are content to spend it before they leave the tap-room, and so they lose both their stock and profit. I do not mean to infer that this is the case with the whole of the public-house hawkers, for some among them strive hard to better their condition, and occasionally succeed; but there are too many who are content to drawl out their existence by always suffering to-morrow to provide for itself. The man who gave me the routine of small hawkers' business I found in a tap-room in Ratcliffe Highway. He was hawking tea-spoons, and all the stock he possessed was half-a-dozen. These he importuned me to purchase with great earnestness. He prayed of me to lay out a trifle with him. He had not taken a penny the whole day he said, and had nothing to eat. "What's much worse for such as me," he added, "I'm dying for a glass of rum." I might have his tea-spoons, he told me, at any price. If I would but pay for a glass of rum for him they should be mine. I assured him some bread and cheese would do him more good, as he had not eaten anything that day; but still he *would* have the rum. With a trembling hand he threw the liquor down his throat, smacked his lips, and said "that there dram has saved my life." A few minutes afterwards he sold his spoons to a customer for sixpence; and he had another glass of rum. "*Now*," said he, "I'm all right for business; if I'd twopence more I could buy a dozen tea-spoons, and I should earn a 'bob' or two yet before I went to bed." After this he grew communicative, and told me he was as good a hawker as there was in London, and he thought he could do more than any other man with a small stock. He had two or three times resolved to better himself, and had '*put in the pin*,' meaning he had made a vow to refrain from drinking; but he had broken out again and gone on in his old course until he had melted the whole of his stock, though twice it had, during his sobriety, amounted to 5*l.*, and was often worth between 2*l.* and 3*l.* It was almost maddening when he came to his senses, he said, to find he had acted so foolishly; indeed, it was so disheartening to discover all the result of his good resolutions dissipated in a moment, that he declared he never intended to try again. After having drunk out his stock, he would if possible commence with half-a-dozen Britannia metal tea-spoons; these cost him 6*d.*, and would sell for 9*d.* or 1*s.* When one half-dozen were disposed of he would procure another, adding a knife, or a comb or two. If entirely destitute, he would stick a needle in a cork, and request to know of "the parties" assembled in some tap-room, if they wanted anything in the ironmongery line, though the needle was all the stock he had. This was done for the purpose of "raising the wind;" and by it he would be sure to obtain a glass or two of ale if he introduced himself with his "ironmongery establishment" among the sailors. Sometimes he would manage to beg a few pence, and then he would purchase a knife, pair of braces, or half-a-dozen tea-spoons, and begin to practise his trade in a legitimate manner. In answer to my inquiry he said he had not always been a hawker. His father had been a soldier, and he had worked in the armoury. His father had been discharged upon a pension, and he (the hawker) left the army with his parents. He had never enlisted while his father was a soldier, but he had since. His mother adopted the business of a hawker upon the receipt of his father's first quarter's pension; and then he used to accompany her on her rounds. With the pension and the mother's exertions they managed to subsist tolerably well. "Being the only child, I was foolishly spoilt by my parents," he said; "and when I was a very young man—15 or 16—I became a great trouble to them. At 18 I enlisted in the 7th Fusileers, remained in the regiment three months, and then, at my own request, was bought off. My mother sold off most of her stock of goods to raise the money (twenty pounds). When I returned home I could not think of trudging by my mother's side, as I had been used to do when carrying the goods; nor did I feel inclined to exert myself in any way for my own support. I considered my mother had a right to keep me without my working, and she, poor thing, thought so too. I was not only supported in idleness, but my mother would give me many a shilling, though she could ill afford it, for me to spend with my companions. I passed most of my time in a skittle ground. I was not what you might term a skittle sharp, for I never entered into a plot to victimise any person, although I confess I have often bet upon the 'greenness' of those who were silly enough to make wagers that they could not possibly win. Sometimes, after I had lost the trifle supplied me by my mother, I would return, and be blackguard enough to assume the bully unless my demands on her for a further supply were attended to. Poor thing, she was very meek, and with tears in her eyes she would grant my request. I often weep when I think how I treated her" (here the tears trickled down the man's cheek), "and yet, badly as I used her, in my heart I loved her very much. I got tired of the skittle grounds in consequence of getting into a hobble relative to a skittle swindle: some sharpers had obtained a flat; I was speculating in a small way, betting pennies and twopences in such a manner as always to win; I was practising upon the flat upon my own account, without having any connection with the others; they fleeced their dupe out of several pounds, and he made a row about it. The police interfered, and I was singled out as one of the gang; the principals were also apprehended; they got six months each, and I was accommodated with a month's board and lodging at the expense of the nation. I thought this at the time unjust, but I was as culpable as any of them, for at the time I only regretted I had not more money to stake larger wagers, and envied the other parties who were making a better thing of the business than I was. When I came out of jail, my poor mother treated me as a martyr. She thought I was as innocent as a child. Shortly after my release from prison my father died, and with him went the pension of course. I was then obligated to do something for myself. A few shillings' worth

of goods only were procured—for my father's funeral and my extravagances had sadly crippled my mother's means. I behaved very well for a short time. My mother then was often ill, and she never recovered the death of my father. In about a year after my father died I lost my mother; our stock of goods had dwindled down to a very poor lot, and I was obligated to ask relief of the parish towards her funeral expenses. When all was over, the value of my goods and cash did not amount to 20*s*. Ten years have elapsed since my mother's death, and I don't think I have ever been, during the whole period, sober for a month together."

While I sat in this tap-room, I counted in the course of an hour and a quarter,—4 hawkers of sheep's trotters, who visited the place; 3 sellers of shrimps, pickled whelks, and periwinkles; 2 baked potato-sellers; 8 song-hawkers; the same number with lucifer matches; and 3 with braces, &c. Not one of these effected a sale.

OF THE STREET-SELLERS OF JEWELLERY.

THE jewellery now sold in the streets far exceeds, both in cheapness and quality, what was known even ten years ago. Fifty years ago the jewellery itinerant trade was almost entirely, if not entirely, in the hands of Jews, who at any rate professed to sell really gold articles, and who asked large prices; but these traders have lost their command over this, as I have shown that they have over other street callings, as not a twelfth of the street-jewellers are now Jews. A common trade among such street and country itinerant jewellers was in large watch seals, the bodies of which were of lead, more or less thickly plated with gold, and which were unsaleable even as old metal until broken to pieces,—but not always saleable then. The street or itinerant trade was for a long time afterwards carried on only by those who were regularly licensed as hawkers, and who preferred "barter" or "swopping" to actual sale, the barter being usually for other and more solid articles of the goldsmith's trade.

The introduction of "mosaic" and other cheap modes of manufacturing *quasi* gold ornaments, brought about considerable changes in the trade, pertaining, however, more to the general manufacture, than to that prepared for the streets.

The itinerants usually carry their wares in boxes or cases, which shut up close, and can be slung on the shoulder for conveyance, or hung round the neck for the purposes of sale. These cases are nearly all glazed; within them the jewellery is disposed in such manner as, in the street-seller's judgment, is the most attractive. A card of the larger brooches, or of cameos, often forms the centre, and the other space is occupied with the shawl-pins, with their globular tops of scarlet or other coloured glass: rings, armlets, necklaces, a few earrings and ear-drops, and sometimes a few side-combs, small medals for keepsakes, clasps, beads, and bead-purses, ornamental buttons for dresses, gilt buckles for waist-belts, thimbles, &c., constitute the street jeweller's stock-in-trade. The usual prices are from 2*d.* to 1*s.* 6*d.*; the price most frequently obtained for any article being 3*d.* It will be seen from the enumeration of the articles, that the stock is such as is required "for women's wear," and women are now almost the sole customers of the street-jewellers. "In my time, sir," said one elderly street-trader, "or rather, when I was a boy, and in my uncle's time—for he was in jewellery, and I helped him at times—quite different sorts of jewellery was sold, and quite different prices was had; what's a high figure now was a low figure then. I've known children's coral and bells in my uncle's stock—well, I don't know whether it was real coral or not—and big watch keys with coloured stones in the centre on 'em, such as I 've seen old gents keep spinning round when they was talking, and big seals and watch-chains; there weren't no guards then, as I remember. And there was plated fruit-knives—silver, as near as a toucher—and silver pencils (pencil-cases), and gilt lockets, to give your sweetheart your hair in for keepsakes. Lor' bless you! times is turned upside down."

The disposition of the street-stalls is somewhat after the same fashion as that in the itinerant's box, with the advantage of a greater command of space. Some of the stalls—one in Tottenham-court Road, I may instance, and another in White-chapel—make a great show.

I did not hear of any in this branch of the jewellery trade who had been connected with it as working jewellers. I heard of two journeymen watchmakers and four clockmakers now selling jewellery (but often with other things, such as eye-glasses) in the street, but that is all. The street mass selling jewellery in town and country are, I believe, composed of the various classes who constitute the street-traders generally.

Of the nature of his present trade, and of the class of his customers, I had the following account from a man of twelve years' experience in the vending of street jewellery:—

"It's not very easy to tell, sir," he said, "what sells best, for people begins to suspect everything, and seems to think they 're done if they give 3*d.* for an agate brooch, and finds out it ain't set in gold. I think agate is about the best part of the trade now. It seems a stone as is easy imitated. Cornelians, too, ain't so bad in brooches—people likes the colour; but not what they was, and not up to agates. But nothing is up to what it once was; not in the least. Sell twice as much—when you can, which often stands over till to-morrow come-never—and get half the profit. I don't expect very much from the Great Exhibition. They sends goods so cheap from Germany, they 'll think anything dear in London, if it's only at German prices. I think it's a mistake to fancy that the cheaper a jewellery article is the more you 'll sell of it. You won't. People 's of opinion—at least that's my notion of it—that it's so common everybody 'll have it, and so they won't touch it. It 's Thames water, sir, against beer, is poor low-priced jewellery, against tidy and fair-priced; but then the low-priced has now ruined the other sorts, for they 're all thought to go under the same um-

brella,—all of a sort; 1*s.* or 1*d.* Why, as to who 's the best customers, that depends on where you pitches your pitch, or works your round, and whether you are known, or are merely a upstart. But I can tell you, sir, who 's been my best customers—and is yet, but not so good as they was —and that 's women of the town; and mostly (for I 've tried most places) about Ratcliff Highway, Whitechapel, Mile-end-road, Bethnal-green, and Oxford-street. The sailors' gals is the best of all; but a'most all of them is very particular, and some is uncommon tiresome. 'I'm afeard,' they says, 'this colour don't suit my complexion; it 's too light, or it 's too dark. How does that ring show on my finger?' I 've known some of the fat and fair ones—what had been younger, but would be older—say, 'Let me have a necklace of bright black beads;' them things shows best with the fat 'uns—but in gen'ral them poor creatures is bad judges of what becomes them. The things they 're the most particular of all in is necklaces. Amber and pearl sells most. I have them from 6*d.* to 1*s.* 6*d.* I never get more than 1*s.* 6*d.* Cornelian necklaces is most liked by children, and most bought for them. I 've trusted the women of the town, and trust them still. One young woman in Shadwell took a fancy the t' other week for a pearl necklace, 'it became her so,' which it didn't; and offered to pay me 6*d.* a week for it if I wouldn't sell it away from her. The first week she paid 6*d.*; the second nothing; and next week the full tip, 'cause her Jack had come home. I never lost a halfpenny by the women. Yes, they pays you a fairish price, but nothing more. Sometimes they 've beat me down 1*d.*, and has said, 'It 's all the money I has.'

"It 's not very long ago that one of them offered me a fine goold watch which I could have bought at any price, for I saw she knew nothing of what it was worth. I never do anything that way. I believe a very few in my line does, for they can't give the prices the rich fences can. It 's common enough for them gals to ask any street-jeweller they knows how much a watch ought to pop for, or to sell for, afore they tries it on. But it isn't they as tries it on, sir; they gets some respeckbel old lady, or old gent, to do that for them. I 've had cigars and Cavendish of them; such as seamen had left behind them; you know, sir, I've never given money, only jewellery for it. Plenty of shopkeepers is glad to buy it of me, and not at a bad price. They asks no questions, and I tells them no lies. One reason why these gals buys free is that when the jewellery gets out of order or out of fashion, they can fling it away and get fresh, it 's so cheap. When I 've had no money on a day until I has sold to these women, I 've oft enough said, 'God bless 'em!' Earrings is hardly any go now, sir; nothing to what they was; they 're going out. The penny jewellery 's little good; it 's only children what buys, or gets it bought for them. I sell most of brooches from 3*d.* to 6*d.*, very seldom higher, and bracelets—they calls them armlets now—at the same price. I buys all my goods at a swag-shop: there 's no other market. Watchguards was middling sale, both silver and goold, or washed white and washed yellow, and the swags made money in them; but instead of 1*s.*, they 're not to be sold at a Joey now, watchguards ain't, if a man patters ever so."

I am informed that there are not less than 1000 individuals who all buy their jewellery at the London swag-shops, and sell it in the streets, with or without other articles, but principally without; and that of this number 500 are generally in London and its suburbs, including such places as Gravesend, Woolwich, and Greenwich. Of these traders about one-tenth are women; and in town about three-fifths are itinerant, and the others stationary. One-half, or thereabouts, of the women, are the wives of street-sellers; the others trade on their own account. A few "swop" jewellery for old clothes, with either the mistress or the maids. Four or five, when they see a favourable opportunity, offer to tell any servant-maid her fortune. "'Buy this beautiful agate brooch, my dear,' the woman 'll say, 'and I 'll only charge you 1*s.* 6*d.*'—a German thing, sir, costing her seven farthings one street-jeweller informed me,—'and I 'll tell you your fortune into the bargain.'"

One "old hand" calculated, that when a street-jeweller could display 50*s.* worth of stock, he could clear, all the year round, 15*s.* a week. "People," said this man, "as far as I've known the streets, like to buy of what they think is a respectable man, and seemingly well to do; they feel safe with him." Those, however, who cannot boast so large a stock of jewellery as 50*s.* worth, may only clear 10*s.* instead of 15*s.* weekly. One trader thought that the average earnings of his fraternity might be taken at 12*s.* a week; another—and both judged from their own experience—thought 10*s.* 6*d.* was high enough. Calculating, then, at a weekly profit of 10*s.* 6*d.*, and a receipt of 18*s.* per individual, we find 23,410*l.* expended in the street-trade, including the sales at Gravesend, Woolwich, and Greenwich; where—both places being resorted to by pleasure-seekers and seamen—the trade is sometimes considerable; watches, which now are almost unknown in a regular street-trade, there forming an occasional part of it.

Of The Pedlar-Jewellers.

I have heard a manufacturer of Birmingham jewellery assert, that one pound of copper was sufficient to make 10*l.* worth of jewellery; consequently, the material to provide the unmanufactured stock in trade of a wholesale dealer in Birmingham jewellery, is not over expensive. It may be imagined then that the pedlars who hawk jewellery do not invest a very great capital in the wares they sell; there are some few, however, who have very valuable stocks of goods, pedlars though they be. This trade is principally pursued by Jews, and to a great extent (especially in a small way) by foreign Jews. The Jews are, I think, more attentive to the wants of their poorer brethren than other people; and instead of supplying them with trifling sums of money, which must necessarily soon be

Original from HARVARD UNIVERSITY

expended, they give them small quantities of goods, so that they may immediately commence foraging for their own support. Many of these poor Jews, when provided with their stock of merchandise, can scarcely speak a word of English, and few of them know but little respecting the value of the goods they sell; they always take care to ask a good price, leaving plenty of room for abatement. I heard one observe that they could not easily be taken in by being overcharged, for according what they paid for the article they fixed the price upon it. Some of these men, notwithstanding their scanty knowledge of the trade at starting, have eventually become excellent judges of jewellery; some of them, moreover, have acquired riches in it; indeed from the indomitable perseverance of the Hebrew race, success is generally the result of their untiring industry. If once you look at the goods of a Jew pedlar, it is not an easy matter to get out of his clutches; it is not for want of perseverance if he does not bore and tease you, until at length you are glad to purchase some trifle to get rid of him. One of my informants tells me he is acquainted with several Jews, who now hold their heads high as merchants, and are considered very excellent judges of the wares they deal in, who originally began trading with but a small stock of jewellery, and that a charitable donation. As well as Jews there are Irishmen who deal in such commodities. The pedlar generally has a mahogany box bound with brass, and which he carries with a strap hung across his shoulder; when he calls at a house, an inquiry is made whether there is any old silver or gold to dispose of. "I will give you a full price for any such articles." If the lady or gentleman accosted seems to be likely to buy, the box is immediately opened and a tempting display of gold rings, chains, scent-boxes, lockets, brooches, breast-pins, bracelets, silver thimbles, &c., &c., are exposed to view. All the eloquence the pedlar can command is now brought into play. The jewellery is arranged about the persons of his expected customers to the best advantage. The pedlar says all he can think of to enhance their sale: he will chop and change for anything they may wish to dispose of—any old clothes, books, or useless lumber may be converted into ornaments for the hair or other parts of dress. The Irish pedlar mostly confines his visits to the vicinity of large factories where there are many girls employed; these he supplies with earrings, necklaces, shawl-pins, brooches, lockets, &c., which are bought wholesale at the following prices:—Earrings and drops at from 3*s*. 6*d*. to 12*s*. per dozen pairs; the 3*d*. earring is a neat little article says my informant, and those sold at 1*s*. each, wholesale, are gorgeous-looking affairs; many of the latter have been disposed of by the pedlars at 1*l*. the pair, and even a greater price. Necklaces are from 5*s*. to 1*l*. per dozen. Lockets may be purchased wholesale at from 2*s*. to 10*s*. per dozen; guard chains (German silver) are 4*s*. per dozen; gilt heavy-looking waistcoat chains 6*s*. per dozen: and all other articles are equally low in price. The pedlar jeweller can begin business "respectably" for two pounds. His box costs him 7*s*. 6*d*.; half-a-dozen pairs of earrings of six different sorts, 3*s*.; half-a-dozen lockets (various), 1*s*. 9*d*.; half-a-dozen guard chains, 2*s*.; half-a-dozen shawl brooches, 2*s*. 6*d*.; one dozen breast-pins (different kinds), 3*s*.; one dozen finger rings of various descriptions, 3*s*. 6*d*.; half-a-dozen brooches at 4*d*. each, 2*s*.; one dozen necklaces (a variety), at 6*s*.; three silver pencil-cases at 1*s*. 9*d*. each, 5*s*. 3*d*.; half-a-dozen waistcoat chains, 3*s*.; one silver toothpick, at 1*s*. 6*d*. These make altogether two pounds. If the articles are arranged with taste and seeming care (as if they were very valuable), with jeweller's wadding under each, and stuck on pink cards, &c., while the finger rings are inserted in the long narrow velvet-lined groove of the box, and the other "valuables" well spread about the little portable shop—they may be made to assume a very respectable and almost "rich" appearance. Many who now have large establishments commenced life with much less stock than is here mentioned. The Jews, I do not think, continues my informant, are the best salesmen; and the fact of their being Israelites is, in many instances, a bar to their success; country people, especially, are afraid of being taken in by them. The importunities and appeals of the Hebrew, however, are far more urgent than any other tradesman; and they always wait where they think there's the slightest chance of effecting a sale, until the door is slammed in their face. I believe there are not, at the present time, many (especially small traders) who deal exclusively in jewellery; they mostly add other small and light articles—such as fancy cutlery, side combs, &c. There may, at a rough guess, be 500 of them travelling the country; half the number are poor foreign Jews; a quarter are Jews, who have, perhaps, followed the same calling for years; and the remaining quarter, a mixture of Irish and English, with a small preponderance of Irishmen. All these "swop" their goods for old gold and silver, and frequently realize a large sum, by changing the base metal for the sterling article. Their goods are always sold as being gold or silver—If asked whether a particular article be gold, they reply "It's jewellers' gold;" "Is this ring gold?" inquires the customer, taking one from the box—"No, ma'am, I wouldn't deceive you!" is the answer, "*that* is not gold; but here is one," adds the pedlar (taking up one exactly of the same description, and which cost the same price) "which is of a similar shape and fashion, and the best jeweller's gold that is made." The profits of the pedlar-jewellers it is almost impossible to calculate, for they will sell at any price upon which the smallest amount of profit can be realized. The foreign Jews, especially, will do this, and it is not an unusual circumstance for one of these men to ask 5*s*. for an article which originally cost them 3*d*., and which they will eventually sell for 4*d*.

In London there are about 200 hawkers of jewellery, who visit the public-houses; but few of these have boxes—they invite customers by displaying some chains in their hands, or having one or two arranged in front of their waistcoats, while

the smaller articles are carried in their waistcoat pockets. The class of persons who patronize the public-house hawkers are those who visit the taprooms of taverns, and countrymen in the vicinity of Smithfield upon market days, (one of the hawkers tells me, that they succeed better upon the hay-market days than at the cattle sales, for the butchers, they say, are too "fly" for them. Sailors are among their best customers, but the coster-girls are very fond of drop earrings and coral beads; the sailors, however, give the best prices of all. I am told that the quantity of old gold and silver which the country pedlars obtain in exchange for their goods is "astonishing;" and there have been occasions on which a pedlar has been enriched for life by one single transaction of barter; some old and unfashionable piece of jewellery, that they received for their goods, has been composed of costly stones, which had lain by for years, and of which the pedlar's customer was unacquainted with the value. The more respectable jewellery pedlars put up at the better class of public-houses, and, even after their day's travels are over, they still have an eye to business; they open the box upon the table of the tap-room where they are lodging, and, under the pretence of cleaning or arranging their goods, temptingly display their glittering stock. The bar-maid, kitchen-maid, the landlady's daughter, or perhaps the landlady herself, admires some ornaments, which the pedlar declares would become them vastly. He hangs a necklace upon the neck of one of them; holds a showy earring and drop to the ear of another; facetiously inquires of the girls whether they are not likely to want something of this sort shortly—as he holds up first a wedding-ring, and then a baby's coral; or else he exhibits a ring set with Turquoise, or pearls and small diamonds in a cluster, to the landlady, and tries it on her finger; and by such arts a sale that will cover his expenses is generally effected. There is one peculiarity these men have when bartering their goods. A worn-out ornament of jewellery is brought to them, and, although it be brass, the pedlar never attempts to undeceive the possessor, if he finds it is considered to be genuine. Of course he never gives cash for such articles; but he offers a large price in barter. "I will take 10*s.* for this ring, and allow you 5*s.* for the old one," says the pedlar. It would never do to say the ornament was not gold; the customer bought it years ago for such, and no one ever disputed its being the precious metal; should our pedlar do so, he might as well shut up shop immediately. The lady would be angry and suspicious; neither would she believe him, but rather suspect that he wanted only to cheat her; consequently the pedlar barters, obtains the old ring, or some other article, and 5*s.*, for his commodity; and though the article he has taken in exchange is worth only a few pence, he very likely profits to the amount of 200 per cent. upon the cash received. The pedlars of lesser consequence put up at humble private or public-houses, and some of them at the common lodging-houses. Those who have only small stocks confine their visits to farm-houses and villages.

Of the Street-Sellers of Card-Counters, Medals, etc.

The "card-counters," or, as I have heard them sometimes called by street-sellers, the "small coins," are now of a very limited sale. The slang name for these articles is "Jacks" and "Half Jacks." They are sold to the street-people at only two places in London; one in Holborn, and the other at Black Tom's (himself formerly a street-seller, now "a small swag"), in Clerkenwell. They are all made in Birmingham, and are of the size and colour of the genuine sovereigns and half sovereigns; but it is hardly possible that any one who had ever received a sovereign in payment, could be deceived by the substitution of a Jack. Those now sold in the streets are much thinner, and very much lighter. Each presents a profile of the Queen; but instead of the superscription "Victoria Dei Gratiâ" of the true sovereign, the Jack has "Victoria Regina." On the reverse, in the place of the "Britanniarum Regina Fid. Def." surrounding the royal arms and crown, is a device (intended for an imitation of St. George and the Dragon) representing a soldier on horseback—the horse having three legs elevated from the ground, while a drawn sword fills the right hand of the equestrian, and a crown adorns his head. The superscription is, "to Hanover," and the rider seems to be sociably accompanied by a dragon. Round the Queen's head on the half Jack is "Victoria, Queen of Great Britain," and on the reverse the Prince of Wales's feather, with the legend, "The Prince of Wales's Model Half Sovereign."

Until within these five or six years the gilt card-counters had generally the portraiture of the monarch, and on the reverse the legend "Keep your temper," as a seasonable admonition to whist players. Occasionally the card-counter was a gilt coin, closely resembling a sovereign; but the magistracy, eight or nine years back, "put down" the sale of these imitations.

Under another head will be found an account of the use made of these sovereigns, in pretended wagers. A further use of them was to add to the heaps of apparent gold at the back of the table-keeper in a race booth, when gambling was allowed at Epsom, and the "great meetings."

There are now only two men regularly selling Jacks in the streets. There have been as many as twelve. One of these street-sellers is often found in Holborn, announcing "30*s.* for 1*d.*! 30*s.* for 1*d.*! cheapest bargain ever offered; 30*s.* for 1*d.*!"

The Jacks cost, wholesale, 4*s.* 6*d.* the gross; the half Jacks 2*s.* 9*d.* The two are sold for 1*d.* If the sale be not brisk, the street-seller will give a ring into the bargain. These rings cost 1*s.* the gross, or the third part of a farthing each.

If there be, on the year's average, only two street-sellers disposing of the Jacks, and earning 9*s.* a week—to earn which the receipts will be about 20*s.*—we find 104*l.* expended in the streets on these trifles.

Of medals the street sale is sometimes considerable, at others a mere nothing. When a

popular subject is before the public, many of the general patterers "go to medals." I could not learn that any of the present street-people vended medals in the time of the war; I believe there are none at present among the street folk who did so. I am told that the street sale in war medals was smaller than might reasonably have been expected. The manufacture of those articles in the Salamanca, Vittoria, and even Waterloo days, was greatly inferior to what it is at present, and the street price demanded was as often 6*d.* as a smaller sum. These medals in a little time presented a dull, leaden look, and the knowledge that they were "poor things" seems to have prevented the public buying them to any extent in the streets, and perhaps deterred the street-sellers from offering them. Those who were the most successful of the medal-sellers had been, or assumed to have been, soldiers or seamen.

Within the last eighteen years, or more, there has hardly been any public occurrence without a comparatively well-executed medal being sold in the streets in commemoration of it. That sold at the opening of London-bridge was, I am told, considered "a superior thing," and the improvement in this art or manufacture has progressed to the present time. Within the last three years the most saleable medals, an experienced man told me, were of Hungerford Suspension (bridge), the New Houses of Parliament, the Chinese Junk, and Sir Robert Peel. The Thames Tunnel medals were at one time "very tidy," as were those of the New Royal Exchange. The great sale is at present of the Crystal Palace; and one man had heard that there were a great many persons coming to London to sell them at the opening of the Great Exhibition. "The great eggs and bacon, I call it," he said; "for I hope it will bring us that sort of grub. But I don't know; I'm afraid there'll be too many of us. Besides, they say we shan't be let sell in the park."

The exhibition medal is as follows :—

What the street medal-sellers call the "right-side"—I speak of the "penny" medal, which commands by far the greatest sale—presents the Crystal Palace, raised from the surface of the medal, and whitened by the application of aqua fortis. The superscription is "THE BUILDING FOR THE INTERNATIONAL EXHIBITION, LONDON, 1851." On the "wrong side" (so called) is the following inscription, occupying the whole face of the medal:

THE CONSTRUCTION IS OF
IRON AND OF GLASS,
1848 FEET LONG.
ABOUT HALF IS 456 WIDE.
THE REMAINDER 408 FEET WIDE,
AND 66 FEET HIGH;
SITE, UPWARDS OF 20 ACRES.
COST £150,000.
JOSH. PAXTON, ARCHT.

The size of this medal is between that of a shilling and a half-crown.

A patterer, who used to sell medals on Sunday mornings in the park, informed me that he told his customers the Crystal Palace part was dead silver, by a new discovery making silver cheap; but for all that he would risk changing it for a four-penny bit!

The two-penny medal is after the same style, but the letters are more distinct. On my stating, to a medal-seller, that it was difficult to read the inscription on his "pennies," he said, "Not at all, sir; but it's your eyes is dazzled." This was said quietly, and with a touch of slyness, and I have no doubt was the man's "cut-and-dried" answer.

The patterer whom I have mentioned, told me, that encouraged by a tolerably sale and "a gathering of the aristocrats," on a very fine Sunday in January or February—he could not remember which—he ventured upon 6 "sixpenny medals," costing him 1*s.* 9*d.* He sold them all but one, which he showed me. It was exactly the size of a crown-piece. The Crystal Palace was "raised," and of "dead silver," as in the smaller medals. The superscription was the same as on the penny medal; but underneath the representation of the palace were raised figures of Mercury and of a naked personage, with a quill as long as himself, a cornucopia, and a bee-hive: this I presume was Industry. These twin figures are supporters to a medallion, crown-surmounted, of the Queen and Prince Albert: being also in "dead silver." On the reverse was an inscription, giving the dimensions, &c., of the building.

The medals in demand for street-sale in London seem to be those commemorative of local events only. None, for instance, were sold relating to the opening of the Britannia Bridge.

The wholesale price of the medals retailed in the street at 1*d.* is 7*s.* the gross; those retailed at 2*d.* are 12*s.* the gross, but more than three-fourths of those sold are penny medals. They are all bought at the swag-shops, and are all made in Birmingham. It is difficult to compute how many persons are engaged in this street trade, for many resort to it only on occasions. There are, however, from 12 to 20 generally selling medals, and at the present time about 30 are so occupied: they, however, do not sell medals exclusively, but along with a few articles of jewellery, or occasionally of such street stationery as letter stamps and "fancy" pens, with coloured glass or china handles. A fourth of the number are women. The weather greatly influences the street medal trade, as rain or damp dims their brightness. One seller told me that the day before I saw him he had sold only four medals. "I've known the trade, off and on," he said, "for about six years, and the greatest number as ever I sold was half-a-gross one Saturday. I cleared rather better than 3*s.* I sold them in Whitehall and by Westminster-bridge. There was nothing new among them, but I had a good stock, and it was a fine day, and I was lucky in meeting parties, and had a run for sets." By a "run for sets," my informant meant that he had met with customers who bought a medal of each of the kinds he displayed; this is called "a set."

An intelligent man, familiar with the trade, and who was in the habit of clubbing his stock-money with two others, that they might buy a gross at a time, calculated that 15 medal sellers were engaged in the traffic the year through, and earned, in medals alone, 6*d.* a day each, to clear

Original from HARVARD UNIVERSITY

which they would take 6*s.* 6*d.* weekly, giving a yearly outlay of 253*l.* 10*s.* It must be remembered, to account for the smallness of the earnings, that the trade in medals is irregular, and the calculation embraces all the seasons of the trade.

On occasions when medals are the sole or chief articles of traffic, they are displayed on a tray, which is a box with a lid, and thus look bright as silver on the faded brown velvet, with which the box is often lined. Among the favourite pitches are Oxford-street, the approaches to London, Blackfriars, Westminster, and Waterloo-bridges, the railway stations, and the City-road.

Of small coins (proper) there is now no sale in the streets. When there was an issue of half-farthings, about seven years ago, the street-sellers drove a brisk trade, in vending them at four a penny, urging on the sale before the coins got into circulation, which they never did. "It's not often," said one patterer to me, "that *we* has anything to thank the Government for, but we may thank them for the half-farthings. I dare say at least 30 of us made a tidy living on them for a week or more; and if they wasn't coined just to give us a spirt, I should like to know what they *was* coined for! I once myself, sir, for a lark, gave one to a man that swept a capital crossing, and he was in a thundering passion, and wanted to fight me, when I told him they was coined to pay the likes of him!"

There was afterwards a tolerable sale of the "new silver pennies, just issued from the Mint, three ha'pence each, or 7 for 6*d.*;" also of "genuine models of the new English florin, only 1*d.*:" both of these were fictitious.

Of the Street-Sellers of Rings and Sovereigns for Wagers.

This class is hardly known in the streets of London at present. Country fairs and races are a more fitting ground for the ring-seller's operations. One man of this class told me that he had been selling rings, and occasionally medals, for wagers for this last fifteen years. "It 's only a so-so game just now," he said; "the people get so fly to it. A many hold out their penny for a ring, and just as I suppose I 'm a going to receive it, they put the penny into their pockets, and their thumb upon their nose. I wish I had some other game, for this is a very dickey one. I gives 3*d.* a-dozen for the rings at the swag shop; and sometimes sells a couple of dozen in a day, but seldom more. Saturday is no better day than any other. Country people are my best customers. I know them by their appearance. Sometimes a person in the crowd whispers to others that he bought one the other day and went and pawned it for 5*s.*, and he 'd buy another, but he 's got no money. I don't ask for such assistance; I suppose it 's done for a lark, and to laugh at others if they buy. Women buy more frequently than any one else. Several times since I have been on this dodge, women have come back and abused me because the ring they bought for a penny was not gold. Some had been to the pawn shop, and was quite astonished that the pawnbroker wouldn't take the ring in. I do best in the summer at races: people think it more likely that two sporting gents would lay an out of the way wager (as you know I always make out) then than at any other time. I have been interfered with at races before now for being an impostor, and yet at the same time the gamblers was allowed to keep their tables; but of course theirs was all fair—no imposition about them—oh no! I am considered about one of the best patterers among our lot. I dare say there may be twenty on us all together, in town and country, on rings and sovereigns. Sometimes, when travelling on foot to a race or fair, I do a little in the *Fawney dropping* line;" (fawneys are rings;) "but that is a dangerous game, I never did it but two or three times. There were some got lagged for it, and that frightened me. In ring-dropping we pretend to have found a ring, and ask some simple-looking fellow if it 's good gold, as it 's only just picked up. Sometimes it is immediately pronounced *gold:* 'Well it 's no use to me,' we 'll say, 'will you buy it?' Often they are foolish enough to buy, and it 's some satisfaction to one's conscience to know that they think they are a taking you in, for they give you only a shilling or two for an article which if really gold would be worth eight or ten. Some ring-droppers write out an account and make a little parcel of jewellery, and when they pick out their man, they say, 'If you please, sir, will you read this for me, and tell me what I should do with these things, as I 've just found them?' Some people advise they should be taken to the police office—but very few say that; some, that they should be taken to the address; others, that they should be sold, and the money shared; others offer a price for them, stating that they 're not gold, they 're only trumpery they say, but they 'll give half-a-crown for them. It 's pleasant to take such people in. Sometimes the finder says he 's in haste, and will sell them for anything to attend to other business, and he then transfers his interest at perhaps 200 per cent. profit. This game won't friz now, sir, it 's very dangerous. I 've left it off long since. I don't like the idea of quod. I 've been there once." Another plan of dropping rings is to write a letter. This is the style:—

> "My dear Anne,
> "I have sent you the ring, and hope it will fit.—Excuse me not bringing it. John will leave it with you.—You know I have so much to attend to.—I shall think every minute a year until the happy day arrives.
> "Yours devotedly,
> "James Brown."

This love epistle containing the wedding-ring was most successful when it first came up, but the public now are too wide awake. According to another informant, the ring-dropping "lurk" is now carried on this way, for the old style is "coopered." "A woman" he says, "is made up so as to appear in the family-way—pretty far gone—and generally with a face as long as a boy's kite. Up she goes to any likely ken, where she knows there are women that are married or expect to get married, and commences begging. Then comes the tale of woe, if she can get them to

listen—'I'm in the family-way,' she says, 'as you can plainly see *young ladies* (this she says to the *servants*, and that prides them you know). My husband has left me after serving me in this way. I don't know where he is, and am forced to solicit the ladies' charity.' Well, the servants will bring broken victuals and make a little collection among themselves for the 'unprotected female;' for which in return, with many thanks for their kindness, she offers her gold wedding-ring for sale, as she wants to get back to her suffering kids to give them something to eat, poor things, and they shall have the gold ring, she says, for half what it's worth; or if they won't buy it, will they lend 2*s.* or 3*s.* on it till she can redeem it, as she hasn't been in the habit of pledging! The girls are taken off their guard (she not being in the habit of pledging is a choker for them) by the woman's seeming simplicity, and there's a consultation. One says to the other—'Oh, you'll want it, Mary, for John;' and another, 'No, you'll want it first, Sally, for William.' But the woman has her eye on the one as says the least, as the likeliest of all to want it, and so she says to the John and William girls, 'Oh, you don't want it; but *here* (touching the silent one), here's a *young lady* as does,' (that sweetens the servant girl up directly.) She says, 'I don't want it, bless you (with a giggle), but I'll lend you a trifle, as you are in this state, and have a family, and are left like this by your husband—aint he cruel, Sally (she adds to her fellow-servant)?' The money the ring-woman gets, sir, depends upon the servant's funds; if it is just after quarter-day, she generally gets a tidy tip—if not, 4 or 5 bob. I've known one woman get 10*s.* and even 12*s.* this way. The ring is made out of brass gilt buttons, and stunning well: it's faked up to rights, and takes a good judge even at this day to detect it without a test."

"The best sort of rings for *fawney dropping* is the Belchers. They are a good thick looking ring, and have the crown and V. R. stamped upon them. They are 7*d.* a dozen. I takes my stand now, in my ring-selling, as if I was in a great hurry, and pulls out my watch. I used to have a real one, but now it's a dummy. 'Now, ladies and gentlemen,' says I, 'I am not permitted to remain more than ten minutes in one spot. I have rings to sell to decide a wager recently made between two sporting noblemen, to the effect that I do not sell a certain quantity of these rings in a given time, at a penny a piece. I can recommend the article as being well worth the money I ask for it, perhaps something more. I do not say they are gold; in fact, I must not say too much, as there is a person in this company watching my proceedings, and seeing that I do not remain more than ten minutes in this spot,'—here I always looks very hard at the most respectable and gentlemanly-looking person among my hearers, and sometimes gives him a wink, and sometimes a nod,—'but if you should hear anything more about these rings, and you want to purchase, don't be vexed if I am gone when you want me. The ten minutes has nearly expired; three minutes more; any more buyers? It makes no difference to me whether I sell or not—I get my pay all the same; but, if you take my advice, buy; and perhaps if you was to call at the sign of the Three Balls, as you go home, you may be agreeably surprised, and hear something to your advantage. Perhaps I have said too much. I have one minute more, before I close the establishment. After shutting the box, I dare not sell another in this spot, if you were to offer me 5*l.* for it; therefore, if you wish to purchase, now is your time.' I make many a pitch, and do not sell a single ring; and the insults I receive used to aggravate me very much, but I do not mind them now, I'm used to it. The flyest cove among all us ring-sellers is little Ikey, the Jew. There were two used to work the game. They had a real gold ring, just like the ones they were selling, and they always used to pitch near a pawnbroker's shop. Ikey's pal would buy a ring for a penny, of the street-seller, and would then say, loud enough to be heard by the bystanders, 'There's a pawn shop—I'll go and ask them to take it in.' A crowd would follow him. He would enter the pawnbroker's—present a real gold ring—obtain a loan of 5*s.*, and would present the ticket to the bystanders, who would then buy very fast. When the pitch was over, Ikey's pal would take the ring out of pawn, and away the two would go to work near some other pawnbroker's. I have heard Ikey say they have pawned the ring thirty-five times in a day. I tried the same caper; but my pal cut with the gold ring the first day, and I've never had another go at that *fake* since.

"Before I commenced the jewellery line," continued my candid informant, "a good many years ago, I used to hold horses about Bond-street. Afterwards I was taken as an errand boy at a druggist's, was out of an errand one day and got 6*d.* for holding a gentleman's horse, which kept me nearly an hour; when I went back to my master's I was told I wasn't wanted any more. I had been cautioned about stopping of errands two or three times before; however I didn't like the situation, it was too confining. I next got a place as pot-boy, in Brick Lane. Here I was out one day gathering in the pots. I hung the strap of pots to a railing to have a game at chances (pitch and toss), somebody prigged my strap of pots, and I cut. A few weeks after I was grabbed for this, and got a month at the mill; but I was quite innocent of prigging—I was only careless. When I came out of prison, I went to Epsom races, thinking to get a job there at something or other. A man engaged me to assist him in 'pitching the hunters.' Pitching the hunters is the three sticks a penny, with the snuffboxes stuck upon sticks; if you throw your stick, and they fall out of the hole, you are entitled to what you knock off. I came to London with my master the pitcher-hunter, he went to a swag shop in Kent-street, in the Borough, to purchase a new stock. I saw a man there purchasing rings, this was little Ikey, the Jew; some days afterwards I saw him making a pitch, and selling very fast. I had fourpence

Original from HARVARD UNIVERSITY

in my pocket; went to Kent-street, to the swag shops, bought a dozen rings, and commenced selling them. I sold that day three dozen; that wasn't bad considering that my toggery was very queer, and I looked anything but like one who would be trusted with ten pounds' worth of gold rings. This wager between the two sporting noblemen has been a long time settling. I've been at it more than fifteen years. The origin of it was this here: when sovereigns were first coined, the Jew boys and others used to sell medals and card-counters upon particular occasions, the same as they do now, and shove them in a saucepan lid, with silver paper under them. Captain Barclay, and another of the same sort, bet a wager, that one of these Jew-boys could not dispose of a certain number of real sovereigns in a given time, supposing the Jew-boy cried out nothing more than 'here's sovereigns, only a penny a piece.' The number he was to sell was 50 within the hour, and to take his station at London Bridge. The wager was made, the Jew-boy procured, and the sovereigns put into the pot lid. 'Here are real sovereigns a penny a piece, who'll buy?' he cried; but he sold only a few. The number disposed of, within the hour, I have heard, was seventeen. Those who purchased, when they found that they had really bought sovereigns at a penny a piece, returned for more, but the salesman was gone. A good harvest was afterwards reaped among the Jews, who got up a medal something like a sovereign, and sold them in every quarter of London, for the Captain's wager soon spread about everywhere. It's a stale game now; it was so before my time, but I've heard the Jews talk about it. The second day I tried the ring dodge, I was a little more successful; indeed every day for some time exceeded the day before, for, as I improved in patter, my sales increased. My appearance, too, was improving. At one time I was a regular swell, sported white kid gloves, white choker, white waistcoat, black ribbon, and a quizzing glass. Some people used to chaff me, and cry out 'there's a swell.' I never was saving, always spent my money as fast as I got it. I might have saved a goodish bit, and I wish I had now. I never had a wife, but I have had two or three broomstick matches, though they never turned out happy. I never got hold of one but what was fond of lush. I live in Westminster, at a padding-ken. I'd rather not tell you where, not that I've anything to fear, but people might think I was a *nose*, if anybody came after me, and they would crab me. I'd rather get something else to do if I could, but I think this is the best street game I could follow. I don't believe any of the ring-sellers dispose of more than myself, except little Ikey; he now adds other articles, a silver thimble (he calls it), some conundrums, a song-book and a seal, and all for a penny. I tried the same thing, but found I could do just as well with the rings alone. We all expects to do great things during the Exhibition. I think all on us ought to be allowed to sell in the parks. Foreigners are invited to witness specimens of British Industry, and it's my opinion they should see all, from the highest to the lowest. We *did* intend petitioning the Prince on the subject, but I don't suppose it would be any go, seeing as how the slang coves" (the showmen), "have done so, and been refused."

Of the Street-Sellers of Children's Gilt Watches.

These articles were first introduced into general street sale about 10 years ago. They were then German made. The size was not much larger than that of a shilling, and to this tiny watch was appended as tiny a chain and seal. The street-price was only 1*d*., and the wholesale price was 8*s*. the gross. They were sold at eight of the swag-shops, all "English and foreign," or "English and German" establishments. From the price it would appear that the profit was 4*d*. a dozen, but as the street-sellers had to "take the watches as they came," the profit was but 3*d*., as a dozen watches in a gross had broken glasses, or were otherwise damaged and unsaleable. The supply of these watches was not equal to the demand, for when a case of them was received, "it could have been sold twice over." One street-seller told me that he had sold 15 and even 16 dozen of these watches on a day, and that once on a Saturday night, and early on Sunday morning, he had sold 2 gross, or 24 dozen. Such, however, was not the regular sale; a "good week" was a profit of 15*s*.

About six years ago gilt watches of a very superior kind were sold in the streets in a different way. They were French made, and were at first vended at 1*s*. each. Some were displayed in case-boxes, fitted up with divisions, in which were placed the watches with the guard-chains, about three-quarters of a yard long, coiled round them. There were also two or three keys, one in the form of a pistol. The others were hung from a small pole, sometimes a dozen, and sometimes two, being so suspended, and they had a good glittering appearance in a bright light; this street fashion still continues. The street-sellers, however, are anxious not to expose these watches too much, as they are easily injured by the weather, and any stain or injury is irreparable. The shilling sale continued prosperously for about six weeks, and then the wholesale price—owing, the street-sellers were told at the swag-shops, to "an opposition in the trade in Paris,"—was reduced to 4*s*. 6*d*. the dozen, and the retail street-price to 6*d*. each. When the trade was "at its best" there were thirty men and twenty women selling these watches, all May, June, and July, and each clearing from 12*s*. to 20*s*. (but rarely the latter sum) a week. Last "season" there were for the same period about half the number of sellers mentioned, averaging a profit of about 15*d*. a day each, or 9*s*. a week. The cry is—"Handsome present for 6*d*. Beautiful child's watch and chain, made of Peruvian metal, by working jewellers out of employ. Only 6*d*. for a handsome present."

The vendors of these watches are the regular

Original from HARVARD UNIVERSITY

street-sellers, some of them being tolerably good patterers. One of these men, in the second year of the street-sale of watches, appeared one morning in an apron and sleeves, to which brass and copper filings were made to adhere, and he announced himself as an English working jeweller unemployed, offering his own manufactures for sale, "better finished and more solider nor the French." The man's sale was greatly increased. On the following day, however, four other English working jewellers appeared in Leicester-square and its approaches, each in besprinkled apron and sleeves, and each offering the productions of his own handicraft! The apron and sleeves were therefore soon abandoned.

Among the best "pitches,"—for the watch-sellers are not itinerant, though they walk to and fro—are the Regent's-park, Leicester-square, the foot of London-bridge, and of Blackfriars-bridge, and at the several railway stations.

The principal purchasers, I was told by an intelligent patterer, who sometimes "turned his hand to the watches," were "fathers and mothers," he thought, "and them as wished to please such parties."

Calculating that twenty-five persons now vend watches for twelve weeks in the year, and—as they are 10 per cent. cheaper than they were at the swag-shops—that each clears 8*s.* weekly, we find 360*l.* yearly expended in London streets in these toy watches.

Of the Street-Sellers of Tinware.

The sellers of tins, who carry them under their arms, or in any way on a round, apart from the use of a vehicle, are known as hand-sellers. The word hand-seller is construed by the street-traders as meaning literally *hand-seller*, that is to say, a *seller* of things held or carried in the *hand;* but the term is clearly derived from the Scotch *hand-sell*, as in "handsell penny." Handsell, according to Jamieson, the Scotch etymologist, means, (1) "The first money that a trader receives for goods; also a gift conferred at a particular season. (2) A piece of bread given before breakfast." Ihre, the Gothic lexicographer, views the term handsell as having sprung from the Mæso-Gothic *hunsla* (sacrifice or offering). This is the same as the Anglo-Sax *husl* (the Eucharist), whence comes the English *housel* and *unhouseled;* and he considers the word to have originally meant a gift or offering of any kind. Hence, the hand-sellers of tin and other wares in the street, would mean simply those who *offered* such tin or other wares for sale. The goods they dispose of are dripping-pans (sometimes called "square pans"), sold at from 3*d.* to 18*d.*, the 3*d.* pans being "6 inch," and the 18*d.* "15 inch;" cullenders, 6*d.* to 9*d.*; hand-bowls, for washerwomen, 1*s.* (now a very small portion of the trade); roasting-jacks, with tin bodies, 6*d.* to 1*s.* 6*d.* (this used to be the best article for profit and ready sale in the trade, but "they are going out of date"); and the smaller articles of graters, &c.

The hand-sellers also trade in other articles which are less portable; the principal sale, however, is at "stands," and there chiefly on a Saturday night, the great business-time of street-commerce! These less portable articles are tea-kettles, 10*d.* to 18*d.*; saucepans of all sizes, the smallest being the "open pints" at 2*d.* or 2½*d.* each (they cost them 20*d.* a dozen; it's a bargain to get them at 18*d.*), and the largest the "nine quart;" but the kinds most in demand are the "three pints" and "two quarts," sold at 6*d.* and 8*d.* There are also fish-kettles in this street-traffic, though to a very limited extent—"one fish-kettle," I was told, "to four-and-twenty saucepans;" the selling price for the fish-kettles is 5*s.* and 3*s.* 6*d.* each; candlesticks are sold at 4*d.* to 1*s.*; and shaving-pots, 4*d.* A few tin things used to be sold at the mews, but the trade is now almost entirely abandoned. These were tins for singeing horses, 2*s.* 6*d.* each when first introduced, ten or twelve years ago, but now 1*s.*, and stable lanterns, of punched tin, which cannot be sold now for more than 1*s.* each, though they cost 10*s.* per dozen at a tin-shop.

There are other tin articles vended in the streets, but they will be more properly detailed in my account of street-artisans, as the maker and the street-seller are the same individual. Among these are Dutch ovens, which are rarely offered now by those who purchase their goods at the tin-shops, as the charge there is 6*d.* "Why," said a working tinman to me, "I've had 10*d.* many a week for making ovens, and the stuff found. It takes two plates of tin to make an oven, that's 3*d.* at any tin-shop, before a minute's labour is given to it, and yet the men who hawk their own goods sell their ovens regularly enough at 4*d.* It's the ruin of the trade." The tin-shops, I may observe, supply the artisans with the materials they require, as well as the ready-made articles, to the street-seller.

One of the largest street-stands "in tin" is in St. John-street, Clerkenwell, on Saturday evenings, but the proprietor pertains to the artisan class, though he buys some of his goods at the tin-shops.

The hand-sellers of tin are about 100 in number, and 60 of that number may be said to be wives and children of the remaining 40; as the majority of the itinerant vendors of tinware are married men with families. "Tins" are not a heavy carriage, and can very well be borne from house to house by women, while children sell such things as nutmeg-graters, pepper-boxes, extinguishers, and save-alls. Those who sell the larger tin articles in the streets are generally the makers of them. "A dozen years back or more, perhaps, there was," I was informed, "some prime block-tin tea-pots sold in the streets; there's none now. Metal's druv out tin."

Among the street tin-sellers I heard many complaints of the smallness, and the constantly diminishing rate of their earnings. "Our people has bad luck, too," said one man, "or they isn't wide awake. You may remember, sir, that a few weeks back, a new save-all came in, and was called candle-wedges, and went off well. It was a tin thing, and ought by rights to have been started by the tin-shops for us. But it was first put out by the

swag-men at 3*s.* the gross. The first and second days the men were soon sold out. Them as could patter tidy did the best—I tried, but you see, sir, I'm no scholar. Well, they went at night to Mr. ——'s, in Houndsditch, I think it is, and he says, 'I'm out of them, but I'll have some in the morning.' They goes in the morning, and the swag says: 'O, I can't afford 'em at three shillings, you can have 'em at four.' He put 1*s.* exter on the gross, cause they sold, nothing else, sir; and a relation of mine heard the swag shopkeeper say, 'Why, they're cheap at four; Jim (the street-seller) there made 3*s.* 3*d.* on 'em yesterday. I ain't a going to slave, and pay rent, and rates, and taxes, to make *your* fortens; it ain't likely.' You see, sir, they was sold at ½*d.* each, and cost ¼*d.*, which is 3*d.* a dozen, and so the swag got a higher profit, while the poor fellows had to sell for less profit."

From the most reliable information which I could acquire, it appears that these tin-sellers, taken altogether, do not earn above 6*s.* a week each, as regards the adult men, and half that as regards the children and women. To realize this amount, the adults must take 13*s.*, and the women and children 7*s.*, for the latter are less "priced down." Thus, if we calculate an average receipt, per individual, of 10*s.* weekly, reckoning 100 sellers, we find a yearly expenditure on tins, bought in the street, of 2500*l.* The trade is greatest in the suburbs, and some men, who have become "known on their rounds," supply houses, by order, with all the tins they require.

There is a branch of the tin-trade carried on in a way which I have shown prevailed occasionally among the costermongers, viz., the selling of goods on commission. This system is now carried on among all the parties who trade "from" swag-barrows.

The word "*swag*" which has been so often used in this work of late, is, like many other of the street-terms, of Scotch origin (as *handseller*, and *busker*). The Scotch word is *sweg* or *swack*, and means, according to Jamieson, a quantity, a considerable number, a large collection of any kind. (The root appears to be an ancient German term, *sweig*—a flock, a herd.) Hence a Swag Warehouse is a warehouse containing a large collection of miscellaneous goods; and a Swag Barrow, a barrow laden with a considerable assortment of articles. The slang term *swag* means booty, plunder—that is to say, the collection of goods—the "lot," the "heap" stolen.

Of these swag-barrowmen, there are not less than 150, and the barrows are mostly the property of three individuals, who are not street-sellers themselves. One of these men has 50 barrows of his own, and employs 50 men to work them. The barrow proprietor supplies not only the vehicle, but the stock, and the men's remuneration is 3*d.* in the 1*s.* on the amount of sales. Each article they sell is charged to the public 1*d.* The tin-wares of the swag-barrows are nutmeg-graters, bread-graters, beer-warmers, fish-slices, goblets, mugs, save-alls, extinguishers, candle-shades, money-boxes, children's plates, and rattles. In addition to the tin-wares, the swag-barrows are stocked with brooches, rings, pot-ornaments, plates, small crockeryware, toys, &c., each article being also vended at 1*d.* The trade is so far stationary, that the men generally confine themselves to one neighbourhood, if not to one street. The majority of the swag-barrowmen have been costermongers, and nearly the whole have been engaged in street avocations all their lives. One man familiar with the trade thought I might state that the whole were of this description; for though there was lately a swag-barrowman who had been a tradesman in an extensive way, there was, he believed, no such exception at the present time. These barrowmen are nearly all uneducated, and are plodding and persevering men, though they make few exertions to better their condition. As the barrow and stock are supplied to them, without any outlay on their part, their faculties are not even sharpened, as among many of the costermongers, by the necessity of providing stock-money, and knowing how to bargain and buy to advantage. They have merely to sell. Their commission furnishes little or nothing more than the means of a bare subsistence. The great sale is on Saturday nights at the street-markets, and to the working people, who then crowd those places, and, as one said to me, "has a few pennies to lay out." At such times as much as 3*l.* has been taken by a swag-barrowman. During the other days of the week their earnings are small. It is considered a first-rate week, and there must be all the facilities for street-trade afforded by fine weather, to take 2*s.* a day (clearing 6*d*), and 3*l.* on a Saturday night. This gives the swag-barrowman a commission of 18*s.*; but I am informed, by competent persons, that the average of the weekly profits of these street-traders does not exceed 10*s.* a week. This shows a yearly receipt, by the men working the barrows, of 3900*l.* as their profit or payment, and a gross receipt of 11,700*l.* Of this large amount nearly two-thirds, I am assured, is expended on tin-wares.

The prime cost, at the tin-shops, of these wares, to the barrow proprietors, are 7*s.* and 7*s.* 6*d.* the gross, leaving from 1½*d.* to 2*d.* profit on every shilling, over the 3*d.* commission paid to the salesman. The tins are all made in London. The jewellery, and other stock of the swag-barrows, are bought at the general swag-shops, of which I have before spoken.

Of the Life of a Tin-Ware Seller.

The following street-biography was communicated to me in writing. It is, I believe, a striking instance of the vicissitudes and privations to which a street-life is subject. It forms, moreover, a curious example of those moral contradictions which make the same individual at one time give way *hopelessly* to the force of circumstances, and at another resolutely control them.

"My object," says my correspondent, "for writing this, what some folks no doubt will call a nonsensical epistle, is merely to show how much human nature is capable of enduring in the shape of privations. People in easy circumstances will

scarcely credit what I am about to relate; and many of the poor will smile at what I have termed hardships, and at my folly in endeavouring to paint the misery I have endured, which will appear slight when compared to what they themselves have suffered.

"I am the son of a mechanic who was accidentally drowned some weeks previous to my birth. My mother, through industry and perseverance, endeavoured to support me and my sister till we arrived at the ages of 15 and 18, I being the younger. I entered a gentleman's service as pantry-boy, where I continued until I considered myself competent to take a higher situation. Still a servant's life was not the bent of my inclinations; martial music and viewing soldiers on parade made me think that a rifle was a more graceful tool than a toasting-fork. I resolved to serve his Majesty, and for that purpose enlisted in the 60th Rifles on the route for India, but Providence ordained it otherwise. On the afternoon on which I 'listed I fell by accident and broke my leg, and as I was not sworn in I was entitled to no pension. I was six months confined to my bed, and it was three years before I could go without my crutch. Grief for my misfortunes had borne my mother to an early grave, and I was left a cripple and destitute. Whether by design or accident I do not recollect, but I met with the lady (Lady M———) in whose service I first entered as pantry-boy; she took pity on my forlorn condition, and kindly invited me to her Mansion, where I remained until completely restored to health, but still crippled. After this I was employed painting and glazing, &c., and, considering myself competent to get my living in that line, I resolved to go to London—the theatre of all my misery to come, for I was disappointed. On reaching the metropolis my paint-brush was turned into a shovel, my paint-pot into a dust sieve, for I could only get employed by a man to work in a dust-yard at 10*s.* a week. From thence I went to a firm belonging to a friend at Beckenham, near Croydon, as working time-keeper, or foreman; but during a fair in that village I neglected to back the time, and being discharged was cast upon the world again with only 3*s.* in my pocket, which I eat and drank up, having no idea of street trading. Then came my trials; but having had sufficient food during the day, I did not feel much the effects of my first night in the streets. The next day I had no food, and towards dusk began bitterly to feel my situation; that night I slept, or rather lay, in an empty house. Towards noon of the next day I felt weak, and drank large quantities of water, for I had no particular desire for food. Passing by a shop where old clothes were offered for sale, I saw a man wretched in appearance disposing of an old vest for a few pence. I caught the malady and was instantly spoiled of my coat, having received in exchange for it 2*s.* and an old frock—such as are generally worn by waggoners or countrymen. I more than once smiled at my novel appearance. A penny loaf, a drink of water, and a threepenny lodging was the first assault upon my 2*s.* I regretted, however, the 3*d.* paid for my lodging, and determined not to risk another, for my bedfellows were so numerous, and of such teazing propensities, that they would not allow me to sleep; truly indeed is it said that 'poverty makes us acquainted with strange bedfellows.' At this time I formed an acquaintance with a man whose condition was similar to my own; he engaged to put me 'fly to a dodge' or two; an explanation from him was necessary to make me acquainted with the sense of his words, which I soon found simply meant artful manœuvres. One of these dodges was to snooze (a term for sleeping) in the Adelphi arches; I felt grateful for such a mark of disinterested friendship, and next day my friend and me fared sumptuously on the produce of my coat, and at night we repaired to the Arches in question, and there found a comfortable lodging in a hay-loft. I lay for some time, but did not sleep. I was several times addressed by my companion in an under tone, 'Are you asleep,' he whispered, 'ain't it a stunning dos?' (which means a good bed). I was not in a mood for conversation, and made no reply; to silence him completely I affected to snore, and this had the desired effect. For a few minutes he was quite quiet, and then he commenced with great caution to unlace my boots, with a view to stealing them. I perceived his object, and immediately left my lodging and companion. I felt grieved and disappointed at the loss of one in whom I placed all confidence; but this time wisdom was purchased cheaply, inasmuch as I suffered no loss except that my money might have lasted me a little longer. The remainder of that night I strayed about the Strand and Charing cross, after a drink of water; I took a seat on a curb surrounding the pump; many wretched beings came and seated themselves beside me, and a conversation ensued respecting their several destinations during the day. One proposed going to Hungerford-market to do a feed on decayed shrimps or other offal laying about the market; another proposed going to Covent-garden to do a 'tightener' of rotten oranges, to which I was humorously invited; I accepted the invitation, and proceeded with my new companion. I fared well; I filled my hat, took a seat, and made a most delicious breakfast. I remained strolling about the Garden all day, and towards evening was invited by my companions to a 'dos' in an open shed in Islington; this I declined, alleging that I had a lodging, but that night I slept amongst a heap of stones near the pillar at Charing-cross. I continued to attend the Garden for several weeks, subsisting entirely on the offal of that market. One day I took notice of a man there selling chestnut leaves; I enquired how he obtained them: he told me he plucked them from the trees without hindrance, and directed me to where I could obtain some. I went to a grove in the vicinity of Kilburn, and lay there all night. Next morning I found no leaves, so I returned disappointed to town, and on going through the market a woman employed me to carry a bushel of pears some little distance for her for a penny. I felt quite elevated in anticipation of

such a treat as a penny loaf, but alas! I fell down under the weight of the fruit and poverty; my employer, however, kindly gave me the penny, though some of her pears were injured, and I had not taken them half the required distance. With the money I purchased a loaf, and sat on a stone near the pump in Covent Garden and began my meal. Here I soon had a companion, who after rincing a lettuce at the pump, began to devour it. I shared my loaf with him. 'O God!' said he, 'what are we destined to suffer. I have escaped the bullets of the Carlists in Spain to die in the streets of London with hunger.' I felt an interest in the poor fellow, who I discovered in the course of conversation had been a gentleman's servant in his time; he assured me he had been living in the same way for several weeks as I myself had been. Towards night my companion asked me where I slept. I told him my different haunts, he told me I'd better go to the straw-yard with him; this was a place I had not yet heard of; it was the nightly refuge for the houseless poor. I accompanied him without hesitation; my confidence was not misplaced; I slept there several nights. Bread was distributed to us night and morning, and this was fortunate, for the Garden began to fail. In the course of conversation with some of the inmates of the Refuge, we found that we could obtain employment at stone-breaking; this we tried the next morning, and succeeded. We worked all day, and received 6*d.* each on leaving work. We then made up our minds to go to lodgings that we might have an opportunity of washing what were once shirts.

"Misery had not had that wasting influence on my companion as it had on me. I was at this time a complete skeleton; a puff of wind would cause me to stagger. I continued stone-breaking, but about noon of the third day I sunk exhausted on the heap of stones before me. Poverty had done its work, and I anticipated with pleasure approaching dissolution. I was assisted to my lodging by my companion, and went to bed. When the woman at the lodging-house discovered that I was ill, she ordered some of her domestics to dress me and put me in the street, alleging that she was under a penalty of 20*l.* were it discovered that she lodged a sick stranger. I was, therefore, cast into the street at 12 o'clock at night. My companion then gave me the 3*d.* he had earned that day to procure me a lodging if possible, and he slept in the streets the remainder of the night. I went to another lodging, concealing as much as possible my illness; my money was taken, and I was conducted to bed. I spent a wretched night, and next morning I was very bad. The landlady led me to the workhouse; I was admitted directly; had they detained me asking questions I should have sunk on the floor. My disorder was pronounced English cholera. I lay three weeks in a precarious state, but at the end of seven weeks was recovered sufficiently to walk about. I was then discharged; but on going towards the Abbey in Westminster I fainted, and on recovery found myself surrounded by a number of persons. I was advised to return to the house; I did so, and was admitted for a short time, after which I was again discharged, but I received out-door relief twice a week; and for some time a small portion of bread and cheese as well. *I had now lost not only all hope, but even desire of bettering my condition;* during these trials I made none acquainted with my privations, save those situated as I was. I now altered my condition as regards sleeping; I walked about during the night, and slept a portion of the day on a heap of sand near Westminster-bridge. I then remembered to have a poor relative in Kensington; I did not plead distress, but merely asked whether she knew where I might procure employment. I had a cup of tea, the first I had tasted since I was in the workhouse, a period of five weeks. Being asked some question by my relative, I could not help making reference to some of my sufferings. At this place I found a young man of whom I had had a previous acquaintance; I told him of my inability to procure a lodging, and he allowed me without the knowledge of his parents to sleep in the stable-loft; the bed was hard, but the coal sacks kept me warm. Here I had many opportunities of earning a few pence, and I began to regain my spirits. On one occasion, seeing a lad illtreated by a young man who was much his superior in size and strength, I interposed, and it may be conjectured in what manner. This circumstance procured me a friend, for, with the assistance of the lad I had protected, I was enabled to live tolerably well, and after a short while I got a situation at a coal-shed at 10*s.* a week. I continued in this place eighteen months, but, my master giving up the business, I was again cast on the world. I then began to think seriously of some way of living, and for the first time asked for the loan of 15*s.* With this I purchased a few articles of furniture, laid out 7*s.* 6*d.* for two hundred of oranges, with which I walked and hawked about two days, taking but 4*d.* during the time. I disposed of the remainder of my stock, wholesale, for 6*s.*; with this I purchased a small tin saucepan, a piece of marble slab, and commenced sugar-boiling. I retailed my manufacture in the streets. By dint of perseverance and economy I managed to live this way through the winter and a portion of the spring; but summer being now come, people needed none of my compounds to warm their mouths, so it was necessary for me to change my hand. What should I do? Thoughts came and vanished at their births. I recollected having seen a person selling rings at a penny each; I made up my mind to try the same. I laid out 5*s.* in a tray and stock; after arranging the goods to the best advantage I sallied into the streets. The glittering baubles took for a while, but when discoloured were useless. Having once a considerable stock of these soiled rings, I was prompted to begin "lot selling." After calculating the profits, I commenced selling in that line. As this continued for seven weeks I managed to get a living. The system then became general; every street in the metropolis contained a lot seller, so I was determined to change my hand. One day in the street I saw a

girl with a bundle of old umbrellas going towards a marine store shop; I asked if the umbrellas were for sale; she replied in the affirmative; the price she asked was 4*d.*; I became a purchaser. With these old umbrellas I commenced a new life. I bought some trifling tools necessary for repairing umbrellas, and, after viewing well the construction of the articles, I commenced operations. I succeeded, and in a little time could not only mend an old umbrella, but make a new one. This way of living I followed three years. In one of my walks through the streets crying old umbrellas to sell, I saw a street tinker repairing a saucepan; he seemed so very comfortable with his fire-pan before him, that I resolved from that moment to become a tinker, and for that purpose I bought a few tools, prepared a budget, and sallied into the streets with as much indifference as if I had been at the business since my birth. After a little practice I fancied I was fit for better things than mending old saucepans, and flattered myself that I was able to make a new one. This I resolved to attempt, and succeeded so well, that I at once abandoned the rainy-day system, and commenced manufacturing articles in tin-ware, such as are now sold in the streets, namely funnels, nutmeg-graters, penny mugs, extinguishers, slices, savealls, &c. I soon became known to the street-sellers and swag-shop proprietors. The prices I get are low, and I am deficient in some of the tools necessary to forward the work, with the required speed to procure returns adequate to my expenses; but thanks to the Lord I am better off than ever I expected to be, with the difference only of a somewhat shattered constitution. There are many at the present day suffering as I have done, and they may be found in and about the different markets of the metropolis."

Of the Street-sellers of Dog-Collars.

Of these street-traders there are now regularly twelve; one man counted to me fourteen, but two of these only sold dog-collars occasionally, when they could not get employment in their trade as journeymen brass-founders. Of the regular hands, one, two, and sometimes three sell only dog-collars (with the usual adjuncts of locks, and sometimes chains, and key-rings), but even these, when their stock-money avails, prefer uniting to the collars some other trifling article.

Two of the most profitable pitches for the sale of these articles are in the neighbourhood of the Old Swan Pier, off Thames-street, and at a corner of the Bank. Neither of these two traders confines his stock to dog-collars, though they constitute the most valuable portion of it. The one sells, in addition to his collars, key-rings, keys and chains, dog-whistles, stamps with letters engraved upon them, printer's type, in which any name or initials may be set up, shaving-brushes, trowser-straps, razors, and a few other light articles. The other sells little more than "dog" articles, with the addition of brass padlocks and small whips. But the minor commodities are frequently varied, according to the season and to the street-seller's opinion of what may "sell."

Some of these traders hang their wares against the rails of any public or other building in a good situation, where they can obtain leave. Others have stalls, with "a back," from the corners of which hang the strings of dog-collars, one linked within another. The manner in which one street-seller displays his wares is shown in the illustration before given. Of the whole number, half are either itinerant on a round, or walk up and down a thoroughfare and an adjacent street or two. "Dog-collars," said one man, "is no good at Saturday-night markets. People has said to me—for I was flat enough to try once—'Dogs! pooh, I 've hardly grub enough for the kids.' For all that, sir, some poor people has dogs, and is very fond of them too; ay, and I 've sold them collars, but seldom. I think it 's them as has no children has dogs."

The collars most in demand are brass. One man pointed out to me the merits of his stock, which he retailed from 6*d.* each (for the very small ones) to 3*s.*—for collars seemingly big enough for Pyrenean sheep dogs. Some of the street-sold collars have black and red rims and linings; others are of leather, often scarlet, stitched ornamentally over a sort of jointed iron or wire-work. A few are of strong compact steel chain-work; "but them 's more the fashion," said one seller, "for sporting dogs, like pointers and greyhounds, and is very seldom bought in the streets. It 's the pet dogs as is our best friends."

The dog-collar sellers have, as regards perhaps one-half, been connected in their youth with some mechanical occupation in metal manufacture. Four, I am told, are or were pensioners to a small amount, as soldiers or sailors.

Some further particulars of the business will be found in the following statement given me by a man in the trade. He was sickly-looking, seemed dispirited at first, but to recover his spirits as he conversed, and spoke with a provincial (I presume a Warwickshire or Staffordshire) accent.

"I served my time, sir; my relations put me—for my parents died when I was a boy—to a harness furniture maker, in Wa'sall (Walsal), who supplied Mr. Dixon, a saddler's ironmonger, in a good way. I had fair makings, and was well treated, and when I was out of my time I worked for another master, and I then found I could make my pad territs" (the round loops of the harness pad, through which the reins are passed), "my hooks, my buckles, my ornaments (some of 'em crests), as well as any man. I worked only in brass, never plated, but sometimes the body for plating, and mostly territs and hooks. Thinking I 'd better myself, I came to London. I was between five and six weeks before I got a stroke of work, and my money had gone. I found that London harness makers and coachmakers' names was put on Walsal-made goods, and 'London made' and 'town made' was put too. They might be as good, but they wasn't town made no more nor I am. I can't tell what I suffered, and felt, and thought, as at last I walked the streets. I was afraid to call at any brass-worker's—for I can do many sorts of brass work—I was so shabby. I called once at

Mr. A——'s, near Smithfield, and he, or his foreman perhaps it was, says to me, 'Give that tug-buckle a file.' I 'd had nothing to eat but an apple I found in the street that day, and my hand trembled, and so he told me that drunkards, with trembling hands, wouldn't do there. I was never a drinking man; and at that time hadn't tasted so much as beer for ten days. My landlady—I paid her 1*s*. a week for half a bed with a porter—trusted me my rent, 'cause I paid her when I had it; but I walked about, narvussed and trembling, and frightened at every sudden sound. No, sir, I 've stood looking over a bridge, but, though I may have thought of suicide, I never once had really a notion of it. I don't know how to tell it, but I felt stupified like, as much as miserable. *I felt I could do nothing.* Perhaps I shouldn't have had power of mind to drown myself if I'd made up my resolution; besides, it 's a dreadful wickedness. I always liked reading, and, before I was fairly beaten out, used to read at home, at shop-windows, and at book-stalls, as long as I dared, but latterly, when I was starving, I couldn't fix my mind to read anyhow. One night I met a Wa's'll friend, and he took me to his inn, and gave me a good beef-steak supper and some beer, and he got me a nice clean bed in the house. In the morning he gave me what did me most good of all, a good new shirt, and 5*s*. I got work two days after, and kept it near five years, with four masters, and married and saved 12*l*. We had no family to live, and my poor wife died in the cholera in 1849, and I buried her decently, thank God, for she was a good soul. When I thought the cholera was gone, I had it myself, and was ill long, and lost my work, and had the same sufferings as before, and was without soles to my shoes or a shirt to my back, 'till a gentleman I 'd worked for lent me 1*l*., and then I went into this trade, and pulled up a little. In six weeks I paid 15*s*. of my debt, and had my own time for the remaining 5*s*. Now I get an odd job with my master sometimes, and at others sell my collars, and chains, and key-rings, and locks, and such like. I 'm ashamed of the dog-collar locks; I can buy them at 2*d*. a dozen, or 1*s*. 6*d*. a gross; they 're sad rubbish. In two or three weeks sometimes, the wire hasp is worn through, just by the rattling of the collar, and the lock falls off. I make now, one way and another, about 10*s*. a week. My lodging 's 2*s*. a week for a bed-room—it 's a closet tho,' for my furniture all went. God's good, and I 'll see better days yet. I have sure promise of regular work, and then I can earn 30*s*. to 40*s*. I do best with my collars about the docks. I 'm sure I don't know why."

I am told that each of the street-sellers of dog-collars sell on the average a dozen a week, at a medium receipt of 12*s*. ("sometimes 20*s*., and sometimes 6*s*."), though some will sell three and even four dozen collars in the week. Any regular dog-collar seller will undertake to get a name engraved upon it at 1*d*. a letter. The goods are bought at a swag-shop, or an establishment carried on in the same way. The retailer's profit is 35 per cent.

Reckoning 12*s*. weekly taken by twelve men, we find 374*l*. expended yearly in the streets in dog-collars.

OF THE LIFE OF A STREET-SELLER OF DOG-COLLARS.

FROM the well-known vendor of these articles whose portrait was given in No. 10 of this work, I had the following sketch of his history:—

"I was born in Brewer-street, St. James," he said, in answer to my questions; "I am 73 years of age. My father and mother were poor people; I never went to school; my father died while I was young; my mother used to go out charing; she couldn't afford to pay for schooling, and told me, I must look out and *yearn* my own living while I was a mere chick. At ten years of age I went to sea in the merchant sarvice. While I was in the merchant sarvice, I could get good wages, for I soon knowed my duty. I was always of an industrious turn, and never liked to be idle; don't you see what I mean. In '97 I was pressed on board the INCONSTANT frigate; I was paid off six months arterwards, but hadn't much to take, and that, like all other young men who hadn't larned the dodges of life, I spent very soon; but I never got drunk—thank God!" said the old man, "I never got drunk, or I shouldn't ha been what I am now at 73 years of age. I was drafted into the Woolwich 44-gun ship; from her to the OVERISAL." I inquired how the name of the ship was spelt; "Oh I am not scholard enough for that there," he replied, "tho' I did larn to read and write when abord a man of war. I larned myself. But you must look into a *Dutch dictionary*, for it's a Dutch name. I then entered on board the AMPHINE frigate, and arter I had sarved some months in her, I entered the merchant sarvice again, and arter that I went to Greenland to the whale-fishery—they calls me here in the college" (he is now an inmate of Greenwich Hospital) "'*Whaler Ben*,' but I arnt affronted—most on 'em here have nicknames. I went three voyages besides to the West Ingees. I never got drunk even there, though I was obliged to drink rum; it wouldn't ha done to ha drunk the water NEAT, there was so many insects in it. When my sailor's life was over I comes to Liverpool and marries a wife—aye and as good a wife as any poor man ever had in England. I had saved a goodish bit o' money, nearly 300*l*., for I was not so foolish as some of the poor sailors, who yearns their money like horses and spends it like asses, I say. Well we sets up a shop—a chandler shop—in Liverpool: me and my old 'ooman does; and I also entered into the pig-dealing line. I used to get some of my pigs from Ireland, and some I used to breed myself, but I was very misfortunate. You recollect the year when the disease was among the cattle, in course you recollects that; well, sir, I lost 24 pigs and a horse in one year, and that was a good loss for a poor man, wer'n't it? I thought it werry hard, for I 'd worked hard for my money at sea, and I was always werry careful, arter I knowed what life was. My poor wife too used to trust a good deal in the shop, and by-and-

Original from HARVARD UNIVERSITY

by, behold you, me and my old 'ooman was on our beam ends. My wife was took ill too—and, for the purpose of getting the best adwice, I brings her to London, but her cable had run out, and she died, and I 've been a poor forlorned creatur' ever since. You wouldn't think it, but arter that I never slept on a bed for seven years. I had blankets and my clothes—but what I means is that I never had a bed to lie on. I sold most of my bits o' things to bury my wife. I didn't relish applying to the parish. I kept a few sticks tho', for I don't like them ere lodging-houses. I can't be a werry bad kerackter, for I was seven years under one landlord, and I warrant me if I wanted a room agin he would let me have one. Arter my wife died, knowing some'at about ropes I gets work at Maberley's, the great contractors—in course you knows *him*. I made rope traces for the artillery; there's a good deal of leather-work about the traces, and stitching them, you see, puts me up to the making of dogs'-collars. I was always handy with my fingers, and can make shoes or anythink. I can work now as well as ever I could in my life, only my eyes isn't so good. Ain't it curious now, sir, that wot a man larns in his fingers he never forgets? Well being out o' work, I was knocking about for some time, and then I was adwised to apply for a board to carry at one of them cheap tailors, but I didn't get none; so I takes to hawking link buttons and key rings, and buys some brass dog-collars; it was them brass collars as made me bethought myself as I could make some leather ones. Altho' I had been better off I didn't think it any disgrace to get a honest living. The leather collars is harder to make than the brass ones, only the brass ones wants more implements. There are about a dozen selling in the streets as makes brass-collars—there 's not much profit on the brass ones. People says there 's nothing like leather, and I thinks they are right. Well, sir, as I was a telling you, I commences the leather-collar making,—in course I didn't make 'em as well at first as I do now. It was werry hard lines at the best of times. I used to get up at 4 o'clock in the morning in the summer time, and make my collars; then I 'd turn out about 9, and keep out until 7 or 8 at night. I seldom took more than 2*s*. per day. What profit did I get out of 2*s*.? Why, lor' bless you, sir! if I hadn't made them myself, I shouldn't have got no profit at all. But as it was, if I took 2*s*., the profits was from 1*s*. to 1*s*. 6*d*.; howsomever, sometimes I didn't take 6*d*. Wet days too used to run me aground altogether; my rheumatics used to bore me always when the rain come down, and then I couldn't get out to sell. If I 'd any leather at them times I used to make it up; but if I hadn't none, why I was obligated to make the best on it. Oh, sir! you little knows what I 've suffered; many a banyan day I 've had in my little room—upon a wet day—aye, and other days too. Why, I think I 'd a starved if it hadn't a been for the 'bus-men about Hungerford-market. They are good lads them there 'bus lads to such as me; they used to buy my collars when they didn't want them. Ask any on 'em if they know anything about old Tom, the collar-maker, and see if they don't flare up and respect me. They used sometimes to raffle my collars and give 'em back to me. Mr. Longstaff too, the landlord of the Hungerford Arms—I believe it 's called the Hungerford Hotel—has given me something to eat very often when I was hungry, and had nothing myself. There 's what you call a hor'nary there every day. You knows what I mean—gentlemen has their grub there at so much a head, or so much a belly it should be, I says. I used to come in for the scraps, and werry thankful I was for them I can assure you. Yes, Mr. Longstaff is what you may call a good man. He 's what you calls a odd man, and a odd man 's always a good man. All I got to say is, 'God bless him!' he 's fed me many time when I 've been hungry. I used to light upon other friends too,—landlords of public-houses, where I used to hawk my collars; they seemed to take to me somehow; it wer'n't for what I spent in their houses I'm sure, seeing as how I 'd nothing to spend. I had no pension for my sarvice, and so I was adwised to apply for admission to 'the house here' (Greenwich Hospital). I goes to Somerset-House; another poor fellow was making a application at the same time; but I didn't nothing till one very cold day, when I was standing quite miserable like with my collars. I 'd been out several hours and hadn't taken a penny, when up comes the man as wanted to get into the house, running with all his might to me. I thought he was going to tell me he had got into the house, and I was glad on it, for, poor fellow, he was werry bad off; howsomever he says to me, 'Tom,' says he, 'they wants you at the Admirality.' 'Does they?' says I, and 'cordingly away I goes; and arter telling the admiral my sarvice, and answering a good many questions as he put to me, the admiral says, says he, 'The order will be made out; you shall go into the house.' I think the admiral knowed me or somethink about me, you see. I don't know his name, and it would'nt ha' done to have axed. God bless him, whoever he is, I says, and shall say to my dying day; it seemed like Providence. I hadn't taken a ha'penny all that day; I was cold and hungry, and suffering great pain from my rheumatics. Thank God," exclaimed the old man in conclusion, "I am quite comfortable now. I 've everythink I want except a little more tea and shuggar, but I 'm quite content, and thank God for all his merçies."

The old man informed me moreover that he did not think there were more than half-a-dozen street-sellers besides himself who made leather collars; it was a poor trade, he said, and though the other makers were younger than he was, he "could lick them all at stitching." He did not believe, he told me, that any of the collar-sellers sold more than he did—if as many—for he had friends that perhaps other men had not. He makes collars now sometimes, and wishes he could get some shopkeeper to sell them for him, and then maybe, he says, he could obtain a little more tea and shuggar, and assist a sister-in-law of his whom he tells me is in great distress, and whom he has been

in the habit of assisting for many years, notwithstanding his poverty. The old man, during the recital of his troubles, was affected to tears several times—especially when he spoke of his wife, and the distress he had undergone—and with much sincerity blessed God for the comforts that he now enjoys.

Of the Street-Sellers of Tools.

These people are of the same class as the sellers of hardware articles, though so far a distinct body that they generally sell tools only.

The tools are of the commonest kind, and supplied by the cheapest swag-shops, from which establishments the majority of the street-traders derive their supplies. They are sometimes displayed on a small barrow, sometimes on a stall, and are mostly German-made.

The articles sold and the price asked—and generally obtained, as no extravagant profit is demanded—is shown by the following :—

Claw hammers, 6*d*. Large claw, black and glaze-faced, 1*s*. Pincers, 4*d*.; larger ones, 6*d*. Screw-drivers, from 2*d*. to 1*s*.! Flat-nose pliers, 6*d*. a pair; squares, 6*d*. to 1*s*. Carpenters' oil-cans, from 9*d*. to 1*s*. 3*d*. Nests of brad-awls (for joiners, and in wooden cases), 6*d*. to 2*s*. Back saws, 1*s*. to 2*s*. 6*d*.

While many of the street-sellers of tools travel the several thoroughfares and suburbs of the metropolis, others vend tools of a particular kind in particular localities. These localities and sellers may be divided into four distinct classes:—(1) The street-sellers of tools in the markets; (2) The street-sellers of tools at the docks and warehouses; (3) The street-sellers of tools at mews, stable-yards, and job-masters'; and (4) The street-sellers of tools to working men at their workshops.

The markets which are usually frequented by the vendors of tools are Newgate and Leadenhall. There are, I am informed, only five or six street-sellers who at present frequent these markets on the busy days. The articles in which they deal are butchers' saws, cleavers, steels, meat-hooks, and knives; these saws they sell from 2*s*. to 4*s*. each; knives and steels, from 9*d*. to 1*s*. 3*d*. each; cleavers, from 1*s*. 6*d*. to 2*s*. each; and meat-hooks at 1*d*., 2*d*., and 3*d*. each, according to the size. It is very seldom, however, that cleavers are sold by the street-sellers, as they are too heavy to carry about. I am told that the trade of the tool-sellers in Newgate and Leadenhall markets is now very indifferent, owing chiefly to the butchers having been so frequently imposed upon by the street-sellers, that they are either indisposed or afraid to deal with them. When the itinerant tool-sellers are not occupied at the markets they vend their wares to tradesmen at private shops, but often without success. "It is a poor living," said one of the hawkers to me; "sometimes little better than starving. I have gone out a whole day and haven't taken a farthing." I am informed that the greater portion of these street-sellers are broken-down butchers. The tools they vend are purchased at the Brummagem warehouses. To start in this branch of the street-business 5*s*. or 10*s*. usually constitutes the amount of capital invested in stock, and the average takings of each are about 2*s*. or 2*s*. 6*d*. a day.

"A dozen years back twenty such men offered saws at my shop," said a butcher in a northern suburb to me; "now there's only one, and he seems half-starving, poor fellow, and looks very hungrily at the meat. Perhaps it's a way he's got to have a bit given him, as it is sometimes."

The only street-seller of tools at present frequenting Billingsgate-market is an elderly man, who is by trade a working cutler. The articles he displays upon his tray are oyster-knives, fish-knives, steels, scissors, packing-needles, and hammers. This tradesman makes his own oyster-knives and fish-knives; the scissors and hammers are second-hand; and the packing-needles are bought at the ironmongers. Sometimes brad-awls, gimlets, nails, and screws form a part of his stock. He informed me that he had frequented Billingsgate-market upwards of ten years. "Wet or dry," he said, "I am here, and I often suffer from rheumatics in the head and limbs. Sometimes I have taken only a few pence; on other occasions I have taken 3*s*. or 4*s*., but this is not very often. However, what with the little I take at Billingsgate, and at other places, I can just get a crust, and go on from day to day."

The itinerant saw-sellers offer their goods to any one in the street as well as at the shops, and are at the street markets on Saturday evenings with small saws for use in cookery. With the butchers they generally barter rather than sell, taking any old saw in exchange with so much money, for a new one. "I was brought up a butcher," said one of these saw-sellers, "and worked as a journeyman, off and on, between twenty and thirty year. But I grew werry delicate from rheumaticks, and my old 'ooman was bad too, so that we once had to go into Marylebone work 'us. I had no family living, perhaps they 're better as it is. We discharged ourselves after a time, and they gave us 5*s*. I then thought I 'd try and sell a few saws and things. A master-butcher that 's been a friend to me, lent me another 5*s*., and I asked a man as sold saws to butchers to put me in the way of it, and he took me to a swag-shop. I do werry badly, sir, but I 'll not deny, and I can't deny—not anyhow—when you tell me Mr. —— told you about me—that there 's 'elps to me. If I make a bargain, for so much; or for old saws or cleavers, or any old butcher thing, and so much; a man wot knows me says, 'Well, old boy, you don't look satisfied; here 's a bit of steak for you.' Sometimes it 's a cut off a scrag of mutton, or weal; that gives the old 'ooman and me a good nourishing bit of grub. I can work at times, and every Saturday a'most I'm now a porter to a butcher. I carries his meat from Newgate, when he 's killed hisself, and wants no more than a man's weight from the market; and when he 'asn't killed hisself in course he hires a cart. I makes 1*s*. a day the year round, I think, on saws, and my old 'ooman makes more than 'arf as much at charing, and there 's the 'elps, and then I gets 18*d*. and my

Original from HARVARD UNIVERSITY

grub every Saturday. It 's no use grumbling; lots isn't grubbed 'arf so well as me and my old 'ooman. My rent 's 20*d.* a week."

The articles vended by the second class of the street-sellers of tools, or those whose purchasers are mostly connected with the docks and warehouses, consist of iron-handled claw-hammers, spanners, bed-keys, and corkscrews. Of these street-traders there are ten or twelve, and the greater portion of them are blacksmiths out of employ. Some make their own hammers, whereas others purchase the articles they vend at the swag-shops. "We sell more hammers and bed-keys than other things," said one, "and sometimes we sells a corkscrew to the landlord of a public-house, and then we have perhaps half-a-pint of beer. Our principal customers for spanners are wheelwrights. Those for hammers are egg-merchants, oilmen, wax and tallow-chandlers, and other tradesmen who receive or send out goods in wooden cases; as well as chance customers in the streets." The amount of capital required to start in the line is from 5*s.* to 15*s.*: "it is not much use," said one, "to go to shop with less than 10*s.*"

A third class of the street-sellers of tools are the vendors of curry-combs and brushes, mane-combs, scrapers, and clipping instruments; and these articles are usually sold at the several mews, stable-yards, and jobbing-masters' in and about the metropolis. The sellers are mostly broken-down grooms, who, not being able to obtain a situation, resort to street-selling as a last shift. "It is the last coach, when a man takes to this kind of living," said one of my informants, a groom in a "good place;" "and it 's getting worse and worse. The poor fellows look half-starved. Why, what do you think I gave for these scissors? I got 'em for 6*d.* and a pint of beer, and I should have to give perhaps half-a-crown for 'em at a shop." The trade is fast declining, and to gentlemen's carriage mews the street-sellers of such tools rarely resort, as the instruments required for stable-use are now bought, by the coachmen, of the tradesmen who supply their masters. At the "mixed mews," as I heard them called, there are two men who, along with razors, knives, and other things, occasionally offer "clipping" and "trimming" scissors. Four or five years ago there were four of these street-sellers. The trimming-scissors are, in the shops, 1*s.* 6*d.* to 2*s.* 6*d.* a pair. There is one trade still carried on in these places, although it is diminutive compared to what it was: I allude to the sale of curry-combs. Those vended by street-sellers at the mews are sold at 7*d.* or 6*d.* The best sale for these curry-combs is about Coventry-street and the Haymarket, and at the livery-stables generally. Along with curry-combs, the street-vendors sell wash-leathers, mane-combs (horn), sponges (which were like dried moss for awhile, I was told, got up by the Jews, but which are now good), dandy-brushes (whalebone-brushes, to scrape dirt from a horse's legs, before he is groomed), spoke-brushes (to clean carriage-wheels), and coach-mops. One dweller in a large West-end mews computed that 100 different street-traders resorted thither daily, and that twenty sold the articles I have specified. In this trade, I am assured, there are no broken-down coachmen or grooms, only the regular street-sellers. A commoner curry-comb is sold at 2*d.* (prime cost 1*s.* 3*d.* a dozen), at Smithfield, on market-days, and to the carmen, and the owners of the rougher sort of horses; but this trade is not extensive.

There may be ten men, I am told, selling common "currys;" and they also sell other articles (often horse oil-cloths and nose-bags) along with them.

The last class of street-sellers is the beaten-out mechanic or workman, who, through blindness, age, or infirmities, is driven to obtain a livelihood by supplying his particular craft with their various implements. Of this class, as I have before stated, there are six men in London who were brought up as tailors, but are now, through some affliction or privation, incapacitated from following their calling. These men sell needles at four and five for 1*d.*; thimbles 1*d.* to 2*d.* each; scissors from 1*s.* to 2*s.* 6*d.*; and wax 1*d.* the lump. There are also old and blind shoemakers, who sell a few articles of grindery to their shopmates, as they term them, as well as a few decayed members of other trades, hawking the implements of the handicraft to which they formerly belonged. But as I have already given a long account of one of this class, under the head of the blind needle-seller, there is no occasion for me to speak further on the subject.

From one of the street-traders in saws I had the following account of his struggles, as well as the benefit he received from teetotalism, of which he spoke very warmly. His room was on the fourth floor of a house in a court near Holborn, and was clean and comfortable-looking. There were good-sized pictures, in frames, of the Queen, the Last Supper, and a Rural Scene, besides minor pictures: some of these had been received in exchange for saws with street-picture-sellers. A shelf was covered with china ornaments, such as are sold in the streets; the table had its oil-skin cover, and altogether I have seldom seen a more decent room. The rent, unfurnished, was 2*s.* a week.

"I 've been eight years in this trade, sir," the saw-seller said, "but I was brought up to a very different one. When a lad I worked in a coal-pit along with my father, but his behaviour to me was so cruel, he beat me so, that I ran away, and walked every step from the north of England to London. I can't say I ever repented running away—much as I 've gone through. My money was soon gone when I got to London, and my way of speaking was laughed at. [He had now very little of a provincial accent.] That 's fourteen year back. Why, indeed, sir, it puzzles me to tell you how I lived then when I did live. I jobbed about the markets, and slept, when I could pay for a lodging, at the cheap lodging-houses; so I got into the way of selling a few things in the streets, as I saw others do. I sold laces and children's handkerchiefs. Sometimes I was miserable enough when I hadn't a farthing, and if I managed to make a sixpence I got tipsy on it. For six weeks I slept every night in the Peckham Union. For another five or six weeks I slept every

night in the dark arches by the Strand. I've sometimes had twenty or thirty companions there. I used to lie down on the bare stones, and was asleep in a minute, and slept like a top all night, but waking was very bad. I felt stiff, and sore, and cold, and miserable. How I lived at all is a wonder to me. About eleven years ago I was persuaded to go to a Temperance Meeting in Harp Alley (Farringdon-street), and there I signed the pledge; that is, I made my mark, for I can't read or write, which has been a great hinder to me. If I'd been a scholard a teetotal gent would have got me into the police three years ago, about the time I got married. I did better, of course, when I was a teetotaller—no more dark arches. I sold a few little shawls in the streets then, but it was hardly bread and butter and coffee at times. Eight year ago I thought I would try saw-selling: a shopkeeper advised me, and I began on six salt saws, which I sold to oilmen. They're for cutting salt only, and are made of zinc, as steel would rust and dirty the salt. The trade was far better at first than it is now. In good weeks I earned 16*s.* to 18*s.* In bad weeks 10*s.* or 12*s.* Now I may earn 10*s.*, not more, a week, pretty regular: yesterday I made only 6*d.* Oilmen are better customers than chance street-buyers, for I'm known to them. There's only one man besides myself selling nothing but saws. I walk, I believe, 100 miles every week, and that I couldn't do, I know, if I wasn't teetotal. I never long for a taste of liquor if I'm ever so cold or tired. It's all poisonous."

The saws sold are 8 inch, which cost at the swag-shops 8*s.* and 8*s.* 6*d.* a dozen; 10 inch, 9*s.* and 9*s.* 6*d.*; and so on, the price advancing according to the increased size, to 18 inch, 13*s.* 6*d.* the dozen. Larger sizes are seldom sold in the streets. The second man's earnings, my informant believed, were the same as his own.

The wife of my informant, when she got work as an embroideress, could earn 11*s.* and 12*s.* At present she was at work braiding dresses for a dressmaker, at 2½*d.* each. By hard work, and if she had not her baby to attend to, she could earn no more than 7½*d.* a day. As it was she did not earn 6*d.*

Of the Beggar Street-Sellers.

Under this head I include only such of the beggar street-sellers as are neither infirm nor suffering from any severe bodily affliction or privation. I am well aware that the aged—the blind—the lame and the halt often *pretend* to sell small articles in the street—such as boot-laces, tracts, cabbage-nets, lucifer-matches, kettle-holders, and the like; and that such matters are carried by them partly to keep clear of the law, and partly to evince a disposition to the public that they are willing to do something for their livelihood. But these being really objects of charity, they belong more properly to the second main division of this book, in which the poor, or those that can't work, and their several means of living, will be treated of.

Such, though beggars, are not "lurkers"—a lurker being strictly one who loiters about for some dishonest purpose. Many modes of thieving as well as begging are termed "lurking"—the "dead lurk," for instance, is the expressive slang phrase for the art of entering dwelling-houses during divine service. The term "lurk," however, is mostly applied to the several modes of plundering by representations of sham distress.

It is of these alone that I purpose here treating—or rather of that portion of them which pretends to deal in manufactured articles.

In a few instances the street-sellers of small articles of utility are also the manufacturers. Many, however, *say* they are the producers of the things they offer for sale, thinking thus to evade the necessity of having a hawker's licence. The majority of these petty dealers know little of the manufacture of the goods they vend, being mere tradesmen. Some few profess to be the makers of their commodities, solely with the view of enlisting sympathy, and thus either selling the trifles they carry at an enormous profit, or else of obtaining alms.

An inmate of one of the low lodging-houses has supplied me with the following statement:—"Within my recollection," says my informant, "the great branch of trade among these worthies, was the sale of sewing cotton, either in skeins or on reels. In the former case, the article cost the 'lurkers' about 8*d.* per pound; one pound would produce thirty skeins, which, sold at one penny each, or two for three halfpence, produced a heavy profit. The lurkers could mostly dispose of three pounds per day; the article was, of course, damaged, rotten, and worthless.

"The mode of sale consisted in the 'lurkers' calling at the several houses in a particular district, and representing themselves as Manchester cotton spinners out of employ. Long tales, of course, were told of the distresses of the operatives, and of the oppression of their employers; these tales had for the most part been taught them at the padding-ken, by some old and experienced dodger of 'the school;' and if the spokesman could patter well, a much larger sum was frequently obtained in direct alms than was reaped by the sale."

Cotton on reels was—except to the purchaser—a still better speculation; the reels were large, handsomely mounted, and displayed in bold relief such inscriptions as the following:—

PIKE'S
PATENT COTTON.
120 Yards.

The reader, however, must divide the "120 yards," here mentioned, by 12, and then he will arrive at something like the true secret as to the quantity; for the surface only was covered by the thread.

"The 'cotton Lurk' is now 'cooper'd' (worn out); a more common dodge—and, of course, only an excuse for begging—is to envelope a packet of 'warranted' needles, or a few inches of 'real Honiton lace' in an envelope, with a few lines to the 'Lady of the House,' or a printed bill, setting forth the misery of the manufacturers, and the intention of the parties leaving the 'fakement' to presume to call for an answer in a few hours. I subjoin a copy of one of these documents.

'*THE LACE-MAKERS' APPEAL.*

'It is with extreme regret we thus presume to trespass on your time and attention, we are Lace Makers by trade, and owing to the extensive improvements in Machinery, it has made hand labour completely useless.

'So that it has thrown hundreds of honest and industrious men out of employment, your petitioners are among the number. Fifteen men with their families have left their homes with the intention of emigrating to South Australia, and the only means we have of supporting ourselves till we can get away, is by the sale of some Frame Thread and Traced Lace Collars of our own manufacture, at the following low prices—Fashionable Frame Lace Collars 3d. each, warranted to wash and wear well; Frame Thread Collars 6d. each, Traced Lace Collars 1s. each, the best that can be made, and we trust we shall meet with that encouragement from the Friends of Industry which our necessities require.

'The enclosed two 6d.

'The patry calling for this, will have an assortment of the Newest Patterns of Frame Thread Lace and Edgings for your inspection, and the smallest purchase will be thankfully received and gratefully remembered by G. DAVIS, Lace Makers.

'We beg to state that a number of the families being destitute of clothing, the bearer is authorised to receive any articles of such in exchange for Lace, Edgings or Collars.

' ALLEN, Printer, Long-row, Nottingham."

"These are left by one of 'the school' at the houses of the gentry, a mark being placed on the door post of such as are 'bone' or 'gammy,' in order to inform the rest of 'the school' where to call, and what houses to avoid. As the needles cost but a few pence per thousand, and the lace less than one halfpenny per yard—a few purchasers of the former at 1*s.* per packet (25 needles), or of the latter at 2*s.* 6*d.* per yard, is what these 'lurkers' term a 'fair day's work for a fair day's wages.'

"Another and very extensive branch of the pseudo-'manufacturing' fraternity is to be found among the sham street-sellers of cutlery.

"At some of the least respectable of the swag-shops may be bought all the paraphernalia requisite in order to set up as the real manufacturer of Sheffield and 'Brummagem' goods—including, beside the cutlery, chamois-leather aprons, paper caps (ready crushed, to give them the appearance of age and usage), and last, but not least, a compound of black lead and tallow, to 'take the granny' off them as has white 'ands, so as the flat's shan't 'tumble' to the 'unworkmanlike appearance of the palms of the 'lurker.'

"Thus 'got up' for the part," continues my informant, "and provided with a case of razors, which perhaps has cost him two groats, and (if he can raise as much) a noggin o' rum to 'give him cheek' and make him 'speak up' to his victims—'Jack Beaver,' the 'king of the street-cutlers,' will sally forth, and meet, intercept, and follow any gentleman who seems a 'likely spec,' till worried perhaps by importunity, the 'swell' buys what he does not want, and, I need scarcely add, what he cannot use. Next, in importance, to 'Jack Beaver,' is the notorious 'Pat Connor.' Pat 'does nothing on the blob,' that is to say (he does not follow people and speak to them on the streets). His 'dodge'—and it has been for years a successful one—is to go round to the public offices, dressed as before described, with the exception of being in his shirt sleeves (he has every day a *clean* shirt), and teaze the clerks till they purchase a pen-knife. He has been known to sell from fifteen to twenty knives in one day, at two shillings each, the first cost being about threepence-halfpenny. Of course he is often interrupted by porters and other officials, but he always carries in one hand a roll of wire, and a small hammer in the other, and having got the name of some gentleman up stairs, he pretends that he is going to mend Mr. So-and-so's bell. This worthy, a short time ago, made free—in the Custom House—with a timepiece, belonging to one of the clerks, for which the 'Sheffield manufacturer' got twelve months in Newgate. I have not seen him since," adds my informant, "and therefore imagine that he is now taking a provincial tour."

Of the "House of Lords," a Street-Seller's Defunct Club.

I have given an account of a defunct club, of which the "paper workers" were the chief members; and I have now to do the same of a society not very dissimilar in its objects, of which the street-sellers of manufactured articles constituted the great majority. It was called the "house of lords," and was established about eight years ago, at the Roebuck-tavern, Holborn, and existed three years. Its object was to relieve its members in sickness. The subscription was 2*d.* a week, and the relief to a sick member was as many pennies a week as the club contained members, with, in any pressing case, an additional halfpenny, which the members paid into the fund, over and above their weekly subscription. For the greater part of its existence the club contained ninety members (a few of them honorary), and there were very few cases of "declaring on the fund" by sick members. At one period for many weeks there were no such declarations, and the "house of lords" had 30*l.* in hand. One of the leading members, a very intelligent man, who had "a good connection in hardware," had taken great pains to prepare a code of rules, which, having been approved by the other members, it was considered time that the "house of lords" should be enrolled. Delays, however, intervened. "To tell you the truth, sir," one of them said, "we were afraid to employ an attorney, and thought of waiting upon Mr. Tidd Pratt ourselves, but it wasn't to be."

The club was, moreover, looked upon as somewhat select. "No costers were admitted, sir," I was told by a hardware-seller in the streets;

"not but what there 's many very industrious and honest men among them, but they 're in a different line, and are a different sort of people to us." The members met once a week, and, though they were merry and talkative enough, drunkenness was strongly discouraged. It was common for the subscribers who were regarded as the "geniuses" of the trade, to take counsel together, and "invent any new move." They were reputed to be knowing among the most knowing, in all street arts and dodges, and the way in which the club came to an end, considering the strong claims to knowingness of its members, was curious enough.

One Saturday evening a member who was considered a respectable man, and was sufficiently regular in his payments, appeared at the weekly meeting, introducing his landlord, who, as a non-member, had to pay 1*d*. for admission. The man told how his family had suffered from illness, and how he had been ill, and got into arrears of rent, for he did not like to distress the fund; and how his landlord was then in possession of his "sticks," which must be sold in the morning if he could not pay 15*s*.; and, moreover, how his landlord—a very kind-hearted, indulgent man—was forced to do this, for he himself was in difficulties. The members voted that the 15*s*. should be advanced; but before the next meeting night it was discovered that the statement of the poor member in arrears was an imposition. The landlord was merely a confederate; the worthy couple had been drinking together, and, to prolong their tippling, had hit upon the roguish scheme I have mentioned.

This, among other things, lowered the confidence of the members. The numbers fell off until it was thought best to "wind up the concern." The small funds in hand were fairly apportioned among the remaining members, and the club ceased to exist.

Another Street-sellers' Club has recently been formed by the men themselves, of which the following is the prospectus, and it is to be hoped that this attempt on the part of the street-folk to better their condition will meet with a better fate than its predecessor:—

Our motto is "To live honestly by daily perseverance and industry."

Street Mechanics, Labourers, Hawkers, &c.

PROTECTION ASSOCIATION,

HELD AT THE LAMB TAVERN,

NEW TURNSTILE, HOLBORN,

Proprietor, Mr. White.

The above-named classes are kindly invited to attend a Meeting convened for

SUNDAY EVENING NEXT,

And every succeeding Sunday Evening, at the above house, to carry out the object unanimously agreed to by the Enrolled Members and the General Committee. Furthermore, to take into consideration the most appropriate means whereby we may be enabled to assist each other in the time of adversity.

COMMITTEE:

Mr. Taylor, Chairman,	Mr. Thoresby,
— Travers,	— Dowse,
— Cowan,	— Manly,
— Moody,	— Morris,
— Moore,	— Lawson,
— Hand,	— Lamb,
— Martin.	

Mr. J. White, Treasurer. Mr. F. A. Thoresby, Secretary.

The chair will be taken at Seven o'clock, and the Committee are requested to be in attendance one hour previous.

OF THE STREET-SELLERS OF CROCKERY AND GLASS-WARES.

WE now come to a new class of the street-sellers of manufactured articles—viz., the "crocks," as they are termed. I have before alluded to one characteristic of these traders—that they all strive to be barterers in preference to salesmen. They also present other varying qualities when compared with other classes of street-sellers. Of these "crocks," there are, from the best data I could obtain from men in the trade, and from the swag-shop people who supply them, 250 men and 150 women; of these, 120 couples (man and woman) "work" together; of the remainder, sometimes two men work in unison, and some women work singly. On my inquiring of one of these street folk if ever three worked together, I was told that such was never the case, as the "crocks" would quote a saying: "Two 's good company, three 's none at all." Of the men and women carrying on this traffic conjointly more than half are married; showing a difference of habits to the costermongers. The reason assigned to me by one of the class (himself once a costermonger) was that the interest of the man and woman in the business was closer than in costermongering, while the serviceableness of a woman helpmate in "swopping," or bartering, was much greater. This prompts the women, I am told, even if they are unmarried at the outset, to insist upon wedlock; and the man—sometimes, perhaps, to secure a valuable "help," at others, it may be, from better motives—consents to what in this rank of life, and under the circumstances of such street-traders, is more frequently the woman's offer than the man's. The trade, in its present form, has not been known more than twelve years.

The goods, which are all bought at the crock swag-shops, of which an account is given below, are carried in baskets on the head, the men having pads on the cloth caps which they wear—or sometimes a padding of hay or wool inside the cap—while the women's pads are worn outside their bonnets or caps, the bonnet being occasionally placed on the basket. The goods, though carried in baskets on the head to the locality of the traffic, are, whilst the traffic is going on, usually borne from house to house, or street to street, on the arm, or when in large baskets carried before them by the two hands. These baskets are strongly made; the principal mart is close to Spitalfields-market.

The men engaged in this trade are usually strong, robust, and red-faced. Most of them are above the middle stature; very few are beyond middle age, and the majority of them are under or little more than 30. The women, more than the men, have contracted a stoop or bend to one side, not so much by carrying weights on the head, as by carrying them on the arm. The weights they carry are from three to five stone. The dress of the men is the same as the costermongers, with the exception of shooting-cut jackets being more frequent among the "crocks" than the costers, and red plush waistcoats are very popular with them. When not at work, or on Sundays—for they never work on the Sabbath, though they do not go to church or chapel—these men are hardly ever seen to wear a hat. Both men and women wear strong boots and, unless when "hard-up," silk handkerchiefs. Their places of residence are, as regards the majority, in Spitalfields, Bethnal-green, and Shoreditch. Of the others the greater portion reside in the neighbourhood of Kent-street, in the Borough. Their abode usually consists of one room, which is in most cases more comfortable, and better furnished than those of the costers. "We pick up a tidy ornament now and then," one crock said, "such as a picture, in the way of swop, and our good women likes to keep them at home for a bit of show." They live well, in general, dining out almost every day; and I am told that, as a body, they have fewer children than any other class of street-folk.

The trade is almost entirely itinerant. Crock-sellers are to be seen at street-markets on Saturday nights, but they are not the regular crocks, who, as I have said, do not care to *sell*. The crocks go on "rounds," the great trade being in the suburbs. Sometimes a round lasts a week, the couple resting at a fresh place every night. Others have a round for each day of the week.

The long rounds are to Greenwich, Woolwich, Northfleet, Gravesend, Stroud, Rochester, Chatham, and then to Maidstone. Some will then make Maidstone the head-quarters, and work the neighbouring villages—such as East Farleigh, Town Malling, Yalding, Aylesford, and others. The return to town may be direct by railway, or by some other route, if any stock remains unsold. On these long rounds the higher priced goods are generally carried, and stock is forwarded from London to the "crock" whilst on the round, if the demand require it. Another long round is Vauxhall, Wandsworth, Kingston-on-Thames, and Guildford, with divergings to the villages. The return from Guildford is often by Richmond, Kew, &c. A third long round is Hampstead, Kilburn, Barnet, Watford, and so on to St. Alban's. The other long rounds are less frequented; but some go to Uxbridge; others to Windsor and Eton, and as far as Reading; others to Cambridge, by Tottenham, Edmonton, Ware, &c. When no trade is to be done close to London, the "crocks" often have themselves and their wares conveyed to any town by rail. The short, or town rounds, are the Dover-road, New Kent-road, Walworth, Camberwell, and back by Newington; Kennington, Brixton, Clapham, and back by Vauxhall; Bayswater, Notting-hill, and back by Paddington; Camden Town, St. John's Wood, and Hampstead; Stoke Newington, Dalston, Clapton, Shacklewell, and Stamford-hill; Mile-end, Stratford, and Bow; Limehouse, Poplar, and back by the Commercial-road. It would be easy to cite other routes, but these show the character of the trade. Some occupy two days. A few crocks "work" the poor neighbourhoods, such as Hoxton, Kingsland-road, parts of Hackney, &c., and cry, "Here we are—now, ladies, bring out your old hats, old clothes, old umbrellers, old anythink; old shoes, metal, old anythink; *here* we are!"

The trade, from the best information I could acquire, is almost equally divided into what may be called "fancy" and "useful" articles. A lodging-letter, for instance, will "swop" her old gowns and boots, and drive keen bargains for plates, dishes, or wash-hand basins and jugs. A housekeeper, who may be in easier circumstances, will exchange for vases and glass wares. Servant-maids swop clothes and money for a set of china, "'gainst they get married." Perhaps there are no more frequent collisions between buyer and seller than in the crock swag-shops. A man who had once been an assistant in one of these places, told me that some of the "crocks" were tiresome beyond measure, and every now and then a minute or two was wasted by the "crock" and the swag-shop-man in swearing one at another. Some of these street traffickers insist upon testing the soundness of *every* article, by striking the middle finger nail against it. This they do to satisfy their customers also, in the course of trade, especially in poor neighbourhoods.

From the best data at my command, one quarter of the goods sold at the swag-shops are sold to the crock dealers I have described, and in about equal proportions as to amount in fancy or useful articles. There are, in addition to the crock barterers, perhaps 100 traders who work the poor streets, chiefly carrying their goods in barrows, but they *sell*, and though they will barter, do not clamour for it. They cry: "Free trade for ever! Here's cup and saucer for a halfpenny! Pick 'em out at your own price! Tea-pot for three halfpence! Pick 'em out! Oho! oho! Giving away here!" They rattle dishes and basins as they make this noise. These men are all supplied at the swag-shops, buying what is called "common lots," and selling at 30 per cent. profit. Such traders have only been known in the streets for five years, and for three or four months of the year half of these "go to costering." The barrows are about seventy in number, and there are thirty stalls. Seven-eighths of the "barrow-crocks" are men. The swag-barrowmen also sell small articles of crockery wares, and altogether one half of the trade of the crock swag-shops (which I have described) is a trade for the streets.

Of the way in which the "crock barterers" dispose of their wares, &c., I have given an account below. They are rapidly supplanting the "old clo'" trade of the Jews.

The hucksters of crockery-ware are a considerable class. One who has great experience in the business thinks there must be some hundreds employed in it throughout London. He says he meets many at the swag warehouses on the evenings that he goes there. He is often half an hour before he can be served. There are seven or eight swag warehouses frequented by the hucksters, and at the busy time my informant has often seen as many has twenty-five at each house, and he is satisfied that there must be three or four hundred hucksters of china and glass throughout the metropolis. The china and glass in which they deal are usually purchased at the east end of the town, upon the understanding that if the huckster is unable to dispose of them in the course of the day the articles will be taken back in the morning, if uninjured, and the money returned. The hucksters usually take out their goods early in the day. Their baskets are commonly deposited at the warehouse, and each warehouse has from thirty to forty baskets left there over-night, when the unsold articles are returned. The baskets are usually filled with china and glass and ornaments, to the amount of from 5*s.* to 15*s.*, according to the stock-money of the huckster. A basket filled with 15*s.* worth of china is considered, I am told, "a very tidy stock." In the same neighbourhood as they get the crockery, are made the baskets in which it is carried. For these baskets they pay from 2*s.* to 6*s.*, and they are made expressly for the hucksters; indeed, on one side of a well-known street at the east end, the baskets made in the cellars may be seen piled outside the houses up to the second-floor windows. The class of persons engaged in hawking china through the metropolis are either broken-down tradesmen or clerks out of place, or Jews, or they may be Staffordshire men, who have been regularly bred to the business. They carry different kinds of articles. The Staffordshire man may generally be known by the heavy load of china that he carries with him. He has few light or fancy articles in his basket; it is filled chiefly with plates and dishes and earthenware pans. The broken-down tradesmen carries a lighter load. He prefers tea services and vases, and rummers and cruet-stands, as they are generally of a more delicate make than the articles carried by the Staffordshire men. The Jew, however, will carry nothing of any considerable weight. He takes with him mostly light, showy, Bohemian goods—which are difficult "to be priced" by his customers, and do not require much labour to hawk about. The hucksters usually start on their rounds about nine. There are very few who take money; indeed they profess to take none at all. "But that is all flam," said my informant. "If any one was to ask me the price of an article in an artful way like, I shouldn't give him a straightforward answer. To such parties we always say, 'Have you got any old clothes?'" The hucksters *do* take money when they can get it, and they adopt the principle of exchanging their goods for old clothes merely as a means of evading the licence. Still they are compelled to do a great deal in the old clothes' line. When they take money they usually reckon to get 4*d.* in the shilling, but at least three-fourths of their transactions consist of exchanges for old clothes. "A good tea-service we generally give," said my informant, "for a left-off suit of clothes, hat, and boots—they must all be in a decent condition to be worth that. We give a sugar-basin for an old coat, and a rummer for a pair of old Wellington boots. For a glass milk-jug I should expect a waistcoat and trowsers, and they must be tidy ones too. But there's nothing so saleable as a pair of old boots to us. There is always a market for old boots, when there is not for old clothes. You can any day get a dinner out of old Wellingtons; but as for coats and waistcoats—there's a fashion about them, and what pleases one don't another. I can sell a pair of old boots going along the streets if I carry them in my hand. The snobs will run after us to get them—the backs are so valuable. Old beaver hats and waistcoats are worth little or nothing. Old silk hats, however, there's a tidy market for. They are bought for the shops, and are made up into new hats for the country. The shape is what is principally wanted. We won't give a farden for the polka hats with the low crowns. If we can double an old hat up and put it in our pockets, it's more valuable to us than a stiff one. We know that the shape must be good to stand that. As soon as a hatter touches a hat he knows by the touch or the stiffness of it whether it's been 'through' the fire or not; and if so, they'll give it you back in a minute. There is one man who stands in Devonshire-street, Bishopsgate-street, waiting to buy the hats of us as we go into the market, and who purchases at least thirty dozen of us a week. There will be three or four there besides him looking out for us as we return from our rounds, and they'll either outbid one another, according as the demand is, or they'll all hold together to give one price. The same will be done by other parties wanting the old umbrellas that we bring back with us. These are valuable principally for the whalebone. Cane ribbed ones are worth only from 1*d.* to 2*d.*, and that's merely the value of the stick and the supporters. Iron skewers are made principally out of the old supporters of umbrellas." The china and crockery bought by the hucksters at the warehouses are always second-rate articles. They are most of them a little damaged, and the glass won't stand hot water. Every huckster, when he starts, has a bag, and most of them two—the one for the inferior, and the other for the better kind of old clothes he buys. "We purchase gentlemen's left-off wearing apparel. This is mostly sold to us by women. They are either the wives of tradesmen or mechanics who sell them to us, or else it is the servant of a lodging-house, who has had the things given to her, and with her we can deal much easier than the others. She's come to 'em light, and of course she parts with 'em light," said the man, "and she'll take a pair of sugar basins worth about 6*d.*, you know, for a thing that 'll fetch two or three shillings sometimes. But the mistresses of the houses are she-dragons. They wants a whole dinner *chany* service for their husband's

rags. As for plates and dishes, they think they can be had for picking up. Many a time they sells their husband's things unbeknown to 'em, and often the gentleman of the house coming up to the door, and seeing us make a deal—for his trowsers maybe—puts a stop to the whole transaction. Often and often I've known a woman sell the best part of her husband's stock of clothes for *chany* ornaments for her mantelpiece. And I'm sure the other day a lady stripped the whole of her passage, and gave me almost a new great coat, that was hanging up in the hall, for a few trumpery tea-things. But the greatest 'screws' we has to deal with are some of the ladies in the squares. They stops you on the sly in the streets, and tells you to call at their house at sitch a hour of the day, and when you goes there they smuggles you quietly into some room by yourselves, and then sets to work Jewing away as hard as they can, pricing up their own things, and downcrying yourn. Why, the other day I was told to call at a fashionable part of Pimlico, so I gave a person 3*d*. to mind the child, and me and my good woman started off at eight in the morning with a double load. But, bless you, when we got there, the lady took us both into a private room unbeknown to the servants, and wanted me to go and buy expressly for her a green and white chamber service all complete, with soap trays and brush trays, together with four breakfast cups—and all this here grand set-out she wanted for a couple of old washed-out light waistcoats, and a pair of light trowsers. She tried hard to make me believe that the buttons alone on the waistcoats was worth 6*d*. a piece, but I knowed the value of buttons afore she was borned; at first start off I'm sure they wouldn't have cost 1*d*. each, so I couldn't make a deal of it no how, and I had to take all my things back for my trouble. I asked her even for a pint of beer, but she wouldn't listen to no such thing. We generally cry as we go, 'any old clothes to sell or exchange,' and I look down the area, and sometimes knock at the door. If I go out with a 15*s*. basket of crockery, may be after a tidy day's work I shall come home with 1*s*. in my pocket (perhaps I shall have *sold* a couple of tumblers, or half a dozen plates), and a bundle of old clothes, consisting of two or three old shirts, a coat or two, a suit of left-off livery, a woman's gown may be, or a pair of old stays, a couple of pair of Wellingtons, and a waistcoat or so. These I should have at my back, and the remainder of my *chany* and glass on my head, and werry probably a humberella or two under my arm, and five or six old hats in my hand. This load altogether will weigh about three quarters of a cwt., and I shall have travelled fifteen miles with that, at least; for as fast as I gets rid on the weight of the crockery, I takes up the weight of the old clothes. The clothes I hardly know the value on till I gets to the Clothes Exchange, in Houndsditch. The usual time for the hucksters arriving there is between three and four in the winter, or between five and six in the summer. In fact, we must be at the Exchange at them hours, because there all our buyers is, and we can't go out the next day until we've sold our lot. We can't have our baskets stocked again until we've got the money for our old clothes." The Exchange is a large square plot of damp ground, about an acre in extent, enclosed by a hoarding about eight feet high, on the top of which is a narrow sloping roof, projecting sufficiently forward to shelter one person from the rain. Across this ground are placed four rows of double seats, ranged back to back. Here meet all the Jew clothesmen, hucksters, dealers in second-hand shoes, left-off wardrobe keepers, hareskin dealers, umbrella dealers and menders, and indeed buyers and sellers of left-off clothes and worn-out commodities of every description. The purchasers are of all nations, and in all costumes. Some are Greeks, others Swiss, and others Germans; some have come there to buy up old rough charity clothing and army coats for the Irish market, others have come to purchase the hareskins and old furs, or else to pick up cheap old teapots and tea-urns. The man with the long flowing beard and greasy tattered gaberdine is worth thousands, and he has come to make another sixpence out of the rags and tatters that are strewn about the ground in heaps for sale. At a little before three o'clock the stream of rag-sellers sets in in a flood towards this spot. At the gate stands "Barney Aaron," to take the half-penny admission of every one entering the ground. By his side stands his son with a leather pouch of half-pence, to give change for any silver that may be tendered. The stench of the old clothes is positively overpowering. Every one there is dressed in his *worst*. If he has any good clothes he would not put them on. Almost each one that enters has a bag at his back, and scarcely has he passed the gate before he is surrounded by some half dozen eager Jews—one feels the contents of the bundle on the huckster's back—another clamours for the first sight. A third cries, "I'm sure you have something that'll suit me." "You know me," says a fourth, "I'm a buyer, and give a good price." "Have you got any breaking?" asks this Jew, who wants an old coat or two to cut up into cloth caps—"Have you got any fustian, any old cords, or old boots?" And such is the anxiety and greediness of the buyers, that it is as much as the seller can do to keep his bundle on his back. At length he forces his way to a seat, and as he empties the contents of his sack on the ground, each different article is snapped up and eagerly overhauled by the different Jews that have followed him to his seat. Then they all ask what sum is wanted for the several things, and they, one and all, bid one quarter of the price demanded. I am assured that it requires the greatest vigilance to prevent the things being carried off unpaid in the confusion. While this scene is going on, a Jew, perched upon a high stage in the centre of the ground, shouts aloud to the multitude, "Hot wine, a half-penny a glass, here." Beside him stands another, with smoking cans of hot eels; and next to this one is a sweetmeat stall, with a crowd of Jew boys gathered round the keeper of it, gambling with marbles for Albert rock and hardbake. Up and down

between the seats push women with baskets of sheep's trotters on their arms, and screaming, "Legs of mutton, two for a penny; who 'll give me a handsel—who 'll give me a handsel?" After them comes a man with a large tin can under his arm, and roaring, "Hot pea, oh! hot pea, oh!" In one corner is a coffee and beer shop. Inside this are Jews playing at draughts, or settling and wrangling about the goods they have bought of one another. In fact, in no other place is such a scene of riot, rags, and filth to be witnessed. The cause of this excitement is the great demand on the part of the poor, and the cheap clothiers as well, for those articles which are considered as worthless by the rich. The old shoes are to be cobbled up, and the cracks heel-balled over, and sold out to the working-classes as strong durable articles. The Wellingtons are to be new fronted, and disposed of to clerks who are expected to appear respectable upon the smallest salaries. The old coats and trowsers are wanted for the slop-shops; they are to be "turned," and made up into new garments. The best black suits are to be "clobbered" up—and those which are more worn in parts are to be cut up and made into new cloth caps for young gentlemen, or gaiters for poor curates; whilst others are to be transformed into the "best boys' tunics." Such as are *too* far gone are bought to be torn to pieces by the "devil," and made up into new cloth—or "shoddy" as it is termed—while such as have already done this duty are sold for manure for the ground. The old shirts, if they are past mending, are bought as "rubbish" by the marine store dealers, and sold as rags to the paper-mills, to be changed either into the bank-note, the newspaper, or the best satin note-paper.

The average earnings of the hucksters who exchange crockery, china and glass for the above articles, are from 8*s.* to 10*s.* per week. Some days, I am told, they will make 3*s.*, and on others they will get only 6*d.* However, taking the good with the bad, it is thought that 10*s.* a week is about a fair average of the earnings of the whole class. The best times for this trade are at the turn of the winter, and at the summer season, because then people usually purchase new clothes, and are throwing off the old ones. The average price of an old hat is from 1*d.* to 8*d.*; for an old pair of shoes, from 1*d.* to 4*d.*; an old pair of Wellingtons fetch from 3*d.* to 1*s.* 6*d.* (those of French leather are of scarcely any value). An old coat is worth from 4*d.* to 1*s.*; waistcoats are valued from 1*d.* to 3*d.*; trowsers are worth from 4*d.* to 8*d.*; cotton gowns are of the same value; bonnets are of no value whatever; shirts fetch from 2*d.* to 6*d.*; stockings are 1*d.* per pair; a silk handkerchief varies in value from 3*d.* to 1*s.* The party supplying me with the above information was originally in the coal and greengrocery business, but, owing to a succession of calamities, he has been unable to carry it on. Since then he has taken to the vending of crockery in the streets. He is a man far above the average of the class to which he at present belongs.

Of the "Swag," Crockery, and Glass Shops.

In addition to the 150 general and particular "swag-shops," or shops having a large *collection* of goods, of which I have spoken, there are twenty establishments for the sale of crockery and china, which I heard styled by persons in the trade "swag-crocks," or "crock-shops." The principle on which the trade is conducted in these places is the same as that of the swag-shops, inasmuch as the sales are wholesale, to street-sellers, shop-keepers, and shippers, but rarely to private individuals.

The crock swag-shops are to be found in the streets neighbouring Spitalfields market, and in and near to Liquorpond-street. As at the more general or miscellaneous swag-shops, the crock-swags make no display. In one of the most extensive, indeed, two large windows are filled with goods. Here are spirit-stands, with the invariable three bottles (invariable in the cheap trade), blue, green, or uncoloured; some lettered "gin," "rum," "brandy," but most of them unlabelled. Here, too, are cruet-stands, and "pot" or spar figures under glass shades; and a number of many-coloured flower-glasses, some of them profusely gilded; and small china vases; but the glass wares greatly predominate. Although there are glass and colour and gilding enough to make "an imposing display," the display is nevertheless anything but showy; the goods look dingy, and, if I may so speak of such things, faded. Some of the coloured glass seems to be losing its colour, and few of the wares have the bright look of newness.

The windows of these shops are, for the most part, literally *packed* to a certain height, so as almost to exclude the light, with pitchers, and basins, and cups, and jugs, and the sundry smaller articles of this multifarious trade, all undusted, and seemingly uncared for. In one "large concern" I saw a number of glass salt-cellars wrapped severally in paper, which had changed from white to a dusty brown, and which from age, and perhaps damp, seemed about to fall to tatters.

The "interiors" of some of these warehouses are very spacious. I saw one large and lofty shop, into which two apartments and a yard had been flung, the partitions having been taken down, and the ceilings supported by pillars, in order to "extend the premises." It was really a hall of pots. On the floor were large crates, the tops removed so that the goods might be examined, packed, one with cups, another with saucers, a third with basins, and packed as only a potter could pack them. Intermixed with them were piles of blue-and-white dishes and plates, and, beside them, washing-pans, fitted one into another like the old hats on a Jew's head. The pillars had their festoons of crockery, being hung with children's white and gold mugs "for a good boy," and with white metal-lidded and brown-bodied mustard pots, as well as other minor articles. The shelves were loaded with tea-services of many shapes and hues, while the unoccupied space was what sufficed to allow the warehousemen and the

Original from HARVARD UNIVERSITY

customers to thread the mazes of this labyrinth of crockerywares. Of the glass goods there was little display, as they are generally kept in cases and other packages, to preserve their freshness of appearance.

The crockery of the swag-shops is made in Staffordshire; the glass principally in Lancashire. At none of these establishments do they issue circulars of prices, such as I have cited of the general swag-shops. The articles are so very many, I was told, that to specify all the sizes and prices "would take a volume and a half." I give a statement, however, of the prices of the goods most in demand, on the occasions when the street vendors sell them without barter, and the prices at which they are purchased wholesale: Blue-edged plates sold at 1*d.* each cost 1*s.* 8*d.* the dozen; this would appear to entail a loss of 8*d.* on every dozen sold, but in this article "30 is a dozen." Dishes are bought at the "swag-crocks" in "nests," which comprise 10 dishes, or 5 pairs, of different sizes. These the street crockman sells, if possible, in pairs, but he will sell them singly, for he can always make up the complement of his "nest" at the warehouse. The prices run, chiefly according to size, from 8*d.* to 1*s.* 6*d.* (sometimes 1*s.* 8*d.*) the pair. "The 8*d.* a pair," said one street crock-seller, "costs me 6*d.*, not a farthing under, and the 18*d.* a pair—it's very seldom we can 'draw' 1*s.* 8*d.*—costs 1*s.* 2*d.* That's all, sir; and the profit's so small, it makes us keen to swop. I'll swop for old clothes, or dripping, or grease, or anything. You see the profit, when you sells downright down, *must* be small, 'cause there's so many pot-shops with prices marked on the plates and other things. They can buy better than us sometimes, and they're hard to stand up against. If a woman says to me—for I very seldom deal with men—'Why, they're cheaper at D——'s, in Oxford-street,'—I answers, 'And worser. I'll tell you what it is, ma'am. The cheapest place was in two houses, painted all red, in the London-road. But one fine morning them two houses fell, and the pots was smashed as a matter of course. It was a judgment on their bad pots.' But it's a fact, sir, that these houses fell, about 7 or 8 years ago, I think, and I've seen goods, with one or two of 'em broken, offered for sale when the place was re-built, having been 'rescued from the ruins;' and at less than half price.' Of course that was gammon. I've cracked and broke a few plates, myself, and sold them in the New Kent-road, and in Walworth and Newington, at half price, from the ruins, and at a very tidy profit." A stone china tea-service, of 32 pieces—12 cups, 12 saucers, 4 bread-and-butter plates, a tea-pot, a sugar-basin, a slop-basin, and a cream-jug—is bought for 6*s.* 9*d.* while 9*s.* is asked for it, and sometimes obtained. A "china set" costs, as the general price, 10*s.* 6*d.*, and for it 14*s.* is asked.

The glass wares are so very rarely sold—being the most attractive articles of barter—that I could hardly get any street-seller to state his prices. "Swop, sir," I was told repeatedly, "they all goes in swop." The glass goods, however, which are the most sold in the streets, I ascertained to be cream-jugs, those vended at 6*d.* each, costing 4*s.* the dozen; and flower-glasses, the most frequent price being 1*s.* a pair, the prime cost 7*d.*

I have estimated the sum turned over by the general swag-shops at 3000*l.* each. From what I can learn, the crock swag-shops, averaging the whole, turn over a larger sum, for their profits are smaller, ranging from 10 to 30 per cent., but rarely 30. Calculating, then, that each of these swag-shops turns over 4000*l.* yearly, we find 80,000*l.* expended, but this includes the sales to shopkeepers and to shippers, as well as to street-folk.

Of the Street-Sellers of Spar and China Ornaments, and of Stone Fruit.

"Spars," as spar ornaments are called by the street-sellers, are sold to the retailers at only four places in London, and two in Gravesend (where the hawkers are for the most part supplied). The London spar-houses are—two in Westminster, one in Shoreditch, and one on Battle-bridge. None of them present any display of their goods which are kept in large drawers, closets, and packages. At Gravesend the spar-shops are handsome.

These wares are principally of Derbyshire spar, and made in Matlock; a few are German. The "spars" are hawked on a round, and are on fine Saturday nights offered for sale in the street and markets. The trade was unknown as a street, or a hawking trade in London, I am informed, until about twenty-five years ago, and then was not extensive, the goods, owing to the cost of carriage, &c., being high-priced. As public conveyance became more rapid, certain and cheap, the trade in spars increased, and cheaper articles were prepared for the London market. From ten to fifteen years ago the vendors of spars "did well in swop" (as street-sellers always call barters). The articles with which they tempted housewives were just the sort of article to which it was difficult for inexperienced persons to attach a value. They were massive and handsome ornaments, and the spar-sellers did not fail to expatiate on their many beauties. "God rest Jack Moody's soul," said an Irishman, now a crock-seller, to me; "Jack Moody was only his nick-name, but that don't matter; God rist his sowl and the hivens be his bid. He was the boy to sell the spar-r's. They was from the cavrents at the bottom of the say, he towld them, or from a new island in the frozen ocean. He did well; God rist him; but he died young." The articles "swopped" were such as I have described in my account of the tradings of the crock-sellers; and if the "swop" were in favour of the spar-seller, still the customer became possessed of something solid, enduring, and generally handsome.

At the outset of the street or hawking trade, the spar-sellers carried their goods done up in paper, in strong baskets on their heads; the man's wife sometimes carrying a smaller basket, with less burdensome articles, on her arm. Men have been known to start on a round, with a basket of spars, which would weigh from 1 cwt. to 1½ cwt. (or 12 stone). This, it must be remembered, might

Original from HARVARD UNIVERSITY

have to be borne for three or four miles into the suburbs, before its weight was diminished by a sale. One of these traders told me that twelve years ago he had sold spar watch-stands, weighing above 15 lbs. These stands were generally of a square form; the inner portion being open, except a sort of recess for the watch. "The tick sounds well on spar, I've often heard," said one spar-seller.

Some of the spar ornaments are plain, white, and smooth. Of these many have flowers, or rims, or insects, painted upon them, and in brilliant colours. Those which are now in demand for the street sales, or for itinerant barterings, are—Small microscopes, candlesticks, inkstands, pin-cushions, mugs, paper-holders, match perfumery, and shaving-boxes, etc. The general price of these articles is 6*d*. to the street-seller or hawker, some of the dealers being licensed hawkers. The wholesale price varies from 2*s*. 6*d*. to 5*s*. per dozen; or an average of 3*s*. 9*d*. or 4*s*. Of the larger articles the most saleable are candlesticks, at from 1*s*. to 2*s*. 6*d*. each; from 1*s*. to 1*s*. 6*d*. being the most frequent price. Watch-stands and vases are now, I am told, in small demand. "People's got stocked, I think," one man said, "and there's so much cheap glass and chaney work, that they looks on spars as heavy and old-fashioned."

Some street-sellers have their spars in covered barrows, the goods being displayed when the top of the barrow is removed, so that the conveyance is serviceable whether the owner be stationary or itinerant. The spar-sellers, however, are reluctant to expose their goods to the weather, as the colours are easily affected.

In this trade I am informed that there are now twelve men, nine of whom are assisted by their wives, and that in the summer months there are eighteen. Their profits are about 15*s*. per week on an average of the whole year, including the metropolis and a wide range of the suburbs. What amount of money may be expended by the public in the street purchase of "spars" I am unable to state, so much being done in the way of barter; but assuming that there are fourteen sellers throughout the year, and that their profits are cent. per cent., there would appear to be about 1000*l*. per annum thus laid out.

Of stone fruit there are now usually six street sellers, and in fine weather eight. Eight or ten years ago there were twenty. The fruit is principally made at Chesterfield in Derbyshire, and is disposed of to the London street-sellers in the swag-shops in Houndsditch. Some of the articles, both as regards form and colour, are well executed; others are far too red or too green; but that, I was told, pleased children best. The most saleable fruits are apples, pears, peaches, apricots, oranges, lemons and cucumbers. The cucumbers, which are sometimes of pot as well as of stone, are often hollow, and are sometimes made to serve for gin-bottles, holding about a quartern.

The price at the swag-shops is 4*s*. 3*d*. for a gross of fruit of all kinds in equal quantities; for a better quality the price is 7*s*. 6*d*. The street-seller endeavours to get 1*d*. each for the lower priced, and 2*d*. for the higher, but has most frequently to be content with ½*d*. and 1*d*. The stone fruitmen are itinerant during the week and stationary in the street markets on Saturday, and sometimes other evenings. They carry their stock both in baskets and barrows. One man told me that he always cried, "Pick 'em out! pick 'em out! Half-penny each! Cheapest fruit ever seen! As good to-morrow as last week! Never lose flavour! Ever-lasting fruit."

Supposing that there are six persons selling stone fruit in the streets through the year, and that each earns—and I am assured that is the full amount—9*s*. weekly (one man said 7*s*. 6*d*. was the limit of his weekly profits in fruit), we find 140*l*. received as profit on these articles, and calculating the gains at 33 per cent., an outlay of 420*l*.

The trade in China ornaments somewhat differs from the others I have described under the present head. It is both a street and a public-house trade, and is carried on both in the regular way and by means of raffles. At some public-houses, indeed, the China ornament dealers are called "rafflers."

The "ornaments" now most generally sold or raffled are Joy and Grief (two figures, one laughing and the other crying); dancing Highlanders; mustard pots in the form of cottages, &c.; grotesque heads, one especially of an old man, which serves as a pepper-box, the grains being thrown through the eyes, nose, and mouth; Queen and Alberts (but not half so well as the others); and, until of late, Smith O'Briens. There are others, also, such as I have mentioned in my account of the general swag-shops, to the windows of many of which they form the principal furniture. Some of these "ornaments" sold "on the sly" can hardly be called obscene, but they are dirty, and cannot be further described.

The most lucrative part of the trade is in the raffling. A street-seller after doing what business he can, on a round or at a stand, during the day, will in the evening resort to public-houses, where he is known, and is allowed to offer his wares to the guests. The ornaments, in public-house sale, are hardly ever offered for less than 6*d*. each, or 6*d*. a pair. The raffling is carried on rapidly and simply. Dice are very rarely used now, and when used, provoke many murmurs from the landlords. The raffler of the China ornaments produces a portable roulette box or table—these tables becoming an established part of street traffic—eight or ten inches in diameter. What may be called "the board" of some of these "roulettes" is numbered to thirty-two. It is set rapidly spinning on a pivot, a pea is then slipped through a hole in the lid of the box, and, when the motion has ceased, the pea is found in one of the numbered partitions. "Now, gentlemen," a raffler told me he would say, "try your luck for this beautiful pair of ornaments; six of you at 1*d*. a piece. If you go home rather how came you so, show what you've bought for the old lady, and it'll be all right and peaceful." If six persons contribute 1*d*. each, the one "spinning" the highest number

Original from HARVARD UNIVERSITY

gains the prize, and is congratulated by the ornament seller on having gained for 1*d.* what was only too cheap at 6*d.* "Why, sir," said a man who had recently left the trade for another calling, and who was anxious that I should not give any particular description of him, "in case he went back to the raffling,"—"Why, sir, I remember one Monday evening four or five months back, going into a parlour, not a tap-room, mind, where was respectable mechanics. They got to play with me, and got keen, and played until my stock was all gone. If one man stopped raffling, another took his place. I can't recollect how many ornaments I raffled, but I cleared rather better than 3*s.* 6*d.* When there was no ornaments left they gave me 1*d.* a piece—there was eleven of them then—and a pint of beer to let them have the roulette till 12 o'clock; and away they went at it for beer and screws, and bets of 1*d.* and 2*d.* One young man that had been lucky in winning the ornaments got cleaned out, and staked his ornaments for 2*d.*, or for a 1*d.* rather than not play. That sort of thing only happened to me once, to the same extent. If the landlord came into the room, of course they was only playing for drink, or he might have begun about his licence."

The ornaments are bought at the swag shops I have described, and are nearly all of German make. They are retailed from 1*d.* and sometimes ½*d.* to 1*s.* each, and the profit is from 25 to 75 per cent. There are, I am informed, about thirty persons in this trade, two-thirds of them being rafflers, and their receipts being from 25*s.* to 30*s.* weekly. Most of them mix "fancy glass" goods and spars, and other articles, with their "ornament" trade, so that it is not easy to ascertain what is expended upon the china ornaments independently of other wares. If we calculate it at 10*s.* weekly (a low average considering the success of some of the raffles), we find 780*l.* expended in the streets in these ornamental productions.

Of the Street-Sellers of Textile Fabrics.

These street-folk present perhaps as great a diversity of character as any of which I have been called upon to treat.

Among them are the strong persevering men, who carry rolls of linen or cotton manufacture in packs on their backs, and trudge along holding a yard-wand by the middle, which—it is a not uncommon joke against them—is always worn down an inch or two, by being used as a walking-stick in their long pedestrian journeys. Such, however, is not the case, for the packman—when measuring is resorted to—generally shows the justice of his measure, or invites the purchaser to use her own yard-wand (for women are now their most frequent customers). Some of these men love to tell of the many hundreds of miles they have walked in their time, and in the three kingdoms. The most of those who make London, or any large town their head-quarters, and take regular journeys into the country, are licensed hawkers; those who confine their sales exclusively to London and its immediate vicinity, frequently conduct their business without incurring the annual cost of a licence. The penalty for hawking without a licence is 10*l.*, or an imprisonment (in default of payment) not exceeding three months, with a discretionary power of mitigation to the magistrates. Some of these men may be styled hereditary hawkers, having first accompanied and then succeeded their parents on a round; some were in their youth assistants to hawkers; some had been unsuccessful as tallymen when shopkeepers, or travellers for tally-shops, and have resorted to hawking or street-trading, occasionally, in their transactions with different parties, blending the tally system with the simple rules of sale for ready money.

In striking contrast to these sturdy and often astute traders are the street-sellers of lace and millinery, the majority of whom are women. A walk through a street-market, especially on a Saturday evening, will show any one the frequent difference of the established street-milliner to the other female traders surrounding her stall. The milliner, as she is commonly called by the street-folk, wears a clean, and often tasty cap, beneath her closely-fitting bonnet, a cap in which artificial flowers are not wanting, should she sell those adornments. Her shawl is pinned beneath her collar; her gown, if it be old or of poor material, is clean; and she is rarely to be seen in boots or shoes made for men's wear. Near her stall are stout, coarse-looking Irish girls, with unstringed bonnets, half-ragged shawls, thrown loose round their shoulders, necks red from exposure to the weather, coarse and never brushed, but sometimes scraped, shoes, when shoes are worn, and a general dirtiness of apparel. The street-milliners have been ladies'-maids, working milliners and dress-makers, the wives of mechanics who have been driven to the streets, and who add to the means of the family by conducting a street-trade themselves, with a sprinkling from other classes.

The street-sellers of lace are of the same class as the milliners, but with perhaps less smartness, and carrying on an inferior trade both as regards profit and display.

The street-sellers of boot and stay-laces and of such things as sewing cotton, threads and tapes, when sold separately from more valuable articles, are children and old people, some of whom are infirm, and some blind. The children have, in some instances, been bred to the streets; the old people probably are worn out in street-trades requiring health and strength, and so adopt a less laborious calling, or else they have been driven to it, either from comparatively better circumstances, or by some privation or affliction, in order to avoid the workhouse.

The sale of belts, stockings, braces, straps and garters, is mostly in the hands of men, who, from all that I can learn, are regular street-sellers, who "turn their hands first to this and then to that," but this portion of street-traffic is often combined with the sale of dog-collars, chains, &c. The trade is more a public-house than a distinct traffic in the street. The landlord of a well-frequented inn in Lambeth told me that every day at least 100 of such street-sellers—not including match-girls and

women— entered his house to offer their wares; the greatest number of such sellers was in the evening.

I have so far described what may be called the fair traders, but to them the street-sellers of textile fabrics are not confined. There are besides these, two other classes known as "Duffers" and as "Lumpers," and sometimes the same man is both "Duffer" and "Lumper." The two names are often confounded, but an intelligent street-seller, versed in all the arts and mysteries of this trade, told me that he understood by a "Duffer," a man who sold goods under false pretences, making out that they were smuggled, or even stolen, so as to enhance the idea of their cheapness; whereas a "Lumper" would sell linens, cottons, or silks, which might be really the commodities represented; but which, by some management or other, were made to appear new when they were old, or solid when they were flimsy.

Of the Haberdashery Swag-Shops.

By this name the street-sellers have long distinguished the warehouses, or rather shops, where they purchase their goods. The term *Swag*, or *Swack*, or *Sweg*, is, as was before stated, a Scotch word, meaning a large collection, a "lot." The haberdashery, however, supplied by these establishments is of a very miscellaneous character; which, perhaps, can best be shown by describing a "haberdashery swag," to which a street-seller, who made his purchases there, conducted me, and which, he informed me, was one of the most frequented by his fraternity, if not *the* most frequented, in the metropolis.

The window was neither dingy, nor, as my companion expressed it, "gay." It was in size, as well as in "dressing," or "show"—for I heard the arrangement of the window goods called by both those names by street people—half-way between the quiet plainness of a really wholesale warehouse, and the gorgeousness of a retail drapery concern, when a "tremendous sacrifice" befools the public. Not a quarter of an inch of space was lost, and the announcements and prices were written many of them in a bungling school-boy-like hand, while others were the work of a professional "ticket writer," and show the eagerness of so many of this class of trade to obtain custom. In one corner was this announcement: "To bootmakers. Boot fronts cut to any size or quality." There was neither boot nor shoe visible, but how a boot front *can be* cut "to any quality," is beyond my trade knowledge. Half hidden, and read through laces, was another announcement, sufficiently odd, in a window decorated with a variety of combustible commodities: "Hawkers supplied with fuzees cheaper than any house in London." On the "ledge," or the part shelving from the bottom of the window, within the shop, were paper boxes of steel purses with the price marked so loosely as to leave it an open question whether 1*s.* 0¾*d.* or 10¾*d.* was the cost. There was also a good store of silk purses, marked 2½*d.*; bright-coloured ribbons, in a paper box, and done up in small rolls, 1½*d.*; cotton reels, four a penny; worsted balls, three a penny; girls' night-caps, 1¾*d.*; women's caps, from 2¾*d.* to 7¾*d.*; (the ¾*d.* was always in small indistinct characters, but it was a very favourite adjunct); diamond patent mixed pins—London and Birmingham—1*d.* an oz. My companion directed my attention to the little packets of pins: "They're well done up, sir, as you can see, and in very good and thick and strong pink papers, with ornamental printers' borders, and plenty of paper for three ounces. The paper's weighed with the pins, and the price is 1*d.* an oz.; so the paper fetches 1*s.* 4*d.* a pound." There were also many papers of combs, and one tied outside the packet as a specimen, without a price marked upon them. "The price varies, sir;" said my guide and informant, and I heard the same account from others; "it varies from 1*d.* a pair to such as me; up to 6*d.* or perhaps 1*s.* to a servant-maid what looks innocent."

From what appeared to be slender rods fitted higher up to the breadth of the window depended "black lace handkerchiefs, 4¾*d.*;" and cap fronts, some being a round wreath of gauze ornamented with light rose-coloured artificial flowers, and marked "only 5½*d.*;" together with lace (or edgings) which hung in festoons, and filled every vacancy. Higher up were braces marked 5*d.*; and more lace; and to the back of all was a sort of screen—for it shuts out all view of the inside of the shop—of big-figured shawls (the figures in purple, orange, and crimson) and of silk handkerchiefs: "They're regular duffers," I was told, "and very tidy duffers too—very, for it's a respectable house."

In the centre of the window ledge was a handsome wreath of artificial flowers, marked 2½*d.* "If a young woman was to go in to buy it at 2½*d.*, I've seen it myself, sir," said the street-seller, "she's told that the ticket has got out of its place, for it belonged to the lace beneath, but as she'd made a mistake without thinking of the value, the flowers was 1*s.* 6*d.* to her, though they was cheap at 2*s.* 6*d.*"

From this account it will be seen that the swag or wholesale haberdashers are now very general traders; and that they trade "retail" as well as "wholesale." Twenty or twenty-five years ago, I am informed, the greater part of these establishments were really haberdashery swags; but so fierce became the competition in the trade, so keen the desire "to do business," that gradually, and more especially within these four or five years, they became "all kinds of swags."

A highly respectable draper told me that he never could thoroughly understand where hosiery, haberdashery, or drapery, began or ended; for hosiers now were always glovers, and often shirt-makers; haberdashers were always hosiers (at the least), and drapers were everything; so that the change in the character of the shops from which the street-sellers of textile fabrics procure their supplies, is but in accordance with the change in the general drapery trade. The literal meaning of the word haberdashery is unknown to etymologists.

There are now about fifty haberdashery swags

resorted to by street-sellers, but only a fifth part of them make the trade to street-sellers a principal, while none make it a sole feature of their business. In the enumeration of the fifty haberdashery "swags," five are large and handsome shops carried on by "cutting" drapers. Some of these—one in the borough, especially—do not "serve" the street-sellers, except at certain hours, generally from four to six.

There is another description of shops from which a class of street traders derive their supplies of stock. These are the "print-brokers," who sell "gown-pieces" to the hawkers or street-traders. Only about a dozen of such shops, and those principally in the borough and in Wormwood-street, Bishopsgate, are frequented by the London street-sellers. One man showed me a draper's shop, at which hawkers were "supplied," but without an announcement of such a thing, as it might affect the character of the concern for gentility. The gown-pieces were rolled loosely together, and to each was attached a ticket, 2*s.* 11*d.* or 3*s.* 11*d.*, with intermediate prices, but those here mentioned were the most frequent. The 11*d.* was in pencil, so that it could be altered at any time, without the expense of a new ticket being incurred. "That one marked 2*s.* 11*d.*," said the street-seller, "would be charged to me 2*s.* 2*d.*, and the 3*s.* 11*d.* in the same way 3*s.* 2*d.*, or I might get it at 3*s.* If those gown-pieces don't take—and they are almost as thin as silver-paper,—they'll be marked down to 2*s.* 2*d.* and 3*s.* 2*d.*, just by degrees, as you see them shown in the window." The regular "print-brokers" make no display in their windows or premises.

The "duffers" and "lumpers" are supplied almost entirely at one shop in the east end. The proprietor has the sham, or inferior, silk handkerchiefs manufactured for the purpose; and for the supply of his other silk-goods, he purchases any silk "miscoloured" in the dyeing, or faded from time. "A faded lavender," one of his customers told me, "he'll get dyed black, and made to look quite new and fresh. Sometimes it's good silk, but it's mostly very dicky." This tradesman is also a retailer.

Such things as braces and garters are sold to the street people at the general as well as the haberdashery swag-shops; and are more frequently sold wholesale than other goods; indeed the general swag-shop keepers sell them by no other way; but the "wholesale haberdashers" will sell a single pair, though not, of course, at wholesale price. Some houses again supply the more petty street-sellers, solely with such articles as are known in Manchester by the name of small-ware, including thread, cotton, tapes, laces, &c.

Of Hawkers, Pedlars, and Petty Chapmen.

The machinery for the distribution of commodities has, in this and in all other "progressive" countries, necessarily undergone many changes; but whether these changes have been beneficial to the community, or not, this is not the place for me to inquire; all I have to do here is to set forth the order of such changes, and to show the position that the hawker and pedlar formerly occupied in the state.

The "distributor" of the produce of the country is necessarily a kind of go-between, or middleman, introduced for the convenience of bringing together the producer and consumer—the seller and the buyer of commodities. The producer of a particular commodity being generally distinct from the consumer, it follows, that either the commodity must be carried to the consumer, or the consumer go to the commodity. To save time and trouble to both parties, it seems to have been originally arranged that producer and consumer should meet, periodically, at appointed places. Such periodical meetings of buyers and sellers still exist in this and many other countries, and are termed either fairs or markets, according as they are held at long or short intervals—the fair being generally an annual meeting, and the market a weekly one. In the olden time the peculiar characteristic of these commercial congregations was, that the producer and consumer came into immediate contact, without the intervention of any middleman. The fair or market seemed to be a compromise between the two, as to the inconvenience of either finding the other when wanted. The producer brought his goods, so to speak, half way to the consumer, while the consumer travelled half way to the goods. "There would be a great waste of time and trouble," says Stewart Mill, "and an inconvenience often amounting to impracticability, if consumers could only obtain the article they want by treating directly with the producers. Both producers and consumers are too much scattered, and the latter often at too great a distance from the former."

"To diminish this loss of time and labour," continues Mr. Mill, "the contrivance of fairs and markets was early had recourse to, where consumers and producers might periodically meet, without any intermediate agency; and this plan still answers tolerably well for many articles, especially agricultural produce—agriculturists having at some seasons a certain quantity of spare time on their hands. But even in this case, attendance is often very troublesome and inconvenient to buyers who have other occupations, and do not live in the immediate vicinity; while, for all articles the production of which requires continuous attention from the producers, these periodical markets must be held at such considerable intervals, and the wants of the consumers must either be provided for so long beforehand, or must remain so long unsupplied, that even before the resources of society permitted the establishment of shops, the supply of those wants fell universally into the hands of *itinerant dealers*, the pedlars who might appear once a month, being preferred to the fair, which only returned once a year. In country districts, remote from towns or large villages, the vocation of the pedlar is not yet wholly superseded. But a dealer who has a fixed abode, and fixed customers," continues Mr. Mill, "is so much more to be depended on, that customers prefer resorting to him, if he is conveniently accessible; and dealers, therefore, find their advantage in esta-

Original from HARVARD UNIVERSITY

blishing themselves in every locality where there are sufficient consumers near at hand to afford them remuneration."

Thus we see that the pedlar was the original distributor of the produce of the country—the primitive middleman, as well as the prime mover in extending the markets of particular localities, or for particular commodities. He was, as it were, the first "free-trader;" increasing the facilities for the interchange of commodities, without regard to market dues or tolls, and carrying the natural advantages of particular districts to remote and less favoured places; thus enabling each locality to produce that special commodity for which it had the greatest natural convenience, and exchanging it for the peculiar produce of other parts.

Now, this extension of the markets necessarily involved some machinery for the conveyance of the goods from one district to another. Hence, the pedlar was not only the original merchant, but the primitive carrier—to whom, perhaps, we owe both our turnpike-roads and railways. For, since the peculiar characteristic of the pedlar was the carrying the produce to the consumer, rather than troubling the consumer to go after the produce, of course it soon became necessary, as the practice increased, and increased quantities of goods had to be conveyed from one part of the country to another, that increased facilities of transit should be effected. The first change was from the pack-*man* to the pack-*horse*: for the former a foot-way alone was required; while the latter necessitated the formation of some kind of a road. Some of these ancient pack-horse roads existed till within these few years. Hagbush-lane, which was described by William Hone only twenty years ago, but which has now vanished, was the ancient bridle or pack-horse road from London to the North, and extended by the Holloway back road as far as the City-road, near Old-street. "Some parts of Hagbush-lane," says Hone, "are much lower than the meadows on either side." At one time a terraced ridge, at another a deep rut, the pack-horse road must have been to the unaccustomed traveller a somewhat perilous pass. The historian of Craven, speaking of 1609, says, "At this time the communication between the north of England and the Universities was kept up by the carriers, who pursued their long but uniform route with trains of pack-horses. To their care were consigned packages, and not unfrequently the persons of young scholars. It was through their medium, also, that epistolary correspondence was managed; and as they always visited London, a letter could scarcely be exchanged between Yorkshire and Oxford in less time than a month." The General Post Office was established by Act of Parliament in the year 1660, and all letters were to be sent through this office, "except such letters as shall be sent by coaches, common-known carriers of goods by carts, waggons, and pack-horses, and shall be carried along with their carts, waggons, and pack-horses respectively."

"There is no such conveyance as a waggon in this country" (Scotland), says Roderick Random, referring to the beginning of the last century, "and my finances were too weak to support the expense of hiring a horse. I determined therefore to set out with the carriers, who transport goods from one place to another on horseback; and this scheme I accordingly put in execution on the 1st day of November, 1739, sitting on a pack-saddle between two baskets, one of which contained my goods in a knapsack. But by the time we arrived at Newcastle-upon-Tyne, I was so fatigued with the tediousness of the carriage, and benumbed with the coldness of the weather, that I resolved to travel the rest of my journey on foot, rather than proceed in such a disagreeable manner."

The present mode of travelling, compared with that of the pack-horse means of conveyance as pursued of old, forms one of the most striking contrasts, perhaps, in all history.

Hence we see that the pedlar was originally both carrier and seller; first conveying his pack on his back, and then, as it increased in bulk, transferring it to the back of "the pack-horse." But as soon as the practice of conveying the commodities to the buyers, instead of compelling the buyers to go to the commodities, was found to be advantageous to both consumer and producer, it was deemed expedient that the two distinct processes of carriage and sale, which are included in the distribution of commodities, should be conducted by distinct persons, and hence the carrying and selling of goods became separate vocations in the State; and such is now the machinery by which the commodities of different parts of this country, as well as of others, are at present diffused over the greater portion of this kingdom. In remote districts however, and the poorer neighbourhoods of large towns, where there are either too few consumers, or too few commodities required now to support a fixed distributor with a distinct apparatus of transit, the pedlar still continues to be the sole means of diffusing the produce of one locality among the inhabitants of another; and it is in this light—as the poor man's merchant—that we must here consider him.

Among the more ancient of the trades, then, carried on in England is that of the hawker or pedlar. It is generally considered, as I said before, that hawking "is as ancient a mode of trade as that carried on in fairs and markets, towns and villages, as well as at the castles of the nobles or the cottages of their retainers." To fix the origin of fairs is impossible, for, in ancient and mediæval times, every great gathering was necessarily a fair. Men—whom it is no violence to language to call "hawkers"—resorted alike to the Olympic games and to the festivals of the early Christian saints, to sell or barter their wares. Of our English fairs Mr. Jacob says, in his "Law Dictionary"—"Various privileges have been annexed to them, and numerous facilities afforded to the disposal of property in them. To give them a greater degree of solemnity, they were originally, both in the ancient and modern world, associated with religious festivals. In most places, indeed, they are still held on the same day with the wake or feast of the saint to whom the church is dedicated; and till the practice was prohibited, it was customary

in England to hold them in churchyards. This practice, I may add, was not fully prohibited until the reign of Charles II., although it had long before fallen into disuse. Thus the connection between church and market is shown to be of venerable antiquity."

The hawker dealt, in the old times, more in textile fabrics than in anything else. Indeed, Shakspere has dashed off a catalogue of his wares, in the song of *Autolycus:*

> "Lawn as white as driven snow,
> Cyprus black as e'er was crow."

In the reigns succeeding the termination of the Wars of the Roses, and down to the Commonwealth, the hawker's pack was often stocked with costly goods; for great magnificence in dress was then the custom of the wealthy, and even the burgesses on public occasions wore velvet, fine cambric ruffs, and furs. The hawker was thus often a man of substance and frequently travelled on horseback, with his wares slung in bags on his horse's side, or fitted to the crupper or pommell of his saddle. He was often, moreover, attended by a man, both for help in his sales, and protection in travelling. In process of time an established hawker became the medium of news and of gossip, and frequently the bearer of communications from town to town. His profits were often great, but no little trust seems to have been reposed in him as to the quality and price of his goods; and, until the present century or so, slop goods were little manufactured, so that he could not so well practise deceptions. Neither, during the prosperity of the trade, does it appear that any great degree of dishonesty characterized the hawker, though to this there were of course plenty of minor exceptions as well as one glaring contradiction. The wreckers of our southern coasts, who sometimes became possessed of rich silks, velvets, laces, &c.—(not unfrequently murdering all the mariners cast on shore, and there was a convenient superstition among the wreckers, that it was unlucky to offer help to a drowning man) —disposed of much of their plunder to the hawkers; and as communication was slow, even down to Mr. Palmer's improvements in the Post Office in 1784, the goods thus rescued from the deep, or obtained by the murder of the mariners, were disposed of even before the loss of the vessel was known at her destination; for we are told that there was generally a hawker awaiting a wreck on the most dangerous shores of Cornwall, Devon, Dorset, and Sussex.

During the last century, and for the first ten years of the present, the hawker's was a profitable calling. He usually in later times travelled with horse and covered cart, visiting fairs, markets, and private houses, more especially in the country. In some parts the calling was somewhat hereditary, son succeeding to father after having officiated as his assistant, and so becoming known to the customers. The most successful of the class, alike on both sides of the border, were Scotchmen.

In 1810 the prosperity of this trade experienced a check. In that year "every hawker, pedlar, or petty chapman going from town to town, or to other men's houses, and travelling on foot, carrying to sell or exposing for sale any goods" was required to pay a yearly licence of 4*l*., with an additional 4*l*. for every horse, ass, or mule, used in the business. Nothing, however, in the Act in question, 50 Geo. III. c. 41, as I have before intimated, "extended to prohibit" the hawking for sale of "any fish, fruit, or victuals" without licence. Neither is there any extension of the prohibition to the unlicensed workers or makers of any goods or wares, or their children or servants resident with them, hawking such goods, and selling them "in every city, borough, town corporate, or market town," but not in villages or country places. "Tinkers, coopers, glaziers, plumbers, and harness-menders," are likewise permitted to carry about with them the proper materials necessary for their business, no licence being necessary.

The passing of this Act did not materially check the fraudulent practices of which the hawkers were accused, and of which a portion of them were doubtlessly guilty; indeed some of the manufacturers, whose names were pirated by the hawkers, were of opinion that the licensing for ten or twenty years facilitated fraud, as many people, both in London and the country, thought they were safe in dealing with a "licensed" hawker, since he could not procure a licence without a certificate of his good character from the clergyman of his place of residence, and from two "reputable inhabitants." Linen of good quality used to be extensively hawked, but from 1820 to 1825, or later in some parts, the hawkers got to deal in an inferior quality, "unions" (a mixture of linen and cotton), glazed and stiffened, and set off with gaudy labels bearing sometimes the name of a well-known firm, but altered in spelling or otherwise, and expressed so as to lead to the belief that such a firm were the manufacturers of the article. Jews, moreover, as we have seen, travelled in all parts with inferior watches and jewellery, and sometimes "did well" by persuading the possessors of old solid watches, or old seals or jewellery, that they were ridiculously out of fashion, and so inducing them to give money along with the old watch for a watch or other article of the newest fashion, which yet was intrinsically valueless compared with the other. These and other practices, such as selling inferior lace under pretence of its having been smuggled from France, and of the choicest quality, tended to bring the hawker's trade into disrepute, and the disrepute affected the honest men in the business. Some sank from the possession of a good horse and cart to travelling on foot, as of yore, forwarding goods from place to place by the common carriers, and some relinquished the itinerant trade altogether. The "cutting" and puffing shopkeepers appeared next, and at once undersold the "slop" hawker, and foiled him on his own ground of pushing off inferior wares for the best. The numbers of the hawkers fell off considerably, but notwithstanding I find, in the last census tables (1841), the following returns as to the numbers of "hawkers, hucksters, and pedlars," distributed throughout Great Bri-

Total in Great Britain	17,270

The counties in which the hawkers, hucksters, and pedlars most abound appear to be—1st, Lancaster; 2nd, Middlesex; 3rd, Yorkshire (West Riding); 4th, Lanark; and 5th, Surrey.

What rule, if any rule, was observed in classing these "hawkers, hucksters, and pedlars," or what distinction was drawn between a hawker and a huckster, I am unable to say, but it is certain that the number of "licensed hawkers" was within one-half of the 17,270; for, in 1841, the hawkers' duty realized only 32,762*l.* gross revenue, and waiving the amount paid for the employment of horses, &c., the official return, reckoning so many persons paying 4*l.* each, shows only 8190 licensed hawkers in 1841.

The hawker's business has been prosecuted far more extensively in country than in town, but he still continues to deal in London.

Of the Packmen, or Hawkers of Soft Wares.

The packman, as he is termed, derives his name from carrying his merchandise or pack upon his back. These itinerant distributors are far less numerous than they were twenty or twenty-five years since. A few years since, they were mostly Irishmen, and their principal merchandise, Irish linens—a fabric not so generally worn now as it was formerly.

The packmen are sometimes called Manchester-men. These are the men whom I have described as the sellers of shirtings, sheetings, &c. One man, who was lately an assistant in the trade, could reckon twenty men who were possessed of good stocks, good connections, and who had saved money. They traded in an honourable manner, were well known, and much respected. The majority of them were natives of the north of Ireland, and two had been linen manufacturers. It is common, indeed, for all the Irishmen in this trade to represent themselves as having been connected with the linen manufacture in Belfast.

This trade is now becoming almost entirely a country trade. There are at present, I am told, only five pursuing it in London, none of them having a very extensive connection, so that only a brief notice is necessary. Their sale is of both cottons and linens for shirts. They carry them in rolls of 36 yards, or in smaller rolls, each of a dozen yards, and purchase them at the haberdashery swag-shops, at from 9*d.* to 18*d.* a yard. I now speak of good articles. Their profits are not very large—as for the dozen yards, which cost them 9*s.*, they often have a difficulty in getting 12*s.*—while in street-sale, or in hawking from house to house, there is great delay. A well-furnished pack weighs about one cwt., and so necessitates frequent stoppages. Cotton, for sheetings, is sold in the same manner, costing the vendors from 6*d.* to 1*s.* 3*d.* a yard.

Of the tricks of the trade, and of the tally system of one of these chapmen, I had the following account from a man who had been, both as principal and assistant, a travelling packman, but was best acquainted with the trade in and about London.

"My master," he said, "was an Irishman, and told everybody he had been a manager of a linen factory in Belfast. I believe he was brought up to be a shoemaker, and was never in the north of Ireland. Anyhow, he was very shy of talking about Irish factories to Irish gentlemen. I heard one say to him, 'Don't tell me, you have the Cork brogue.' I know he'd got some knowledge of linen weaving at Dundee, and could talk about it very clever; indeed he was a clever fellow. Sometimes, to hear him talk, you'd think he was quite a religious man, and at others that he was a big blackguard. It wasn't drink that made the difference, for he was no drinker. It's a great thing on a round to get a man or woman into a cheerful talk, and put in a joke or two; and that he could do, to rights. I had 12*s.* a week, standing wages, from him, and bits of commissions on

Original from HARVARD UNIVERSITY

sales that brought me from 3*s.* to 5*s.* more. He was a buyer of damaged goods, and we used to 'doctor' them. In some there was perhaps damages by two or three threads being out all the way, so the manufacturers wouldn't send them to their regular customers. My master pretended it was a secret where he got them, but, lord, I knew; it was at a swag-shop. We used to cut up these in twelves (twelve yards), sometimes less if they was very bad, and take a Congreve, and just scorch them here and there, where the flaws was worst, and plaster over other flaws with a little flour and dust, to look like a stain from street water from the fire-engine. Then they were from the stock of Mr. Anybody, the great draper, that had his premises burnt down—in Manchester or Glasgow, or London—if there'd been a good fire at a draper's—or anywhere; we wasn't particular. They was fine or strong shirtings, he'd say—and so they was, the sound parts of them—and he'd sell as cheap as common calico. I've heard him say, 'Why, marm, sure marm, with your eyes and scissors and needle, them burns—ah! fire's a dreadful judgment on a man—isn't the least morsel of matter in life. The stains is cured in a wash-tub in no time. It's only *touched* by the fire, and you can humour it, I know, in cutting out as a shirt ought to be cut; it should be as carefully done as a coat.' Then we had an Irish linen, an imitation, you know, a kind of 'Union,' which we call double twist. It is made, I believe, in Manchester, and is a mixture of linen and cotton. Some of it's so good that it takes a judge to tell the difference between it and real Irish. He got some beautiful stuff at one time, and once sold to a fine-dressed young woman in Brompton, a dozen yards, at 2*s.* 6*d.* a yard, and the dozen only cost him 14*s.* Then we did something on tally, but he was dropping that trade. The shopkeepers undersold him. 'If you get 60*l.* out of 100*l.*, in tally scores,' he often said, 'it's good money, and a fair living profit; but he got far more than that. What was worth 8*s.* was 18*s.* on tally, pay 1*s.* a week. He did most that way with the masters of coffee-shops and the landlords of little public-houses. Sometimes, if they couldn't pay, we'd have dinner, and that went to account, and he'd quarrel with me after it for what was my share. There's not much of this sort of trade now, sir. I believe my old master got his money together and emigrated."

"Do you want any ginuine Irish linin, ma'am?" uttered in unmistakable brogue, seemed to authenticate the fact, that the inquirer (being an Irishman) in all likelihood possessed the legitimate article; but as to their obtaining their goods from Coleraine and other places in the Emerald Isle, famed for the manufacture of linen, it was and is as pure fiction as the Travels of Baron Munchausen.

The majority of these packmen have discontinued dealing in linens exclusively, and have added silks, ladies' dresses, shawls and various articles connected with the drapery business. The country, and small towns and villages, remote from the neighbourhood of large and showy shops, are the likeliest markets for the sale of their goods. In London the Irish packmen have been completely driven out by the Scotch tallymen, who indeed are the only class of packmen likely to succeed in London. If the persevering Scotch tallyman can but set foot in a decent-looking residence, and be permitted to display his tempting finery to the "lady of the house," he generally manages to talk her into purchasing articles that perhaps she has no great occasion for, and which serve often to involve her in difficulties for a considerable period—causing her no little perplexity, and requiring much artifice to keep the tallyman's weekly visits a secret from her husband—to say nothing of paying an enormous price for the goods; for the many risks which the tallyman incurs, necessitates of course an exorbitant rate of profit.

"The number of packmen or hawkers of shawls, silks, &c., I think" (says one of their own body) "must have decreased full one-half within the last few years. The itinerant haberdashery trade is far from the profitable business that it used to be, and not unfrequently do I travel a whole day without taking a shilling: still, perhaps, one day's good work will make up for half a dozen bad ones. All the packmen have hawkers' licences, as they have mostly too valuable a stock to incur the risk of losing it for want of such a privilege. Some of the fraternity" (says my informant) "do not always deal 'upon the square;' they profess to have just come from India or China, and to have invested all their capital in silks of a superior description manufactured in those countries, and to have got them on shore 'unbeknown to the Custom-house authorities.' This is told in confidence to the servant-man or woman who opens the door—'be so good as tell the lady as much,' says the hawker, 'for really I'm afraid to carry the goods much longer, and I have already sold enough to pay me well enough for my spec—go, there's a good girl, tell your missus I have splendid goods, and am willing almost to give them away, and if we makes a deal of it, why I don't mind giving you a handsome present for yourself.'" This is a bait not to be resisted. Should the salesman succeed with the mistress, he carries out his promise to the maid by presenting her with a cap ribbon, or a cheap neckerchief.

The most primitive kind of packmen, or hawkers of soft-wares, who still form part of the distributing machinery of the country, traverse the highlands of Scotland. They have their regular rounds, and regular days of visiting their customers; their arrival is looked for with interest by the country people; and the inmates of the farm-house where they locate for the night consider themselves fortunate in having to entertain the packman; for he is their newsmonger, their story-teller, their friend, and their acquaintance, and is always made welcome. His wares consist of hose—linsey wolsey, for making petticoats—muslins for caps—ribbons—an assortment of needles, pins, and netting-pins—and all sorts of small wares. He always travels on foot. It is suspected that he likewise does a little in the "jigger line," for many of these

Highlanders have, or are supposed to have, their illicit distilleries; and the packmen are suspected of trafficking without excise interference. Glasgow, Dundee, Galashiels, and Harwick are the principal manufacturing towns where the packman replenishes his stock. "My own opinion," says an informant of considerable experience, "is that these men seldom grow rich; but the prevailing idea in the country part of Scotland is, that the pedlar has an unco lang stockin wi' an awfu' amount o goden guineas in it, and that his pocket buik is plumped out wi' a thick roll of bank notes. Indeed there are many instances upon record of poor packmen having been murdered—the assassins, doubtlessly, expecting a rich booty." It scarcely ever costs the packman of Scotland anything for his bed and board. The Highlanders are a most hospitable people with acquaintances—although with strangers at first they are invariably shy and distant. In Ireland there is also the travelling pedlar, whose habits and style of doing business are nearly similar to that of the Scotchman. Some of the packmen of Scotland have risen to eminence and distinction. A quondam lord provost of Glasgow, a gentleman still living, and upon whom the honour of knighthood has been conferred, was, according to common report, in his earlier days a packman; and rumour also does the gentleman the credit to acknowledge that he is not ashamed to own it.

I am told by a London hawker of soft goods, or packman, that the number of his craft, hawking London and its vicinity, as far as he can judge, is about 120 (the census of 1841 makes the London hawkers, hucksters and pedlars amount to 2041). In the 120 are included the Irish linen hawkers. I am also informed that the fair trader's profits amount to about 20 per cent., while those of the not over-particular trader range from 80 to 200 per cent. In a fair way of business it is said the hawker's taking will amount, upon an average, to 7*l.* or 8*l.* per week; whereas the receipts of the "duffer," or unfair hawker, will sometimes reach to 50*l.* per week. Many, however, travel days, and do not turn a penny.

Statement of a Packman.

Of the way of trading of a travelling-pedlar I had the following account from one of the body. He was well dressed, and a good but keen-looking man of about thirty-five, slim, and of rather short stature, with quick dark eyes and bushy whiskers, on which it was evident no small culture was bestowed. His manners were far from obtrusive or importunate—to those whom he sought to make customers—for I happened to witness a portion of his proceedings in that respect; but he had a quiet perseverance with him, which, along with perfect civility, and something like deference, might be the most efficient means of recommending himself to the maid-servants, among whom lay his chief customers. He showed a little of the pride of art in describing the management of his business, but he would not hear that he "pattered:" he talked to his customers, he declared, as any draper, who knew his business well, might talk to *his*.

When I saw him, his pack, which he carried slung over one shoulder, contained a few gown-pieces of printed cotton, nearly all with pink grounds; a few shawls of different sizes; and three rolls firmly packed, each with a card-label on which was neatly written, "French Merino. Full duty paid. A.B.—L.F.—18—33—1851. French Chocolate." There were also six neat paper packages, two marked "worked collars," three, "gauze handkerchiefs," and the other "beautiful child's gros de naples." The latter consisted of 4½ yards of black silk, sufficient for a child's dress. He carried with him, moreover, 5 umbrellas, one inclosed in a bright glazed cover, while from its mother-of-pearl handle hung a card addressed—"The Lady's Maid, Victoria Lodge, 13*s.* 6*d.*"

"This is a very small stock," he said, "to what I generally carry, but I'm going on a country round to-morrow, and I want to get through it before I lay in a new one. I tell people that I want to sell off my goods cheap, as they're too good for country sale; and that's true, the better half of it."

On my expressing some surprise that he should be leaving London at this particular time, he answered:—

"I go into the country because I think all the hawkers will be making for town, and there'll be plenty of customers left in the country, and fewer to sell to them at their own places. That's my opinion."

"I sell to women of all sorts. Smart-dressing servant-maids, perhaps, are my best customers, especially if they live a good way from any grand ticketing shop. I sold one of my umbrellas to one of them just before you spoke to me. She was standing at the door, and I saw her give half a glance at the umbrellas, and so I offered them. She first agreed to buy a very nice one at 3*s.* 3*d.* (which should have been 4*s.*), but I persuaded her to take one at 3*s.* 9*d.* (which should have been 4*s.* 6*d.*). 'Look here, ma'am,' said I, 'this umbrella is much bigger you see, and will carry double, so when you're coming from church of a wet Sunday evening, a friend can have share of it, and very grateful he'll be, as he's sure to have his best hat on. There's been many a question put under an umbrella that way that's made a young lady blush, and take good care of her umbrella when she was married, and had a house of her own. I look sharp after the young and pretty ladies, Miss, and shall as long as I'm a bachelor.' 'O,' says she, 'such ridiculous nonsense. But I'll have the bigger umbrella, because it's often so windy about here, and then one must have a good cover if it rains as well.'

"That's my way, sir. I don't mind telling that, because they do the same in the shops. I've heard them, but they can't put love and sweet-hearting so cleverly in a crowded shop as we can in a quiet house. It's that I go for, love and sweet-hearting; and I always speak to any smart servant as if I thought she was the mistress, or as

if I wasn't sure whether she was the mistress or the lady's-maid; three times out of four she's house-maid or maid of all work. I call her 'ma'am,' and 'young lady,' and sometimes 'miss.' It's no use offering to sell until a maid has tidied herself in the afternoon—not a bit. I should make a capital draper's shopman, I know, only I could never bear the confinement. I never will hear such words as 'I don't want it,' or, 'nothing more to-day,' no more than if I was behind a counter.

"The great difficulty I have is to get a chance of offering my goods. If I ring at a gate—for I always go a little way out of town—they can see who it is, and I may ring half an hour for nothing. If the door's opened it's often shut again directly, and I just hear 'bother.' I used to leave a few bills, and I do so still in some parts of the country, with a list of goods, and 'this bill to be called for' printed at the bottom. But I haven't done that in town for a long time; it's no good. People seem to think it's giving double trouble. One of the prettiest girls I ever saw where I called one evening, pointed—just as I began to say, 'I left a bill and'—to some paper round a candle in a stick, and shut the door laughing.

"In selling my gown-pieces I say they are such as will suit the complexion, and such like; and I always use my judgment in saying so. Why shouldn't I? It's the same to me what colour I sell. 'It's a genteel thing, ma'am,' I'll say to a servant-maid, 'and such as common people won't admire. It's not staring enough for them. I'm sure it would become you, ma'am, and is very cheap; cheaper than you could buy at a shop; for all these things are made by the same manufacturers, and sold to the wholesale dealers at the same price, and a shopkeeper, you know, has his young men, and taxes, and rates, and gas, and fine windows to pay for, and I haven't, so it don't want much judgment to see that I must be able to sell cheaper than shopkeepers, and I think your own taste, ma'am, will satisfy you that these here are elegant patterns.'

"That's the way I go on. No doubt there's others do the same, but I know and care little about them. I have my own way of doing business, and never trouble myself about other people's patter or nonsense.

"Now, that piece of silk I shall, most likely, sell to the landlady of a public-house, where I see there's children. I shall offer it after I've got a bit of dinner there, or when I've said I want a bit. It's no use offering it there, though, if it isn't cheap; they're too good judges. Innkeepers aren't bad customers, I think, taking it altogether, to such as me, if you can get to talk to them, as you sometimes can at their bars. They're generally wanting something, that's one step. I always tell them that they ought to buy of men, in my way, who live among them, and not of fine shop-keepers, who never came a-near their houses. I've sold them both cottons and linens, after such talk as that. I live at public-houses in the country. I sleep nowhere else.

"My trade in town is nothing to what it was ten or a dozen years back. I don't know the reason exactly. I think so many threepenny busses is one; for they'll take any servant, when she's got an afternoon, to a thoroughfare full of ticket-shops, and bring her back, and her bundle of purchases too, for another 3*d*. I shall cut it altogether, I think, and stick to the country. Why, I've known the time when I should have met from half-a-dozen to a dozen people trading in my way in town, and for these three days, and dry days too, I haven't met one. My way of trading in the country is just the same as in town. I go from farm-house to farm-house, or call at gentlemen's grand seats—if a man's known to the servants there, it may be the best card he can play—and I call at every likely house in the towns or villages. I only go to a house and sell a mistress or maid the same sort of goods (a little cheaper, perhaps), and recommend them in the same way, as is done every day at many a fine city, and borough, and West-End shop. I never say they're part of a bankrupt's stock; a packfull would seem nothing for that. I never pretend that they're smuggled. Mine's a respectable trade, sir. There's been so much dodging that way, it's been a great stop to fair trading; and I like to go on the same round more than once. A person once taken-in by smuggled handkerchiefs, or anything, won't deal with a hawker again, even though there's no deception. But 'duffing,' and all that is going down fast, and I wish it was gone altogether. I do nothing in tally. I buy my goods; and I've bought all sorts, in wholesale houses, of course, and I'd rather lay out 10*l*. in Manchester than in London. O, as to what I make, I can't say it's enough to keep me (I've only myself), and escape the income-tax. Sometimes I make 10*s*. a week; sometimes 20*s*.; sometimes 30*s*.; and I have made 50*s*.; and one week, the best I ever did, I made as much as 74*s*. 6*d*. That's all I can say."

Perhaps it may be sufficiently accurate to compute the average weekly earnings of a smart trader like my informant, at from 21*s*. to 25*s*. in London, and from 25*s*. to 30*s*. in the country.

Of the Tally Packman.

The pedlar tallyman is a hawker who supplies his customers with goods, receiving payment by weekly instalments, and derives his name from the tally or score he keeps with his customers. Linen drapery—or at least the general routine of linen-draper's stock, as silk-mercery, hosiery, woollen cloths, &c.—is the most prevalent trade of the tallyman. There are a few shoemakers and some household furniture dealers who do business in the tally or "score" system; but the great majority are linen-drapers, though some of them sell household furniture as well. The system is generally condemned as a bad one; as leading to improvidence in the buyer and rapacity in the seller. There are many who have incurred a tally debt, and have never been able to "get a-head of it," but have been kept poor by it all their lives. Some few, however, may have been benefited by the system, and as an outfit for a young man or woman entering service is necessary—when the parties are too poor to pay ready money—it is an

HARVARD UNIVERSITY

accommodation. I have never heard any of the tallyman's customers express an opinion upon the subject, other than that they wish they had done with the tallyman, or could do without him.

The system does not prevail to so great an extent as it did some years back. The pedlar or hawking tallyman travels for orders, and consequently is said not to require a hawker's licence. The great majority of the tally-packmen are Scotchmen. The children who are set to watch the arrival of the tallyman, and apprise the mother of his approach, when not convenient to pay, whisper instead of "Mother, here 's the Tallyman," "Mother, here 's the Scotchman." These men live in private houses, which they term their warehouse; they are many of them proprietors themselves in a small way, and conduct the whole of their business unassisted. Their mode of doing business is as follows :—they seldom knock at a door except they have a customer upon whom they call for the weekly instalment, but if a respectable-looking female happens to be standing at her door, she, in all probability, is accosted by the Scotchman, "Do you require anything in my way to-day, ma'am?" This is often spoken in broad Scotch, the speaker trying to make it sound as much like English as possible. Without waiting for a reply, he then runs over a programme of the treasures he has to dispose of, emphasising all those articles which he considers likely to suit the taste of the person he addresses. She doesn't want perhaps any—she has no money to spare then. "She may want something in his way another day, may-be," says the tallyman. "Will she grant him permission to exhibit some beautiful shawls—the last new fashion? or some new style of dress, just out, and an extraordinary bargain?" The man's importunities, and the curiosity of the lady, introduces him into the apartment,—an acquaintance is called in to pass her opinion upon the tallyman's stock. Should she still demur, he says, "O, I 'm sure your husband cannot object—he will not be so unreasonable; besides, consider the easy mode of payment, you 'll only have to pay 1*s.* 6*d.* a week for every pound's worth of goods you take; why it 's like nothing; you possess yourself of respectable clothing and pay for them in such an easy manner that you never miss it; well, I 'll call next week. I shall leave you this paper." The paper left is a blank form to be filled up by the husband, and runs thus :—"I agree on behalf of my wife to pay, by weekly instalments of 1*s.* 6*d.* upon every pound's worth of good she may purchase." This proceeding is considered necessary by the tallymen, as the judges in the Court of Requests now so frequently decide against him, where the husband is not cognisant of the transaction.

These preliminaries being settled, and the question having been asked what business the husband is—where he works—and (if it can be done without offence) what are his wages? The Scotchman takes stock of the furniture, &c. ; the value of what the room contains gives him a sufficiently correct estimate of the circumstances of his customers. His next visit is to the nearest chandler's shop, and there as blandly as possible he inquires into the credit, &c., of Mr. ——. If he deal, however, with the chandler, the tallyman accounts it a bad omen, as people in easy circumstances seldom resort to such places. "It is unpleasant to me," he says to the chandler, "making these inquiries; "but Mrs. —— wishes to open an account with me, and I should like to oblige them if I thought my money was safe." "Do *you* trust them, and what sort of payers are they?" According to the reply—the tallyman determines upon his course. But he rarely stops here; he makes inquiries also at the greengrocer's, the beer shop, &c.

The persons who connect themselves with the tallyman, little know the inquisition they subject themselves to.

When the tallyman obtains a customer who pays regularly, he is as importunate for her to recommend him another customer, as he originally was to obtain her custom. Some tallymen who keep shops have "travellers" in their employ, some of whom have salaries, while others receive a percentage upon all payments, and do not suffer any loss upon bad debts. Notwithstanding the caution of the tallyman, he is frequently "victimised." Many pawn the goods directly they have obtained them, and in some instances spend the money in drink. Their many losses, as a matter of course, *somebody* must make good. It therefore becomes necessary for them to charge a higher price for their commodities than the regular trader.

However charitably inclined the tallyman may be at first, he soon becomes, I am told, inured to scenes of misery, while the sole feeling in his mind at length is, "I will have my money;" for he is often tricked, and in some cases most impudently victimised. I am told by a tallyman that he once supplied goods to the amount of 2*l.*, and when he called for the first instalment, the woman said she didn't intend to pay, the goods didn't suit her, and she would return them. The tallyman expressed his willingness to receive them back, whereupon she presented him a pawnbroker's duplicate. She had pledged them an hour after obtaining them. This was done in a court in the presence of a dozen women, who all chuckled with delight at the joke.

The principal portion of the tallyman's customers are poor mechanics. When the appearance of the house, and the inquiries out of doors are approved of, no security is required; but the tallyman would at all times rather add a security, when attainable. Servant-girls who deal with tallymen must find the security of a housekeeper; and when such housekeeper agrees to be responsible for the payments, the same inquisitorial proceedings are adopted, in order to ascertain the circumstances of the surety. There are about fifty drapery shops in London where the tally-trade is carried on; and about 200 Scotchmen, besides fifty others (part English, part Irish), are engaged in the trade. A clerk of a tally-shop, at the West-end, informs me that there are ten collectors and canvassers for customers, out each day, from that one establishment; and that, until

lately, they were accustomed to collect moneys on Sundays. Some collect as much as 12*l.* or 14*l.* a day; and some not more than 2*l.* or 3*l.* The average sum collected may be about 5*l.* each, or 50*l.* per day by the whole. The profits are 30 per cent., the bad debts 10 per cent., thus leaving 20 per cent. net.

The Scotchman who does not choose to extend his business beyond his own cautious superintendence, is content with smaller profits, perhaps 20 per cent., and his bad debts may be estimated at 2½ per cent. One of the body informed me that he had been in the tally-trade about five years; that he commenced with a capital of only 10*l.*, and that now his collections average 30*l.* per week. He never bought, he said, on credit; and his stock on hand is worth nearly 200*l.* cost price, while his outstanding debts are nearly 200*l.* also. "This is a flourishing state of affairs," he remarked; "I do not owe a penny in the world, and I have accomplished all this in little less than five years." This man had served his apprenticeship to a draper in Glasgow, and had originally arrived in London with 20*l.* in his pocket. After some weeks' fruitless endeavour to obtain a situation, his money dwindling away the while, he was advised, by a fellow-countryman, who was a tallyman, to try the tally-trade. For a few days previous to adopting the business, he went the "rounds" with his friend, for the purpose of getting initiated, and the week after started on his own account. Notwithstanding his having no hawker's licence, he tried to effect sales for ready money, and, to a trifling extent, succeeded. The first week he obtained three tally customers. He could have got, he said, a dozen; but he selected three whom he considered good, and he was not deceived, for they continued to be customers of his to this day. The amount of goods that each of these took of him was 20*s.*; and the three instalments of 1*s.* 6*d.* each (4*s.* 6*d.* per week) the tallyman determined to subsist upon, though his lodging and washing cost him 2*s.* per week. He lived principally upon "parritch" and skim milk, indulging now and then in the luxury of a herring and a few potatoes. In twelve weeks he had added only one more credit customer to his books. He had hawked for ready money, and had succeeded so far as to increase his stock to 15*l.* in value. His first three customers had, by this time, paid their accounts, and again patronized him. In the course of a little time his fourth customer had also paid up, and had another supply of goods; he then added two more tally customers, and commenced indulging (though very seldom) in a mutton chop. He progressed slowly, and is now in flourishing circumstances. He states that he has met with only one loss during his connection with the tally-trade, and that but a trifling one. It is those who wish to drive a very extensive business, he says, who are principally victimised. The most industrious of the packmen tallymen seldom travel less than twenty miles a day, carrying a burthen upon their backs of from 100 to 120 lbs. They used to carry merely patterns to their customers, but they find that the full-length article is more likely to secure purchasers and customers. Those who keep shops do not carry goods with them; the would-be customer is invited to the shop.

The best day for business in the tally-trade is Monday, and most of these shops upon that day are crowded. Sometimes an unsolicited customer (mostly a female) presents herself, and wishes to be supplied with goods on tally. "Who recommended you?" inquires the tallyman. "Oh, Mrs. ——, sir, a customer of yours." "Ah! indeed, very much obliged to Mrs. ——," is the answer. The articles required are shown, selected, and cut. The new customer is treated most civilly by the tallyman, who further inquires her name and abode. The purchaser, of course, expects the next process will be to deliver up the parcel to her, when she is informed that they "will send it home for her." "Oh," she replies, "I won't trouble you, I can carry it myself." "Our rule, ma'am," returns the tallyman, "is always to send parcels home. We certainly cannot doubt your respectability, but we never deviate from our practice." The disappointed female departs, and if the inquiries do not prove satisfactory, she never hears further from the tallyman. The goods which she selected, and which were cut expressly for her, find their way to the shelves of the establishment. If, however, a good customer accompanies a friend whom she wishes to recommend, the parcels are delivered when purchased, if required. The tallyman (to good customers) often extends his civilities to a glass of wine; or, if the "Ladies" prefer it (which it must be confessed they mostly do), a glass of gin.

There is another class of tallymen who sell clocks, receiving payment by weekly instalments. These are content with an instalment of 1*s.* in the pound per week. They are principally Germans who can speak English. Their proceedings altogether are similar to the tally linen-draper.

I have given the rise and progress of a Scotch tallyman, and will now relate the downfall of another—an Englishman. He commenced a tally-shop in the neighbourhood of ———, and was carrying on a prosperous and daily increasing trade. At one time, a bill in the shop window announced that an errand boy was wanted—an applicant soon presented himself—was engaged, and proved a steady lad. In the course of a few weeks, this youth was promoted to the office of serving in the shop, and afterwards became collecting clerk. "George," said his master one day, "we have three days in the week unemployed; suppose you try and form a connection around Finchley, Highgate, Hampstead, and that neighbourhood." George was quite willing to make the experiment, and succeeded beyond expectation. The country connection soon surpassed the town trade; and George, the errand boy, became a man of some consequence in the establishment. The principal of the firm was what is termed "gay." He was particularly fond of attending public entertainments. He sported a little as well, and delighted in horse-racing. His business,

Original from HARVARD UNIVERSITY

though an excellent one, was neglected; the books got out of order; and he became involved in difficulties. An examination of his affairs took place; and a Mr. R—— was engaged from a wholesale house in the city to assist in making up the accounts, &c. During this person's sojourn in the shop, he saw that George (the quondam errand boy) was the chief support of the concern. The country customers had never seen any other person, and a partnership was proposed. The proposal was accepted, and the firm R—— and W—— became one of the most prosperous tally-shops in the neighbourhood of Tottenham-court-road. George's master was made bankrupt, and is now a street-seller in Fitzroy-market—vending sandwiches, &c.

The cases are not a few where ruin has followed a connection with the tallymen. I will particularize one instance related to me on good authority. A lawyer's clerk married, when young, a milliner; his salary was a guinea per week, and he and his wife had agreed to "get on in the world." They occupied furnished lodgings at first, but soon accumulated furniture of their own, and every week added some little useful article towards their household stock. "At the end of a year," said the individual in question, "I had as comfortable a little home as any man would wish to possess; I was fond of it too, and would rather have been there than anywhere else. My wife frequently wished to obtain credit; 'it would be so easy,' said she, 'to pay a trifling instalment, and then we could obtain immediately whatever we might want.' I objected, and preferred supplying our wants gradually, knowing that for ready money I could purchase to much better advantage. Consequently we still kept progressing, and I was really happy. Judge my astonishment one day, when I came home, and found an execution was in the house. My wife had run in debt with the tallyman unknown to me. Summonses had been served, which by some means she had concealed from me. The goods which I had taken so much pains to procure were seized and sold. But this was not all. My wife grew so much alarmed at the misery she had caused that she fled from me, and I have never seen her but once since. This occurred seven years ago, and she has been for some time the companion of those who hold their virtue of little worth. For some time after this I cared not what became of me; I lost my situation, and sunk to be a supernumerary for 1*s.* a night at one of the theatres. Here, after being entrusted with a line to speak, I eventually rose to a 'general utility man,' at 12*s.* per week. With this and some copying, that I occasionally obtain from the law-stationers, I manage to live, but far from comfortably, for I never think of saving now, and only look out for copying when I stand in need of more money. I am always poor, and scarcely ever have a shilling to call my own."

Some of the principal establishments, "doing largely" in the tally-trade, are in or about Red Lion-square and street, the higher part of High Holborn, the vicinity of Tottenham-court-road, the Blackfriars, Waterloo, Westminster, St. George's, Walworth, New Kent, and Dover roads.

At some of these tally-shops horses and carts are kept to carry out the goods ordered of the "travellers," especially when furniture is supplied as well as drapery; while in others the "travellers" are resident on the premises, and are occasionally shopmen, for a "large" tally-master not unfrequently carries on a retail trade in addition to his tally-business.

The tallymen not concerned with these large establishments, but carrying on trade on their own account, reside generally in the quieter streets in the neighbourhood of the thoroughfares I have mentioned, and occupy perhaps the ground-floor, letting (for the house is generally their own) the other apartments. Sometimes a piece of cotton-print is placed in their parlour-window, and sometimes there is no indication whatever of any business being carried on within, for the hawking tallymen do not depend in any measure upon situation or display, but solely on travelling and personal solicitations at people's own residences.

OF THE "DUFFERS" OR HAWKERS OF PRETENDED SMUGGLED GOODS.

OF "duffers" and "lumpers," as regards the sale of textile fabrics, there are generally, I am informed, about twenty in London. At such times as Epsom, Ascot-heath, or Goodwood races, however, there is, perhaps, not one. All have departed to prey, if possible, upon the countrymen. Eight of them are Jews, and the majority of the others are Irishmen. They are generally dressed as sailors, and some wear either fur caps, or cloth ones, with gilt bands round them, as if they were the mates or stewards of ships. They look out for any likely victim at public-houses, and sometimes accost persons in the streets—first looking carefully about them, and hint that they are smugglers, and have the finest and cheapest "Injy" handkerchiefs ever seen. These goods are now sold in "pieces" of three handkerchiefs. When times were better, I was told, they were in pieces of four, five, and six. One street-seller said to me, "Yes, I know the 'duffers;' all of them. They do more business than you might think. Everybody likes a smuggled thing; and I should say these men, each of the 'duffers,' tops his 1*l.* a week, clear profit." I am assured that one of the classes most numerously victimised is a body who generally account themselves pretty sharp, viz. gentlemen's grooms, and coachmen at the several mews. Sailors are the best customers, and the vicinity of the docks the best locality for this trade; for the hawker of pretended smuggled goods always does most business among the "tars." The mock handkerchiefs are damped carefully with a fine sponge, before they are offered for sale; and they are often strongly perfumed, some of the Jews supplying cheap perfumes, or common "scents." When the "duffer" thinks he may venture upon the assertion, he assures a customer that this is "the smell the handkerchiefs brought with 'em from foreign parts, as they was smuggled in a bale of spices!"

The trade however is not without its hazards; for I am informed that the "duffers" sometimes, on attempting their impositions imprudently, and sometimes on being discovered before they can leave the house, get soundly thrashed. They have, of course, no remedy.

The "pieces" of three handkerchiefs sold by the "duffers" are purchased by them in Houndsditch, at from 3*s.* to 7*s.*; but 7*s.* is only given when there is a design to palm off the 3*s.* goods along with them. Cent. per cent. is a low profit in this trade.

One intelligent street-trader, to whom I am indebted for carefully-considered information, said to me very quietly: "I 've read your work, sir, at a coffee-shop; for I can't afford to take it in. I know you're going to open the eyes of the public as to the 'duffer's' tricks, now. All right, sir, they're in honest men's ways. But, sir, when are you going to say something about the rich shopkeepers as sells, and the rich manufacturers as makes, the 'duffer's' things? Every man of them knows it 's for roguery."

There is a peculiar style among the "duffers;" they never fold their goods neatly—the same as drapers do, but thrust them into the pack, in a confused heap, as if they did not understand their value—or their business. There are other classes of "duffers" whose calling is rather more hazardous than the licensed-hawker "duffer." "I have often thought it strange," says a correspondent, "that these men could induce any one to credit the fact of their being sailors, for, notwithstanding the showy manner in which they chew their quid, and the jack-tar like fashion in which they suffer their whiskers to grow, there is such a fresh-waterfied appearance about them, that they look no more like a regular mariner than the supernumerary seamen in a nautical drama, at the Victoria Theatre. Yet they obtain victims readily. Their mode of proceeding in the streets is to accost their intended dupes, while walking by their side; they usually speak in a half whisper, as they keep pace with them, and look mysteriously around to see if there be any of 'them ere Custom-house sharks afloat.' They address the simple-looking passers by thus: 'Shipmate' (here they take off their fur-cap and spit their quid into it)—'shipmate, I 've just come ashore arter a long voyage—and splice me but I 've something in the locker that 'll be of service to you; and, shiver my timbers' (they are very profuse in nautical terms), 'you shall have it at your own price, for I'm determined to have a spree, and I haven't a shot in the locker; helm 's a-lee; just let's turn into this creek, and I 'll show you what it is' (perhaps he persuades his dupe down a court, or to a neighbouring public-house). 'Now here is a beautiful piece of *Ingy* handkerchiefs.' (They are the coarsest description of spun not *thrown* silk, well stiffened into stoutness, and cost the "duffer" perhaps 15*d.* each; but as business is always done on the sly, in a hurry, and to escape observation, an examination seldom or never takes place). 'I got 'em on shore in spite of those pirates, the Custom-house officers. You shall have 'em cheap, there 's half a dozen on 'em, they cost me 30*s.* at Madras, you shall have 'em for the same money.' (The victim, may be, is not inclined to purchase. The pretended tar, however, must have money.) 'Will you give me 25*s.* for them?' he says; 'd—n it, a pound? Shiver my topsails, you don't want them any cheaper than that, do you?' The 'duffer' says this to make his dupe believe that he really does want the goods, or has offered a price for them. Perhaps if the 'duffer' cannot extort more he takes 10*s.* for the half dozen 'Ingy' handkerchiefs, the profit being thus about 2*s.* 6*d.*; but more frequently he gets 100 and even 200 per cent. on his transactions according to the gullibility of his customers. The 'duffer' deals also in cigars; he accosts his victim in the same style as when selling handkerchiefs, and gives himself the same sailor-like airs.

"Sometimes the 'duffers' visit the obscure streets in London, where there are small chandlers' shops; one of them enters, leaving his mate outside to give him the signal in case the enemy heaves in sight. He requests to be served with some trifling article—when if he approve of the physiognomy of the shopkeeper, and consider him or her likely to be victimised—he ventures an observation as to how enormously everything is taxed' (though to one less innocent it might appear unusual for a sailor to talk politics); 'even this 'ere baccy' he says, taking out his quid, 'I can't chew, without paying a tax; but,' he adds, chuckling—'us sailor chaps sometimes shirks the Custom-house lubbers, sharp as they are.' (Here his companion outside puts his head in at the door, and, to make the scene as natural as possible, says, 'Come, Jack, don't stop there all night spinning your yarns; come, bear a hand, or I shall part convoy.') 'Oh, heave to a bit longer, my hearty,' replies the 'duffer,' 'I will be with you in the twinkling of a marling spike. I'll tell you what we've got, marm, and if you likes to buy it you shall have it cheap, for me and my mate are both short of rhino. We've half-a-dozen pounds of tea—you can weigh it if you like—and you shall have the lot for 12*s.*' Perhaps there is an immediate purchase, but if 12*s.* is refused, then 10*s.* 8*s.* or 6*s.* is asked, until a sale be effected, after which the sailors make their exit as quickly as possible. Then the chandler's-shop keeper begins to exult over the bargain he or she has made, and to examine more minutely the contents of the neatly packed, and tea-like looking packet thus bought. It proves to be lined with a profuse quantity of tea lead, and though some Chinese characters are marked on the outside, it is discovered on opening to contain only half-a-pound of tea, the remainder consisting principally of chopped hay. The 'duffers' enact the same part, and if a purchaser buy 10 lbs. of the smuggled article, then 9 lbs. at least consist of the same chopped hay.

"Sometimes the 'duffers' sell all their stock to one individual. No sooner do they dispose of the handkerchiefs to a dupe, than they introduce the smuggled tobacco to the notice of the unsuspecting customer; then they palm off their cigars, next their tea, and lastly, as the 'duffer' is determined to raise as much money as he can 'to

have his spree;' 'why d—e,' he exclaims to his victim—'I'll sell you my watch. It cost me 6*l.* at Portsmouth—give me 3*l.* for it and it's yours, shipmate. Well, then, 2*l.*—— 1*l.*' The watch, I need not state, is made solely for sale.

"It is really astonishing," adds my informant, "how these men ever succeed, for their look denotes cunning and imposition, and their proceedings have been so often exposed in the newspapers that numbers are alive to their tricks, and warn others when they perceive the "duffers" endeavouring to victimise them; but, as the thimble-men say, "There's a fool born every minute."

OF THE STREET-SELLERS OF "SMALL-WARE," OR TAPE, COTTON, ETC.

THE street-sellers of tape and cotton are usually elderly females; and during my former inquiry I was directed to one who had been getting her living in the street by such means for nine years. I was given to understand that the poor woman was in deep distress, and that she had long been supporting a sick husband by her little trade, but I was wholly unprepared for a scene of such startling misery, sublimed by untiring affection and pious resignation, as I there discovered.

I wish the reader to understand that I do not cite this case as a type of the sufferings of this particular class, but rather as an illustration of the afflictions which frequently befall those who are solely dependent on their labour, or their little trade, for their subsistence, and who, from the smallness of their earnings, are unable to lay by even the least trifle as a fund against any physical calamity.

The poor creatures lived in one of the close alleys at the east end of London. On inquiring at the house to which I had been directed, I was told I should find them in "the two-pair back." I mounted the stairs, and on opening the door of the apartment I was terrified with the misery before me. There, on a wretched bed, lay an aged man in almost the last extremity of life. At first I thought the poor old creature was really dead, but a tremble of the eyelids as I closed the door, as noiselessly as I could, told me that he breathed. His face was as yellow as clay, and it had more the cold damp look of a corpse than that of a living man. His cheeks were hollowed in with evident want, his temples sunk, and his nostrils pinched close. On the edge of the bed sat his heroic wife, giving him drink with a spoon from a tea-cup. In one corner of the room stood the basket of tapes, cottons, combs, braces, nutmeg-graters, and shaving-glasses, with which she strove to keep her old dying husband from the workhouse. I asked her how long her good man had been ill, and she told me he had been confined to his bed five weeks last Wednesday, and that it was ten weeks since he had eaten the size of a nut in solid food. Nothing but a little beef-tea had passed his lips for months. "We have lived like children together," said the old woman, as her eyes flooded with tears, "and never had no dispute. He hated drink, and there was no cause for us to quarrel. One of my legs, you see, is shorter than the other," said she, rising from the bed-side, and showing me that her right foot was several inches from the ground as she stood. "My hip is out. I used to go out washing, and walking in my pattens I fell down. My hip is out of the socket three-quarters of an inch, and the sinews is drawn up. I am obliged to walk with a stick." Here the man groaned and coughed so that I feared the exertion must end his life. "Ah, the heart of a stone would pity that poor fellow," said the good wife.

"After I put my hip out, I couldn't get my living as I'd been used to do. I couldn't stand a day if I had five hundred pounds for it. I must sit down. So I got a little stall, and sat at the end of the alley here with a few laces and tapes and things. I've done so for this nine year past, and seen many a landlord come in and go out of the house that I sat at. My husband used to sell small articles in the streets—black lead and furniture paste, and blacking. We got a sort of a living by this, the two of us together. It's very seldom though we had a bit of meat. We had 1*s.* 9*d.* rent to pay—Come, my poor fellow, will you have another little drop to wet your mouth?" said the woman, breaking off. "Come, my dearest, let me give you this," she added, as the man let his jaw fall, and she poured some warm sugar and water flavoured with cinnamon—all she had to give him—into his mouth. "He's been an ailing man this many a year. He used to go of errands and buy my little things for me, on account of my being lame. We assisted one another, you see. He wasn't able to work for his living, and I wasn't able to go about, so he used to go about and buy for me what I sold. I am sure he never earned above 1*s.* 6*d.* in the week. He used to attend me, and many a time I've sat for ten and fourteen hours in the cold and wet and didn't take a sixpence. Some days I'd make a shilling, and some days less; but whatever I got I used to have to put a good part into the basket to keep my little stock." [A knock here came to the door; it was for a halfpenny-worth of darning cotton.] "You know a shilling goes further with a poor couple that's sober than two shillings does with a drunkard. We lived poor, you see, never had nothing but tea, or we couldn't have done anyhow. If I'd take 18*d.* in the day I'd think I was grandly off, and then if there was 6*d.* profit got out of that it would be almost as much as it would. You see these cotton braces here" (said the old woman, going to her tray). "Well, I gives 2*s.* 9*d.* a dozen for them here, and I sells 'em for 4½*d.*, and oftentimes 4*d.* a pair. Now, this piece of tape would cost me seven farthings in the shop, and I sells it at six yards a penny. It has the *name* of being eighteen yards. The profit out of it is five farthings. It's beyond the power of man to wonder how there's a bit of bread got out of such a small way. And the times is so bad, too! I think I could say I get 8*d.* a day profit if I have any sort of custom, but I don't exceed that at the best of times. I've often sat at the end of the alley and taken only 6*d.*, and that's not much more than 2*d.* clear—it an't 3*d.* I'm

sure. I think I could safely state that for the last nine year me and my husband has earned together 5*s.* a week, and out of that the two of us had to live and pay rent—1*s.* 9*d.* a week. Clothes I could buy none, for the best garment is on me; but I thank the Lord still. I've paid my rent all but three weeks, and that isn't due till to-morrow. We have often reckoned it up here at the fire. Some weeks we have got 5*s.* 3*d.*, and some weeks less, so that I judge we have had about 3*s.* to 3*s.* 6*d.* a week to live upon the two of us, for this nine year past. Half-a-hundred of coals would fit me the week in the depths of winter. My husband had the kettle always boiling for me against I came in. He used to sit here reading his book—he never was fit for work at the best—while I used to be out minding the basket. He was so sober and quiet too. His neighbours will tell that of him. Within the last ten weeks he's been very ill indeed, but still I could be out with the basket. Since then he's never earnt me a penny—poor old soul, he wasn't able! All that time I still attended to my basket. He wasn't so ill then but what he could do a little here in the room for hisself; but he wanted little, God knows, for he couldn't eat. After he fell ill, I had to go all my errands myself. I had no one to help me, for I'd nothing to pay them, and I'd have to walk from here down to Sun-street with my stick, till my bad leg pained me so that I could hardly stand. You see the hip being put out has drawn all the sinews up into my groin, and it leaves me oncapable of walking or standing constantly; but I thank God that I've got the use of it anyhow. Our lot's hard enough, goodness knows, but we are content. We never complain, but bless the Lord for the little he pleases to give us. When I was away on my errands, in course I couldn't be minding my basket; so I lost a good bit of money that way. Well, five weeks on Wednesday he has been totally confined to his bed, excepting when I lifted him up to make it some nights; but he can't bear *that* now. Still the first fortnight he was bad, I did manage to leave him, and earn a few pence; but, latterly, for this last three weeks, I haven't been able to go out at all, to do anything."

"She's been stopping by me, minding me here night and day all that time," mumbled the old man, who now for the first time opened his gray glassy eyes and turned towards me, to bear, as it were, a last tribute to his wife's incessant affection. "She has been most kind to me. Her tenderness and care has been such that man never knew from woman before, ever since I lay upon this sick bed. We've been married five-and-twenty years. We have always lived happily—very happily, indeed—together. Until sickness and weakness overcome me I always strove to help myself a bit, as well as I could; but since then she has done all in her power for me—worked for me—ay, she has worked for me, surely—and watched over me. My creed through life has been repentance towards God, faith in Jesus Christ, and love to all my brethren. I've made up my mind that I must soon change this tabernacle, and my last wish is that the good people of this world will increase her little stock for her. She cannot get her living out of the little stock she has, and since I lay here it's so lessened, that neither she nor no one else can live upon it. If the kind hearts would give her but a little stock more, it would keep her old age from want, as she has kept mine. Indeed, indeed, she does deserve it. But the Lord, I know, will reward her for all she has done to me." Here the old man's eyelids dropped exhausted.

"I've had a shilling and a loaf twice from the parish," continued the woman. "The overseer came to see if my old man was fit to be removed to the workhouse. The doctor gave me a certificate that he was not, and then the relieving officer gave me a shilling and a loaf of bread, and out of that shilling I bought the poor old fellow a sup of port wine. I bought a quartern of wine, which was 4*d.*, and I gave 5*d.* for a bit of tea and sugar, and I gave 2*d.* for coals; a halfpenny rushlight I bought, and a short candle, that made a penny—and that's the way I laid out the shilling. If God takes him, I know he'll sleep in heaven. I know the life he's spent, and am not afraid; but no one else shall take him from me—nothing shall part us but death in this world. Poor old soul, he can't be long with me. He's a perfect skeleton. His bones are starting through his skin."

I asked what could be done for her, and the old man thrust forth his skinny arm, and laying hold of the bed-post, he raised himself slightly in his bed, as he murmured "If she could be got into a little parlour, and away from sitting in the streets, it would be the saving of her." And, so saying, he fell back overcome with the exertion, and breathed heavily.

The woman sat down beside me, and went on. "What shocked him most was that I was obligated in his old age to go and ask for relief at the parish. You see, he was always a spiritful man, and it hurted him sorely that he should come to this at last, and for the first time in his lifetime. The only parish money that ever we had was this, and it *does* hurt him every day to think that he must be buried by the parish after all. He was always proud, you see."

I told the kind-hearted old dame that some benevolent people had placed certain funds at my disposal for the relief of such distress as hers; and I assured her that neither she nor her husband should want for anything that might ease their sufferings.

The day after the above was written, the poor old man died. He was buried out of the funds sent to the "Morning Chronicle," and his wife received some few pounds to increase her stock; but in a few months the poor old woman went mad, and is now, I believe, the inmate of one of the pauper lunatic asylums.

Of the Street-Sellers of Lace.

This trade is carried on both by itinerants and at stands, or "pitches." The itinerants, of whom I will first treat, are about forty in number (thirty

women and ten men). They usually carry their lace in boxes, or cases. It is not uncommon for the women to represent themselves as lacemakers from Marlow, or some other place in Buckinghamshire, or from Honiton, in Devonshire, while the men assert they are from Nottingham. I am informed that there are among these itinerant lace-sellers two women and one man who really have been lacemakers. They all buy their wares at the haberdashery swag-shops.

The lace, which is the principal staple of this trade, is "edgings," or the several kinds of cheap lace used for the bordering of caps and other female requirements. Among street-people the lace is called "driz," and the sellers of it "driz-fencers." It gained this slang name, I was informed, many years ago, when it was sold, and often to wealthy ladies, as rare and valuable lace, smuggled from Mechlin, Brussels, Valenciennes, or any foreign place famous, or once famous, for its manufacture. The pretended smuggled lace trade is now unknown in London, and is very little practised in the country. There is, however, still some smuggling connected with lace-selling. Two, and sometimes three, female lace-sellers are also "jigger-workers." They carry about their persons pint bladders of "stuff," or "jigger stuff" (spirit made at an illicit still). "I used to supply them with it until lately," one street-trader told me, "from a friend that kept a 'jigger,' and a tidy sale some of them had. Indeed, I've made the stuff myself. I knew one woman, six or seven years back, that did uncommon well at first, but she got too fond of the stuff, and drank herself into the work'us. They never carried gin, for brandy was most asked for. They sold the brandy at 2*s.* 6*d.* the pint; rum at 1*s.* 6*d.*; and whiskey at 2*s.*; sometimes higher, and always trying for 6*d.* a pint profit, at least. O yes, sir; I know they got the prices I've mentioned, though they seem high; for you must remember that the jigger spirit is above proof, and a pint will make two pints of gin-palace stuff. They sold it, I've heard them say, to ladies that liked a drop on the sly; and to some as pretended they bought that way for economy; yes, and to shopkeepers and publicans too. One old lady used to give 3*s.* for three yards of driz, and it was well enough understood, without no words, that a pint of brandy was part of them three yards. But the trade that way is nothing to what it was, and gets less and less every year."

From a middle-aged woman selling laces I had the following account:—

"I've been in the trade about six years, sir. Ten years back or more I was in place, and saved a little money, as a servant of all work. I married a house-painter, but trade got bad, and we both had illnesses; and my husband, though he's as good a man as need be, can't stick to anything very long at a time." (A very common failing, by the bye, with the street-folk.) "It seems not in his nature. When we was reduced very low he got on a cab—for he can turn his hand to almost anything—and after that we came to street-selling. He's now on jewellery, and I think it suits him as well or better than anything he's tried; I do my part, and we get on middling. If we're ever pushed it's no use fretting. We had one child, and he died when he wanted just a month of three years old, and after I'd lost him I said I would never fret for trifles no more. My heart was broke for a long time—it was indeed. He was the loveliest boy ever seen, and everybody said so. I went into lace, because my husband got to know all about it, and I had no tie at home then. I was very shy and ashamed at first to go into houses, but that wears off, and I met with some nice people that bought of me and was very civil, so that encourages one. I sell nothing but lace. I never cleared more than 2*s.* 6*d.* in a day, and that only once. I suppose I clear from 3*s.* 6*d.* to 4*s.* 6*d.* a week now; perhaps, take it altogether, rather more than 4*s.* I have a connection, and go to the houses in and about the Regent's Park, and all the small streets near it, and sometimes Maida Hill way. I once tried a little millinery made-up things, but it didn't suit somehow, and I didn't stick to it. You see, sir, I sell my lace to very few but servant maids and small shopkeepers' wives and daughters; but then they're a better sort of people than those as has to buy everything ready made like servants has. They can use their own needles to make themselves nice and smart, and they buy of such as me to do it cheap, and they're not often such beaters down as them that buys the ready-made. I can do nothing, or next to nothing, in very wet weather. If I'm in the habit of going into a nice kitchen, perhaps the housemaid flies at me for 'bringing in all that dirt.' My husband says all women is crossest in bad weather, and perhaps servants is.

"I buy my lace near Shoreditch. It's a long walk, but I think I'm best used there. I buy generally a dozen yards, from 3½*d.* to 1*s.*, and sometimes up to 2*s.* I sell the commoner at 1*d.* a yard, and three yards 2*d.*; and the better at 2*d.* and 3*d.* a yard. It's a poor trade, but it's doing something. My husband seldom earns less than 12*s.* a week, for he's a good salesman, and so we pay 2*s.* rent regular every Monday for an unfurnished room, and has the rest to live on. I have sold in the Brill on a Saturday night, but not often, nor lately I don't like it; I haven't tongue enough."

In addition to the itinerants there are about seventy stationary lace sellers, and not less than eighty on the Saturday evenings. The best pitches are, I am told, near the Borough-market; in Clare-market; the New Cut (on Saturday nights); Walworth-road; Tooley-street; and Dockhead, Bermondsey. From the best information at my command, it appears that at least half of these traders sell only lace, or rarely anything else. The others sell also net for making caps and "cauls," which are the plain portion at the back, to be trimmed or edged according to the purchaser's taste. Some sell also, with their lace, cap ribbons—plain or worked collars—and muslin, net, or worked under-sleeves. Braid and gimp were formerly sold by them, but are now in no demand. The prices run from 2*d.* to 6*d.* for lace articles, and about the same for net, &c. per yard; the lowest priced are most sold.

Original from HARVARD UNIVERSITY

In this stationary trade are as many men and youths as women and girls. One woman, who had known street-selling for upwards of twenty years, said she could not do half so well now as she could twenty years ago, for the cheaper things got the cheaper people would have them. "Why, twenty year ago," she exclaimed, "I bought a lot of 'leno' cheap—it was just about going out of fashion for caps then, I think—and one Saturday night in the Cut, I cleared 15*s.* on it. I don't clear that in a fortnight now. I have sold to women of the town, as far as I've known them to be of that sort, but very seldom. It's not often you'll catch *them* using a needle for theirselves. They do use their needles, I know. You can see some of them sewing at their doors and windows in Granby-street, Waterloo-road, or could lately—for I haven't passed that way for some time—but I believe it's all for money down, for the slop-shops. It suits the slop-shops to get work cheap anyway; and it suits the women to have some sort of occupation, which they needn't depend upon for their living."

The stationary lace sellers, for the most part, display their goods on stalls, but some spread them on a board, or on matting on the ground. Some of the men gather an audience by shouting out, "Three yards a penny, edging!" As at this rate the lace-seller would only clear ½*d.* in a dozen yards, the cry is merely uttered to attract attention. A few who patter at the trade—but far fewer than was once the case—give short measure. One man, who occasionally sold lace, told me, that when he was compelled to sell for "next to no profit, and a hungry Sunday coming," he gave good shop measure, thirty full inches to a yard. His yard wand was the correct length, "but I can do it, sir," he said with some exultation, "by palming," and he gave a jerk to his fingers, to show how he caught in the lace, and "clipped it short."

Calculating that 100 persons in this trade each take 10*s.* 6*d.* weekly, the profit being about cent. per cent., we find 2600*l.* expended in the streets in lace and similar commodities.

Of the Street-Sellers of Japanned Table-Covers.

This trade, like several others, as soon as the new commodities became in established demand, and sufficiently cheap, was adopted by street-sellers. It has been a regular street-trade between four and five years. Previously, when the covers were dearer, the street-sellers were afraid to speculate much in them; but one man told me that he once sold a table-cover for 8*s.*, and at another time for 10*s.*

The goods are supplied to the street-folk principally by three manufacturers—in Long-lane, Smithfield, Whitechapel-road, and Petticoat-lane. The venders of the glazed table-covers are generally considered among the smartest of the street-folk, as they do not sell to the poor, or in poor neighbourhoods, but "at the better sort of houses, and to the wealthier sort of people." Table-covers are now frequently disposed of by raffle. "I very seldom sell in the streets," said one man, "though I one evening cleared 4*s.* by standing near the Vinegar-works, in the City-road, and selling to gents on their way home from the city. The public-house trade is the best, and indeed in winter evenings, and after dark generally, there's no other. I get rid of more by raffling than by sale. On Saturday evening I had raffles for two covers, which cost me 1*s.* 4*d.* each. I had some trouble to get 1*s.* 9*d.* for one; but I got up a raffle for the other, and it brought me 2*s.*; six members at 4*d.* each. It's just the sort of thing to get off in a raffle on Saturday night, or any time when mechanics have money. A man thinks—leastways I've thought so myself, when I've been in a public-house raffle—now I've spent more money than I ought to, and there's the old woman to face; but if I win the raffle, and take the thing home, why my money has gone to buy a nice thing, and not for drink." I may remark that in nearly all raffles got up in this manner, the article raffled for is generally something coveted by a working man, but not so indispensably necessary to him, that he feels justified in expending his money upon it. This fact seems well enough known to the street-sellers who frequent public-houses with their wares. I inquired of the informant in question if he had ever tried to get up a raffle of his table-covers in a coffee-shop as well as a public-house. "Never, with table-covers," he said, "but I have with other things, and find it's no go. In a coffee-shop people are quiet, and reading, unless it's one of them low places for young thieves, and such like; and they've no money very likely, and I wouldn't like to trust them in a raffle if they had. In public-houses there's talk and fun, and people's more inclined for a raffle, or anything spicy that offers."

There are now fifteen regular street-sellers, or street-hawkers of these table-covers, in London, four of whom are the men's wives, and they not unfrequently go a round together. Sometimes, on fine days, there are twenty. I heard of one woman who had been very successful in bartering table-covers for old clothes. "I've done a little that way myself," said a man in the trade, "but nothing to her, and people sees into things so now, that there's hardly a chance for a crust. The covers is so soft and shiny, and there's such fine parrots and birds of paradise on them, that before the price was known there was a chance of a good bargain. I once got for a cover that cost me 2*s.* 9*d.* a great coat that a Jew, after a hard bargaining, gave me 6*s.* 3*d.* for."

The prices of the table-covers (wholesale) run from 8*s.* a dozen to 30*s.*; but the street-sellers rarely go to a higher price than 18*s.* They can buy a dozen, or half a dozen—or even a smaller quantity—of different sizes. Some of these street-traders sell, with the table-covers, a few wash-leathers, of the better kind. Calculating that fifteen street-sellers each take 25*s.* weekly the year round—one-half being the profit, including their advantages in bartering and raffling—we find 975*l.* expended yearly upon japanned table-covers, bought in the streets.

OF THE STREET-SELLERS OF BRACES, BELTS, HOSE, TROWSER-STRAPS, AND WAISTCOATS.

THE street-sellers of braces are a numerous and a mixed class. They are nearly all men, and the majority are Irishmen; but this relates only to the itinerant or public-house brace-sellers. These wares are sold also by street-traders, who make other articles the staple of their trade—such as the dog-collar-sellers.

The braces sold thirty years ago were of a very different manufacture from those vended in the streets at present. India-rubber web was then unknown as a component part of the street braces. The braces, which in some parts of the country are called "gallowses," were, at the time specified, made of a woollen web, both washable and durable. "One pair of such braces, good ones," said an old tailor with whom I had some talk on the subject, "would last a poor man his lifetime. Now they're in a rope or in rags in no time." These woollen braces were sold at from 1*s.* to 2*s.* the pair in the streets; the straps being of good firm leather. Not long after this period a much cheaper brace-web was introduced—a mixture of cotton with the woollen—and the cheap manufacture gradually supplanted the better article, as respects the street trade. The cheaper braces were made with sheepskin straps, which soon yielded to friction, and were little serviceable. The introduction of the India-rubber web was another change in the trade, and the manufacture has become lower and lower-priced until the present time.

The braces sold in the streets, or hawked in the public-houses, are, however, not all of the very inferior manufacture. Some are called "silk," others "buck-leather," and others "knitted cotton." The "silk" are of a silken surface, with an admixture of cotton and India-rubber; the "buck-leather" (a kind now very little known in street sale) are of strong sheepskin, dressed buck-leather fashion; and the "knitted" cotton are woven, some kinds of them being very good and strong.

The street brace-sellers, when trying to do business in the streets, carry their goods generally with a few belts, and sometimes with hose in their hands and across their arms. They stretch them from end to end, as they invite the custom of passers by, to evince the elasticity and firmness of the web. Sometimes the braces are slung from a pole carried on the shoulder. The sellers call at the public-house bars and tap-rooms; some are admitted into the parlours; and at a well-frequented gin-palace, I was informed by a manager of one, a brace-seller will call from twelve to twenty times a day, especially on a Monday; while on a Saturday evening they will remain two, three, or four hours, accosting fresh customers. At the gin-palaces, the young and strong Irishmen offering these wares—and there are many such—are frequently scoffed at for selling "braces and things a baby can carry."

The following account, which I received from a street brace-seller, shows the class who purchase such articles:—

"I was put to a carriage-lamp maker," the man said, "at Birmingham, but soon ran away. Nobody saw after me, for I had only an uncle, and he left me to to the parish. It was all my own fault. I was always after some idle end, though I can read very well. It seems as if I couldn't help it, being wild, I mean. I ran away to Worcester, *without knowing where I was going, or caring either.* I was half starved in Worcester, for I lived as I could. I found my way to London afterwards. I've been in the streets ever since, at one thing or the other; how many years I can't say. Time goes so quick sometimes, and sometimes so slow, and I'm never long in one place. I've sold braces off and on ever since Amato won the Derby, if you know when that was. I remember it because I went to Epsom races that year to sell race cards. When I came to London after the races I laid out 12*s.* in braces. I hardly remember how many pairs I bought for it, but they wasn't such common things as I'm carrying now. I could sell a few then at from 9*d.* to 1*s.* 3*d.* a pair, to the 'cads' and people at such places as the 'Elephant,' and the 'Flower Pot' in Bishopsgate-street, which was a great ''bus' place then. I used to sell, too, to the helpers in inn-yards, and a few in the mews. The helpers in the mews mostly buys knitted cotton. I've got 1*s.* and sometimes 1*s.* 6*d.* for an extra article from them, but now I don't carry them; there's no demand there. You see, many of them work in their shirts, and the head coachmen and grooms, which is often great Turks, would blow up if the men had dirty braces hanging to their buttons, so they uses what'll wash. Nearly all my business now is done at public-houses. I go from one tavern to another on my round all day long, and sell in the street when I can. I think I sell as many at 5*d.* and at 10*d.* as at all other prices together, and most at 5*d.*; but when I have what I call a full stock I carry 'em from 4*d.* to 20*d.* The poorer sort of people, such as wears braces—for there's a many as does without 'em—likes the 1*d.* out of 6*d.*, and the others the 2*d.* out of the 1*s.*; it tempts them. It's a tiresome life, and not so good as costermongering, for I once did tidy well in apples. But in the brace trade you ar'n't troubled with hiring barrows, and it's easy carried on in public-houses in wet weather, and there's no stock to spoil. I sell all to working-people, I think. Sometimes an odd pair or two at 1*s.* 6*d.*, or so, to a tradesman, that may happen to be in a bar, and likes the look and the price; or to a gentleman's servant. I make from 1*s.* to 1*s.* 6*d.* a day; full 1*s.* 6*d.* if I stick close to it. I may make 2*s.* or 2*s.* 6*d.* a week, too, in selling belts and stockings; but I only sometimes carry stockings. Perhaps I clear 9*s.* a week the year round. There's lots in the trade don't clear 1*s.* a day, for they only carry low-priced things. I go for 4*d.* profit on every shilling's worth I sell. I've only myself to keep. I pay 3*d.* a night at a lodging-house, and nothing on Sundays. I had a young woman with me when I was a coster, but we didn't agree, and parted. She was too fond of lifting her hand to her mouth ('tippling') to please me. I mean to live very near this week, and get a few shillings if I can to

Original from HARVARD UNIVERSITY

try something at Greenwich next Monday." This was said on the Tuesday in Passion-week.

The braces are bought by the street-sellers at the swag-shops I have described. The prices range from 1*s*. 6*d*. (for common children's) to 12*s*. a dozen; 3*s*., 3*s*. 6*d*., 6*s*. 6*d*., and 7*s*. being the most frequent prices. Higher-priced articles are also sold at the swags and by the street-sellers, but not one in twenty of these compared with the lower priced.

In London and its suburbs, and on "rounds," of which the metropolis forms the central point, and at stands, there are, I am assured, not fewer than 500 persons vending braces. Of these a twentieth portion may be women, and a tenth old and sometimes infirm men. There are few children in the trade. The stall-keepers, selling braces with other articles, are about 100, and of the remainder of this class, those who are not Irishmen are often impoverished mechanics, such as tailors—brace-vending being easily resorted to, and carried on quietly in public-houses, and it does not entail the necessity of bawling aloud, to which a working-man, driven to a street-life, usually feels repugnance. Calculating that 500 brace-sellers clear 5*s*. a week each on those articles alone, and estimating the profit at 33 per cent., it shows a street expenditure of 3900*l*. One brace-seller considered that 500 such sellers was too low a number; but the most intelligent I met with agreed on that estimate.

The Belts sold in the street are nearly all of stout cotton web, "with India-rubber threads," and usually of a drab colour, woollen belts being rarely ever seen now. They are procured in the same way, and sold by the same parties, as are braces. The amount expended on belts is, from the best information I can command, about an eighth of that expended on braces. The belts are sold at 1*s*. each, and cost 8*s*. the dozen, or 9*d*. each, if only one be purchased.

The street-sale of hose used to be far more considerable than it is now, and was, in a great measure, in the hands of a class who had personal claims to notice, independent of the goodness of their wares. These were old women, wearing, generally, large white aprons, and chintz-patterned gowns, and always scrupulously clean. They carried from door to door, in the quieter streets, and in the then suburbs, stockings of their "own knitting." Such they often were; and those which were not were still knitted stockings, although they might be the work of old women in the country, who knitted by the fireside, needing no other light on winter evenings and at the doors of their cottages in the sunshine in summer. Of these street-sellers some were blind. Between thirty and forty years ago, I am told, there were from twelve to twenty blind knitters, but my informant could not speak with certainty, as he might probably observe the same women in different parts. The blind stocking-sellers would knit at a door as they waited. The informant I have quoted thought that the last of these knitters and street-sellers disappeared upwards of twenty years ago, as he then missed her from his door, at which she used to make her regular periodical appearance. The stockings of this trade were most frequently of white lamb's-wool, and were sold at from 3*s*. 6*d*. to 5*s*. 6*d*. They were long in the leg, and were suited "for gentle-people's winter wear." The women-sellers made in those days, I am assured, a comfortable livelihood.

The sale of stockings is now principally in the hands of the men who vend braces, &c. The kind sold is most frequently unbleached cotton. The price to a street-buyer is generally from 6*d*. to 9*d*.; but the trade is of small extent. "It's one of the trades," a street-seller said to me, "that we can't compete with shop-keepers in. You shall go to a haberdashery swag-shop, and though they have 'wholesale haberdashers,' and 'hawkers supplied' on the door-post, you'll see a pair of stockings in the window marked with a very big and very black 6, and a very little and not half black ¾; and if I was to go in, they'd very likely ask me 6*s*. 6*d*. a dozen for an inferior thing. They retail themselves, and won't be undersold if they can help it, and so they don't care to accommodate us in things that's always going."

A few pairs of women's stockings are hawked by women, and sold to servant-maids; but the trade in these goods, I am informed, including all classes of sellers—of whom there may be fifty—does not exceed (notwithstanding the universality of the wear), the receipt of 6*s*. weekly per individual, with a profit of from 1*s*. 4*d*. to 2*s*., and an aggregate expenditure of about 800*l*. in the year. The trade is an addition to some other street trade.

The brace-sellers used to carry with their wares another article, of which India-rubber web formed the principal part. These were trowser-straps, "with leather buttonings and ingy-spring bodies." It was only, however, the better class of brace-sellers who carried them; those who, as my informant expressed it, "had a full stock;" and their sale was insignificant. At one time, the number of brace-sellers offering these straps was, I am informed, from 70 to 100. "It was a poor trade, sir," said one of the class. "At first I sold at 4*d*., as they was 6*d*. in middling shops, and 1*s*. in the toppers, if not 1*s*. 6*d*.; but they soon came down to 3*d*., and then to 2*d*. My profit was short of 3*d*. in 1*s*. My best customers for braces didn't want such things; plain working-men don't. And grooms, and stable-keepers generally, wears boots or knee-gaiters, and footmen sports knee-buckles and stockings. All I did sell to was, as far as I can judge, young mechanics as liked to turn out like gents on a Sunday or an evening, and real gents that wanted things cheap. I very seldom cleared more than 1*s*. a week on them. The trade's over now. If you see a few at a stand, it's the remains of an old stock, or some that a swag-shop has pushed out for next to nothing to be rid of them."

The sale of waistcoats is confined to Smithfield, as regards the class I now treat of—the sellers of articles made by others. Twelve or fourteen years back, there was a considerable sale in what was a branch of duffing. Waistcoats were sold to countrymen, generally graziers' servants, under

Original from HARVARD UNIVERSITY

the pretence that they were of fine silk plush, which was then rather an object of rustic Sunday finery. A drover told me that a good many years ago he saw a countryman, with whom he was conversing at the time, pay 10*s.* 6*d.* for a "silk plush waistcoat," the vendor having asked 15*s.*, and having walked away—no doubt remarking the eagerness of his victim—when the countryman refused to give more than 10*s.* "He had a customer set for it," he said, "at half-a-guinea." On the first day the waistcoat was worn—the drover was afterwards told by the purchaser—it was utterly spoiled by a shower of rain; and when its possessor asked the village tailor the value of the garment, he was told that it had no value at all; the tailor could not even tell what it was made of, but he never saw anything so badly made in his life; never. Some little may be allowed for the natural glee of a village tailor on finding one of his customers, who no doubt was proud of his London bargain, completely taken in; but these waistcoats, I am assured by a tailor who had seen them, were the veriest rubbish. The trade, however, has been unknown, unless with a few rare exceptions at a very busy time—such as the market for the show and sale of the Christmas stock—since the time specified.

The waistcoats now sold in Smithfield market, or in the public-houses connected with it, are, I am told, and also by a tailor, very paltry things; but the price asked removes the trade from the imputation of duffing. These garments are sold at from 1*s.* to 4*s.* 6*d.* each; but very rarely 4*s.* 6*d.* The shilling waistcoats are only fit for boys—or "youths," as the slop-tailors prefer styling them—but 1*s.* 6*d.* is a common price enough; and seven-eighths of the trade, I am informed, is for prices under, or not exceeding, 2*s.* The trade is, moreover, very small. There are sometimes no waistcoat-sellers at all; but generally two, and not unfrequently three. The profits of these men are 1*s.* on a bad, and 2*s.* 6*d.* on a good day. As, at intervals, these street-sellers dispose of a sleeve-waistcoat (waiscoat with sleeves) at from 4*s.* 6*d.* to 6*s.*, we may estimate the average earnings in the trade at 5*s.* per market day, or 10*s.* in the week. This shows an outlay of 78*l.* in the year, as the profits of these street traders may be taken at 33 per cent.; or, as it is almost invariably worded by such classes, "4*d.* in the 1*s.*" The material is of a kind of cotton made to look as stout as possible, the back, &c., being the commonest stuff. They are supplied by a slop-house at the East End, and are made by women, or rather girls.

The sale of waistcoats in the street, markets, &c., is of second-hand goods, or otherwise in the hands of a distinct class. There are other belts, and other portions of wearing apparel, which, though not of textile fabrics, as they are often sold by the same persons as I have just treated of, may be described here. These are children's "patent leather" belts, trowser-straps, and garters.

The sellers of children's and men's belts and trowser-straps are less numerous than they were, for both these things, I am told, but only on street authority, are going out of fashion. From one elderly man who had "dropped belts, and straps, and all that, for oranges," I heard bitter complaints of the conduct of the swag shop-keepers who supplied these wares. The substance of his garrulous and not very lucid complaint was that when boys' patent leather belts came into fashion, eleven, twelve, or thirteen years back, he could not remember which, the usual price in the shops was 1*s.*, and they were soon to be had in the streets for 6*d.* each. The belt-sellers "did well" for a while. But the "swags" who, according to my informant, at first supplied belts of patent horse-leather, came to substitute patent sheep-leather for them, which were softer, and looked as well. The consequence was, that whenever the sheep-leather belts were wet, or when there was any "pull" upon them, they stretched, and "the polish went to cracks." After having been wet a few times, too, they were easily torn, and so the street trade became distrusted. It was the same with trowser-straps.

The belt trade is now almost extinct in the streets, and the strap trade, which was chiefly in the hands of old and infirm, and young people, is now confined to the sellers of dog-collars, &c. The trowser-straps are not glazed or patent-leather, now, but "plain calf;" sold at 2*d.* a pair generally, and bought at from 1*s.* 2*d.* to 1*s.* 4*d.* the dozen pairs. Many readers will remember how often they used to hear the cry, "Three pair for sixpence! Three pair for sixpence!" A cry now, I believe, never heard.

Among the belt and strap-sellers were some blind persons. One man counted to me three blind men whom he knew selling them, and one sells them still, attached to the rails by St. Botolph's church, Bishopsgate.

The same persons who sold straps, &c., not including the present sellers, the dog-collar men, &c., had lately no small traffic in the vending of garters. The garter-sellers were, however, far more numerous than ever were the strap-sellers. At one time, I am told, there were 200 garter sellers; all old or infirm, or poor women, or children, and chiefly Irish children. As these children were often stockingless and shoeless, their cry of "Penny a pair! India-rubber garters, penny a pair!" was sometimes pitiful enough, as they were offering a cheap article, unused by themselves. The sudden influx of garters, so to speak, was owing, I am told, to a manufacturer having discovered a cheap way of "working the India-rubber threads," and having "thrown a lot into the market through the swag shops." The price was at first 8*s.* a gross (8*d.* a dozen), but as the demand increased, it was raised to 9*s.* and 9*s.* 6*d.* The trade continued about six weeks, but has now almost entirely ceased. The stock of garters still offered for sale is what stall-keepers have on hand, or what swag shop-keepers tempt street-sellers to buy by reducing the price. The leather garter-trade, 1*d.* a pair being the usual price for sheep-skin garters, is now almost unknown. It was somewhat extensive.

OF THE STREET-SELLERS OF BOOT AND STAY-LACES, &c.

LIKE many street-callings which can be started on

the smallest means, and without any previous knowledge of the article sold being necessary to the street-vendor, the boot and stay-lace trade has very many followers. I here speak of those who *sell* boot-laces, and subsist, or endeavour to subsist, by the sale, without mixing it up with begging. The majority, indeed the great majority, of these street traders are women advanced in years, and, perhaps, I may say the whole of them are very poor. An old woman said to me, "I just drag, on, sir, half-starving on a few boot-laces, rather than go into the workhouse, and I know numbers doing the same."

The laces are bought at the haberdashery swag-shops I have spoken of, and amongst these old women I found the term "swag-shop" as common as among men who buy largely at such establishments. The usual price for boot-laces to be sold in the streets is 1*d.* a dozen. Each lace is tagged at both ends, sufficing for a pair of boots. The regular retail price is three a penny, but the lace-sellers are not unfrequently compelled to give four, or lose a customer. A better quality is sold at 1½*d.* and 2*d.* a dozen, but these are seldom meddled with by the street lace-sellers. It is often a matter of strong endeavour for a poor woman to make herself mistress of 11*d.*, the whole of which she can devote to the purchase of boot-laces, as for 11*d.* she can procure a gross, so saving 1*d.* in twelve dozen.

The stay-laces, which are bought at the same places, and usually sold by the same street-traders, are 2*d.* and 2½*d.* the dozen. I am told that there are as many of the higher as of the lower priced stay-laces bought for street sale, "because," one of the street-sellers told me "there's a great many servant girls, and others too, that's very particular about their stay-laces." The stay-laces are retailed at ½*d.* each.

These articles are vended at street-stalls, along with other things for female use; but the most numerous portion of the lace-sellers are itinerant, walking up and down a street market, or going on a round in the suburbs, calling at every house where they are known, or where, as one woman expressed it, "we make bold to venture." Those frequenting the street-markets, or other streets or thoroughfares, usually carry the boot-laces in their hands, and the stay-laces round their necks, and offer them to the females passing. Their principal customers are the working-classes, the wives and daughters of small shop-keepers, and servant-maids. "Ladies, of course," said one lace-seller, "won't buy of us." Another old woman whom I questioned on the subject, and who had sold laces for about fourteen years, gave me a similar account; but she added:—"I've sold to high-up people though. Only two or three weeks back, a fine-dressed servant maid stopped me and said, 'Here, I must have a dozen boot-laces for mistress, and she says, she'll only give 3*d.* for them, as it's a dozen at once. A mean cretur she is. It's grand doings before faces, and pinchings behind backs, at our house.'"

Among the lace-sellers having rounds in the suburbs are some who "have known better days." One old woman had been companion and housekeeper to a lady, who died in her arms, and whose legacy to her companion-servant enabled her to furnish a house handsomely. This she let out in apartments at "high-figures," and anything like a regular payment by her lodgers would have supplied her with a comfortable maintenance. But fine gentlemen, and fine ladies too, went away in her debt; she became involved, her furniture was seized, and step by step she was reduced to boot-lace selling. Her appearance is still that of "the old school;" she wears a very large bonnet of faded black silk, a shawl of good material, but old and faded, and always a black gown. The poor woman told me that she never ventured to call even at the houses where she was best received if she saw any tax-gatherer go to or from the house: "I know very well what it is," she continued, "it's no use my calling; they're sure to be cross, and the servants will be cross too, because their masters or mistresses are cross with them. If the tax-gatherer's not paid, they're cross at being asked; if he is paid, they're cross at having had to part with their money. I've paid taxes myself."

The dress of the boot lace-sellers generally is that of poor elderly women, for the most part perhaps a black chip, or old straw bonnet (often broken) and a dark-coloured cotton gown. Their abodes are in the localities in all parts of the metropolis, which I have frequently specified as the abodes of the poor. They live most frequently in their own rooms, but the younger, and perhaps I may add, coarser, of the number, resort to lodging-houses. It is not very uncommon, I was told by one of the class, for two poor women, boot-lace sellers or in some similar line, "to join" in a room, so saving half the usual rent of 1*s.* 6*d.* for an unfurnished room. This arrangement, however, is often of short duration. There is always arising some question, I was told, about the use or wear of this utensil or the other, or about washing, or about wood and coals, if one street-seller returned an hour or two before her companion. This is not to be wondered at, when we bear in mind that to these people every farthing is of consequence. From all that I can learn, the boot-lace sellers (I speak of the women) are poor and honest, and that, as a body, they are little mixed up with dishonest characters and dishonest ways. The exceptions are, I understand, among some hale persons, such as I have alluded to as sojourning in the lodging-houses. Some of these traders receive a little parochial relief.

One intelligent woman could count up 100 persons depending chiefly upon the sale of boot and stay-laces, in what she called her own neighbourhood. This comprised Leather-lane, Holborn, Tottenham Court-road, the Hampstead-road, and all the adjacent streets. From the best data at my command, I believe there are not fewer than 500 individuals *selling* these wares in London. Several lace-sellers agreed in stating that they sold a dozen boot-laces a-day, and a dozen stay-laces, and 2 dozen extra on Saturday nights; but the drawbacks of bad weather, &c., reduce the average sale to not more than 6 dozen a week, or 384,400

Original from HARVARD UNIVERSITY

boot-laces in a year, at an outlay to the public of 3120*l.* yearly; from a half to three-fourths of the receipts being the profit of the street-sellers.

The same quantity of stay-laces sold at 6*d.* a dozen shows an outlay of 4680*l.*, with about an equally proportional profit to the sellers.

Most of these traders sell tapes and other articles as well as laces. The tapes cost 3*d.* and 3½*d.* the dozen, and are sold at ½*d.* a knot. A dozen in 2 days is an average sale, but I have treated more expressly of those who depend principally upon boot-lace selling for their livelihood. Their average profits are about 3*s.* a week, on laces alone. The trade, I am told, was much more remunerative a few years back, and the decline was attributed "to so many getting into the trade, and the button boots becoming as fashionable as the Adelaides."

Of a Blind Female Seller of "Small-Wares."

I now give an account of the street-trade, the feelings, and the life of a poor blind woman, who may be seen nearly every fine day, selling what is technically termed "small-ware," in Leather-lane, Holborn. The street "small-wares" are now understood to be cotton-tapes, pins, and sewing cotton; sometimes with the addition of boot and stay-laces, and shirt-buttons.

I saw the blind small-ware seller enter her own apartment, which was on the first floor of a small house in a court contiguous to her "pitch." The entrance into the court was low and narrow; a tall man would be compelled to stoop as he entered the passage leading into the court. Here were unmistakeable signs of the poverty of the inhabitants. Soapsuds stood in the choked gutter, old clothes were hung out to dry across the court, one side being a dead wall, and the windows were patched with paper, sometimes itself patched with other paper. In front of one window, however, was a rude gate-work, behind which stood a root of lavender, and a campanula, thriving not at all, but yet, with all their dinginess, presenting a relief to the eye.

The room of the blind woman is reached by a very narrow staircase, on which two slim persons could not pass each other, and up old and worn stairs. Her apartment may be about ten feet square. The window had both small and large panes, with abundance of putty plastering. The furniture consisted of a small round deal table (on which lay the poor woman's stock of black and white tapes, of shirt-buttons, &c.), and of four broken or patched chairs. There were a few motley-looking "pot" ornaments on the mantel-shelf, in the middle of which stood a doctor's bottle. The bust of a female was also conspicuous, as was a tobacco-pipe. Above the mantel-piece hung some pictureless frames, while a pair of spectacles were suspended above a little looking-glass. Over a cupboard was a picture of the Ethiopian serenaders, and on the uncoloured walls were engravings of animals apparently from some work on natural history. There were two thin beds, on one of which was stowed a few costermonger's old baskets and old clothes (women's and boys'), as if stowed away there to make room to stir about. All the furniture was dilapidated. An iron rod for a poker, a pair of old tongs, and a sheet-iron shovel, were by the grate, in which glimmered a mere handful of fire. All showed poverty. The rent was 1*s.* a week (it had been 1*s.* 9*d.*), and the blind woman and a lodger (paying 6*d.* of the rent) slept in one bed, while a boy occupied the other. A wiry-haired dog, neither handsome nor fat, received a stranger (for the blind woman, and her guide and lodger, left their street trade at my request for their own room) with a few querulous yelps, which subsided into a sort of whining welcome to me, when the animal saw his mistress was at ease. The pleasure with which this poor woman received and returned the caresses of her dog was expressed in her face. I may add that owing to a change of street names in that neighbourhood, I had some difficulty in finding the small-ware seller, and heard her poor neighbours speak well of her as I inquired her abode; usually a good sign among the poor.

The blind tape-seller is a tall and somewhat strongly-formed woman, with a good-humoured and not a melancholy expression of face, though her manner was exceedingly quiet and subdued and her voice low. Her age is about 50. She wore, what I understand is called a "half-widow's cap;" this was very clean, as indeed was her attire generally, though worn and old.

I have already given an account of a female small-ware seller (which account formerly appeared in one of my letters in the *Morning Chronicle*) strongly illustrating the vicissitudes of a street life. It was the statement, however, of one who is no longer in the streets, and the account given by the blind tape and pin seller is further interesting as furnishing other habitudes or idiosyncracies of the blind (or of an individual blind woman), in addition to those before detailed; more especially in its narrative of the feelings of a perhaps not very sensitive woman who became "dark" (as she always called it) in mature age.

"It's five years, sir," she said, "since I have been quite dark, but for two years before that I had lost the sight of one eye. Oh, yes, I had doctors but they couldn't save my eyesight. I lost it after illnesses and rheumatics, and from want and being miserable. I felt *very* miserable when I first found myself quite dark, as if everything was lost to me. I felt as if I'd no more place in the world; but one gets reconciled to most things, thank God, in time; but I'm often low and sad now. Living poorly and having a sickly boy to care about may be one reason, as well as my blindness and being so bad off.

"I was brought up to service, and was sent before that to St. Andrew's school. I lost my parents and friends (relatives) when I were young. I was in my first place eighteen months, and was eight or nine years in service altogether, mostly as maid of all work. I saved a little money and married. My husband was a costermonger, and we didn't do well. Oh, dear no, sir, because he was addicted to drinking. We often suffered great pinching. I can't say as he was unkind to me.

He died nine years or more since. After that I supported myself, and two sons we had, by going out to wash and 'chair.' I did that when my husband was living. I had tidy work, as I 'chaired' and washed for one family in Clerkenwell for ten years, and might again if I wasn't dark. My eldest son's now a soldier and is with his regiment at Dover. He's only eighteen, but he could get nothing to do as hard as he tried; I couldn't help him; he knew no trade; and so he 'listed. Poor fellow! perhaps I shall never see him again. Oh, *see* him! That I couldn't if he was sitting as near me as you are, sir; but perhaps I may never hear his voice again. Perhaps he'll have to go abroad and be killed. It's a sad thought that for a blind widow; I think of it both up and in bed. Blind people thinks a great deal, I feel they does. My youngest son—he's now fourteen —is asthmatical; but he's such a good lad, so easily satisfied. He likes to read if he can get hold of a penny book, and has time to read it. He's at a paper-stainer's and works on fancy satin paper, which is very obnicious" (the word she used twice for pernicious or obnoxious) "to such a delicate boy. He has 5*s.* a week, but, oh dear me, it takes all that for his bit of clothes, and soap for washing, and for shoes, and then he must carry his dinner with him every day, which I makes ready, and as he has to work hard, poor thing, he requires a little meat. I often frets about his being so weakly; often, as I stands with my tapes and pins, and thinks, and thinks. But, thank God, I can still wash for him and myself, and does so regularly. No, I can't clean my room myself, but a poor woman who lives by selling boot-laces in the streets has lodged with me for many years, and she helps me."

"Lives!" interrupted the poor boot-lace woman, who was present, "starves, you mean; for all yesterday I only took a farthing. But anything's better than the house. I'll live on 4*d.* a day, and pay rent and all, and starve half my time, rather nor the great house" (the Union).

"Yes, indeed," resumed the blind woman, "for when I first went dark, I was forced to send to my parish, and had 6*d.* twice a week, and a half-quartern loaf, and that was only allowed for three weeks, and then there was the house for me. Oh dear, after that I didn't know what I could do to get a bit of bread. At first I was so frightened and nervous, I was afraid of every noise. That was when I was quite dark; and I am often frightened at nothing still, and tremble as I stand in the lane. I was at first greatly distressed, and in pain, and was very down-hearted. I was so put about that I felt as if I was a burden to myself, and to everybody else. If you lose your sight as I did, sir, when you're not young, it's a long time *before you learns to be blind.* [So she very expressly worded it.] A friend advised me to sell tapes and cottons, and boot-laces, in the street, as better than doing nothing; and so I did. But at first I was sure every minute I should be run on. The poor woman that lodges with me bought some things for me where she buys her own—at Albion-house, in the Borough. O, I does very badly in my trade, very badly. I now clear only 2*d.*, 3*d.*, or 4*d.* a day; no, I think not more than 1*s.* 6*d.* a week; that is all. Why, one day this week I only sold a ha'porth of pins. But what I make more than pays my rent, and it's a sort of employment; something to do, and make one feel one's not quite idle. I hopes to make more now that nights are getting long, for I can then go into the lane (Leather-lane) of an evening, and make 1*d.* or 2*d.* extra. I daren't go out when it's long dark evenings, for the boys teases me, and sometimes comes and snatches my tapes and things out of my hands, and runs away, and leaves me there robbed of my little stock. I'm sure I don't know whether it's young thieves as does it, or for what they calls a lark. I only knows I loses my tapes. Do I complain to the police, do you say, sir? I don't know when a policeman's passing, in such a crowded place. Oh yes, I could get people to complain for me, but perhaps it would be no good; and then I'm afraid of the police; they're so arbitry. [Her word.] It's not very long since one of them—and I was told afterwards he was a sergeant, too—ordered me to move on. 'I can't move on, sir,' said I, 'I wish I could, but I must stand still, for I'm blind.' 'I know that,' says he, 'but you're begging.' 'No, I'm not,' says I, 'I'm only a trying to sell a few little things, to keep me out of the work 'us.' 'Then what's that thing you have tied over your breast?' says he. 'If you give me any more of your nonsense, I'll lock you up;' and then he went away. I'm terrified to think of being taken to the station."

The matter which called forth the officer's wrath, was a large card, tied from the poor woman's shoulders, on which was printed, in large letters, "PLEASE TO BUY OF THE POOR BLIND." "Ay," said the blind woman's companion, with a bitterness not uncommon on the part of street-sellers on such occasions, "and any shopkeeper can put what notice he likes in his window, that he can, if it's ever such a lie, and nothing's said if *he* collects a crowd; oh dear, no. But *we* mus'n't say our lives is our own."

"Yes, sir," said the blind woman, as I questioned her further, "there I stands, and often feels as if I was half asleep, or half dreaming; and I sometimes hardly knows when I dreams, and what I thinks; and I think what it was like when I had my eyesight and was among them, and what it would be like if I had my eyesight again; all those people making all that noise, and trying to earn a penny, seems so queer. And I often thinks if people suffered ever so much, they had something to be thankful for, if they had their eyesight. If I'd been dark from a child, I think I shouldn't have felt it so much. It wouldn't have been like all that lost, and I should be handier, though I'm not bad that way as it is, but I'm afraid to go out by myself. Where I lives there's so many brokers about, I should run against their furniture. I'm sometimes not spoken to for an hour and more. Many a day I've only took 1*d.* Then I thinks and mopes about what will become of me, and thinks

about my children. I don't know who buys of me, but I'm sure I'm very thankful to all as does. They takes the things out of my hands, and puts the money into them. I think they're working-people as buys of me, but I can't be sure. Some speaks to me very kind and pleasant. I don't think they're ladies that speaks kind. My husband used to say that if ladies went to places like the Lane, it was on the sly, to get something cheap, and they did'nt want to be seen there, or they might be counted low. I'm sure he was right. And it ain't such as them as buys of a poor blind woman out of kindness. No, sir, it's very seldom indeed that I get more than the regular price. A halfpenny a knot for my tapes; and a halfpenny and a farthing for pins; and a halfpenny and a penny a dozen for shirt-buttons; and three a penny when I sells boot-laces; and a halfpenny a piece when I has stay-laces. I sells good things, I know, for the friend as gets them wouldn't deceive me, and I never has no complaints of them.

"I don't know any other blind woman in the trade besides myself. No, I don't associate with blind people. I wasn't brought up, like, to such a thing, but am in it by accident. I can't say how many blind women there may be in my line in the streets. I haven't the least notion. I took little notice of them, God forgive me, when I had my eyesight, and I haven't been thrown among them since. Whether there's many of them or not, they're all to be pitied.

"On a Sunday I never stirs out, except to chapel, with my lodger or my son. No, sir, not a Roman Catholic chapel, but a Protestant. When it's not very fine weather we goes to the nearest, but you hears nothing but what's good in any of them. Oh dear, no.

"I lives on tea and bread and butter all the week—yes, I can make it ready myself—except on Sundays, when my son has his dinner here, and we has a bit of cheap meat; not often fish; it's troublesome. If bread and things wasn't cheap I couldn't live at all, and it's hardly living as it is. What *can* any one do on all that I can earn? There's so many in the streets, I'm told, in my line, and distress drives more and more every week—everybody says so, and wages is so bad, and there's such under-selling, that I don't know whatever things will come to. I've no 'spectation of anything better in the time that has to come, nothing but misery, God help me. But I'm sure I should soon fret to death in a work'us."

The poor woman lodging with the blind street-seller is herself in the same trade, but doing most in boot and stay-laces. She has a sharp and pinched outline of countenance, as if from poverty of diet, and is indeed wretchedly poor, earning only about 6*d*. a day, if so much. She is about the same age as her landlady, or somewhat younger, and has apparently been good-looking, and has still an intelligent expression. She lodged with the blind woman during her husband's lifetime, when he rented two rooms, letting her one, and she had lived with the present widow in this way about fourteen years. She speaks cheerfully and seems an excellent companion for a blind person. On my remarking that they could neither of them be very cross-tempered to have lived so long together, the lodger said, laughingly, "O, we have a little tiff now and then, sir, as women will, you know; but it's not often, and we soon are all right again. Poor people like us has something else to think of than tiffs and gossipping."

THE BLIND STREET-SELLER OF BOOT-LACES.

THE character, thoughts, feelings, regrets, and even the dreams, of a very interesting class of street-folk—the blind—are given in the narratives I now proceed to lay before the reader, from blind street-folk; but a few words of general introduction are necessary.

It may be that among the uneducated—among those whose feelings and whose bodies have been subjected to what may be called the wear and tear of poverty and privation—there is a tendency, even when misfortunes the most pitiable and undeserved have been encountered, to fall from misery into mendicancy. Even the educated, or, as the street people more generally describe them, those "who have seen better days," sometimes, after the ordeal of the streets and the low lodging-houses, become trading mendicants. Among such people there may be, in one capacity or other, the ability and sometimes the opportunity to labour, and yet—whether from irrepressible vagabondism, from utter repugnance to any *settled* mode of subsistence (caused either by the natural disposition of the individual, or by the utter exhaustion of mind and body driving him to beg)—yet, I say, men of this class become beggars and even "lurkers."

As this is the case with men who have the exercise of their limbs, and of the several senses of the body, there must be some mitigating plea, if not a full justification, in the conduct of those who beg directly or indirectly, because they *cannot* and perhaps *never could* labour for their daily bread—I allude to those afflicted with blindness, whether "from their youth up" or from the calamity being inflicted upon them in maturer years.

By the present law, for a blind man to beg is to be amenable to punishment, and to be subjected to perhaps the bitterest punishment which can be put upon him—imprisonment; to a deprivation of what may be his chief solace—the enjoyment of the fresh air; and to a rupture of the feeling, which cannot but be comforting to such a man, that under his infirmity he still has the sympathies of his fellow-creatures.

It appears to me, then, that the blind have a right to ask charity of those whom God has spared so terrible an affliction, and who in the terms best understood by the destitute themselves, are "well to do;" those whom—in the canting language of a former generation of blind and other beggars—"Providence has blessed with affluence." This right to solicit aid from those to whom such aid does not even approach to the sacrifice of any idle indulgence—to say nothing of any necessary want—is based on their helplessness, but lapses if it becomes a mere business, and with all the

trickiness by which a street business is sometimes characterised.

On this question of moral right, as of political expediency, I quote an authority which must command attention, that of Mr. Stuart Mill:—

Apart from any metaphysical considerations respecting the foundation of morals or of the social union, he says, "It will be admitted to be right, that human beings should help one another; and the more so, in proportion to the urgency of the need; and none needs help so urgently as one who is starving. The claim to help, therefore, created by destitution, is one of the strongest which can exist; and there is *primâ facie* the amplest reason for making the relief of so extreme an exigency as certain, to those who require it, as, by any arrangements of society, it can be made.

"On the other hand, in all cases of helping, there are two sets of consequences to be considered; the consequences of the assistance itself, and the consequences of relying on the assistance. The former are generally beneficial, but the latter for the most part injurious; so much so, in many cases, as greatly to outweigh the value of the benefit. And this is never more likely to happen than in the very cases where the need of help is the most intense. There are few things for which it is more mischievous, that people should rely on the habitual aid of others, than for the means of subsistence, and unhappily there is no lesson which they more easily learn." I may here mention, in corroboration of this statement, that I was told by an experienced parochial officer, that there was truth in the saying, "Once a pauper, and always a pauper;" which seems to show that the lesson of relying on the habitual aid of others may not only be learned with ease, but is forgotten with difficulty. "The problem to be solved," continues Mr. Mill, "is, therefore, one of peculiar nicety, as well as importance; how to give the greatest amount of needful help, with the smallest encouragement to undue reliance on it.

"Energy and self-dependence are, however," Mr. Mill proceeds to argue, and, in this respect, it seems to me, to argue to demonstration, "liable to be impaired by *the absence of help, as well as by its excess. It is even more fatal to exertion to have no hope of succeeding by it, than to be assured of succeeding without it.* When the condition of any one is so disastrous that his energies are paralyzed by discouragement, assistance is a tonic, not a sedative: it braces, instead of relaxing the active faculties: always provided that the assistance is not such as to dispense with self-help, by substituting itself for the person's own labour, skill, and prudence, but is limited to affording him a better hope of attaining success by those legitimate means. This, accordingly, is a test to which all plans of philanthropy and benevolence should be brought, whether intended for the benefit of individuals or of classes, and whether conducted on the voluntary or on the government principle.

"In so far as the subject admits of any general doctrine or maxim, it would appear to be this—*that if assistance is given in such a manner that the condition of the person helped is rendered as desirable as that of another* (in a similar grade of society) *who succeeds in maintaining himself without help, the assistance, if systematic and capable of being previously calculated upon, is* MISCHIEVOUS: *but if, while available to everybody, it leaves to all a strong motive to do without it if they can, it is then for the most part* BENEFICIAL."

That the workhouse should bring less comfort and even greater irksomeness and restraint to any able-bodied inmate, than is felt by the poorest agricultural labourer in the worst-paid parts of the country, or the most wretched slop tailor, or shoemaker, or cabinet maker in London, who supports himself by his own labour, is, I think, a sound principle. However wretched the ploughman may be in his hut, or the tailor in his garret, he is what I have heard underpaid mechanics call, still "his own man." He is supported by his labour; he has escaped the indignity of a reliance on others.

I need not now enter into the question whether or not the workhouse system has done more harm than good. Some harm it is assuredly doing, for its over-discipline drives people to beg rather than apply for parish relief; and so the public are twice mulct, by having to pay compulsorily, in the form of poor's-rate, and by being induced to give voluntarily, because they feel that the applicant for their assistance deserves to be helped.

But although the dogma I have cited, respecting the condition of those in a workhouse, may be sound in principle as regards the able-bodied, how does it apply to those who are not able-bodied? To those who *cannot* work? And above all how does it apply to those to whom nature has denied even the capacity to labour? To the blind, for instance? Yet the blind man, who dreads the injustice of such a creed applied to his misfortune, is subject to the punishment of the mendacious beggar, should he ask a passer-by to pity his afflictions. The law may not often be enforced, but sometimes it is enforced—perhaps more frequently in country than in town—and surely it is so enforced against abstract right and political morality. The blind beggar, "worried by the police," as I have heard it described, becomes the mendacious beggar, no longer asking, in honesty, for a mite to which a calamity that no prudence could have saved him gave him a fair claim, but resorting to trick in order to increase his precarious gains.

That the blind resort to deceitful representations is unquestionable. One blind man, I am informed, said to Mr. Child the oculist, when he offered to couch him, "Why, that would ruin me!" And there are many, I am assured, who live by the streets who might have their eyesight restored, but who will not.

The public, however, must be warned to distinguish between those determined beggars and the really deserving and helpless blind. To allow their sympathies to be blunted against *all*, because some are bad, is a creed most consolatory to worldly successful selfishness, and alien to every principle of pure morals, as well as to that of more than morals—the spirit of Christianity.

The feelings of the blind, apart from their mere sufferings as poor men, are well described in some of the narratives I give, and the account of a blind man's dreams is full of interest. Man is blessed with the power of seeing dreams, it should be remembered, *visionally;* but the blind man, to whose statement I invite attention, dreams, it will be seen, like the rest of his fraternity, through the sense of hearing, or of feeling, best known as "touching;" that is to say, by audible or tactile representations.

Some of the poor blind, he told me, are polishers' wheel-turners, but there is not employment for one in one hundred at this. My informant only knew two so engaged. People, he says, are glad to do it, and will work at as low wages as the blind. Some of the blind, too, blow blacksmiths' forges at foundries; others are engaged as cutlers' wheel-turners. "There was one talking to me the other day, and he said he'd get me a job that way." Others again turn mangles, but at this there is little employment to be had. Another blind acquaintance of my informant's chops chaff for horses. Many of the blind are basket-makers, learning the business at the blind school, but one-half, I am told, can't make a living at this, after leaving the school; they can't do the work so neatly, and waste more rods than the other workers. Other blind people are chair-bottomers, and others make rope mats with a frame, but all of these can scarcely make a living. Many blind people play church organs. Some blind men are shoemakers, but their work is so inferior, it is almost impossible to live by it.

The blind people are forced to the streets because, they say, they can do nothing else to get a living; at no trade, even if they know one, can they get a living, for they are not qualified to work against those who can see; and what's more, labourers' wages are so low that people can get a man with his eyesight at the same price as they could live upon. "There's many a blind basket-weaver playing music in the streets 'cause he can't get work. At the trade I know one blind basket-maker can make 15*s.* a-week at his trade, but then he has a good connection and works for hisself; the work all comes home. He couldn't make half that working for a shop. At turning wheels there's nothing to be done; there's so many seeing men out of employment that's glad to do the work at the same price as the blind, so that unless the blind will go into the workhouse, they must fly to the streets. The police, I am told, treat the blind very differently: some of the force are very good to them, and some has no feeling at all—they shove them about worse than dogs; but the police is just like other men, good and bad amongst them. They're very kind to me," said my blind informant, "and they have a difficult duty to perform, and some persons, like Colonel Cavendish, makes them harsher to us than they would be." I inquired whether my blind informant had received one of the Census papers to fill up, and he told me that he had heard nothing about them, and that he had certainly made no return to the government about his blindness; but what it was to the government whether he was blind or not, he couldn't tell. His wife was blind as well as himself, and there was another blind man living in his room, and none of his blind friends, that he had heard of, had ever received any of the papers.

"Some blind people in the streets carry laces. There are some five men and one woman at the West-end do this, and three of these have dogs to lead them; one stands always on Langham-place. One carries cabbage-nets, he is an old man of seventy year, with white hair, and is likewise led by a dog. Another carries matches (he has a large family), and he is often led by one of his boys. There is a blind woman who always sits by the Polytechnic, and has indeed done so since it was built. She gets her living by sewing, making caps and things for ladies. Another blind woman obtains a livelihood by knitting garters and covers for bread trays and backs of chairs. She generally walks about in the neighbourhood of Baker-street, and Portman-square. Many recite a lamentation as they go along, but in many parts of London the police will not allow them to do so.

"It's a very jealous place, is London. The police is so busy; but many recites the lamentation for all that. It's a feeling thing — Oh, they're very touching words."

The greater part in the streets are musicians; five to one are, or ten to one. My informant thinks, last Thursday week, there were seven blind musicians all playing through the streets together in one band. There are four living in York-court; two in Grafton-court; two in Clement's-lane; one in Orchard-place; two in Gray's-buildings; two in Half-Moon-street, in the City, and two in a court hard by; one up by Ball's-pond; two in Rose-court, Whitechapel; three in Golden-lane; two at Chelsea; three in Westminster; one up at Paddington; one (woman) in Marylebone; one in Westminster; one in Gray's-inn-lane; one in Whitechapel: in all thirty-one; but my informant was satisfied there must be at least as many more, or sixty blind musicians in all.

In the course of a former inquiry into the character and condition of street performers, I received the following account from a blind musician:—

"The street blind tried, some years back, to maintain a burying and sick club of our own; but we were always too poor. We live in rooms. I don't know one blind musician who lives in a lodging-house. I myself know a dozen blind men now performing in the streets of London. The blind musicians are chiefly married men. I don't know one who lives with a woman unmarried. The loss of sight changes a man, he doesn't think of women, and women don't think of him. We are of a religious turn, too, generally.

"When we agreed to form the blind club there was not more than a dozen members. These consisted of two basket-makers; one mat-maker; four violin players; myself; and my two mates;

Original from
HARVARD UNIVERSITY

and this was the number when it dropped for want of funds; that's now sixteen years ago. We were to pay 1*s.* a month, and sick members were to have 5*s.* a week when they had paid two years. Our other rules were the same as other clubs. There's a good many blind who play at sailors dances, Wapping and Deptford way. We seldom hire children to lead us in the streets; we have plenty of our own generally. I have five. Our wives are generally women that have their eyesight; but some blind men marry blind women."

My informant was satisfied that there were at least 100 blind men and women getting their living in the streets, and about 500 throughout the country. There are many who stay continually in Brighton, Bristol, Liverpool, Birmingham, Manchester, Newcastle-on-Tyne, Plymouth, and indeed all large towns. "There are a great many blind people, I am told," he said, "in Cornwall. It's such a humane place for them; the people has great feeling for the blind; they're very religious there, and a many lose their sight in the mines, and that's what makes them have a feeling for others so." This man heard a calculation made some time back, that there were 5000 blind people, including those in schools and asylums, within five miles round St. Paul's. The most of the blind have lost their sight by the small-pox — nine out of every ten of the musicians have done so; since the vaccination has been discovered, I am told the cases of blindness from small-pox have been considerably increased. "Oh, that was a very clever thing—very," said the blind boot-lace seller to me. Those who have not lost their sight by the small-pox, have gone blind from accidents, such as substances thrown or thrust in the eyes, or inflammation induced from cold and other ailments. My informant was not acquainted with one blind person in the streets who had been born blind. One of his acquaintance who had been blind from birth caught the small-pox, and obtained his sight after recovery at eight years old. "The great majority have lost their sight at an early age—when mere children, indeed; they have consequently been trained to no employment; those few who have" (my informant knew two) "been educated in the blind schools as basket-makers, are unable to obtain employment at this like a seeing person. Why, the time that a blind man's feeling for the hole to have a rod through, a seeing man will have it through three or four times. The blind people in the streets mostly know one another; they say they have all a feeling of brotherly love for another, owing to their being similarly afflicted. If I was going along the street, and had a guide with me that could see, they would say, 'Here's a blind man or blind woman coming;' I would say, 'Put me up to them so as I'll speak to them;' then I should say, as I laid my hand upon them, 'Holloa, who's this?' they'd say, 'I'm blind.' I should answer, 'So am I.' 'What's your name?' would be the next question. 'Oh, I have heard tell of you,' most like, I should say. 'Do you know so and so?' I would say, 'Yes, he's coming to see me,' or perhaps, 'I'm going to see him on Sunday:' then we say, 'Do you belong to any of the Institutions?' that's the most particular question of all; and if he's not a traveller, and we never heard tell of one another, the first thing we should ask would be, 'How did you lose your sight?' You see, the way in which the blind people in the streets gets to know one another so well, is by meeting at the houses of gentlemen when we goes for our pensions."

The boot, shoe, and stay laces, are carried by the blind, I am told "seldom for sale;" for it's very few they sell of them. "They have," they say, "to prevent the police or mendicity from interfering with them, though the police do not often show a disposition to obstruct them." "The officers of the Mendicity Society," they tell me, "are their worst enemies." These, however, have desisted from molesting them, because the magistrates object to commit a blind man to prison. The blind never ask anybody for anything, they tell me their cry is simply "Bootlace! Bootlace!" When they do sell, they charge 1½*d.* per pair for the leather boot-laces, 1*d.* per pair the silk boot-laces, and ½*d.* per pair for the cotton boot-laces, and ½*d.* each for the stay-laces. They generally carry black laces only, because the white ones are so difficult to keep clean. For the stay-laces they pay 2*d.* a dozen, and for the boot-laces 5*d.* a dozen, for the leather or for the silk ones; and 1½*d.* for the cotton; each of the boot-laces is double, so that a dozen makes a dozen pair. They buy them very frequently at a swag-shop in Compton-street. My informant carried only the black-cotton laces, and doesn't sell six-penny worth in a week. He did not know of a blind boot lace-seller that sold more than he did.

"Formerly the blind people in the street used to make a great deal of money; up to the beginning of the peace, and during all the war, the blind got money in handfuls. Where there was one blind man travelling then, there's ten now. If they didn't take 2*l.* and 2*l.* 10*s.* a day in a large town, it was reckoned a bad day's work for the musicianers. Almost all the blind people then played music. In war time there was only one traveller (tramp); there are 100 now. There was scarcely a common lodging-house then in one town out of the three; and now there's not a village hardly in the country but what there's one, and perhaps two or three. Why the lodging-houses coin money now. Look at a traveller's house where there's twenty beds (two in each bed), at 3*d.* each, and that's 10*s.* you know. There was very few blind beggars then, and what there was done well. Certainly, done well; they could get hatfuls of money almost, but then money was of no valley scarcely; you could get nothing for it most; but now if you get a little, you can buy a plenty with it. What is worth 6*d.* now fetched 2*s.* then. I wasn't in the streets then, I wish I had been, I should have made a fortin, I think I should. The blind beggars then could get 2*l.* a day if they went to look for it." "I myself," said one, "when I first began, have gone and sat myself down by the side of the road and got my 1*l.*, all in half-pence. When I went to Brain-

tree, I stood beside a public-house, the 'Orange Tree,' just by where the foot-people went on to the fair ground, and I took 15*s.* a day for two days only, standing there a pattering my lamentation from 1 o'clock till the dusk in the evening. This is what I said:—

'You feeling Christians look with pity,
Unto my grief relate—
Pity my misfortune,
For my sufferings are great.

'I'm bound in dismal darkness—
A prisoner I am led;
Poor and blind, just in prime,
Brought to beg my bread.

'When in my pleasant youthful days
In learning took delight,

(and when I was in the country I used to say)

And by the small pox
I lost my precious sight.

(some says by an inflammation)

'I've lost all earthly comforts,
But since it is God's will,
The more I cannot see the day,
He'll be my comfort still.

'In vain I have sought doctors,
Their learned skill did try,
But they could not relieve me,
Nor spare one single eye.

'So now in dismal darkness
For ever more must be,
To spend my days in silent tears,
Till death doth set me free.

'But had I all the treasures
That decks an Indian shore,
Was all in my possession,
I'd part with that wealthy store,

'If I once more could gain my sight,
And when could gladly view
That glorious light to get my bread,
And work once more like you.

'Return you, tender Christians dear,
And pity my distress;
Relieve a helpless prisoner,
That's blind and comfortless.

'I hope that Christ, our great Redeemer,
Your kindness will repay,
And reward you with a blessing
On the judgment day.'

"Some say 'pity the poor blind,' but the lamentation is better. It's a very feeling thing. Many people stands still and hears it right through, and gives a halfpenny. I'd give one myself any day to hear it well said. I'm sure the first time I heard it the very flesh crept on my bones. I larnt it to one blind man myself last summer.

"Now just to show you the difference of things two year afterwards: I went to the very same place where I had took 1*l.* by the road side, as I told, and all I got was 4*s.*, so you can see how things was falling. The day I took the 1*l.*, there was only one blind man in the town beside me; but when I got the 4*s.*, there was three men blind there. But things now is much worse—bless you, a hundred times worse. If I went now to Braintree fair, I don't think as I should take 3*s.* You see there's so many blind men now about that I should'nt wonder if there'd be eight or ten at that very fair; they don't know where to run to now to get a halfpenny; there's so many blind people that persons makes game of them. If they see two near one another, they cries out, there's opposition! See what things is come to. Twelve year ago I should have thought the town was completely done, and people quite tired of me, If I didn't get my shilling going down only one side of a street, and now I may go up and down and not get a penny. If I get 3*d.* I am very well satisfied. But mind, I may perhaps sometimes meet a gentlemen who may give me a shilling, or one who may give me 2*s.* 6*d.*; a person the other day tapped me on the shoulder, near Brook-street, and said, 'Here's half-a-crown for you.' Why, even five year ago one gentleman gave me 1*l.* twice over within three months, and Prince Napoleon gave me a sovereign last 23rd June was two year. I know the date, because that's the day the blind people goes to the Cloth Hall to get their quarter's money, 25*s.*, and I thought I was as good as they." My informant told me he does better than any of them. "Not one does better than me," he said, "because I sticks to it night and day. It's 12 o'clock every night before I leave the streets. You know I leaves home by ten of a morning. I will have it to get a living. Many says they don't know how I stand it to keep so long on my legs. I only has two meals a day—my breakfast, a bit of summat about five or six at a public-house—my dog though has plenty. I feeds him well, poor fellow. Many times I sleep as I go, and knock my stick just the same as if I was awake. I get a comfortable living—always a little in debt. I've got a very good kerackter, thank God—indeed all the blind men has—they can always get credit; and my dog gets me many a shilling that I wouldn't get at all. But then it's dreadful slavery. I've never no amusement—always out excepting on Sunday. Then I've got 5*l.* from Cloth Hall, besides a small pension of 1*s.*, and 2*s.* 6*d.*, and 5*s.* a year from different gentlemen, who allows us poor blind a small pension yearly. There are many gentleman do this at the West-end. Some will allow 10*s.* a year, and some only 1*s.* a year, to a stated number; and they all pay on a particular day that they may appoint. The Earl of Mansfield allows twenty-four destitute blind people 10*s.* 6*d.* a year; and his mother gives two blind 1*l.*, and four 10*s.* The Baroness Rothschild gives to between seventy and eighty 5*s.* a piece once a year." ("Bless her," said my informant, most heartily, "she is a good woman.") "The Earl Stanhope gives to between forty and fifty the same sum every year, and he's a fine kind-hearted gentleman. The Earl of Cork's brother gives eight or nine of us a shilling a piece once a year. Lady Otway Cave, she is very good to us; she gives seventy or eighty of us 1*s.* each every fust of May; but the butler, like a many more, I am told, takes advantage of the blind, and puts them off with 6*d.*, and takes a receipt from them for 1*s.* The Earl of Normanton gives 2*s.* 6*d.* to ten of us. Mrs. Managan, of May-fair, gives three 2*s.* 6*d.* a piece. The Hon. Miss Brande 1*s.* a piece to eight. Lady Clements, Grosvenor-square, 2*s.* a piece to fifteen. The Marchioness of Aylesbury, 5*s.* a piece to about thirty. The Earl of Harrowby gives twelve 5*s.* a piece. Lord Dudley Stuart gives to seven or eight 5*s.* a piece.

Mr. Gurney, 1*s.* a piece to forty. Mr. Ellis, Arlington-street, 2*s.* 6*d.* a piece to fourteen. The Marquis of Bute used to give 5*s.* a piece to sixty or seventy; but the Marchioness, since his death, has discontinued his allowance. The Dean of Westminster gives 1*s.* a piece to thirty on Boxing-day. Mr. Spottiswoode, 1*s.* a piece to about fourteen. Archbishop of Oxford, 5*s.* a piece to twelve. Rev. Sir Samuel Jarvis, 2*s.* 6*d.* a piece to five. Lady Dundas, 1*s.* a piece to about fourteen or fifteen. The Earl of Besborough, 1*s.* each to ten. Lord Stafford, 1*s.* each to about twenty; he used to give 2*s.* 6*d.*, but, owing to his servant, I am told the sum has been reduced to 1*s.* Lady Isabella Thynne, 1*s.* to ten. The Countess of Carlisle, 2*s.* 6*d.* each to sixteen. Earl Fitzwilliam used to give 5*s.* to some, and 2*s.* 6*d.* to others, to about twenty. The Countess of Essex, 2*s.* 6*d.* each to three. Lord Hatherton, 2*s.* 6*d.* each to twelve. John Ashley Warr, Esq., 5*s.* each to twenty-four. Lord Tynemouth, 2*s.* 6*d.* each to forty. Miss Vaughan, 2*s.* 6*d.* each to forty (this is bequeathed for ever). Lord Saltoun, 5*s.* each to three. Mr. Hope, 1*s.* each to fifty. Mr. Warren (Bryanstone-square), 1*s.* each to twenty-five. Miss Howard (York-place), 1*s.* each to every blind person that calls on Boxing-day. Sir John Curtis, 1*s.* each to eighty (this is also a bequest). Lady Beresford, 1*s.* each to forty. Lord Robert Grosvenor gives 1*l.* each to some few. The Countess of Andover, 2*s.* 6*d.* a piece to ten. Lord Stanley used to give 3*s.* to about twelve; but two years ago the allowance was discontinued. The Marquis of Bristol gives 10*s.* to eighteen. The Bishop of London, 5*s.* to every one that can obtain a minister's signature. Mr. Mackenzie (Devonshire-place), 2*s.* 6*d.* to ten. Mr. Deacon, 2*s.* 6*d.* to ten. Miss Sheriff (Manchester-square), 1*s.* to twenty. Miss Morrison (Cadogan-place), 1*s.* each to ten. Mrs. Kittoye (Wilton-crescent), 1*s.* to twenty. Mrs. Ferguson, 2*s.* 6*d.* each to seven. The Earl of Haddington, 10*s.* each to twelve." I am assured that these are only half of the donors to the blind, and that, with the exception of Lady Liddledam, there is not one person living eastward of Tottenham Court-road, who allows the smallest pension to the blind. My informant told me that he knew of no attorneys, barristers, surgeons, physicians, soldiers or sailors, who distributed any money to the blind, nor one tradesman. I think I get 10*s.* a week regular," he said. "While the quality's in town I 'm safe. For other times I can't count above 5*s.* a week at the outside—if it 's the least damp in the world, the quality will not come out. The musicians, you see, have got the chance of a damp day, for then all the best people 's at home; but such as me does well only when they 're out. If it wasn't for the pensions that the quality gives to the blind during the winter, they couldn't do at all. The blind people who have guides pay them no wages, they find them their victuals and clothes; but the guides are mostly children, and the blind are very good to them; many that I know spoils them."

The blind people are mostly all of a religious turn of mind. They all make a point of attending divine service; and the majority of them are Catholics. My informant knew only five among his blind neighbours who were Protestants—and two of these were Presbyterians, one a Methodist, and two Churchmen; and on the other hand he numbered up fourteen Catholics, all going to the same chapel, and living within a short distance of himself. They are peculiarly distinguished by a love of music. "It 's a sure bit of bread to the most; besides, it makes them independent, you see, and that 's a great thing to people like us." There is not one teetotaller, I am told, among the street blind, but they are not distinguished by a love of drink. The blind musicians often, when playing at public-houses, are treated to drink, and, indeed, when performing in the streets, are taken by drunken men to play at taverns, and there supplied with liquor; but they do not any of them make a habit of drinking. There is, however, one now in prison who is repeatedly intoxicated; and this, the blind say, is a great injury to them; for people who see one of them drunk in the streets, believe that they are all alike; and there is one peculiarity among them all—being continually mistaken for one another. However different they may be in features, still, from the circumstance of their being blind, and being mostly accompanied by a dog, or a guide, few persons can distinguish one from another. They are mostly very jealous, they tell me, because they say every one takes advantage of their affliction, even their own children, and their own wives. "Some of the wives dress themselves very gaily, because they know their husbands can't see their fine clothes, particularly those that have got no children—then there's none to tell. But, pray mind I only speaking of some of them—don't blame the whole. People never took no money out of my dog's basket—two gals of the town once did try to steal a shilling out of it, that some gentleman had dropped in, but the dog barked, and they gave a scream, and run away. Many of the blind men have married blind women—they say that they don't like seeing women. If seeing men find it a hard job to take care of seeing women, how are blind men to do it?" My informant knows six blind men who have married blind wives—the blind wives, I am told, stick closer to home—and do not want to go to plays, or dances, or shows, and have no love of dress—and they are generally more sober than those who can see. "A blind person," says one, "has no reason to be as wicked as those that can see—there 's not half the temptation, you know. The women do all their household duties as well as if they had their eyesight. They make puddings and pies, and boil them, or send them to the oven, as well, as quick, and as handy as a woman that can see. They sweep the floor without leaving a speck; and tidy the room, and black-lead the grate, and whiten the hearth, and dress the chimney-piece off quite handsome, I can tell you. They take great pride in their chimney-piece—they like other people to see it—and they take great pride in having their house quite clean and neat. Where I live it 's the remark of all, that they who can't see have their

houses the cleanest. I don't know of any blind person that has a looking-glass over the mantel-piece, though. I'm sure that many would, if they had the money, just to please their friends. And, what's more strange, the blind wives will wash their husbands' shirts quite clean." "The blind are very fond of their children, you see, sir," said one; "we owe so much to them, they're such helps to us, even from their very infancy. You'll see a little thing that can hardly walk, leading her blind father about, and then, may be, our affliction makes them loves us the more. The blind people are more comfortable at home—they are more together, and more dependent on one another, and don't like going out into company as others do. With women a love of company is mostly of a love of seeing others, and being seen themselves, so the blind wives is happy and contented at home. No man that could see, unless he was a profligate, would think of marrying a blind woman; and the blind women knows this, and that's why they love their blind husbands the more—they pity one another, and so can't help liking each other." Now, it's strange, that with so many blind couples living together, no one ever heard of any accident from fire with blind people—the fact is, their blindness makes them so careful, that there's no chance of it; besides, when there's two blind people together, they never hardly light a candle at all, except when a stranger comes in, and then they always ask him, before he leaves, to put the light out.

The blind people generally are persons of great feeling; they are very kind and charitable to persons who are in any way afflicted, or even to poor persons. Many of those who live on charity themselves are, I am assured, very generous to those that want. One told me that "a beggar had come to his house, and he had made him cry with his story; my heart" he said, "was that full I was ashamed." They're not particularly proud, though they like to be well-dressed, and they say that no one can get a wife so soon as a blind man. One assured me that he'd go into any lodging-house in the country and get two or three if he wanted—only they'd fight, he said. "You see in the lodging-houses there are many woman whose husbands (but they're not married, you know) have told them to go on and said they would follow them, which of course they don't; or there's many in such places as wants a companion. When a blind man goes into one of these houses, a woman is sure to say to him, 'Can I fetch you anything, master?' Half an ounce of tea may be, and when they've got it, of course, they're invited to have a cup, and that does the business. She becomes the blind man's guide after that. The next morning, after telling one another where to meet—'I'm going such a road,' they whisper to each other,—away they starts. I've known many a blind man run away with a seeing man's wife. The women, I think, does it for a living, and that's all.

"I can't see the least light in the world—not the brightest sun that ever shone. I have pressed my eye-balls—they are quite decayed, you see; but I have pushed them in, and they have merely hurt me, and the water has run from them faster than ever. I have never seen any colours when I did so." (This question was asked to discover whether the illusion called "peacock's feathers" could still be produced by pressure on the nerve). "I have been struck on the eye since I have been blind, and then I have seen a flash of fire like lightning. I know it's been like that, because I've seen the lightning sometimes, when it's been very vivid, even since I was stone blind. It was terrible pain when I was struck on the eye. A man one day was carrying some chairs along the street, and struck me right in the eye-ball with the end of the leg of one of the chairs; and I fell to the ground with the pain. I thought my heart was coming out of my mouth; then I saw the brightest flash that ever I saw, either before or since I was blind." (I irritated the ball of the eye with the object of discovering whether the nerve was decayed, but found it impossible to produce any luminous impression—though I suspect this arose principally from the difficulty of getting him to direct his eye in the proper direction). "I know the difference of colours, because I remember them; but I can't distinguish them by my touch, nor do I think that any blind man in the world ever could. I have heard of blind people playing at cards, but it's impossible they can do so any other way than by having them marked. I know many that plays cards that way." He was given two similar substances, but of different colours, to feel, but could not distinguish between them—both were the same to him, he said, "with the exception that one felt stiffer than the other. I know hundreds of people myself—and they know hundreds more—and none of us has ever heard of one that could tell colours by the feel. There's blind people in the school can tell the colours of their rods; but they do so by putting their tongue to them, and so they can distinguish them that's been dipped in copperas from them that hasn't. I know blind people can take a clock to pieces, and put it together again, as well as any person that can see. Blind people gets angry when they hear people talk of persons seeing with their fingers. A man has told me that a blind person in St. James's workhouse could read the newspaper with his fingers, but that, the blind know, is quite impossible."

Many blind men can, I am told, distinguish between the several kinds of wood by touch alone. Mahogany, oak, ash, elm, deal, they say, have all a different feel. They declare it is quite ridiculous, the common report, that blind people can discern colours by the touch. One of my informants, who assured me that he was considered to be one of the cleverest of blind people, told me that he had made several experiments on this subject, and never could distinguish the least difference between black or red, or white, or yellow, or blue, or, indeed, any of the mixed colours. "My wife," said one, "went blind so young, that she doesn't never remember having seen the light; and I am often sorry for her that she has no idea of what a beautiful thing light or colours is. We often talk about

it together, and then she goes a little bit melancholy, because I can't make her understand what the daylight is like, or the great delight that there is in seeing it. I 've often asked whether she knows that the daylight and the candlelight is of different colours, and she has told me she thinks they are the same; but then she has no notion of colours at all. Now, it 's such people as these I pities." I told the blind man of Sanderson's wonderful effect of imagination in conceiving that the art of seeing was similar to that of a series of threads being drawn from the distant object to the eye; and he was delighted with the explanation, saying, "he could hardly tell how a born blind man could come at such an idea." On talking with this man, he told me he remembered having seen a looking-glass once—his mother was standing putting her cap on before it, and he thought he never saw anything so pretty as the reflection of the half-mourning gown she had on, and the white feathery pattern upon it (he was five years old then). He also remembered having seen his shadow, and following it across the street; these were the only two objects he can call to mind. He told me that he knew many blind men who could not comprehend how things could be seen, round or square, *all at once;* they are obliged, they say, to pass their fingers all over them; and how it is that the shape of a thing can be known in an instant, they cannot possibly imagine. I found out that this blind man fancied the looking-glass reflected only one object at once—only the object that was immediately in front of it; and when I told him that, looking in the glass, I could see everything in the room, and even himself, with my back turned towards him, he smiled with agreeable astonishment. He said, "You see how little I have thought about the matter." There was a blind woman of his acquaintance, he informed me, who could thread the smallest needle with the finest hair in a minute, and never miss once. "She 'll do it in a second. Many blind women thread their needles with their tongues; the woman who stitches by the Polytechnic always does so." My informant was very fond of music. One of the blind makes his own teeth, he told me; his front ones have all been replaced by one long bit of bone which he has fastened to the stumps of his two eye teeth: he makes them out of any old bit of bone he can pick up. He files them and drills a hole through them to fasten them into his head, and eats his food with them. He is obliged to have teeth because he plays the clarionet in the street. "Music," he said, "is our only enjoyment, we all like to listen to it and learn it." It affects them greatly, they tell me, and if a lively tune is played, they can hardly help dancing. "Many a tune I 've danced to so that I could hardly walk the next day," said one. Almost all of the blind men are clever at reckoning. It seems to come natural to them after the loss of their sight. By counting they say they spend many a dull hour—it appears to be all mental arithmetic with them, for they never aid their calculations by their fingers or any signs whatever. My informant knew a blind man who could reckon on what day it was new moon for a hundred years back, or when it will be new moon a century to come—he had never had a book read to him on the subject in his life—he was one of the blind wandering musicians. My informant told me he often sits for hours and calculates how many quarters of ounces there are in a ship-load of tea, and such like things. Many of the blind are very partial to the smell of flowers. My informant knew one blind man about the streets who always would have some kind of smelling flowers in his room.

"The blind are very ingenious; oh, very!" said one to me, "they can do anything that they can feel. One blind man who kept a lodging-house at Manchester and had a wife fond of drink, made a little chest of drawers (about two feet high), in which he used to put his money, and so cleverly did he arrange it that neither his wife nor any one else could get at the money without breaking the drawers all to pieces. Once while her blind husband was on his travels, she opened every drawer by means of false keys, and though she took each one out, she could find no means to get at the money, which she could hear jingling inside when she shook it. At last she got so excited over it that she sent for a carpenter, and even he was obliged to confess that he could not get to it without taking the drawers to pieces. The same blind man had a great fancy for white mice, and made a little house for them out of pieces of wood cut into the shape of bricks: there were doors, windows, and all," said my informant. The blind are remarkable for the quickness of their hearing—one man assured me he could hear the lamp-posts in the streets, and, indeed, any *substance* (any solid thing he said) that he passed in the street, provided it be as high as his ear; if it were below that he could not *hear* it so well.

"Do you know, I can hear any substance in the street as I pass it by, even the lamp-post or a dead wall—anything that's the height of my head, let it be ever so small, just as well, and tell what it is as well as you as can see. One night I was coming home—you 'll be surprised to hear this—along Burlington-gardens, between twelve and one o'clock, and a gentleman was following me. I knew he was not a poor man by his walk, but I didn't consider he was watching me. I just heerd when I got between Sackville-street and Burlington-street. Oh, I knows every inch of the street, and I can go as quick as you can, and walk four mile an hour; know where I am all the while. I can tell the difference of the streets by the sound of my ear—a wide street and a narrow street—I can't tell a long street till I get to the bottom of it. I can tell when I come to an opening or a turning just by the click on the ear, without either my touching with hand or stick. Well, as I was saying, this gentleman was noticing me, and just as I come to turn up Cork-street, which, you know, is my road to go into Bond-street, on my way home; just as I come into Cork-street, and was going to turn round the corner, the sergeant of police was coming from Bond-street, at the opposite corner of Cork-street, I heerd him, and he just stopped to notice me, but didn't know the gentleman was noticing me too. I whipped

round the corner as quick as any man that had his sight, and said, 'Good night, policeman.' I can tell a policeman's foot anywhere, when he comes straight along in his regular way while on his beat, and they all know it too. I can't tell it where there's a noise, but in the stillness of the night nothing would beat me. I can't hear the lamp-posts when there's a noise. When I said, 'Good night, policeman,' the gentleman whipped across to him, and says, 'Is that man really blind?' and by this time I was half way up Cork-street, when the gentleman hallooed to me to stop; and he comes up, and says, says he, 'Are you really blind?' The sergeant of police was with him, and he says, 'Yes, he is really blind, sir;' and then he says, 'How is it that you go so cleverly along the street if you're blind?' Well, I didn't want to stop bothering with him, so I merely says, 'I do far cleverer things than that. I can hear the lamp-post as well as you that can see it.' He says, 'Yes, because you know the distance from one to another.' The sergeant stood there all the time, and he says, 'No, that can't be, for they're not a regular distance one from another.' Then the gentleman says, 'Now, could you tell if I was standing in the street when you passed me by?' I said, 'Yes; but you mustn't stand behind the lamp-post to deceive me with the sound of the substance.' Then he went away to try me, and a fine try we had. He will laugh when he sees that they're all put down. When he went away I recollected that if he didn't stand as near to the pavement as the lamp-post is, and remain still, he'd deceive me. Oh, certainly, I couldn't hear him if he was far off, and I shouldn't hear him in the same way as I can hear the lamp-posts if he didn't stand still. The policeman hallooed after him, and told him that he mustn't deceive me; but he wouldn't make no answer, for fear I should catch the sound of his voice and know where he was. I had agreed to touch every substance as I went along and round the street to look for him; we always call it looking though we are blind. Well, when he had stood still the sergeant told me to go; he's the sergeant of St. James' station-house, and has been often speaking to me since about it; and on I went at the rate of about three mile an hour, and touched every lamp-post without feeling for them, but just struck them with my stick as I went by, without stopping, and cried out, 'There's a substance.' At last I come to him. There's a mews, you know, just by the hotel in Cork-street, and the gentleman stood between the mews and Clifford-street, in Cork-street; and when I come up to him, I stopped quite suddenly, and cried out 'There's a substance.' As I was offering to touch him with my stick, he drew back very softly, just to deceive me. Then he would have another try, but I picked him out again, but that wouldn't satisfy him, and he would try me a third time; and then, when I come up to him, he kept drawing back, right into the middle of the road. I could hear the stones scrunch under his feet; so I says, 'Oh, that's not fair;' and he says, 'Well, I'm bet.' Then he made me a present, and said that he would like to spend an hour some night with me again. I don't think he was a doctor, 'cause he never took no notice of my eyes, but he was a real gentleman—the sergeant said so.

"When I dream, it's just the same as I am now, I dream of hearing and touching. The last dream that I had was about a blind man—that's in prison just now. I went into his wife's house, I knew it was her house by the sound of my foot in it. I can tell whether a place is clean or dirty by the sound. Then I heard her say, 'Well, how do you get on?' and I said 'Very well;' and she said 'Sit down,' and after sitting there a little while, I heard a voice at the door, and I said to her, 'Bless me, wouldn't you think that was John;' she said, 'Yes, I would,' but she took no farther notice, and I heard his voice repeatedly. I thought he was speaking to a child, and I got up and went to the door, and says, 'Halloa! is this you;' I was quite surprised and took him by the arm (laying his hand on his own) and he was in his shirt sleeves. I knew that by the feel. Then I was kind of afeard of him, though I am not afeard of anything. I was rather surprised that he should come out three weeks before his time. Then I dreamt that he tried to frighten and pushed me down on the floor, that way (making the motion sideways), to make me believe he was a ghost. I felt it as plain as I should if you were to do the same to me now. I says to him 'Don't be so foolish, sit down', and I pushed him away and got up. When I got up, his wife says to him, 'Sit down, John, and don't be so foolish; sit down, and behave yourself;' and then we set down the two of us, just on the edge of the bed (here he moved his hand along the edge of the table). I thought it was turned down. He's a very resolute man and a wicked one, this blind man is, so I would like to have been out from him, but I was afeard to go, for he'd got a hold of me; after that I waked and I heerd no more. But it's my real opinion that he's dead now, it is indeed, through having such dreams of him I think so; and the same night his wife dreamt that I was killed and all knocked into about a hundred pieces; and those two dreams convince me something's come to him. Oh, I do firmly believe in dreams, that I do; they're sent for people to foresee things, I'm certain of it, if people will only take notice of 'em. I have been many times in prison myself, while I've been travelling the country. You know in many towns they comes and takes you up without given you never no warning if they catches you begging. I was took up once in Liverpool, once in Hull, once in Exeter, and once in Biddeford, in Devonshire. Most of the times I had a month, and one of them only seven days. I think that's very unjust—never to say you mustn't do it; but to drag you off without never no warning. Every time before I was put in quod I had always dreamt that my father was starving to death for want of victuals, and at last I got to know whenever I dreamt that, I was sure of going to prison. I never dreamt about my mother; she died, you see, when I was very young, and I never remember hearing

her speak but once or twice. My father never did the thing that was right to me, and I didn't care much about him. When I was at home I was very fond of pigeons, and my mind went so much upon them, that I used to dream of it the night before, always when they had eggs, and when my rabbits had young ones too. I know when I wake in the morning that I am awake by my thoughts. Sometimes I dream I've got a lot of money in my hand, and when I wake and put my hand to feel it, it's gone, there's none there, and so I know it's been only a dream. I'm much surprised at my disappointment though."

Many of the blind are very fond of keeping birds and animals; some of them keep pigeons in one of their rooms, others have cocks and hens, and others white mice and rabbits, and almost all have dogs, though all are not led about by them. Some blind men take delight in having nothing but bull-dogs, not to lead them, but solely for fancy. Nobody likes a dog so much as a blind man, I am told—"they can't—the blind man is so much beholden to his dog, he does him such favours and sarvices." "With my dog I can go to any part of London as independent as any one who has got his sight. Yesterday afternoon when I left your house, sir, I was ashamed of going through the street. People was a saying, 'Look'ee there, that's the man as says he's blind.' I was going so quick, it was so late you know, they couldn't make it out, but without my dog I must have crawled along, and always be in great fear. The name of my present dog is 'KEEPER;' he is a mongrel breed; I have had him nine years, and he is with me night and day, goes to church with me and all. If I go out without him, he misses me, and then he scampers all through the streets where I am in the habit of going, crying and howling after me, just as if he was fairly out of his mind. It's astonishing. Often, before my first blind wife died (for I've been married twice to blind women, and once to a seeing woman), I used to say I'd sooner lose my wife than my dog; but when I did lose her I was sorry that ever I did say so. I didn't know what it was. I'm sorry for it yet, and ever will be sorry for it; she was a very good woman, and had fine principles. I shall never get another that I liked so much as the first. My dog knows every word I say to him. Tell him to turn right or left, or cross over, and whip! round he goes in a moment. Where I go for my tobacco, at the shop in Piccadilly, close to the Arcade—it's down six or seven steps, straight down—and when I tells Keeper to go to the baccy shop, off he is, and drags me down the steps, with the people after me, thinking he's going to break my neck down the place, and the people stands on top the steps making all kinds of remarks, while I'm below. If he was to lose me to-night or to-morrow, he'd come back here and rise the whole neighbourhood. He knows any public-house, no matter whether he was there before or not; just whisper to him, go to the public-house, and away he scampers and drags me right into the first he comes to. Directly I whisper to him, go to the public-house, he begins playing away with the basket he has in his mouth, throwing it up and laying it down—throwing it and laying it down for pleasure; he gets his rest there, and that's why he's so pleased. It's the only place I can go to in my rounds to sit down. Oh, he's a dear clever fellow. Now, only to show you how faithful he is, one night last week I was coming along Burlington-gardens, and I stopped to light my pipe as I was coming home, and I let him loose to play a bit and get a drink; and after I had lit my pipe I walked on, for I knew the street very well without any guide. I didn't take notice of the dog, for I thought he was following me. I was just turning into Clifford-street when I heard the cries of him in Burlington-gardens. I know his cry, let him be ever so far away; the screech that he set up was really quite dreadful; it would grieve anybody to hear him. So I puts my fingers in my mouth and gives a loud whistle; and at last he heard me, and then up he comes tearing along and panting away as if his heart was in his mouth; and when he gets up to me he jumped up to me right upon my back, and screams like—as if really he wanted to speak—you can't call it panting, because it's louder than that, and he does pant when he a'n't tired at all; all I can say is, it's for all the world like his speaking, and I understands it as such. If I say a cross word to him after he's lost—such as, ah, you rascal, you —he'll just stand of one side, and give a cry just like a Christian. I've known him break the windows up two story high when I've left him behind, and down he would have been after me only he durstn't jump out. I've had Keeper nine year. The dog I had before him was Blucher; he was a mongrel too; he had a tail like a wolf, an ear like a fox, and a face black like a monkey. I had him thirteen year. He was as clever as Keeper, but not so much loved as he is. At last he went blind; he was about two year losing his sight. When I found his eyes was getting bad I got Keeper. The way I first noticed him going blind was when I would come to cross a street on my way home; at nightfall the shade of the house on the opposite side, as we was crossing, would frighten him and drive him in the middle of the road; and he wouldn't draw to the pavement till he found he was wrong; and then after that he began to run again the lamp-posts in the dark; when he did this he'd cry out just like a Christian. I was sorry for him, and he knowed that, for I used to fret. I was sorry for him on account of my own affliction. At last I was obligated to take to Keeper. I got him of another blind man, but he had no larning in him when he come to me. I was a long time teaching him, for I didn't do it all at once. I could have teached him in a week, but I used to let the old dog have a run, while I put Keeper into the collar for a bit" (here the blind man was some time before he could proceed for his tears), "and so he larnt all he knows, little by little. Now Keeper and Blucher used to agree pretty well; but I've got another dog now, named Dash, and Keeper's as jealous of him as a woman is of a man. If I say, 'Come Keeper,

come and have the collar on,' I may call twenty times before he'll come; but if I say, 'Dash, come and have the collar on,' Keeper's there the first word, jumping up agin me, and doing anything but speak. At last my old Blucher went stone blind, as bad as his master; it was, poor thing; and then he used to fret so when I went out without him that I couldn't bear it, and so got at length to take him always with me, and then he used to follow the knock of my stick. He done so for about six months, and then I was one night going along Piccadilly and I stops speaking to a policeman, and Blucher misses me; he couldn't hear where I was for the noise of the carriages. He didn't catch the sound of my stick, and couldn't hear my voice for the carriages, so he went seeking me into the middle of the road, and there a buss run over him, poor thing. I heerd him scream out and I whistled to him, and he came howling dreadful on to the pavement again. I didn't think he was so much hurt then, for I puts the collar on him to take him safe back, and he led me home blind as he was. The next morning he couldn't rise up at all, his hind parts was useless to him. I took him in my arms and found he couldn't move. Well, he never eat nor drink nothing for a week, and got to be in such dreadful pain that I was forced to have him killed. I got a man to drown him in a bag. I could'nt have done it myself for all the world. It would have been as bad to me as killing a Christian. I used to grieve terribly after I'd lost him. I couldn't get him off my mind. I had had him so many years, and he had been with me night and day, my constant companion, and the most faithful friend I ever had, except Keeper: there's nothing in the world can beat Keeper for faithfulness—nothing."

Of the Life of a Blind Boot-lace Seller.

The blind boot lace-seller who gave me the following history of his life was the original of the portrait given in No. 17. He was a tall, strongly-built man. In face he was ghastly, his cheek bones were sharp and high, his nose flat to his face, and his eyes were so deeply sunk in that he had more the appearance of a death's head than of a living man. His shirt was scrupulously clean. He wore a bright red cotton neckerchief and a plaid waistcoat of many colours. His dog accompanied him and never left his master's side one moment.

"It's very sorrowful—very sorrowful indeed to hear that," said the boot-lace seller to me, on my reading him the account of the blind needle-seller; "it touches me much to hear that. But you see I don't grieve for the loss of my sight as he do, poor man. I don't remember ever seeing any object. If there was a thing with many colours in it, I could dissarn the highest colour. I couldn't tell one from another, but only the highest.

"I was born in Northumberland," he said, "about five-and-fifty years ago. My father was a grocer and had 1,000*l.* worth of freehold property besides his business, which was very large for a small town; his was the principal shop, and in the general line. He had a cart of his own, in which he attended market. I was very comfortably brought up, never wanted for nothing, and had my mother lived I should have had an independent fortune. At five years old, while mother was still alive, I caught the small pox. I had four sisters and one brother, and we all six had it at once; that was before the vaccination was properly established. I've heerd said that father did not want to have us inoculated, because of the people coming backwards and forwards to the shop. I only wish vaccination had been in vogue then as it is now, and I shouldn't have lost my eyes. God bless the man who brought it up, I say; people doesn't know what they've got to thank him for. Well, all my sisters and brothers had not a mark upon them. It laid hold of only me. They couldn't lay a finger upon me, they was obligated to lift me up in one of my father's shirts, by holding the corners of it like a sheet. As soon as ever the pock began to decay it took away my eyes altogether. I didn't lose both my eyeballs till about twenty years after that, though my sight was gone for all but the shadow of daylight and any high colours. At sixteen years of age my left eye bursted; I suffered terribly then—oh terribly! yes, that I did. The black-and-white like all mixed together, the pock came right through the star of the eye the doctor said; and when I was five-and-twenty my other eye-ball bursted, and then my eyes was quite out of my head. Till that time I could see a little bit; I could tell the daylight, and I could see the moon, but not the shape of it. I never could see a star, and do you know I grieved about the loss of that little bit of sight as much as if I was losing the whole of it. As my eye-ball sloughed day by day, I could see the light going away by little, every day till the week's end. When I looked at the daylight just before it all went, I could see the light look as red as fire—as red as blood; and when it all left me, oh, I was dreadful sorrowful, I thought I was lost altogether. But, I shouldn't have been so bad off, as I said, if mother had lived, but she died when I was about six year old. I didn't care much about her, indeed I took a dreadful dislike to her. I heerd her say one day to a person in the shop, that she would sooner see me dead and buried than be as I was, but now I know that it was her fondness for me. Mother catched a cold, and died after six day's illness. When she was gone, father got to neglect his business. He had no one then to attend to it, and he took and shut up the shop. He lost heart, you see. He took and turned all the tenants out of his property, and furnished all the rooms of a large house suitable for the quality that used to come to the town to bathe. He mortgaged the place for 250*l.* to buy the furniture, and that was the ruin of him. Eighteen years afterwards the lawyers got the better of him, and all the family was turned out of the door without a penny. My father they'd put in jail before. He died a few years afterwards in the workhouse. When the family was turned

out, there was only my eldest brother away at sea, and my eldest sister in sarvice; so me and my three sisters was sent in the wide world without the means of getting a crust or a place to put our heads in. All my sisters after that got into sarvice, and I went to drive some coal carts at North Shields. The coal carts was father's, and they was all he had left out of his property; so I used to go to Wall's End and fill the carts, then take them down to North Shields and sell them at the people's doors. We never used to sell less than the load. I did all this, blind as I was, without a person to guide, and continued at it night and day for about fifteen year. It was well known to the whole country side. I was the talk for miles round. They couldn't believe I was blind; though they see my eyes was gone, still they couldn't hardly believe. Then, after the fifteen year, me and my father had a complete fall out. He took an advantage of my sister. He had borrowed 20*l.* of her, and when he could he wouldn't pay her. He behaved as bad as father could, and then I broke with him." (He then went over the whole story, and was affected, even to speechlessness, at the remembrance of his family troubles. Into these there is no necessity to enter here; suffice it, the blind man appears to have behaved very nobly.) "I came away and went to my brother, who was well off at Hull; when I got there, I found he had gone to Russia and died there that very spring. While I was on my way to Hull, I used to go to sleep at the lodging-houses for travellers. I had never been in one before, and there I got to think, from what I heerd, that a roving life was a fine pleasant one. The very first lodging-house I went into was one in Durham, and there persons as was coming the same road persuaded me to go and beg with them, but I couldn't cheek it; it was too near hand at home. We came on to Darlington, that was 18 miles further, that day. They still kept company with me, and wanted me to beg, but I wouldn't; I couldn't face it. I thought people would know me. The next day we started on our way to Northallerton, and then my few shillings was all gone; so that night we went to seek relief, and got a pennyworth of milk, and a penny loaf each and our bed. The parish gave us a ticket to a lodging-house. The next morning we started from Northallerton, and then I was very hungry; all I had the day before was the pennyworth of bread I got from the parish. Then as we got about a mile out of the town, there was a row of houses, and the Scotchman who was with me says, 'If ye'll gang up wi' me, I'll speak for ye.' Well, we went up and got 3*d.*, and plenty of bread and butter; almost every house we got something at; then I was highly delighted; thinks I, this is a business—and so I did. We shared with the other man who had come on the road with us, and after that we started once more, and then I was all eager to go on with the same business. You see I'd never had no pleasure, and it seemed to me like a new world — to be able to get victuals without doing anything—instead of slaving as I'd been with a couple of carts and horses at the coal-pits all the time. I didn't think the country was half so big, and you couldn't credit the pleasure I felt in going about it. I felt as if I didn't care for nothing: it was so beautiful to be away there quite free, without any care in the world, for I could see plainly I could always get the best of victuals, and the price of my lodgings. There's no part in all England like Yorkshire for living. We used to go to all the farm-houses, we wouldn't miss one if it was half a mile off the road; if the Scotchman who was with me could only see a road he'd take me up it, and we got nice bits of pie and meat, and bread and cake, indeed as much as would serve four people, when we got to the lodging-house at night and a few shillings beside. I soon got not to care about the loss of my brother. At last we got to make so much money that I thought it was made to chuck about the streets. We got it so easy, you see. It was only 4*s.* or 5*s.*, but then I was only a flatty or I could have made 14*s.* or 15*s.* at least. This was in Boroughbridge, and there at a place called, I think, Bridely-hill, there was a lodging-house without never a bed in it at all; but only straw littered on the ground, and here I found upwards of sixty or seventy, all tramps, and living in different ways, pattering, and thieving, and singing, and all sorts; and that night I got to think it was the finest scene I had ever known. I grew pleaseder, and pleaseder, with the life, and wondered how any one could follow any other. There was no drunkenness, but it was so new and strange, and I'd never known nothing of life before, that I was bewildered, like, with over-joy at it. Then I soon got to think I'd have the summer's pleasure out and wouldn't go near Hull till the back end of the year, for it was the month of May, that what I'm talking about took place; and so things went on. I never thought of home, or sisters, or anything, indeed. I was so over-joyed that I could think of nothing else. Whenever I got to a new county it seemed like getting into a new nation, and when I heard we were close upon a new place I used to long and long to get into it. At last I left the Scotchman and took up with an old sailor, a man-of-warsman, who was coming up to London to get his pension, and he was a regular 'cadger' like the other who had put me 'fly to the dodge,' though none of us wer'nt 'fly' to nothing then. I can't tell you, I wanted to, how I longed to be in town, and, as I came through the streets with him, I didn't know whether I carried the streets or they carried me. You see I had heard people talk about London in North Shields, and I thought there was no poor people there at all—none but ladies and gentlemen and sailors. In London the sailor drew his pension, and he and me got robbed, and then the sailor left me, and then I started off without a penny into the country; and at Stratford-le-Bow I began, for the first time, to say, 'Pity the poor blind.' Up to this time I had never axed no one—never spoke, indeed—the cadgers who had been with me had done this for me, and glad to have the chance of sharing with me. A blind man can get a guide at any place, because they know

he's sure to get something. I took only *5d.* at Stratford-le-Bow, and then started on my way to Romford; and there, in the lodging-house, I met a blind man, who took me in partnership with him, and larnt me my business complete—that he just did, and since then I've been following it, and that's about two or three and twenty year ago. Since I've been in London, and that's fourteen year, I've lived very regular, always had a place, and attended my church. If it hadn't been for the lodging-houses I should never, may be, have been as I am; though, I must confess, I always had a desire to find out travelling, but couldn't get hold of any one to put me in the way of it. I longed for a roving life and to shake a loose leg, still I couldn't have done much else after my quarrel with my father. My sister had offered to lend me money enough to buy a horse and cart for myself, but I didn't like that, and thought I'd get it of my brother at Hull; and that and the padding kens is solely the cause of my being as I am; and since I first travelled there's more now than ever—double and treble as many."

Of the Low Lodging-Houses.

The revelations of the Blind Boot-Lace Seller concerning the low lodging-houses make me anxious to arouse the public to a full sense of the atrocities committed and countenanced in those infamous places. It will have been noticed that the blind man frankly tells us that he was "taught his business" as a mendicant in one of these houses of call for vagabonds of all kinds—beggars, prostitutes, cheats, and thieves. Up to the time of his starting to see his brother at Hull, he appears to have had no notion of living but by his labour, and, more especially, no wish to make a trade of his affliction. Till then he seems to have been susceptible of some of the nobler impulses of humanity, and to have left his home solely because he refused to be party to a fraud on his own sister. Unfortunately, however, on his way to carry out his generous purposes, he put up for the night at the "travellers'" house in the town where he arrived, at the end of his first day's journey; from the very minute that he set foot in the place he was a lost man. Here were assembled scores of the most degraded and vicious members of society, lying in ambush, as it were, like tigers in the jungle, ready to spring upon and make a prey of any one who came within the precincts of their lair. To such as these—sworn to live on the labours of others, and knowing almost to a sixpence the value of each human affliction as a means of operating upon both the heart-strings and the purse strings of the more benevolent of the industrious or the affluent—to such as these, I say, a blind man, unskilled in the art and system of mendicancy, was literally a God-send. A shipwreck or a colliery explosion, as they too well knew, some of the more sceptical of the public *might* call in question, but a real blind man, with his eye-balls gone, was beyond all doubt; and to inspire faith, as they were perfectly aware, was one of the most important and difficult processes of the beggar's craft. Besides, of all misfortunes, blindness is one which, to those who have their sight, appears not only the greatest of human privations, but a privation which wholly precludes the possibility of self-help, and so gives the sufferer the strongest claim on our charity. In such a place, therefore, as a low lodging-house, the common resort of all who are resolved not to work for their living, it was almost impossible for a blind man to pass even an hour without every virtuous principle of his nature being undermined, and overtures of the most tempting character being made to him. To be allowed to go partners in so valuable a misfortune was a privilege that many there would strive for; accordingly, as we have seen, the day after the blind man entered the low lodging-house, he who, up to that time, had been, even in his affliction, earning his living, was taken out by one of the "travellers," and taught how much better a living—how much more of the good things of this world—he could get by mendicancy than by industry; and from the very hour when the blind man learnt this, the most dangerous lesson that any human being can possibly be taught, he became, heart and soul, an ingrained beggar. His description of the delight he felt when he found that he had no longer any need to work—that he could rove about the country as he pleased—without a care, without a purpose—with a perfect sense of freedom, and a full enjoyment of the open air in the day, and the wild licence of the lodging-house society at night, satisfied that he could get as much food and drink, and even money as he needed, solely for the asking for it; his description of this is a frank confession of a few of the charms of vagabondism—charms to which the more sedate are not only strangers, but of which they can form no adequate conception. The pleasure of "shaking a loose leg," as the vagrants themselves call it, is, perhaps, known only in its intensity by those wayward spirits who object to the restraint of work or the irksomeness of any settled pursuit. The perfect *thoughtlessness* that the blind man describes as the first effect produced upon him by his vagabondism is the more remarkable, because it seems to have effaced from his mind all regard, even for the sister for whose sake he had quitted his home—though to those who have made a study of the vagrant character it is one of those curious inconsistencies which form the principal feature in the idiosyncrasy of the class, and which, indeed, are a necessary consequence of the very purposelessness, or want of some permanent principle or feeling, which constitutes, as it were, the mainspring of vagabondism. Indeed, the blind man was a strange compound of cunning and good feeling; at one moment he was weeping over the afflictions of others—he was deeply moved when I read to him the sufferings of the Crippled Nutmeg-Grater Seller; and yet, the next minute he was grinning behind his hand, so that his laughter might be concealed from me, in a manner that appeared almost fiendish. Still, I am convinced that at heart he was far from a bad man; there was, amid the degradation that necessarily comes of habitual

mendicancy, a fine expression of sympathy, that the better class of poor always exhibit towards the poor; nor could I help wondering when I heard *him*—the professed mendicant—tell me how he had been moved to tears by the recital of the sufferings of another mendicant—sufferings that might have been as profitable a stock in trade to the one as his blindness was to the other; though it is by no means unusual for objects of charity to have *their* objects of charity, and to be imposed upon by fictitious or exaggerated tales of distress, almost as often as they impose upon others by the very same means.

I now invite the reader's attention to the narratives given below as to the character of the low lodging-houses. The individuals furnishing me with those statements, it should be observed, were not "picked" people, but taken promiscuously from a number belonging to the same class. I shall reserve what else I may have to remark on the subject till the conclusion of those statements.

Prisons, tread-mills, penal settlements, gallows, I said, eighteen months ago, in the 'Morning Chronicle,' are all vain and impotent as punishments—and Ragged Schools and City missions are of no avail as preventives of crime—so long as the wretched dens of infamy, brutality, and vice, termed "padding-kens" continue their daily and nightly work of demoralization. If we would check the further spread of our criminals—and within the last four years they have increased from 24,000 to 30,000—we must apply ourselves to the better regulation and conduct of these places. At present they are not only the preparatory schools, but the finishing academies for every kind of profligacy and crime.

"The system of lodging-houses for travellers, otherwise trampers," says the Constabulary Commissioners' Report, "requires to be altogether revised; at present they are in the practice of lodging all the worst characters unquestioned, and are subject to no other control than an occasional visit of inspection from the parish officers, accompanied by the constables, whose power of interference—if they have a legal right of entry—does not extend to some of the most objectionable points connected with those houses, as they can merely take into custody such persons as they find in commission of some offence. The state in which those houses are found on the occasion of such visit, proves how much they require interference. The houses are small, and yet as many as thirty travellers, or even thirty-five, have been found in one house; fifteen have been found sleeping in one room, three or four in a bed—men, women, and children, promiscuously: beds have been found occupied in a cellar. It is not necessary to urge the many opportunities of preparing for crime which such a state of things presents, or the actual evils arising from such a mode of harbouring crowds of low and vicious persons."

According to the report of the Constabulary Commissioners, there were in 1839—

	Mendicants' Lodging-houses.		Lodgers.		Total No. of Inmates.
In London	221	average	11	or	2,431
In Liverpool	176		6		1,056
Bristol	69		7		483
Bath	14		9		126
Kingston-on-Hull	11		3		33
Newcastle-on-Tyne	78		3		234
Chester (see Report, p. 35)	150		3		450
	619				4,813

Moreover, the same Report tells us, at p. 32, that there is a low lodging-house for tramps in every village. By the Post-office Directory there are 3823 postal towns in England and Wales; and assuming that in each of these towns there are two "travellers'" houses, and that each of these, upon an average, harbours every night ten tramps (in a list given at p. 311, there were in 83 towns no less than 678 low lodging-houses, receiving 10,860 lodgers every night; this gives, on an average, 8 such houses to each town, and 16 lodgers to each such house), we have thus 76,460 for the total number of the inmates of such houses.

To show the actual state of these lodging-houses from the testimony of one who had been long resident in them, I give the following statement. It was made to me by a man of superior education and intelligence (as the tone of his narrative fully shows), whom circumstances, which do not affect the object of my present letter, and therefore need not be detailed, had reduced from affluence to beggary, so that he was compelled to be a constant resident in those places. All the other statements that I obtained on the subject—and they were numerous—were corroborative of his account to the very letter:—

"I have been familiar, unfortunately for me, with low lodging-houses, both in town and country, for more than ten years. I consider that, as to the conduct of those places, it is worse in London than in the country—while in the country the character of the keeper is worse than in London, although but a small difference can be noted. The worst I am acquainted with, though I haven't been in it lately, is in the neighbourhood of Drury-lane—this is the worst both for filth and for the character of the lodgers. In the room where I slept, which was like a barn in size, the tiles were off the roof, and as there was no ceiling, I could see the blue sky from where I lay. That may be altered now. Here I slept in what was called the single men's room, and it was confined to men. In another part of the house was a room for married couples, as it was called, but of such apartments I can tell you more concerning other houses. For the bed with the view of the blue sky I paid 3*d*. If it rained there was no shelter. I have slept in a room in Brick-lane, Whitechapel, in which were fourteen beds. In the next bed to me, on the one side, was a man, his wife, and three children, and a man and his wife on the other. They were Irish people, and I believe the women were the men's wives—as the Irish women generally are. Of all the women that resort to these places the Irish are far the best for chastity. All the beds were occupied, single men being mixed with the married couples. The question is never asked, when a man and woman go to a lodging-house, if they are man and wife. All must pay before they go to bed, or be turned into the street. These beds were made—as all the low lodging-house beds are—of the worst cotton flocks stuffed in coarse, strong canvas. There is a pair of sheets, a blanket, and a rug. I have known the bedding to be unchanged for three months; but that is not general. The beds are an

average size. Dirt is the rule with them, and cleanliness the exception. They are all infested with vermin. I never met with an exception. No one is required to wash before going to bed in any of these places (except at a very few, where a very dirty fellow would not be admitted), unless he has been walking on a wet day without shoes or stockings, and then he must bathe his feet. The people who slept in the room I am describing were chiefly young men, almost all accompanied by young females. I have seen girls of fifteen sleep with 'their chaps'—in some places with youths of from sixteen to twenty. There is no objection to any boy and girl occupying a bed, even though the keeper knows they were previously strangers to each other. The accommodation for purposes of decency is very bad in some places. A pail in the middle of a room, to which both sexes may resort, is a frequent arrangement. No delicacy or decency is ever observed. The women are, I think, worse than the men. If any one, possessing a sense of shame, says a word of rebuke, he is at once assailed, by the women in particular, with the coarsest words in the language. The Irish women are as bad as the others with respect to language, but I have known them keep themselves covered in bed when the other women were outraging modesty or decency. The Irish will sleep anywhere to save a halfpenny a night, if they have ever so much money." [Here he stated certain gross acts common to lodging-houses, which cannot be detailed in print.] "It is not uncommon for a boy or man to take a girl out of the streets to these apartments. Some are the same as common brothels, women being taken in at all hours of the day or night. In most, however, they must stay all night as a married couple. In dressing or undressing there is no regard to decency, while disgusting blackguardism is often carried on in the conversation of the inmates. I have known decent people, those that are driven to such places from destitution, perhaps for the first time, shocked and disgusted at what they saw. I have seen a decent married pair so shocked and disgusted that they have insisted on leaving the place, and have left it. A great number of the lodging-houses are large old buildings, which were constructed for other purposes; these houses are not so ill-ventilated, but even there, where so many sleep in one room, the air is hot and foul. In smaller rooms, say twelve feet by nine, I have seen four beds placed for single men, with no ventilation whatsoever, so that no one could remain inside in warmish weather, without every door and window open; another room in the same house, a little larger, had four double beds, with as many men and women, and perhaps with children. The Board of Health last autumn compelled the keepers of these places to whitewash the walls and ceilings, and use limewash in other places; before that, the walls and ceilings looked as if they had been blackwashed, but still you could see the bugs creeping along those black walls, which were not black enough to hide that. In some houses in the summer you can hardly place your finger on a part of the wall free from bugs. I have scraped them off by handfulls.

"Nothing can be worse to the health than these places, without ventilation, cleanliness, or decency, and with forty people's breaths perhaps mingling together in one foul choking steam of stench. [The man's own words.] They are the ready resort of thieves and all bad characters, and the keepers will hide them if they can from the police, or facilitate any criminal's escape. I never knew the keepers give any offender up, even when rewards were offered. If they did, they might shut up shop. These houses are but receptacles, with a few exceptions, for beggars, thieves, and prostitutes, and those *in training* for thieves and prostitutes—the exceptions are those who *must* lodge at the lowest possible cost. I consider them in every respect of the worst possible character, and think that immediate means should be adopted to improve them. Fights, and fierce fights too, are frequent in them, and I have often been afraid murder would be done. They are money-making places, very. One person will own several —as many as a dozen. In each house he has one or more 'deputies,' chiefly men. Some of these keepers are called respectable men; some live out in the country, leaving all to deputies. They are quite a separate class from the keepers of regular brothels. In one house that I know they can accommodate eighty single men; and when single men only are admitted, what is decent, or rather what is considered decent in such places, is less unfrequent. Each man in such houses pays 4*d.* a night, a bed to each man or boy; that is 26*s.* 8*d.* nightly, or 486*l.* 13*s.* 4*d.* a year, provided the beds be full every night—and they are full six nights out of seven. Besides that, some of the beds supply double turns; for many get up at two to go to Covent-garden or some other market, and their beds are then let a second time to other men; so that more than eighty are frequently accommodated, and I suppose 500*l.* is the nearest sum to be taken for an accurate return. The rent is very trifling; the chief expense to be deducted from the profits of the house in question is the payment of three and sometimes four deputies, receiving from 7*s.* to 12*s.* a week each—say an average of from 30*s.* to 40*s.* a week—as three or four are employed. Fire (coke being only used) and gas are the other expenses. The washing is a mere trifle. Then there are the parochial and the water-rates. The rent is always low, as the houses are useable for nothing but such lodgings. The profits of the one house I have described cannot be less than 300*l.* a year, and the others are in proportion. Now, the owner of this house has, I believe, 10 more such houses, which, letting only threepenny beds (some are lower than that), may realise a profit of about 200*l.* a year each. These altogether yield a clear profit of 2300*l.* for the eleven of them; but on how much vice and disease that 2300*l.* has been raised is a question beyond a schoolmaster. The missionaries visit these lodging-houses, but, judging from what I have heard said by the inmates in all of them, when the missionaries have left, scarcely any

good effect has resulted from the visits. *I never saw a clergyman of any denomination in any one of these places, either in town or country.* In London the master or deputy of the low lodging-house does not generally meddle with the disposal of stolen property, as in the country. This is talked about, alike in the town and country houses, very openly and freely before persons known only to be beggars, and never stealing: it is sufficient that they are known as tramps. In London the keepers must all know that stolen property is nightly brought into the house, and they wink at its disposal, but they won't mix themselves up with disposing of it. If it be provisions that have been stolen, they are readily disposed of to the other inmates, and the owner or deputy of the house may know nothing about it, and certainly would not care to interfere if he did. I never heard robberies planned there, but there are generally strangers present, and this may deter. I believe more robberies are planned in low coffee-shops than in lodging-houses. The influence of the lodging-house society on boys who have run away from their parents, and have got thither, either separately or in company with lads who have joined them in the streets, is this:—Boys there, after paying their lodgings, may exercise the same freedom from every restraint as they see the persons of maturer years enjoy. This is often pleasant to a boy, especially if he has been severely treated by his parents or master; he apes, and often outdoes, all the men's ways, both in swearing and lewd talk, and so he gets a relish for that sort of life. After he has resorted to such places—the sharper boys for three, and the duller for six months—they are adepts at any thieving or vice. Drunkenness, and even moderate drinking, is very rare among them. I seldom or never see the boys drink—indeed, thieves of all ages are generally sober men. Once get to like a lodging-house life, and a boy can hardly be got out of it. I said the other day to a youth, 'I wish I could get out of these haunts and never see a lodging-house again;' and he replied, 'If I had ever so much money I would never live anywhere else.' I have seen the boys in a lodging-house sit together telling stories, but paid no attention to them."

Statement of a Young Pickpocket.

To show the class of characters usually frequenting these lodging-houses, I will now give the statement of a boy—a young pickpocket—without shoes or stockings. He wore a ragged, dirty, and very thin great coat, of some dark jean or linen, under which was another thin coat, so arranged that what appeared rents—and, indeed, were rents, but designedly made—in the outer garment, were slits through which the hand readily reached the pockets of the inner garment, and could there deposit any booty. He was a slim, agile lad, with a sharp but not vulgar expression, and small features. His hands were of singular delicacy and beauty. His fingers were very long, and no lady's could have been more taper. A burglar told me that with such a hand he ought to have made his fortune. He was worth 20*l.* a week, he said, as a "*wire*," that is, a picker of ladies' pockets. When engaged "for a turn," as he told me he once was by an old pickpocket, the man looked minutely at his fingers, and approved of them highly. His hands, the boy said, were hardly serviceable to him when very cold. His feet were formed in the same symmetrical and beautiful mould as his hands. "I am 15," he said. "My father was a potter, and I can't recollect my mother" (many of the thieves are orphans or motherless). "My father has been dead about five years. I was then working at the pottery in High-street, Lambeth, earning about 4*s.* a week; in good weeks, 4*s.* 6*d.* I was in work eight months after my father died; but one day I broke three bottles by accident, and the foreman said 'I shan't want you any more;' and I took that as meant for a discharge; but I found afterwards that he did'nt so mean it. I had 2*s.* and a suit of clothes then, and tried for work at all the potteries; but I couldn't get any. It was about the time Smithfield fair was on. I went, but it was a very poor concern. I fell asleep in a pen in the afternoon, and had my shoes stolen off my feet. When I woke up, I began crying. A fellow named Gyp then came along (I knew his name afterwards), and he said, 'What are you crying for?' and I told him, and he said, 'Pull off your stockings, and come with me, and I'll show you where to sleep.' So I did, and he took me to St. Olave's workhouse, having first sold my stockings. I had never stolen anything until then. There I slept in the casual ward, and Gyp slept there too. In the morning we started together for Smithfield, where he said he had a job to sweep the pens, but he couldn't sweep them without pulling off his coat, and it would look so queer if he hadn't a shirt—and he hadn't one. He promised to teach me how to make a living in the country if I would lend him mine, and I was persuaded—for I was an innocent lad then—and went up a gateway and stripped off my shirt and gave it to him, and soon after he went into a public-house to get half a pint of beer; he went in at one door and out at another, and I didn't see him for six months afterwards. That afternoon I went into Billingsgate market and met some boys, and one said, 'Mate, how long have you been knocking about; where did you doss?' I didn't know what they meant, and when they'd told me they meant where did I sleep? I told them how I'd been served. And they said, 'Oh! you must expect that, until you learn something,' and they laughed. They all know'd Gyp; he was like the head of a Billingsgate gang once. I became a pal with these boys at Billingsgate, and we went about stealing fish and meat. Some boys have made 2*s.* in a morning, when fish is dear—those that had pluck and luck; they sold it at half-price. Billingsgate market is a good place to sell it; plenty of costermongers are there who will buy it, rather than of the salesmen. I soon grew as bad as the rest at this work. At first I sold it to other boys, who would get 3*d.* for what they bought at 1*d.* Now they can't do me. If I can get a thing

cheap where I lodge, and have the money, and can sell it dear, that's the chance. I carried on this fish rig for about two years, and went begging a little, too. I used to try a little thieving sometimes in Petticoat-lane. They say the 'fliest' is easy to take in sometimes—that 's the artfullest; but I could do no good there. At these two years' end, I was often as happy as could be; that is, when I had made money. Then I met B——, whom I had often heard of as an uncommon clever pickpocket; he could do it about as well as I can now, so as people won't feel it. Three of his mates were transported for stealing silver plate. He and I became pals, and started for the country with 1*d*. We went through Foot's Cray, and passed a farm where a man 's buried at the top of a house; there 's something about money while a man 's above ground; I don't understand it, but it 's something like that. A baker, about thirty miles from London, offended us about some bread; and B—— said 'I'll serve him out.' We watched him out, and B—— tried at his pocket, saying, 'I'll show you how to do a handkerchief;' but the baker looked round, and B—— stopped; and just after that I flared it (whisked the handkerchief out); and that 's the first I did. It brought 1*s*. 3*d*. We travelled across country, and got to Maidstone, and did two handkerchiefs. One I wore round my neck, and the other the lodging-housekeeper pawned for us for 1*s*. 6*d*. In Maidstone, next morning, I was nailed, and had three months of it. I didn't mind it so much then, but Maidstone's far worse now, I've heard. I have been in prison three times in Brixton, three times in the Old Horse (Bridewell), three times in the Compter, once in the Steel, and once in Maidstone—thirteen times in all, including twice I was remanded, and got off; but I don't reckon that prison. Every time I came out harder than I went in. I've had four floggings; it was bad enough—a flogging was—while it lasted; but when I got out I soon forgot it. At a week's end I never thought again about it. If I had been better treated I should have been a better lad. I could leave off thieving now as if I had never thieved, if I could live without." [I am inclined to doubt this part of the statement.] "I have carried on this sort of life until now. I didn't often make a very good thing of it. I saw Manning and his wife hung. Mrs. Manning was dressed beautiful when she came up. She screeched when Jack Ketch pulled the bolt away. She was harder than Manning, they all said; without her there would have been no murder. It was a great deal talked about, and Manning was pitied. It was a punishment to her to come on the scaffold and see Manning with the rope about his neck, if people takes it in the right light. I did 4*s*. 6*d*. at the hanging—two handkerchiefs, and a purse with 2*s*. in it—the best purse I ever had; but I've only done three or four purses. The reason is, because I've never been well dressed. If I went near a lady, she would say, 'Tush, tush, you ragged fellow!' and would shrink away. But I would rather rob the rich than the poor; they miss it less. But 1*s*. honest goes further than 5*s*. stolen. Some call that only a saying, but it's true. All the money I got soon went—most of it a-gambling. Picking pockets, when any one comes to think on it, is the daringest thing that a boy can do. It didn't in the least frighten me to see Manning and Mrs. Manning hanged. I never thought I should come to the gallows, and I never shall—I'm not high-tempered enough for that. The only thing that frightens me when I'm in prison is sleeping in a cell by myself—you do in the Old Horse and the Steel—because I think things may appear. You can't imagine how one dreams when in trouble. I've often started up in a fright from a dream. I don't know what might appear. I've heard people talk about ghosts and that. Once, in the County, a tin had been left under a tap that went drip—drip—drip. And all in the ward were shocking frightened; and weren't we glad when we found out what it was! Boys tell stories about haunted castles, and cats that are devils; and that frightens one. At the fire in Monument-yard I did 5*s*. 7*d*.—3*s*. in silver and 2*s*. 3*d*. in handkerchiefs, and 4*d*. for three pairs of gloves. I sell my handkerchiefs in the Lane (Petticoat-lane). I carry on this trade still. Most times I've got in prison is when I've been desperate from hunger, and have said to B——, 'Now I'll have money, nailed or not nailed.' I can pick a woman's pocket as easy as a man's, though you wouldn't think it. If one's in prison for begging, one's laughed at. The others say, 'Begging! Oh, you cadger!' So a boy is partly forced to steal for his character. I've lived a good deal in lodging-houses, and know the ways of them. They are very bad places for a boy to be in. Where I am now, when the place is full, there's upwards of 100 can be accommodated. I won't be there long. I'll do something to get out of it. There's people there will rob their own brother. There's people there talk backward—for one they say *eno*, for two *owt*, for three *eerht*, for four *ruof*, for five *evif*, for six *exis*. I don't know any higher. I can neither read nor write. In this lodging-house there are no women. They talk there chiefly about what they've done, or are going to do, or have set their minds upon, just as you and any other gentlemen might do. I have been in lodging-houses in Mint-street and Kent-street, where men and women and children all slept in one room. I think the men and women who slept together were generally married, or lived together; but it's not right for a big boy to sleep in the same room. Young men have had beds to themselves, and so have young women there; but there's a deputy comes into the room, every now and then, to see there's nothing wrong. There's little said in these places, the people are generally so tired. Where I am there's horrid language—swearing, and everything that's bad. They are to be pitied, because there's not work for honest people, let alone thieves. In the lodging-houses the air is very bad, enough to stifle one in bed—so many breaths together. Without such places my trade couldn't be carried on; I couldn't live. Some though would find another way out. Three or four would take a room among them. Anybody's money's good — you can always get a room. I would be glad to leave this life, and

work at a pottery. As to sea, a bad captain would make me run away—sure. He can do what he likes with you when you're out at sea. I don't get more than 2*s.* a week, one week with the other, by thieving; some days you do nothing until hunger makes your spirits rise. I can't thieve on a full belly. I live on 2*s.* a week from thieving, because I understand fiddling — that means, buying a thing for a mere trifle, and selling it for double, or for more, if you're not taken in yourself. I've been put up to a few tricks in lodging-houses, and now I can put others up to it. Everybody must look after themselves, and I can't say I was very sorry when I stole that 2*s.* from a poor woman, but I'd rather have had 1*s.* 6*d.* from a rich one. I never drink—eating's my part. I spend chief part of my money in pudding. I don't like living in lodging-houses, but I must like it as I'm placed now—that sort of living, and those lodging-houses, or starving. They bring tracts to the lodging-houses—pipes are lighted with them; tracts won't fill your belly. Tracts is no good, except to a person that has a home; at the lodging-houses they're laughed at. They seldom are mentioned. I've heard some of them read by missionaries, but can't catch anything from them. If it had been anything bad, I should have caught it readily. If an innocent boy gets into a lodging-house, he'll not be innocent long—he can't. I know three boys who have run away, and are in the lodging-houses still, but I hope their father has caught them. Last night a little boy came to the lodging-house where I was. We all thought he had run away, by the way he spoke. He stayed all night, but was found out in two or three falsehoods. I wanted to get him back home, or he'll be as bad as I am in time, though he's nothing to me; but I couldn t find him this morning; but I'll get him home yet, perhaps. The Jews in Petticoat-lane are terrible rogues. They'll buy anything of you —they'll buy what you've stolen from their next-door neighbours—that they would, if they knew it. But they'll give you very little for it, and they threaten to give you up if you won't take a quarter of the value of it. 'Oh! I shee you do it,' they say, 'and I like to shee him robbed, but you musht take vot I give.' I wouldn't mind what harm came to those Petticoat-laners. Many of them are worth thousands, though you wouldn't think it." After this I asked him what he, as a sharp lad, thought was the cause of so many boys becoming vagrant pickpockets? He answered, "Why, sir, if boys runs away, and has to shelter in low lodging-houses—and many runs away from cruel treatment at home—they meet there with boys such as me, or as bad, and the devil soon lays his hand on them. If there wasn't so many lodging-houses there wouldn't be so many bad boys—there couldn't. Lately a boy came down to Billingsgate, and said he wouldn't stay at home to be knocked about any longer. He said it to some boys like me; and he was asked if he could get anything from his mother, and he said 'yes, he could.' So he went back, and brought a brooch and some other things with him to a place fixed on, and then he and some of the boys set off for the country; and that's the way boys is trapped. I think the fathers of such boys either ill-treat them, or neglect them; and so they run away. My father used to beat me shocking; so I hated home. I stood hard licking well, and was called 'the plucked one.'" This boy first stole flowers, currants, and gooseberries out of the clergyman's garden, more by way of bravado, and to ensure the approbation of his comrades, than for anything else. He answered readily to my inquiry, as to what he thought would become of him?—"Transportation. If a boy has great luck he may carry on for eight years. Three or four years is the common run, but transportation is what he's sure to come to in the end." This lad picked my pocket at my request, and so dexterously did he do his "work," that though I was alive to what he was trying to do, it was impossible for me to detect the least movement of my coat. To see him pick the pockets, as he did, of some of the gentlemen who were present on the occasion, was a curious sight. He crept behind much like a cat with his claws out, and while in the act held his breath with suspense; but immediately the handkerchief was safe in his hand, the change in the expression of his countenance was most marked. He then seemed almost to be convulsed with delight at the success of his perilous adventure, and, turning his back, held up the handkerchief to discover the value of his prize, with intense glee evident in every feature.

Statement of a Prostitute.

The narrative which follows—that of a prostitute, sleeping in the low-lodging houses, where boys and girls are all huddled promiscuously together, discloses a system of depravity, atrocity, and enormity, which certainly cannot be paralleled in any nation, however barbarous, nor in any age, however "dark." The facts detailed, it will be seen, are gross enough to make us all blush for the land in which such scenes can be daily perpetrated. The circumstances, which it is impossible to publish, are of the most loathsome and revolting nature.

A good-looking girl of sixteen gave me the following awful statement:—

"I am an orphan. When I was ten I was sent to service as maid of all-work, in a small tradesman's family. It was a hard place, and my mistress used me very cruelly, beating me often. When I had been in place three weeks, my mother died; my father having died twelve years before. I stood my mistress's ill-treatment for about six months. She beat me with sticks as well as with her hands. I was black and blue, and at last I ran away. I got to Mrs. ——, a low lodging-house. I didn't know before that there was such a place. I heard of it from some girls at the Glasshouse (baths and washhouses), where I went for shelter. I went with them to have a halfpenny worth of coffee, and they took me to the lodging-house. I then had three shillings, and stayed about a month, and did nothing wrong, living on

the three shillings and what I pawned my clothes for, as I got some pretty good things away with me. In the lodging-house I saw nothing but what was bad, and heard nothing but what was bad. I was laughed at, and was told to swear. They said, 'Look at her for a d—— modest fool'—sometimes worse than that, until by degrees I got to be as bad as they were. During this time I used to see boys and girls from ten and twelve years old sleeping together, but understood nothing wrong. I had never heard of such places before I ran away. I can neither read nor write. My mother was a good woman, and I wish I'd had her to run away to. I saw things between almost children that I can't describe to you—very often I saw them, and that shocked me. At the month's end, when I was beat out, I met with a young man of fifteen—I myself was going on to twelve years old—and he persuaded me to take up with him. I stayed with him three months in the same lodging-house, living with him as his wife, though we were mere children, and being true to him. At the three months' end he was taken up for picking pockets, and got six months. I was sorry, for he was kind to me; though I was made ill through him; so I broke some windows in St. Paul's-churchyard to get into prison to get cured. I had a month in the Compter, and came out well. I was scolded very much in the Compter, on account of the state I was in, being so young. I had 2*s*. 6*d*. given to me when I came out, and was forced to go into the streets for a living. I continued walking the streets for three years, sometimes making a good deal of money, sometimes none, feasting one day and starving the next. The bigger girls could persuade me to do anything they liked with my money. I was never happy all the time, but I could get no character and could not get out of the life. I lodged all this time at a lodging-house in Kent-street. They were all thieves and bad girls. I have known between three and four dozen boys and girls sleep in one room. The beds were horrid filthy and full of vermin. There was very wicked carryings on. The boys, if any difference, was the worst. We lay packed on a full night, a dozen boys and girls squeedged into one bed. That was very often the case—some at the foot and some at the top—boys and girls all mixed. I can't go into all the particulars, but whatever could take place in words or acts between boys and girls did take place, and in the midst of the others. I am sorry to say I took part in these bad ways myself, but I wasn't so bad as some of the others. There was only a candle burning all night, but in summer it was light great part of the night. Some boys and girls slept without any clothes, and would dance about the room that way. I have seen them, and, wicked as I was, felt ashamed. I have seen two dozen capering about the room that way; some mere children, the boys generally the youngest. * * * * There were no men or women present. There were often fights. The deputy never interfered. This is carried on just the same as ever to this day, and is the same every night. I have heard young girls shout out to one another how often they had been obliged to go to the hospital, or the infirmary, or the workhouse. There was a great deal of boasting about what the boys and girls had stolen during the day. I have known boys and girls change their 'partners,' just for a night. At three years' end I stole a piece of beef from a butcher. I did it to get into prison. I was sick of the life I was leading, and didn't know how to get out of it. I had a month for stealing. When I got out I passed two days and a night in the streets doing nothing wrong, and then went and threatened to break Messrs. ——— windows again. I did that to get into prison again; for when I lay quiet of a night in prison I thought things over, and considered what a shocking life I was leading, and how my health might be ruined completely, and I thought I would stick to prison rather than go back to such a life. I got six months for threatening. When I got out I broke a lamp next morning for the same purpose, and had a fortnight. That was the last time I was in prison. I have since been leading the same life as I told you of for the three years, and lodging at the same houses, and seeing the same goings on. I hate such a life now more than ever. I am willing to do any work that I can in washing and cleaning. I can do a little at my needle. I could do hard work, for I have good health. I used to wash and clean in prison, and always behaved myself there. At the house where I am it is 3*d*. a night; but at Mrs. ——'s it is 1*d*. and 2*d*. a night, and just the same goings on. Many a girl—nearly all of them—goes out into the streets from this penny and twopenny house, to get money for their favourite boys by prostitution. If the girl cannot get money she must steal something, or will be beaten by her 'chap' when she comes home. I have seen them beaten, often kicked and beaten until they were blind from bloodshot, and their teeth knocked out with kicks from boots as the girl lays on the ground. The boys, in their turn, are out thieving all day, and the lodging-house keeper will buy any stolen provisions of them, and sell them to the lodgers. I never saw the police in the house. If a boy comes to the house on a night without money or sawney, or something to sell to the lodgers, a handkerchief or something of that kind, he is not admitted, but told very plainly, 'Go thieve it, then.' Girls are treated just the same. Any body may call in the daytime at this house and have a halfpennyworth of coffee and sit any length of time until evening. I have seen three dozen sitting there that way, all thieves and bad girls. There are no chairs, and only one form in front of the fire, on which a dozen can sit. The others sit on the floor all about the room, as near the fire as they can. Bad language goes on during the day, as I have told you it did during the night, and indecencies too, but nothing like so bad as at night. They talk about where there is good places to go and thieve. The missioners call sometimes, but they're laughed at often when they're talking, and always before the door's closed on them. If a decent girl goes there to get a ha'porth of coffee, seeing the board over the door, she is always shocked. Many a poor girl

has been ruined in this house since I was, and boys have boasted about it. I never knew boy or girl do good, once get used there. Get used there, indeed, and you are life-ruined. I was an only child, and haven't a friend in the world. I have heard several girls say how they would like to get out of the life, and out of the place. From those I know, I think that cruel parents and mistresses cause many to be driven there. One lodging-house keeper, Mrs. ——, goes out dressed respectable, and pawns any stolen property, or sells it at public-houses."

As a corroboration of the girl's statement, a wretched-looking boy, only thirteen years of age, gave me the following additional information. He had a few rags hanging about him, and no shirt—indeed, he was hardly covered enough for purposes of decency, his skin being exposed through the rents in his jacket and trowsers. He had a stepfather, who treated him very cruelly. The stepfather and the child's mother went "across the country," begging and stealing. Before the mother died, an elder brother ran away on account of being beaten:—

"Sometimes (I give his own words) he (the stepfather) wouldn't give us a bit to eat, telling us to go and thieve for it. My brother had been a month gone (he's now a soldier in Gibraltar) when I ran away to join him. I knew where to find him, as we met sometimes. We lived by thieving, and I do still—by pulling flesh (stealing meat). I got to lodge at Mrs. ——, and have been there this eight months. I can read and write a little." [This boy then confirmed what the young girl had told me of the grossest acts night by night among the boys and girls, the language, &c., and continued]—"I always sleep on the floor for 1*d*. and pay a ½*d*. besides for coke. At this lodging-house cats and kittens are melted down, sometimes twenty a day. A quart pot is a cat, and pints and half pints are kittens. A kitten (pint) brings 3*d*. from the rag shops, and a cat 6*d*. There's convenience to melt them down at the lodging-house. We can't sell clothes in the house, except any lodger wants them; and clothes nearly all goes to the Jews in Petticoat-lane. Mrs. —— buys the sawney of us; so much for the lump, 2*d*. a pound about; she sells it again for twice what she gives, and more. Perhaps 30 lb. of meat every day is sold to her. I have been in prison six times, and have had three dozen; each time I came out harder. If I left Mrs. ——'s house I don't know how I could get my living. Lots of boys would get away if they could. I never drink, I don't like it. Very few of us boys drink. I don't like thieving, and often go about singing; but I can't live by singing, and I don't know how I could live honestly. If I had money enough to buy a stock of oranges I think I could be honest."

The above facts require no comment from me.

Statement of a Beggar.

A beggar decently attired, and with a simple and what some would call even a respectable look, gave me the following account:—

"I am now twenty-eight, and have known all connected with the begging trade since I was fourteen. My grandfather (mother's father) was rich, owning three parts of the accommodation houses in St. Giles's; he allowed me 2*s*. a week pocket-money. My grandfather kept the great house, the old Rose and Crown, in Church-lane, opposite Carver-street, best known as the 'Beggar's Opera.' When a child of seven, I have seen the place crowded—crammed with nothing but beggars, first-rates—none else used the house. The money I saw in the hands of the beggars made a great impression upon me. My father took away my mother's money. I wish my mother had run away instead. He was kind, but she was always nagging. My father was a foreman in a foundry. I got a situation in the same foundry after my father cut. Once I was sent to a bank with a cheque for 38*l*. to get cashed, in silver, for wages. In coming away, I met a companion of mine, and he persuaded me to bolt with the money, and go to Ashley's. The money was too much for my head to carry. I fooled all that money away. I wasn't in bed for more than a fortnight. I bought linnets in cages for the fancy of my persuader. In fact, I didn't know what use to put the money to. I was among plenty of girls. When the money was out I was destitute. I couldn't go back to my employers, and I couldn't face my mother's temper—that was worse; but for that nagging of hers I shouldn't have been as I am. She has thrashed me with a hand broom until I was silly; there's the bumps on my head still; and yet that woman would have given me her heart's blood to do me a good. As soon as I found myself quite destitute, I went wandering about the City, picking up the skins of gooseberries and orange peel to eat, to live on—things my stomach would turn at now. At last my mother came to hear that I tried to destroy myself. She paid the 38*l*., and my former employers got me a situation in Paddington. I was there a month, and then I met him as advised me to steal the money before—he's called the ex-king of the costermongers now. Well he was crying hareskins, and advised me again to bolt, and I went with him. My mind was bent upon costermongering and a roving life. I couldn't settle to anything. I wanted to be away when I was at work, and when I was away I wanted to be back again. It was difficult for me to stick to anything for five minutes together; it is so now. What I begin I can't finish at the time—unless it's a pot of beer. Well, in four days my adviser left me; he had no more use for me. I was a flat. He had me for a "go-along," to cry his things for him. Then, for the first time in my life, I went into a low lodging-house. There was forty men and women sleeping in one room. I had to sleep with a black man, and I slept on the floor to get away from the fellow. There were plenty of girls there; some playing cards and dominoes. It was very dirty—old Mother ———, in Lawrence-lane—the Queen of Hell she was called. There was one tub among the lot of us. I felt altogether disgusted. Those who lived there were beggars, thieves, smashers, coiners,

purchasers of begged and stolen goods, and prostitutes. The youngest prostitute was twelve, and so up to fifty. The beastliest language went on. It's done to outrival one another. There I met with a man called Tom Shallow (*shallow* is cant for half-naked), and he took me out ballad-singing, and when we couldn't get on at that (the songs got dead) he left me. I made him 10*s.* or 12*s.* a day in them days, but he only gave me my lodgings and grub (but not half enough), and two pipes of tobacco a day to keep the hunger down, that I mightn't be expensive. I then 'listed. I was starving, and couldn't raise a lodging. I took the shilling, but was rejected by the doctor. I 'listed again at Chatham afterwards, but was rejected again. I stayed jobbing among the soldiers for some weeks, and then they gave me an old regimental suit, and with that I came to London. One gave me a jacket, and another a pair of military trowsers, and another a pair of old ammunition boots, and so on. About that time a batch of invalids came from Spain, where they had been under General Evans. On my way up from Chatham, I met at Gravesend with seven chaps out on '*the Spanish lurk*' as they called it —that is, passing themselves off as wounded men of the Spanish Legion. Two *had been* out in Spain, and managed the business if questions were asked; the others were regular English beggars, who had never been out of the country. I joined them as a serjeant, as I had a sergeant's jacket given me at Chatham. On our way to London—'the school' (as the lot is called) came all together—we picked up among us 4*l.* and 5*l.* a day—no matter where we went. 'The school' all slept in lodging houses, and I at last began to feel comfortable in them. We spent our evenings in eating out-and out suppers. Sometimes we had such things as sucking pigs, hams, mince pies—indeed we lived on the best. No nobleman could live better in them days. So much wine, too! I drank in such excess, my nose was as big as that there letter stamp; so that I got a sickening of it. We gave good victuals away that was given to us—it was a nuisance to carry them. It cost us from 6*d.* to 1*s.* a day to have our shoes cleaned by *poor* tramps, and for clean dickies. The clean dodge is always the best for begging upon. At Woolwich we were all on the fuddle at the Dust Hole, and our two spokesmen were drunk; and I went to beg of Major ——, whose brother was then in Spain—he himself had been out previously. Meeting the major at his own house, I said, 'I was a sergeant in the 3rd Westminster Grenadiers, you know, and served under your brother.' 'Oh! yes, that's my brother's regiment,' says he. 'Where was you, then, on the 16th of October?' 'Why, sir, I was at the taking of the city of Irun,' says I—(in fact, I was at that time with the costermonger in St. Giles's, calling cabbages, 'white heart cabbages, oh!') Then said the major, 'What day was Ernani taken on?' 'Why,' said I (I was a little tipsy, and bothered at the question), 'that was the 16th of October, too.' 'Very well, my man,' says he, tapping his boots with a riding whip he held, 'I'll see what I can do for you;' and the words were no sooner out of his mouth than he stepped up to me and gave me a regular pasting. He horsewhipped me up and down stairs, and all along the passages; my flesh was like sassages. I managed at last, however, to open the door myself, and get away. After that 'the school' came to London. In a day we used to make from 8*l.* to 10*l.* among us, by walking up Regent-street, Bond-street, Piccadilly, Pall-mall, Oxford-street, the parks—those places were the best beats. All the squares were good too. It was only like a walk out for air, and your 25*s.* a man for it. At night we used to go to plays, dressed like gentlemen. At first the beaks protected us, but we got found out, and the beaks grew rusty. The thing got so overdone, every beggar went out as a Spanish lurksman. Well, the beaks got up to the dodge, and all the Spanish lurksmen in their turns got to work the universal staircase, under the care of Lieutenant Tracy (Tothill-fields treadmill). The men that had really been out and got disabled were sent to that staircase at last, and I thought I would try a fresh lurk. So I went under the care and tuition of a sailor. He had been a sailor. I became a *turn-pike sailor*, as it's called, and went out as one of the Shallow Brigade, wearing a Guernsey shirt and drawers, or tattered trowsers. There was a school of four. We only got a tidy living—16*s.* or 1*l.* a day among us. We used to call every one that came along—coalheavers and all—sea-fighting captains. 'Now, my noble sea-fighting captain,' we used to say, 'fire an odd shot from your larboard locker to us, Nelson's bull-dogs;' but mind we never tried that dodge on at Greenwich, for fear of the old geese, the Collegemen. The Shallow got so grannied (known) in London, that the supplies got queer, and I quitted the land navy. Shipwrecks got so common in the streets, you see, that people didn't care for them, and I dropped getting cast away. I then took to *screeving* (writing on the stones). I got my head shaved, and a cloth tied round my jaws, and wrote on the flags—

'Illness and Want,'

though I was never better in my life, and always had a good bellyfull before I started of a morning. I did very well at first: 3*s.* or 4*s.* a day—sometimes more—till I got grannied. There is one man who draws Christ's heads with a crown of thorns, and mackerel, on the pavement, in coloured chalks (there are four or five others at the same business); this one, however, often makes 1*l.* a day now in three hours; indeed, I have known him come home with 21*s.*, besides what he drank on the way. A gentleman who met him in Regent-street once gave him 5*l.* and a suit of clothes to do Christ's heads with a crown of thorns and mackerel on the walls. His son does Napoleon's heads best, but makes nothing like so much as the father. The father draws cats' heads and salmon as well —but the others are far the best spec. He will often give thirteen-pence, and indeed fourteen-pence, for a silver shilling, to get rid of the coppers. This man's pitch is Lloyd-square, not far from Sadler's Wells. I have seen him commence

his pitch there at half-past eleven, to catch the people come from the theatre. He is very clever. In wet weather, and when I couldn't chalk, as I couldn't afford to lose time, I used to dress tidy and very clean for the '*respectable broken-down tradesman or reduced gentleman*' caper. I wore a suit of black, generally, and a clean dickey, and sometimes old black kid gloves, and I used to stand with a paper before my face, as if ashamed—

'*To a Humane Public.*
'*I have seen better days.*'

This is called standing pad with a fakement. It is a wet-weather dodge, and isn't so good as screeving, but I did middling, and can't bear being idle. After this I mixed with the street patterers (men who make speeches in the streets) on *the destitute mechanics' lurk*. We went in a school of six at first, all in clean aprons, and spoke every man in his turn. It won't do unless you're clean. Each man wanted a particular article of dress. One had no shirt—another no shoes—another no hat—and so on. No two wanted the same. We said:—

"'Kind and benevolent Christians!—It is with feelings of deep regret, and sorrow and shame, that us unfortunate tradesmen are compelled to appear before you this day, to ask charity from the hands of strangers. We are brought to it from want—I may say, actual starvation.' (We always had a good breakfast before we started, and some of us, sir, was full up to the brim of liquor.) 'But what will not hunger and the cries of children compel men to do.' (We were all single men.) 'When we left our solitary and humble homes this morning, our children were crying for food, but if a farthing would have saved their lives, we hadn't it to give them. I assure you, kind friends, me, my wife, and three children, would have been houseless wanderers all last night, but I sold the shirt from off my back as you may see (opening my jacket) to pay for a lodging. We are, kind friends, *English* mechanics. It is hard that you wont give your own countrymen a penny, when you give so much to *foreign* hurdy-gurdies and organ-grinders. Owing to the introduction of steam and machinery and foreign manufactures we have been brought to this degraded state. Fellow countrymen, there are at this moment 4000 men like ourselves, able and willing to work, but can't get it, and forced to wander the streets. I hope and trust some humane Christian within the sound of my voice will stretch out a hand with a small trifle for us, be it ever so small, or a bit of dry bread or cold potato, or anything turned from your table, it would be of the greatest benefit to us and our poor children.' (Then we would whisper to one another, 'I hope they won't bring out any scran—only coppers.') 'We have none of us tasted food this blessed day. We have been told to go to our parishes, but that we cannot brook; to be torn from our wives and families is heart-rending to think of—may God save us all from the Bastile!' (We always pattered hard at the overseers).

The next of the school that spoke would change the story somehow, and try to make it more heart-rending still. We did well at first, making about 5*s.* a day each, working four hours, two in the morning and two in the afternoon. We got a good deal of clothing too. The man who went without a shirt never went to a door to ask for one; he had to show himself in the middle of the road. The man that *did* go to the door would say, 'Do bestow a shirt on my poor shopmate, who hasn't had one for some days.' It's been said of me, when I had my shirt tied round my waist all the time out of sight. The man who goes without his shirt has his pick of those given; the rest are sold and shared. Whatever trade we represented we always had one or two really of the trade in the school. These were always to be met at the lodging-houses. They were out of work, and had to go to low lodging-houses to sleep. There they met with beggars who kiddied them on to the lurk. The lodging-houses is good schools for that sort of thing, and when a mechanic once gets out on the lurk he never cares to go to work again. I never knew one return. I have been out oft and oft with weavers with a loom, and have woven a piece of ribbon in a gentleman's parlour—that was when we was Coventry ribbon weavers. I have been a stocking weaver from Leicester, and a lacemaker too from Nottingham. Distressed mechanics on their way to London get initiated into beggar's tricks in the low lodging-houses and the unions. This is the way, you see, sir. A school may be at work from the lodging-house where the mechanic goes to, and some of the school finds out what he is, and says, 'Come and work with us in a school: you'll do better than you can at your business, and you can answer any questions; we'll lurk on your trade.' I have been out with a woman and children. It's been said in the papers that children can be hired for that lurk at 4*d.* or 6*d.* a day—that's all fudge, all stuff, every bit of it—there's no children to be hired. There's many a labouring man out of work, who has a wife and three or more children, who is glad to let them go out with any patterer he knows. The woman is entitled to all the clothes and grub given, and her share of the tin—that's the way it's done; and she's treated to a drink after her day's work, into the bargain. I've been out on the *respectable family man* lurk. I was out with a woman and three kids the other day; her husband was on the pad in the country, as London was too hot to hold him. The kids draws, the younger the better, for if you vex them, and they're oldish, they'll blow you. Liverpool Joe's boy did so at Bury St. Edmund's to a patterer that he was out with, and who spoke cross to him. The lad shouted out so as the people about might hear, 'Don't you jaw me, you're not my father; my father's at home playing cards.' They had to crack the pitch (discontinue) through that. The respectable family dodge did pretty well. I've been on *the clean family* lurk too, with a woman and children. We dressed to give the notion that, however humble, at least we were clean in all our poverty. On this lurk we stand by the side of the pavement in silence, the wife in a perticler clean cap, and a milk-white apron. The kids have long clean pinafores, white as the driven snow; they're only used in clean lurk, and taken off directly they come home. The husband and father is in a white flannel jacket, an apron worn and clean, and polished shoes. To succeed in this caper there must be no rags, but plenty of darns. A pack of pawn-tickets is carried in the waistcoat pocket. (One man that I know stuck them in his hat like a carman's.) That's to show that they've parted with their little all before they came to that. They are real pawn-tickets. I have known a man pay 2*s.* 6*d.*

THE STREET-SELLER OF WALKING-STICKS.

for the loan of a marriage certificate to go out on the clean lurk. If a question is asked, I say —'We've parted with everything, and can get no employment; to be sure, we have had a loaf from the parish, but what's that among my family?' That takes the start out of the people, because they say, why not go to the parish? Some persons say, 'Oh, poor folks, they're brought to this, and how clean they are—a darn is better than a patch any time.' The clean lurk is a bare living now—it was good—lots of togs came in, and often the whole family were taken into a house and supplied with flannel enough to make under clothing for them all; all this was pledged soon afterwards, and the tickets shown to prove what was parted with, through want. Those are some of the leading lurks. There's others. 'Fits,' are now bad, and 'paralytics' are no better. *The lucifer lurk* seems getting up though. I don't mean the selling, but the dropping them in the street as if by accident. It's a great thing with the children; but no go with the old 'uns. I'll tell you of another lurk: a woman I knows sends out her child with ¼ oz. of tea and half a quarter of sugar, and the child sits on a door step crying, and saying, if questioned, that she was sent out for tea and sugar, and a boy snatched the change from her, and threw the tea and sugar in the gutter. The mother is there, like a stranger, and says to the child :—'And was that your poor mother's last shilling, and daren't you go home, poor thing?' Then there is a gathering—sometimes 18*d*. in a morning; but it's almost getting stale, that is. I've done *the shivering dodge* too —gone out in the cold weather half naked. One man has practised it so much that he can't get off shivering now. Shaking Jemmy went on with his shivering so long that he couldn't help it at last. He shivered like a jelly—like a calf's foot with the ague—on the hottest day in summer. It's a good dodge in tidy inclement seasons. It's not so good a lurk, by two bob a day, as it once was. This is a single-handed job; for if one man shivers less than another he shows that it isn't so cold as the good shiverer makes it out—then it's no go. Of the *maimed beggars*, some are really deserving objects, as without begging they must starve to death; that's a fact, sir. What's a labouring man to do if he's lost any of his limbs? But some of these even are impostors. I know several blind men who have pensions; and I know two who have not only pensions, but keep lodging-houses, and are worth money, and still go out a begging—though not near where they live. There's the man with the very big leg, who sits on the pavement, and tells a long yarn about the tram carriage having gone over him in the mine. He does very well—remarkable well. He goes tatting and billy-hunting in the country (gathering rags and buying old metal), and comes only to London when he has that sort of thing to dispose of. There's Paddy in the truck too; he makes a good thing, and sends money home to Ireland; he has a decrepit old mother, and it's to his credit. He never drinks. There's Jerry, the collier, he has lost both arms, and does a tidy living, and deserves it; it's a bad misfortune. There's Jack Tiptoe, he can't put one heel to the ground—no gammon; but Mr. Horsford and he can't agree, so Jack takes to the provinces now. He did very well indeed here. There used to be a society among us called *the Cadger's Club*; if one got into a prison there was a gathering for him when he came out, and 6*s*. a week for a sick member, and when he got out again two collections for him, the two amounting perhaps to 1*l*. We paid 3*d*. a week each—no women were members—for thirteen weeks, and then shared what was in hand, and began for the next thirteen, receiving new members and transacting the usual business of a club. This has been discontinued these five years; the landlord cut away with the funds. We get up raffles, and help one another in the best way we can now. At one time we had forty-five members, besides the secretary, the conductor, and under-conductor. The rules were read over on meeting nights—every Wednesday evening. They were very strict; no swearing, obscene or profane language was permitted. For the first offence a fine of 1*d*. was inflicted, for the second 2*d*., and for the third the offender was ejected the room. There was very good order, and few fines had to be inflicted. Several respectable tradesmen used to pay a trifle to be admitted, out of curiosity, to see the proceedings, and used to be surprised at their regularity. Among the other rules were these: a fine of 1*d*. for any member refusing to sing when called on; visitors the same. All the fines went to the fund. If a member didn't pay for five meeting nights he was scratched. Very few were scratched. The secretary was a windmill cove (sold children's windmills in the streets), and was excused contributing to the funds. He had 1*d*. from each member every sharing night, once a quarter, for his labour; he was a very good scholar, and had been brought up well. The landlord generally gave a bob on a sharing night. The conductor managed the room, and the under-conductor kept the door, not admitting those who had no right to be there, and putting out those who behaved improperly. It was held in the Coachmakers' Arms, Rose-street, Longrave-street; tip-top swells used to come among us, and no mistake; real noblemen, sir. One was the nephew of the Duke of ——, and was well-known to all of us by the nick-name, Facer.

I used to smoke a very short and very black pipe, and the honourable gent has often snatched it from my mouth, and has given me a dozen cigars for it. My face has been washed in the gin by a noble lord after he'd made me drunk, and I felt as if it was vitriol about my eyes. The beggars are now dispersed and broken up. They live together now only in twos and threes, and, in plain truth, have no money to spend; they can't get it. Upon an average, in former days a cadger could make his two or three guineas per week without working overtime; but now he can hardly get a meal, not even at the present winter, though it's been a slap up inclement season, to be sure. The Mendicity Society has ruined us—them men took me and gave me a month, and I

can say from my conscience, that I was no more guilty of begging at that time than an unborn baby. The beggars generally live in the low lodging-houses, and there of a night they tell their tales of the day, and inform each other of the good and bad places throughout London, and what 'lurks' do the best. They will also say what beats they intend to take the next day, so that those who are on the same lurk may not go over the same ground as their pals. It is no use telling a lie, but the low lodging-houses throughout London and the country are nests for beggars and thieves. I know some houses that are wholly supported by beggars. In almost every one of the padding kens, or low lodging-houses in the country, there is a list of walks written on a piece of paper, and pasted up over the kitchen mantel-piece. Now at St. Alban's, for instance, at the ———, and at other places, there is a paper stuck up in each of the kitchens. This paper is headed 'WALKS OUT OF THIS TOWN,' and underneath it is set down the names of the villages in the neighbourhood at which a beggar may call when out on his walk, and they are so arranged as to allow the cadger to make a round of about six miles, each day, and return the same night. In many of those papers there are sometimes twenty walks set down. No villages that are in any way 'gammy' are ever mentioned in these papers, and the cadger, if he feels inclined to stop for a few days in the town, will be told by the lodging-house keeper, or the other cadgers that he may meet there, what gentleman's seats or private houses are of any account on the walk that he means to take. The names of the good houses are not set down in the paper, for fear of the police. Most of the lodging-house keepers buy the 'scran' (broken victuals) of the cadgers; the good food they either eat themselves or sell to the other travellers, and the bad they sell to parties to feed their dogs or pigs upon. The cadgers' talk is quite different now to what it was in the days of Billy. You see the flats got awake to it, so in course we had to alter the patter. The new style of cadgers' cant is nothing like the thieves' cant, and is done all on the rhyming principle. This way's the caper. Suppose I want to ask a pal to come and have a *glass* of *rum* and smoke a *pipe* of *tobacco*, and have a game at cards with some *blokes* at *home* with me, I should say, if there were any flats present, 'Splodger, will you have a Jack-surp*ass* of finger-and-*thumb*, and blow your yard of *tripe* of nosey me *knacker*, and have a touch of the *broads* with me and the other heaps of *coke* at my *drum*. [In this it will be observed that every one of the 'cant words rhymes with the words ordinarily used to express the same idea.] I can assure you what little we cadgers do get we earn uncommon hard. Why, from standing shaking—that is, being out nearly naked in the hardest frosts—I lost the use of my left side for nearly three years, and wasn't able to stir outside the door. I got my living by card-playing in the low lodging-houses all that time. I worked the oracle—they were not up to it. I put the first and seconds on and the bridge also. I'd play at cards with any one. You see, sir, I was afeard to come to you at first because I had been 'a starving' on the pavement only a few days ago, not a hundred yards from your very door, and I thought you might know me."

MEETING OF THIEVES.

As a further proof, however, of the demoralizing influences of the low lodging-houses, I will now conclude my investigations into the subject with a report of the meeting of vagrants, which I convened for the express purpose of consulting them generally upon several points which had come under my notice in the course of my inquiries. The Chronicle reporter's account of this meeting was as follows:—

A meeting of an unprecedented character was held at the British Union School-room, Shakspeare-walk, Shadwell, on Monday evening last. The use of the school-room was kindly granted by Mr. Fletcher, the proprietor, to whose liberality we stand indebted for many similar favours. It was convened by our Metropolitan Correspondent, for the purpose of assembling together some of the lowest class of male juvenile thieves and vagabonds who infest the metropolis and the country at large; and although privately called, at only two days' notice, by the distribution of tickets of admission among the class in question at the various haunts and dens of infamy to which they resort, no fewer than 150 of them attended on the occasion. The only condition to entitle the parties to admission was that they should be vagrants, and under twenty years of age. They had all assembled some time before the hour for commencing the proceedings arrived, and never was witnessed a more distressing spectacle of squalor, rags, and wretchedness. Some were young men, and some mere children; one, who styled himself a "cadger," was six years of age, and several who confessed themselves "prigs" were only ten. The countenances of the boys were of various characters. Many were not only good-looking, but had a frank, ingenuous expression that seemed in no way connected with innate roguery. Many, on the other hand, had the deep-sunk and half-averted eye which are so characteristic of natural dishonesty and cunning. Some had the regular features of lads born of parents in easy circumstances. The hair of most of the lads was cut very close to the head, showing their recent liberation from prison; indeed, one might tell by the comparative length of the crop, the time that each boy had been out of gaol. All but a few of the elder boys were remarkable, amidst the rags, filth, and wretchedness of their external appearance, for the mirth and carelessness impressed upon their countenances. At first their behaviour was very noisy and disorderly: coarse and ribald jokes were freely cracked, exciting general bursts of laughter; while howls, cat-calls, and all manner of unearthly and indescribable yells threatened for some time to render the object of the meeting utterly abortive. At one moment a lad would imitate the bray of a jack-ass, and immediately the whole hundred and fifty would fall to braying.

Then some ragged urchin would crow like a cock, whereupon the place would echo again with a hundred and fifty cock-crows. Then, as a black boy entered the room, one of the young vagabonds would shout out "swe-ee-op." This would be received with peals of laughter, and followed by a general repetition of the same cry. Next, a hundred and fifty cat-calls of the shrillest possible description would almost split the ears. These would be succeeded by cries of "Strike up, you catgut scrapers," "Go on with your barrow," "Flare up, my never-sweats," and a variety of other street sayings. Indeed, the uproar which went on before the meeting began will be best understood if we compare it to the scene presented by a public menagerie at feeding time. The greatest difficulty, as might be expected, was experienced in collecting the subjoined statistics of their character and condition. By a well-contrived and persevering mode of inquiry, however, the following facts were elicited:—

With respect to their *ages*, the youngest boy present was 6 years old. He styled himself a "cadger," and said that his mother, who is a widow, and suffering from ill-health, sends him into the streets to beg. There were seven of 10 years of age, three of 12, three of 13, ten of 14, ten of 15, eleven of 16, twenty of 17, twenty-six of 18, and forty-five of 19.

Nineteen had *fathers and mothers* still living; thirty-nine had only one parent, and eighty were orphans in the fullest sense of the word, having neither father nor mother alive.

Of *professed beggars* there were fifty, and sixty-six who acknowledged themselves to be *habitual thieves*. The announcement that the greater number present were thieves pleased them exceedingly, and was received with three rounds of applause.

Twelve of the youths assembled had been *in prison* once (two of these were but 10 years of age); 5 had been in prison twice; 3, thrice; 4 four times; 7, five times; 8, six times; 5, seven times; 4, eight times; 2, nine times (1 of them 13 years of age); 5, ten times; 5, twelve times; 2, thirteen times; 3, fourteen times; 2, sixteen times; 3, seventeen times; 2, eighteen times; 5, twenty times; 6, twenty-four times; 1, twenty-five times; 1, twenty-six times; and 1, twenty-nine times. The announcements in reply to the questions as to the number of times that any of them had been in prison were received with great applause, which became more and more boisterous as the number of imprisonments increased. When it was announced that one, though only 19 years of age, had been in prison as many as twenty-nine times, the clapping of hands, the cat-calls, and shouts of "brayvo!" lasted for several minutes, and the whole of the boys rose to look at the distinguished individual. Some chalked on their hats the figures which designated the sum of the several times that they had been in gaol.

As to the *causes of their vagabondism*, it was found that 22 had run away from their homes, owing to the ill-treatment of their parents; 18 confessed to having been ruined through their parents allowing them to run wild in the streets, and to be led astray by bad companions; and 15 acknowledged that they had been first taught thieving in a lodging-house.

Concerning the vagrant habits of the youths, the following facts were elicited: 78 regularly roam through the country every year, 65 sleep regularly in the casual wards of the unions, and 52 occasionally slept in tramper's lodging-houses throughout the country.

Respecting their *education*, according to the popular meaning of the term, 63 of the 150 were able to read and write, and they were principally thieves. Fifty of this number said they had read "Jack Sheppard," and the lives of Dick Turpin, Claude du Val, and all the other popular thieves' novels, as well as the "Newgate Calendar" and "Lives of the Robbers and Pirates." Those who could not read themselves, said they'd had "Jack Sheppard" read to them at the lodging-houses. Numbers avowed that they had been induced to resort to an abandoned course of life from reading the lives of notorious thieves, and novels about highway robbers. When asked what they thought of "Jack Sheppard," several bawled out "He's a regular brick"—a sentiment which was almost universally concurred in by the deafening shouts and plaudits which followed. When asked whether they would like to be Jack Sheppards, they answered, "Yes, if the times was the same now as they were then." Thirteen confessed that they had taken to thieving in order to go to the low theatres; and one lad said he had lost a good situation on the Birmingham Railway through his love of the play.

Twenty stated they had *been flogged in prison*—many of them two, three, and four different times. A policeman in plain clothes was present; but their acute eyes were not long before they detected his real character notwithstanding his disguise. Several demanded that he should be turned out. The officer was accordingly given to understand that the meeting was a private one, and requested to withdraw. Having apologised for intruding, he proceeded to leave the room—and, no sooner did the boys see the policeman move towards the door, than they gave vent to several rounds of very hearty applause, accompanied with hisses, groans, and cries of "throw him over."

The process of interrogating them in the mass having been concluded, the next step was to call several of them separately to the platform, to narrate, in their peculiar style and phraseology, the history of their own career, together with the causes which had led them to take up a life of dishonesty. The novelty of their position as speech-makers seemed peculiarly exciting to the speakers themselves, and provoked much merriment and interest amongst the lads. Their antics and buffoonery in commencing their addresses were certainly of the most ludicrous character. The first speaker, a lad 17 years of age, ascended the platform, dressed in a torn "wide-a-awake" hat, and a dirty smock-frock. He began:—Gentlemen [immense applause and laughter], I am a Brummagem lad [laughter]. My father has been

dead three years, and my mother seven. When my father died I had to go and live along with my aunt. I fell out of employment, and went round about the town, and fell into the company of a lot of chaps, and went picking ladies' pockets. Then I was in prison once or twice, and I came to London, and have been in several prisons here. I have been in London three years; but I have been out of it several times in that time. I can't get anything honest to do; and I wish I could get something at sea, or in any foreign land. I don't care what or where it is [cheers and yells].

Another lad about 16, clad in a ragged coat, with a dirty face and matted hair, next came forward and said—My father was a soldier, and when I growed up to about ten years I joined the regiment as a drummer in the Grenadier Guards. I went on and got myself into trouble, till at last I got turned away, and my father left the regiment. I then went out with some more chaps and went thieving, and have been thieving about two years now. [Several voices—"Very good;" "that 's beautiful;" "I hope you do it well."]

The third boy, who stated that he had been twenty-four times in prison, said he belonged to Hendon, in Middlesex, and that his father left his mother seventeen years ago, and he did not know whether he was dead or alive. He went to Christchurch school for some time, but afterwards picked up with bad companions, and went a thieving. He went to school again, but again left it to go a thieving and cadging with bad companions. He had been doing that for the last five years; and if he could get out of it he would be very glad to leave it [cheers].

The fourth lad (who was received with loud cheering, evidently indicating that he was a well-known character) said, he came from the city of York, and was a farrier. His father died a few years ago, and then he took to work; but "the play" led him on to be a thief, and from that time to the present he had done nothing but beg or thieve. If he could go to Australia he would be very glad; as if he stopped in England he feared he should do nothing but thieve to the end [laughter, with cries of "well done," "very well spoken"].

The next speaker was about 18 years of age, and appeared a very sharp intelligent lad. After making a very grave but irresistibly comical prefatory bow, by placing his hand at the back of his head, and so (as it were) forcing it to give a nod, he proceeded: My father is an engineer's labourer, and the first cause of my thieving was that he kept me without grub, and wallopped me [laughter]. Well, I was at work at the same time that he was, and I kept pilfering, and at last they bowled me out [loud cheers]. I got a showing up, and at last they turned me away; and, not liking to go home to my father, I ran away. I went to Margate, where I had some friends, with a shilling in my pocket. I never stopped till I got to Ramsgate, and I had no lodging except under the trees, and had only the bits of bread I could pick up. When I got there my grandfather took me in and kept me for a twelvemonth. My mother's brother's wife had a spite against me, and tried to get me turned away. I did not know what thieving was then; and I used to pray that her heart might be turned, because I did not know what would become of me if my grandfather turned me away. But she got other people to complain of me, and say I was a nuisance to the town; but I knowed there was no fault in me; but, however, my grandfather said he could put up with me no longer, and turned me away. So after that I came back to London, and goes to the union. The first night I went there I got tore up [cheers and laughter]. Everything was torn off my back, and the bread was taken away from me, and because I said a word I got well wallopped [renewed laughter]. They "small-ganged" me; and afterwards I went seven days to prison because others tore my clothes. When I went in there—this was the first time—a man said to me, "What are you here for?" I said, "For tearing up." The man said to another, "What are you here for?" and the other made answer, "For a handkerchief." The man then said, "Ah, that's something like;" and he said to me, "Why are you not a thief—you will only get to prison for that." I said, "I will." Well, after that I went pilfering small things, worth a penny or twopence at first; but I soon saw better things were as easy to be got as them, so I took them [laughter]. I picked up with one that knowed more than me. He fairly kept me for some time, and I learnt as well as him. I picked him up in a London workhouse. After that I thought I would try my friends again, and I went to my uncle at Dover, but he could do nothing for me, so I got a place at a butcher's, where I fancied myself fairly blessed, for I had 2*s.* a week and my board and washing. I kept a twelvemonth there honest, without thieving. At last my master and I fell out and I left again, so I was forced to come up to London, and there I found my old companions in the Smithfield pens—they were not living anywhere. I used to go to the workhouse and used to tear up and refuse to work, and used to get sent to "quod," and I used to curse the day when it was my turn to go out. The governor of the prison used to say he hoped he wouldn't see my face there again; but I used to answer, "I shall be here again to night, because it's the only place I've got." That's all I 've got to say.

The next lad, who said he had been fourteen times in prison, was a taller, cleaner, and more intelligent-looking youth than any that had preceded him. After making a low affected bow, over the railing, to the company below, and uttering a preliminary a-hem or two with the most ludicrous mock gravity, he began by saying:—"I am a native of London. My father is a poor labouring man, with 15*s.* a week—little enough, I think, to keep a home for four, and find candle-light [laughter]. I was at work looking after a boiler at a paper-stainer's in Old-street-road at 6*s.* a week, when one night they bowled me out. I got the sack, and a bag to take it home in [laughter]. I got my wages, and ran away from

home, but in four days, being hungry, and having no money, I went back again. I got a towelling, but it did not do me much good. My father did not like to turn me out of doors, so he tied me to the leg of the bedstead [laughter]. He tied my hands and feet so that I could hardly move, but I managed somehow to turn my gob (mouth) round and gnawed it away. I run down stairs and got out at the back door and over a neighbour's wall, and never went home for nine months. I never bolted with anything. I never took anything that was too hot for me. The captain of a man-of-war about this time took me into his service, where I remained five weeks till I took a fever, and was obliged to go to the hospital. When I recovered, the captain was gone to Africa; and not liking to go home, I stepped away, and have been from home ever since. I was in Brummagem, and was seven days in the new 'stir' (prison), and nearly broke my neck. When I came out, I fell into bad company, and went cadging, and have been cadging ever since; but if I could leave off, and go to the Isle of Dogs, the Isle of Man, or the Isle of Woman [laughter], or any other foreign place, I would embrace the opportunity as soon as I could. And if so be that any gentleman would take me in hand, and send me out, I would be very thankful to him, indeed. And so good night" [cheers].

A dirty little boy, fourteen years of age, dressed in a big jacket, next stood forward. He said his father was a man-of-war's man, and when he came home from sea once his father, his mother, and all of them got drunk. The lad then stole 4*d.* from his father's pocket. After this, when he was sent for sixpenny rum he used to fetch fourpenny, and for fourpenny gin threepenny; and for fourpenny beer he used to fetch threepenny, and keep the difference to himself. His mother used to sell fruit, and when she left him at the stall he used to eat what he could not sell, and used to sell some to get marbles and buttons. Once he stole a loaf from a baker's shop. The man let him off, but his father beat him for it. The beating did him no good. After that he used to go "smugging" [running away with] other people's things. Then one day his father caught him, and tied his leg to the bedstead, and left him there till he was pretty near dead. He ran away afterwards, and has been thieving ever since.

A lad about twenty was here about to volunteer a statement concerning the lodging-houses, by which he declared he had been brought to his ruin, but he was instantly assailed with cries of "come down!" "hold your tongue!" and these became so general, and were in so menacing a tone, that he said he was afraid to make any disclosures, because he believed if he did so he would have perhaps two or three dozen of the other chaps on to him [great confusion].

Mr. Mayhew: Will it hurt any of you here if he says anything against the lodging-houses [yes, yes]? How will it do so?

A Voice: They will not allow stolen property to come into them if it is told.

Mr. Mayhew: But would you not all gladly quit your present course of life [yes, yes, yes]? Then why not have the lodging-house system, the principal cause of all your misery, exposed?

A Voice: If they shut up the lodging-houses, where are we to go? If a poor boy gets to the workhouse he catches a fever, and is starved into the bargain.

Mr. Mayhew:—Are not you all tired of the lives you now lead? [Vociferous cries of "yes, yes, we wish to better ourselves!" from all parts of the room.] However much you dread the exposure of the lodging-houses, you know, my lads, as well as I do, that it is in them you meet your companions, and ruin, if not begun there, is at least completed in such places. If a boy runs away from home he is encouraged there and kept secreted from his parents. And do not the parties who keep these places grow rich on your degradation and your peril? [Loud cries of "yes, yes!"] Then why don't you all come forward now, and, by exposing them to the public, who know nothing of the iniquities and vice practised in such places, put an end to these dens at once? There is not one of you here—not one, at least, of the elder boys, who has found out the mistake of his present life, who would not, I verily believe, become honest, and earn his living by his industry, if he could. You might have thought a roving life a pleasant thing enough at first, but you now know that a vagabond's life is full of suffering, care, peril, and privation; you are not so happy as you thought you would be, and are tired and disgusted with your present course. This is what I hear from you all. Am I not stating the fact? [Renewed cries of "yes, yes, yes!" and a voice: "The fact of it is, sir, we don't see our folly till it is too late."] Now I and many hundreds and thousands really wish you well, and would gladly do anything we could to get you to earn an honest living. All, or nearly all, your misery, I know, proceeds from the low lodging-houses ["yes, yes, it does, master! it does"]; and I am determined, with your help, to effect their utter destruction. [A voice, "I am glad of it, sir—you are quite right; and I pray God to assist you."]

The elder boys were then asked what they thought would be the best mode of effecting their deliverance from their present degraded position. Some thought emigration the best means, for if they started afresh in a new colony, they said they would leave behind them their bad characters, which closed every avenue to employment against them at home. Others thought there would be difficulties in obtaining work in the colonies in sufficient time to prevent their being driven to support themselves by their old practices. Many again thought the temptations which surrounded them in England rendered their reformation impossible; whilst many more considered that the same temptations would assail them abroad which existed at home.

Mr. Mayhew then addressed them on another point. He said he had seen many notorious thieves in the course of his investigations. Since then he had received them at all hours into his house—men of the most desperate and women of

Original from HARVARD UNIVERSITY

the most abandoned characters—but he had never lost a 6*d.* worth of his property by them. One thief he had entrusted with a sovereign to get changed, and the lad returned and gave him back the full amount in silver. He had since gone out to America. Now he would ask all those present whether, if he were to give them a sovereign, they would do the same? [Several voices here called out that they would, and others that they would not. Others, again, said that they would to him, but to no one else.]

Here one of the most desperate characters present, a boy who had been twenty-six times in prison, was singled out from the rest, and a sovereign given to him to get changed, in order to make the experiment whether he would have the honesty to return the change or abscond with it in his possession. He was informed, on receiving it, that if he chose to decamp with it, no proceedings should be taken against him. He left the room amid the cheers of his companions, and when he had been absent a few moments all eyes were turned towards the door each time it opened, anxiously expecting his arrival, to prove his trustworthiness. Never was such interest displayed by any body of individuals. They mounted the forms in their eagerness to obtain the first glimpse of his return. It was clear that their honour was at stake; and several said they would kill the lad in the morning if he made off with the money. Many minutes elapsed in almost painful suspense, and some of his companions began to fear that so large a sum of money had proved too great a temptation for the boy. At last, however, a tremendous burst of cheering announced the lad's return. The delight of his companions broke forth again and again, in long and loud peals of applause, and the youth advanced amidst triumphant shouts to the platform, and gave up the money in full.

The assemblage was then interrogated as to the effect of flogging as a punishment; and the general feeling appeared to be that it hardened the criminal instead of checking his depravity, and excited the deadliest enmity in his bosom at the time towards the person inflicting it. When asked whether they had seen any public executions, they almost all cried out that they had seen Manning and his wife hung; others said that they had seen Rush and Sarah Thomas executed. They stated that they liked to go a "death-hunting," after seeing one or two executed. It hardened them to it, and at last they all got to thieve under the gallows. They felt rather shocked at the sight of an execution at first; but, after a few repetitions, it soon wore off.

Before the meeting broke up several other lads expressed a strong desire to make statements.

A young man, 18 years of age, and of a miserable and ragged appearance, said he first left home from bad usage; and could not say whether it was the same with his sister or not, but she left her home about nine months ago, when he met her while he was getting his living as a costermonger. With the stock-money that he had, rather than she should be driven to prostitution and the streets, he bought as many things as he could to furnish a room. This exhausted his stock-money, and then his furniture had to go a little at a time to support him and his sister in food. After this he was obliged to take a furnished room, which put him to greater expense. To keep her off the streets, he was compelled to thieve. His father, if he ever had the feeling of a Christian, would never have treated him as he had done. Could a father (he asked) have any feeling, who chained his son up by the leg in a shed, as *his* father had done to him, and fed him on bread and water for one entire month: and then, after chaining him up all day, still chain him in bed at night. This it was that drove him into the streets at first. It was after his mother died, and he had a step-mother, that his father treated him thus. His mother-in-law ill-treated him as well as his father. If he had been a transport he could not have been treated worse. He told his father that he was driving him on the road to transportation, but he took no notice of it; and he was obliged to leave his roof. He had been in Newgate since.

A little boy, dressed in the garb of a sailor, came up to Mr. Mayhew crying bitterly, and implored him to allow him to say a word. He stated —I am here starving all my time. Last night I was out in the cold and nearly froze to death. When I got up I was quite stiff and could hardly walk. I slept in Whitechapel under a form where they sell meat. I was an apprentice on board of a fishing smack, and ran away because I was ill-treated. After I ran away I broke into my master's house because I was hungry. He gave me twelve months, and now he is in the union himself; he failed in business and got broken up. I have been out of prison three months, starving; and I would rather do anything than thieve. If I see a little thing I take it, because I can't get anything to eat without it. [Here the child, still weeping piteously, uncovered his breast, and showed his bones starting through his skin. He said he was anxious to get out of the country.]

The following statement respecting the lodging-houses was made, after the others had left, by another lad. He left home when about thirteen, and never thieved before that. His father was dead, and his mother was unable to keep him. He got a situation and held it for three years and nine months, until he picked up with a man from a lodging-house, and through keeping late hours he was obliged to leave his place and sleep in a lodging-house himself. The lodging-house is in Short's-gardens. This he considered to have been the commencement of his downfall. About forty thieves lived in the house, and they brought in stolen property of every description, and the deputies received it and took it to other people to sell it again, and get the price and pay the thieves. They got double as much as the thieves did, or else they would have nothing to do with it. Several housebreakers lived at the house, and he heard them there plan the robbery of Bull and Wilson, the woollen-drapers in St. Martin's-lane. One of the men secreted himself in the house in the daytime, and the other two were admitted by

HARVARD UNIVERSITY

him at night. If he had stated this at the meeting the persons present would have killed him. He was sure that more might be done by giving proper encouragement to virtue, and by reforming the criminal, than by rigorous prosecution. He said (with tears in his eyes) that he should be very willing and happy to work for an honest living if he could only get it to do. He showed a letter of recommendation for good conduct to his former master, and a Bible; both of which had been given him by the chaplain of the gaol which he had just left, after undergoing an imprisonment of twelve months. It was useless (he said) for a young man like him to apply to the parish for relief; he might just as well stand in the street and talk to a lamp-post. Then what was a man to do after he left prison? He must go a thieving to live. He was persuaded that if there was an institution to give employment to the homeless, the friendless, and the penniless, after being liberated from prison, it would be the means of rescuing thousands.

The proceedings then terminated. The assemblage, which had become more rational and manageable towards the close, dispersed, quite peaceably it should be added, and the boys were evidently sincerely grateful for the efforts being made to bring their misfortunes before the notice of those in whose power it may be to alleviate them.

Before they were dismissed, as much money was dispensed to each as would defray his night's lodging.

Of the Country Lodging-Houses.

Concerning the lodging-houses, more especially in the country, I give the statement of a middle-aged man, familiar with them for twenty years. He was recommended to me as possessed of much humour and a great master of humourous slang:—

"I can tell you all about it, sir; but one lodging-house is so like another that I can't draw much distinction. In small country towns, especially agricultural towns, they are decent places enough, regular in their hours, and tidy enough. At these places they have what they call 'their own travellers,' persons that they know, and who are always accommodated in preference. As to the characters that frequent these places, let us begin with *the Crocusses*. They carry about a lot of worms in bottles, what they never took out of anybody, though they'll tell you different, or long pieces of tape in bottles, made to look like worms, and on that they'll *patter* in a market place as if on a real cure, and they've got the cheek to tell the people that that very worm was taken from Lady ——, near the town, and referring them to her to prove it. The one I knew best would commence with a piece of sponge in a bottle, which he styled the stomach wolf. That was his leading slum, and pretty well he sponged them too. When he'd pattered on about the wolf, he had another bottle with what he called a worm 200 inches long, he bounced it was, which the day before yesterday he had from Mrs. ——'s girl (some well-known person), and referred them to her. While he's going on, a brother Crocus will step up, a stranger to the people, and say, 'Ah, Doctor ——, you're right. I had the pleasure of dining with Mr. —— when the worm was extracted, and never saw a child so altered in my life.' That's what the Crocus's call giving a jolly; and after that don't the first Crocus's old woman serve out the six-penny-worths? The stuff is to cure every mortal thing a man can ail—ay, or a woman either. They'd actually have the cheek to put a blister on a cork leg. Well, when they're done pattering on the worm racket, then come the wonderful pills. Them are the things. These pills, from eight to a dozen in a box, are charged 4*d.* to 6*d.* according to the flat's appearance—as the Crocus calls his customers. The pills meet with a ready sale, and they're like chip in porridge, neither good nor harm. It's chiefly the bounciful patter, the cheek they have, that gets them Crocusses on. It's amazing. They'll stare a fellow in the face, and make him believe he's ill whether he is or no. The man I speak of is a first-rate cove; he trains it and coaches it from market to market like any gentleman. He wears a stunning fawny (ring) on his finger, an out-and-out watch and guard, and not a duffer neither—no gammon; and a slap-up suit of black togs. I've seen the swell bosmen (farmers) buy the pills to give the people standing about, just to hear the Crocus patter. Why they've got the cheek to pitch their stall with their worms opposite a regular medical man's shop, and say, 'Go over the way and see what he'll do—he'll drive up in a horse and gig to your door, and make you pay for it too; but I don't—I've walked here to do you good, and I *will* do you good before I leave you. One trial is all I ask'—and quite enough too (said my informant). I'll warrant they won't come a second time; if they do, it's with a stick in their hands. If he does much business in the worm-powder way (some have it in cakes for children), the Crocus never gives them a chance to catch him. But if it's only pills, he'll show next market day, or a month after, and won't he crack about it then? He says, 'One trial is all I ask,' and one of them got it and was transported. I knew one of these Crocusses who was once so hard up from lushing and boozing about that he went into a field and collected sheep dung and floured it over, and made his pills of it, and made the people swallow it at Lutterworth market, in Leicestershire; because there they'll swallow anything. If the Crocus I have mentioned see this in the paper—as he will, for he's a reading-man—won't he come out bouncefull? He'll say, 'Why am I thus attacked—why don't the proprietor and the editor of this paper come forward—if he's among you? Who made this report? let him come forward, and I'll refute him face to face.' And no doubt (my informant remarked), he'd give him a tidy dose, too, the Crocus would. For myself, I'd far rather meet him face to face than his medicine, either his blue or his pink water. There's another sort who carry on the crocussing business, but on a small scale; they're on the penny and twopenny racket, and are called hedge crocusses—men who sell corn salve, or 'four pills

a penny,' to cure anything, and go from house to house in the country. But as the hedge crocus is shickery togged, he makes poorly out. Respectable people won't listen to him, and it's generally the lower order that he gulls. These hedge fellows are slow and dull; they go mouching along as if they were croaking themselves. I've seen the head crocus I've mentioned at four markets in one week, and a town on a Saturday night, clear from 5*l.* to 7*l.*—all clear profit, for his fakement costs him little or nothing. For such a man's pound, the hedge fellow may make 1*s.* The next I'll tell you about is durynacking, or duryking. The gipsies (and they're called Romanies) are the leading mob at this racket, but they're well known, and I needn't say anything about those ladies. But there're plenty of travelling women who go about with a basket and a bit of driss (lace) in it, gammy lace, for a stall-off (a blind), in case they meet the master, who would order them off. Up at a bosken (farm-house) they'll get among the servant girls, being pretty well acquainted with the neighbourhood by inquiries on the road, as to the number of daughters and female servants. The first inquiry is for the missus or a daughter, and if they can't be got at they're on to the slaveys. Suppose they do get hold of one of the daughters, they commence by offering the driss, which, as it is queer stuff, wouldn't be picked up by an agricultural young lady, as the durynacker very well knows. Then she begins, 'Ah! my sweet young lady, my blessed looking angel'—if she's as ugly as sin, and forty; they say that, and that's the time you get them to rights, when they're old and ugly, just by sweetening them, and then they don't mind tipping the loaver (money)—'I know you dont want this stuff (she'll continue), there's something on your mind. I see you're in love; but the dear handsome gentleman—he'll not slight you, but loves you as hard as a hammer.' This is thrown out as a feeler, and the young lady is sure to be confused; then the durrynacker has hold of her mauly (hand) in a minute. It's all up with the girl, once the woman gets a grip. She's asked in directly, and of course the sisters (if she has any) and the slavey are let into the secret, and all have their fortunes told. The fortune-teller may make a week's job of it, according as the loaver comes out. She'll come away with her basket full of eggs, bacon, butter, tea and sugar, and all sorts of things. I *have* seen them bring the scran in! Every one is sure to have handsome husbands, thumping luck, and pretty children. The durrynacker, too, is not particular, if there's a couple of silver spoons—she doesn't like odd ones; and mind you, she alway carries a basket—big enough too. I know a man on this lurk, but he works the article with a small glass globe filled full of water, and in that he shows girls their future husbands, and kids them on to believe they do see them—ay, and the church they're to be married in—and they fancy they do see it as they twist the globe this way and that, while he twists the tin out of them, and no flies. He actually had the cheek, though he knew I was fly to every fake, to try to make me believe that I could see the place where Smith O'Brien had the fight in Ireland! 'Don't you see them cabbages, and a tall man in a green velvet cap among them, holloring out, "I'm the King of Munster?"' I don't know any other male durrynacker worth noticing; the women have all the call. Young women won't ask their fortunes of men. The way the globe man does is to go among the old women and fiddle (humbug) them, and, upon my word, three-parts of them are worse than the young ones. Now I'll tell you about the tat (rag) gatherers; buying rags they call it, but I call it bouncing people. Two men I lodged with once, one morning hadn't a farthing, regularly smashed up, not a feather to fly with, they'd knocked down all their tin lushing. Well, they didn't know what to be up to, till one hit upon a scheme. 'I've got it, Joe,' says he. He borrows two blue plates from the lodging-house keeper, a washing jug and basin. Off they goes, one with the crockery, and the other with a bag. They goes into the by-courts in Windsor, because this bouncing caper wouldn't do in the main drag. Up goes the fellow with a bag, and hollas out, 'Now, women, bring out your copper, brass, white rags, old flannel, bed-sacking, old ropes, empty bottles, umbrellas—any mortal thing—the best price is given;' and the word's hardly out, when up comes his pal, hollaring, 'Sam, holloa! stop that horse,' as if he'd a horse and cart passing the court, and then the women bring out their umbrellas and things, and the're all to be exchanged for crockery such as he shows, and all goes into the bag, and the bagman goes off with the things, leaving the other to do the bounce, and he keeps singing out for the horse and cart with the load of crockery, gammoning there is one, that the ladies may have their choice, and he then hurries down to quicken his cart-driver's movements, and hooks it, leaving the flats completely stunned. Oh! it does give them a ferrycadouzer. Two other men go about on this lurk, one with an old cracked plate under his waistcoat, and the other with a bag. And one sings out, 'Now, women, fourpence a pound for your white rags. None of your truck system, your needles and thread for it. I don't do it that way; ready money, women, is the order of the day with me.' Well, one old mollesher (woman), though she must have known her rags would only bring 2*d.* a lb. at a fair dealer's, if there be one, brought out 8 lbs. of white rags. He weighs them with his steelyards, and in they went to the bag. The man with the bag steps it immediately, and the other whips out his flute quite carelessly, and says—'Which will you have marm, Jem Crow, or the Bunch of Roses?' The old woman says directly, 'What do you mean, 8 times 4 is 32, and 32 pence is 2*s.* 8*d.*; never mind, I won't be hard, give me half-a-crown.' Well, when she finds there's no money, out she hollars, and he plays his distracted flute to drown her voice, and backs himself manfully out of the court. I have known these men get on so that I have seen them with a good horse and cart. There's another class

of rag bloaks, who have bills printed with the Queen's Arms at the top, if you please, 'By royal authority'—that 's their own authority, and they assume plenty of it. Well, this bill specifies the best prices for rags, left-off clothes, &c. One fellow goes and drops these bills at the kens (houses), the other comes after him, and as the man who drops marks every house where a bill has been taken, the second man knows where to call. Any house where he gets a call commences the caper. Well, anything to be disposed of is brought out, often in the back yard. The party of the house produces the bill, which promises a stunning tip for the old lumber. The man keeps sorting the things out, and running them down as not so good as he expected; but at the same time he kids them on by promising three times more than the things are worth. This is a grand racket—the way he fakes them, and then he says, 'Marm (or sir, as it may be), I shall give you 15s. for the lot,' which stuns the party, for they never expected to get anything like that—and their expectations is not disappointed, for they don't. Then he turns round directly, and commences sorting more particularly than before, putting the best and the easiest to carry altogether. He starts up then, and whips a couple of bob, or half a bull (2s. 6d.) into the woman's hand, saying, 'I always like to bind a bargain, marm—one of the fairest dealing men travelling. Do save all your old lumber for me.' Of a sudden he begins searching his pockets, and exclaims, 'Dear me, I haven't enough change in my pocket, but I 'll soon settle that—my mate has it outside. I 'll just take a load out to the cart, and come back for the others with the money;' and so he hooks it, and I 've no occasion to tell you he never comes back; and that 's what he calls having them on the knock."

The other inmates at the lodging-houses which my informant described are of the class concerning whom full information is or will be given in other portions of this or the following letters. His description of the lodging-houses, too, was a corroboration of the statement I give to-day. All the classes described meet and mix at the lodging-houses.

I shall reserve what I have to say concerning the influence of the low lodging-houses of London and the country till the conclusion of the present volume.

Of the Street-Sellers of Chemical Articles of Manufacture.

The street purveyors of blacking, of the different preparations of black lead, of plating-balls, of corn-salves, of grease-removing compositions, of china and glass cements, of rat poisons, of fly-papers, of beetle-wafers, of gutta-percha heads, of lucifer-matches, and of cigar-lights, may be classed generally under two heads. They are either very old or very young persons, or else they are men who recommend their wares by patter.

Among the first-mentioned class are the vendors of cakes of blacking, papers of black-lead, and lucifer matches. Of blacking and black-lead the street-sellers are more frequently old women; of lucifer matches they are usually women and children, and of all ages. It is not uncommon, in the quieter roads of the suburbs especially, to see a young woman extend her bare red arm from beneath a scanty ragged shawl, and with an imploring look, a low curtsey, and a piteous tone, proffer a box of matches for sale; while a child in her arms, perhaps of two or three years old, extends in its little hand another box. There are also in the street sale of lucifer matches very many girls and boys, parentless or uncared for, and many old or infirm women and men.

The street-sellers of chemically-manufactured articles, who feel it necessary to recommend their wares by a little street oratory, or patter, (the paper-worker, whose humorous remarks I have before quoted, once described it to me as "advertising by word of mouth,") are the vendors of the articles which are to cure, to repair, to renovate, or to kill. Any other itinerant vendors of chemical articles are of the ordinary class of street traders.

Of the Street-Sellers of Blacking, Black Lead, etc.

I specify these two commodities jointly, because they are frequently sold by the same individual. In Whitechapel and Spitalfields are eight establishments, where the street-sellers of blacking are principally supplied with their stock. It is sold in cakes, which are wrapped in a kind of oil paper, generally printed on the back, so as to catch the eye, with the address of some well-known blacking manufacturer. Thus some which a street-seller of blacking showed me were printed, in large type, as a sort of border, "Lewis's India Rubber Blacking," while in the middle was a very black and very predominant 30, and beneath it, in small and hardly distinguishable type, "Princess-st., Portman-market." Any shopkeeper, who "supplies the trade," if he be a regular customer of the manufacturer, can have his name and address printed on the cover of the blacking-cakes. The 30 is meant to catch the eye with the well-known flourish of "30, Strand."

The quality of these cakes of blacking, the street-sellers whom I questioned told me was highly approved by their customers, and, as blacking is purchased by the classes who aim at a smartness and cleanliness above that of the purchasers of many street commodities, there is no reason to doubt the assertion. The sale of this blacking, indeed, is chiefly on a round, and it would be hopeless as to future custom to call a second time at any house where bad blacking had been sold on a previous visit. The article is vended wholesale, in "gross boxes," and "half-gross boxes." The half-gross boxes are 1s. 9d., and capital, even in this trifling trade, has its customary advantages, for the "gross boxes" are but 3s. It should be remembered, however, that to the buyer of two "half-gross" a couple of the plain wooden boxes, in which the blacking is sold, and often hawked, must be supplied; but to the buyer of a "gross box" only one of these cases is furnished. I may mention, to the credit

of the vendors, that of the wholesale blacking makers, two have themselves been street-sellers, and one still, but only at intervals, goes "on a blacking-round" among his old customers. There are other blacking-makers, but those I have specified, as to number, are more particularly the providers for the street trade. The poor people who sell blacking at a distance from the manufacturer's premises—as in the case of the "30, Princess-st., Portman-market"—are supplied by oilmen, chandlers, and other shopkeepers, who buy largely of the manufacturers, and can consequently supply the purchasers by the dozen, for street sale or hawking, as cheaply as they would be supplied by the manufacturer himself. A dozen is generally charged 3½*d.*, and as the cakes are sold at ½*d.* each (occasionally 1*d.*, both by the street people and more frequently the small shopkeepers) the profit is moderate enough. The cakes, however, which are regularly retailed at 1*d.*, are larger, and cost nearly twice the amount of the others wholesale.

This trade presents the peculiarity of being almost entirely a street "door-to-door" trade, as I heard it described. Blacking is not presented for purposes of begging, as are lucifer-matches, tracts, memorandum-books, boot-laces, &c.; for the half-trading, half-begging, is carried on in the quieter parts of town, and more extensively in the suburbs, ladies being principally accosted, and to them blacking is not offered.

There are now, I learn from good authority, never fewer than 200 persons selling cake blacking, "from door to door." More than half of them are elderly women, and more than three-fourths women of all ages and girls. The other sellers are old men and boys. None of the blacking-sellers make the article they vend. To sell eight dozen cakes a week is a full average, and of these the "pennies" and the "half-pennies" are about equally divided. This gives a weekly outlay of 6*s.* to each individual seller, with an average profit of about 2*s.* 6*d.*, and shows a yearly street-expenditure by the public of 3120*l.* The profit, however, is not in equal apportionment among the traders in blacking, for the "old hands" on a regular round will do double the business of the others.

In liquid blacking the trade is now small. It is occasionally sold in the street markets on Saturday nights, but the principal traffic is in the public-houses. This kind of blacking is retailed at 2*d.* a bottle, and, I was informed by a man who had sold it, was "rather queer stuff." It is labelled "equal to" (in very small letters) DAY AND MARTIN "in very large letters. One of the manufacturers a few years ago told my informant that he had been threatened "with being sued for piracy, but it was no use sueing a mouse." There are sometimes none, and sometimes twenty persons hawking this blacking, and they are principally, I am informed, the servants of showmen, "out of employ," or "down on their luck." Some of these men "raffle" their blacking in public-houses. They are provided with tickets, numbered from one to six, which are thrown, the blank sides upwards on a table, and the drawer of number six wins a two-penny bottle of blacking for ½*d.*; for this the raffler receives 3*d.* Few of these traders sell more than one dozen bottles in a day, the principal trade being in the evening, and "one-and-a-half dozen is a very good day." The goods are carried in a sack, slung from the shoulder, and are a very heavy carriage, as two-and-a-half dozen, which are often carried, weigh about 100 lbs. If ten men, the year through, take each 6*s.* weekly (about half the amount being profit), which, I am assured, is the average extent of the trade, we find 156*l.* yearly expended in this liquid blacking. "Ten years ago," said one blacking seller to me, "it was three times as much as it is now." At the mews blacking is sold by men who are for the most part servants out of place, or who have become known to the denizens of the mews, from having been "helpers" in some capacity, if they have not worn a livery. Here the article vended is what it is announced to be,—"Hoby's" or "Everett's" blacking. The sellers are known to the coachmen and grooms, many of whom have to "find their own blacking," or there would be no business done in the mews, the dwellers there being great sticklers for "a good article." The profit to the vendors is 3*s.* in 12*s.* Shilling bottles are vended as numerously as "sixpennies." An old coachman, who had lived in mews in all parts of town, calculated that, take the year through, there was every day twenty men selling blacking in the mews, with an average profit of 10*d.* a day, or 5*s.* a week, so taking 15*s.* each. This gives a mews expenditure, yearly, of 780*l.*

Black-Lead, for the polishing of grates, is sold in small paper packets, the half ounce being a ½*d.*, and the ounce a 1*d.* The profit is cent. per cent. Nearly all the women who sell blacking, as I have described, sell black-lead also. In addition to these elderly traders, however, there are from twenty to thirty boys and girls who vend black-lead in the street markets, but chiefly on Saturday nights, and on other days offer it through the area rails—their wretched plight, without any actual begging, occasionally procuring them custom.

The black-lead sold in the streets has often a label in imitation of that of established shopkeepers, as "Superfine Pencil Black-Lead, prepared expressly for, and sold by T. H. Jennings, Oil-Colour and Italian Warehouse, 25, Wormwood-street, City." The name and address must of course be different, but the arrangement of the lines, and often the type, is followed closely, as are the adornments of the packet, which in the instance cited are heraldic. In other parts of town, the labels of tradesmen are imitated in a similar way, but not very closely; and in nearly half the qantity sold a *boná fide* label is given, without imitation or sham. "There would be more sold in that way," I was told by a sharp lad, "quite the real ticket, if the dons as wholesales the black-lead, would make it up to sell in ha'porths and penn'orths, with a proper 'lowance to us as sells." This boy and a young sister went on a round; the boy with black-lead, the girl with

boot-laces, in one direction, the mother going in another, and each making for their room at six in the evening, or as soon as "sold out."

There are, I am informed, 100 to 150 persons selling and hawking black-lead in the streets, and it may be estimated that they take 4*s.* each weekly (the adults selling other small articles with the black-lead); thus we find, averaging the number of sellers at 125, that 1250*l.* is yearly expended in this article, half of which sum forms the profit of the street-folk.

Of the Street-Sellers of French Polish.

The greater part of the French polish vended in the streets is bought at oil and varnish-shops in Bethnal-green and Whitechapel, the wholesale price being 1*s.* a pint. The street-vendors add turpentine to the polish, put it into small bottles, and retail it at 1*d.* a bottle. They thus contrive to clear 5*d.* on each shilling they take.

There are now five and sometimes six men selling French polish in the streets and public-houses. "But the trade 's getting stale," I was told; "there was twice as many in it three or four years back, and there 'll be fewer still next year." When French polish first became famous there were, I was informed, several cabinet-makers who hawked it—some having prepared it themselves—and they would occasionally clear 5*s.* in a day. Of these street-traders there are now none, the present vendors having been in no way connected with the manufacture of furniture. These men generally carry with them pieces of "fancy wood," such as rose, or sandal wood, which they polish up in the streets to show the excellence of the varnish. The chief purchasers are working people and small tradespeople, or their wives, who require trifling quantities of such a composition when they re-polish any small article of furniture.

The French polish-sellers, I am assured by a man familiar with the business, take 2*s.* a day each, or rather in an evening, for the sales are then the most frequent: the 2*s.* leaves a profit of 10*d.* The street expenditure is, therefore (reckoning five regular sellers), 156*l.* yearly. None of the French polish-sellers confine themselves entirely to the sale of it.

Of the Street-Sellers of Grease-removing Compositions.

The persons engaged in this trade carry it on with a regular patter. One man's street announcement is in the following words: "Here you have a composition to remove stains from silks, muslins, bombazeens, cords, or tabarets of any kind or colour. It will never injure nor fade the finest silk or satin, but restore it to its original colour. For grease on silks, &c., only rub the composition on dry, let it remain five minutes, then take a clothes' brush and brush it off, and it will be found to have removed the stains. For grease in woollen cloths spread the composition on the place with a piece of woollen cloth and cold water; when dry rub it off, and it will remove the grease or stain. For pitch or tar use hot water instead of cold, as that prevents the nap coming off the cloth. Here it is. Squares of grease-removing composition, never known to fail, only 1*d.* each."

This street-traffic, I was informed, was far more extensively carried on when silks and woollen cloths, and textile manufactures generally, were more costly and more durable than at present, and when to dye, and scour, and "turn" a garment, was accounted good housewiveship. The sellers then told wonders of their making old silk gowns, or old coats, as good as new, by removing every discolouration, no matter from what cause. Now a silk dress is rarely, if ever, subjected to the experiment of being renovated by the virtues of grease-removing compositions sold in the streets. The trade, at present, is almost confined to the removing of the grease from coat-collars, or of stains from contact with paint, &c., with which boys (principally) have damaged their garments.

The grease-remover generally carries his wares on a tray slung in front of him, and often illustrates the efficacy of his composition, by showing its application to the very greasy collar of a boy's old jacket, which is removed with admirable facility. The man patters as he carries on this work. "You would have thought now that jacket was done for, and only fit for the rag-bag, or to go to make up a lot for a Jew; but with my composition—only 1*d.* a cake—it has acquired a new nap and a new gloss, and you 've escaped a tailor's bill for awhile for 1*d.* You can use your own eyes. You 've seen me do it, and here 's the very same stuff as I have proved to you is so useful and was never known to fail. No mother, or wife, or mistress, or maid, that wishes to be careful and not waste money, should be without it in the house. It removes stains from silks, &c., &c."

Notwithstanding these many recommendations, the street trade in grease-removing cakes is a very poor one. It cannot be carried on in bad weather, for an audience cannot then be collected, and to clear 1*s.* 6*d.* in a day is accounted fair work. No grease-remover confines his trade to that commodity. One of the best known sells also plate balls, and occasionally works conundrums and comic exhibitions. The two brothers, who were formerly Grecians at the Blue Coat School, are also in this line. There are now seven men who sell grease-removing compositions, which they prepare themselves. The usual ingredients are pipe clay, two pennyworth of which is beat up and "worked with two colours," generally red lead and stone blue. This gives the composition a streaky look, and takes away the appearance of pipe clay.

The purchasers of this article are, I am told, women and servants, but the trade is one which is declining. One of the best localities for sale is Ratcliff Highway and the purchasers there are sailors. One man told me that he once made a pound's worth for a sailor, who took it to sea with him. The street-seller did not know for what purpose, but he conjectured that it was as a matter of speculation to a foreign country.

Calculating that the seven grease-removers carry on the sale of the article 3 days each week, and clear 1*s.* 6*d.* per day, we find 78 guineas yearly

expended in the streets for the removal of grease. Nearly the whole is profit.

Plating Balls are generally sold by the grease-removers, but sometimes they are proffered for sale alone. There are four men whose principal dependance is on the sale of plating balls. One announces his wares as "making plate as good as silver, and all inferior metals equal to the best plated. No tarnish can stand against my plate balls," he goes on, "and if, in this respectable company, there should chance to be any lady or genl'man that has no plate, then let him make an old brass candlestick shine like gold, or his tin candlestick, extinguisher and all, shine like silver. Here are the balls that can do it, and only 4 a penny. You have only to rub the ball on your wash-leather, or dry woollen cloth, and rub it on what has to be restored. Four a penny!"

These balls, which are prepared by the street-sellers, are usually made of a halfpennyworth of whitening, a farthing'sworth of red-lead, and an ounce of quicksilver, costing 7*d.* A gross of balls costs 7¾*d.*, as regards the materials. The receipts of the plating ball sellers are the same as those of the grease-removers, but with a somewhat smaller profit.

Of the Street-Sellers of Corn-Salve.

The street purveyors of corn-salve, or corn-plaster, for I heard both words used, are not more than a dozen in number; but, perhaps, none depend *entirely* upon the sale of corn-salve for a living. As is the wont of the pattering class to which they belong, these men make rounds into the country and into the suburbs, but there are sometimes, on one day, a dozen "working the main drags" (chief thoroughfares) of London: there are no women in the trade. The salve is most frequently carried on a small tray, slung in front of the street professional; but sometimes it is sold at a small stall or stand. Oxford-street, Holborn, Tottenham-court-road, and Whitechapel, are favourite localities for these traders; as are Blackfriars-road and Newington-causeway on the Surrey side of the Thames. On the Saturday evening the corn-salve sellers resort to the street markets.

The patter of these traders is always to the same purport (however differently expressed)—the long-tested efficacy and the unquestionable cheapness of their remedies. The vendors are glib and unhesitating; but some, owing, I imagine, to a repetition of the same words, as they move from one part of a thoroughfare to another, or occupy a pitch, have acquired a monotonous tone, little calculated to impress a street audience—to effect which a man must be, or appear to be, in earnest. The patter of one of these dealers, who sells corn-salve on fine evenings, and works the public-houses, "with anything likely," on wet evenings, is, from his own account, in the following words:—

"Here you have a speedy remedy for every sort of corn! Your hard corn, soft corn, blood corn, black corn, old corn, new corn, wart, or bunion, can be safely cured in three days! Nothing further to do but spread this salve on a piece of glove-leather, or wash-leather, and apply it to the place. Art and nature does the rest. Either corns, warts, or bunions, cured for one penny."

This, however, is but as the announcement of the article on sale, and is followed by a recapitulation of the many virtues of that peculiar recipe; but, as regards the major part of these street-traders, the recapitulation is little more than a change of words, if that. There are, however, one and sometimes two patterers, of acknowledged powers, who every now and then sell corn-salve—for the restlessness of this class of people drives them to incessant changes in their pursuits—and their oratory is of a higher order. One of the men in question speaks to the following purport:—

"Here you are! here you are! all that has to complain of corns. As fast as the shoemaker lames you, I'll cure you. If it wasn't for me he durstn't sing at his work; bless you, but he knows I'll make his pinching easy to you. Hard corn, soft corn, any corn—sold again! Thank you, sir, you'll not have to take a 'bus home when you've used my corn-salve, and you can wear your boots out then; you can't when you've corns. Now, in this little box you see a large corn which was drawn by this very salve from the honourable foot of the late lamented Sir Robert Peel. It's been in my possession three years and four months, and though I'm a poor man—hard corn, soft corn, or any corn—though I'm a poor man, the more's the pity, I wouldn't sell that corn for the newest sovereign coined. I call it the free-trade corn, gen'l'men and leddis. No cutting and paring, and sharpening penknives, and venturing on razors to level your corns; this salve draws them out—only one penny—and without pain. But wonders can't be done in a moment. To draw out such a corn as I've shown you, the foot, the whole foot, must be soaked five minutes in warm soap and water. That makes the salve penetrate, and draw the corn, which then falls out, in three days, like a seed from a flower. Hard corn, soft corn, &c., &c."

The corn from "the honourable foot" of Sir Robert Peel, or from the foot of any one likely to interest the audience, has been scraped and trimmed from a cow's heel, and may safely be submitted to the inspection and handling of the incredulous. "There it is," the corn-seller will reiterate—"it speaks for itself."

One practice—less common than it was, however,—of the corn-salve street-seller, is to get a friend to post a letter—expressive of delighted astonishment at the excellence and rapidity of the corn-cure—at some post-office not very contiguous. If the salve-seller be anxious to remove the corns of the citizens, he displays this letter, with the genuine post-mark of Piccadilly, St. James's-street, Pall-mall, or any such quarter, to show how the fashionable world avails itself of his wares, cheap as they are, and fastidious as are the fashionable! If the street-professional be offering his corn-cures in a fashionable locality, he produces a letter from Cheapside, or Cornhill—"there it is, it speaks for itself"—to show how the shrewd city-people, who were never taken in

by street-sellers in their lives, and couldn't be, appreciated that particular corn-salve! Occasionally, as the salve-seller is pattering, a man comes impetuously forward, and says loudly, "Here, doctor, let me have a shilling's-worth. I bought a penn'orth, and it cured one corn by bringing it right out—here the d——d thing is, it troubled me seven year—and I've got other corns, and I'm determined I'll root out the whole family of them. Come, now, look sharp, and put up a shilling's-worth." The shilling's-worth is gravely handed to the applicant as if it were not only a *bonâ fide*, but an ordinary occurrence in the way of business.

One corn-salve seller—who was not in town at the time of my inquiry into this curious matter—had, I was assured, "and others might have" full faith in the efficacy of the salve he vended. One of his fellow-traders said to me, "Ay, sir, and he has good reason for trusting to it for a cure; he cured *me* of my corns, that I'm sure of; so there can be no nonsense about it. He has a secret." On my asking this informant if he had tried his own corn-salve, he laughed, and said "No! I'm like the regular doctors that way, never tries my own things." The same man, who had no great faith in what he sold being of any use in the cure of "corn, wart, or bunion," assured me—and I have no doubt with truth—that he had sold his remedy to persons utter strangers to him, who had told him afterwards that it had cured their corns. "False relics," says a Spanish proverb, "have wrought true miracles," and to what cause these corn-cures were attributable, it is not my business to inquire.

I had no difficulty in acquiring a knowledge of the ingredients of a street corn-salve. "Anybody," said one man, "that understands how to set about it, can get the recipe for 2*d.*" Resin, 1 lb., (costing 2*d.*); tallow, ¼ lb. (1½*d.*); emerald green (1*d.*); all boiled together. The emerald green, I was told, was to "give it a colour." The colour is varied, but I have cited the most usual mode of preparation. Attempts have been made to give an aromatic odour to the salve, but all the perfumes within the knowledge, or rather the means, of the street-sellers, were overpowered by the resin and the tallow, "and it has," remarked one dealer, "a physicky sort of smell as it is, which answers." The quantity I have cited would supply a sufficiency of the composition for the taking of "a sovereign in penn'orths." In a week or so the stuff becomes discoloured, often from dust, and has to be re-boiled. Some of the traders illustrate the mode of applying the salve by carrying a lighted candle, and a few pieces of leather, and showing how to soften the composition and spread it on the leather. "After all, sir," said the man, who had faith in the virtues of his fellow street-trader's salve, "the regular thing, such as I sell, may do good; I cannot say; but it is very likely that the resin will draw the corn, just as people apply cobbler's wax, which has resin in it. The chemists will sell you something of the same sort as I do."

The principal purchasers are working men, who buy in the streets, and occasionally in the public-houses. The trade, however, becomes less and less remunerative. To take 15*s.* in a week is a good week, and to take 10*s.* is more usual; the higher receipt is no doubt attributable to a superior patter being used, as men will give 1*d.* to be amused by this street work, without caring about the nostrum. Calculating that eight of these traders take 10*s.* weekly—so allowing for the frequent resort of the patterers to anything more attractive—we find 208*l.* expended in the streets on this salve. The profits of the seller are about the same as his receipts, for 240 pennyworths can be made out of materials costing only 4½*d.* The further outlay necessary to this street profession is a tray worth 1*s.* or 1*s.* 6*d.*, but a large old backgammon board, which may be bought at the second-hand shops for 1*s.* and sometimes for 6*d.*, is more frequently used by the street purveyors of corn-salve.

Of the Street-Sellers of Glass and China Cement, and of Razor Paste.

The sale of glass and china cement is an old trade in the streets, but one which becomes less and less followed. Before the finer articles of crockeryware became cheap as they are now, it was of importance to mend, if possible, a broken dish of better quality, and of more importance to mend a china punch-bowl. Dishes, however, are now much cheaper, and china punch-bowls are no longer an indispensable part of even tavern festivity.

The sellers of this cement proclaim it as one which will "cure any china, stone, or earthenware, and make the broken parts adhere so firmly, that if you let it fall again, it will break, not at the part where it has been cemented, but at some other. Only a halfpenny, or a penny a stick." These traders sometimes illustrate the adhesive strength of the composition by producing a plate or dish which has been cemented in different places, and letting it fall, to break in some hitherto sound part. This they usually succeed in doing. For the cementing of glass the street article is now perhaps never sold, and was but scantily sold, I am informed, at any time, as the junction was always unsightly.

There are now four men who sell this cement in the streets, one usually to be found in Wilderness-row, Goswell-street, being, perhaps, the one who carries on the trade most regularly. They all make their own cement; one of the receipts being—1 lb. shellac (5*d.*), ¼ lb. brimstone (½*d.*), blended together until it forms a thick sort of glue. This quantity makes half-a-crown's-worth of the cement for the purposes of retail. The sellers do not confine themselves to one locality, but are usually to be found in one or other of the street-markets on a Saturday night. If each seller take 5*s.* weekly (of which 4*s.* may be profit), we find 52*l.* expended yearly by street customers in this cement.

I include razor paste under this head, as sometimes, and at one time more frequently than now,

Original from HARVARD UNIVERSITY

the same individual sold both articles, though not at the same time.

There are twelve street-sellers of razor-paste, but they seem to prefer "working" the distant suburbs, or going on country rounds, as there are often only three in London. It is still vended, I am told, to clerks, who use it to sharpen their pen-knives, but the paste, owing to the prevalence of the use of steel pens, is now almost a superfluity, compared to what it was. It is bought also, and frequently enough in public-houses, by working men, as a means of "setting" their razors. The vendors make the paste themselves, except two, who purchase of a street-seller. The ingredients are generally fuller's earth (1*d.*), hog's lard (1*d.*), and emery powder (2*d.*). The paste is sold in boxes carried on a tray, which will close and form a sort of case, like a backgammon board. The quantity I have given will make a dozen boxes (each sold at 1*d.*), so that the profit is 7*d.* in the 1*s.*, for to the 4*d.* paid for ingredients must be added 1*d.*, for the cost of a dozen boxes. The paste is announced as "warranted to put an edge to a razor or pen-knife superior to anything ever before offered to the public." The street-sellers offer to prove this by sharpening any gentleman's pen-knife on the paste spread on a piece of soldier's old belt, which sharpening, when required, they accomplish readily enough. One of these paste-sellers, I was told, had been apprenticed to a barber; another had been a cutler, the remainder are of the ordinary class of street-sellers.

Calculating that 6 men "work" the metropolis daily, taking 2*s.* each per day (with 1*s.* 2*d.* profit), we find 187*l.* the amount of the street outlay.

Of the Street-Seller of Crackers and Detonating Balls.

This trade, I am informed by persons familiar with it, would be much more frequently carried on by street-folk, and in much greater numbers, were it not the one which of all street callings finds the least toleration from the police. "You must keep your eyes on both corners of the street," said one man, "when you sell crackers; and what good is it the police stopping us? The boys have only to go to a shop, and then it 's all right."

The trade is only known in the streets at holiday seasons, and is principally carried on for a few days before and after the 5th of November, and again at Christmas-tide. "Last November was good for crackers," said one man; "it was either Guy Faux day, or the day before, I 'm not sure which now, that I took 15*s.*, and nearly all of boys, for waterloo crackers and ball crackers (the common trade names), 'waterloo' being the 'pulling crackers.' At least three parts was ball crackers. I sold them from a barrow, wheeling it about as if it was hearthstone, and just saying quietly when I could, 'Six a penny crackers.' The boys soon tell one another. All sorts bought of me; doctors' boys, school boys, pages, boys as was dressed beautiful, and boys as hadn't neither shoes nor stockings. It 's sport for them all." The same man told me he did well at what he called "last Poram fair," clearing 13*s.* 6*d.* in three days, or rather evenings or nights. "Poram fair, sir," he said, "is a sort of feast among the Jews, always three weeks I 've heard, afore their Passover, and I then work Whitechapel and all that way."

I inquired of a man who had carried on this street trade for a good many years, it might be ten or twelve, if he had noticed the uses to which his boy-customers put his not very innocent wares, and he entered readily into the subject.

"Why, sir," he said, "they 're not all boy-customers, as you call them, but they 're far the most. I 've sold to men, and often to drunken men. What larks there is with the ball-crackers! One man lost his eye at Stepney Fair, but that 's 6 or 7 years ago, from a lark with crackers. The rights of it I never exactly understood, but I know he lost his eye, from the dry gravel in the ball-cracker bouncing into it. But it 's the boys as is fondest of crackers. I sold 'em all last Christmas, and made my 5*s.* and better on Boxing-day. I was sold out before 6 o'clock, as I had a regular run at last—just altogether. After that, I saw one lad go quietly behind a poor lame old woman and pull a Waterloo close behind her ear; he was a biggish boy and tidily dressed; and the old body screamed, 'I 'm shot.' She turned about, and the boy says, says he, 'Does your grand-mother know you 're out? It 's a improper thing, so it is, for you to be walking out by yourself.' You should have seen her passion! But as she was screaming out, 'You saucy wagabone! You boys is all wagabones. People can't pass for you. I 'll give you in charge, I will," the lad was off like a shot.

"But one of the primest larks I ever saw that way was last winter, in a street by Shoreditch. An old snob that had a bulk was making it all right for the night, and a lad goes up. I don't know what he said to the old boy, but I saw him poke something, a last I think it was, against the candle, put it out, and then run off. In a minute, three or four lads that was ready, let fly at the bulk with their ball-crackers, and there was a clatter as if the old snob had tumbled down, and knocked his lasts down; but he soon had his head out—he was Irish, I think—and he first set up a roar like a Smithfield bull, and he shouts, 'I 'm kilt intirely wid the murthering pistols! Po—lice! Po—o—lice!' He seemed taken quite by surprise—for they was capital crackers—I think he couldn 't have been used to bulks, or he would have been used to pelting; but how he did bellow, surely.

"I think it was that same night too, I saw a large old man, buttoned up, but seeming as if he was fine-dressed for a party, in a terrible way in the Commercial-road. I lived near there then. There was three boys afore me—and very well they did it—one of 'em throws a ball-cracker bang at the old gent's feet, just behind him, and makes him jump stunning, and the boy walks on with his hands in his pocket, as if he know'd nothing about it. Just after that another boy does the same, and then the t'other boy; and the old gent—Lord,

Original from HARVARD UNIVERSITY

how he swore! It was shocking in such a respectable man, as I told him, when he said, *I'd* crackered him! 'Me cracker you,' says I; 'it 'ud look better if you'd have offered to treat a poor fellow to a pint of beer with ginger in it, and the chill off, than talk such nonsense.' As we was having this jaw, one of the boys comes back and lets fly again; and the old gent saw how it was, and he says, 'Now, if you'll run after that lad, and give him a d——d good hiding, you shall have the beer.' 'Money down, sir,' says I, 'if you mean honour bright;' but he grumbled something, and walked away. I saw him soon after, talking to a Bobby, so I made a short cut home."

At the fairs near London there is a considerable sale of these combustibles; and they are often displayed on large stalls in the fair. They furnish the means of practical jokes to the people on their return. "After last Whitsun Greenwich Fair," said a street-seller to me, I saw a gent in a white choker, like a parson, look in at a pastry-cook's shop, as is jist by the Elephant (and Castle), a-waiting for a 'bus, I s'pose. There was an old 'oman with a red face standing near him; and I saw a lad, very quick, pin something to one's coat and the t'other's gown. They turned jist arter, and bang goes a Waterloo, and they looks savage one at another; and hup comes that indentical boy, and he says to the red faced 'oman, a pointing to the white choker, 'Marm, I seed him a twiddling with your gown. He done it for a lark arter the fair, and ought to stand something.' So the parson, if he were a parson, walked away."

There are eight makers, I am told, who supply the street-sellers and the small shops with these crackers. The wholesale price is 4*d.* to 6*d.* a gross, the "cracker-balls" being the dearest. The retail price in the streets is from six to twelve a penny, according to the appearance and eagerness of the purchaser. Some street traders carry these commodities on trays, and very few are stationary, except at fairs. I am assured, that for a few days last November, from 50 to 60 men and women were selling crackers in the streets, of course "on the sly." In so irregular and surreptitious a trade, it is not possible even to approximate to statistics. The most intelligent man that I met with, acquainted, as he called it, "with all the ins and outs of the trade," calculated that in November and Christmas, 100*l.* at least was expended in the streets in these combustibles, and another 100*l.* in the other parts of the year. About Tower-hill, Ratcliff-highway (or "the Highway," as street-sellers often call it), and in Wapping and Shadwell, the sale of crackers is the best. The sellers are the ordinary street-sellers, and no patter is required.

Of the Street-Sellers of Lucifer-Matches.

Under this head I shall speak only of those who *sell* the matches, apart from those who, in proffering lucifer boxes, mix up trade with mendicancy. The latter class I have spoken of, and shall treat of them more fully under the head of "the London Poor."

Until "lucifers" became cheap and in general use, the matches sold by the street-folks, and there were numbers in the trade, were usually prepared by themselves. The manufactures were simple enough. Wooden splints, twice or thrice the length of the lucifer matches now in use, were prepared, and dipped into brimstone, melted in an iron ladle. The matches were never, as now, self-igniting, or rather ignitable by rapid friction; but it was necessary to "strike a light" by the concussion of a flint and steel, the sparks from which were communicated to tinder kept in a "box."

The brimstone match-sellers were of all ages, but principally, I am told, old people. Many of them during, and for some years after the war, wore tattered regimentals, or some remains of military paraphernalia, and had been, or assumed to have been, soldiers, but not entitled to a pension; the same with seamen. I inquired of some of the present race of match-sellers what became of the "old brimstones," as I heard them called, but from them I could gain little information. An old groundsel-gatherer told me that some went into his trade. Others, I learned, "took to pins," and others to song or tract selling. Indeed the brimstone match-sellers not unfrequently carried a few songs to vend with their matches. It must be borne in mind that, 15 years agô, those street trades, into which any one who is master of a few pence can now embark, were less numerous. Others of the match-sellers, with rounds, or being known men, displaced their "brimstones" for "lucifers," and traded on as usual. I heard of one old man, now dead, who made a living on brimstone-matches by selling a good quantity in Hackney, Stoke Newington, and Islington, and who long refused to sell lucifer-matches; "they was new-fangled rubbish," he said, "and would soon have their day." He found his customers, however, fall off, and in apprehension of losing them all, he was compelled to move with the times.

"I believe, sir," said one man, still a street-seller, but not having sold matches of any kind for years,—"I believe I was the first who hawked 'Congreves,' or 'instantaneous lights;' they weren't called 'lucifers' for a good while after. I bought them at Mr. Jones's light-house in the Strand, and if I remember right, for it must be more than 20 years ago, between 1820 and 1830, Mr. Jones had a patent somehow about them. I bought them at 7*s.* a dozen boxes, and sold them at 1*s.* a box. I'm not sure how many matches was in a box, but I think it was 100. You'll get as much for a farthing now, as you would for a shilling then. The matches were lighted by being drawn quickly through sand-paper. I sold them for a twelvemonth, and had the trade all to myself. As far as I know, I had; for I never met with or heard of anybody else in it all that time. I did decent at it. I suppose I cleared my 15*s.* a week. The price kept the same while I was in the business. I sold them at city offices. I supplied the Phœnix in Lombard-street, I remember, and the better sort of shops.

HARVARD UNIVERSITY

People liked them when they wanted to light a candle in a hurry, in places where there was no fire to seal a letter, or such like. There was no envelopes in them days. The penny-postage brought *them* in. I was sometimes told not to carry such things there again, as they didn't want the house set on fire by keeping such dangerous things in it. Now, I suppose, lucifers are in every house, and that there's not a tinder-box used in all London." Such appears to have been the beginning of the extensive street-trade in these chemical preparations now carried on. At the twelvemonth's end, my informant went into another line of business.

The "German Congreves" were soon after introduced, and were at first sold wholesale at the "English and German" swag-shops in Houndsditch, at 2*s.* the dozen boxes, and were retailed at 3*d.*, 4*d.*, and sometimes as high as 6*d.* the box. These matches, I am told, "kept their hold" about five years, when they ceased to be a portion of the street trade. The German Congreves were ignited by being drawn along a slip of sand-paper, at the bottom of the box, as is done at present; with some, however, a double piece of sand-paper was sold for purposes of igniting.

After this time cheaper and cheaper matches were introduced, and were sold in the streets immediately on their introduction. At first, the cheaper matches had an unpleasant smell, and could hardly be kept in a bed-room, but that was obviated, and the trade progressed to its present extent.

The lucifer-match boxes, the most frequent in the street-trade, are bought by the poor persons selling them in the streets, at the manufacturers, or at oil-shops, for a number of oilmen buy largely of the manufacturers, and can "supply the trade" at the same rate as the manufacturer. The price is 2½*d.* the dozen boxes, each box containing 150 matches. Some of the boxes (German made) are round, and many used to be of tin, but these are rarely seen now. The prices are proportionate. The common price of a lucifer box in the streets is ½*d.*, but many buyers, I am told, insist upon and obtain three a penny, which they do generally of some one who supplies them regularly. The trade is chiefly itinerant.

One feeble old man gave me the following account of his customers. He had been in the employ of market-gardeners, carmen, and others, whose business necessitated the use of carts and horses. In his old age he was unable to do any hard work; he was assisted, however, by his family, especially by one son living in the country; he had a room in the house of a daughter, who was a widow, but his children were only working people, with families, he said, and so he sold a few lucifers "as a help," and to have the comfort of a bit of tobacco, and buy an old thing in the way of clothing without troubling any one. Out of his earnings, too, he paid 6*d.* a week for the schooling of one of his daughter's children.

"I *sell* these lucifers, sir," he said, in answer to my inquiries, "I never beg with them: I'd scorn it. My children help me, as I've told you; I did my best for them when I was able, and so I have a just sort of claim on them. Well, indeed, then, sir, as you ask me, if I had only myself to depend upon, why I couldn't live. I must beg or go into the house, and I don't know which I should take to worst at 72. I've been selling lucifers about five years, for I was worn out with hard work and rheumatics when I was 65 or 66. I go regular rounds, about 2 miles in a day, or 2½, or if it's fine 3 miles or more from where I live, and the same distance back, for I can sometimes walk middling if I can do nothing else. I carry my boxes tied up in a handkerchief, and hold 2 or 3 in my hand. I'm ashamed to hold them out on any rail where I aint known; and never do if there isn't a good-humoured looking person to be seen below, or through the kitchen window. But my eyesight aint good, and I make mistakes, and get snapped up very short at times. Yesterday, now, I was lucky in my small way. There's a gentleman, that if I can see him, I can always sell boxes to at 1*d.* a piece. That's his price, he says, and he takes no change if I offer it. I saw him yesterday at his own door, and says he, 'Well, old greybeard, I haven't seen you for a long time. Here's 1*s.*, leave a dozen boxes.' I told him I had only 11 left; but he said, 'O, it's all the same,' and he told a boy that was crossing the hall to take them into the kitchen, and we soon could hear the housekeeper grumbling quite loud—perhaps she didn't know her master could hear—about being bothered with rubbish that people took in master with; and the gentleman shouts out, 'Some of you stop that old —— mouth, will you? She wants a profit out of them in her bills.' All was quiet then, and he says to me quite friendly, 'If she wasn't the best cook in London I'd have quitted her long since, by G—.'" The old man chuckled no little as he related this; he then went on, "He's a swearing man, but a good man, I'm sure, and I don't know why he's so kind to me. Perhaps he is to others. I'm ashamed to hold my boxes to the ary rails, 'cause so many does that to beg. I sell lucifers both to mistresses and maids. Some will have 3 for a 1*d.*, and though it's a poor profit, I do it, for they say, 'O, if you come this way constant, we'll buy of you whenever we want. If you won't give 3 a penny, there's plenty will.' I sell, too, in some small streets, Lisson-grove way, to women that see me from their windows, and come down to the door. They're needle-workers I think. They say sometimes, 'I'm glad I've seen you, for it saves me the trouble of running out.'

"Well, sir, I'm sure I hardly know how many boxes I sell. On a middling good day I sell 2 dozen, on a good day 3 dozen, on a bad day not a dozen, sometimes not half-a-dozen, and sometimes, but not often, not more than a couple. Then in bad weather I don't go out, and time hangs very heavy if it isn't a Monday; for every Monday I buy a threepenny paper of a newsman for 2*d.*, and read it as well as I can with my old eyes and glasses, and get my

Original from HARVARD UNIVERSITY

daughter to read a bit to me in the evening, and next day I send the paper to my son in the country, and so save him buying one. As well as I can tell I sell about 9 dozen boxes a week, one week with another, and clear from 2*s.* to 2*s.* 6*d.* It's employment for me as well as a help."

It is not easy to estimate the precise number of persons who really sell lucifer matches as a means of subsistence, or as a principal means. There are many, especially girls and women, the majority being Irishwomen, who do not directly solicit charity, and do not even say, "Buy a box of lucifers from a poor creature, to get her a ha'porth of bread;" or, "please a bit of broken victuals, if it's only cold potatoes, for a box of the best lucifers." Yet these match-sellers look so imploringly down an area, or through a window, some "shouldering" a young child the while, and remain there so pertinaciously that a box is bought, or a halfpenny given, often merely to get rid of the applicant.

An intelligent man, a street-seller, and familiar with street-trading generally, whom I questioned on the subject, said: "It's really hard to tell, sir, but I should calculate this way. It's the real sellers you ask about; them as tries to live on their selling lucifers, or as their main support. I have worked London and the outside places—yes, I mean the suburbs—in ten rounds, or districts, but six is better, for you can then go the same round the same day next week, and so get known. The real sellers, in my opinion, is old men and women out of employ, or past work, and to beg they are ashamed. I've read the Bible you see, sir, though I've had too much to do with gay persons even to go to church. I should say that in each of those ten rounds, or at any rate, splicing one with another, was twenty persons really selling lucifers. Yes, and depending a good deal upon them, for they're an easy carriage for an infirm body, and as ready a sale as most things. I don't reckon them as begs, or whines, or sticks to a house for an hour, but them as sells; in my opinion, they're 200, and no more. All the others dodges, in one way or other, on pity and charity. There's one lurk that's getting common now. A man well dressed, and very clean, and wearing gloves, knocks at a door, and asks to speak to the master or mistress. If he succeeds, he looks about him as if he was ashamed, and then he pulls out of his coat-pocket a lucifer box or two, and asks, as a favour, to be allowed to sell one, as reduced circumstances drive him to do so. He doesn't beg, but I don't reckon him a seller, for he has always some story or other to tell, that's all a fakement." Most dwellers in a suburb will have met with one of these well-dressed match-sellers.

Adopting my informant's calculation, and supposing that each of these traders take, on lucifers alone, but 4*s.* weekly, selling nine dozen (with a profit to the seller of from 1*s.* 9*d.* to 2*s.* 6*d.*), we find 2080*l.* expended in this way. The matches are sold also at stalls, with other articles, in the street markets, and elsewhere; but this traffic, I am told, becomes smaller, and only amounts to one-tenth of the amount I have specified as taken by itinerants. These street-sellers reside in all parts of town which I have before specified as the quarters of the poor.

OF THE STREET-SELLERS OF CIGAR LIGHTS, OR FUZEES.

THIS is one of the employments to which boys, whom neglect, ill-treatment, destitution, or a vagrant disposition, have driven or lured to a street life, seem to resort to almost as readily as to the offers," "Old your 'os, sir?" "Shall I carry your passel, marm?"

The trifling capital required to enter into the business is one cause of its numbering many followers. The "fuzees," as I most frequently heard them called, are sold at the "Congreve shops," and are chiefly German made. At one time, indeed, they were announced as "German tinder." The wholesale charge is 4½*d.* per 1000 "lights." The 1000 lights are apportioned into fifty rows, each of twenty self-igniting matches; and these "rows" are sold in the streets, one or two for ½*d.*, and two, three, or four 1*d.* It is common enough for a juvenile fuzee-seller to buy only 500; so that 2¼*d.* supplies his stock in trade.

The boys (for the majority of the street-traders who sell *only* fuzees, are boys) frequent the approaches to the steam-boat piers, the omnibus stands, and whatever places are resorted to by persons who love to smoke in the open air. Some of these young traders have neither shoes nor stockings, more especially the Irish lads, who are at least half the number, and their apology for a cap fully displays the large red ears, and flat features, which seem to distinguish a class of the Irish children in the streets of London. Some Irish boys hold out their red-tipped fuzees with an appealing look, meant to be plaintive, and say, in a whining tone, "Spend a halfpenny on a poor boy, your honour." Others offer them, without any appealing look or tone, either in silence, or saying—"Buy a fuzee to light your pipe or cigar, sir; a row of lights for a ½*d.*"

I met with one Irish boy, of thirteen or fourteen years of age, who was offering fuzees to the persons going to Chalk Farm fair on Easter Tuesday, but the rain kept away many visitors, and the lad could hardly find a customer. He was literally drenched, for his skin, shining with the rain, could be seen about his arms and knees through the slits of his thin corduroy jacket and trowsers, and he wore no shirt.

"It's oranges I sell in giniral, your honour," he said, "and it's on oranges I hopes to be next week, plaze God. But mother—it's orange-selling she is too—wanted to make a grand show for Aister wake, and tuk the money to do it, and put me on the fuzees. It's the thruth I'm telling your honour. She thought I might be after making a male's mate" (meal's meat) "out of them, intirely; but the sorra a male I'll make to day if it cost me a fardin, for I haven't tuk one. I niver remimber any fader; mother and me lives together somehow, glory be to God; but it's often knowin' what it is to be hungry we are. I've

Original from HARVARD UNIVERSITY

sould fuzees before, when ingans, and nuts, and oranges was dear and not for the poor to buy, but I niver did so bad as to-day. A gintleman once said to me: 'Here, Pat, yer sowl, you look hungry. Here's a thirteener for yez; go and get drunk wid it.' Och, no, your honour, he wasn't an Irish gintleman; it was afther mocking me he was, God save him." On my asking the boy if he felt hurt at this mockery, he answered, slily, with all his air of simplicity, "Sure, thin, wasn't there the shillin'? For it was a shillin' he gave me, glory be to God. No, I niver heard it called a thirteener before, but mother has. Och, thin, sir, indeed, and it's could and wet I am. I have a new shirt, as was giv to mother for me by a lady, but I wouldn't put it on sich a day as this, your honour, sir. I'll go to mass in it ivery Sunday. I've made 6*d.* a day and sometimes more a sellin' fuzees, wid luck, God be praised, but the bad wither's put me out intirely this time."

The fuzee-sellers frequently offer their wares at the bars of public-houses in the daytime, and sometimes dispose of them to those landlords who sell cigars. From the best information I can command there are now upwards of 200 persons selling fuzees in the streets of the metropolis. But the trade is often collateral. The cigar-seller offers fuzees, play-bill sellers (boys) do so sometimes at the doors of the theatres to persons coming out, the pipe-sellers also carry them; they are sometimes sold along with lucifer matches, and at miscellaneous stalls. It will, I believe, be accurate to state that in the streets there are generally 100 persons subsisting, or endeavouring to subsist, on the sale of fuzees alone. It may be estimated also that each of these traders averages a receipt of 10*d.* a day (with a profit exceeding 6*d.*), so that 1300*l.* is yearly laid out in the streets in this way.

Of the fuzee-selling lads, those who are parentless, or runaway, sleep in the lodging-houses, in the better conducted of which the master or deputy takes charge of the stock of fuzees or lucifer-matches during the night to avert the risk of fire; in others these combustibles are stowed anywhere at the discretion, or indiscretion, of the lodgers.

OF THE STREET-SELLERS OF GUTTA-PERCHA HEADS.

THERE are many articles which, having become cheap in the shops, find their way to the street-traders, and after a brief, or comparatively brief, and prosperous trade has been carried on in them, gradually disappear. These are usually things which are grotesque or amusing, but of no utility, and they are supplanted by some more attractive novelty—a main attraction being that it is a novelty.

Among such matters of street-trade are the elastic toys called "gutta-percha heads;" these, however, have no gutta-percha in their composition, but consist solely of a composition made of glue and treacle—the same as is used for printer's rollers. The heads are small coloured models of the human face, usually with projecting nose and chin, and wide or distorted mouth, which admit of being squeezed into a different form of features, their elasticity causing them to return to the original caste. The trade carried on in the streets in these toys was at one time extensive, but it seems now to be gradually disappearing. On a fine day a little after noon, last week, there was not one "head" exposed for sale in any of the four great street markets of Leather-lane, the Brill, Tottenham-court-road including the Hampstead-road, and High-street, Camden-town.

The trade became established in the streets upwards of two years ago. At first, I am told by a street-seller, himself one of the first, there were six "head-sellers," who "worked" the parks and their vicinity. My informant one day sold a gross of heads in and about Hyde-park, and a more fortunate fellow-trader on the same day sold 1½ gross. The heads were recommended, whenever opportunity offered, by a little patter. "Here," one man used to say, "here's the Duke of Wellington's head for 1*d.* It's modelled from the statty on horseback, but is a improvement. His nose speaks for itself. Sir Robert Peel's only 1*d.* Anybody you please is 1*d.*; a free choice and no favour. The Queen and all the Royal Family 1*d.* apiece." As the street-seller offered to dispose of the model of any eminent man's head and face, he held up some one of the most grotesque of the number. Another man one Saturday evening sold five or six dozen to costermongers and others in the street markets "pattering" them off as the likenesses of any policeman who might be obnoxious to the street-traders! This was when the trade was new. The number of sellers was a dozen in the second week; it was soon twenty-five, all confining themselves to the sale of the heads; besides these the heads were offered to the street-buying public by many of the stationary street-folk, whose stock partook of a miscellaneous character. The men carrying on this traffic were of the class of general street-sellers.

"The trade was spoiled, sir," said an informant, "by so many going into it, but I've heard that it's not bad in parts of the country now. The sale was always best in the parks, I believe, and Sundays was the best days. I don't pretend to be learned about religion, but I know that many a time after I'd earned next to nothing in a wet week, it came a fine Sunday morning, and I took as much as got me and my wife and children a good dinner of meat and potatoes, and sometimes, when we could depend on it, smoking hot from the baker's oven; and I then felt I had something to thank God for. You see, sir, when a man's been out all the week, and often with nothing to call half a dinner, and his wife's earnings only a few pence by sewing at home, with three young children to take care of, you're nourished and comforted, and your strength keeps up, by a meat dinner on a Sunday, quietly in your own room. But them as eats their dinner without having to earn it, can't understand about that, and as the Sunday park trade was stopped, the police drive us about like dogs, not gentlemen's dogs, but stray or mad dogs. And it

HARVARD UNIVERSITY

seems there's some sort of a new police. I can't understand a bit of it, and I don't want to, for the old police is trouble enough."

The gutta-percha heads are mostly bought at the "English and German" swag-shops. A few are made by the men who sell them in the streets. The "swag" price is 1*s.* the gross; at one time the swag man demurred to sell less than half a gross, but now when the demand is diminished, a dozen is readily supplied for 8*d.* The street price retail, is and always was 1*d.* a head. The principal purchasers in the street are boys and young men, with a few tradesmen or working people, "such as can afford a penny or two," who buy the "gutta percha" heads for their children. There used to be a tolerable trade in public houses, where persons enjoying themselves bought them. "for a lark," but this trade has now dwindled to a mere nothing. One of the "larks," an informant knew to be practised, was to attach the head to a piece of paper or card, write upon it some one's name, make it up into a parcel, and send it to the flattered invividual. The same man had sold heads to young women, not servant-maids he thought, but in some not very ill paid employment, and he believed, from their manner when buying, for some similar purpose of "larking." When the heads were a novelty, he sold a good many to women of the town.

There are now no street-folks who depend upon the sale of these gutta-percha heads, but they sell them occasionally. The usual mode is to display them on a tray, and now, generally with other things. One man showed me his box, which, when the lid was raised, he carried as a tray slung round his neck, and it contained gutta-percha heads, exhibition medals, and rings and other penny articles of jewellery.

There are at present, I am informed, 30 persons selling gutta-percha heads in the streets, some of them confining their business solely to those articles. In this number, however, I do not include those who are both makers and sellers. Their average receipts, I am assured, do not exceed 5*s.* a week each, for, though some may take 15*s.* a week, others, and generally the stationary head-sellers, do not take 1*s.* The profit to the street retailer is one third of his receipts. From this calculation it appears, that if the present rate of sale continue, 390*l.* is spent yearly in these street toys. At one time it was far more than twice the amount.

OF THE STREET-SELLERS OF FLY-PAPERS AND BEETLE-WAFERS.

FLY-PAPERS came, generally, into street-traffic, I am informed, in the summer of 1848.

The fly-papers are sold wholesale at many of the oil-shops, but the principal shop for the supply of the street-traders is in Whitechapel. The wholesale price is 2¼*d.* a dozen, and the (street) retail charge ½*d.* a paper, or three 1*d.* A young man, to whom I was referred, and whom I found selling, or rather bartering, crockery, gave me the following account of his experience of the fly-paper trade. He was a rosy-cheeked, strong-built young fellow, and said he thought he was "getting on" in his present trade. He spoke merrily of his troubles, as I have found common among his class, when they are over.

"My father had a milk-walk," he said, "and when he died I was without money and had nothing to do, but I soon got a place with a single gentleman. He had a small house, and kept only me and a old housekeeper. I was to make myself generally useful, but when I first went, the most I had to do was to look after a horse that master had. Master never was on horseback in his life, but he took Skipjack—that was the horse's name, he was rising six—for a debt, and kept him two months, till he could sell him to his mind. Master took a largeish garden—for he was fond of growing flowers and vegetables, and made presents of them—just before poor Skipjack went, and I was set to work in it, besides do my house-work. It was a easy place, and I was wery comfable. But master, who was a good master and a friend to a poor man, as I know, got into difficulties; he was something in the City; I never understood what; and one night, when I'd been above a year and a-half with him, he told me I must go, for he couldn't afford to keep me any longer. Next day he was arrested, quite sudden I believe, and sent to prison for debt. I had a good character, but nobody cared for one from a man in prison, and in a month my money was out, and my last 3*s.* 6*d.* went for an advertisement, what was no good to me. I then took to holding horses or anything that way, and used to sleep in the parks or by the road-sides where it was quiet. I did that for a month and more. I've sometimes never tasted food all day, and used to quench myself (so he worded it) with cold water from the pumps. It took off the hunger for a time. I got to know other boys that was living as I was, and when I could afford it I slept at lodging-houses, the boys took me to or told me about. One evening a gentleman gave me 1*s.* for catching his horse that he'd left standing, but it had got frightened, and run off. Next morning I went into the fly-paper trade,—it's nearly two years ago, I think—because a boy I slept with did tidy in it. We bought the papers at the first shop as was open, and then got leave of the deputy of the lodging-house to catch all the flies we could, and we stuck them thick on the paper, and fastened the paper to our hats. I used to think, when I was in service, how a smart livery hat, with a cockade to it, would look, but instead of that I turned out, the first time in my life that ever I sold anything, with my hat stuck round with flies. I felt so ashamed I could have cried. I was miserable, I felt so awkerd. But I spent my last 2*d.* in some gin and milk to give me courage, and that brightened me up a bit, and I set to work. I went Mile-end way, and got out of the main streets, and I suppose I'd gone into streets and places where there hadn't often been fly-papers before, and I soon had a lot of boys following me, and I felt, almost, as if I'd picked a pocket, or done something to be 'shamed of. I could hardly cry 'Catch 'em alive, only a halfpenny!' But I found I could sell my papers to public-houses and

Original from HARVARD UNIVERSITY

shopkeepers, such as grocers and confectioners, and that gave me pluck. The boys caught flies, and then came up to me, and threw them against my hat, and if they stuck the lads set up a shout. I stuck to the trade, however, and took 2*s.* 6*d.* to 3*s.* every day that week, more than half of it profit, and on Saturday I took 5*s.* 6*d.* The trade is all to housekeepers. I called at open shops and looked up at the windows, or held up my hat at private houses, and was sometimes beckoned to go in and sell my papers. Women bought most, I think. 'Nasty things,' they used to say, 'there 's no keeping nothing clean for them.' I stuck to the trade for near two months, and then I was worth 13*s.* 6*d.*, and had got a pair of good shoes, and a good second-hand shirt, with one to change it; and next I did a little in tins and hardware, at the places where I used to go my fly rounds, and in the winter I got into the crock-trade, with another young fellow for a mate, and I 'm in it yet, and getting a tidy connection, I think."

Some of the fly-paper sellers make their stock-in-trade, but three-fourths of the number buy them ready-made. The street-sellers make them of old newspapers or other waste-paper, no matter how dirty. To the paper they apply turpentine and common coach varnish, some using resin instead of varnish, and occasionally they dash a few grains of sugar over the composition when spread upon the paper.

Last summer, I was informed, there were fifty or sixty persons selling fly-papers and beetle wafers in the streets; some of them boys, and all of them of the general class of street-sellers, who "take" to any trade for which 1*s.* suffices as capital. Their average earnings may be estimated at 2*s.* 6*d.* a day, about one-half being profit. This gives a street outlay, say for a "season" of ten weeks, of 375*l.*, calculating fifty sellers.

A few of these street traders carried a side of a newspaper, black with flies, attached to a stick, waving it like a flag. The cries were "Catch 'em alive! Catch 'em alive for ½*d*!" "New method of destroying thousands!"

Of the Street-Sellers of Miscellaneous Manufactured Articles.

In addition to the more staple wares which form the street trade in manufactured articles of a miscellaneous character, are many, as I said before, which have been popular for a while and are now entirely disused. In the course of my inquiry it was remarkable how oblivious I found many of the street-sellers as to what they had sold at various periods. "O dear, yes sir, I 've sold all sorts of things in the streets besides what I'm on now; first one and then another as promised a few pence," was the substance of a remark I frequently heard; but *what* was meant by the one and the other thing thus sold they had a difficulty to call to mind, but on a hint being thrown out they could usually give the necessary details. From the information I acquired I select the following curious matter.

Six or seven years ago *Galvanic Rings* were sold extensively by the street-folk. These were clumsy lead-coloured things, which were described by the puffing shop-keepers, and in due course by the street-sellers, as a perfect amulet; a thing which by its mere contact with the finger would not only cure but prevent "fits, rheumatics, and cramps." On my asking a man who had sold them if these were all the ailments of which he and the others proclaimed the galvanic rings an infallible cure, he answered: "Like the quack medicines you read about, sir, in 'vertisements, we said they was good for anything anybody complained of or was afraid was coming on them, but we went mostly for rheumatics. A sight of tin some of the shopkeepers must have made, for what we sold at 1*d.* they got 6*d.* a piece for. Then for gold galvanics—and I 've been told they was gilt—they had 10*s.* 6*d.* each. The streets is nothing to the shops on a dodge. I 've been told by people as I 'd sold galvanics to, that they 'd had benefit from them. I suppose that was just superstitious. I think Hyams did the most of any house in galvanics."

The men selling these rings—for the business was carried on almost entirely by men—were the regular street-traders, who sell "first one thing and then another." They were carried in boxes, as I have shown medals are now, and they generally formed a portion of the street-jeweller's stock, whether he were itinerant or stationary. The purchasers were labourers in the open air, such as those employed about buildings, whose exposure to the alternations of heat and cold render them desirous of a cure for, or preventive against rheumatism. The costermongers were also purchasers, and in the course of my inquiries among that numerous body, I occasionally saw a galvanic ring still worn by a few, and those chiefly, I think, fish-sellers.

Nor was the street or shop trade in these galvanic rings confined to amulets for the finger. I heard of one elderly woman, then a prosperous street-seller in the New Cut, who slept with a galvanic ring on every toe, she suffered so much from cramp and rheumatism! There were also galvanic shields, which were to be tied round the waist, and warranted "to cure all over." They were retailed at 6*d.* each. Galvanic earrings were likewise a portion of this manufacture. They were not "drops" from the ear, but filled behind and around it as regards the back of the skull, and were to avert rheumatic attacks, and even aching from the head. The street price was 1*s.* the pair. Galvanic bracelets, handsomely gilt, were 2*s.* 6*d.* the pair. But the sale of all these highter-priced charms was a mere nonentity compared to that of the penny rings.

Another trade—if it may be classed under this head—carried on by great numbers and with great success for a while, was that of *cards with the Lord's Prayer in the compass of a sixpence.* This was an engraving—now and then offered in the streets still—strictly fulfilling the announcement as to the compass in which the Prayer was contained, with the addition of a drawing of the Bible, as part of the engraving, "within the six-

Original from HARVARD UNIVERSITY

pence." This trade was at first, I am told, chiefly in the hands of the patterers: "Grand novelty!" they said; "splendid engraving! The Lord's Prayer, with a beautiful picture of the Bible, all legible to the naked eye, in the compass of a sixpence. Five hundred letters, all clear, on a sixpence." One man said to me: "I knew very well there wasn't 500, but it was a neat number to cry. A schoolmaster said to me once—'Why, there isn't above half that number of letters.' He was wrong though; for I believe there's 280." This card was published six or seven years ago, and the success attending the sale of the Lord's Prayer, led to the publication of the Belief in the same form. "When the trade was new," said one man, "I could sell a gross in a day without any very great trouble; but in a little time there was hundreds in the trade, and one might patter hard to sell four dozen."

The wholesale price was 8*s.* the gross, and as thirteen cards went to the dozen, the day's profit when a gross was sold was 5*s.* When the sale did not extend to beyond four dozen the profit was 1*s.* 8*d.* A few cards "in letters of gold" were vended in the streets at 6*d.* each. They had large margins and presented a handsome appearance. The wholesale price was 3*s.* 6*d.* the dozen.

When this trade was at its height, there were, I am told, from 500 to 700 men, women and children engaged in it; selling the cards both with and without other articles. The cards had also a very extensive sale in the country.

Pen-holders with glass or china handles are another commodity which appeared suddenly, about six months ago, in street commerce, and at once became the staple of a considerable traffic. These pens are eight or nine inches long, the "body," so to speak, being of solid round glass, of almost all colours, green, blue, and black predominating, with a seal (lacquered white or yellow) at the top, and a holder of the usual kind, with a steel pen at the bottom. Some are made of white pot and called "China pens," and of these some are ornamented with small paintings of flowers and leaves. These wares are German, and were first charged 9*s.* 6*d.* the gross, without pens, which were an additional 3*d.* at the swag-shops. The price is now 5*s.* the gross, the pens being the same. The street-sellers who were fortunate enough to "get a good start" with these articles did exceedingly well. The pen-holders, when new, are handsome-looking, and at 1*d.* each were cheap; some few were at first retailed at 2*d.* One man, I am told, sold two-and-a-half gross in one day in the neigbourhood of the Bank, purchasers not seldom taking a dozen or more. As the demand continued, some men connected with the supply of goods for street sale, purchased all the stock in the swag-shops, expending about 170*l.*, and at once raised the price to 10*s.* 6d. the gross. This amount the poorer street-sellers demurred to give, as they could rarely obtain a higher price than 1*d.* each, and 2*d.* for the ornamented holders, but the street-stationers (who bought, however, very sparingly) and the small shopkeepers gave the advance "as they found the glass-holders asked for." On the whole, I am told, this forestalling was not very profitable to the speculators, as when fresh supplies were received at the "swags," the price fell.

At first this street business was carried on by men, but it was soon resorted to by numbers of poor women and children. One gentleman informed me that in consequence of reading "London Labour and the London Poor," he usually had a little talk with the street-sellers of whom he purchased any trifle; he bought these pen-holders of ten or twelve different women and girls; all of them could answer correctly his inquiry as to the uses of the pens; but only one girl, of fifteen or sixteen, and she hesitatingly, ventured to assert that she could write her own name with the pen she offered for sale. The street-trade still continues, but instead of being in the hands of 400 individuals—as it was, at the very least, I am assured, at one period—there are now only about fifty carrying it on itinerantly, while with the "pitched" sales-people, the glass-holders are merely a portion of the stock, and with the itinerants ten dozen a week (a receipt of 10*s.*, and a profit of 4*s.* 9*d.*) is now an average sale. The former glass-holder sellers of the poorer sort are now vending oranges.

Shirt Buttons form another of the articles—(generally either "useful things" or with such recommendation to street-buyers as the galvanic amulets possessed)—which every now and then are disposed of in great quantities in the streets. If an attempt be made by a manufacturer to establish a cheaper shirt button, for instance, of horn, or pot, or glass, and if it prove unsuccessful, or if an improvement be effected and the old stock becomes a sort of dead stock, the superseded goods have to be disposed of, and I am informed by a person familiar with those establishments, that the swag-shopkeepers can always find customers, "for anything likely," with the indispensable proviso that it be cheap. In this way shirt buttons have lately been sold in the streets, not only by the vendors of small wares in their regular trade, but by men, lads, and girls, some of the males shirtless themselves, who sell them solely, with a continuous and monotonous cry of "Halfpenny a dozen; halfpenny a dozen." The wholesale price of the last "street lot," was 3*d.* the gross, or $\frac{1}{4}$*d.* the dozen. To clear 6*d.* a day in shirt buttons is "good work;" it is more frequently 4*d.*

Of the Street-Sellers of Walking-Sticks.

The walking-sticks sold in the streets of London are principally purchased at wholesale houses in Mint-street and Union-street, Borough, and their neighbourhoods. "There's no street-trade," said an intelligent man, "and I've tried most that's been, or promised to be, a living in the streets, that is so tiresome as the walking-stick trade. There is nothing in which people are so particular. The stick's sure to be either too short or too long, or too thick or too thin, or too limp or too stiff. You would think it was a simple thing for a man to choose a stick out of a lot, but if you were with

me a selling on a fine Sunday at Battersea Fields, you 'd see it wasn't. O, it 's a tiresome job."

The trade is a summer and a Sunday trade. The best localities are the several parks, and the approaches to them, Greenwich-park included; Hampstead Heath, Kennington Common, and, indeed, wherever persons congregate for pedestrian purposes, Battersea Fields being, perhaps, the place where the greatest Sunday trade is carried on. Some of the greater thoroughfares too, such as Oxford-street and the City-road, are a good deal frequented by the stick-sellers.

This trade—like others where the article sold is not of general consumption or primary usefulness—affords, what I once heard a street-seller call, "a good range." There is no generally recognised price or value, so that a smart trader in sticks can apportion his offers, or his charges, to what he may think to be the extent of endurance in a customer. What might be 2*d.* to a man who "looked knowing," might be 6*d.* to a man who "looked green." The common sticks, which are the "cripples," I was told, of all the sorts of sticks (the spoiled or inferior sticks) mixed with "common pines," are 15*d.* the dozen. From this price there is a gradual scale up to 8*s.* the dozen for "good polished;" beyond that price the street-seller rarely ventures, and seldom buys even at that (for street-trade) high rate, as fourpenny and sixpenny sticks go off the best; these saleable sticks are generally polished hazel or pine. "I 've sold to all sorts of people, sir," said a stick-seller. "I once had some very pretty sticks, very cheap, only 2*d.* a piece, and I sold a good many to boys. They bought them, I suppose, to look like men, and daren't carry them home; for I once saw a boy I 'd sold a stick to, break it and throw it away just before he knocked at the door of a respectable house one Sunday evening. I 've sold shilling sticks to gentlemen, sometimes, that had lost or broken or forgot their own. Canes there's nothing done in now in the streets; nor in 'vines,' which is the little switchy things that used to be a sort of a plaything. There's only one stick-man in the streets, as far as I know—and if there was, I should be sure to know, I think—that has what you may call a capital in sticks. Only the other day I saw him sell a registered stick near Charing-cross. It was a beauty. A Bath cane, with a splendid ivory head, and a compass let into the ivory. The head screwed off, and beneath was a map of London and a Guide to the Great Exhibition. O, but he has a beautiful stock, and aint he aristocratic! 'Ash twigs,' with the light-coloured bark on them, not polished, but just trimmed, was a very good sale, but they 're not now. Why, as to what I take, it 's such a uncertain trade that it 's hard to say. Some days I haven't taken 6*d.*, and the most money I ever took was one Derby day at Epsom—I wish there was more Derby days, for poor people's sakes—and then I took 30*s.* The most money as ever I took in London was 14*s.* —one Sunday, in Battersea Fields, when I had a prime cheap stock of bamboos. When I keep entirely to the stick trade, and during the summer, I may take 35*s.* in a week, with a profit of 15*s.*

The street stick-sellers are, I am assured, sometimes about 200 in number, on a fine Sunday in the summer. Of these, some are dock-labourers, who thus add to their daily earnings by a seventh day's labour; others, and a smarter class, are the "supers" (supernumeraries) of theatres, who also eke out their pittance by Sunday toil; porters, irregularly employed, and consequently "hard pushed to live," also sell walking-sticks on the Sundays; as do others who "cannot afford"—as a well-educated man, a patterer on paper, once said to me—"to lose a day if they were d——d for it." The usual mode of this street-trade is to carry the bundle of sticks strapped together, under the arm, and deposit the ends on the ground when a sale is to be effected. A few, however, and principally Jews, have "stands," with the walking-sticks inclosed in a sort of frame. On the Mondays there are not above a third of the number of stick-sellers there are on the Sundays; and on the other days of the week not above a seventh, or an eighth. Calculating that for 12 weeks of the year there are every day 35 stick-sellers, each taking, on an average, 30*s.* a week (with a profit, individually, of about 12*s.*), we find 630*l.* expended in walking-sticks in the streets.

On clear winter days a stick-seller occasionally plies his trade, but on frosty days they are occupied in letting out skates in the parks, or wherever ponds are frozen.

Of the Street-Sellers of Whips, etc.

These traders are a distinct class from the stick-sellers, and have a distinct class of customers. The sale is considerable; for to many the possession of a whip is a matter of importance. If one be lost or stolen, for instance, from a butcher's cart at Newgate-market, the need of a whip to proceed with the cart and horse to its destination, prompts the purchase in the quickest manner, and this is usually effected of the street-seller who offers his wares to the carters at every established resort.

The commonest of the whips sold to cart-drivers is sometimes represented as whalebone covered with gut; but the whalebone is a stick, and the flexible part is a piece of leather, while the gut is a sort of canvas, made to resemble the worked gut of the better sort of whips, and is pasted to the stock; the thong—which in the common sort is called "four-strands," or plaits—being attached to the flexible part. Some of these whips are old stocks recovered, and many are sad rubbish; but for any deceit the street-seller can hardly be considered responsible, as he always purchases at the shop of a wholesale whipmaker, who is in some cases a retailer at the same price and under the same representations as the street-seller. The retail price is 1*s.* each; the wholesale, 8*s.* and 9*s.* a dozen. Some of the street whip-sellers represent themselves as the makers, but the whips are almost all made in Birmingham and Walsall.

Of these traders very few are the ordinary street-sellers. Most of them have been in some

way or other connected with the care of horses, and some were described to me as "beaten-out countrymen," who had come up to town in the hope of obtaining employment, and had failed. One man, of the last-mentioned class, told me that he had come to London from a village in Cambridgeshire, bringing with him testimonials of good character, and some letters from parties whose recommendation he expected would be serviceable to him; but he had in vain endeavoured for some months to obtain work with a carrier, omnibus proprietor, or job-master, either as driver or in charge of horses. His prospects thus failing him, he was now selling whips to earn his livelihood. A friend advised him to do this, as better than starving, and as being a trade that he understood:—

"I often thought I'd be forced to go back home, sir," he said, "and I'd have been ashamed to do't, for I *would* come to try my luck in London, and would leave a place I had. All my friends—and they're not badly off—tried to 'suade me to stop at home another year or two, but come I would, as if I must and couldn't help it. I brought good clothes with me, and they're a'most all gone; and I'd be ashamed to go back so shabby, like the prodigal's son; you know, sir. I'll have another try yet, for I get on to a cab next Monday, with a very respectable cab-master. As I've only myself, I know I can do. I was on one, but not with the same master, after I'd been six weeks here; but in two days I was forced to give it up, for I didn't know my way enough, and I didn't know the distances, and couldn't make the money I paid for my cab. If I asked another cabman, he was as likely to tell me wrong as right. Then the fares used to be shouting out, 'I say, cabby, where the h—— are you going? I told you Mark-lane, and here we are at the Minories. Drive back, sir.' I know my way now well enough, sir. I've walked the streets too long not to know it. I notice them on purpose now, and know the distances. I've written home for a few things for my new trade, and I'm sure to get them. They don't know I'm selling whips. There would be such a laugh against me among all t' young fellows if they did. Me as was so sure to do well in London!

"It's a poor trade. A carman 'll bid me 6*d.* for such a whip as this, which is 4*s.* 3*d.* the half dozen wholesale. 'I have to find my own whips,' my last customer said, 'though I drives for a stunning grocer, and be d—— d to him.' They're great swearers some of them. I make 7*s.* or 8*s.* in a week, for I can walk all day without tiring. I one week cleared 14*s.* Next week I made 3*s.* I *have* slept in cheap lodging-houses—but only in three: one was very decent, though out of the way; one was middling; and the t'other was a pig-sty. I've seen very poor places in the country, but nothing to it. I now pay 2*s.* a week for a sort of closet, with a bed in it, at the top of a house, but it's clean and sweet; and my landlord's a greengrocer and coal-merchant and firewood-seller;—he's a good man—and I can always earn a little against the rent with him, by cleaning his harness, and grooming his pony—he calls it a pony, but it's over 15 hands—and greasing his cart-wheels, and mucking out his stable, and such like. I shall live there when I'm on my cab."

Other carmen's whips are 1*s.* 6*d.*, and as high as 2*s.* 6*d.*, but the great sale is of those at 1*s.* The principal localities for the trade are at the meat-markets, the "green markets," Smithfield, the streets leading to Billingsgate when crowded in the morning, the neighbourhood of the docks and wharfs, and the thoroughfares generally.

The trade in the other kind of whips is again in the hands of another class, in that of cabmen who have lost their licence, who have been maimed, and the numerous "hands" who job about stables—especially cab-horse stables—when without other employment. The price of the inferior sort of "gig-whips" is 1*s.* to 1*s.* 6*d.*, the wholesale price being from 9*s.* 6*d.* to 14*s.* 6*d.* the dozen. Some are lower than 9*s.* 6*d.*, but the cabmen, I am told, "will hardly look at them; they know what they're a-buying of, and is wide awake, and that's one reason why the profit's so small." Occasionally, one whip-seller told me, he had sold gig-whips at 2*s.* or 2*s.* 6*d.* to gentlemen who had broken their "valuable lance-wood," or "beautiful thorn," and who made a temporary purchase until they could buy at their accustomed shops. "A military gent, with mustachers, once called to me in Piccadilly," the same man stated, "and he said, 'Here, give me the best you can for half-a-crown, I've snapped my own. I never use the whip when I drive, for my horse is skittish and won't stand it, but I can't drive without one.'"

In the height of the season, two, and sometimes three men, sell handsome gig-whips at the fashionable drives or the approaches. "I have taken as much as 30*s.* in a day, for three whips," said one man, "each 10*s.*; but they were silver-mounted thorn, and very cheap indeed; that's 8 or 9 years back; people looks oftener at 10*s.* now. I've sold horse-dealers' whips too, with loaded ends. Oh, all prices. I've bought them, wholesale, at 8*s.* a dozen, and 7*s.* 6*d.* a piece. Hunting whips are never sold in the streets now. I have sold them, but it's a good while ago, as riding whips for park gentlemen. The stocks were of fine strong lancewood—such a close grain! with buck horn handles, and a close-worked thong, fastened to the stock by an 'eye' (loop), which it's slipped through. You could hear its crack half a mile off. 'Threshing machines,' I called them."

All the whip-sellers in a large way visit the races, fairs, and large markets within 50 miles of London. Some go as far as Goodwood at the race-time, which is between 60 and 70 miles distant. On a well-thronged race-ground these men will take 3*l.* or 4*l.* in a day, and from a half to three-fourths as much at a country fair. They sell riding-whips in the country, but seldom in town.

An experienced man knew 40 whip-sellers, as nearly as he could call them to mind, by sight, and 20 by name. He was certain that on no day

Original from HARVARD UNIVERSITY

were there fewer than 30 in the streets, and sometimes—though rarely—there were 100. The most prosperous of the body, including their profits at races, &c., make 1*l.* a week the year through; the poorer sort from 5*s.* to 10*s.*, and the latter are three times as numerous as the others. Averaging that only 30 whip-sellers take 25*s.* each weekly (with profits of from 5*s.* to 10*s.*) in London alone, we find 2340*l.* expended in the streets in whips.

Some of the whip-sellers vend whipcord, also, to those cabmen and carters who "cord" their own whips. The whipcord is bought wholesale at 2*s.* the pound (sometimes lower), and sold at ½*d.* the knot, there being generally six dozen knots in a pound.

Another class "mend" cabmen's whips, re-thonging, or "new-springing" them, but these are street-artisans.

Of the Street-Sellers of Pipes, and of Snuff and Tobacco Boxes.

The pipes now sold in the streets and public-houses are the "china bowls" and the "comic heads." The "china-bowl" pipe has a bowl of white stone china, which unscrews, from a flexible tube or "stem," as it is sometimes called, about a foot long, with an imitation-amber mouth-piece. They are retailed at 6*d.* each, and cost 4*s.* a dozen at the swag-shops. The "comic heads" are of the clay ordinarily used in the making of pipes, and cost 16*d.* the dozen, or 15*s.* the gross. They are usually retailed at 2*d.* Some of the "comic heads" may be considered as hardly well described by the name, as among them are death's-heads and faces of grinning devils. "The best sale of the comic heads," said one man, "was when the Duke put the soldiers' pipes out at the barracks; wouldn't allow them to smoke there. It was a Wellington's head with his thumb to his nose, taking a sight, you know, sir. They went off capital. Lots of people that liked their pipe bought 'em, in the public-houses especial, 'cause, as I heerd one man—he was a boot-closer—say, 'it made the old boy a-ridiculing of hisself.' At that time—well, really, then, I can't say how long it's since—I sold little bone 'tobacco-stoppers'—they 're seldom asked for now, stoppers is quite out of fashion—and one of them was a figure of 'old Nosey,' the Duke you know—it was intended as a joke, you see, sir; a tobacco-*stopper.*"

There are now nine men selling pipes, which they frequently raffle at the public-houses; it is not unusual for four persons to raffle at ½*d.* each, for a "comic head." The most costly pipes are not now offered in the streets, but a few are sold on race-courses. I am informed that none of the pipe-sellers depend entirely upon their traffic in those wares, but occasionally sell (and raffle) such things as china ornaments or table-covers, or tobacco or snuff-boxes. If, therefore, we calculate that four persons sell pipes daily the year through, taking each 25*s.* (and clearing 10*s.*), we find 260*l.* yearly expended upon the hawkers' pipes.

The snuff and tobacco-boxes disposed of by street-traders, for they are usually sold by the same individual, are bought at the swag-shops. In a matter of traffic, such as snuff-boxes, in which the "fancy" (or taste) of the purchaser is freely exercised, there are of course many varieties. The exterior of some presents a series of transverse lines, coloured, and looking neat enough. Others have a staring portrait of the Queen, or of "a young lady," or a brigand, or a man inhaling the pungent dust with evident delight; occasionally the adornment is a ruin, a farm-house, or a hunting scene. The retail price is from 4*d.* to 1*s.*, and the wholesale 3*s.* to 7*s.* 6*d.* the dozen. The Scotch boxes, called "Holyroods" in the trade, are also sold in the streets and public-houses. These are generally the "self-colour" of the wood; the better sort are lined with horn, and are, or should be, remarkable for the closeness and nice adjustment of the hinges or joints. They are sold—some I was told being German-made—at the swag-shops at 3*s.* the dozen, or 4*d.* each, to 6*s.* the dozen, or 8*d.* each. "Why, I calc'lated," said one box-seller, "that one week when I was short of tin, and had to buy single boxes, or twos, at a time, to keep up a fair show of stock, the swags got 2*s.* more out of me than if I could have gone and bought by the dozen. I once ventured to buy a very fine Holyrood; it 'll take a man three hours to find out the way to open it, if he doesn't know the trick, the joints is so contrived. But I have it yet. I never could get an offer for what it cost me, 5*s.*"

The tobacco-boxes are of brass and iron (though often called "steel"). There are three sizes: the "quarter-ounce," costing 3*s.* the dozen; the "half-ounce," 4*s.* 3*d.*; and "the ounce," 5*s.* 6*d.* the dozen, or 6½*d.* each. These are the prices of the brass. The iron, which are "sized" in the same way, are from 2*s.* to 3*s.* 6*d.* the dozen, wholesale. They are retailed at from 3*d.* to 6*d.* each, the brass being retailed at from 4*d.* to 1*s.* All these boxes are opened and shut by pressure on a spring; they are partly flat (but rounded), so as to fit in any pocket. The cigar-cases are of the same quality as the snuff-boxes (not the Holyroods), and cost, at the German swag-shops, 3*s.* 6*d.* the dozen, or 4½*d.* each. They are usually retailed, or raffled for on Saturday and Monday nights, at 6*d.* each, but the trade is a small one.

One branch of this trade, concerning which I heard many street-sellers very freely express their opinions, is the sale of "indecent snuff-boxes." Most of these traders insisted, with a not unnatural bitterness, that it would be as easy to stop the traffic as it was to stop Sunday selling in the park, but then "gentlemen was accommodated by it," they added. These boxes and cigar-cases are, for the most part, I am told, French, the lowest price being 2*s.* 6*d.* a box. One man, whose information was confirmed to me by others, gave me the following account of what had come within his own knowledge:—

"There's eight and sometimes nine persons carrying on the indecent trade in snuff-boxes and cigar-cases. They make a good bit of money, but they 're drunken characters, and often hard up. They 've neither shame nor decency; they 'll

tempt lads or anybody. They go to public-houses which they know is used by fast gents that has money to spare. And they watch old and very young gents in the streets, or any gents indeed, and when they see them loitering and looking after the girls, they take an opportunity to offer a 'spicy snuff-box, very cheap.' It's a trade only among rich people, for I believe the indecent sellers can't afford to sell at all under 2*s.* 6*d.*, and they ask high prices when they get hold of a green 'un; perhaps one up on a spree from Oxford or Cambridge. Well, I can't say where they get their goods, nor at what price. That 's their secret. They carry them in a box, with proper snuff-boxes to be seen when its opened, and the others in a secret drawer beneath; or in their pockets. You may have seen a stylish shop in Oxford-street, and in the big window is large pipe heads of a fine quality, and on them is painted, quite beautiful, naked figures of women, and there 's snuff-boxes and cigar-cases of much the same sort, but they 're nothing to what these men sell. I must know, for it's not very long since I was forced, through distress, to colour a lot of the figures. I could colour 50 a day. I hadn't a week's work at it. I don't know what they make; perhaps twice as much in a day, as in the regular trade can be made in a week. I was told by one of them that one race day he took 15*l.* It 's not every day they do a good business, for sometimes they may hawk without ever showing their boxes; but gentlemen will have them if they pay ever so much for them. There 's a risk in the trade, certainly. Sometimes the police gets hold of them, but very very seldom, and it's 3 months. Or if the Vice Society takes it up, it may be 12 months. The two as does best in the trade are women; they carry great lots. They 've never been apprehended, and they 've been in the trade for years. No, I should say they was not women of the town. They 're both living with men, but the men 's not in the same trade, and I think is in no trade; just fancy men. So I 've understood."

I may observe that the generality of the hawkers of indecent prints and cards are women.

There are about 35 persons selling snuff and tobacco-boxes—the greatest sale being of tobacco-boxes—and cigar-cases, generally with the other things I have mentioned. Of these 35, however, not one-half sell snuff-boxes constantly, but resort to any traffic of temporary interest in the public or street-public estimation. Some sell only in the evenings. Reckoning that 15 persons on snuff and tobacco and cigar boxes alone take 18*s.* weekly (clearing 7*s.* or 8*s.*), we find 692*l.* thus expended.

Of the Street-Sellers of Cigars.

Cigars, I am informed, have constituted a portion of the street-trade for upwards of 20 years, having been introduced not long after the removal of the prohibition on their importation from Cuba. It was not, however, until five or six years later that they were at all extensively sold in the streets; but the street-trade in cigars is no longer extensive, and in some respects has ceased to exist altogether.

I am told by experienced persons that the cigars first vended in the streets and public-houses were really smuggled. I say "really" smuggled, as many now vended under that pretence never came from the smuggler's hands. "Well, now, sir," said one man, "the last time I sold Pickwicks and Cubers a penny apiece with lights for nothing, was at Greenwich Fair, on the sly rather, and them as I could make believe was buying a smuggled thing, bought far freer. Everybody likes a smuggled thing." [This remark is only in consonance with what I have heard from others of the same class.] "In my time I 've sold what was smuggled, or made to appear as sich, but far more in the country than town, to all sorts—to gentlemen, and ladies, and shopkeepers, and parsons, and doctors, and lawyers. Why no, sir, I can't say as how I ever sold anything in that way to an exciseman. But smuggling 'll always be liked; it's sich a satisfaction to any man to think he 's done the tax-gatherer."

The price of a cigar, in the earlier stages of the street-traffic, was 2*d.* and 3*d.* One of the boxes in which these wares are ordinarily packed was divided by a partition, the one side containing the higher, and the other the lower priced article. The division was often a mere trick of trade—in justification of which any street-seller would be sure to cite the precedent of shopkeepers' practices—for the cigars might be the same price (wholesale) but the bigger and better-looking were selected as "threepennies," the "werry choicest and realest Hawanners, as mild as milk, and as strong as gunpowder," for such, I am told, was the cry of a then well-known street-trader. The great sale was of the "twopennies." As the fuzees, now so common, were unknown, and lucifer matches were higher-priced, and much inferior to what they are at present, the cigar seller in most instances carried tow with him, a portion of which he kept ignited in a sort of tinder-box, and at this the smokers lighted their cigars; or the vender twisted together a little tow and handed it, ignited, to a customer, that if he were walking on he might renew his "light," if the cigar "wouldn't draw."

A cheaper cigar soon found its way into street commerce, "only a penny apiece, prime cigars;" and on its first introduction, a straw was fitted into it, as a mouth-piece. "Cigar tubes" were also sold in the streets; they were generally of bone, and charged from 2*d.* to 1*s.* each. The cigar was fitted into the tube, and they were strongly recommended on the score of economy, as "by means of this tube, any gen'l'man can smoke his cigar to half a quarter of an inch, instead of being forced to throw it away with an inch and a half left." These tubes have not for a long time been vended in the streets. I am told by a person, who himself was then engaged in the sale, that the greatest number of penny cigars ever sold in the streets in one day was on that of her Majesty's coronation (June 28, 1838). Of this he was quite

positive from what he had experienced, seen, and heard.

"In my opinion," said another street-seller, "the greatest injury the street-trade in such things had was when the publicans took to selling cigars. They didn't at first, at least not generally; I 've sold cigars myself, at the bars of respectable houses, to gentlemen that was having their glass of ale with a friend, and one has said to another, 'Come, we 'll have a smoke,' and has bought a couple. O, no; I never was admitted to offer them in a parlour or tap-room; that would have interfered with the order for 'screws' (penny papers of tobacco), which is a rattling good profit, I can tell you. Indeed, I was looked shy at, from behind the bar; but if customers chose to buy, a landlord could hardly interfere. Now, it's no go at all in such places."

One common practice among the smarter street-seller, when "on cigars," was, until of late years, and still is, occasionally at races and fairs, to possess themselves of a few really choice "weeds," as like as they could procure them to their stock-in-trade, and to smoke one of them, as they urged their traffic.

The aroma was full and delicate, and this was appealed to if necessary, or, as one man worded it, the smell was "left to speak for itself." The street-folk who prefer the sale of what is more or less a luxury, become, by the mere necessities of their calling, physiognomists and quick observers, and I have no reason to doubt the assertion of one cigar-vendor, when he declared that in the earlier stages of this traffic he could always, and most unerringly in the country, pick out the man on whose judgment others seemed to rely, and by selling him one of his choice reserve, procure a really impartial opinion as to its excellence, and so influence other purchasers. When the town trade "grew stale"—the usual term for its falling-off—the cigar-sellers had a remunerative field in many parts of the country.

In London, before railways became the sole means of locomotion to a distance, the cigar-sellers frequented the coaching-yards; and the "outsides" frequently "bought a cigar to warm their noses of a cold night," and sometimes filled their cases, if the cigar-seller chanced to have the good word of the coachman or guard.

The cigar street-trade was started by two Jews, brothers, named Benasses, who were "licensed to deal in tobacco," and vended good articles. When they relinquished the open-air business, they supplied the other street-sellers, whose numbers increased very rapidly. The itinerant cigar-vending was always principally in the hands of the Jews, but the general street-traders resorted to the traffic on all occasions of public resort,—"sich times," observed one, "as fairs and races, and crownations, and Queen's weddings; I wish they came a bit oftener for the sake of trade." The manufacture of the cigars sold at the lowest rates, is now almost entirely in the hands of the Jews, and I am informed by a distinguished member of that ancient faith, that when I treat of the Hebrew children, employed in *making* cigars, there will be much to be detailed of which the public have little cognisance and little suspicion.

The cigars in question are bought (wholesale) in Petticoat-lane, Rosemary-lane, Ailie-street, Tenter-ground, in Goodman's-fields, and similar localities. The kinds in chief demand are Pickwicks, 7*s.* and 8*s.* per lb.; Cubas, 8*s.* 6*d.*; common Havannahs and Bengal Cheroots, the same price; but the Bengal Cheroots are not uncommonly smuggled.

"The best places for cigar-selling," one man stated, "I 've always found to be out of town; about Greenwich and Shooter's Hill, and to the gents going to Kensington Gardens, and such like places. About the Eagle Tavern was good, too, as well as the streets leading to the Surrey Zoological—one could whisper, 'cheap cigar, sir, half what they 'll charge you inside.' I 've known young women treat their young men to cigars as they were going to Cremorne, or other public places; but there 's next to no trade that way now, and hasn't been these five or six years. I don't know what stopped it exactly. I 've heard it was shopkeepers that had licences, complaining of street people as hadn't, and so the police stopped the trade as much as they could."

At all the neighbouring races and fairs, and at any great gathering of people in town, cigars are sold, more with the affectation than the reality of its being done, "quite on the sly." The retail price is 1*d.* each, and three for 2*d.* Some of the cheap cigars are made to run 200, and even as high as 230 to the pound. A fuzee is often given into the bargain.

I am told that, on all favourable opportunities, there are still 100 persons who vend cigars in the streets of London, while a greater number of "London hands" carry on the trade at Epsom and Ascot races. At other periods the business is all but a nonentity. To clear 1*l.* a week is considered "good work." At one period, on every fine Sunday, there were not, I am assured, fewer than 500 persons selling cigars in the open air in London and its suburbs.

Of the Street-Sellers of Sponge.

This is one of the street-trades which has been long in the hands of the Jews, and, unlike the traffic in pencils, sealing-wax, and other articles of which I have treated, it remains so principally still.

In perhaps no article which is a regular branch of the street-trade, is there a greater diversity in the price and quality than in sponge. The street-sellers buy it at 1*s.* (occasionally 6*d.*), and as high as 21*s.* the pound. At one time, I believe about 20 years back, when fine sponge in large pieces was scarce and dear, some street-sellers gave 28*s.* the pound, or, in buying a smaller quantity, 2*s.* an ounce.

"I have sold sponge of all sorts," said an experienced street-seller, "both 'fine toilet,' fit for any lady or gentleman, and coarse stuff not fit to groom a ass with. That very common sponge is mostly 1*s.* the lb. wholesale, but it's no manner of use, it's so sandy and gritty. It weighs heavy,

Original from HARVARD UNIVERSITY

or there might be a better profit on it. It has to be trimmed up and damped for showing it, and then it always feels hask (harsh) to the hand. It rubs to bits in no time. There was a old gent what I served with sponges, and he was very perticler, and the best customer I ever had, for his housekeeper bought her leathers of me. Like a deal of old coves that has nothing to do and doesn't often stir out, but hidles away time in reading or pottering about a garden, he was fond of a talk, and he 'd give me a glass of something short, as if to make me listen to him, for I used to get fidgety, and he 'd talk away stunning. He 's dead now. He 's told me, and more nor once, that sponges was more of a animal than a wegetable," continued the incredulous street-seller, "I do believe people reads theirselves silly. Such —— nonsense! Does it look like a animal? Where 's its head and its nose? He 'd better have said it was a fish. And it 's not a wegetable neither. But I 'll tell you what it is, sir, and from them as has seen it where its got with their own eyes. I have some relations as is seafarin'-men, and I went a woyage once myself when a lad—one of my relations has seen it gathered by divers, I forget where, from the rocks at the bottom and shores of the sea, and he says it 's just seamoss—stuff as grows there, as moss does to old walls in England. That 's what it is, sir. As it 's grown in the water, it holds water you see. I 've made 15*s*. on sponge alone, in a good week, when I had a good stock; but oftener I 've made only 10*s*., and sometimes not 5*s*. My best trade is at private houses a little ways out of town. I 've heard gents say, 'A good sponging 's as good as a bath,' and when I could get good things cheap they 'd be sure to sell. No, I never did much at the mews."

Another man told me that he once bought a large quantity of sponge at 6*d*. the lb., trimmed it up as well as he could, and got a man to help him, and the two "worked it off" in barrows; there was six barrows full, and as one was empted it was replenished. It was sold at 1*d*. and 2*d*. a lump; about twenty lumps, or pieces, going to a pound, so that there was 14*d*. profit on what cost 6*d*., even on the penny lumps. He had forgotten the exact amount he cleared, and he and his mate sold it all in one summer's evening, but it was somewhere about 10*s*. This happened some years ago, when the common sponge, which I heard called also "honeycomb" sponge, was not so "blown upon," as my informant expressed it, as it is now. On my asking this man as to the proportion of Jews in this trade, he answered: "Well, many a day I 'm satisfied there 's 100 people selling sponge, and I should say that for every ten or twelve Jews is one Christian, and half of them, or more, has been in some sort of service, I mean the Christians has, most likely stable-helpers, and they supplies the mews and the job and livery stables, such of them as requires men to find their own sponges, but that 's only a few; sponges is mostly bought for such places at the saddlers' and other shops. In my opinion, sir, Jews is better Christians than Christians themselves, for *they* help one another, and we don't. I 've been helped by a Jew myself, without any connection with them. They 're terrible keen hands at a bargain, though."

The sponge in the street-trade is purchased, wholesale, chiefly in Houndsditch. The wholesale trade in sponge, I may add, is also in the hands of the Jews. The great mart is Smyrna, the best qualities being gathered in the islands of the Greek Archipelago. The sponge is carried by the street-traders in baskets, the bearer holding a specimen piece or two in his hand. Smaller pieces are sometimes carried in nets, and nets were more frequently in use for this purpose than at present. It is nearly all sold by itinerants, in the business parts as well as the suburbs, the purchasers being "shopkeepers, innkeepers, gentlemen, and gentlemen's servants." Sometimes low-priced sponge is offered in a street-market on a Saturday or Monday night, but very rarely, as it is a thing little used by the poor. A little is sold to the cabmen at their stands. The sponge-sellers, I may add, when going a regular round, offer their wares to any passer-by. A little is done by the Jews in bartering sponge for old clothes. There are five or six women in the trade.

I have reason to believe that the estimate of my informant, as to the number of sponge-sellers, is correct. But some sell sponge only occasionally, some make it only a portion of their business, and others vend it only when they "have it a bargain." Calculating, then, that only fifty persons (so allowing for the irregularities in the trade) vend sponge daily, and that each takes 15*s*. weekly,—some taking 25*s*., and others but 5*s*.—with about half profit on the whole (the common sponge is often from 200 to 300 per cent. profit), we find the outlay to be 1850*l*.

Of the Street-Sellers of Wash-Leathers.

The wash-leathers, sometimes called "shammys" (chamois), now sold extensively in the streets, are for the most part the half of a sheep-skin, or of a larger lamb-skin. The skin is "split" by machinery, and to a perfect nicety, into two portions. That known as the "grain" (the part to which the fleece of the animal is attached) is very thin, and is dressed into a "skiver," a kind of leather used in the commoner requirements of book-binding, and for such purposes as the lining of hats. The other portion, the "flesh," is dressed as wash-leather. These skins are bought at the leather-sellers and the leather-dressers, at from 2*s*. to 20*s*. the dozen. The higher priced, or those from 12*s*. are often entire, and not "split" skins. The great majority of the street-sellers of wash-leathers are women, and principally Irishwomen. They offer their wash-leathers in all parts of town, calling at shops and inns; and at private houses offering them through the area rails, or knocking at the door when it is accessible. Many of these street-sellers are the wives of Irish labourers, employed by bricklayers and others, who are either childless, or able to leave their younger children under

the care of an older brother or sister, or when the poverty of the parents, or their culpable neglect, is extreme, allow them to run at large in the court or street, untended. The wives by this street-trade add to the husbands' earnings. In the respects of honesty and chastity, these women bear good characters.

The wash-leathers are sold for the cleaning of windows, and of plate and metal goods. Sixpence is a common price for a leather, the higher priced being sold at the mews and at gentlemen's houses. The "chamois" sold at the mews, however, are not often sold by the Irishwomen, but by the class I have described as selling scissors, &c., there. The leathers are also cut into pennyworths, and these pennyworths are sometimes sold on Saturday evenings in the street-markets.

There are, I am assured, 100 individuals selling little or nothing else but wash-leathers (for these traders are found in all the suburbs) in London, and that they take 10*s.* weekly, with a profit of from 4*s.* to 5*s.* There are, also, 100 other persons selling them occasionally, along with other goods, and as they vend the higher-priced articles, they probably receive nearly an equal amount. Hence it would appear that upwards of 5000*l.* is annually expended in the streets in this purchase.

Of the Street-Sellers of Spectacles and Eye-Glasses.

Twenty-five years ago the street-trade in spectacles was almost entirely in the hands of the Jews, who hawked them in their boxes of jewellery, and sold them in the streets and public-houses, carrying them in their hands, as is done still. The trade was then far more remunerative that it is at the present time to the street-folk carrying it on. "People had more money then," one old spectacle-seller, now vending sponges, said, "and there wasn't so many forced to take to the streets, Irish particularly, and opticians' charges were higher than they are now, and those who wanted glasses thought they were a take-in if they wasn't charged a fair price. O, times was very different then."

The spectacles in the street-trade are bought at swag-shops in Houndsditch. The "common metal frames," with or without slides, are 2*s.* 6*d.* to 3*s.* 6*d.* the dozen wholesale, and are retailed from 4*d.* to 1*s.* The "horn frames" are 6*s.* to 7*s.* 6*d.* the dozen, and are retailed from 9*d.* to 18*d.*, and even 2*s.* The "thin steel" are from 10*s.* 6*d.* to 21*s.* the dozen, and are retailed from 1*s.* 6*d.* to 3*s.* There are higher and lower prices, but those I have cited are what are usually paid by the street-traders. The inequality of the retail prices is accounted for by there being some difference in the spectacles in a dozen, some being of a better-looking material in horn or metal; others better finished. Then there is the chance of which street-sellers are not slow to avail themselves—("no more nor is shopkeepers," one man said)—I mean, the chance of obtaining an enhanced price for an article, with whose precise value the buyer is unacquainted.

"The patter," said the street-trader I have before quoted, "is nothing now, to what I've known it. You call it patter, but I don't. I think it's more in the way of persuasion, and is mostly said in public-houses, and not in the streets. Why, I've persuaded people, when I was in the trade and doing well at it—for that always gives you spirits—I've persuaded them in spite of their eyes that they wanted glasses. I knew a man who used to brag that he could talk people blind, and then they bought! It wasn't old people I so much sold to as young and middle-aged. I think perhaps I sold as many because people thought they looked better, or more knowing in them, than to help their eyesight. I've known my customers try my glasses, one pair after another, in the chimney glass of a public-house parlour. 'They're real Scotch pebbles,' I used to say sometimes—and I always had a fair article,—'and was intended for a solid silver frame but the frame was made too small for them, and so I got them and put them into this frame myself, for I'm an optician, out of work, by trade. They're worth 15*s.*, but you may have them, framed and all, for 7*s.* 6*d.*' I got 5*s.* for one pair once that way but they were a superior thing; I had them a particular bargain." One man told me that not long ago he asked 10*d.* for a pair of spectacles, and a journeyman slop-tailor said to him, "Why I only gave 1*s.* for this pair I'm wearing a few years back, and they ought to be less than 10*d.* now, for the duty's off glass."

The eye-glasses sold in the streets are "framed" in horn. They are bought at the same places as the spectacles, and cost, wholesale, for "single eyes" 4*s.* 6*d.* to 7*s.* 6*d.* the dozen. The retail price is from 6*d.* to 1*s.* The "double eyes," which are jointed in the middle so that the frame can be fitted to the bridge of the nose, are 10*s.* 6*d.* to 15*s.* the dozen, and are retailed by the street-folk from 1*s.* 3*d.* to 2*s.* each.

The spectacles are sold principally to working men, and are rarely hawked in the suburbs. The chief sale is in public-houses, but they are offered in all the busier thoroughfares and wherever a crowd is assembled. "The eye-glasses," said a man who vended them, "is sold to what I calls counter-hoppers and black-legs. You'll see most of the young swells that's mixed up with gaming concerns at races—for there's gaming still, though the booths is put down in many places—sport their eye-glasses; and so did them as used to be concerned in getting up Derby and St. Leger 'sweeps' at public-houses; least-ways I've sold to them, where sweeps was held, and they was busy about them, and offered me a chance, sometimes, for a handsome eye-glass. But they're going out of fashion, is eye-glasses, I think. The other day I stood and offered them for nearly five hours at the foot of London-bridge, which used to be a tidy pitch for them, and I couldn't sell one. All that day I didn't take a halfpenny."

There are sometimes 100 men, the half of whom are Jews and Irishmen in equal propor-

tions, now selling spectacles and eye-glasses. Some of these traders are feeble from age, accident, continued sickness, or constitution, and represent that they must carry on a "light trade," being incapable of hard work, even if they could get it. Two women sell spectacles along with Dutch drops. As in other "light trades," the spectacle sellers do not, as a body, confine themselves to those wares, but resort, as one told me, "to anything that's up at the time and promises better," for a love of change is common among those who pursue a street life. It may be estimated, I am assured, that there are thirty-five men (so allowing for the breaks in regular spectacle selling) who vend them daily, taking 15*s.* a week (with a profit of 10*s.*), the yearly expenditure being thus 1365*l.*

OF THE STREET-SELLERS OF DOLLS.

THE making of dolls, like that of many a thing required for a mere recreation, a toy, a pastime, is often carried on amidst squalor, wretchedness, or privation, or—to use the word I have frequently heard among the poor—"pinching." Of this matter, however, I shall have to treat when I proceed to consider the manufacture of and trade in dolls generally, not merely as respects street-sale.

Dolls are now so cheap, and so generally sold by open-air traders whose wares are of a miscellaneous character, as among the "swag-barrow" or "penny-a-piece" men of whom I have treated separately, that the sale of what are among the most ancient of all toys, as a "business of itself," is far smaller, numerically, than it was.

The dolls are most usually carried in baskets by street-sellers (who are not makers) and generally by women who are very poor. Here and there in the streets most frequented by the patrons of the open-air trade may be seen a handsome stall of dolls of all sizes and fashions, but these are generally the property of makers, although those makers may buy a portion of their stock. There are also smaller stalls which may present the stock of the mere seller.

The dolls for street traffic may be bought at the swag-shops or of the makers. For the little armless 1*d.* dolls the maker charges the street-seller 8*s.*, and to the swag-shop keeper who may buy largely, 7*s.* 6*d.* the dozen. Some little stalls are composed entirely of penny dolls; on others the prices run from 1*d.* to 6*d.* The chief trade, however, among the class I now describe, is carried on by the display of dolls in baskets. If the vendor can only attract the notice of children—and more especially in a private suburban residence, where children are not used to the sight of dolls on stalls or barrows, or in shops—and can shower a few blessings and compliments, "God be wid your bhutiful faces thin—and yours too, my lady, ma'am (with a curtsey to mistress or maid). Buy one of these dolls of a poor woman: shure they're bhutiful dolls and shuted for them angels o' the worruld;" under such circumstances, I say, a sale is almost certain. I may add that the words I have given I myself heard a poor Irishwoman, whom I had seen before selling large pincushions in the same neighbourhood (that of the Regent's Park), address to a lady who was walking round her garden accompanied by two children.

A vendor of dolls expresses an opinion that as long as ever there are children from two years old to ten, there will always be purchasers of dolls; "but for all that," said he, "somehow or another 't is nothing of a trade to what it used to be. I've seen the time when I could turn out in the morning and earn a pound afore night; but it's different now there's so many bazaars, and so many toy shops that the doll hawker hasn't half the chance he used to have. Sartinly we gets a chance now and then—fine days is the best—and if we can get into the squares or where the children walks with their nurses, we can do tidy; but the police are so very particular there's not much of a livelihood to be got. Spoiled children are our best customers. Whenever we sees a likely customer approaching—we, that is, those who know their business—always throw ourselves in the way, and spread out our dolls to the best advantage. If we hears young miss say *she will* have one, and cries for it, we are almost sure of a customer, and if we see her kick and fight a bit with the nuss-maid we are sure of a good price. If a child *cries well* we never baits our price. Most of the doll-sellers are the manufacturers of the dolls—that is, I mean, they puts 'em together. The heads are made in Hamburgh; the principal places for buying them in London are at Alfred Davis's, in Houndsditch; White's, in Houndsditch; and Joseph's, in Leadenhall-street. They are sold as thus:—The heads that we sell for 3*d.* each, when made up, cost us 7*s.* 6*d.* per gross, or 7½*d.* per dozen; these are called 1—O's. No. 2—O's., are 8*s.* 6*d.* per gross, and No. 3—O's. 10*s.* per gross. One yard and half of calico will make a dozen bodies, small size. These we get sewn for three halfpence, and we stuffs and finishes them ourselves.

"When our 3*d.* dolls are made up, they cost about 1*s.* per dozen—so there is 2*d.* profit on every doll, which I thinks is little enough; but we often sells 'em at 2*d.*; we lays 'em out to the best advantage in a deep basket, all standing up, as it were, or leaning against the sides of the basket. The legs and bodies is carefully wrapped in tissue paper, not exactly to preserve the lower part of the doll, for that isn't so very valuable, but in reality to conceal the legs and body, which is rather the reverse of symmetrical; for, to tell the truth, every doll looks as if it were labouring under an attack of the gout. There are, however, some very neat articles exported from Germany, especially the jointed dolls, but they are too dear for the street-hawker, and would not show to such advantage. There is also the plaster dolls, with the match legs. I wonder how they keep their stand, for they are very old-fashioned; but they sell, for you never see a chandler's shop window without seeing one of these sticking in it, and a falling down as if it was drunk. Then there's the wax dolls. Some of 'em are made of wax, and others of '*pappy mashy*,' and afterwards dipped in wax. The cheapest and best mart for these is in Barbi-

can; it would astonish many if they knew exactly what was laid out in the course of a year in dolls. It would be impossible, I think, to ascertain exactly; but I think I could guess something near the mark. There are, at least, at this time of year, when the fairs are coming on, fifty doll-hawkers, who sell nothing else. Say each of these sells one dozen dolls per day, and that their average price is 4*d.* each. That is just 10*l.* a day, and 60*l.* per week. In the winter time so many are not sold; but I have no doubt that 50*l.*'s worth of dolls are sold each week throughout the year by London hawkers alone, or just upon 3000*l.* per annum. The shops sell as many as the hawkers, and the stalls attending fairs half the amount; and you may safely say that the sum taken for dolls in and around London in one year amounts to 7500*l.* A doll-merchant can begin business with a trifle," continued my informant; "a shilling will obtain a dozen 3*d.* dolls. If you have no basket, carry them in your arms, although they don't show off to such advantage there as they do when nicely basketed; however, if you 've luck, you may soon raise a basket; for 3*s.* 6*d.* you can get a very nice one; and although the doll trade is not what it used to be, there are," said my informant, "worse games than that yet, I know. One man, who is now in a very respectable way of business —'*a regular gentleman*'—was a very few years ago only a doll-hawker. Another man, who had two hands and only one arm—poor fellow! he was born with one arm, and had two hands, one appended to his arm in the usual way, and the other attached to his shoulder—a freak of nature, I think, they called it. However, my one-armed friend keeps now a very respectable little swag-shop at North Shields, in Northumberland."

I inquired of my informant whether he objected to relate a little of his history? He replied, "not the least," and recounted as follows:—

"They call me *Dick the Dollman*. I was, I believe, the first as ever cried dolls three a shilling in the streets. Afore I began they al'ays stood still with 'em; but I cried 'em out same as they do mackrel; that is twenty years ago. I wasn't originally a doll-seller. My father was a pensioner in Greenwich College. My mother used to hawk, and had a licence. I was put to school in St. Patrick's-school, Lanark's-passage, where I remained six years, but I didn't learn much. At thirteen years of age I was apprenticed to a brush and broom maker's, corner of C——— Street, Spitalfields. My master was not the honestest chap in the world, for he bought hair illegal, was found out, and got transported for seven years. A man who worked for my master took me to finish my apprenticeship; this man and his wife was very old people. I used to work four days in the week, two for them and two for myself; the other two days I went out hawking brooms and brushes, and very often would earn 7*s.* or 8*s.* on a Saturday, but times was better then than they are now. Arter that, for sake of gain, I left the old people, I was offered 20*s.* to make and hawk; and in course I took it. I remained with this master five months; he was afflicted with rheumatic fever—went into the hospital—and I was left to shift for myself. When my master went to the hospital I had 7*s.* 6*d.* in my pocket; I knew I *must* do something, and, to tell you the truth, I didn't like the brush-making; I would rather have hawked something without the trouble of making it. I think *now* I was a little afflicted with laziness. I was passing London-bridge and saw a man selling Marshall's pocket-books; I knowed him afore; I thought I should like to try the pocket-book selling, and communicated my wishes to the man; he told me they cost eight shillings a dozen, if I liked we would purchase a dozen a'twixt us; we did so; I received half a dozen, but I afterwards learned that my friend obtained seven for his share, as they were sold thirteen to the dozen. I went to Chancery-lane with my lot and was very lucky; I sold the six books to one gentleman for six shillings: in course I soon obtained another supply; that day I sold four dozen, and earned 20*s.* I was such a good seller that Marshall let me have 3*l.* or 4*l.*'s worth on credit—*and I never paid him.* I know that was wrong now; but I was such a foolish chap, and used to spend my money as fast as I got it. I would have given Marshall a shilling the other day if I had had one, for I see him selling penny books in the street. I thought it was hard lines, and had been such a gentleman too. Somerset-house corner was a capital stand for selling pocket-books. The way I took to the dolls was this; I met a girl with a doll basket one day as I was standing at Somerset-house corner; she and I got a talking. 'Will you go to the 'Delphy to night?' says I; she consented. They was a playing Tom and Jerry at this time, all the street-sellers went to see it, and other people; and nice and crabbed some on 'em was. Well, we goes to the 'Delphy—and I sees her often arter that, and at last gets married. She used to buy her dolls ready made; I soon finds out where to get the heads—and the profits when we made them ourselves was much greater. We began to serve hawkers and shops; went to Bristol—saved 47*l.*—comes to London and spends it all; walks back to Bristol, and by the time we got there we had cleared more than 20*l.* We were about a month on the journey, and visited Cheltenham and other towns. We used to spend our money very foolishly; we were too fond of what was called getting on the spree. You see we might have done well if we had liked, but we hadn't the sense. My wife got very clever at the dolls and so did I. Then I tried my hand at the wax dolls, and got to make them very well. I paid a guinea to learn.

"I was selling wax-dolls one day in London, and a gentleman asked me if I could mend a wax figure whose face was broken. I replied yes, for I had made a few wax heads, large size, for some showmen. I had made some murderers who was hung; lately I made Rush and Mr. and Mrs. Manning; but the showmen can't afford to get new heads now-a-days, so they generally makes one head do for all; sometimes they changes the dress. Well, as I was telling you, I went with this gentleman, and proposed that he should have

a new head cast, for the face of the figure was so much broken. It was Androcles pulling the thorn out of the lion's foot, and was to be exhibited. I got 20*s.* for making the new head. The gentleman asked me if I knew the story about Androcles. Now I had never heard on him afore, but I didn't like to confess my ignorance, so I says 'yes;' then he offers me 30*s.* a week to describe it in the Flora Gardens, where it was to be exhibited. I at once accepted the engagement; but I was in a bit of a fix, for I didn't know what to say. I inquired of a good many people, but none on 'em could tell me; at last I was advised to go to Mr. Charles Sloman—you know who I mean—him as makes a song and sings it directly; I was told he writes things for people. I went, and he wrote me out a patter. I asked him how much he charged; he said, 'Nothing my man.' Sartinly he wasn't long a-doing it, but it was very kind of him. I got what Mr. Sloman wrote out for me printed, and this I stuck inside my hat; the people couldn't see it, though I dare say they wondered what I was looking in my hat about. However, in a week or so, I got it by heart, and could speak it well enough. After exhibiting Androcles I got an engagement with another waxwork show—named Biancis—and afterwards at other shows. I was considered a very good doorsman in time, but there's very little to be got by that now; so we keeps to the dolly business, and finds we can get a better living at that than anything else. Me and the old woman can earn 1*l.* a week, bad and all as things are; but we're obliged to hawk."

Of the "Swag-Barrowmen," and "Lot-Sellers."

The "swag" (miscellaneous) barrow is one of the objects in the streets which attracts, perhaps more readily than any other, the regards of the passer-by. There are so many articles and of such various uses; they are often so closely packed, so new and clean looking, and every here and there so tastefully arranged, that this street-trader's barrow really repays an examination. Here are spread on the flat part of the barrow, pepper-cruets or boxes, tea-caddies, nutmeg-graters, vinegar-cruets, pen-cases, glass or china-handled pens, pot ornaments, beads, ear-rings, finger-rings (plain or with "stones"), cases of scent-bottles, dolls, needle-cases, pincushions, Exhibition medals and "frames" (framed pictures), watches, shawl-pins, extinguishers, trumpets and other toys, kaleidoscopes, seals, combs, lockets, thimbles, bone tooth-picks, small playing-cards, teetotums, shuttle-cocks, key-rings, shirt-studs or buttons, hooks and eyes, coat-studs, money-boxes, spoons, boxes of toys, earthenware-mugs, and glass articles, such as salt-cellars and smelling-bottles. On one barrow were 225 articles.

At the back and sides of the swag-barrow are generally articles which are best displayed in an erect position. These are children's wooden swords, whips, climbing monkeys, and tumblers, jointed snakes twisting to the wind from the top of a stick, kites, and such things as tin egg-holders.

Perhaps on very few barrows or stalls are to be seen *all* the articles I have enumerated, but they are all "in the trade," and, if not found in this man's stock, may be found in his neighbour's. Things which attain only a temporary sale, such as galvanic rings, the Lord's Prayer in the compass of a sixpence, gutta-percha heads, &c., are also to be found, during the popular demand, in the miscellaneous trader's stock.

Each of the articles enumerated is retailed at 1*d.* "Only a penny!" is the cry, "pick 'em out anywhere; wherever your taste lies; only a penny, a penny, a penny!" But on a few other barrows are goods, mixed with the "penny" wares, of a higher price; such as knives and forks, mustard pots, sham beer glasses (the glasses which appear to hold beer frothing to the brim), higher-priced articles of jewellery, skipping-ropes, drums, china ornaments, &c. At these barrows the prices run from 1*d.* to 1*s.*

The practice of selling by commission, the same as I have shown to prevail among the costers, exists among the miscellaneous dealers of whom I am treating, who are known among street-folk as "swag-barrowmen," or, in the popular ellipsis, "penny swags;" the word "swag" meaning, as I before showed, a collection—a lot.

The "swag-men" are often confounded with the "lot-sellers"; so that I proceed to show the difference.

The *Lot-Sellers* proper, are those who vend a variety of small articles, or "a lot," all for 1*d.* A "lot" frequently consists of a sheet of songs, a Chinese puzzle, a 5*l.* note (Bank of Elegance), an Exhibition snuff-box (containing 6 spoons), a half jack (half sovereign), a gold ring, a silver ring, and a chased keeper with rose, thistle, and shamrock on it. The lots are diversified with packs of a few cards, little pewter ornaments, boxes of small wooden toys, shirt-buttons, baby thimbles, beads, tiny scent bottles, and such like.

The "penny apiece" or "swag" trade, as contradistinguished from the "penny lots" vended by the lot-sellers, was originated by a man who, some 19 years ago, sold a variety of trifles from a tea-tray in Petticoat-lane. My informant had heard him say—for the original "penny apiece" died four years ago—that he did it to get rid of the odds and ends of his stock. The system, however, at once attracted popularity, and the fortunate street-seller prospered and "died worth money." At that period penny goods (excepting such things as sweet-stuffs, pastry, &c.) were far less numerous in the streets, and yet I have never met with an old street-trader (a statement fully borne out by old and intelligent mechanics) who did not pronounce spare pennies to be far more abundant in those days among the poorer and even middle classes. There were, moreover, far fewer street chapmen, so that this novel mode of business had every chance to thrive.

The origin of "lot-selling," or selling "penny lots" instead of penny articles, was more curious. It was commenced by an ingenious Swiss (?)

(about a year after the "penny apiece" trade), known in the street circles as "Swede." He was a refugee,—a Roman Catholic, and a hot politician. He spoke and understood English well, but had no sympathy with the liberal parties in this country. "He was a republican," he would say, "and the Chartists were only milk and water." When he established his lot-selling he used to place to his mouth an instrument, which was described to me as "like a doubled card," and play upon it very finely. This would attract a crowd, and he would then address them in good English, but with a slight foreign accent: "My frents; come to me, and I will show you my musical instruments, which will play Italian, Swiss, French, Scotch, Irish, or any tunes. And here you see beautiful cheap lots of useful tings, and elegant tings. A penny a lot, a penny a lot!" The arrangement of the "lots" was similar to what it is at present, but the components of the pennyworth were far less numerous. This man carried on a good trade in London for two or three years, and then applied his industry to a country more than a town career. He died about five or six years ago, at his abode in Fashion-street, Spitalfields, "worth money." At the time of his decease he was the proprietor of two lodging-houses; one in Spitalfields, the other in Birmingham, both I am told, well conducted; the charge was 4*d.* a night. He did not reside in either, but employed "deputies." I may observe that he sold his "musical instruments," also, at 1*d.* each, but the sale was insignificant. "Only himself seemed master of 'em," said one man; "with other people they were no better nor a Jew's-harp."

Of the "penny apiece" street-vendors, there are about 300 in London; 250 having barrows, and 50 stalls or pitches on the ground. Some even sell at "a halfpenny apiece," but chiefly to get rid of inferior wares, or when "cracked up," and unable to "spring" a better stock. The barrows are 7 feet by 3; are well built in general, and cost 50*s.* each. These barrows, when fully stocked, are very heavy (about 4 cwt.), so that it requires a strong man to propel one any distance, and though occasionally the man's wife officiates as the saleswoman, there is always a man connected with the business. In my description of a stock of penny goods, I have mentioned that there were 225 articles; these were counted on a barrow in a street near the Brill—but probably on another occasion (when there appeared a better chance of selling) there might be 500 articles, such things as rings and the like admitting of being stowed by the hundred in very small compass. The great display, however, is only on the occasion of holidays, or "when a man starts and wants to stun you with a show." At Maidstone Fair the other day, a London street-seller, rather well to do, sold his entire stock of penny articles to a shopkeeper of the town, and when counted there were exactly fifteen gross, or 2160 "pieces" as they are sometimes called. These, vended at 1*d.* each, would realize just 9*l.*, and would cost, wholesale, about 6*l.*, or for ready money, at the swag-shops, where they may be bought, from 10*s.* to 20*s.* less, according to the bargaining powers of the buyer. The man's reason for selling was that the Fair was "no good;" that is to say, the farmers had no money, and their labourers received only 7*s.* a week, so there was no demand; the swag-seller, therefore, rather than incur the trouble and expense of having to carry his wares back to London, sold at a loss to a shopkeeper in Maidstone, who wanted a stock.

The swag-barrowmen selling on commission have 3*s.* in every 20*s.* worth of goods that they sell. The commission may average from 9*s.* to 12*s.* a week in tolerable weather, but as in bad, and especially in foggy weather, the trade cannot be prosecuted at all, 7*s.* 6*d.* may be the highest average, or 10*s.* the year through.

The character of the penny swag-men belongs more to that of the costermongers than to any other class of street-folk. Many of them drink as freely as their means will permit. I was told of a match between a teetotaller and a beer-drinker, about nine years ago. It was for 5*s.* a side, and the "Championship." Each man started with an equal stock, alike in all respects, but my informant had forgotten the precise number of articles. They pattered, twenty-five yards apart one from another, three hours in James-street, Covent-garden; three hours in the Blackfriars-road; and three hours in Deptford. The teetotaller was "sold out" in seven-and-a-half hours; while his opponent—and the contest seems to have been carried on very good-humouredly—at the nine hours' end, had four dozen articles left, and was rather exhausted, or, as it was described to me, "told out." The result, albeit, was not looked upon, I was assured, as anything very decisive of the relative merits of beer or water, as the source of strength or inspiration of "patter." The teetotaller was the smarter, though he did not appear the stronger, man; he abandoned the championship, and went into another trade four years ago. The patter of the swag-men has nothing of the humour of the paper-workers; it is merely declaratory that the extensive stock offered on such liberal terms to the public would furnish a wholesale shop; that such another opportunity for cheap pennyworths could never by any possibility occur again, and that it was a duty on all who heard the patterer to buy at once.

The men having their own barrows or stalls (but the stall-trade is small) buy their goods as they find their stock needs replenishment at the swag-shops. "It was a good trade at first, sir," said one man, "and for its not being a good trade now, we may partly blame one another. There was a cutting down trade among us. Black earrings were bought at 14*d.* the dozen, and sold at a loss at 1*d.* each. So were children's trap-bats, and monkeys up sticks, but they are now 9*d.* a dozen. Sometimes, sir, as I know, the master of a swag-barrow gets served out. You see, a man may once on a time have a good day, and take as much as 2*l.* Well, next day he'll use part of that money, and go as a penny swag on his own account; or else he'll buy things he is sold out of, and work them on his own account on

his master's barrow. All right, sir; his master makes him a convenience for his own pocket, and so his master may be made a convenience for the man's. When he takes the barrow back at the week's end, if he 's been doing a little on his own dodge, there's the stock, and there's the money. It's all right between a rich man and a poor man that way; turn and turn about 's fair play."

The lot-sellers are, when the whole body are in London, about 200 in number; but they are three times as itinerant into the country as are the traders in the heavier and little portable swag-barrows. The lot-sellers nearly all vend their goods from trays slung from their shoulders. The best localities for the lot-sellers are Ratcliffe-highway, Commercial-road, Whitechapel, Minories, Tower-hill, Tooley-street, Newington-causeway, Walworth, Blackfriars and Westminster-roads, Long-acre, Holborn, and Oxford-street. To this list may be added the Brill, Tottenham-court-road, and the other street-markets, on Saturday evenings, when some of these places are almost impassable. The best places for the swag-barrow trade are also those I have specified. Their customers, alike for the useful and fancy articles, are the working-classes, and the chief sale is on Saturdays and Mondays. One swag-man told me that he thought he could sell better if he had a less crowded barrow, but his master was so keen of money that he *would* make him try everything. It made selling more tiresome, too, he said, for a poor couple who had a penny or two to lay out would fix on half the things they saw, and change them for others, before they parted with their money.

Of the penny-a-piece sellers trading on their own account, the receipts may be smaller than those of the men who work the huge swag-barrows on commission, but their profits are greater. Calculating that 100 of these traders are, the year round, in London (some are absent all the summer at country fairs, and on any favourable opportunity, while a number of swag-barrowmen leave that employment for costermongering on their own account), and that each takes 2*l.* weekly, we find no less than 10,400*l.* thus expended in the streets of London in a year.

The lot-sellers also resort largely to the country, and frequently try other callings, such as the sale of fruit, medals, &c. Some also sell lots only on Saturday and Monday nights. Taking these deductions into consideration, it may be estimated that only fifty men (there is but one female lot-seller on her own account) carry on the trade, presuming it to be spread over the six days of the week. Each of them may take 13*s.* weekly (with a profit of 7*s.* 6*d.*), so showing the street outlay to be 1190*l.* The "lots" are bought at the German and English swag-shops; the principal supply, however, is procured from Black Tom in Clerkenwell.

Of the Street-Sellers of Roulette Boxes.

In my account of the street-trade in "China ornaments" I had occasion to mention a use to which a roulette box, or portable roulette table, was put. I need only repeat in this place that the box (usually of mahogany) contains a board, with numbered partitions, which is set spinning, by means of a central knob, on a pivot; the lid is then placed on the box, a pea is slipped through a hole in the lid, and on the number of the partition in which the pea is found deposited, when the motion has ceased, depends the result. The table, or board, is thus adapted for the determination of that mode of raising money, popular among costermongers and other street-folk, who in their very charities crave some excitement; I mean a "raffle;" or it may be used for play, by one or more persons, the highest number "spun" determining the winner. These street-sold tables may still be put to another use: In the smaller sort, "going no higher than fourteen," one division is blank. Thus any one may play against another, or several others spinning in turns, the "blank" being a chance in the "banker's" favour. Some of the tables, however, are numbered as high as 36, or as a seller of them described it, "single and double zero, bang; a French game."

This curious street-trade has been carried on for seven years, but with frequent interruptions, by one man, who, until within these few weeks, was the sole trader in the article. There are now but two selling roulette-boxes at all regularly. The long-established salesman wears mustachios, and has a good deal the look of a foreigner. During his seven years' experience he has sold, he calculates, 12,000 roulette-boxes, at a profit of from 175*l.* to 200*l.* The prices (retail) are from 1*s.* to 2*l.*, at which high amount my informant once disposed of "a roulette" in the street. He has sold, however, more at 1*s.* than at all other rates together. The "shilling roulette" is about three inches in diameter; the others proportionately larger. These wares are German made, bought at a swag-shop, and retailed at a profit of from 15 to 33 per cent. They are carried in a basket, one being held for public examination in the vendor's hand.

"My best customers," said the experienced man in the business, "are stock-brokers, travellers, and parsons; people that have spare time on their hands. O, I mean by 'travellers,' gentlemen going on a railway who pass the time away at roulette. Now and then a regular 'leg,' when he's travelling to Chester, York, or Doncaster, to the races, may draw other passengers into play, and make a trifle, or not a trifle, by it; or he will play with other legs; but it's generally for amusement, I've reason to believe. Friends travelling together play for a trifle to pass away time, or who shall pay for breakfasts for two, or such like. I supplied one gaming-house with a large roulette-table made of a substance that if you throw it into water—and there's always a pail of 'tepid' ready—would dissolve very quickly. When it's not used it's hung against the wall and is so made that it looks to be an oil-painting framed. It cost them 10*l.* I suppose I have the 'knock' of almost every gaming-house in London. There's plenty of them still. The police can drive such as me about in the streets or out of the streets to

starve, but lords, and gentlemen, and some parsons, I know, go to the gaming-houses, and when one's broke into by the officers—it's really funny—John Smith, and Thomas Jones, and William Brown are pulled up, but as no gaming implements are found, there's nothing against them. Some of these houses are never noticed for a long time. The 'Great Nick' hasn't been, nor the 'Little Nick.' I don't know why they're called 'Nicks,' those two; but so they are. Perhaps after Old Nick. At the Great Nick I dare say there's often 1000*l.* depending. But the Little Nick is what we call only 'brown papermen,' low gamblers—playing for pence, and 1*s.* being a great go. I wonder the police allow *that.*"

Of the Street-Sellers of Poison for Rats.

The number of Vermin-Destroyers and Rat-Catchers who ply their avocation in London has of late years become greatly diminished. One cause which I heard assigned for this was that many ruinous old buildings and old streets had been removed, and whole colonies of rats had been thereby extirpated. Another was that the race of rat-catchers had become distrusted, and had either sought some other mode of subsistence, or had resorted to other fields for the exercise of their professional labours.

The rat-catcher's dress is usually a velveteen jacket, strong corduroy trowsers, and laced boots. Round his shoulder he wears an oil-skin belt, on which are painted the figures of huge rats, with fierce-looking eyes and formidable whiskers. His hat is usually glazed and sometimes painted after the manner of his belt. Occasionally—and in the country far more than in town—he carries in his hand an iron cage in which are ferrets, while two or three crop-eared rough terriers dog his footsteps. Sometimes a tamed rat runs about his shoulders and arms, or nestles in his bosom or in the large pockets of his coat. When a rat-catcher is thus accompanied, there is generally a strong aromatic odour about him, far from agreeable; this is owing to his clothes being rubbed with oil of thyme and oil of aniseed, mixed together. This composition is said to be so attractive to the sense of the rats (when used by a man who understands its due apportionment and proper application) that the vermin have left their holes and crawled to the master of the powerful spell. I heard of one man (not a rat-catcher professionally) who had in this way tamed a rat so effectually that the animal would eat out of his mouth, crawl upon his shoulder to be fed, and then "smuggle into his bosom" (the words of my informant) "and sleep there for hours." The rat-catchers have many wonderful stories of the sagacity of the rat, and though in reciting their own feats, these men may not be the most trustworthy of narrators, any work on natural history will avouch that rats *are* sagacious, may be trained to be very docile, and are naturally animals of great resources in all straits and difficulties.

One great source of the rat-catcher's employment and emolument thirty years ago, or even to a later period, is now comparatively a nonentity. At that time the rat-catcher or killer sometimes received a yearly or quarterly stipend to keep a London granary clear of rats. I was told by a man who has for twenty-eight years been employed about London granaries, that he had never known a rat-catcher employed in one except about twenty or twenty-two years ago, and that was in a granary by the river-side. The professional man, he told me, certainly poisoned many rats, "which stunk so," continued my informant—but then all evil odours in old buildings are attributed to dead rats—"that it was enough to infect the corn. He poisoned two fine cats as well. But I believe he was a young hand and a bungler." The rats, after these measures had been taken, seem to have deserted the place for three weeks or a month, when they returned in as great numbers as ever; nor were their ravages and annoyances checked until the drains were altered and rebuilt. It is in the better disposition of the drains of a corn-magazine, I am assured, that the great check upon the inroads of these "varmint" is attained—by strong mason work and by such a series and arrangement of grates, as defy even the perseverance of a rat. Otherwise the hordes which prey upon the garbage in the common sewers, are certain to find their way into the granary along the drains and channels communicating with those sewers, and will increase rapidly despite the measures of the rat-catcher.

The same man told me that he had been five or six times applied to by rat-catchers, and with liberal offers of beer, to allow them to try and capture the black rats in the granary. One of these traders declared that he wanted them "for a gent as vas curous in them there hinteresting warmint;" But from the representations of the other applicants, my informant was convinced that they were wanted for rat-hunts, the Dog Billy being backed for 100*l.* to kill so many rats in so many minutes. "You see, sir," the corn merchant's man continued, "ours is an old concern, and there's black rats in it, great big fellows; some of 'em must be old, for they 're as white about the muzzle as is the Duke of Wellington, and they have the character of being very strong and very fierce. One of the catchers asked me if I knew what a stunning big black rat would weigh, as if I weighed rats! I always told them that I cared nothing about rat-hunts and that I knew our people wouldn't like to be bothered; and they was gentlemen that didn't admire sporting characters."

The black rat, I may observe, or the English rat, is now comparatively scarce, while the brown, or Hanoverian, rat is abundant. This brown rat seems to have become largely domiciled in England about the period of the establishment of the Hanoverian dynasty; whence its name. "A Hanover rat" was a term of reproach applied by the Jacobites to the successful party.

The rat-catchers are also rat-killers. They destroy the animals sometimes by giving them what is called in the trade "an alluring poison." Every professional destroyer, or capturer, of rats will pretend that as to poison he has his own particular method—his secret—his discovery. But

there is no doubt that arsenic is the basis of all their poisons. Its being inodorous, and easily reducible to a soft fine powder, renders it the best adapted for mixing with anything of which rats are fond—toasted cheese, or bacon, or fried liver, or tallow, or oatmeal. Much as the poisoner may be able to tempt the animal's appetite, he must, and does, proceed cautiously. If the bait be placed in an unwonted spot, it is often untouched. If it be placed where rats have been accustomed to find their food, it is often devoured. But even then it is frequently accounted best to leave the bait unpoisoned for the first night; so that a hungry animal may attack it greedily the second. With oatmeal it is usual to mix for the first and even second nights a portion of pounded white sugar. If this be eaten it accustoms the jealous pest to the degree of sweetness communicated by arsenic. The "oatmeal poison" is, I am told, the most effectual; but even when mixed only with sugar it is often refused; as "rats is often better up to a dodge nor Kirstians" (Christians).

Another mode of killing rats is for the professional destroyer to slip a ferret into the rats' haunts wherever it is practicable. The ferret soon dislodges them, and as they emerge for safety they are seized by terriers, who, after watching the holes often a long time, and very patiently, and almost breathlessly, throttle them silently, excepting the short squeak, or half-squeak, of the rat, who, by a "good dog," is seized unerringly by the part of the back where the terrier's gripe and shake is speedy death; if the rat still move, or shows signs of life, the well-trained rat-killer's dog cracks the vermin's skull between his teeth.

If the rats have to be taken alive, they are either trapped, so as not to injure them for a rat-hunt (or the procedure in the pit would be accounted "foul"), or if driven out of their holes by ferrets, they can only run into some cask, or other contrivance, where they can be secured for the "sportsman's" purposes. Although any visible injury to the body of the rat will prevent its reception into a pit, the creatures' teeth are often drawn, and with all the cruelty of a rough awkwardness, by means of pinchers, so that they may be unable to bite the puppies being trained for the pit on the rats. If the vermin be not truly seized by the dog, the victim will twist round and inflict a tremendous bite on his worrier, generally on the lip. This often causes the terrier to drop his prey with a yell, and if a puppy he may not forget the lesson from the sharp nip of the rat. To prevent this it is that the rat-catchers play the dentist on their unfortunate captives.

I heard many accounts of the "dodges" practised by, or imputed to, the rat-catchers: that it was not a very unusual thing to deposit here and there a dead rat, when those vermin were to be poisoned on any premises; it is then concluded that the good poison has done its good work, and the dead animal supplies an ocular demonstration of professional skill. These men, also, I am informed, let loose live rats in buildings adapted for the purpose, and afterwards apply for employment to destroy them.

I am informed that the principal scene of the rat-catcher's labours in London is at the mews, and in private stables, coach-houses, and out-buildings. It is probable that the gentlemen's servants connected with such places like the excitement of rat-hunting, and so encourage the profession which supplies them with that gratification. In these places such labours are often necessary as well as popular; for I was informed by a coachman, then living with his family in a West End mews, and long acquainted with the mews in different parts of town, that the drainage was often very defective, and sanitary regulations —except, perhaps, as regarded the horses—little cared for. Hence rats abounded, and were with difficulty dislodged from their secure retreats in the ill-constructed drains and kennels.

The great sale of the rat-catchers is to the shops supplying "private parties" with rats for the amusement of seeing them killed by dogs. With some "fast" men, one of these shopkeepers told me, it was a favourite pastime in their own rooms on the Sunday mornings. It is, however, somewhat costly if carried on extensively, as the retail charge from the shops is 6*d.* per rat. The price from the catcher to the dealer is from 2*s.* 6*d.* to 7*s.* the dozen. Rats, it appears, are sometimes scarce, and then the shopkeeper must buy, "to keep up his connection," at enhanced cost. One large bird-seller, who sold also plain and fancy rats, white mice, and live hedgehogs, told me that he had, last winter, been compelled to give 7*s.* a dozen for his vermin and sell them at 6*d.* each.

The grand consumption of rats, however, is in Bunhill-row, at a public-house kept by a pugilist. A rat-seller told me that from 200 to 500 rats were killed there weekly, the weekly average being, however, only the former number; while at Easter and other holidays, it is not uncommon to see bills posted announcing the destruction of 500 rats on the same day and in a given time, admittance 6*d.* Dogs are matched at these and similar places, as to which kills the greatest number of these animals in the shortest time. I am told that there are forty such places in London, but in some only the holiday times are celebrated in this small imitation of the beast combats of the ancients. There is, too, a frequent abandonment of the trade in consequence of its "not paying," and perhaps it may be fair to estimate that the average consumption of this vermin-game does not exceed, in each of these places, 20 a week, or 1040 in a year; giving an aggregate—over and above those consumed in private sport —of 52,000 rats in a year, or 1000 a week in public amusement alone.

To show the nature of the sport of rat-catching, I print the following bill, of which I procured two copies. The words and type are precisely the same in each, but one bill is printed on good and the other on very indifferent paper, as if for distribution among distinct classes. The concluding announcement, as to the precise moment at which

killing will commence, reads supremely business-like :—

RATTING FOR THE MILLION!

A SPORTING GENTLEMAN, Who is a Staunch Supporter of the destruction of these VERMIN WILL GIVE A

GOLD REPEATER WATCH,

TO BE KILLED FOR BY

DOGS Under 13¾ *lbs. Wt.*

15 *RATS EACH!*

TO COME OFF AT JEMMY MASSEY'S, KING'S HEAD, COMPTON ST., SOHO,

On Tuesday, May 20, 1851.

☞ To be Killed in a Large Wire Pit. A chalk Circle to be drawn in the centre for the Second.—Any Man touching Dog or Rats, or acting in any way unfair his dog will be disqualified.

TO GO TO SCALE AT Half past 7 KILLING TO COMMENCE At Half past 8 PRECISELY.

A dealer in live animals told me that there were several men who brought a few dozens of rats, or even a single dozen, from the country; men who were not professionally rat-catchers, but worked in gardens, or on farms, and at their leisure caught rats. Even some of the London professional rat-catchers work sometimes as country labourers, and their business is far greater, in merely rat-catching or killing, in the country than in town. From the best information I could command, there are not fewer than 2000 rats killed, for sport, in London weekly, or 104,000 a year, including private and public sport, for private sport in this pursuit goes on uninterruptedly; the public delectation therein is but periodical.

This calculation is of course exclusive of the number of rats *killed* by the profession, "on the premises," when these men are employed to "clear the premises of vermin."

There are, I am told, 100 rat-catchers resorting, at intervals, to London, but only a fourth of that number can be estimated as carrying on their labours regularly in town, and their average earnings, I am assured, do not exceed 15*s.* a week; being 975*l.* a year for London merely.

These men have about them much of the affected mystery of men who are engaged on the turf. They have their "secrets," make or pretend to "make their books" on rat fights and other sporting events; are not averse to drinking, and lead in general irregular lives. They are usually on intimate terms with the street dog-sellers (who are much of the same class). Many of the rat-catchers have been brought up in stables, and there is little education among them. When in London, they are chiefly to be found in Whitechapel, Westminster, and Kent-street, Borough; the more established having their own rooms; the others living in the low lodging-houses. None of them remain in London the entire year.

These men also sell rat-poison (baked flour or oatmeal sometimes) in cakes, arsenic being the ingredient. The charge is from 2*d.* to 1*s.*, "according to the circumstances of the customer." In like manner the charge for "clearing a house of vermin" varies from 2*s.* to 1*l.*: a very frequent charge is 2*s.* 6*d.*

OF THE STREET-SELLERS OF RHUBARB AND SPICE.

FROM the street-seller whose portrait has already been given I received the following history. He appeared to be a very truthful and kindly-disposed old man :—

"I am one native of Mogadore in Morocco. I am an Arab. I left my countree when I was sixteen or eighteen year of age. I forget, sir. I don't know which, about eighteen, I tink it was. My fader was like market man, make de people pay de toll—he rent de whole market, you see, from de governemen, and make de people pay so much for deir stands. I can't tell you what dey call dem dere. I couldn't recollect what my fader pay for de market; but I know some of de people pay him a penny, some a ha'penny, for de stands. Dere everyting sheap, not what dey are here in England. Dey may stop all day for de toll or go when de market is over. My fader was not very rish—not very poor—he keep a family. We have bread, meat, shicken, apples, grapes, all de good tings to eat, not like here—tis de sheapest countree in de world. My fader have two wifes, not at once you know, he bury de first and marry anoder. I was by second wife. He have seven shildren by her, four sons and tree daughters. By de first I tink dere was five, two sons and tree daughters. Bless you, by de time I was born dere was great many of 'em married and away in de world. I don't know where dey are now. Only one broder I got live for what I know, wheder de oders are dead or where dey are I can't tell. De one broder I speak of is in Algiers now; he is dealer dere. What led me to come away, you say? Like good many I was young and foolish; like all de rest of young people, I like to see foreign countries, but you see in my countree de governemen don't like de people to come away, not widout you pay so mush, so Gibraltar was de only port I could go to, it was only one twenty miles across de water—close to us. You see you go to Gibraltar like smuggling—you smuggle yourself—you talk wid de Captain and he do it for you.

"My fader been dead years and years before I come away, I suppose I was about ten year old when he die. I had been at school till time I was grown up, and after dat I was shoemaker. I make de slippers. Oh yes! my moder was alive den—she was dead when I was here in England. I get about one penny a pair for de slippers in my countree; penny dere as good as shilling here amost. I could make tree, four, five pair in one day. I could live on my gains den better dan what I could do here wid twelve times as mush—

dat time I could. I don't know what it is now. Yes, my moder give me leave to go where I like. She never see me since" (sighing). "Oh yes, I love her very mush. I am old man now, but I never forgot her yet;" here the old man burst into tears and buried his face in his handkerchief for several minutes. "No, no! she don't know when I come away dat she never see me again, nor me neider. I tell I go Gibraltar, and den I tell her I go to Lisbon to see my broder, who was spirit merchant dere. I didn't say noting not at all about coming back to her, but I tought I should come back soon. If I had tought I never see no more, not all de gold in de world take me from her. She was good moder to me. I was de youngest but one. My broders kept my moder, you see. Where I came from it is not like here, if only one in de family well off, de oders never want for noting. In my country, you see, de law is you must maintain your fader and moder before you maintain your own family. You must keep dem in de house." Here he repeated the law in Hebrew. "De people were Mahomedans in Mogadore, but we were Jews, just like here, you see. De first ting de Jews teesh de shildren is deir duty to deir faders and deir moders. And dey love one anoder more than de gold; but dey love de gold more dan most people, for you see gold is more to dem. In my countree de governemen treat de Jews very badly, so de money all de Jews have to help dem. Often de government in my country take all deir money from de Jews, and kill dem after, so de Jews all keep deir money in secret places, put de gold in jars and dig dem in de ground, and de men worths hundreds go about wid no better clothes dan mine.

"Well, you see I leave my poor moder, we kissed one anoder, and cry for half an hour, and come away to Gibraltar. When I get dere, my broder come away from Lisbon to Gibraltar; dat time it was war time, and de French was coming to Lisbon, so everybody run. When I come away from Mogadore, I have about one hundred dollars—some my moder give me, and some I had save. When I got to Gibraltar, I begin to have a little stand in de street wid silk handkershiefs, cotton handkershiefs, shop goods you know. I do very well wid dat, so after I get licence to hawk de town, and after dat I keep shop. Altogeder, I stop in Gibraltar about six year. I had den about five or six hundred dollars. I live very well all de time I dere. I was wid my broder all de time. After I am six year in Gibraltar, I begin to tink I do better in England. I tink, like good many people, if I go to anoder part dat is risher—'t is de rishest countree in de world—I do better still. So I start off, and get I here I tink in 1811, when de tree shilling pieces first come out. I have about one hundred and tirty pound at dat time. I stop in London a good bit, and eat my money; it was most done before I start to look for my living. I try to look what I could do, but I was quite stranger you see. I am about fourteen or fifteen month before I begin to do anyting. I go to de play house; I see never such tings as I see here before I come. When I come here, I tink I am in heaven altogether—God a'mighty forgive me—such sops (shops) and such beautiful tings. I live in Mary Axe Parish when I first come; same parish where I live now. Well, you see some of my countreemen den getting good living by selling de rhubarb and spices in de street. I get to know dem all; and dat time you see was de good time, money was plenty, like de dirt here. Dat time dere was about six or seven Arabians in de street selling rhubarb and spices, five of 'em was from Mogadore, and two from not far off; and dere is about five more going troo de country. Dey all sell de same tings, merely rhubarb and spice, dat time; before den was good for tem tings—after dat dey get de silks and tings beside. I can't tell what first make dem sell de rhubarb and de spice; but I tink it is because people like to buy de Turkey rhubarb of de men in de turbans. When I was little shild, I hear talk in Mogadore of de people of my country sell de rhubarb in de streets of London, and make plenty money by it.

"Dere was one very old Arabian in de streets wen I first come; dey call him Sole; he been forty year at de same business. He wear de long beard and Turkish dress. He used to stand by Bow Shursh, Sheapside. Everybody in de street know him. He was de old establish one. He been dead now, let me see—how long he been dead—oh, dis six or seven and twenty year. He die in Gibraltar very poor and very old—most ninety year of age. All de rhubarb-sellers was Jews. Dere was anoder called Ben Aforiat, and two broders; and anoder, his name was Azuli. One of Aforiat's broders use to stand in St. Paul's Shurshyard. He was very well know; all de oders hawk about de town like I do myself. Now dey all gone dead, and dere only four of us now in England; dey all in London, and none in de country. Two of us live in Mary Axe, anoder live in, what dey call dat—Spitalfield, and de oder in Petticoat-lane. De one wat live in Spitalfield is old man, I dare say going for 70. De one in Petticoat-lane not mush above 30. I am little better dan 73, and de oder wat live in Mary Axe about 40. I been de longest of all in de streets, about tirty-eight or tirty-nine year. All dat was here when I first come, die in London, except dat old man Sole wat I was telling you of, dat die in Gibraltar. About tirteen or fourteen die since I come to England; some die in de Hospital of de Jews at Mile End; some die at home—not one of dem die worth no money. Six of dem was very old people, between 60 and 70; dere was some tirty, some forty. Some of dem die by inshes. Dere was one fine fellow, he was six foot two, and strong man, he take to his bed and fall away so; at last you see troo his hand; he was noting but de carcase; oders die of what you call de yellow jaundice; some have de fever, but deir time was come; de death we must be.

"When I first come to dis countree me make plenty of money by selling de rhubarb in de street. Five-and-twenty year ago I make a pound a day

HARVARD UNIVERSITY

some time. Take one week wid another, I dare say I clear, after I pay all de cost of my living, tirty shillings; and now, God help me, I don't make not twelve shilling a week, and all my food to pay out of dat. One week wid anoder, when I go out I clear about twelve shilling. Everyting is so sheep now, and dere is so many sops (shops), people has no money to buy tings with. I could do better when everyting was dear. I could live better, get more money, and have more for it. I have better food, better lodging, and better clothes. I don't know wat is de cause, as you say. I only know dat I am worse, and everybody is worse; dat is all I know. Bread is sheeper, but when it was one and ninepence de loaf I could get plenty to buy it wid, but now it is five pence, I can't no five pence to have it. If de cow is de penny in de market what is de use of dat, if you can't get no penny to buy him? After I been selling my rhubarb for two years, when I fust come here, I save about a hundred and fifty pound, and den you see I agree wid tree oder of my countrymen to take a sop (shop) in Exeter. De oder tree was rhubarb-sellers, like myself, and have save good bit of money as well. One have seven hundred pound; but he have brought tree or four hundred pound wid him to dis countree. Anoder of de tree have about two hundred, and de oder about one hundred; dey have all save deir money out of de rhubarb. We keep our sop, you see, about five year, and den we fall in pieces altogeder. We take and trust, and lose all our money. T'oders never keep a sop before, and not one of us was English scholar; we was forced to keep a man, and dat way we lose all our money, so we was force to part, and every one go look for hisself. Den we all go selling rhubarb again about de country, and in London; and I never able to hold up my head since. When I come back to de rhubarb times is getting bad, and I not able to save no more money. All I am worth in de world is all I got in my box, and dat altogether is not more dan ten shilling. Last week I havn't a pound of meat in de house, and I am obliged to pawn my waistcoat and handkerchief to get me some stock. It easy to put dem in, but very hard to get dem out.

"I had two wives. After two or tree year when I come I marry my first. I had two shildren by my first, but both of dem die very young; one was about five year old and de oder about tree. When I travel the countree, my first wife she go wid me everywhere. I been to all parts — to Scotland, to Wales, but not Ireland. I see enough of dem Irish in dis countree, I do no want no more of dem dere. Not one of my countree I tink ever been to Ireland, and only one beside myself been to Scotland; but dat no use, de Scotsh don't know wat de spice is. All de time I am in Scotland I can't get no bread, only barley and pea meal, and dat as sour as de winegar—and I can't get no flour to make none too—so I begin to say, by God I come to wrong countree here. When I go across de countree of England I never live in no lodging-houses—always in de public—because you see I do business dere; de missus perhaps dere buy my spices of me. I lodge once in Taunton, at a house where a woman keep a lodging-house for de Jewish people wat go about wid de gold tings—de jewellery. At oder towns I stop at de public, for dere is de company, and I sell my tings.

"I buy my rhubarb and my spice of de large warehouse for de drugs; sometime I buy it of my countreemen. We all of us know de good spice from de bad. You look! I will show you how to tell de good nutmeg from de bad. Here is some in de shell: you see, I put de strong pin in one and de oil run out; dat is because dey has not been put in de spirit to take away de oil for to make de extract. Now, in de bad nutmeg all de oil been took out by de spirit, and den dere is no flavour, like dose you buy in de sheep sops (cheap shops). I sell de Rhubarb, East Indy and Turkey, de Cloves, Cinnamons, Mace, Cayenne Pepper, White Pepper—a little of all sorts when I get de money to buy it wid. I take my solemn oat I never sheat in scales nor weight; because de law is, 'take weight and give weight,' dat is judge and justice. Dere is no luck in de sort weight—no luck at all. Never in my life I put no tings wid my goods. I tell you de troot, I grind my white pepper wid my own hands, but I buy me ginger ground, and *dat* is mixed I know. I tink it is pea flour dey put wid it, dere is no smell in dat, but it is de same colour—two ounces of ginger will give de smell to one pound of pea flour. De public-houses *will* have de sheap ginger and dat I buy. I tell you de troot. How am I tell what will become of me. Dat is de Almighty's work" (here he pointed to Heaven). "De Jews is very good to deir old people. If it was not for my old woman I be like a gentleman now in de hospital at Mile End; but you see, I marry de Christian woman, and dat is against our people—and I would never leave her—no not for all de good in de world to come to myself. If I am poor, I not de only one. In de holiday times I send a petition, and perhaps dere is five shillings for me from de hospital. In de Jews' Hospital dere is only ten—what you call de Portuguese Jews. We have hospital to our ownselves. Dere de old people — dey are all above sixty—are all like noblemen, wid good clothes, plenty to eat, go where you like, and pipe of tobacco when you want. But I wont go in no hospital away from my old woman. I will get a bit of crust for her as long as I can stand—but I can hardly do that now. Every one got his feeling, and I will feel for her as long as I live. When dere is de weather I have de rheumatis—oh! very bad—sometime I can scarcely stand or walk. I am seventy-tree, and it is a sad time for me now. I am merry sometime tho'. Everyting wid de pocket. When de pocket is merry, den I am merry too. Sometime I go home wid one shilling, and den I tink all gets worse and worse, and what will become of me I say—but dat is de Almighty's work, and I trust in him. Can I trust any better one? Sometime I say I wish I was back in my countree—and I tink of my poor moder wat is dead now, and den I am very sad. Oh yes, bless your heart, very sad indeed!"

The old man appears to sell excellent articles, and to be a very truthful, fair-dealing man.

OF THE HAWKING OF TEA.

"PERSONS hawking tea without a licence" (*see* Chitty's Edition of "Burn's Justice," vol. ii. p. 1113) "are liable to a penalty, under 50 Geo. III., cap. 41.; and, even though they had a licence, they would be liable to a penalty for selling tea in an unentered place." The penalty under this act is 10*l.*, but the prohibition in question has long been commonly, if not very directly, evaded.

The hawking of tea in London cannot be considered as immediately a street-trade, but it is in some respects blended with street callings and street traffic, so that a brief account is necessary.

I will first give a short history of what is, or was, more intimately a portion of the street-trade.

Until about eight or ten years ago, tea was extensively hawked—from house to house almost—"on tally." The tally system is, that wherein "weekly payments" are taken in liquidation of the cost of the article purchased, and the trade is one embodying much of evil and much of trickery. At the present time the tallymen are very numerous in London, and in the tally trade there are now not less than 1000 hawkers of, or travellers in, tea; but they carry on their business principally in the suburbs. When I come to treat of the class whom I have called "distributors," I shall devote an especial inquiry to the tally trade, including, of course, the tea trade. Mr. M'Culloch mentions that a Scotchman's "tally-walk"—and the majority of the tallymen are Scotchmen—is worth 15 per cent. more than an Englishman's.

The branch of the tea trade closely connected with the street business is that in tea-leaves. The exhausted leaves of the tea-pot are purchased of servants or of poor women, and they are made into "new" tea. One gentleman—to whose information, and to the care he took to test the accuracy of his every statement, I am bound to express my acknowledgments—told me that it would be fair to reckon that in London 1500 lbs. of tea-leaves were weekly converted into new tea, or 78,000 lbs. in the year! One house is known to be very extensively and profitably concerned in this trade, or rather *manufacture*, and on my asking the gentleman who gave me the information if the house in question (he told me the name) was accounted respectable by their fellow-citizens, the answer was at once, "*Highly* respectable."

The *old* tea-leaves, to be converted into *new*, are placed by the manufacturers on hot plates, and are re-dried and *re-dyed*. To give the "green" hue, a preparation of copper is used. For the "black" no dye is necessary in the generality of cases. This tea-manufacture is sold to "cheap" or "slop" shopkeepers, both in town and country, and especially for hawking in the country, and is almost always sold ready mixed.

The admixture of sloe-leaves, &c., which used to be gathered for the adulteration of tea, is now unknown, and has been unknown since tea became cheaper, but the old tea-leaf trade is, I am assured, carried on so quietly and cleverly, that the most vigilant excise-officers are completely in the dark; a smaller "tea-maker" was, however, fined for tea-leaf conversion last year.

Into this curious question, concerning the purposes for which the old tea-leaves are now purchased by parties in the street, I shall enter searchingly when I treat of the *street-buyers*. The information I have already received is of great curiosity and importance, nor shall I suppress the names of those dishonest traders who purchase the old dried tea-leaves, as a means of cheating their customers.

Into the statistics of this strange trade I will not now enter, but I am informed that great quantities of tea-leaves are sent from the country to London. Perhaps of the 1500 lbs. weekly manufactured, three quarters may be collected in the metropolis.

I may here add, that the great bulk of the tea *now* hawked throughout the metropolis is supplied from the handsome cars, or vans, of well-known grocers and tea-dealers. Of these—it was computed for me—there are, on no day, fewer than 100 in the streets of London, and of its contiguous and its more remote suburbs, such as Woolwich, and even Barnet. One tradesman, has six such cars. The tea is put up in bags of 7, 14, and 21 lbs., duly apportioned in quarter, half, and whole pounds; a quarter of a pound being the smallest quantity vended in this manner. The van and its contents are then entrusted to a driver, who has his regular round, and very often his regular customers. The customers purchase the tea from their faith in the respectability of the firm—generally well known through extensive advertising. The teas *are* supplied by the house which is pronounced to supply them; for the tradesman is the capitalist in the matter, his carman is the labourer, and the house is responsible for the quality of the article. When a new connection has to be formed, or an "old connection" to be extended, circulars (*bonâ fide*) are sent round, and the carman afterwards calls: and, "in some genteel streets," I was told, "calls, oft enough, at every house, and, in many districts, at every decent-looking house in every street." So far, then, even this part of the traffic may be considered one of the streets. The remuneration of the street-traveller in, or hawker of, tea, is usually 1*d.* per lb. on the lower-priced kinds, 2*d.* on the higher (but more often 1*d.*) and, very rarely indeed, 3*d.* on the highest. The trade is one peculiar to great cities—and most peculiar, I am assured, to London—for the tradesman does not know so much as the name of his customer; nor, perhaps, does the carman, but merely as "Number such-an-one." The supply is for ready money, or, if credit be given, it is at the risk of the carman, who has a weekly wage in addition to his perquisites. Every evening, when the vehicle is driven back to the premises of its owner, "stock is taken," and the money taken by the carman—

minus what may be called the "poundage"—is paid over to the proper party.

A man who had driven, or, as he called it, "managed," one of these vans, told me that he made this way, 2s. to 2s 6d. a day; "but," he added, "if you make a good thing of it that way, you have all the less salary." These carmen are men of good character and good address, and were described to me, by a gentleman familiar with the trade, as "of the very best class of porters."

As this vehicular-itinerant business has now become an integral part of the general tea-trade, I need not further dwell upon it, but reserve it until I come to treat of the shopmen of grocers and tea-dealers, and thence of the tea-trade in general. I may add, however, that the tea thus hawked is, as regards, perhaps, three-fourths of the quantity sold, known as "mixed," and sold at 4s. per lb.—costing, at a tea-broker's, from 2s. 11d. to 3s. 3d. It is announced, as to its staple or entire compound, to be "congou," but is in reality a tea known as "pouchong." Some old ladies are still anxious, I was told, for a cup of good strong bohea; and though bohea has been unknown to the tea-trade since the expiration of the East India Company's Charter in 1834, the accommodating street-traveller will undertake to supply the genuine leaf to which the old lady had been so long accustomed. The green teas thus sold (and they are not above a fiftieth part of the other) are common twankays and common young hysons, neither of them—I can state on excellent authority—accounted in the trade to be "true teas," but, as in the case of some other green teas, "Canton made." The "green" is sold from the vans generally at 4s. 6d.; sometimes, but rarely, as high as 5s. 6d. What is sold at 4s. 6d. may cost, on the average, 3s. 5d. I may add, also, that when a *good* article is supplied, such profits in the tea-trade are not accounted at all excessive.

But the more usual mode of tea hawking is by itinerant dealers who have a less direct connection with the shop whereat they purchase their goods. To this mode of obtaining a livelihood, the hawkers are invited by all the persuasive powers of advertising eloquence: "To persons in want of a genteel and lucrative employment"—"To Gentlemen of good address and business habits," &c., &c. The genteel and lucrative employment is to hawk tea under the auspices of this "company" or the other. The nature of this business, and of the street tea-trade generally, is shown in the following statement:—"About twelve years ago I came to London in expectation of a situation as tide-waiter; I did not succeed, however, and not being able to obtain any other employment, and trusting to the promises of gentlemen M.P.s for too long a time, my means were exhausted, and I was at length induced to embark in the tea business. To this I was persuaded by a few friends who advanced me some money, considering that it would suit me well, while my friends would endeavour to get me a connection, that is, procure me customers. I accordingly went to a well-known Tea Company in the City, a firm bearing a great name. Their advertisements put forth extraordinary statements, of so many persons realizing independencies from selling their teas, and in very short spaces of time. I was quite pleased at the prospect presented to me in such glowing terms, and, depending not a little on my own industry and perseverance, I embraced the opportunity and introduced myself forthwith to the Company. They advised me in the first place to take out a licence for selling teas, to secure me against any risk of fines or forfeitures. The cost of a licence, after payment of 2s. 11½d. preliminary expenses, is 11s. per annum, to be paid quarterly, as it becomes due, and it is paid by the Company for their agents. The licence is granted for the place of abode of the 'traveller,' and strictly prohibits him from hawking or exposing his wares for sale at places other than at such place of abode, but he may of course supply his customers where he will, and serve them at their places of abode respectively. Everything thus prepared, I commenced operations, but soon found that this tea dealing was not so advantageous as I had anticipated. I found that the commission allowed by the Company on cheap teas was very low. For those generally used by the working people, '4s. tea,' for instance, or that at 4s. per pound, I had to pay to the Company 3s. 6d. per pound, thus allowing the travelling dealer or agent for commission only 6d. in the pound, or 1½d. per quarter. Now 80 or 100 customers is considered a fair connection for a dealer, and allowing each customer to take a quarter of a pound at an average, 80 good customers at that rate would bring him in 10s., or 100 customers 12s. 6d. clear profit weekly. But many customers do not require so much as a quarter of a pound weekly, while others require more, so that I find it rather awkward to subdivide it in portions to suit each customer, as the smallest quantity made at the warehouse is a quarter of a pound, and every quarter is done up in a labelled wrapper, with the price marked on it. So that to break or disturb the package in any way might cause some customers to suspect that it had been meddled with unfairly.

"Another disadvantage was in dealing with the 'Tea Company.' No sugars are supplied by them, which makes it more inconvenient for the travelling dealer, as his customers find it difficult to get sugars, most retail grocers having an objection to sell sugars to any but those who are purchasers of teas as well. However, I was not confined to deal with this Company, and so I tried other places, and found a City house, whose terms were preferable. Here I could get tea for 3s. 3d., as good as that for which the Company charged 3s. 6d., besides getting it done up to order in plain paper, and in quantities to suit every variety of customer. There were also sugars, which must be had to accommodate the customers, at whatever trouble or inconvenience to the traveller; for it is very lumbersome to carry about, and leaves scarcely any profit at all.

"The trade is anything but agreeable, and the customers are often exacting. They seem to fancy,

Original from HARVARD UNIVERSITY

however cheaply and well they may be supplied, that the tea-seller is under obligations to them; that their custom will be the making of him, and, therefore, they expect some compliment in return. The consequence is, that very often, unless he be willing to be accounted a 'shabby man,' the tea-dealer is obliged, of a Saturday night, to treat his customers, to ensure a continuance of their custom. Other customers take care to be absent at the time he calls. Those who are anxious to run up bills, perhaps, keep out of the way purposely for two or more successive nights of the dealer's calling, who, notwithstanding, cannot very well avoid serving such customers. This is another evil, and if the tea-man's capital be not sufficient to enable him to carry on the business in this manner, giving credit (for it is unavoidable), he is very soon insolvent, and compelled to give up the business. I had to give it up at last, after having carried it on for four years, leaving 8*l.* or 9*l.* due to me, in small sums, varying from 1*s.* to 10*s.*, one shilling of which I never expect to be paid. I could not have continued it so long, for my means would not allow me to give credit; but getting partial employment at the last-mentioned house, where I dealt, enabled me to do so. When, however, I got permanently employed, I grew tired of tea-dealing, and gave it up.

"In my opinion the business would best suit persons casually employed, such as dockmen and others, who might have leisure to go about; those also who get other commissions and hawk about other commodities, such as soft wares, might do very well by it; otherwise, in most cases, 't is only resorted to as a make-shift where no other employment can be obtained.

"I do not know how many persons are in the trade. I have, however, heard it asserted, that there were between 4000 and 5000 persons in London engaged in the business, who are, with but few exceptions, Scotchmen; they, of all others, manage to do the best *in this* line.

"A man, to undertake the tea business, requires a double capital, because in the first place, he has to purchase the tea, then he must give credit, and be able to support himself till such time as he can get in his money. Some of the tea-dealers manage to eke out their profits by mixing tea-leaves, which have been used, with the genuine commodity. They spread the old tea-leaves on tins which they have for the purpose, and, by exposing them either to the action of the air or the heat of the fire, the leaves crisp up as they had been before they were used, and are not distinguishable from the rest. I never vended such an article, and that may be one reason why I could not succeed in the business."

I believe the career thus detailed is a common one among the hawkers of tea, or rather the "travellers" in the tea trade. Many sell it on tally.

OF THE WOMEN STREET-SELLERS.

As the volume is now fast drawing to a close, and a specific account has been furnished of almost every description of street-*seller* (with the exception of those who are the *makers* of the articles they vend), I purpose giving a more full and general history and classification than I have yet done of the feminine portion of the traders in the streets.

The women engaged in street-sale are of all ages and of nearly all classes. They are, however, chiefly of two countries, England and Ireland. There are (comparatively) a few Jewesses, and a very few Scotchwomen and Welchwomen who are street-traders; and they are so, as it were, accidentally, from their connection, by marriage or otherwise, with male street-sellers. Of foreigners there are German broom-women, and a few Italians with musical instruments.

The first broad and distinctive view of the female street-sellers, is regarding them *nationally*, that is to say, either English or Irish women—two classes separated by definite characteristics from each other.

The Irishwomen — to avoid burthening the reader with an excess of subdivisions—I shall speak of generally; that is to say, as one homogeneous class, referring those who require a more specific account to the description before given of the street-sellers.

The Englishwomen selling in the streets appear to admit of being arranged into four distinct groups, viz. :—

1. The Wives of Street-Sellers.
2. Mechanics' or Labourers' Wives, who go out Street-Selling (while their husbands are at work) as a means of helping out the family income.
3. Widows of former Street-Sellers.
4. Single Women.

I do not know of any street-trade carried on *exclusively* by women. The sales in which they are principally concerned are in fish (including shrimps and oysters), fruit and vegetables (widows selling on their own account), fire-screens and ornaments, laces, millinery, artificial flowers (but not in any great majority over the male traders), cut flowers, boot and stay-laces and small wares, wash-leathers, towels, burnt linen, combs, bonnets, pin-cushions, tea and coffee, rice-milk, curds and whey, sheeps'-trotters, and dressed and undressed dolls.

What may be called the "heavier" trades, those necessitating the carrying of heavy weights, or the pushing of heavily-laden barrows, are in the hands of men; and so are, even more exclusively, what may be classed as the more skilled trades of the streets, viz. the sale of stationery, of books, of the most popular eatables and

Original from HARVARD UNIVERSITY

drinkables (the coffee-stalls excepted), and in every branch dependent upon the use of patter. In such callings as root-selling, crock-bartering, table-cover selling, mats, game, and poultry, the wife is the helpmate of her husband; if she trade separately in these things, it is because there is a full stock to dispose of, which requires the exertions of two persons, perhaps with some hired help just for the occasion.

The difference in the street-traffic, as carried on by Englishwomen and Irishwomen, is marked enough. The Irishwoman's avocations are the least skilled, and the least remunerative, but as regards mere toil, such as the carrying of a heavy burthen, are by far the most laborious. An Irishwoman, though not reared to the streets, will carry heavy baskets of oranges or apples, principally when those fruits are cheap, along the streets while her English co-trader (if not a costermonger) may be vending laces, millinery, artificial flowers, or other commodities of a "light," and in some degree of street estimation a "genteel" trade. Some of the less laborious callings, however, such as that in wash-leathers, are principally in the hands of young and middle-aged Irishwomen, while that in sheeps'-trotters, which does not entail heavy labour, are in the hands mostly of elderly Irishwomen. The sale of such things as lucifer-matches and water-cresses, and any "stock" of general use, and attainable for a few pence, is resorted to by the very poor of every class. The Irishwoman more readily unites begging with selling than the Englishwoman, and is far more fluent and even eloquent; perhaps she pays less regard to truth, but she unquestionably pays a greater regard to chastity. When the uneducated Irishwoman, however, has fallen into licentious ways, she is, as I once heard it expressed, the most "savagely wicked" of any.

After these broad distinctions I proceed to details.

1. From the best information at my command it may be affirmed that about one-half of the women employed in the diverse trades of the streets, are the wives or concubines (permanently or temporarily) of the men who pursue a similar mode of livelihood—the male street-sellers. I may here observe that I was informed by an experienced police-officer—who judged from his personal observation, without any official or even systematic investigation—that the women of the town, who survived their youth or their middle age, did not resort to the sale of any commodity in the streets, but sought the shelter of the workhouse, or died, he could not tell where or under what circumstances. Of the verity of this statement I have no doubt, as a street-sale entails some degree of industry or of exertion, for which the life of those wretched women may have altogether unfitted them.

In the course of the narratives and statements I have given, it is shown that some wives pursue one (itinerant or stationary) calling, while the husband pursues another. The trades in which the husband and wife (and I may here remark that when I speak of "wives," I include all, so regarded in street life, whether legally united or not)—the trades in which the woman is, more than in any others, literally the help-mate of the man, are the costermonger's (including the flower, or root, sellers) and the crockery-ware people. To the costermonger some help is often indispensable, and that of a wife is the cheapest and the most honest (to say nothing of the considerations connected with a home) which can be obtained. Among the more prosperous costermongers too, especially those who deal in fish, the wife attends to the stall while the husband goes "a round," and thus a greater extent of business is transacted. In the root and crockery-trades the woman's assistance is necessary when barter takes place instead of sale, as the husband may be ignorant of the value of the old female attire which even "high-hip ladies," as they were described to me, loved to exchange for a fuchsia or a geranium; for a glass cream-jug or a china ornament. Of the married women engaged in any street-trade, I believe nineteen-twentieths are the wives of men also pursuing some street avocation.

2. There are, however, large classes of female street-sellers who may be looked upon as exceptions, the wife selling in the streets while the husband is engaged in some manual labour, but they are only partially exceptions. In the sale of wash-leathers, for instance, are the wives of many Irish bricklayers' labourers; the woman may be constantly occupied in disposing of her wares in the streets or suburbs, and the man labouring at any building; but in case of the deprivation of work, such a man will at once become a street-seller, and in the winter many burly Irish labourers sell a few nuts or "baked taties," or a few pairs of braces, or some article which seems little suitable for the employment of men of thews and muscle. In the course of my present inquiry I have, in only very rare instances, met with a poor Irishman, who had not a reason always at his tongue's end to justify anything he was doing. Ask a bricklayer's labourer why, in his youth and strength, he is selling nuts, and he will at once reply: "Sure thin, your honnur, isn't it better than doin' nothing? I must thry and make a pinny, 'til I'm in worruk again, and glory be to God, I hope that 'll be soon."

An experienced man, who knows all the street-folk trading in Whitechapel and its neighbourhood, and about Spitalfields, told me that he could count up 100 married women, in different branches of open-air commerce, and of them only two had husbands who worked regularly in-doors. The husband of one woman works for a slop-tailor, the other is a bobbin turner; the tailor's wife sells water-cresses every morning and afternoon; the turner's wife is a "small-ware woman." The tailor, however, told my informant that his eyesight was failing him, that his earnings became less and less, that he was treated like dirt, and would go into some street-trade himself before long. When the man and his wife are both in the street-trade, it is the case in three instances out of four (excluding of course the costermongers, root-sellers, and crock-man's pursuits) that the couple carry on different callings.

In the full and specific accounts I gave of the largest body of street-sellers, viz., the costermongers, I showed that concubinage among persons of all ages was the rule, and marriage the exception. It was computed that, taking the mass of costermongers, only one couple in twenty, living together, were married, except in Clerkenwell, where the costers are very numerous, and where the respected incumbent at certain seasons marries poor persons gratuitously; there one couple in ten were really man and wife.

Of the other classes of women street-sellers, directly the reverse is the case; of those living as man and wife, one couple in twenty may be *unmarried*. An intelligent informant thought this average too high, and that it was more probably one in sixteen. But I incline to the opinion of one in twenty, considering how many of the street-traders have "seen better days," and were married before they apprehended being driven to a street career. In this enumeration I include only street-*traders*. Among such people as ballad singers, concubinage, though its wrongfulness is far better understood than among ignorant costermongers, is practised even more fully; and there is often among such classes even worse than concubinage—a dependance, more or less, on the wages of a woman's prostitution, and often a savage punishment to the wretched woman, if those wages of sin are scant or wanting.

3. The widows in the street-trades are very generally the widows of street-sellers. I believe that very few of the widows of mechanics, when left unprovided for on their husbands' demise, resort to street traffic. If they have been needlewomen before marriage, they again seek for employment at needle-work; if they have been servants, they become charwomen, or washerwomen, or again endeavour to obtain a livelihood in domestic service.

There are some to whom those resources are but starvation, or a step from starvation, or whom they fail entirely, and then they "*must* try the streets," as they will describe it. If they are young and reckless, they become prostitutes; if in more advanced years, or with good principles, they turn street-sellers; but this is only when destitution presses sharply.

4. The single women in the street-callings are generally the daughters of street-sellers, but their number is not a twentieth of the others, excepting they are the daughters of Irish parents. The costermongers' daughters either help their parents, with whom they reside, or carry on some similar trade; or they soon form connections with the other sex, and easily sever the parental tie, which very probably has been far too lax or far too severe. I made many inquiries, but I did not hear of any unmarried young woman, not connected with street-folk by birth or rearing, such as a servant maid,—endeavouring to support herself when out of work or place by a street avocation. Such a person will starve on slop millinery or slop shirt-making; or will, as much or more from desperation than from viciousness, go upon the town. With the Irish girls the case is different: brought up to a street-life, used to whine and blarney, they grow up to womanhood in street-selling, and as they rarely form impure connections, and as no one may be induced to offer them marriage, their life is often one of street celibacy. A young Irishwoman, to whom I was referred in the course of my inquiry among fruit-sellers, had come to London in the hopes of meeting her brother, with whom she was to emigrate; but she could learn nothing of him, and, concluding that he was dead, became an apple-seller. She sat, when I saw her, on cold wintry days, at the corner of a street in the Commercial-road, seemingly as much dead as alive, and slept with an aunt, also a single woman, who was somewhat similarly circumstanced; and thus these two women lived on about 6*d*. a day each. Their joint bed was 1*s*. a week, and they contrived to subsist on what remained when this shilling was paid. The niece referred me, not without a sense of pride, to her priest, as to her observance of her religious duties, and declared that where she lodged there were none but women lodgers, and those chiefly her own countrywomen. I believe such cases are not uncommon. A few, who have had the education of ladies (as in the case of an envelope-seller whose statement I gave), are driven to street-trading, but it is as a desperate grasp at something to supply less bitter bread, however little of it, than is supplied in the workhouse. I have many a time heard poor women say: "God knows, sir, I should live far better, and be better lodged and better cared for in the house (they seldom call it workhouse), but I'd rather live on 2*d*. a day." Into the question of out and in-door relief I need not now enter, but the prevalent feeling I have indicated is one highly honourable to the English poor. I have heard it stated that the utter repugnance to a workhouse existence was weaker than it used to be among the poor, but I have not met with anything to uphold such an opinion.

Such constitute the several classes of women street-sellers. I shall now proceed to speak of the habits and characters of this peculiar portion of the street-folk.

As regards the religion of the women in street-trades, it is not difficult to describe it. The Irishwomen are Roman Catholics. Perhaps I am justified in stating that they are *all* of that faith. The truth of this assertion is proved, moreover, to as full a demonstration as it very well can be proved without actual enumeration, by the fact that the great majority of the Irishwomen in the streets are from the Catholic provinces of Connaught, Leinster, and Munster; there are very few from Ulster, and not one-twentieth of the whole from any one of the other provinces. Perhaps, again, it is not extravagant to estimate that three-fourths of the women and girls from the sister island, now selling things in the streets, have been, when in their own country, connected through their husbands or parents with the cultivation of the land. It is not so easy to speak of what the remaining fourth were before they became immigrants. Some were the wives of mechanics, who, when their husbands

failing to obtain work in London became street-traders, had adopted the same pursuits. I met with one intelligent man having a stall of very excellent fruit in Battle-bridge, who had been a brogue-maker. He had been in business on his own account in Tralee, but mended the indifferent profits of brogue-making by a little trade in "dry goods." This, he told me with a cautious glance around him and in a half whisper, though it was twenty-eight years since he left his country, meant smuggled tobacco. He found it advisable, on account of being "wanted" by the revenue officers, to leave Tralee in great haste. He arrived in London, got employment as a bricklayer's labourer, and sent for his wife to join him. This she did, and from her first arrival, sold fruit in the streets. In two or three years the husband's work among the builders grew slack, and he then took to the streets. Another man, a shoemaker, who came from Dublin to obtain work in London, as he was considered "a good hand," could not obtain it, but became a street-seller, and *his* wife, previously to himself, had resorted to a street-trade in fruit. He became a widower and married as "his second," the daughter of an Irish carpenter who had been disappointed in emigrating from London, and whose whole family had become fruit-sellers. A third man, who had worked at his trade of a tailor in Cork, Waterford, Wicklow, and Dublin (he "tramped" from Cork to Dublin) had come to London and been for many years a street-seller in different capacities. His wife and daughter now assist him, or trade independently, in selling "roots." "Raythor," this man said, "than put up wid the wages and the *ter-ratement* (said very emphatically) o' thim slop masters at the Aist Ind, I'd sill myself as a slave. The sthraits doesn't degrade a man like thim thieves o' the worruld." This man knew, personally, ten Irish mechanics who were street-sellers in London, as were their wives and families, including some five-and-twenty females.

I adduce these and the following details somewhat minutely, as they tend to show by what class of Irish immigrants the streets of the imperial metropolis are stocked with so large a body of open-air traders.

There is also another class of women who, I am informed on good authority, sometimes become street-sellers, though I met with no instance myself. The orphan children of poor Irish parents are, on the demise of their father and mother sometimes taken into a workhouse and placed out as domestic servants. So, as regards domestic servants, are the daughters of Irish labourers, by their friends or the charitable. As the wages of these young girls are small and sometimes nominal, the work generally hard, and in no few instances the food scanty and the treatment severe, domestic service becomes distasteful, and a street life "on a few oranges and limmons" is preferred. There is, moreover, with some of this class another cause which almost compels the young Irish girl into the adoption of some street calling. A peevish mistress, whose numerous family renders a servant necessary, but whose means are small or precarious, becomes bitterly dissatisfied with the awkwardness or stupidity of her Irish handmaiden; the girl's going, or "teasing to go," every Sunday morning to mass is annoying, and the girl is often discharged, or discharges herself "in a huff." The mistress, perhaps, with the low tyranny dear to vulgar minds, refuses her servant a character, or, in giving one, suppresses any good qualities, and exaggerates the failings of impudence, laziness, lying, and dirtiness. Thus the girl cannot obtain another situation, and perforce perhaps she becomes a street-seller.

The readiness with which young Irish people thus adapt themselves to all the uncertainties and hardships of a street life is less to be wondered at when we consider that the Irish live together, or at any rate associate with one another, in this country, preserving their native tastes, habits, and modes of speech. Among their tastes and habits, a dislike to a street life does not exist as it does among English girls.

The poor Irish females in London are for the most part regular in their attendance at mass, and this constant association in their chapels is one of the links which keeps the street-Irish women so much distinct from the street-English. In the going to and returning from the Roman Catholic chapels, there is among these people—I was told by one of the most intelligent of them—a talk of family and secular matters,—of the present too high price of oranges to leave full 6*d*. a day at two a penny, and the probable time when cherries would be "in" and cheap, "plaze God to prosper them." In these colloquies there is an absence of any interference by English street-sellers, and an unity of conversation and interest peculiarly Irish. It is thus that the tie of religion, working with the other causes, keeps the Irish in the London streets knitted to their own ways, and is likely to keep them so, and, perhaps, to add to their number.

It was necessary to write somewhat at length of so large a class of women who *are* professors of a religion, but of the others the details may be brief; for, as to the great majority, religion is almost a nonentity. For this absence of religious observances, the women street-sellers make many, and sometimes, I must confess, valiant excuses. They must work on a Sunday morning, they will say, or they can't eat; or else they tell you, they are so tired by knocking about all the week that they must rest on a Sunday; or else they have no clothes to go to church in, and ar'n't a-going there just to be looked down upon and put in any queer place as if they had a fever, and for ladies to hold their grand dresses away from them as they walked in to their grand pews. Then, again, some assert they are not used to sit still for so long a time, and so fall asleep. I have heard all these causes assigned as reasons for not attending church or chapel.

A few women street-sellers, however, *do* attend the Sunday service of the Church of England. One lace-seller told me that she did so because it obliged Mrs. ——, who was the best friend and customer she had, and who always looked from

HARVARD UNIVERSITY

her pew in the gallery to see who were on the poor seats. A few others, perhaps about an equal number, attend dissenting places of worship of the various denominations—the Methodist chapels comprising more than a half. If I may venture upon a calculation founded on the result of my inquiries, and on the information of others who felt an interest in the matter, I should say that about five female street-sellers attended Protestant places of worship, in the ratio of a hundred attending the Roman Catholic chapels.

The localities in which the female street-sellers reside are those (generally) which I have often had occasion to specify as the abodes of the poor. They congregate principally, however, in the neighbourhood of some street-market. The many courts in Ray-street, Turnmill-street, Cow-cross, and other parts of Clerkenwell, are full of street-sellers, especially costermongers, some of those costermongers being also drovers. Their places of sale are in Clerkenwell-green, Aylesbury-street, and St. John-street. Others reside in Vine-street (late Mutton-hill), Saffron-hill, Portpool Lane, Baldwin's-gardens, and the many streets or alleys stretching from Leather-lane to Gray's-inn-lane, with a few of the better sort in Cromer-street. Their chief mart is Leather-lane, now one of the most crowded markets in London. The many who use the Brill as their place of street-traffic, reside in Brill-row, in Ossulston-street, Wilstead-street, Chapel-street, and in the many small intersecting lanes and alleys connected with those streets, and in other parts of Somers-town. The saleswomen in the Cripplegate street-markets, such as Whitecross-street, Fore-street, Golden-lane, &c., reside in Play-house-yard, and in the thick congregation of courts and alleys, approximating to Aldersgate-street, Fore-street, Bunhill-row, Chiswell-street, Barbican, &c., &c. Advancing eastward, the female street-sellers in Shoreditch (including the divisions of the Bishopsgate-streets Within and Without, Norton Folgate, and Holywell-street) reside in and about Artillery-lane, Half-moon-street, and the many narrow "clefts" (as they are called in one of Leigh Hunt's essays) stretching on the right hand as you proceed along Bishopsgate-street, from its junction with Cornhill; "clefts" which, on my several visits, have appeared to me as among the foulest places in London. On the left-hand side, proceeding in the same direction, the street-sellers reside in Long-alley, and the many yards connected with that, perhaps narrowest, in proportion to its length, of any merely pedestrian thoroughfare in London. Mixed with the poor street-sellers about Long-alley, I may observe, are a mass of the tailors and shoemakers employed by the east-end slop-masters; they are principally Irish workmen, carrying on their crafts many in one room, to economise the rent, while some of their wives are street-sellers.

The street-sellers in Spitalfields and Bethnal-green are so mixed up as to their abodes with the wretchedly underpaid cabinet-makers who supply the "slaughter-houses;" with slop-employed tailors and shoemakers (in the employ of a class, as respects shoemakers, known as "garret-masters" or middle-men, between the workman and the wholesale warehouse-man), bobbin-turners, needle-women, slop-milliners, &c., that I might tediously enumerate almost every one of the many streets known, emphatically enough, as the "poor streets." These poor streets are very numerous, running eastward from Shoreditch to the Cambridge-road, and southward from the Bethnal-green-road to Whitechapel and the Mile End-road. The female street sellers in Whitechapel live in Wentworth-street, Thrawl-street, Osborne-street, George-yard, and in several of their interminglements with courts and narrow streets. The Petticoat-lane street-dealers are generally Jews, and live in the poorer Jewish quarters, in Petticoat-lane and its courts, and in the streets running on thence to Houndsditch. Rosemary-lane has many street-sellers, but in the lane itself and its many yards and blind alleys they find their domiciles. Westward in the metropolis one of the largest street-markets is in Tottenham-court-road; and in the courts between Fitzroy-market and Tottenham-court-road are the rooms of the women vending their street goods. Those occupying the Hampstead-road with their stalls—which is but a continuation of the Tottenham-court-road market—live in the same quarters. In what is generally called the St. George's-market, meaning the stalls at the western extremity of Oxford-street, the women who own those stalls reside in and about Thomas-street, Tom's-court, and the wretched places—the very existence of which is perhaps unknown to their aristocratic neighbourhood—about Grosvenor-square; some of them lamentably wretched places. It might be wearisome to carry on this enumeration further. It may suffice to observe, that in the populous parts of Southwark, Lambeth, and Newington, wherever there is a street-market, are small or old streets inhabited by the street-sellers, and at no great distance. From the Obelisk at the junction, or approximate junction, of the Westminster, Waterloo, Black-friars, Borough, and London-roads, in pretty well every direction to the banks of the Thames, are a mass of private-looking streets—as far as the absence of shops constitutes the privacy of a street—old and half-ruinous, or modern and trim, in all of which perhaps may be found street-sellers, and in some of which are pickpockets, thieves, and prostitutes.

Of course it must be understood that these specified localities are the residence of the male, as well as the female street-sellers, both adults and children.

The proportion of female street-traders who reside in lodging-houses may be estimated at one-tenth of the entire number. This may appear a small proportion, but it must be remembered that the costermongering women do not reside in lodging-houses—so removing the largest class of street-folk from the calculation of the numbers thus accommodated—and that the Irish who pursue street callings with any regularity generally prefer living, if it be two or three families in a room, in a place of their own. The female

street-folk sleeping in lodging-houses, and occasionally taking their meals there, are usually those who are itinerant; the women who have a settled trade, especially a "pitch," reside in preference in some "place of their own." Of the number in lodging-houses one half may be regular inmates, some having a portion of a particular room to themselves; the others are casual sojourners, changing their night's shelter as convenience prompts.

Of the female street-sellers residing in houses of ill-fame there are not many; perhaps not many more than 100. I was told by a gentleman whose connection with parochial matters enabled him to form an opinion, that about Whitecross-street, and some similar streets near the Cornwall-road, and stretching away to the Blackfriars and Borough-roads—(the locality which of any in London is perhaps the most rank with prostitution and its attendant evils)—there might be 600 of those wretched women and of all ages, from 15 to upwards of 40; and that among them he believed there were barely a score who occupied themselves with street-sale. Of women, and more especially of girl, street-sellers, such as flower-girls, those pursuing immoral courses are far more numerous than 100, but they do not often reside in houses notoriously of ill-fame, but in their own rooms (and too often with their parents) and in low lodging-houses. For women who are street-sellers, without the practice of prostitution, to reside in a house of ill-fame, would be a reckless waste of money; as I am told that in so wretched a street as White-horse-street, the rent of a front kitchen is 4*s.* 6*d.* a week; of a back kitchen, 3*s.* 6*d.*; of a front parlour, 6*s.*; and of a back parlour, 4*s.* 6*d.*; all being meagrely furnished and very small. This is also accounted one of the cheapest of all such streets. The rent of a street-seller's unfurnished room is generally 1*s.* 6*d.* or even 1*s.* a week; a furnished room is 3*s.* or 2*s.* 6*d.*

The state of education among the female street-sellers is very defective. Perhaps it may be said that among the English costers not one female in twenty can read, and not one in forty can write. But they are fond of listening to any one who reads the newspaper or any exciting story. Among the street-selling Irish, also, education is very defective. As regards the adults, who have been of woman's estate before they left Ireland, a knowledge of reading and writing may be as rare as among the English costerwomen; but with those who have come to this country sufficiently young, or have been born here, education is far more diffused than among the often more prosperous English street children. This is owing to the establishment of late years of many Roman Catholic schools, at charges suited to the poor, or sometimes free, and of the Irish parents having availed themselves (probably on the recommendation of the priest) of such opportunities for the tuition of their daughters, which the English costers have neglected to do with equal chances. Of the other classes whom I have specified as street-sellers, I believe I may say that the education of the females is about the average of that of "servants of all work" who have been brought up amidst struggles and poverty; they can read, but with little appreciation of what they read, and have therefore little taste for books, and often little leisure even if they have taste. As to writing, a woman told me that at one time, when she was "in place," and kept weekly accounts, she had been complimented by her mistress on her neat hand, but that she and her husband (a man of indifferent character) had been street-sellers for seven or eight years, and during all that time she had only once had a pen in her hand; this was a few weeks back, in signing a petition—something about Sundays, she said—she wrote her name with great pain and difficulty, and feared that she had not even spelled it aright! I may here repeat that I found the uneducated always ready to attribute their want of success in life to their want of education; while the equally poor street-sellers, who were "scholars," are as apt to say, "It 's been of no manner of use to me." In all these matters I can but speak generally. The male street-sellers who have seen better days have of course been better educated, but the most intelligent of the street class are the patterers, and of them the females form no portion.

The diet of the class I am describing is, as regards its poorest members, tea and bread or bread and grease; a meal composed of nothing else is their fare twice or thrice a day. Sometimes there is the addition of a herring—or a plaice, when plaice are two a penny—but the consumption of cheap fish, with a few potatoes, is more common among the poor Irish than the poor English female street-sellers. "Indeed, sir," said an elderly woman, who sold cakes of blacking and small wares, "I could make a meal on fish and potatoes, cheaper than on tea and bread and butter, though I don't take milk with my tea—I 've got to like it better without milk than with it—but if you 're a long time on your legs in the streets and get to your bit of a home for a cup of tea, you want a bit of rest over it, and if you have to cook fish it 's such a trouble. O, no, indeed, this time of year there 's no 'casion to light a fire for your tea—and tea 'livens you far more nor a herring—because there 's always some neighbour to give a poor woman a jug of boiling water." Married women, who may carry on a trade distinct from that of their husbands, live as well as their earnings and the means of the couple will permit: what they consider good living is a dinner daily off "good block ornaments" (small pieces of meat, discoloured and dirty, but not tainted, usually set for sale on the butcher's block), tripe, cow-heel, beef-sausages, or soup from a cheap cook-shop, "at 2*d.* a pint." To this there is the usual accompaniment of beer, which, in all populous neighbourhoods, is "3*d.* a pot (quart) in your own jugs." From what I could learn, it seems to me that an inordinate or extravagant indulgence of the palate, under any circumstances, is far less common among the female than the male street-sellers.

During the summer and the fine months of the spring and autumn, there are, I am assured, one-third of the London street-sellers—male and female—

"tramping" the country. At Maidstone Fair the other day, I was told by an intelligent itinerant dealer, there were 300 women, all of whose faces he believed he had seen at one time or other in London. The Irish, however, tramp very little into the country for purposes of trade, but they travel in great numbers from one place to another for purposes of mendicancy; or, if they have a desire to emigrate, they will tramp from London to Liverpool, literally begging their way, no matter whether they have or have not any money. The female street-sellers are thus a fluctuating body.

The beggars among the women who profess to be street-traders are chiefly Irishwomen, some of whom, though otherwise well-conducted, sober and chaste, beg shamelessly and with any mendacious representation. It is remarkable enough, too, that of the Irishwomen who will thus beg, many if employed in any agricultural work, or in the rougher household labours, such as scouring or washing, will work exceedingly hard. To any feeling of self-respect or self-dependence, however, they seem dead; their great merit is their chastity, their great shame their lying and mendicancy.

The female street-sellers are again a fluctuating body, as in the summer and autumn months. A large proportion go off to work in market-gardens, in the gathering of peas, beans, and the several fruits; in weeding, in hay-making, in the corn-harvest (when they will endeavour to obtain leave to glean if they are unemployed more profitably), and afterwards in the hopping. The women, however, thus seeking change of employment, are the ruder street-sellers, those who merely buy oranges at 4*d.* to sell at 6*d.*, and who do not meddle with any calling mixed up with the necessity of skill in selection, or address in recommending. Of this half-vagrant class, many are not street-sellers usually, but are half prostitutes and half thieves, not unfrequently drinking all their earnings, while of the habitual female street-sellers, I do not think that drunkenness is now a very prevalent vice. Their earnings are small, and if they become habituated to an indulgence in drink, their means are soon dissipated; in which case they are unable to obtain stock-money, and they cease to be street-sellers.

If I may venture upon an estimation, I should say that the women engaged in street sale—wives, widows, and single persons—number from 25,000 to 30,000, and that their average earnings run from 2*s.* 6*d.* to 4*s.* a week.

I shall now proceed to give the histories of individuals belonging to each of the above class of female street-sellers, with the view of illustrating what has been said respecting them generally.

Of a Single Woman, as a Street-Seller.

I had some difficulty, for the reasons I have stated, in finding a single woman who, by her unaided industry, supported herself on the sale of street merchandise. There were plenty of single young women so engaged, but they lived, or lodged, with their parents or with one parent, or they had some support, however trifling, from some quarter or other. Among the street Irish I could have obtained statements from many single women who depended on their daily sale for their daily bread, but I have already given instances of their street life. One Irishwoman, a spinster of about 50, for I had some conversation with her in the course of a former inquiry, had supported herself alone, by street sale, for many years. She sat, literally packed in a sort of hamper-basket, at the corner of Charles-street, Leather-lane. She seemed to fit herself cross-legged, like a Turk, or a tailor on his shop-board, into her hamper; her fruit stall was close by her, and there she seemed to doze away life day by day—for she usually appeared to be wrapped in slumber. If any one approached her stall, however, she seemed to awake, as it were, mechanically. I have missed this poor woman of late, and I believe she only packed herself up in the way described when the weather was cold.

A woman of about 26 or 27—I may again remark that the regular street-sellers rarely know their age—made the following statement. She was spare and sickly looking, but said that her health was tolerably good.

"I used to mind my mother's stall," she stated, "when I was a girl, when mother wasn't well or had a little work at pea-shelling or such like. She sold sweet-stuff. No, she didn't make it, but bought it. I never cared for it, and when I was quite young I 've sold sweet-stuffs as I never tasted. I never had a father. I can't read or write, but I like to hear people read. I go to Zion Chapel sometimes of a Sunday night, the singing 's so nice. I don't know what religion you may call it of, but it 's a Zion Chapel. Mother 's been dead these—well I don't know how long, but it 's a long time. I 've lived by myself ever since, and kept myself, and I have half a room with another young woman who lives by making little boxes. I don't know what sort of boxes. Pill-boxes? Very likely, sir, but I can't say I ever saw any. She goes out to work on another box-maker's premises. She 's no better off nor me. We pays 1*s.* 6*d.* a-week between us; it 's my bed, and the other sticks is her'n. We 'gree well enough. I haven't sold sweet stuff for a great bit. I 've sold small wares in the streets, and artificials (artificial flowers), and lace, and penny dolls, and penny boxes (of toys). No, I never hear anything improper from young men. Boys has sometimes said, when I 've been selling sweets, 'Don't look so hard at 'em, or they 'll turn sour.' I never minded such nonsense. I has very few amusements. I goes once or twice a month, or so, to the gallery at the Wick (Victoria Theatre), for I live near. It 's beautiful there. O, it 's really grand. I don't know what they call what's played, because I can't read the bills.

"I hear what they 're called, but I forgets. I knows Miss Vincent and John Herbert when they come on. I likes them the best. I 'm a going to leave the streets. I have an aunt a laundress, because she was mother's sister, and I always helped her, and she taught me laundressing. I

work for her three and sometimes four days a-week now, because she 's lost her daughter Ann, and I 'm known as a good ironer. Another laundress will employ me next week, so I 'm dropping the streets, as I can do far better. I 'm not likely to be married and I don't want to."

Of a Mechanic's Wife, as a Street-Seller.

A middle-aged woman, presenting what may be best understood as a decency of appearance, for there was nothing remarkable in her face or dress, gave me the following account of her experience as a street-seller, and of her feelings when she first became one:—

"I went into service very young in the country," she said, "but mistress brought me up to London with her, where master had got a situation: the children was so fond of me. I saved a little money in that and other places as girls often does, and they seems not to save it so much for themselves as for others. Father got the first bit of money I saved, or he would have been seized for rent—he was only a working man (agricultural labourer)—and all the rest I scraped went before I 'd been married a fortnight, for I got married when I was 24. O no, indeed, I don't mean that my money was wasted by my husband. It was every farthing laid out in the house, besides what he had, for we took a small house in a little street near the Commercial-road, and let out furnished rooms. We did very well at first with lodgings, but the lodgers were mates of vessels, or people about the river and the docks, and they were always coming and going, and the rooms was often empty, and some went away in debt. My husband is a smith, and was in middling work for a good while. Then he got a job to go with some horses to France, for he can groom a horse as well as shoe it, and he was a long time away, three or four months, for he was sent into another country when he got to France, but I don't understand the particulars of it. The rooms was empty and the last lodger went away without paying, and I had nothing to meet the quarter's rent, and the landlord, all of a sudden almost, put in the brokers, for he said my husband would never come back, and perhaps I should be selling the furniture and be off to join him, for he told me it was all a planned thing he knew. And so the furniture was sold for next to nothing, and 1*l.* 6*s.* was given to me after the sale; I suppose that was over when all was paid, but I'd been forced to part with some linen and things to live upon and pay the rates, that came very heavy. My husband came back to an empty house three days after, and he 'd been unlucky, for he brought home only 4*l.* instead of 10*l.* at least, as he expected, but he 'd been cheated by the man he went into the other country with. Yes, the man that cheated him was an Englishman, and my poor John was put to great trouble and expense, and was in a strange place without knowing a word of the language. But the foreigners was very kind to him, he said, and didn't laugh at him when he tried to make hisself understood, as I 've seen people do here many a time. The landlord gave us 1*l.* to give up the house, as he had a good offer for it, and so we had to start again in the world like.

"Our money was almost all gone before John got regular work, tho' he had some odd jobs, and then he had for a good many months the care of a horse and cart for a tradesman in the City. Shortly after that he was laid up a week with a crushed leg, but his master wouldn't wait a week for him, so he hired another: 'I have nothing to say against John,' says he, when I told his master of the accident, 'and I 'm sorry, very sorry, but my business can't be hindered by waiting for people getting better of accidents.' John got work at his own business next, but there was always some stopper. He was ill, or I was ill, and if there was 10*s.* in the house, then it went and wasn't enough. And so we went on for a good many years, I don't know how many. John kept working among horses and carts, or at his own business, but what with travelling abroad, I suppose, and such like, he got to like best to be in the streets, and he has his health best that way." (The husband, it is evident, was afflicted with the restlessness of the tribe.) "About seven years ago we were very badly off—no work, and no money, and neither of of us well. Then I used to make a few women's plain night-caps and plain morning caps for servants, and sell them to a shopkeeper, but latterly I couldn't sell them at all, or get no more than the stuff cost me, without any profit for labour. So at last—and it was on a Friday evening of all unlucky times—my gold wedding-ring that cost 8*s.* 6*d.*, and that I 'd stuck to all along, had to be pawned for 4*s.* 6*d.* for rent and bread. That *was* a shocking time, sir. We 've sat in the dark of an evening, for we could get neither coals nor a candle as we was a little in debt, and John said, it was a blessing after all perhaps that we hadn't no family, for he often, both joking and serious, wished for children, but it wasn't God's will you see that we should have any. One morning when I woke very early I found my husband just going out, and when I asked him what sent him out so soon, he says: 'It's for nothing bad, so don't fret yourself, old gal.' That day he walked all over London and called on all the masters as had employed him, or knowed him, and told them how he was situated, and said that if he could borrow 20*s.* up and down, he could do a little, he knew—the thought of it came into his mind all of a sudden—in going about with a horse and cart, that he could hire, and sell coals to poor people. He raised 8*s.* 6*d.*, I think it was, and started with a quarter of a ton of coals, and then another quarter when the first was sold, and he carried it on for three or four weeks. But the hire of the horse and cart took all the profit, and the poor people wanted credit, besides people must cheat to thrive as sells coals in the street. All this time I could do nothing—though I tried for washing and charing, but I 'm slow at washing—but starve at home, and be afraid every knock was the landlord. After that John was employed to carry a very heavy board over his shoulder, and so as to have it read on both sides. It was about an eating-house, and I went

Original from HARVARD UNIVERSITY

with him to give little bills about it to all we met, for it was as much as a man could do to carry the board. He had 1*s.* a day, and I had 6*d.* That was my first time in the streets and I felt so 'shamed to come to that. I thought if I met any people I knew in Essex, or any of my old mistresses, what would they think. Then we had all sorts of jokes to stand. We both looked pinched, and young gents used to say, 'Do you dine there yourselves?' and the boys—O, of all the torments!—they've shouted out, 'Excellent Dining-rooms' that was on the board, sir, 'and two jolly speciments of the style of grub!' I could have knocked their saucy heads together. We was resting in the shade one day—and we were anxious to do our best, for 1*s.* 6*d.* a day was a great thing then—and an old gentleman came up and said he was glad to get out of the sun. He looked like a parson, but was a joky man, and he'd been having some wine, I think, he smelled of it so. He began to talk to us and ask us questions, such as you have, sir, and we told him how we was situated. 'God bless you,' says he, 'for I think you're honest folks. People that lie don't talk like you; here's some loose silver I have,' and he gave John 5*s.* 6*d.* and went away. We could hardly think it was real; it seemed such a lot of money just then, to be got clear all at once. I've never seen him since, and never saw him, as I knows of, before, but may God Almighty bless him wherever he is, for I think that 5*s.* 6*d.* put new life into us, and brought a blessing. A relation of John's came to London not long after and gave him a sovereign and sent him some old clothes, and very good ones, when he went back. Then John hired a barrow—it's his own now—and started as a costermonger. A neighbour of ourn told him how to do it, and he's done very well at it since.

"Well, you know, sir, I could'nt like to stay at home by myself doing of a nothing, and I couldn't get any charing; besides John says, 'Why, can't *you* sell something?' So I made some plain women's caps, and as we lived in Ann's-place, Waterloo-road, then, I went into the New Cut with them on a Saturday night. But there was such crowding, and shoving, and shouting, that I was kept under and sold only one cap. I was very much nervoused before I went and thought again—it was very foolish, I know—'if I saw anybody from Essex,' for country people seem to think all their friends in London are making fortunes! Before I went my landlady *would* treat me to a little drop of gin to give me spirits, and 'for luck,' but I think it made me more nervoused. I very seldom taste any. And John's very good that way. He takes his pint or two every now and then, but I know where he uses, and if it gets late I go for him and he comes home. The next time I went to sell in the Cut I got bold, for I knew I was doing nothing but what was honest; I've sold caps, and millinery, and laces, and artificial flowers, and such like ever since. We've saved a little money now, which is in the bank, thank God, but that's not done by costering, or by my trade. But my husband buys a poney every now and then, and grooms and fattens it up well, and makes it quite another thing, and so clears a pound or two; he once cleared 3*l.* 15*s.* on it. We don't go to church or chapel on a Sunday, we're so tired out after the week's work. But John reads a tract that a young lady leaves 'till he falls asleep over it."

Of an Irishwoman, as a Street-Seller.

I have before had occasion to remark the aptitude of the poor Irish in the streets of London not so much to lie, which may be too harsh a word when motives and idiosyncrasy are considered, but to exaggerate, and misrepresent, and colour in such a way that the truth becomes a mere incident in the narrative, instead of being the animating principle throughout. I speak here not as regards any direct question or answer on one specific point, but as regards a connected statement. Presuming that a poor Irishwoman, for instance, had saved up a few shillings, very likely for some laudable purpose, and had them hidden about her person, and was asked if she had a farthing in the world, she would reply with a look of most stolid innocence, "Sorra a fardin, sir." This of course is an unmitigated lie. Then ask her *why* she is so poor and what are her hopes for the future, and a very slender substratum of truth will suffice for the putting together of a very ingenious history, if she think the occasion requires it.

It is the same when these poor persons are questioned as to their former life. They have heard of societies to promote emigration, and if they fancy that any inquiries are made of them with a view to emigration, they will ingeniously shape their replies so as to promote or divert that object, according to their wishes. If they think the inquiries are for some charitable purpose, their tale of woe and starvation is heart-rending. The probability is that they may have suffered much, and long, and bravely, but they will still exaggerate. In one thing, however, I have found them understate the fact, and that I believe principally, or wholly, when they had been previously used to the most wretched of the Irish hovels. I mean as to their rooms. "Where do you live," may be asked. "Will, thin, in Paraker-street (Parker-street) Derwry-lane?" "Have you a decent room?" "Shure, thin, and it is dacint for a poor woman." On a visit, perhaps the room will be found smoky, filthy, half-ruinous, and wretched in every respect. I believe, however, that if these poor people could be made to comprehend the motives which caused their being questioned for the purposes of this work, the elucidation of the truth—motives which they cannot be made to understand—they would speak with a far greater regard to veracity. But they *will* suspect an ulterior object, involving some design on the part of the querist, and they will speak accordingly. To what causes, social or political, national, long-rooted, or otherwise, this spirit may be owing, it is not now my business to inquire.

At the outset of my inquiries amongst the poor

Irish, whose civility and often native politeness, where there is a better degree of intelligence, makes it almost impossible to be angry with them even when you listen to a story of which you believe not one-sixth—at the outset of my inquiries, I say, I was told by an Irish gentleman that I was sure to hear the truth if I had authority to use the name of their priest. I readily obtained the consent of reverend gentlemen to use their names and for any purpose of inquiry, a courtesy which I thankfully acknowledge. I mention this more especially, that it may not be thought that there has been exaggeration in my foregoing or in the following statement, where the Irish are the narrators. I have little doubt of their truth.

It may be but proper to remark, in order that one class of poor people may not be unduly *depreciated*, while another class is, perhaps, unduly *appreciated*, that the poor Irishman is much more imaginative, is readier of wit and far readier of speech, than an Englishman of a corresponding grade; and were the untaught Englishman equally gifted in those respects, who will avouch that *his* regard for the truth would be much more severe?

Of the causes which induced a good-looking Irish woman to become a street-seller I had the following account, which I give in its curious details:—

"'Deed thin, sir, it's more than 20 long years since I came from Dublin to Liverpool wid my father and mother, and brother William that's dead and gone, rest his soul. He died when he was fourteen. They was masons in Ireland. Was both father and mother masons, sir? Well, then, in any quiet job mother helped father, for she was a strong woman. They came away sudden. They was in some thrubble, but I never knew what, for they wouldn't talk to me about it. We thravelled from Liverpool to London, for there was no worruk at Liverpool; and he got worruk on buildings in London, and had 18*s.* a week; and mother cleaned and worruked for a greengrocer, as they called him—he sold coals more than anything—where we lodged, and it wasn't much, she got, but she airned what is such a thrubble to poor people, the rint. We was well off, and I was sent to school; and we should have been better off, but father took too much to the dhrop, God save him. He fell onste and broke his leg; and though the hospital gintlemen, God bless them for good Christians, got him through it, he got little worruk when he came out again, and died in less than a year. Mother wasn't long afther him; and on her death-bed she said, so low I could hardly hear her, 'Mary, my darlint, if you starruve, be vartuous. Rimimber poor Illen's funeral.' When I was quite a child, sir, I went wid mother to a funeral—she was a relation—and it was of a young woman that died after her child had been borrun a fortnight, and she wasn't married; that was Illen. Her body was brought out of the lying-in hospital—I've often heard spake of it since—and was in the churchyard to be buried; and her brother, that hadn't seen her for a long time, came and wanted to see her in her coffin, and they took the lid off, and then he currused her in her coffin afore him; she'd been so wicked. But he wasn't a good man hisself, and was in dhrink too; still nobody said anything, and he walked away. It made me ill to see Illen in her coffin, and hear him curruse, and I've remimbered it ever since.

"I was thin fifteen, I believe, and hadn't any friends that had any tie to me. I was lone, sir. But the neebours said, 'Poor thing, she's left on the shuckrawn' (homeless); and they helped me, and I got a place. Mistress was very kind at first, that's my first mistress was, and I had the care of a child of three years old; they had only one, because mistress was busy making waistcoats. Master was a hatter, and away all day, and they was well off. But some women called on mistress once, and they had a deal of talkin', and bladherin', and laughin', and I don't know how often I was sent out for quarterns of gin. Then they all went out together; and mistress came home quite tipsy just afore master, and went upstairs, and had just time to get into bed; she told me to tell master she had one of her sick head-aches and was forced to go to bed; she went on that way for three or four days, and master and she used to quarrel of a night, for I could hear them. One night he came home sooner than common, and he'd been drinking, or perhaps it might be thrubble, and he sent me to bed wid the child; and sometime in the night, I don't know what time, but I could only see from a gas-lamp that shined into the room, he came in, for there was no fastenin' inside the door, it was only like a closet, and he began to ask me about mistress. When he larned she'd been drinking wid other women, he used dreadful language, and pulled me out of bed, and struck me with a stick that he snatched up, he could see it in the gas-light, it was little Frank's horse, and swore at me for not telling him afore. He only struck me onste, but I screamed ever so often, I was so frightened. I dressed myself, and lay down in my clothes, and got up as soon as it was light—it was summer time—and thought I would go away and complain to some one. I would ask the neebours who to complain to. When I was going out there was master walking up and down the kitchen. He'd never been to bed, and he says, says he, 'Mary, where are you going?' So I told him, and he begged my pardon, and said he was ashamed of what he'd done, but he was half mad; then he began to cry, and so I cried, and mistress came home just then, and when she saw us both crying together, *she* cried, and said she wasn't wanted, as we was man and wife already. Master just gave her a push and down she fell, and he ran out. She seemed so bad, and the child began to cry, that I couldn't lave thin; and master came home drunk that night, but he wasn't cross, for he'd made out that mistress had been drinking with some neebours, and had got to her mother's, and that she was so tipsy she fell asleep, they let her stay till morning, and then some woman set her home, but she'd been there all night. They made

it up at last, but I wouldn't stay. They was very kind to me when I left, and paid me all that was owing, and gave me a good pair of shoes, too; for they was well off.

"I had a many places for seven years; after that, and when I was out of a place, I stayed wid a widder, and a very dacint woman, she was wid a daughter working for a bookbinder, and the old woman had a good pitch with fruit. Some of my places was very harrud, but shure, again, I met some as was very kind. I left one because they was always wanting me to go to a Methodist chapel, and was always running down my religion, and did all they could to hinder my ever going to mass. They would hardly pay me when I left, because I wouldn't listen to them, they said —the haythens!—when they would have saved my soul. *They* save my soul, indeed! The likes o' thim! Yes, indeed, thin, I had wicked offers sometimes, and from masters that should have known better. I kept no company wid young men. One mistress refused me a karackter, because I was so unhandy, she said; but she thought better of it. At last, I had a faver (fever), and wasn't expected for long (not expected to live); when I was getting well, everything went to keep me. What wasn't good enough for the pawn went to the dolly (dolly-shop, generally a rag and bottle shop, or a marine store). When I could get about, I was so shabby, and my clothes hung about me so, that the shops I went to said, 'Very sorry, but can't recommend you anywhere;' and mistresses looked strange at me, and I didn't know what to do and was miserable. I'd been miserable sometimes in place, and had many a cry, and thought how 'lone' I was, but I never was so miserable as this. At last, the old woman I stayed along wid —O, yes, she was an Irishwoman—advised me to sill fruit in the streets, and I began on strawberries, and borrowed 2*s.* 6*d.* to do it wid. I had my hilth better than ever thin; and after I'd sold fruit of all kinds for two years, I got married. My husband had a potato can thin. I knew him because he lived near, and I saw him go in and out, and go to mass. After that he got a porter's place and dropped his can, and he porters when he has a chance still, and has a little work in sewing sacks for the corn-merchants. Whin he's at home at his sacks, as he is now, he can mind the children —we have two—and I sells a few oranges to make a thrifle. Whin there's nothing ilse for him to do, he sills fruit in the sthreets, and thin I'm at home. We do middlin, God be praised."

There is no doubt my informant was a modest, and, in her way, a worthy woman. But it may be doubted if any English girl, after seven years of domestic service, would have so readily adapted herself to a street calling. Had an English girl been living among, and used to the society of women who supported themselves by street labour, her repugnance to such a life might have been lessened; but even then, I doubt if she, who had the virtue to resist the offers told of by my Irish informant, could have made the attempt to live by selling fruit. I do not mean that she would rather have fallen into immoral courses than honestly live upon the sale of strawberries, but that she would have struggled on and striven to obtain any domestic labour in preference to a street occupation.

Of a Widow, a Street-Seller.

A woman, apparently about 50, strong-built and red-faced, speaking in a loud tone, and what people of her class account a *hearty* manner, gave me the following account. I can readily condense it, for in her street career there there was nothing very novel. She was the daughter of a costermonger, and she married a costermonger before she was 20. On my hinting that sometimes the marriage ceremony was not considered indispensable, the good woman laughed and said, "married, or as good, it's hall as one—but we was married." The marriage was not one of unalloyed happiness, for the couple often wrangled and occasionally fought. This was told to me with some laughter, and with perfect good humour; for the widow seemed interested to have a listener. She did not, I feel confident, exaggerate the merits of the deceased, nor, perhaps, his failings. He was the best judge of fish in the streets, she said, and was the neatest hand in cutting it up, or showing it off; he was not "a bad sort," and was very fond of his children. When sober and at work he was a quiet fellow, without a cross word for a whole morning, but when drunk, which was far too often (unless *very* drunk, and then he was silly), he went about tearing and swearing "like one o'clock." But if he saw his wife take but a glass or two, to do her good, he went on like a madman, and as if he never touched it himself. He never had nothing to say to other women—if he had she would have clawed their eyes out, and his'n too—he was as good that way as any nobleman could be, and he was a fine man to look at; and on a Sunday, when he dressed hisself, he was beautiful. He was never in a church in his life, and didn't trouble hisself about such things; they was no concern of his'n.

It may be thought that I have treated this matter too lightly, but the foregoing is really the substance, and certainly it is the tone, of the widow's talk, which she poured forth freely, without expressing wonder why any one, a perfect stranger, cared to listen to such a history. She needed but a few hints and leading questions to make her talk on. Nor is this an uncommon quality even among classes who would be shocked to be classed, in any respect, with the Widowed Street-Seller. Their own career, their own sayings and doings, hopes and disappointments, alone interest masses of people, and with the simplicity which not seldom pertains to selfishness, they will readily talk of all that interests themselves, as if it must necessarily interest others. On the whole, though the departed costermonger was greatly deplored by his widow and family, they did very well without him, and carry on the business to this day. He died four or five years back.

I have no doubt this widow is a shrewd sales-

woman enough. I have heard her cry "mack'rel, live mack'rel, eight a shilling, mack'rel!" and at other times, "Eight a bob, fine mack'rel, mack'rel, eight a bob, eight a bob!" On my inquiring as to the cause of this difference in her cries, the fish-seller laughed and said, "I cries eight a bob when I sees people as I thinks is likely to like slang; to others I cries eight a shilling, which no doubt is the right way of talking."

OF THE CHILDREN STREET-SELLERS OF LONDON.

WHEN we consider the spirit of emulation, of imitation, of bravado, of opposition, of just or idle resentment, among boys, according to their training, companionship, natural disposition, and, above all, home treatment, it seems most important to ascertain how these feelings and inclinations are fostered or stimulated by the examples of the free street-life of other lads to be seen on every side. There is no doubt that to a large class of boys, whose parents are not in poverty, the young street ruffian is a hero.

If this inquiry be important, as it unquestionably is, concerning boys, how much more important is it, when it includes the female children of the streets; when it relates to the sex who, in all relations of life, and in all grades of society, are really the guardians of a people's virtue.

The investigation is, again, rendered more interesting and more important, when it includes those children who have known no guidance from parent, master, or relative, but have been flung into the streets through neglect, through viciousness, or as outcasts from utter destitution. Mixed with the children who really *sell* in the streets, are the class who assume to sell that they may have the better chance to steal, or the greater facility to beg.

Before I classify what I consider to be the causes which have driven children to a street career, with all its hardening consequences, I may point out that culpability cannot be imputed to them at the commencement of their course of life. They have been either untaught, mistaught, maltreated, neglected, regularly trained to vice, or fairly turned into the streets to shift for themselves. The censure, then, is attributable to parents, or those who should fill the place of parents—the State, or society. The exceptions to this culpability as regards parents are to be found in the instances where a costermonger employs his children to aid him in his business occupation, which the parents, in their ignorance or prejudices, may account as good as any other, and the youths thus become unfit, perhaps, for any other than a scrambling street life. A second exception may be where the children in a poor family (as continually happens among the Irish in London) *must* sell in the streets, that they may eat in any place.

In the following details I shall consider all to be children who are under fifteen years of age. It is just beyond that age (or the age of puberty) that, as our prison statistics and other returns show, criminal dispositions are developed, "self-will" becomes more imperious and headstrong, that destructive propensity, or taste, which we term the ruling passion or character of the individual is educed, and the destiny of the human being, especially when apart from the moulding and well-directed care of parents or friends, is influenced perhaps for life.

The Causes, then, which fill our streets with children who either manifest the keen and sometimes roguish propensity of a precocious trader, the daring and adroitness of the thief, or the loutish indifference of the mere dull vagabond, content if he can only eat and sleep, I consider to be these:—

1. The conduct of parents, masters, and mistresses.

2. The companionship and associations formed in tender years.

3. The employment of children by costermongers and others who live by street traffic, and the training of costermongers' children to a street life.

4. Orphanhood, friendlessness, and utter destitution.

5. Vagrant dispositions and tastes on the part of children, which cause them to be runaways.

After this I shall treat of (*a*) the pursuits of the street-trading children; (*b*) their earnings; (*c*) the causes or influences which have induced children to adopt some especial branch of a street life; (*d*) their state of education; (*e*) their morals, religion, opinions, and conduct; (*f*) places and character of dwellings; (*g*) diet; (*h*) amusements; (*i*) clothing; (*j*) propensities.

Concerning cause 1, viz., "The conduct of parents, masters, and mistresses," I should have more to say were I treating of the juvenile criminals, instead of sellers in the streets. The brute tyranny of parents, manifested in the wreaking of any annoyances or disappointments they may have endured, in the passionate beating and cursing of their children, for trifling or for no causes, is among the worst symptoms of a depraved nature. This conduct may be the most common among the poor, for among them are fewer conventional restraints; but it exists among and debases other classes. Some parents only exercise this tyranny in their fits of drunkenness, and make that their plea in mitigation; but their dispositions are then only the more undisguisedly developed, and they would be equally unjust or tyrannical when sober, but for some selfish fear which checks them. A boy perhaps endures this course of tyranny some time, and then finding it increase he feels its further endurance intolerable, and runs away. If he have no friends with whom he can hope to find a shelter, the streets only are open to him. He soon meets with comrades, some of whom perhaps had been circumstanced like himself, and, if not strongly disposed to idleness and vicious indulgencies, goes through a course of horse-holding, errand-running, parcel-carrying, and such like, and so becomes, if honestly or prudently inclined, a street-seller, beginning with fuzees, or nuts, or some unexpensive stock. The where to buy and the how to sell he will find

plenty to teach him at the lodging-houses, where he *must* sleep when he can pay for a bed.

When I was collecting information concerning brace-selling I met with a youth of sixteen who about two years previously had run away from Birmingham, and made his way to London, with 2*s.* 6*d.* Although he earned something weekly, he was so pinched and beaten by a step-mother (his father was seldom at home except on Sunday) that his life was miserable. This went on for nearly a year, until the boy began to resist, and one Saturday evening, when beaten as usual, he struck in return, drawing blood from his step-mother's face. The father came home before the fray was well ended; listened to his wife's statement, and would not listen to the boy's, and in his turn chastised the lad mercilessly. In five minutes after the boy, with aching bones and a bitter spirit, left his father's house and made his way to London, where he was then vending cheap braces. This youth could neither read nor write, and seemed to possess no quickness or intelligence. The only thing of which he cared to talk was his step-mother's treatment of him; all else was a blank with him, in comparison; this was the one burning recollection.

I may here observe, that I heard of several instances of children having run away and adopted a street life in consequence of the violence of step-mothers far more than of step-fathers.

I cite the foregoing instance, as the boy's career was exactly that I have described; but the reader will remember, that in the many and curious narratives I have collected, how often the adult street-seller has begun such a life by being a runaway from domestic tyranny. Had this Birmingham boy been less honest, or perhaps less dull, it would have been far easier for him to have become a thief than a street-trader. To the gangs of young thieves, a new boy, who is not known to the police is often (as a smart young pickpocket, then known as the Cocksparrow, described it to me) "a God-send."

My readers will remember that in the collected statements of the street-folk, there are several accounts of runaways, but they were generally older than the age I have fixed, and it was necessary to give an account of one who comes within my classification of a child.

I did not hear of any girls who had run away from their homes having become street-sellers merely. They more generally fall into a course of prostitution, or sometimes may be ostensibly street-sellers as a means of accosting men, and, perhaps, for an attractive pretence to the depraved, that they are poor, innocent girls, struggling for an honest penny. If they resort to the low lodging-houses, where the sexes are lodged indiscriminately, their ruin seems inevitable.

2. That the companionship and associations formed in tender years lead many children to a street life is so evident, that I may be brief on the subject. There are few who are in the habit of noting what they may observe of poor children in the streets and quieter localities, who have not seen little boys playing at marbles, or gambling with halfpennies, farthings, or buttons, with other lads, and who have laid down their basket of nuts or oranges to take part in the play. The young street-seller has probably more halfpence at his command, or, at any rate, in his possession, than his non-dealing playmates; he is also in the undoubted possession of what appears a large store of things for which poor boys have generally a craving and a relish. Thus the little itinerant trader is envied and imitated.

This attraction to a street career is very strong, I have ascertained, among the neglected children of the poor, when the parents are absent at their work. On a Saturday morning, some little time since, I was in a flagged court near Drury-lane, a wretched place, which was full of children of all ages. The parents were nearly all, I believe, then at work, or "on the look out for a job," as porters in Covent Garden-market, and the children played in the court until their return. In one corner was a group of four or five little boys gambling and squabbling for nuts, of which one of the number was a vendor. A sharp-looking lad was gazing enviously on, and I asked him to guide me to the room of a man whom I wished to see. He did so, and I gave him a penny. On my leaving the court I found this boy the most eager of the players, gambling with the penny I had given him. I had occasion to return there a few hours after, and the same lad was leaning against the wall, with his hands in his pockets, as if suffering from listlessness. He had had no luck with the nut covey, he told me, but he hoped before long to sell nuts himself. He did not know his age, but he appeared to be about eleven. Only last week I saw this same lad hawking a basket, very indifferently stocked with oranges. He had raised a shilling, he said, and the "Early Bird" (the nickname of a young street-seller) had put him up to the way to lay it out. On my asking if his father (a journeyman butcher) knew what he was doing, he replied that so long as he didn't bother his father he could do what he pleased, and the more he kept out of his (the father's) way the better he would be liked and treated.

The association of poor boys and girls with the children of the costermongers, and of the Irish fruit-sellers, who are employed in itinerant vending, is often productive of a strong degree of envy on the part of unemployed little ones, who look upon having the charge of a basket of fruit, to be carried in any direction, as a species of independence.

3. "The employment of children by costermongers, and others who live by street traffic; and the training of costermongers' children to a street life, is the ordinary means of increase among the street-folk."

The children of the costermongers become necessarily, as I have already intimated, street-dealers, and perhaps more innocently than in any other manner, by being required, as soon as their strength enables them, to assist their parents in their work, or sell trifles, single-handed, for the behoof of their parents. The child does but obey his father, and the father does but rear the child

to the calling by which his daily bread is won. This is the case particularly with the Irish, who often have large families, and bring them with them to London.

There are, moreover, a great number of boys, "anybody's children," as I heard them called, who are tempted and trained to pursue an open-air traffic, through being engaged by costermongers or small tradesmen to sell upon commission, or, as it is termed, for "bunse." In the curious, and almost in every instance novel, information which I gave to the public concerning the largest body of the street-sellers, the costermongers, this word "bunse" (probably a corruption of *bonus*, *bone* being the slang for good) first appeared in print. The mode is this: a certain quantity of saleable, and sometimes of not very saleable, commodities is given to a boy whom a costermonger knows and perhaps employs, and it is arranged that the young commission-agent is to get a particular sum for them, which must be paid to the costermonger; I will say 3*s*., that being somewhere about the maximum. For these articles the lad may ask and obtain any price he can, and whatever he obtains beyond the stipulated 3*s*. is his own profit or "bunse." The remuneration thus accruing to the boy-vendor of course varies very materially, according to the season of the year, the nature of the article, and the neighbourhood in which it is hawked. Much also depends upon whether the boy has a regular market for his commodities; whether he has certain parties to whom he is known and upon whom he can call to solicit custom; if he has, of course his facilities for disposing of his stock in trade are much greater than in the case of one who has only the chance of attracting attention and obtaining custom by mere crying and bawling "Penny a piece, Col-ly-flowers," "Five bunches a penny, Red-dish-es," and such like. The Irish boys call this "having a back," an old Hibernian phrase formerly applied to a very different subject and purpose.

Another cause of the abundance of street-dealers among the boyish fraternity, whose parents are unable or unwilling to support them, is that some costers keep a lad as a regular assistant, whose duty it is to pull the barrow of his master about the streets, and assist him in "crying" his wares. Sometimes the man and the boy call out together, sometimes separately and alternately, but mostly the boy alone has to do this part of the work, the coster's voice being generally rough and hoarse, while the shrill sound of that of the boy re-echoes throughout the street along which they slowly move, and is far more likely to strike the ear, and consequently to attract attention, than that of the man. This mode of "practising the voice" is, however, perfectly ruinous to it, as in almost every case of this description we find the natural tone completely annihilated at a very early age, and a harsh, hoarse, guttural, disagreeable mode of speaking acquired. In addition to the costers there are others who thus employ boys in the streets: the hawkers of coal do so invariably, and the milkmen—especially those who drive cows or have a cart to carry the milk-pails in. Once in the streets and surrounded with street-associates, the boy soon becomes inured to this kind of life, and when he leaves his first master, will frequently start in some branch of costermongering for himself, without seeking to obtain another constant employment.

This mode of employing lads, and on the whole perhaps they are fairly enough used by the costermongers, and generally treated with great kindness by the costers' wives or concubines, is, I am inclined to think, the chief cause of the abundance and even increase of the street-sellers of fish, fruit, and vegetables.

4. To "orphanhood, friendlessness, and utter destitution," the commerce of the streets owes a considerable portion of its merchants. A child finds himself or herself an orphan; the parents having been miserably poor, he or she lives in a place where street-folk abound; it seems the only road to a meal and a bed, and the orphan "starts" with a few lucifer-matches, boot-laces, nuts, or onions. It is the same when a child, without being an orphan, is abandoned or neglected by the parents, and, perhaps without any injunctions either for or against such a course, is left to his or her own will to sell or steal in the streets.

5. The vagrant dispositions and tastes of lads, and, it may be, now and then somewhat of a reckless spirit of adventure, which in our days has far fewer fields than it once had, is another cause why a street-life is embraced. Lads have been known to run away from even comfortable homes through the mere spirit of restlessness; and sometimes they have done so, but not perhaps under the age of fifteen, for the unrestrained indulgence of licentious passions. As this class of runaways, however, do not ordinarily settle into regular street-sellers, but become pickpockets, or trade only with a view to cloak their designs of theft, I need not further allude to them under this head.

I now come to the second part of my subject, the *Pursuits*, &c., of the children in street avocations.

As I have shown in my account of the women street-sellers, there is no calling which this body of juveniles monopolize, none of which they are the *sole* possessors; but some are principally in their hands, and there are others, again, to which they rarely incline.

Among the wares sold by the boys and girls of the streets are:—money-bags, lucifer-match boxes, leather straps, belts, firewood (common, and also "patent," that is, dipped into an inflammable composition), fly-papers, a variety of fruits, especially nuts, oranges, and apples; onions, radishes, water-cresses, cut flowers and lavender (mostly sold by girls), sweet-briar, India rubber, garters, and other little articles of the same material, including elastic rings to encircle rolls of paper-music, toys of the smaller kinds, cakes, steel pens and penholders with glass handles, exhibition medals and cards, gelatine cards, glass and other cheap seals, brass watch-guards, chains, and rings; small tin ware, nutmeg-graters, and other articles

DOCTOR BOKANKY, THE STREET HERBALIST.

[*From a Daguerreotype by* BEARD.]

"Now then for the Kalibonca Root, that was brought from Madras in the East Indies. It 'll cure the tooth-ache, head-ache, giddiness in the head, dimness of sight, rheumatics in the head, and is highly recommended for the ague; never known to fail; and I've sold it for this six and twenty year. From one penny to sixpence the packet. The best article in England."

of a similar description, such as are easily portable; iron skewers, fuzees, shirt buttons, boot and stay-laces, pins (and more rarely needles), cotton bobbins, Christmasing (holly and other evergreens at Christmas-tide), May-flowers, coat-studs, toy-pottery, blackberries, groundsel and chickweed, and clothes'-pegs.

There are also other things which children sell temporarily, or rather in the season. This year I saw lads selling wild birds'-nests with their eggs, such as hedge-sparrows, minnows in small glass globes, roots of the wild Early Orchis (Orchis mascula), and such like things found only out of town.

Independently of the vending of these articles, there are many other ways of earning a penny among the street boys: among them are found —tumblers, mud-larks, water-jacks, Ethiopians, ballad-singers, bagpipe boys, the variety of street musicians (especially Italian boys with organs), Billingsgate boys or young "roughs," Covent Garden boys, porters, and shoeblacks (a class recently increased by the Ragged School Brigade). A great many lads are employed also in giving away the cards and placards of advertising and puffing tradesmen, and around the theatres are children of both sexes (along with a few old people) offering play-bills for sale, but this is an occupation less pursued than formerly, as some managers sell their own bills inside the house and do not allow any to pass from the hands of the printer into those of the former vendors. Again: amid the employments of this class may be mentioned—the going on errands and carrying parcels for persons accidentally met with; holding horses; sweeping crossings (but the best crossings are usually in the possession of adults); carrying trunks for any railway traveller to or from the terminus, and carrying them from an omnibus when the passenger is not put down at his exact destination. During the frosty days of the winter and early spring, some of these little fellows used to run along the foot-path—Baker-street was a favourite place for this display—and keep pace with the omnibuses, not merely by using their legs briskly, but by throwing themselves every now and then on their hands and progressing a few steps (so to speak) with their feet in the air. This was done to attract attention and obtain the preference if a job were in prospect; done, too, in hopes of a halfpenny being given the urchin for his agility. I looked at the hands of one of these little fellows and the fleshy parts of the palm were as hard as soling-leather, as hard, indeed, as the soles of the child's feet, for he was bare-footed. At the doors of the theatres, and of public places generally, boys are always in waiting to secure a cab from the stand, their best harvest being when the night has "turned out wet" after a fine day. Boys wait for the same purpose, lounging all night, and until the place closes, about the night-houses, casinos, saloons, &c., and sometimes without receiving a penny. There are, again, the very many ways in which street boys employed to "help" other people, when temporary help is needed, as when a cabman must finish the cleaning of his vehicle in a hurry, or when a porter finds himself over-weighted in his truck. Boys are, moreover, the common custodians of the donkeys on which young ladies take invigorating exercise in such places as Hampstead-heath and Blackheath. At pigeon-shooting matches they are in readiness to pick up the dead birds, and secure the poor fluttering things which are "hard hit" by the adventurous sportsman, without having been killed. They have their share again in the picking of currants and gooseberries, the pottling of strawberries, in weeding, &c., &c., and though the younger children may be little employed in haymaking, or in the more important labours of the corn harvest, they have their shares, both with and without the company of their parents, in the "hopping." In fine there is no business carried on to any extent in the streets, or in the open air, but it will be found that boys have their portion. Thus they are brought into contact with all classes; another proof of what I have advanced touching the importance of this subject.

It will be perceived that, under this head, I have had to speak far more frequently of boys than of girls, for the boy is far more the child of the streets than is the girl. The female child can do little but *sell* (when a livelihood is to be gained without a recourse to immorality); the boy can not only sell, but *work*.

The many ramifications of child-life and of child-work in our teeming streets, which I have just enumerated, render it difficult to arrive at a very nice estimation of the *earnings of the street boys and girls*. The gains of this week are not necessarily the gains of the next; there is the influence of the weather; there may be a larger or a smaller number of hands "taking a turn" at any particular calling this week than in its predecessor; and, above all, there is that concatenation of circumstances, which street-sellers include in one expressive word—"luck." I mean the opportunities to earn a few pence, which on some occasions present themselves freely, and at others do not occur at all. Such "luck," however, is more felt by the holders of horses, and the class of waiters upon opportunity (so to speak), than by those who depend upon trade.

I believe, however, both in consequence of what I have observed, and from the concurrent testimony of persons familiar with the child-life of London streets, that the earnings of the children, when they are healthful and active, are about the same in the several capacities they exercise. The waiter on opportunity, the lad "on the look-out for a job," may wait and look out all day bootlessly, but in the evening some fortunate chance may realize him "a whole tanner all in a lump." In like manner, the water-cress girl may drudge on from early morning until "cresses" are wanted for tea, and, with "a connection," and a tolerably regular demand, earn no more than the boy's 6*d.*, and probably not so much.

One of the most profitable callings of the street-child is in the sale of Christmasing, but that is only for a very brief season; the most regular

Original from HARVARD UNIVERSITY

returns in the child's trade, are in the sale of such things as water-cresses, or any low-priced article of daily consumption, wherever the youthful vendor may be known.

I find it necessary to place the earnings of the street-children higher than those of the aged and infirm. The children are more active, more persevering, and perhaps more impudent. They are less deterred by the weather, and can endure more fatigue in walking long distances than old people. This, however, relates to the boys more especially, some of whom are very sturdy fellows.

The oranges which the street-children now vend at two a-penny, leave them a profit of 4*d.* in the shilling. To take 1*s.* 6*d.* with a profit of 6*d.* is a fair day's work; to take 1*s.* with a profit of 4*d.* is a poor day's work. The dozen bunches of cut-flowers which a girl will sell on an average day at 1*d.* a bunch, cost her 6*d.*, that sum being also her profit. These things supply, I think, a fair criterion. The children's profits may be 6*d.* a day, and including Sunday trade, 3*s.* 6*d.* a week; but with the drawbacks of bad weather, they cannot be computed at more than 2*s.* 6*d.* a week the year through. The boys may earn 2*d.* or 3*d.* a week on an average more than the girls, except in such things (which I shall specify under the next head) as seem more particularly suited for female traffic.

Of the causes which influence children to follow this or that course of business when a street career has been their choice or their lot, I have little to say. It seems quite a matter of chance, even where a preference may exist. A runaway lad meets with a comrade who perhaps sells fuzees, and he accordingly begins on fuzees. One youth, of whom I have given an account (but he was not of child's estate), began his street career on fly-papers. When children are sent into the streets to sell on account of their parents, they, of course, vend just what their parents have supplied to them. If "on their own hook," they usually commence their street career on what it is easiest to buy and easiest to sell; a few nuts or oranges bought in Duke's-place, lucifer-boxes, or small wares. As their experience increases they may become general street-sellers. The duller sort will continue to carry on the trades that any one with ordinary lungs and muscles can pursue. "All a fellow wants to know to sell potatoes," said a master street-seller to me, "is to tell how many tanners make a bob, and how many yenaps a tanner." [How many sixpences make a shilling, and how many pence a sixpence.] The smarter and bolder lads ripen into patterers, or street-performers, or fall into theft. For the class of adventurous runaways, the patterer's, or, rather, the paper-working patterer's life, with its alternations of town and country, fairs and hangings, the bustle of race-grounds and the stillness of a village, has great attractions. To a pattering and chaunting career, moreover, there is the stimulus of that love of approbation and of admiration, as strong among the often penniless professionals of the streets as on the boards of the opera house.

Perhaps there is not a child of either sex, now a street-seller, who would not to-morrow, if they thought they could clear a penny or two a day more by it, quit their baskets of oranges and sell candle-ends, or old bones, or anything. In a street career, and most especially when united with a lodging-house existence, there is no daintiness of the senses and no exercise of the tastes: the question is not "What do I like best to sell?" but "What is likely to pay me best?" This cannot be wondered at; for if a child earn but 5*d.* a day on apples, and can make 6*d.* on onions, its income is increased by 20 per cent.

The trades which I have specified as in the hands of street-children are carried on by both sexes. I do not know that even the stock in trade which most taxes the strength is more a boy's than a girl's pursuit. A basket of oranges or of apples is among the heaviest of all the stocks hawked by children; and in those pursuits there are certainly as many, or rather more, girls than boys. Such articles as fly-papers, money-bags, tins, fuzees, and Christmasing, are chiefly the boys' sale; cut-flowers, lavender, water-cresses, and small wares, are more within the trading of the girls.

The callings with which children do not meddle are those which require "patter." Some of the boys very glibly announce their wares, and may be profuse now and then in commendations of their quality, cheapness, and superiority, but it requires a longer experience to patter according to the appreciation of a perhaps critical street audience. No child, for instance, ventures upon the sale of grease-removing compositions, corn-salve, or the "Trial and Execution of Thomas Drory," with an "Affecting Copy of Werses."

A gentleman remarked to me that it was rather curious that boys' playthings, such as marbles and tops, were not hawked by street juveniles, who might be very well able to recommend them. I do not remember to have seen any such things vended by children.

Education is, as far as I have been able to ascertain, more widely extended among street children than it was twelve or fifteen years ago. The difficulty in arriving at any conclusion on such a subject is owing to the inability to find any one who knew, or could even form a tolerably accurate judgment of what was the state of education among these juveniles even twelve years back.

Perhaps it may be sufficiently correct to say that among a given number of street children, where, a dozen years ago, you met twenty who could read, you will now meet upwards of thirty. Of sixteen children, none apparently fifteen years of age, whom I questioned on the subject, nine admitted that they could not read; the other seven declared that they could, but three annexed to the avowal the qualifying words—"a little." Ten were boys and six were girls, and I spoke to them promiscuously as I met them in the street. Two were Irish lads, who were "working" oranges in company, and the bigger answered—"Shure, thin, we

Original from HARVARD UNIVERSITY

can rade, your honour, sir." I have little doubt that they could, but in all probability, had either of those urchins thought he would be a penny the better by it, he would have professed, to a perfect stranger, that he had a knowledge of algebra. "Yis, sir, I do, thin," would very likely be his response to any such inquiry; and when told he could not possibly know anything about it, he would answer, "Arrah, thin, but I didn't understand your honour."

To the Ragged Schools is, in all probability, owing this extension of the ability to read. It appears that the attendance of the street children at the Ragged School is most uncertain; as, indeed, must necessarily be the case where the whole time of the lad is devoted to obtaining a subsistence. From the best information I can collect, it appears that the average attendance of these boys at these schools does not exceed two hours per week, so that the amount of education thus acquired, if education it may be called, must necessarily be scanty in the extreme; and is frequently forgotten as soon as learned.

With many of these little traders a natural shrewdness compensates in some measure for the deficiency of education, and enables them to carry on their variety of trades with readiness and dexterity, and sometimes with exactness. One boy with whom I had a conversation, told me that he never made any mistake about the "coppers," although, as I subsequently discovered, he had no notion at all of arithmetic beyond the capability of counting how many pieces of coin he had, and how much copper money was required to make a "tanner" or a "bob." This boy vended coat-studs: he had also some metal collars for dogs, or as he said, "for cats aither." These articles he purchased at the same shop in Houndsditch, where "there was a wonderful lot of other things to be had, on'y some on 'em cost more money."

In speaking of money, the slang phrases are constantly used by the street lads; thus a sixpence is a "tanner;" a shilling a "bob," or a hog;" a crown is "a bull;" a half-crown "a half bull," &c. Little, as a modern writer has remarked, do the persons using these phrases know of their remote and somewhat classical origin, which may, indeed, be traced to the period antecedent to that when monarchs monopolized the surface of coined money with their own images and superscriptions. They are identical with the very name of money among the early Romans, which was *pecunia*, from *pecus*, a flock. The collections of coin dealers amply show, that the figure of a hog was anciently placed on a small silver coin, and that that of a bull decorated larger ones of the same metal: these coins were frequently deeply crossed on the reverse: this was for the convenience of easily breaking them into two or more pieces, should the bargain for which they were employed require it, and the parties making it had no smaller change handy to complete the transaction. Thus we find that the "half-bull" of the itinerant street-seller or "traveller," so far from being a phrase of modern invention, as is generally supposed, is in point of fact referable to an era extremely remote. Numerous other instances might be given of the classical origin of many of the flash or slang words used by these people.

I now give the answers I received from two boys. The first, his mother told me, was the best scholar at his school when he was there, and before he had to help her in street sale. He was a pale, and not at all forward boy, of thirteen or fourteen, and did not appear much to admire being questioned. He had not been to a Ragged School, but to an "academy" kept by an old man. He did not know what the weekly charge was, but when father was living (he died last autumn) the schoolmaster used to take it out in vegetables. Father was a costermonger; mother minded all about his schooling, and master often said she behaved to him like a lady. "God," this child told me, "was our Heavenly Father, and the maker of all things; he knew everything and everybody; he knew people's thoughts and every sin they committed if no one else knew it. His was the kingdom and the power, and the glory, for ever and ever, Amen. Jesus Christ was our Lord and Saviour; he was the son of God, and was crucified for our sins. He was a God himself." [The child understood next to nothing of the doctrine of the Trinity, and I did not press him.] "The Scriptures, which were the Bible and Testament, were the Word of God, and contained nothing but what was good and true. If a boy lied, or stole, or committed sins," he said, "he would be punished in the next world, which endured for ever and ever, Amen. It was only after death, when it was too late to repent, that people went to the next world. He attended chapel, sometimes."

As to mundane matters, the boy told me that Victoria was Queen of Great Britain and Ireland. She was born May 24, 1819, and succeeded his late Majesty, King William IV., July 20, 1837. She was married to his Royal Highness Prince Albert, &c., &c. France was a different country to this: he had heard there was no king or queen there, but didn't understand about it. You couldn't go to France by land, no more than you could to Ireland. Didn't know anything of the old times in history; hadn't been told. Had heard of the battle of Waterloo; the English licked. Had heard of the battle of Trafalgar, and of Lord Nelson; didn't know much about him; but there was his pillar at Charing-cross, just by the candlesticks (fountains). When I spoke of astronomy, the boy at once told me he knew nothing about it. He had heard that the earth went round the sun, but from what he'd noticed, shouldn't have thought it. He didn't think that the sun went round the earth, it seemed to go more sideways. Would like to read more, if he had time, but he had a few books, and there was hundreds not so well off as he was.

I am far from undervaluing, indeed I would not indulge in an approach to a scoff, at the extent of this boy's knowledge. Many a man who piques himself on the plenitude of his breeches' pocket, and who attributes his success in life to the fulness

of his knowledge, knows no more of Nature, Man, and God, than this poor street child.

Another boy, perhaps a few months older, gave me his notions of men and things. He was a thick-limbed, red-checked fellow; answered very freely, and sometimes, when I could not help laughing at his replies, laughed loudly himself, as if he entered into the joke.

Yes, he had heer'd of God who made the world. Couldn't exactly recollec' when he'd heer'd on him, but he had, most sarten-ly. Didn't know when the world was made, or how anybody could do it. It must have taken a long time. It was afore his time, "or yourn either, sir." Knew there was a book called the Bible; didn't know what it was about; didn't mind to know; knew of such a book to a sartinty, because a young 'oman took one to pop (pawn) for an old 'oman what was on the spree—a bran new 'un—but the cove wouldn't have it, and the old 'oman said he might be d——d. Never heer'd tell on the deluge; of the world having been drownded; it couldn't, for there wasn't water enough to do it. He weren't a going to fret hisself for such things as that. Didn't know what happened to people after death, only that they was buried. Had seen a dead body laid out; was a little afeared at first; poor Dick looked so different, and when you touched his face, he was so cold! oh, so cold! Had heer'd on another world; wouldn't mind if he was there hisself, if he could do better, for things was often queer here. Had heered on it from a tailor—such a clever cove, a stunner—as went to 'Straliar (Australia), and heer'd him say he was going into another world. Had never heer'd of France, but had heer'd of Frenchmen; there wasn't half a quarter so many on 'em as of Italians, with their earrings like flash gals. Didn't dislike foreigners, for he never saw none. What was they? Had heer'd of Ireland. Didn't know where it was, but it couldn't be very far, or such lots wouldn't come from there to London. Should say they walked it, aye, every bit of the way, for he'd seen them come in, all covered with dust. Had heer'd of people going to sea, and had seen the ships in the river, but didn't know nothing about it, for he was very seldom that way. The sun was made of fire, or it wouldn't make you feel so warm. The stars was fire, too, or they wouldn't shine. They didn't make it warm, they was too small. Didn't know any use they was of. Didn't know how far they was off; a jolly lot higher than the gas lights some on 'em was. Was never in a church; had heer'd they worshipped God there; didn't know how it was done; had heer'd singing and playing inside when he'd passed; never was there, for he had'nt no togs to go in, and wouldn't be let in among such swells as he had seen coming out. Was a ignorant chap, for he'd never been to school, but was up to many a move, and didn't do bad. Mother said he would make his fortin yet.

Had heer'd of the Duke of Wellington; he was Old Nosey; didn't think he ever seed him, but had seed his statty. Hadn't heer'd of the battle of Waterloo, nor who it was atween; once lived in Webber-row, Waterloo-road. Thought he had heerd speak of Buonaparte; didn't know what he was; thought he had heer'd of Shakespeare, but didn't know whether he was alive or dead, and didn't care. A man with something like that name kept a dolly and did stunning; but he was sich a hard cove that if *he* was dead it wouldn't matter. Had seen the Queen, but didn't recollec' her name just at the minute; oh! yes, Victoria and Albert. Had no notion what the Queen had to do. Should think she hadn't such power [he had first to ask me what 'power' was] as the Lord Mayor, or as Mr. Norton as was the Lambeth beak, and perhaps is still. Was never once before a beak and didn't want to. Hated the crushers; what business had they to interfere with him if he was only resting his basket in a street? Had been once to the Wick, and once to the Bower: liked tumbling better; he meant to have a little pleasure when the peas came in.

The knowledge and the ignorance of these two striplings represent that of street children generally. Those who may have run away from a good school, or a better sort of home as far as means constitute such betterness, of course form exceptions. So do the utterly stupid.

The Morals, Religion, and Opinions of the street-trading children are the next topic. Their business morals have been indicated in the course of my former statements, and in the general tone of the remarks and conversation of street-sellers.

As traders their morals may be lax enough. They give short weight, and they give short measure; they prick the juice out of oranges; and brush up old figs to declare they're new. Their silk braces are cotton, their buck-leather braces are wash-leather, their sponge is often rotten, and their salves and cures quackeries.

Speak to any one of the quicker-witted street-sellers on the subject, and though he may be unable to deny that his brother traders are guilty of these short-comings, he will justify them all by the example of shopkeepers. One man, especially, with whom I have more than once conversed on the subject, broadly asserts that as a whole the streets are in all matters of business honester than the shops. "It ain't *we*," runs the purport of his remarks, "as makes coffee out of sham chickory; it ain't *we* as makes cigars out of rhubarb leaves; *we* don't make duffers handkerchiefs, nor weave cotton things and call them silk. If we quacks a bit, does *we* make fortins by it as shopkeepers does with their ointments and pills! If we give slang weights, how many rich shopkeepers is fined for that there? And how many's never found out? And when one on 'em's fined, why he calculates how much he's into pocket, between what he's made by slanging, and what he's been fined, and on he goes again. *He* didn't know that there ever was short weight given in his shop: not *he!* No more do *we* at our stalls or barrows! Who 'dulterates the beer? Who makes old tea-leaves into new? Who grinds rice among pepper? And as for smuggling—but nobody thinks there's any harm in buying smuggled things. What *we* does is like that pencil you're

writing with to a great tree, compared to what the rich people does. O, don't tell me, sir, a gentleman like you that sees so much of what 's going on, must know *we 're* better than the shopkeepers are."

To remarks such as these I have nothing to answer. It would be idle to point out to such casuists, that the commission of one wrong can never justify another. The ignorant reverse the doctrine of right, and live, not by rule, but by example. I have unsparingly exposed the rogueries and trickeries of the street people, and it is but fair that one of them should be heard in explanation, if not in justification. The trade ethics of the adult street-folk are also those of the juveniles, so on this subject I need dwell no longer.

What I have said of the religion of the women street-sellers applies with equal truth to the children. Their religious feelings are generally formed for them by their parents, especially their mothers. If the children have no such direction, then they have no religion. I did not question the street-seller before quoted on this subject of the want of the Christian spirit among his fraternity, old or young, or he would at once have asked me, in substance, to tell him in what class of society the real Christian spirit was to be found?

As to the opinions of the street-children I can say little. For the most part they have formed no opinions of anything beyond what affects their daily struggles for bread. Of politics such children can know nothing. If they are anything, they are Chartists in feeling, and are in general honest haters of the police and of most constituted authorities, whom they often confound with the police officer. As to their opinions of the claims of friendship, and of the duty of assisting one another, I believe these children feel and understand nothing about such matters. The hard struggles of their lives, and the little sympathy they meet with, make them selfish. There may be companionship among them, but no friendship, and this applies, I think, alike to boys and girls. The boy's opinion of the girl seems to be that she is made to help *him*, or to supply gratification to his passions.

There is yet a difficult inquiry,—as to the opinions which are formed by the young females reared to a street-life. I fear that those opinions are not, and cannot be powerfully swayed in favour of chastity, especially if the street-girl have the quickness to perceive that marriage is not much honoured among the most numerous body of street-folk. If she have not the quickness to understand this, then her ignorance is in itself most dangerous to her virtue. She may hear, too, expressions of an opinion that "going to church to be wed" is only to put money into the clergyman's, or as these people say the "parson's," pocket. Without the watchful care of the mother, the poor girl may form an illicit connection, with little or no knowledge that she is doing wrong; and perhaps a kind and indulgent mother may be herself but a concubine, feeling little respect for a ceremony she did not scruple to dispense with. To such opinions, however, the Irish furnish the exception.

The Dwelling-places of the street-children are in the same localities as I specified regarding the women. Those who reside with their parents or employers sleep usually in the same room with them, and sometimes in the same bed. Nearly the whole of those, however, who support themselves by street-trade live, or rather sleep, in the lodging-houses. It is the same with those who live by street-vagrancy or begging, or by street-theft; and for this lazy or dishonest class of children the worst description of lodging-houses have the strongest attractions, as they meet continually with "tramps" from the country, and keep up a constant current of scheming and excitement.

It seems somewhat curious that, considering the filth and noisomeness of some of these lodging-houses, the children who are inmates suffer only the average extent of sickness and mortality common to the districts crammed with the poor. Perhaps it may be accounted for by the circumstance of their being early risers, and their being in the open air all day, so that they are fatigued at the close of the day, and their sleep is deep and unbroken. I was assured by a well-educated man, who was compelled to resort to such places, that he has seen children sleep most profoundly in a lodging-house throughout a loud and long-continued disturbance. Many street-children who are either "alone in the world," or afraid to return home after a bad day's sale, sleep in the markets or under the dry arches.

There are many other lads who, being unable to pay the 1*d*., 2*d*., or 3*d*. demanded, in pre-payment, by the lodging-house keepers, pass the night in the streets, wherever shelter may be attainable. The number of outcast boys and girls who sleep in and about the purlieus of Covent Garden-market each night, especially during the summer months, has been computed variously, and no doubt differs according to circumstances; but those with whom I have spoken upon the subject, and who of all others are most likely to know, consider the average to be upwards of 200.

The Diet of the street-children is in some cases an alternation of surfeit and inanition, more especially that of the stripling who is "on his own hook." If money be unexpectedly attained, a boy will gorge himself with such dainties as he loves; if he earn no money, he will fast all day patiently enough, perhaps drinking profusely of water. A cake-seller told me that a little while before I saw him a lad of twelve or so had consumed a shilling's worth of cakes and pastry, as he had got a shilling by "fiddling;" not, be it understood, by the exercise of any musical skill, for "fiddling," among the initiated, means the holding of horses, or the performing of any odd jobs.

Of these cakes and pastry—the cakes being from two to twelve a penny, and the pastry, tarts, and "Coventrys" (three-cornered tarts) two a penny —the street-urchins are very fond. To me they seemed to possess no recommendation either to the nose or the palate. The "strong" flavour of

these preparations is in all probability as grateful to the palate of an itinerant youth, as is the high *gout* of the grouse or the woodcock to the fashionable epicure. In this respect, as in others which I have pointed out, the "extremes" of society "meet."

These remarks apply far more to the male than to the female children. Some of the street-boys will walk a considerable distance, when they are in funds, to buy pastry of the Jew-boys in the Minories, Houndsditch, and Whitechapel; those keen traders being reputed, and no doubt with truth, to supply the best cakes and pastry of any.

A more staple article of diet, which yet partakes of the character of a dainty, is in great demand by the class I treat of—pudding. A halfpenny or a penny-worth of baked plum, boiled plum (or plum dough), currant or plum batter (batter-pudding studded with raisins), is often a dinner. This pudding is almost always bought in the shops; indeed, in a street apparatus there could hardly be the necessary heat diffused over the surface required; and as I have told of a distance being travelled to buy pastry of the Jew-boys, so is it traversed to buy pudding at the best shops. The proprietor of one of those shops, upon whom I called to make inquiries, told me that he sold about 300 pennyworths of pudding in a day. Two-thirds of this quantity he sold to juveniles under fifteen years of age; but he hadn't noticed particularly, and so could only guess. This man, when he understood the object of my inquiry, insisted upon my tasting his "batter," which really was very good, and tasted—I do not know how otherwise to describe it—honest. His profits were not large, he said, and judging from the size and quality of his oblong halfpenny and pennyworth's of batter pudding, I have no doubt he stated the fact. "There 's many a poor man and woman," he said, "aye, sir, and some that you would think from their appearance might go to an eating-house to dine, make a meal off my pudding, as well as the street little ones. The boys are often tiresome: 'Master,' they 'll say, 'can't you give us a plummier bit than this?' or, 'Is it just up? I likes it 'ot, all 'ot.'"

The "baked tatur," from the street-dealer's can more frequently than from the shops, is another enjoyable portion of the street child's diet. Of the sale to the juvenile population of pickled whelks, stewed eels, oysters, boiled meat puddings, and other articles of street traffic, I have spoken under their respective heads.

The Irish children who live with their parents fare as the parents fare. If very poor, or if bent upon saving for some purpose, their diet is tea and bread and butter, or bread without butter. If not so *very* poor, still tea, &c., but sometimes with a little fish, and sometimes with a piece of meat on Sundays; but the Sunday's meat is more common among the poor English than the poor Irish street-traders; indeed the English street-sellers generally "live better" than the Irish. The coster-boys often fare well and abundantly.

The children living in the lodging-houses, I am informed, generally, partake only of such meals as they can procure abroad. Sometimes of a night they may partake of the cheap beef or mutton, purveyed by some inmate who has been "lifting flesh" (stealing meat) or "sawney" (bacon). Vegetables, excepting the baked potato, they rarely taste. Of animal food, perhaps, they partake more of bacon, and relish it the most.

Drinking is not, from what I can learn, common among the street boys. The thieves are generally sober fellows, and of the others, when they are "in luck," a half-pint of beer, to relish the bread and saveloy of the dinner, and a pennyworth of gin "to keep the cold out," are often the extent of the potations. The exceptions are among the ignorant coster-lads, who when they have been prosperous in their "bunse," drink, and ape the vices of men. The girls, I am told, are generally fonder of gin than the boys. Elderwine and gingerbeer are less popular among children than they used to be. Many of the lads smoke.

The Amusements of the street-children are such as I have described in my account of the costermongers, but in a moderate degree, as those who partake with the greatest zest of such amusements as the Penny Gaff (penny theatre) and the Twopenny Hop (dance) are more advanced in years. Many of the Penny Gaffs, however, since I last wrote on the subject, have been suppressed, and the Twopenny Hops are not half so frequent as they were five or six years back. The Jew-boys of the streets play at draughts or dominoes in coffee-shops which they frequent; in one in the London-road at which I had occasion to call were eight of these urchins thus occupied; and they play for money or its equivalent, but these sedentary games obtain little among the other and more restless street-lads. I believe that not one-half of them "know the cards," but they are fond of gambling at pitch and toss, for halfpennies or farthings.

The Clothing of the street-children, however it may vary in texture, fashion, and colour, has one pervading characteristic—it is never made for the wearers. The exceptions to this rule seem to be those, when a child has run away and retains, through good fortune or natural acuteness, the superior attire he wore before he made the choice—if choice he had—of a street life; and where the pride of a mother whose costermonger husband is "getting on," clothes little Jack or Bill in a new Sunday suit. Even then the suit is more likely to be bought ready-made than "made to measure," nor is it worn in business hours until the gloss of novelty has departed.

The boys and girls wear every variety of clothing; it is often begged, but if bought is bought from the fusty stocks of old clothes in Petticoat and Rosemary-lanes. These rags are worn by the children as long as they will hold, or can be tied or pinned together, and when they drop off from continued wear, from dirt, and from the ravages of vermin, the child sets his wits to work to procure more. One mode of obtaining a fresh supply is far less available than it was three or four years back. This was for the lads to denude

themselves of their rags, and tearing them up in the casual-ward of a workhouse, as it were compel the parish-officers to provide them with fresh apparel.

This mode may be successful in parts of the country still, but it is not so, or to a very limited extent, in town. The largest, and what was accounted by the vagrants the most liberal, of all the casual wards of the metropolitan workhouses, that of Marylebone, has been closed above two years. So numerous were the applicants for admission, and so popular among the vagrants was Marylebone workhouse, that a fever resulted, and attacked that large establishment. It was not uncommon for the Irish who trudged up from Liverpool, to be advised by some London vagrant whom they met, to go at once, when they reached the capital, to Marylebone workhouse, and that the Irishman might not forget a name that was new to him, his friendly adviser would write it down for him, and a troop of poor wretched Irish children, with parents as wretched, would go to Marylebone workhouse, and in their ignorance or simplicity, present the address which had been given to them, as if it were a regular order for admission! Boys have sometimes committed offences that they might get into prison, and as they contrived that their apparel should be unfit for purposes of decency, or perhaps their rags had become unfit to wear, they could not be sent naked into the streets again, and so had clothing given to them. A shirt will be worn by one of those wretched urchins, without washing, until it falls asunder, and many have no shirts. The girls are on the whole less ragged than the boys, the most disgusting parts of their persons or apparel—I speak here more of the vagrant or the mixed vagrant trading and selling girl (often a child prostitute) than of the regular street-seller—the worst particular of these girls' appearance, I repeat, is in their foul and matted hair, which looks as if it would defy sponge, comb, and brush to purify it, and in the broken and filthy boots and stockings, which they seem never to button or to garter.

The Propensities of the street-children are the last division of my inquiry, and an ample field is presented, alike for wonder, disgust, pity, hope, and regret.

Perhaps the most remarkable characteristic of these wretched children is their extraordinary licentiousness. Nothing can well exceed the extreme animal fondness for the opposite sex which prevails amongst them; some rather singular circumstances connected with this subject have come to my knowledge, and from these facts it would appear that the age of puberty, or something closely resembling it, may be attained at a much less numerical amount of years than that at which most writers upon the human species have hitherto fixed it. Probably such circumstances as the promiscuous sleeping together of both sexes, the example of the older persons indulging in the grossest immorality in the presence of the young, and the use of obscene expressions, may tend to produce or force an unnatural precocity, a precocity sure to undermine health and shorten life. Jealousy is another characteristic of these children, and perhaps less among the girls than the boys. Upon the most trivial offence in this respect, or on the suspicion of an offence, the "gals" are sure to be beaten cruelly and savagely by their "chaps." This appears to be a very common case.

The details of filthiness and of all uncleanness which I gave in a recent number as things of course in certain lodging-houses, render it unnecessary to dwell longer upon the subject, and it is one from which I willingly turn to other matters.

In addition to the licentious, the vagabond propensities of this class are very striking. As soon as the warm weather commences, boys and girls, but more especially boys, leave the town in shoals, traversing the country in every direction; some furnished with trifling articles (such as I have already enumerated) to sell, and others to begging, lurking, or thieving. It is not the street-sellers who so much resort to the tramp, as those who are devoid of the commonest notions of honesty; a quality these young vagrants sometimes respect when in fear of a gaol, and the hard work with which such a place is identified in their minds—and to which, with the peculiar idiosyncrasy of a roving race, they have an insuperable objection.

I have met with boys and girls, however, to whom a gaol had no terrors, and to whom, when in prison, there was only one dread, and that a common one among the ignorant, whether with or without any sense of religion—superstition. "I lay in prison of a night, sir," said a boy who was generally among the briskest of his class, "and think I shall see things." The "things" represent the vague fears which many, not naturally stupid, but untaught or ill-taught persons, entertain in the dark. A girl, a perfect termagant in the breaking of windows and such like offences, told me something of the same kind. She spoke well of the treatment she experienced in prison, and seemed to have a liking for the matron and officials; her conduct there was quiet and respectful. I believe she was not addicted to drink.

Many of the girls, as well as the boys, of course trade as they "tramp." They often sell, both in the country and in town, little necklaces, composed of red berries strung together upon thick thread, for dolls and children: but although I have asked several of them, I have never yet found one who collected the berries and made the necklaces themselves; neither have I met with a single instance in which the girl vendors knew the name of the berries thus used, nor indeed even that they *were* berries. The invariable reply to my questions upon this point has been that they "are called necklaces;" that "they are just as they sells 'em to us;" that they "don't know whether they are made or whether they grow;" and in most cases, that they "gets them in London, by Shoreditch;" although in one case a little brown-complexioned girl, with bright sparkling eyes, said that "she got them from the gipsies."

At first I fancied, from this child's appearance, that she was rather superior in intellect to most of her class; but I soon found that she was not a whit above the others, unless, indeed, it were in the possession of the quality of cunning.

Some of the boys, on their country excursions, trade in dominoes. They carry a variety of boxes, each differing in size and varying accordingly in price: the lowest-priced boxes are mostly 6*d.* each (sometimes 4*d.*, or even 3*d.*), the highest 1*s.* An informant told me that these boxes are charged to him at the rate of 20 to 25 per cent. less; but if, as is commonly the case, he could take a number at a time, he would have them at a smaller price still. They are very rudely made, and soon fall to pieces, unless handled with extreme care. Most of the boys who vend this article play at the game themselves, and some with skill; but in every case, I believe, there is a willingness to cheat, or take advantage, which is hardly disguised; one boy told me candidly that those who make the most money are considered to be the cleverest, whether by selling or cheating, or both, at the game; nor can it be said that this estimation of cleverness is peculiar to these children.

At this season of the year great numbers of the street-children attend the races in different parts of the country, more especially at those in the vicinity of a large town. The race-course of Wolverhampton, for instance, is usually thronged with them during the period of the sport. While taking these perigrinations they sometimes sleep in the low lodging-houses with which most of our provincial towns abound: frequently "skipper it" in the open air, when the weather is fine and warm, and occasionally in barns or outhouses attached to farms and cottages. Sometimes they travel in couples—a boy and a girl, or two boys or two girls; but the latter is not so common a case as either of the former. It is rare that more than two may be met in company with each other, except, indeed, of a night, and then they usually herd together in numbers. The boys who carry dominoes sometimes, also, have a sheet of paper for sale, on which is rudely printed a representation of a draught-board and men—the latter of which are of two colours (black and white) and may be cut out with a pair of scissors; thus forming a ready means of playing a game so popular in rustic places. These sheets of paper are sold (if no more can be got for them) at a penny each. The boy who showed them to me said he gave a halfpenny a piece for them, or 6*d.* for fifteen. He said he always bought them in London, and that he did not know any other place to get them at, nor had "ever heard any talk of their being bought nowhere else."

The extraordinary lasciviousness of this class which I have already mentioned, appears to continue to mark their character during their vagabondizing career in the country as fully as in town; indeed, an informant, upon whom I think I may rely, says, that the nightly scenes of youthful or even childish profligacy in the low lodging-houses of the small provincial towns quite equal—even if they do not exceed—those which may be witnessed in the metropolis itself. Towards the approach of winter these children (like the vagrants of an older growth) advance towards London; some remain in the larger towns, such as Liverpool, Manchester, Birmingham, Sheffield, &c., but the greater proportion appear to return to the metropolis, where they resume the life they had previously led, anything but improved in education, morals, manners, or social position generally, by their summer's excursion.

The language spoken by this rambling class is peculiar in its construction: it consists of an odd medley of cockneyfied English, rude provincialisms, and a large proportion of the slang commonly used by gipsies and other "travellers," in conveying their ideas to those whom they wish to purchase their commodities.

Among the propensities of the street-boys I do not think that pugnacity, or a fondness, or even a great readiness, for fighting, is a predominant element. Gambling and thieving may be rife among a class of these poor wretches; and it may not unfrequently happen that force is resorted to by one boy bigger than another to obtain the halfpence of which the smaller child is known to be possessed. Thus quarrels among them are very frequent, but they rarely lead to fighting. Even in the full swing and fury of their jealousy, it does not appear that these boys attack the object of their suspicions, but prefer the less hazardous course of chastising the delinquent or unjustly suspected girl. The girls in the low lodging-houses, I was told a little time since, by a woman who used to frequent them, sometimes, not often, scratched one another until the two had bloody faces; and they tried to bite one another now and then, but they seldom fought. What was this poor woman's notion of a fight between two girls, it may not be very easy to comprehend.

The number of children out daily in the streets of London, employed in the various occupations I have named, together with others which may possibly have been overlooked—including those who beg without offering any article for sale—those who will work as light porters, as errand boys and the like, for chance passengers, has been variously calculated; probably nothing like exactitude can be hoped for, much less expected, in such a speculation, for when a government census has been so frequently found to fail in correctness of detail, it appears highly improbable that the number of those so uncertain in their places of resort and so migratory in their habits, can be ascertained with anything like a definite amount of certainty by a private individual. Taking the returns of accommodation afforded to these children in the casual wards of workhouses, refuges for the destitute and homeless poor; of the mendicity and other societies of a similar description, and those of our hospitals and gaols,—and these sources of information upon this subject can alone be confidently relied upon,—and then taking into the calculation the additional numbers, who pass the night in the variety of ways I have already enumerated, I think it will be found that the

number of boys and girls selling in the streets of this city, and often dependent upon their own exertions for the commonest necessaries of life, may be estimated at some thousands, but nearer 10,000 than 20,000.

The consideration which I have devoted to this branch of my subject has been considerable, but still not, in my own opinion, commensurate to the importance of its nature. Steps ought most unquestionably to be taken to palliate the evils and miseries I have pointed out, even if a positive remedy be indeed impossible.

Each year sees an increase of the numbers of street-children to a very considerable extent, and the exact nature of their position may be thus briefly depicted: what little *information* they receive is obtained from the worst class—from cheats, vagabonds, and rogues; what little *amusement* they indulge in, springs from sources the most poisonous—the most fatal to happiness and welfare; what little they know of a *home* is necessarily associated with much that is vile and base; their very means of existence, uncertain and precarious as it is, is to a great extent identified with petty chicanery, which is quickly communicated by one to the other; while their physical sufferings from cold, hunger, exposure to the weather, and other causes of a similar nature, are constant, and at times extremely severe. Thus every means by which a proper intelligence may be conveyed to their minds is either closed or at the least tainted, while every duct by which a bad description of knowledge may be infused is sedulously cultivated and enlarged. Parental instruction; the comforts of a home, however humble—the great moral truths upon which society itself rests;—the influence of proper example; the power of education; the effect of useful amusement; are all denied to them, or come to them so greatly vitiated, that they rather tend to increase, than to repress, the very evils they were intended to remedy.

The costers invariably say that no persons under the age of fifteen should be allowed by law to vend articles in the streets; the reason they give for this is—that the children under that period of life having fewer wants and requiring less money to live than those who are older, will sell at a less profit than it is fair to expect the articles sold should yield, and thus they tersely conclude, "they pervents others living, and ruins theirselves."

There probably is truth in this remark, and I must confess that, for the sake of the children themselves, I should have no objection to see the suggestion acted upon; and yet there immediately rises the plain yet startling question—in such a case, what is to become of the children?

I now cite the histories of street-lads belonging to the several classes above specified, as illustrations of the truth of the statements advanced concerning the children street-sellers generally.

Of Children sent out as Street-Sellers by their Parents.

Of the boys and girls who are sent out to sell in the streets by parents who are themselves street-traders, I need say but little under this head. I have spoken of them, and given some of their statements in other divisions of this work (see the accounts of the coster boys and girls). When, as is the case with many of the costermongers, and with the Irish fruit-sellers, the parents and children follow the same calling, they form one household, and work, as it were, "into one another's hands." The father can buy a larger, and consequently a cheaper quantity, when he can avail himself of a subdivision of labour as inexpensive as that of his own family—whom he must maintain whether employed or unemployed—in order to vend such extra quantity. I have already noticed that in some families (as is common with rude tribes) costermongering seems an hereditary pursuit, and the frequent and constant employment of children in street traffic is one reason why this hereditary pursuit is perpetuated, for street commerce is thus at a very early age made part and parcel of the young coster's existence, and he very probably acquires a distaste for any other occupation, which may entail more of *restraint* and *irksomeness*. It is very rarely that a costermonger apprentices his son to any handicraft business, although a daughter may sometimes be placed in domestic service. The child is usually "sent out to sell."

There is another class of children who are "sent out" as are the children of the costers, and sometimes with the same cheap and readily attained articles—oranges and lemons, nuts, chestnuts, onions, salt (or fresh) herrings, winks, or shrimps, and, more rarely, with water-cresses or cut-flowers. Sometimes the young vendors offer small wares—leather boot-laces, coat-studs, steel pens, or such like. These are often the children, not of street sales-people, but of persons in a measure connected with a street life, or some open-air pursuit; the children of cabmen deprived of their licences, or of the hangers-on of cabmen; of the "supers" (supernumeraries) of the theatres who have irregular or no employment, or, as they would call it, "engagement," with the unhappy consequence of irregular or no "salary:" the children, again, of street performers, or Ethiopians, or street-musicians, are "sent out to sell," as well as those of the poorer class of labourers connected with the river—ballast-heavers, lumpers, &c.; of (Irish) bricklayers' labourers and paviours' assistants; of market-porters and dock-labourers; of coal-heavers out of work, and of the helpers at coal-wharfs, and at the other wharfs; of the Billingsgate "roughs;" and of the many classes of the labouring, rather than the artisan poor, whose earnings are uncertain, or insufficient, or have failed them altogether.

With such classes as these (and more especially with the Irish), as soon as Pat or Biddy is big enough to carry a basket, and is of sufficiently ripened intellect to understand the relative value of coins, from a farthing to a shilling, he or she *must* do something "to help," and that something is generally to sell in the streets. One poor woman who made a scanty living in working on corn sacks and bags—her infirmities sometimes preventing her working at all—sent out three children, together

Original from HARVARD UNIVERSITY

or separately, to sell lucifer-matches or small wares. "*They like it,*" she said, "*and always want to be off into the streets;* and when my husband (a labourer) was ill in the hospital, the few pence they brought in was very useful; but now he's well and at work again and we want to send the eldest—she's nine—to school; *but they all* will *go out to sell if they can get hold of any stock.* I would never have sent them at all if I could have helped it, but if they made 6*d.* a day among the three of them, perhaps it saved their lives when things were at the worst." If a poor woman, as in this instance, has not been used to street-selling herself, there is always some neighbour to advise her what to purchase for her children's hawking, and instruct her where.

From one little girl I had the following account. She was then selling boot-laces and offered them most perseveringly. She was turned nine, she said, and had sold things in the streets for two years past, but not regularly. The father got his living in the streets by "playing;" she seemed reluctant to talk about his avocation, but I found that he was sometimes a street-musician, or street-performer, and sometimes sung or recited in public houses, and having "seen better days," had it appears communicated some feeling of dislike for his present pursuits to his daughter, so that I discontinued any allusion to the subject. The mother earned 2*s.* or 2*s.* 6*d.* weekly, in shoe-binding, when she had employment, which was three weeks out of four, and a son of thirteen earned what was sufficient to maintain him as an (occasional) assistant in a wholesale pottery, or rather pot-shop.

"It's in the winter, sir, when things are far worst with us. Father can make very little then —but I don't know what he earns exactly at any time—and though mother has more work then, there's fire and candle to pay for. We were very badly off last winter, and worse, I think, the winter before. Father sometimes came home and had made nothing, and if mother had no work in hand we went to bed to save fire and candle, if it was ever so soon. Father would die afore he would let mother take as much as a loaf from the parish. I was sent out to sell nuts first: 'If it's only 1*d.* you make,' mother said, 'it's a good piece of bread.' I didn't mind being sent out. I knew children that sold things in the streets. Perhaps I liked it better than staying at home without a fire and with nothing to do, and if I went out I saw other children busy. No, I wasn't a bit frightened when I first started, not a bit. Some children—but they was such little things—said: 'O, Liz, I wish I was you.'. I had twelve ha'porths and sold them all. I don't know what it made; 2*d.* most likely. I didn't crack a single nut myself. I was fond of them then, but I don't care for them now. I could do better if I went into public-houses, but I'm only let go to Mr. Smith's, because he knows father, and Mrs. Smith and him recommends me and wouldn't let anybody mislest me. Nobody ever offered to. I hear people swear there sometimes, but it's not at me. I sell nuts to children in the streets, and laces to young women. I have sold nuts and oranges to soldiers. They never say anything rude to me, never. I was once in a great crowd, and was getting crushed, and there was a very tall soldier close by me, and he lifted me, basket and all, right up to his shoulder, and carried me clean out of the crowd. He had stripes on his arm. 'I shouldn't like you to be in such a trade,' says he, 'if you was my child.' He didn't say why he wouldn't like it. Perhaps because it was beginning to rain. Yes, we are far better off now. Father makes money. I don't go out in bad weather in the summer; in the winter, though, I must. I don't know what I make. I don't know what I shall be when I grow up. I can read a little. I've been to church five or six times in my life. I should go oftener and so would mother, if we had clothes."

I have no reason to suppose that in this case the father was an intemperate man, though some of the parents who thus send their children out *are* intemperate, and, loving to indulge in the idleness to which intemperance inclines them, are forced to live on the labour of their wives and children.

Of a "Neglected" Child, a Street-Seller.

Of this class perhaps there is less to be said than of others. Drunken parents allow their children to run about the streets, and often to shift for themselves. If such parents have any sense of shame, unextinguished by their continued besottedness, they may feel relieved by not having their children before their eyes, for the very sight of them is a reproach, and every rag about such helpless beings must carry its accusation to a mind not utterly callous.

Among such children there is not, perhaps, that extreme pressure of wretchedness or of privation that there is among the orphans, or the utterly deserted. If a "neglected child" have to shift, wholly or partly, for itself, it is perhaps with the advantage of a shelter; for even the bare room of the drunkard is in some degree a shelter or roof. There is not the nightly need of 2*d.* for a bed, or the alternative of the Adelphi arches for nothing.

I met with one little girl ten or eleven years of age, whom some of the street-sellers described to me as looking out for a job every now and then. She was small-featured and dark-eyed, and seemed intelligent. Her face and hands were brown as if from exposure to the weather, and a lack of soap; but her dress was not dirty. Her father she described as a builder, probably a bricklayer's labourer, but he could work, she said, at drains or such like. "Mother's been dead a long time," the child continued, "and father brought another woman home and told me to call her mother, but she soon went away. I works about the streets, but only when there's nothing to eat at home. Father gets drunk sometimes, but I think not so oft as he did, and then he lies in bed. No, sir. not all day, but he gets up and goes out and gets more drink, and comes back and goes to bed again. He never uses me badly. When he's drinking and has money, he gives me some now and then to get bread and butter with, or a halfpenny pudding; he never eats anything

in the house when he's drinking, and he's a very quiet man. Sometimes he's laid in bed two or three days and nights at a time. I goes to school when father has money. We lives very well then. I've kept myself for a whole week. I mind people's stalls, if they're away a bit, and run for them if they're wanted; and I go errands. I've carried home flower-pots for a lady. I've got a halfpenny on a day, and a penny, and some bread perhaps, and I've lived on that. I should like very well to have a pitch of my own. *I think I should like that better than place.* But I have a sister who has a place in the country; she's far older than I am, and perhaps I shall get one. But father's at work now, and he says he'll take the pledge. Five or six times I've sold oranges, and ingans as well, and carried the money to Mrs. ——, who gave me all I took above 4*d.* for myself."

It could surprise no one if a child so neglected became so habituated to a street life, that she could not adapt herself to any other. I heard of other children thus or similarly neglected, but boys far more frequently than girls, who traded regularly in apples, oranges, &c., on their own account. Some have become regular street-sellers, and even in childhood have abandoned their homes and supported themselves.

Of a Hired Coster Boy.

One shell-fish seller, who has known street-commerce and street-folk for many years, thought, although he only hazarded an opinion, that there was less drinking among the young costers, and less swearing, than he had known in a preceding generation.

A young coster boy living with his parents, who had a good business, told me that he would never be nothing but a "general dealer," (which among some of these people is the "genteel" designation for a costermonger,) as long as he lived, unless, indeed, he rose to a coal shed and a horse and cart; a consummation, perhaps with the addition of a green-grocery, a fried fish, and a gingerbeer trade, not unfrequently arrived at by the more prudent costermongers. This boy could neither read nor write; he had been sent to school, and flogged to school (he grinned as he told me) by his mother, who said his father wouldn't have been "done" so often by fine folks, when he sold "grass" (asparagus) and such things as cost money, if he could have kept 'count. But his father only laughed, and said nothing, when the boy "cut away" from school, which he did so continuously, that the schoolmaster at length declined the charge of the young coster's further education. This stripling, who was about fourteen, seemed very proud of a pair of good half-boots which his mother had bought him, and which he admired continually as he glanced at his feet. His parents, from his account, were indulgent, and when they got farthings in change or in any manner, kept them for him; and so he got treats, and smart things to wear now and then. "We expects to do well," he said, for he used the "we" when he spoke of his parents' business, "when it's peas and new potatoes, cheap enough to cry. It's my dodge to cry. I know a man as says, 'May month ought to be ashamed on itself, or things 'ud a been herlier.' Last week I sung out, it was the same man's dodge, he put me up to it—'Here's your Great Exhibition mackarel.' People laughed, but it weren't no great good. I've been to Penny Gaffs, but not this goodish bit. I likes the singing best as has a stunnin chorus. There's been a deal of hard up lately among people as is general dealers. Things is getting better, I think, and they must. It wouldn't do at all if they didn't. It's no use your a-asking me about what I thinks of the Queen or them sort of people, for I knows nothing about them, and never goes among them."

The Hired boys, for the service of the costermongers, whether hired for the day, or more permanently, are very generally of the classes I have spoken of. When the New Cut, Lambeth, was a great street-market, every morning, during the height of the vegetable and fruit seasons, lads used to assemble in Hooper-street, Short-street, York-street, and, indeed, in all the smaller streets or courts, which run right and left from the "two Cuts." When the costermonger started thence, perhaps "by the first light," to market, these boys used to run up to his barrow, "D' you want me, Jack?" or, "Want a boy, Bill?" being their constant request. It is now the same, in the localities where the costermongers live, or where they keep their ponies, donkeys, and barrows, and whence they emerge to market. It is the same at Billingsgate and the other markets at which these traders make their wholesale purchases. Boys wait about these marts "to be hired," or, as they may style it, to "see if they're wanted." When hired, there is seldom any "wage" specified, the lads seeming always willing to depend upon the liberality of the costermonger, and often no doubt with an eye to the chances of "bunse." A sharp lad thus engaged, who may acquit himself to a costermonger's liking, perhaps continues some time in the same man's employ. I may observe, that in this gathering, and for such a purpose, there is a resemblance to the simple proceedings of the old times, when around the market cross of the nearest town assembled the population who sought employment, whether in agricultural or household labour. In some parts of the north of England these gatherings are still held at the two half-yearly terms of May-day and Martinmas.

A lad of thirteen or fourteen, who did not look very strong, gave me the following account: "I helps, you see, sir, where I can, for mother (who sells sheep's-trotters) depends a deal on her trotters, but they're not great bread for an old 'oman, and there's me and Neddy to keep. Father's abroad and a soger. Do I know he is? Mother says so, sir. I looks out every morning when the costermongers starts for the markets, and wants boys for their barrows. I cried roots last: 'Here's your musks, ha'penny each. Here's yer all agro'in' and all a blo'in'.' I got my grub and 3*d.* I takes the tin home. If there's a cabbage or two left,

Original from HARVARD UNIVERSITY

I've had it guv to me. *I likes that work better nor school. I should think so. One sees life.* Well, I don't know wot one sees perticler; but it's wot people calls life. I was a week at school once. I has a toss up sometimes when I has a odd copper for it. I'aven't 'ad any rig'lar work as yet. I shall p'raps when it's real summer." [Said, May 24th.] "This is the Queen's birthday, is it, sir? Werry likely, but she's nothing to me. I can't read, in coorse not, after a week's schooling. Yes, I likes a show. Punch is stunnin', but they might make more on the dog. I would if I was a Punch. O, I has tea, and bread and butter with mother, and gets grub as I jobs besides. I makes no bargain. If a cove's scaly, we gets to know him. I hopes to have a barrer of my own some day, and p'raps a hass. Can I manage a hass? *In* coorse, and he don't want no groomin'. I'd go to Hepsom then; I've never been yet, but I've been to Grinnage fairs. I don't know how I can get a barrer and a hass, but I may have luck."

Of an Orphan Boy, a Street-Seller.

From one of this class I had the following account. It may be observed that the lad's statement contains little of incident, or of novelty, but this is characteristic of many of his class. With many of them, it may indeed be said, "one day certifieth another." It is often the same tale of labour and of poverty, day after day, so that the mere uniformity makes a youth half oblivious of the past; the months, or perhaps years, seem all alike.

This boy seemed healthy, wore a suit of corduroy, evidently not made for him, and but little patched, although old; he was in good spirits.

"I believe I'm between fifteen and sixteen," he said, "and mother died more than two year ago, nearer three, perhaps. Father had gone dead a long time afore; I don't remember him." [I am inclined to think that this story of the death of the father is often told by the mother of an illegitimate child to her offspring, through a natural repugnance to reveal her shame to her child. I do not know, however, that it was the case in this instance.] "I don't remember about mother's funeral, for I was ill myself at the time. She worked with her needle; sometimes for a dress-maker, on "skirts," and sometimes for a tailor, on flannels. She sometimes worked all night, but we was wery badly off—we was so. She had only me. When mother died there was nothing left for me, but there was a good woman—she was a laundress and kept a mangle—and she said, 'well, here's a old basket and a few odd things; give the kid the basket and turn the bits of old traps into money, and let him start on muffins, and then he must shift for hisself.' So she tuk me to a shop and I was started in the muffin line. I didn't do so bad, but it's on'y a winter trade, isn't muffins. I sold creases next—no, not creases, cherries; yes, it was creases, and then cherries, for I remembers as 'ow 'Ungerford was the first market I ever was at; it was so. Since then, I've sold apples, and oranges, and nuts, and chestnuts—but *they* was dear the last time as I had 'em—and spring garters a penny a pair, and glass pens; yes, and other things. I goes to market, mostly to Common Gard'n, and there's a man goes there what buys bushels and bushels, and he'll let me have any little lot reas'nable; he will so. There's another will, but he ain't so good to a poor kid. Well, I doesn't know as 'ow one trade's better nor another; I think I've done as much in one as in another. But I've done better lately; I've sold more oranges, and I had a few sticks of rhubarb. I think times is mending, but others says that's on'y my luck. I sleeps with a boy as is younger nor I am, and pays 9*d.* a week. Tom's father and mother—he's a coal-heaver, but he's sometimes out of work—sleeps in the same room, but we has a good bed to ourselves. Tom's father knew my mother. There's on'y us four. Tom's father says sometimes if his rheumatics continues, he and all on 'em must go into the house. Most likely I should then go to a lodging-house. I don't know that some on 'em's bad places. I've heer'd they was jolly. I has no amusements. Last year I helped a man one day, and he did so well on fruit, he did so, for he got such a early start, and so cheap, that he gave me 3*d.* hextra to go to the play with. I didn't go. I'd rather go to bed at seven every night than anywhere else. I'm fond of sleep. I never wakes all night. I dreams now and then, but I never remembers a dream. I can't read or write; I wish I could, if it would help me on. I'm making 3*s.* 6*d.* a week now, I think. Some weeks in winter I didn't make 2*s.*"

This boy, although an orphan at a tender age, was yet assisted to the commencement of a business by a friend. I met with another lad who was left under somewhat similar circumstances. The persons in the house where his mother had died were about to take him to the parish officers, and there seemed to be no other course to be pursued to save the child, then nearly twelve, from starvation. The lad knew this and ran away. It was summer time, about three years ago, and the little runaway slept in the open air whenever he could find a quiet place. Want drove him to beg, and several days he subsisted on one penny which he begged. One day he did not find any one to give him even a halfpenny, and towards the evening of the second he became bold, or even desperate, from hunger. As if by a sudden impulse he went up to an old gentleman, walking slowly in Hyde-park, and said to him, "Sir, I've lived three weeks by begging, and I'm hungering now; give me sixpence, or I'll go and steal." The gentleman stopped and looked at the boy, in whose tones there must have been truthfulness, and in whose face was no doubt starvation, for without uttering a word he gave the young applicant a shilling. The boy began a street-seller's life on lucifer-matches. I had to see him for another purpose a little while ago, and in the course of some conversation he told me of his start in the streets. I have no doubt he told the truth, and I should have given a more detailed account of him, but when I inquired for him, I found that he had

gone to Epsom races to sell cards, and had not returned, having probably left London on a country tour. But for the old gentleman's bounty he would have stolen something, he declared, had it been only for the shelter of a prison.

Of the Life of an Orphan Girl, a Street-Seller.

"Father was a whitesmith," she said, "and mother used to go out a-washing and a-cleaning, and me and my sister (but she is dead now) did nothing; we was sent to a day school, both of us. We lived very comfortable; we had two rooms and our own furniture; we didn't want for nothing when father was alive; he was very fond on us both, and was a kind man to everybody. He was took bad first when I was very young—it was consumption he had, and he was ill many years, about five years, I think it was, afore he died. When he was gone mother kept us both; she had plenty of work; she couldn't a-bear the thought of our going into the streets for a living, and we was both too young to get a place anywhere, so we stayed at home and went to school just as when father was alive. My sister died about two year and a half ago; she had the scarlet-fever dreadful, she lay ill seven weeks. We was both very fond of her, me and mother. I often wish she had been spared, I should not be alone in the world as I am now. We might have gone on together, but it is dreadful to be quite alone, and I often think now how well we could have done if she was alive.

"Mother has been dead just a year this month; she took cold at the washing and it went to her chest; she was only bad a fortnight; she suffered great pain, and, poor thing, she used to fret dreadful, as she lay ill, about me, for she knew she was going to leave me. She used to plan how I was to do when she was gone. She made me promise to try to get a place and keep from the streets if I could, for she seemed to dread them so much. When she was gone I was left in the world without a friend. I am quite alone, I have no relation at all, not a soul belonging to me. For three months I went about looking for a place, as long as my money lasted, for mother told me to sell our furniture to keep me and get me clothes. I could have got a place, but nobody would have me without a character, and I knew nobody to give me one. I tried very hard to get one, indeed I did; for I thought of all mother had said to me about going into the streets. At last, when my money was just gone, I met a young woman in the street, and I asked her to tell me where I could get a lodging. She told me to come with her, she would show me a respectable lodging-house for women and girls. I went, and I have been there ever since. The women in the house advised me to take to flower-selling, as I could get nothing else to do. One of the young women took me to market with her, and showed me how to bargain with the salesman for my flowers. At first, when I went out to sell, I felt so ashamed I could not ask anybody to buy of me; and many times went back at night with all my stock, without selling one bunch. The woman at the lodging-house is very good to me; and when I have a bad day she will let my lodging go until I can pay her. She always gives me my dinner, and a good dinner it is, of a Sunday; and she will often give me a breakfast, when she knows I have no money to buy any. She is very kind, indeed, for she knows I am alone. I feel very thankful to her, I am sure, for all her goodness to me. During the summer months I take 1*s.* 6*d.* per day, which is 6*d.* profit. But I can only sell my flowers five days in the week—Mondays there is no flowers in the market: and of the 6*d.* a day I pay 3*d.* for lodging. I get a halfpenny-worth of tea; a halfpenny-worth of sugar; one pound of bread, 1½*d.*; butter, ½*d.* I never tastes meat but on Sunday. What I shall do in the winter I don't know. In the cold weather last year, when I could get no flowers, I was forced to live on my clothes, I have none left now but what I have on. What I shall do I don't know—I can't bear to think on it."

Of Two Runaway Street-Boys.

I endeavoured to find a boy or girl who belonged to the *well*-educated classes, had run away, and was now a street-seller. I heard of boys of this class—one man thought he knew five, and was sure of four—who now lived by street-selling, my informant believed without having any recourse to theft, but all these boys were absent; they had not returned from Epsom, or had not returned to their usual haunts, or else they had started for their summer's excursion into the country. Many a street-seller becomes as weary of town after the winter as a member of parliament who sits out a very long session; and the moment the weather is warm, and "seems settled," they are off into the country. In this change of scene there is the feeling of independence, of freedom; *they* are not "tied to their work;" and this feeling has perhaps even greater charms for the child than the adult.

The number of lads of a *well-educated class*, who support themselves by street-selling, is not large. I speak of those whom I have classed as children under fifteen years of age. If a boy run away, scared and terrified by the violence of a parent, or maddened by continuous and sometimes excessive severity, the parent often feels compunction, and I heard of persons being sent to every lodging-house in London, and told to search every dry arch, to bring back a runaway. On these occasions the street-sellers willingly give their aid; I have even heard of women, whose degradation was of the lowest, exerting themselves in the recovery of a runaway child, and that often unsolicited and as often unrecompensed.

The children who are truants through their own vicious or reckless propensities, or through the inducements of their seniors, become far more frequently, thieves or lurkers, rather than street-sellers. As to runaway girls of a well-educated class, and under fifteen, I heard of none who were street-sellers.

I now give instances of two runaway lads, who have been dishonest, and honest.

The one, when he told me his history, was a slim and rather tall young man of 23 or 24, with a look, speech, and air, anything but vulgar. He was the son of a wealthy jeweller, in a town in the West of England, and ran away from home with an adult member of his father's establishment, who first suggested such a course, taking with them money and valuables. They came to London, and the elder thief, retaining all the stolen property, at once abandoned the child, then only ten, and little and young-looking for his age. He fell into the hands of some members of the swell-mob, and became extremely serviceable to them. He was dressed like a gentleman's son, and was innocent-looking and handsome. His appearance, when I saw him, showed that this must have been the case as regards his looks. He lived with some of the swell-mobsmen—then a more prosperous people than they are now—in a good house in the Southwark-Bridge-road. The women who resided with the mobsmen were especially kind to him. He was well fed, well lodged, well clad, and petted in everything. He was called "the kid," a common slang name for a child, but he was *the* kid. He "went to work" in Regent-street, or wherever there were most ladies, and his appearance disarmed suspicion. He was, moreover, highly successful in church and chapel practice. At length he became "spotted." The police got to know him, and he was apprehended, tried, and convicted. He was, however—he believed through the interest of his friends, of whose inquiries concerning him he had heard, but of that I know nothing—sent to the Philanthropic Asylum, then in St. George's-road. Here he remained the usual time, then left the place well clothed, and with a sum of money, and endeavoured to obtain some permanent employment. In this endeavour he failed. Whether he exerted himself strenuously or not I cannot say, but he told me that the very circumstance of his having been "in the Philanthropic" was fatal to his success. His "character" and "recommendations" necessarily showed where he had come from, and the young man, as he then was, became a beggar. His chief practice was in "screeving," or writing on the pavement. Perhaps some of my readers may remember having noticed a wretched-looking youth who hung over the words "I AM STARVING," chalked on the footway on the Surrey side of Waterloo Bridge. He lay huddled in a heap, and appeared half dead with cold and want, his shirtless neck and shoulders being visible through the rents in his thin jean jacket; shoe or stocking he did not wear. This was the rich jeweller's son. Until he himself told me of it—and he seemed to do so with some sense of shame—I could not have believed that the well-spoken and well-looking youth before me was the piteous object I had observed by the bridge. What he is doing now I am unable to state.

Another boy, who thought he was not yet fifteen, though he looked older, gave me the following account. He was short but seemed strong, and his career, so far, is chiefly remarkable for his perseverance, exercised as much, perhaps, from insensibility as from any other quality. He was sufficiently stupid. If he had parents living, he said, he didn't know nothing about them; he had lived and slept with an old woman who said she was his grandmother, and he'd been told that she weren't no relation; he didn't trouble himself about it. She sold lucifer-boxes or any trifle in the streets, and had an allowance of 2*s.* weekly, but from what quarter he did not know. About four years ago he was run over by a cab, and was carried to the workhouse or the hospital; he believed it was Clerkenwell Workhouse, but he weren't sure. When he recovered and was discharged he found the old woman was dead, and a neighbour went with him to the parish officers, by whom—as well as I could understand him—he was sent to the workhouse, after some inquiry. He was soon removed to Nor'ud. On my asking if he meant Norwood, he replied, "no, Nor'ud," and there he was with a number of other children with a Mr. Horbyn. He did not know how long he was there, and he didn't know as he had anything much to complain of, but he ran away. He ran away because he thought he would; and he believed he could get work at paper-staining. He made his way to Smithfield, near where there was a great paper-stainer's, but he could not get any work, and he was threatened to be sent back, as they knew from his dress that he had run away. He slept in Smithfield courts and alleys, fitting himself into any covered corner he could find. The poor women about were kind to him, and gave him pieces of bread; some knew that he had run away from a workhouse and was all the kinder. "The fust browns as ivver I yarned," he said, "was from a drover. He was a going into the country to meet some beasts, and had to carry some passels for somebody down there. They wasn't 'evvy, but they was orkerd to grip. His old 'oman luk out for a young cove to 'elp her old man, and saw me fust, so she calls me, and I gets the job. I gived the greatest of satisfaction, and had sixpence giv me, for Jim (the drover) was well paid, as they was vallyble passels, and he said he'd taken the greatest of care on 'em, and had engaged a poor lad to 'elp him." On his return the child slept in a bed, in a house near Gray's-inn-lane, for the first time since he had run away, he believed about a fortnight. He persevered in looking out for odd jobs, without ever stealing, though he met some boys who told him he was a fool not to prig. "I used to carry his tea from his old 'oman," he went on, "to a old cove as had a stunnin' pitch of fruit in the City-road. But my best friend was Stumpy; he had a beautiful crossin' (as a sweeper) then, but he's dead now and berried as well. I used to talk to him and whistle—I *can* just whistle" [here he whistled loud and shrill, to convince me of his perfection in that street accomplishment] "—and to dance him the double-shuffle" [he favoured me with a specimen of that dance], "and he said I hinterested him. Well, he meant he liked it, I s'pose. When he went to rest hisself, for he soon got tired, over

Original from HARVARD UNIVERSITY

his drop of beer to his grub, I had his crossin' and his broom for nuff'n. One boy used to say to Stumpy, 'I'll give you 1*d.* for your crossin' while you's grubbin.' But I had it for nuff'n, and had all I yarned; sometimes 1*d.*, sometimes 2*d.*, but only once 3½*d.* I've been 'elping Old Bill with his summer cabbages and flowers (cauliflowers), and now he's on live heels. I can sing 'em out prime, but you 'eared me. I has my bit o' grub with him, and a few browns, and Old Bill and Young Bill, too, says I shall have better to do, but I can't until peas. I sleeps in a loft with 'ampers, which is Old Bill's; a stunnin' good bed. I've cried for and 'elped other costers. Stumpy sent me to 'em. I think he'd been one hisself, but I was always on the look-out. I'll go for some bunse soon. I don't know what I shall do time to come, I nivver thinks on it. I could read middlin', and can a little now, but I'm out of practice."

I have given this little fellow's statement somewhat fully, for I believe he is a type of the most numerous class of runaway urchins who ripen, so to speak, into costermongers, after "helping" that large body of street-traders.

I heard of one boy who had been discharged from Brixton, and had received 6*d.* to begin the world with, as it was his first offence, on his way back to London, being called upon suddenly as soon as he had reached the New Cut (then the greatest of all the street-markets) to help a costermonger. This gave the boy a start, and he had since lived honestly.

OF THE CAPITAL AND INCOME OF THE STREET-SELLERS OF MANUFACTURED ARTICLES.

Before giving a Summary of the Capital and Income of the above-mentioned class, I shall endeavour to arrive at some notion as to the number of persons belonging to this division of the London Street-sellers.

As far as I am able to ascertain, the following estimate may be taken as an approximation to the truth. There are in the metropolis 100 hard ware-sellers, 6 cheap Johns, 30 sellers of cutlery, 6 sellers of tailors' needles, 20 sellers of metal spoons, 500 sellers of jewellery, 2 sellers of card counters, 15 sellers of medals, 6 sellers of rings and sovereigns for a wager, 25 sellers of children's gilt watches, 100 sellers of tin-ware, 100 swag-barrowmen, 12 sellers of dog-collars, &c., 40 sellers of tools, 380 sellers of crockery and glass-wares, 12 sellers of spar-ornaments, 30 sellers of China-ornaments, 6 sellers of stone-fruit, 120 packmen and duffers or hawkers of soft wares, 500 sellers of tapes, cottons, &c.. 100 sellers of lace, 15 sellers of japanned table covers, 500 brace and belt-sellers, 50 sellers of hose, 3 sellers of waistcoats, 230 sellers of blacking, 125 sellers of black-lead, 5 sellers of French polish, 7 sellers of grease-removing composition, 4 sellers of plating-balls, 8 sellers of corn-salve, 4 sellers of China and glass cement, 6 sellers of razor paste, 55 sellers of crackers and detonating-balls, 200 sellers of Lucifer matches, 100 sellers of cigar-lights, 30 sellers of gutta-percha heads, 50 sellers of fly-papers and beetle-wafers, 25 sellers of poison for rats, 35 sellers of walking-sticks, 30 sellers of whips, 4 sellers of clay and Meerschaum pipes, 15 sellers of tobacco-boxes, snuff-boxes, and cigar-cases, 100 sellers of cigars, 50 sellers of sponge, 200 sellers of wash-leathers, 35 sellers of spectacles, and eye glasses, 50 sellers of dolls, 50 lot-sellers, 2 sellers of Roulette tables, 4 sellers of rhubarb, 100 rat-catchers, 50 sellers of combs, 50 sellers of money-bags, 70 sellers of coat-studs; making altogether a total of 4272.

Some few of the above trades are, however, of only a temporary character; as, for instance, such as are engaged in the street-sale of crackers and detonating-balls—the month of November and the Christmas week being the only regular periods, with the exception of fairs and races, for the vending of those articles. The fly-papers and beetle-wafers are other instances of the same kind—summer being the only season in which there is a demand for such things. Making due allowance therefore for the temporary character of some of the callings, as well as for the itinerancy and unsettledness of other trades or traders, we may, I think, safely assume that the street-sellers connected with this class are about 4000 in number.

Concerning the amount of capital invested in this branch of the street-traffic as well as the income derived therefrom, the following tables are given as being somewhat near the truth.

Metal.

	£	s.	d.
Street-Sellers of Hardware.			
Stock-money for 100 vendors at 10*s.* each	50	0	0
Cheap Johns.			
6 carts 30*l.* each, and stock-money for the same, 50*l.* each	480	0	0
Street-Sellers of Cutlery.			
Stock-money for 30 vendors at 1*s.* 6*d.* each	2	5	0
Blind Street-Sellers of Tailors' Needles.			
6 boxes at 1*s.* 6*d.* each; stock-money for 6 vendors at 2*s.* each	1	1	0
Street-Sellers of Metal Spoons, &c., at Public-Houses.			
Stock-money for 20 vendors at 2*s.* 6*d.* each	2	10	0
Street-Sellers of Jewellery.			
500 boxes at 3*s.* 6*d.* each; stock-money for 500 vendors at 15*s.* each	462	10	0
Street-Sellers of Card-Counters, Medals, &c.			
17 boxes at 3*s.* each; stock-money for 17 vendors at 2*s.* 6*d.* each	4	13	6
Street-Sellers of Rings and Sovereigns for Wagers.			
Stock-money for 6 vendors at 2*s.* 6*d.* each	0	15	0
Street-Sellers of Children's Gilt Watches.			
Stock-money for 25 vendors at 5*s.* each	6	5	0

INCOME OF THE STREET-SELLERS OF MANUFACTURED ARTICLES.

METAL.

Street-Sellers of Hardware.

There are at present 100 hardware sellers, trading in London, &c.; half of them, I am assured, may be said to take on an average from 20s. to 25s., weekly the year through; a quarter take 15s., and the remaining quarter from 7s. 6d. to 10s. Calculating an average receipt of 15s. each per week, throughout the entire class, men, women, and children, we find there is annually expended in street-sold hardwares 3,900 0 0

Cheap Johns.

If we calculate that there are 6 "Cheap Johns" in London throughout the year, and that they each take 4l. per day for nine months in the year, or 24l. per week; this amounts to about 5,000l. in nine months. Say that during the winter or the remaining 13 weeks of the year, their receipts are 15l. each per week, this amounts to upwards of 1000l. additional, thus making a gross annual outlay with these dealers of 6,000 0 0

Street-Sellers of Cutlery.

Reckoning there are 30 men who are engaged regularly in the sale of cutlery, and that the average takings of each are about 15s. weekly, this gives a yearly expenditure in the street-trade of cutlery 1,170 0 0

Blind Street-Sellers of Tailors' Needles.

There are now 6 men engaged in selling needles at the several tailors' shops, and calculating their average daily receipts to be 2s. 6d. or 15s. a week each, we find that the annual takings of the whole are 234 0 0

Street-Sellers of Metal-Spoons in Publichouses.

From the best information I can arrive at, the number of metal-spoon hawkers is 20, each of whom take upon an average 16s. weekly, thus showing a yearly expenditure in the street-sale of spoons of 832 0 0

Street-Sellers of Jewellery.

I am informed that there are at present 500 persons engaged in the street sale of jewellery, and calculating a weekly profit of 10s. 6d., and a receipt of 18s. per individual, we find expended in the street-trade . . 23,400

Street-Sellers of Card-Counters.

If there be, on the year's average, only two street-sellers disposing of "Jacks" and earning 9s. a week,—to earn which the receipts will be about 20s.,—we find expended in the streets on these trifles annually 104 0 0

Street-Sellers of Medals.

An intelligent man, familiar with the trade, and who was in the habit of clubbing his stock-money with two others, so that they might buy a gross of medals at a time, calculated that 15 medal-sellers were engaged in the traffic the year through, and earned, upon medals alone, 6d. a day each, to clear which they must take 6s. 6d. weekly, giving a yearly outlay of 253 10 0

Street-Sellers of Rings and Sovereigns for a Wager.

One of this class, who is "up to all the dodges of the trade," informed me that there were only 6 men working the rings and sovereigns now in the streets, and that the average takings of each might be about 12s. weekly, thus showing a yearly expenditure of 187 4 0

Street-Sellers of Children's Gilt Watches.

Calculating that 25 persons now vend watches for twelve weeks in the year and that each clears 8s. weekly, taking 24s., we find yearly expended in London streets on these toy watches 360 0 0

Street-Sellers of Tin-Ware.

If we calculate an average receipt, per individual, of 10s. weekly: we find, reckoning 100 sellers, a yearly expenditure on tins, bought in the street, of 2,600 0 0

	£	s.	d.
Swag-Barrowmen.			
Calculating that 100 of these traders are, the year round, in London (some are absent all the summer at country fairs, and on any favourable opportunity), and that each takes 2*l.* weekly, we find thus expended in the streets of London, in a year, no less than	10,400	0	0
Sellers of Dog-Collars, Key-Rings, &c.			
Reckoning 12*s.* weekly taken by 12 men, there is expended yearly in the streets upon dog-collars . . .	374	0	0
Street-Sellers of Tools.			
There are at present 40 men engaged in selling tools throughout the metropolis and they each average about 15*s.* weekly. This gives a yearly outlay of	1,560	0	0
Street-Sellers of Crockery and Glass-Wares.			
According to the best calculation there are 380 vendors of crockery and glass-wares, and the average takings of each may be said to amount to 10*s.* weekly, so giving an annual expenditure in the streets of	9,880	0	0
Street-Sellers of Spar-Ornaments.			
In this trade I am informed that there are now 12 men, 9 of whom are assisted by their wives, and that in the summer months there are 18. Their profits are about 15*s.* per week on an average of the whole year. What amount of money may be expended by the public in the street-purchase of "spars" I am unable definitely to state, so much being done in the way of barter; but assuming that there are 14 sellers throughout the year, and that their profits are cent. per cent., there would appear to be laid out in the streets every year on these articles, about	1,000	0	0
Street-Sellers of China-Ornaments.			
There are, I am informed, about 30 persons in this trade. If we calculate the receipts at 10*s.* weekly (a low average considering the success of some of the raffles), we find yearly expended in the streets in these ornamental productions	780	0	0
Street-Sellers of Stone-Fruit.			
Supposing that there are 6 persons selling stone-fruit in the streets through the year, and that each earns 9*s.* weekly (one man said 7*s.* 6*d.* was the limit of his weekly profits), we find 140*l.* received as profit on these articles, and calculating the gains at 33 per cent., an outlay of	420	0	0
TEXTILE.			
Packmen and Duffers, or Hawkers of Soft Wares.			
I am told by a London hawker of soft goods that the number of his craft, hawking London and its vicinity, as far as he can judge, is about 120. In this number are included the Irish linen hawkers. I am also informed that the fair trader's profits amount to about 20 per cent., while those of the not over-particular trader range from 80 to 200 per cent. In a fair way of business it is said the hawker's takings will amount, upon an average, to 7*l.* or 8*l.* per week; whereas the receipts of the "duffer," or unfair hawker, will sometimes reach to 50*l.* per week; at 7*l.* per week each, the gross takings will amount to	43,680	0	0
Street-Sellers of Small Ware, or Tapes, Cottons, Laces, &c.			
From the best data at my command, I believe there are not fewer than 500 individuals selling these wares in London. Their weekly receipts do not appear to average more than 6*s.* each, hence the expenditure on these articles will amount to	7800	0	0
Street-Sellers of Lace.			
100 persons in this trade may be said each to take 10*s.* 6*d.* weekly, the profit being about cent. per cent.; hence the annual sum expended in the streets in lace and similar commodities is.	2730	0	0
Street-Sellers of Japanned Table-Covers.			
Calculating that 15 street-sellers each take 25*s.* weekly the year round — one-half being the profit, including their advantages in bartering and raffling—we find there is expended yearly upon japanned table-covers, bought in the streets	975	0	0
Street-Sellers of Braces and Belts.			
500 brace-sellers are said to clear 5*s.* a week each on those articles alone, and estimating the profit at 33 per cent., it shows a street expenditure of 26,196*l.*, and calculating one-eighth less for belts, we find that the annual outlay in the streets on braces and belts is	29,470	0	0
Street-Sellers of Hose.			
A few pairs of women's stockings are hawked by women, and sold to servant-maids; but the trade in these goods, I am informed, including all classes of sellers—of whom there may be fifty—does not exceed (notwithstanding the universality of the wear) the receipt of 6*s.* weekly per individual, with a profit of from 1*s.* 4*d.* to 2*s.*; thus there is an aggregate expenditure yearly of	800	0	0
Street-Sellers of Waistcoats.			
There are sometimes no waistcoat-sellers at all; but generally two, and not unfrequently three. The profits of these men are 1*s.* on a bad, and 2*s.* 6*d.* on a good day. As, at intervals, the street-sellers dispose of a sleeve-waistcoat (waistcoat with

Original from HARVARD UNIVERSITY

sleeves) at from 4*s.* 6*d.* to 6*s.*, we may estimate the average earnings in the trade at 5*s.* per market day, or 10*s.* in the week; assuming their profits to be 33 per cent., this shows an annual outlay of . . . . £312 0*s.* 0*d.*

CHEMICAL.

Street-Sellers of Blacking.

There are at present 230 vendors of blacking in the London streets. 210 of these sell cake and liquid blacking, each taking 6*s.* weekly, while the 20 others "work" the Mews with a superior kind of blacking, taking 15*s.* each; thus there is a yearly expenditure in the sale of blacking in the streets of . . . 4,056 0 0

Street-Sellers of Black-Lead.

There are, I am informed, 100 to 150 persons selling and hawking black-lead in the streets; it may be estimated that they take 4*s.* each weekly (the adults selling other small articles with the black-lead); thus we find—averaging the number of sellers at 125—that there is expended yearly in the street-sale of this article 1,300 0 0

Street-Sellers of French Polish.

The French-polish-Sellers, I am assured by a man familiar with the business, take 2*s.* a day each; the 2*s.* leaves a profit of 10*d.* The street expenditure is, therefore (reckoning five regular sellers) annually . . 156 0 0

Street-Sellers of Grease-removing Composition.

Calculating that 7 grease-removers carry on the sale of the article 3 days each week, and clear 1*s.* 6*d.* per day, we find a yearly expenditure on this commodity equal to 81 18 0

Street-Sellers of Plating-Balls.

Reckoning that 4 men are engaged in selling plating-balls 3 days in each week, and that each take 2*s.* a day, we find there is an annual outlay on the sale of this article of 62 8 0

Street-Sellers of Corn Salve.

Calculating that 8 of these traders take 10*s.* weekly, we find there is expended in the streets on this salve 208 0 0

Street-Sellers of Glass and China-Cement.

There are at present 4 men vending this article in the streets of London, and if each seller take 5*s.* weekly (of which 4*s.* may be profit), we find there is expended yearly by street customers in this cement . . . 52 0 0

Street-Sellers of Razor Paste.

Calculating that 6 men "work" the metropolis daily, taking 2*s.* each per day (with 1*s.* 2*d.* profit), we find the amount of the street outlay to be upwards of 187 0 0

Street-Sellers of Crackers and Detonating-Balls.

I am assured that for a few days last November, from 50 to 60 men and women were selling crackers in the streets. The most intelligent man that I met with, acquainted, as he called it, "with all the ins and outs of the trade," calculated that during the month of November and at Christmas, 100*l.* at least was expended in the streets in these combustibles, and another 100*l.* at other times of the year, thus giving altogether a yearly outlay of 200 0 0

Street-Sellers of Lucifer-Matches.

Supposing that each of the 200 traders take, on lucifers alone, but 4*s.* weekly, selling nine dozen (with a profit to the seller of from 1*s.* 9*d.* to 2*s.* 6*d.*), we find on lucifer-matches bought in the streets an annual outlay of 2,080 0 0

Street-Sellers of Cigar-Lights or Fuzees.

It will, I believe, be accurate to state that in the streets there are generally 100 persons subsisting, or endeavouring to subsist, on the sale of fuzees alone. It may be estimated also that each of these traders averages a receipt of 10*d.* a day (with a profit exceeding 6*d.*), so that the sum yearly laid out in the streets in this way amounts to 1,300 0 0

Street-Sellers of Gutta-Percha Heads, &c.

There are at present, I am informed, 30 persons selling gutta-percha heads in the streets, some of them confining their business solely to those articles. Their average receipts, I am assured, do not exceed 5*s.* a week each, for, though some may take 15*s.* a week, others, and generally the stationary head-sellers, do not take 1*s.* The profit to the street retailer is one-third of his receipts. From this calculation it appears, that if the present rate of sale continue, the sum spent yearly in these street toys is 390 0 0

Street-Sellers of Fly-Papers and Beetle-Wafers.

Last summer, I was informed, there were 50 or 60 persons selling fly-papers and beetle-wafers in the streets; some of them boys, and all of them of the general class of street-sellers, who "take" to any trade for which 1*s.* suffices as capital. Their average earnings may be estimated at 2*s.* 6*d.* a day, about one-half being profit. This gives a street outlay, for a "season" of ten weeks, of . . 375 0 0

Street-Sellers of Poison for Rats.

Calculating 25 sellers of rat-poison, and each taking on an average 1*s.* daily for the sale of their article, we find that the sum annually expended upon this commodity amounts to . 390 0 0

MISCELLANEOUS. £ s. d.

Street-Sellers of Walking-Sticks.

For 12 weeks of the year there are, I am told, every day 35 stick-sellers, each taking, on an average, 30*s.* a week (with a profit, individually, of about 12*s.*); we find thus that the sum expended yearly in walking-sticks in the streets is 630 0 0

Street-Sellers of Whips, &c.

Averaging that 30 whip-sellers take 25*s.* each weekly (with profits of from 5*s.* to 10*s.*) in London alone, we find that the yearly sum expended in the streets in whips amounts to . 1,950 0 0

Street-Sellers of Pipes (Tobacco).

If we calculate that 4 persons sell pipes daily the year through, taking each 25*s.* (and clearing 10*s.*), we find the yearly sum expended upon the hawkers' pipes amounts to . . . 260 0 0

Street-Sellers of Snuff-Boxes, Tobacco-Boxes, &c.

Reckoning that 15 persons trading on snuff and tobacco and cigar-boxes take 18*s.* weekly (clearing 7*s.* or 8*s.*), we find the sum thus expended annually amounts to 702 0 0

Street-Sellers of Cigars.

Reckoning the number of vendors of cigars at 100, and the average takings of each to be 20*s.* weekly, we have a yearly outlay of 5,200 0 0

Street-Sellers of Sponge.

Calculating, then, that only 50 persons (and so allowing for the irregularities in the trade) vend sponge daily, and that each takes 15*s.* weekly, —some taking 25*s.*, and others but 5*s.*—with about half profit on the whole (the common sponge is often from 200 to 300 per cent. profit), we find the outlay to be 1,950 0 0

Street-Sellers of Wash-Leather.

There are, I am assured, 100 individuals selling little or nothing else but wash-leather in London (for these traders are found in all the suburbs), and that they respectively take 10*s.* weekly, with a profit of from 4*s.* to 5*s.* There are, also, 100 other persons selling them occasionally, along with other goods, and as they vend the higher-priced articles, they probably receive nearly an equal amount, Hence it would appear that there is annually expended in the streets in this purchase, upwards of 5,000 0 0

Street-Sellers of Spectacles and Eye-glasses.

It may be estimated, I am assured, that there are 35 men who vend these articles daily, taking 15*s.* a week (with a profit of 10*s.*), the yearly expenditure being thus . . 1,365 0 0

Street-Sellers of Dolls. £ s. d.

There are, at least, at this time of year, when the fairs are coming on, 50 doll-hawkers, who vend nothing else. Say that each of these sell one dozen dolls per day, and that their average price is 4*d.* each; that is just 10*l.* a day, and 60*l.* per week. In the winter time so many are not sold; but I have no doubt that 50*l.*'s worth of dolls are sold each week throughout the year by London hawkers alone, hence the annual outlay on street-dolls would be close upon 3,000 0 0

Street Lot-sellers.

It may be estimated that 50 men carry on this trade. Each of these may take 13*s.* weekly (with a profit of 7*s.* 6*d.*), so showing the annual street outlay to be 1,690 0 0

Street-Sellers of Roulette Tables.

Calculating the 2 sellers of Roulette tables take 30*s.* each weekly, we find the annual outlay amounts to . . . 156 0 0

Street-Sellers of Rhubarb.

Reckoning 4 street-sellers of rhubarb and spice each taking 18*s.* weekly, we find the sum annually spent in the sale of these articles to be upwards of 187 0 0

Rat-Catchers.

There are, I am told, 100 rat-catchers resorting, at intervals, to London, but only a fourth of that number can be estimated as carrying on their labours regularly in town; their average earnings, I am assured, do not exceed 15*s.* a week; thus there is a yearly expenditure of 975 0 0

Street-Sellers of Combs.

From the best information I have gained, there are 50 persons who sell nothing but combs, the average takings of each are 9*s.* a week, showing the yearly outlay in the streets on these articles to be 1,170 0 0

Street-Sellers of Money-Bags.

There are at present 50 persons consisting of men, women, and children vending money-bags in the streets of London, each taking on an average 1*s.* 6*d.* daily, or 9*s.* per week, and so giving a yearly expenditure of . . 1,170 0 0

Street-Sellers of Coat-Studs.

There are, I am informed, no less than 70 persons, consisting of men, women, and children. These, I am told, take upon an average 15*s.* a week each, their usual profits being cent. per cent.; thus we find a yearly outlay on studs bought in the streets of . . 2.730 0 0

Total amount of income. . £188,189 0 0

LONDON LABOUR
AND
THE LONDON POOR.

VOL. II.

THE STREET-FOLK.
BOOK THE SECOND.

INTRODUCTION.

In commencing a new volume I would devote a few pages to the consideration of the import of the facts already collected concerning the London Street-Folk, not only as regards the street-people themselves, but also in connection with the general society of which they form so large a proportion.

The precise extent of the proportion which the Street-Traders bear to the rest of the Metropolitan Population is the first point to be evolved; for the want, the ignorance, and the vice of a street-life being in a direct ratio to the numbers, it becomes of capital importance that we should know how many are seeking to pick up a livelihood in the public thoroughfares. This is the more essential because the Government returns never *have* given us, and probably never *will* give us, any correct information respecting it. The Census of 1841 set down the "Hawkers, Hucksters, and Pedlars" of the Metropolis as numbering 2045; and from the inquiries I have made among the street-sellers as to the means taken to obtain a full account of their numbers for the next population return, the Census of 1851 appears likely to be about as correct in its statements concerning the Street Traders and Performers as the one which preceded it.

According to the accounts which have been collected during the progress of this work, the number of the London Street-People, so far as the inquiry has gone, is upwards of 40,000. This sum is made up of 30,000 Costermongers; 2000 Street-Sellers of "Green-Stuff," as Watercresses, Chickweed, and Groundsell, Turf, &c.; 4000 Street-Sellers of Eatables and Drinkables; 1000 selling Stationery, Books, Papers, and Engravings in the streets; and 4000 other street-sellers vending manufactured articles, either of metal, crockery, textile, chemical, or miscellaneous substances, making altogether 41,000, or in round numbers say 40,000 individuals. The 30,000 costermongers may be said to include 12,000 men, 6000 women, and 12,000 children.

The above numbers comprise the main body of people selling in the London streets; hence if we assert that, with the vendors of second-hand articles, as old metal, glass, linen, clothes, &c., and mineral productions, such as coke, salt, and sand, there are about 45,000 street-traders in the Metropolis, we shall not, I am satisfied, be very far from the truth.

The value of the Capital, or Stock in Trade, of these people, though individually trifling, amounts, collectively, to a considerable sum of money—indeed, to very nearly 40,000*l.*, or at the rate of about 1*l.* per head. Under the term Capital are included the donkeys, barrows, baskets, stalls, trays, boards, and goods belonging to the several street-traders; and though the stock of the water-cress, the small-ware, the lucifer, the flower, or the chickweed and groundsell seller may not exceed in value 1*s.*, and the basket or tray upon which it is carried barely half that sum, that of the more prosperous costermonger, possessed of his barrow and donkey; or of the Cheap John, with his cart filled with hardware; or the Packman, with his bale of soft wares at his back, may be worth almost as many pounds as the others are pence.

The gross amount of trade done by the London Street-Sellers in the course of the year is so large that the mind is at first unable to comprehend how, without reckless extravagance, want can be in any way associated with the class. After the most cautious calculation, the results having been checked and re-checked in a variety of ways, so that the conclusion arrived at might be somewhat near and certainly not beyond the truth, it appears that the "*takings*" of the London Street-Sellers cannot be said to be less than 2,500,000*l.* per annum. But vast as this sum may seem, and especially when considered as only a portion of the annual expenditure of the Metropolitan Poor, still, when we come to spread the gross yearly receipts over 40,000 people, we find that the individual takings are but 62*l.* per annum, which (allowing the rate of profit to be in all cases even 50 per cent., though I am convinced it is often much less) gives to each street-trader an annual income of 20*l.* 13*s.* 4*d.*, or within a fraction of 8*s.* a week, all the year round. And when we come to deduct from this the loss by perishable articles, the keep of donkeys, the wear and tear, or hire, of barrows—the cost of stalls and baskets, together with the interest on stock-money (generally at the rate of 4*s.* a week—and often 1*s.* a day—for 1*l.*, or 1040*l.* per cent. per annum), we may with safety assert that the average gain or clear income of the Metropolitan Street-Sellers is rather under than over 7*s.* 6*d.* a week. Some of the more expert street-traders may clear 10*s.* or even 15*s.* weekly throughout the year, while the

Original from HARVARD UNIVERSITY

weekly profit of the less expert, the old people, and the children, may be said to be 3*s.* 6*d.* These incomes, however, are the average of the gross yearly profits rather than the regular weekly gains; the consequence is, that though they might be sufficient to keep the majority of the street-sellers in comparative comfort, were they constant and capable of being relied upon, from week to week —but being variable and uncertain, and rising sometimes from nothing in the winter to 1*l.* a week in the summer, when street commodities are plentiful and cheap, and the poorer classes have money wherewith to purchase them — and fluctuating moreover, even at the best of times, according as the weather is wet or fine, and the traffic of the streets consequently diminished or augmented— it is but natural that the people subject to such alternations should lack the prudence and temperance of those whose incomes are more regular and uniform.

To place the above facts clearly before the reader the following table has been prepared. The first column states the titles of the several classes of street-sellers; the second, the number of individuals belonging to each of these classes; the third, the value of their respective capitals or stock in trade; the fourth, the gross amount of trade done by them respectively every year; the fifth, the average yearly takings of each class; and the sixth, their average weekly gains. This gives us, as it were, a bird's-eye view of the earnings and pecuniary condition of the various kinds of street-sellers already treated of. It is here cited, as indeed all the statistics in this work are, as an approximation to the truth rather than a definite and accurate result.

DESCRIPTION OF CLASS.	Number of Persons in each Class.	Gross amount of capital, or stock in trade belonging to each class.	Gross amount of trade annually done by each class.	Average yearly receipts per head.	Average weekly gains.
COSTERMONGERS [a].			£		
Street-Sellers of Wet Fish . .			1,177,200		
" " Dry fish . .			127,000		
" " Shell Fish .			156,600		
			1,460,800		
" " Green Fruit .			332,400		
" " Dry Fruit . .	30,000 [b]	£25,000	1,000	£60	8*s.*
" " Vegetables .			292,200		
			625,600		
" " Game, Poultry, Rabbits, &c.			80,000		
" " Flowers, Roots, &c. . . .			14,800		
			2,181,200		
STREET-SELLERS OF GREEN STUFF.					
Watercresses [c]	1,000	87	13,900	13	3*s.* 6*d.*
Chickweed, Groundsell, and Plantain [d]	1,000	42	14,000	14	5*s.*
Turf-Cutters and Sellers. . .	40	20	570	14	5*s.* 6*d.*

STREET-SELLERS OF STATIONERY, LITERATURE, AND THE FINE ARTS.	1,000	400	33,400	30	8*s.*
STREET-SELLERS OF MANUFACTURED ARTICLES of Metal, Crockery and Glass, Textile, Chemical, or Miscellaneous Substances	4,000	2,800	188,200	47	10*s.*
	41,040	£37,529	£2,634,370	£60	8*s.*

[a] The definition of a Costermonger strictly includes only such individuals as confine themselves to the sale of the produce of the Green and Fruit Markets: the term is here restricted to that signification.

[b] This number includes Men, Women, and Children.

[c] The Watercress trade is carried on in the streets, principally by old people and children. The chief mart to which the street-sellers of cresses resort is Farringdon-market, a place which but few or none of the regular Costermongers attend.

[d] The Chickweed and Groundsell Sellers and the Turf-Cutters' traffic has but little expense connected with it, and their trade is therefore nearly all profit.

Now, according to the above estimate, it would appear that the gross annual receipts of the entire body of street-sellers (for there are many besides those above specified—as for instance, the vendors of second-hand articles, &c.) may be estimated in round numbers at 3,000,000*l.* sterling, and their clear income at about 1,000,000*l.* per annum. Hence, we are enabled to perceive the importance of the apparently insignificant traffic of the streets; for were the street-traders to be prohibited from pursuing their calling, and so forced to apply for relief at the several metropolitan unions, the poor-rates would be at the least doubled. The total sum expended in the relief of the London poor, during 1848, was 725,000*l.*, but this we see is hardly three-fourths of the income of the street-traders. Those, therefore, who would put an end to the commerce of our streets, should reflect whether they would like to do so at the cost of doubling the present poor-rates and of reducing one-fortieth part of the entire metropolitan population from a state of comparative independence to absolute pauperism.

However unsatisfactory it may be to the aristocratic pride of the wealthy commercial classes, it cannot be denied that a very important element of the trade of this vast capital—this marvellous centre of the commerce of the world—I cite the stereotype phrases of civic eloquence, for they are at least truths—it is still undeniable, I say, that a large proportion of the commerce of the capital of Great Britain is in the hands of the Street-Folk. This simple enunciation might appear a mere platitude were it not that the street-sellers are a *proscribed class.* They are driven from stations to which long possession might have been thought to give them a quasi legal right; driven from them at the capricious desire of the shopkeepers, some of whom have had bitter reason, by the diminution of their own business, to repent their interference. They are bandied about at the will of a police-officer. They must "move on" and not obstruct a thoroughfare which may be crammed and blocked with the carriages of the wealthy until to cross the road on foot is a danger. They are, in fine, a body numbering thousands, who are allowed to live in the prosecution of the most ancient of all trades, sale or barter in the open air, *by sufferance alone.* They are classed as unauthorized or illegal and intrusive traders, though they "*turn over*" *millions in a year.*

The authorities, it is true, do not sanction any general arbitrary enforcement of the legal proscription of the Street-Folk, but they have no option if a section of shopkeepers choose to say to them, "Drive away from our doors these street-people." It appears to be sufficient for an inferior class of tradesmen—for such the meddlers with the street-folk generally seem to be—merely to desire such a removal in order to accomplish it. It is not necessary for them to say in excuse, "We pay heavy rents, and rates, and taxes, and are forced to let our lodgings accordingly; we pay for licences, and some of us as well pay fines for giving short weight to poor people, and that, too, when it is hardly safe to give short weight to our richer patrons; but what rates, taxes, or licences do these street-traders pay? Their lodgings may be dear enough, but their rates are nominally nothing" (being charged in the rent of their rooms). "From taxes they are blessedly exempt. They are called upon to pay no imposts on their property or income; they defray merely the trifling duties on their tobacco, beer, tea, sugar, coffee" (though these by the way—the chief articles in the excise and customs returns—make up one-half of the revenue of the country). "They ought to be put down. *We* can supply all that is wanting. What may become of *them* is simply their own concern."

The Act 50 Geo. III., c. 41, requires that every person "carrying to sell or exposing to sale any goods, wares, or merchandize," shall pay a yearly duty. But according to s. 23, "nothing in this Act shall extend to prohibit any person or persons from selling (by hawking in the streets) any printed papers licensed by authority; or any fish, fruit, or victuals." Among the privileged articles are also included barm or yeast, and coals. The same Act, moreover, contains nothing to prohibit the maker of any home-manufacture from exposing his goods to sale in any town-market or fair, nor any tinker, cooper, glazier, or other artizan, from going about and carrying the materials of his business. The unlicensed itinerant vendors of such things however as lucifer-matches, boot-laces, braces, fuzees, or any wares indeed, not of their own manufacture, are violators of the law, and subject to a penalty of 10*l.*, or three months' imprisonment for each offence. It is in practice, however, only in the hawking of such articles as those on which the duty is heavy and of considerable value to the revenue (such as tea, tobacco, or cigars), that there is any actual check in the London streets.

Nevertheless, a large proportion of the street-trading without a licence is contrary to law, and the people seeking to obtain a living by such means are strictly liable to fine or imprisonment, while even those street-traders whom the Act specially exempts—as for instance the street-sellers of fish, fruit, and vegetables, and of eatables and drinkables, as well as the street artizans, and who are said to have the right of "exposing their goods to sale in any market or fair in every city, borough, town-corporate, and market-town"—even these, I say, are liable to be punished for obstructing the highway whenever they attempt to do so.

Now these are surely anomalies which it is high time, in these free-trade days, should cease. *The endeavour to obtain an honest and independent livelihood should subject no man to fine or imprisonment;* nor should the poor hawker—the neediest perhaps of all tradesmen—be required to pay 4*l.* a year for the liberty to carry on his business when the wealthy shopkeeper can do so "scot-free." Moreover, it is a glaring iniquity that the rich tradesman should have it in his power, by complaining to the police, to deprive his poorer rival of the right to dispose of his goods in the streets. It is often said, in justification, that as the shopkeepers pay the principal portion of the rates and taxes, *they* must be protected in the exercise of their business. But this, in the

Digitized by Google
Original from HARVARD UNIVERSITY

first place, is far from the truth. As regards the taxes, the poorer classes pay nearly half of the national imposts: they pay the chief portion of the malt duty, and that is in round numbers 5,000,000*l.* a year; the greater part of the spirit duty, which is 4,350,000*l.*; the tobacco duty, 4,250,000*l.*; the sugar duty, 4,500,000*l.*; and the duty on tea, 5,330,000*l.*; making altogether 23,430,000*l.*, out of about 50,000,000*l.* Concerning the rates, however, it is not so easy to estimate what proportion the poor people contribute towards the local burdens of the country; but if they are householders, they have to pay quota of the parish and county expenses directly, and, if lodgers, indirectly in the rent of their apartments. Hence it is evident, that to consider the street-sellers unworthy of being protected in the exercise of their calling because they pay neither rates nor taxes, is to commit a gross injustice, not only to the street-sellers themselves by forcing them to contribute in their tea and sugar, their beer, gin, and tobacco, towards the expenses of a Government which exerts itself rather to injure than benefit them, but likewise to the ratepayers of the parish; for it is a necessary consequence, if the shopkeepers have the power to deprive the street-dealers of their living whenever the out-of door tradesmen are thought to interfere with the business of those indoors (perhaps by underselling them), that the street-dealers, being unable to live by their own labour, must betake themselves to the union and live upon the labour of the parishioners, and thus the shopkeepers may be said to enrich themselves at the expense, not only of the poor street-people, but likewise of their brother ratepayers.

Nor can it be said that the *Street-Sellers* are interlopers upon these occasions, for if ancient custom be referred to, it will be found that the Shopkeepers are the real intruders, they having succeeded the Hawkers, who were, in truth, the original distributors of the produce of the country.

But though no body of Shopkeepers, nor, indeed, any other class of people *individually*, should possess the power to deprive the Hawkers of what is often the last shift of struggling independence—the sale of a few goods in the street—still it is evident that the *general* convenience of the public must be consulted, and that, were the Street-Traders to be allowed the right of pitching in any thoroughfare they pleased, many of our principal streets would be blocked up with costers' barrows, and the kerb of Regent-street possibly crowded like that of the New Cut, with the hawkers and hucksters that would be sure to resort thither; while those thoroughfares which, like Fleet-street and Cheapside, are now almost impassable at certain times of the day, from the increased traffic of the City, would be rendered still more impervious by the throngs of street-sellers that the crowd alone would be sure to attract to the spot.

Under the circumstances, therefore, it becomes necessary that we should provide for the vast body of Street-Sellers some authorized place of resort, where they might be both entitled and permitted to obtain an honest living according to Act of Parliament. To think for a moment of "putting down" street-trading is to be at once ignorant of the numbers and character of the people pursuing it. To pass an Act declaring 50,000 individuals rogues and vagabonds, would be to fill our prisons or our workhouses with men who would willingly earn their own living. Besides, the poor *will* buy of the poor. Subject the petty trader to fine and imprisonment as you please, still the very sympathy and patronage of the petty purchaser will in this country always call into existence a large body of purveyors to the poorer classes. I would suggest, therefore, and I do so after much consideration, and an earnest desire to meet all the difficulties of the case, that a number of "poor men's markets" be established throughout London, by the purchase or rental of plots of ground in the neighbourhood of the present street-markets; that a small toll be paid by each of the Street-Sellers attending such markets, for the right to vend their goods there—that the keeper or beadle of each market be likewise an Inspector of Weights and Measures, and that any hawker found using "slangs" of any kind, or resorting to any imposition whatever, be prohibited entering the market for the future—that the conduct and regulation of the markets be under the direction of a committee consisting of an equal number of shareholders, sellers, and working men—the latter as representatives of the buyers—and that the surplus funds (if any, after paying all expenses, together with a fair interest to the shareholders of the market) should be devoted to the education of the children of the hawkers before and after the hours of sale. There might also be a penny savings'-bank in connection with each of the markets, and a person stationed at the gates on the conclusion of the day's business, to collect all he could from the hawkers as they left.

There are already a sufficient number of poor-markets established at the East end of the town—though of a different character, such as the Old Clothes Exchange—to prove the practicability of the proposed plan among even the pettiest traders. And I am convinced, after long deliberation, that such institutions could not but tend to produce a rapid and marked improvement in the character of the London Hawkers.

This is the only way evident to me of meeting the evil of our present street-life—an evil which is increasing every day, and which threatens, ere long, almost to overwhelm us with its abominations. To revile the street-people is stark folly. Their ignorance is no demerit to them, even as it is no merit to us to know the little that we do. If we really wish the people better, let us, I say again, do for them what others have done for us, and without which (humiliating as it may be to our pride) we should most assuredly have been as they are. It is the continued forgetfulness of this truth—a truth which our wretched self-conceit is constantly driving from our minds—that prevents our stirring to improve the condition of these poor people; though, if we

Original from HARVARD UNIVERSITY

knew but the whole of the facts concerning them, and their sufferings and feelings, our very fears alone for the safety of the state would be sufficient to make us do something in their behalf. I am quite satisfied, from all I have seen, that there are thousands in this great metropolis ready to rush forth, on the least evidence of a rising of the people, to commit the most savage and revolting excesses—men who have no knowledge of the government of the country but as an armed despotism, preventing their earning their living, and who hate all law, because it is made to appear to them merely as an organised tyranny—men, too, who have neither religious nor moral principles to restrain the exercise of their grossest passions when once roused, and men who, from our very neglect of them, are necessarily and essentially the dangerous classes, whose existence we either rail at or deplore.

The rate of increase among the street-traders it is almost impossible to arrive at. The population returns afford us no data for the calculation, and the street-people themselves are unable to supply the least information on the subject; all they can tell us is, that about 20 years ago they took a guinea for every shilling that they get now. This heavy reduction of their receipts they attribute to the cheapness of commodities, and the necessity to carry and sell a greater quantity of goods in order to get the same profit, as well as to the increase in the number of street-traders; but when questioned as to the extent of such increase, their answers are of the vaguest possible kind. Arranging the street-people, however, as we have done, into three distinct classes, according to the causes which have led to their induction into a street-life, viz., those who are *born* and *bred* to the streets—those who *take* to the streets—and those who are *driven* to the streets, it is evident that the main elements of any extraordinary increase of the street-folk must be sought for among the two latter classes. Among the first the increase will, at the utmost, be at the same rate as the ordinary increase of the population—viz., 1½ per cent. per annum; for the English costermongers and street-traders in general appear to be remarkable rather for the small than the large number of their children, so that, even supposing all the boys and girls of the street-sellers to be brought up to the same mode of life as their father, we could not thus account for any *enormous* increase among the street-folk. With those, however, who *take* to the streets from the love of a "roving life," or the desire to "shake a free leg"—to quote the phrases of the men themselves—or are *driven* to the streets from an inability to obtain employment at the pursuit to which they have been accustomed, the case is far different.

That there is every day a greater difficulty for working men to live by their labour—either from the paucity of work, or from the scanty remuneration given for it—surely no one will be disposed to question when every one is crying out that the country is over-populated. Such being the case, it is evident that the number of mechanics in the streets must be daily augmenting, for, as I have before said, street-trading is the last shift of an unemployed artizan to keep himself and his family from the "Union." The workman out of work, sooner than starve or go to the parish for relief, takes to making up and vending on his own account the articles of his craft, whilst the underpaid workman, sooner than continue toiling from morning till midnight for a bare subsistence, resorts to the easier trade of buying and selling. Again, even among the less industrious of the working classes, the general decline in wages has tended, and is continually tending, to make their labour more and more irksome to them. There is a cant abroad at the present day, that there is a special pleasure in industry, and hence we are taught to regard all those who object to work as appertaining to the class of natural vagabonds; but where is the man among us that loves labour? for work or labour is merely that which is irksome to perform, and which every man requires a certain amount of remuneration to induce him to perform. If men really loved work they would pay to be allowed to do it rather than require to be paid for doing it. That occupation which is agreeable to us we call amusement, and that and that only which is disagreeable we term labour, or drudgery, according to the intensity of its irksomeness. Hence as the amount of remuneration given by way of inducement to a man to go through a certain amount of work becomes reduced, so does the stimulus to work become weakened, and this, through the decline of wages, is what is daily taking place among us. Our operatives are continually ceasing to be producers, and passing from the creators of wealth into the exchangers or distributors of it; becoming mere tradesmen, subsisting on the labour of other people rather than their own, and so adding to the very non-producers, the great number of whom is the main cause of the poverty of those who make all our riches. To teach a people the difficulty of living by labour is to inculcate the most dangerous of all lessons, and this is what we are daily doing. Our trading classes are increasing at a most enormous rate, and so giving rise to that exceeding competition, and consequently, to that continual reduction of prices—all of which must ultimately fall upon the working man. This appears to me to be the main cause of the increase of the London street people, and one for which I candidly confess I see no remedy.

OF THE STREET-SELLERS OF SECOND-HAND ARTICLES.

I HAVE already treated of the street-commerce in such things as are presented to the public in the form in which they are to be cooked, eaten, drank, or used. They have comprised the necessaries, delicacies, or luxuries of the street; they have been either the raw food or preparations ready cooked or mixed for

immediate consumption, as in the case of the street eatables and drinkables; or else they were the proceeds of taste (or its substitute) in art or literature, or of usefulness or ingenuity in manufacture.

All these many objects of street-commerce may be classified in one well-known word: they are bought and sold *first-hand*. I have next to deal with the *second-hand* sellers of our streets; and in this division perhaps will be found more that is novel, curious, and interesting, than in that just completed.

Mr. Babbage, in his "Economy of Machinery and Manufactures," says, concerning the employment of materials of little value: "The worn-out saucepan and tin-ware of our kitchens, when beyond the reach of the tinker's art, are not utterly worthless. We sometimes meet carts loaded with old tin kettles and worn-out iron coal-skuttles traversing our streets. These have not yet completed their useful course; the less corroded parts are cut into strips, punched with small holes, and varnished with a coarse black varnish for the use of the trunk-maker, who protects the edges and angles of his boxes with them; the remainder are conveyed to the manufacturing chemists in the outskirts, who employ them in combination with pyroligneous acid, in making a black dye for the use of calico-printers."

Mr. Babbage has here indicated one portion of the nature of the street-trade in second-hand articles—the application of worn-out materials to a new purpose. But this second-hand commerce of the streets—for a street-commerce it mainly is, both in selling and buying—has a far greater extent than that above indicated, and many ramifications. Under the present head I shall treat only of street *sellers*, unless when a street *purchase* may be so intimately connected with a street *sale* that for the better understanding of the subject it may be necessary to sketch both. Of the STREET-BUYERS and the STREET-FINDERS, or COLLECTORS, both connected with the second-hand trade, I shall treat separately.

In London, where many, in order to live, struggle to extract a meal from the possession of an article which seems utterly worthless, nothing must be wasted. Many a thing which in a country town is kicked by the penniless out of their path even, or examined and left as meet only for the scavenger's cart, will in London be snatched up as a prize; it is money's worth. A crushed and torn bonnet, for instance, or, better still, an old hat, napless, shapeless, crownless, and brimless, will be picked up in the street, and carefully placed in a bag with similar things by one class of street-folk—the STREET-FINDERS. And to tempt the well-to-do to *sell* their second-hand goods, the street-trader offers the barter of shapely china or shining glass vessels; or blooming fuchsias or fragrant geraniums for "the rubbish," or else, in the spirit of the hero of the fairy tale, he exchanges, "new lamps for old."

Of the street sale of second-hand articles, with all the collateral or incidental matter bearing immediately on the subject, I shall treat under the following heads, or under such heads as really constitute the staple of the business, dismissing such as may be trifling or exceptional. Of these traffickers, then, there are five classes, the mere enumeration of the objects of their traffic being curious enough:—

1. *The Street-Sellers of Old Metal Articles*, such as knives, forks, and butchers' steels; saws, hammers, pincers, files, screw-drivers, planes, chisels, and other tools (more frequently those of the workers in wood than of other artisans); old scissors and shears; locks, keys, and hinges; shovels, fire-irons, trivets, chimney-cranes, fenders, and fire-guards; warming-pans (but rarely now); flat and Italian irons, curling-tongs; rings, horse-shoes, and nails; coffee and tea-pots, urns, trays, and canisters; pewter measures; scales and weights; bed-screws and keys; candlesticks and snuffers; niggards, generally called niggers (*i. e.*, false bottoms for grates); tobacco and snuff-boxes and spittoons; door-plates, numbers, knockers, and escutcheons; dog-collars and dog-chains (and other chains); gridirons; razors; coffee-mills; lamps; swords and daggers; gun and pistol-barrels and locks (and occasionally the entire weapon); bronze and cast metal figures; table, chair, and sofa castors; bell-pulls and bells; the larger buckles and other metal (most frequently brass) articles of harness furniture; compositors' sticks (the depositories of the type in the first instance); the multifarious kinds of tin-wares; stamps; cork-screws; barrel-taps; ink-stands; a multiplicity of culinary vessels and of old metal lids; footmen, broken machinery, and parts of machinery, as odd wheels, and screws of all sizes, &c., &c.

2. *The Street-Sellers of Old Linen, Cotton, and Woollen Articles*, such as old sheeting for towels; old curtains of dimity, muslin, cotton, or moreen; carpeting; blanketing for house-scouring cloths; ticking for beds and pillows; sacking for different purposes, according to its substance and quality; fringes; and stocking-legs for the supply of "jobbing worsted," and for re-footing.

I may here observe that in the street-trade, second-hand linen or cotton is often made to pay a double debt. The shirt-collars sold, sometimes to a considerable extent and very cheap, in the street-markets, are made out of linen which has previously been used in some other form; so is it with white waistcoats and other habiliments. Of the street-folk who vend such wares I shall speak chiefly in the fourth division of this subject, viz. the second-hand street-sellers of miscellaneous articles.

3. *The Street-Sellers of Old Glass and Crockery*, including the variety of bottles, odd, or in sets, or in broken sets; pans, pitchers, wash-hand basins, and other crockery utensils; china ornaments; pier, convex, and toilet glasses (often without the frames); pocket ink-bottles; wine, beer, and liqueur glasses; decanters; glass fish-bowls (occasionally); salt-cellars; sugar-basins; and lamp and gas glasses.

4. *The Street-Sellers of Miscellaneous Articles.* These are such as cannot properly be classed under any of the three preceding heads, and include a mass of miscellaneous commodities: Accordions and other musical instruments; brushes of all

descriptions; shaving-boxes and razor-strops; baskets of many kinds; stuffed birds, with and without frames; pictures, with and without frames; desks, work-boxes, tea-caddies, and many articles of old furniture; boot-jacks and hooks; shoe-horns; cartouche-boxes; pocket and opera glasses; rules, and measures in frames; backgammon, and chess or draught boards and men, and dice; boxes of dominoes; cribbage-boards and boxes, sometimes with old packs of cards; pope-boards (boards used in playing the game of "Pope," or "Pope Joan," though rarely seen now); "fish," or card counters of bone, ivory, or mother of pearl (an equal rarity); microscopes (occasionally); an extensive variety of broken or faded things, new or long kept, such as magic-lanterns, dissected maps or histories, &c., from the toy warehouses and shops; Dutch clocks; barometers; wooden trays; shells; music and books (the latter being often odd volumes of old novels); tee-totums, and similar playthings; ladies' head-combs; umbrellas and parasols; fishing-rods and nets; reins, and other parts of cart, gig, and "two-horse" harness; boxes full of "odds and ends" of old leather, such as water-pipes; and a mass of imperfect metal things, which had "better be described," said an old dealer, "as from a needle to an anchor."

5. *The Street-Sellers of Old Apparel*, including the body habiliments, constituting alike men's, women's, boys', girls', and infants' attire: as well as hats, caps, gloves, belts, and stockings; shirts and shirt-fronts ("dickeys"); handkerchiefs, stocks, and neck-ties; furs, such as victorines, boas, tippets, and edgings; beavers and bonnets; and the other several, and sometimes not easily describable, articles which constitute female fashionable or ordinary wear.

I may here observe, that of the wares which once formed a portion of the stock of the street-sellers of the fourth and fifth divisions, but which are now no longer objects of street sale, were, till within the last few years, fans; back and shoulder boards (to make girls grow straight!); several things at one time thought indispensable to every well-nurtured child, such as a coral and bells; belts, sashes, scabbards, epaulettes, feathers or plumes, hard leather stocks, and other indications of the volunteer, militia, and general military spirit of the early part of the present century.

Before proceeding immediately with my subject, I may say a few words concerning what is, in the estimation of some, a *second-hand* matter. I allude to the many uses to which that which is regarded, and indeed termed, "offal," or "refuse," or "waste," is put in a populous city. This may be evidenced in the multiform uses to which the "offal" of the animals which are slaughtered for our use are put. It is still more curiously shown in the uses of the offal of the animals which are killed, not for our use, but for that of our dogs and cats; and to this part of the subject I shall more especially confine the remarks I have to make. My observations on the uses of other waste articles will be found in another place.

What in the butcher's trade is considered the offal of a bullock, was explained by Mr. Deputy Hicks, before the last Select Committee of the House of Commons on Smithfield Market: "The carcass," he said, "as it hangs clear of everything else, is the carcass, and all else constitutes the offal."

The carcass may be briefly termed the four quarters, whereas the offal then comprises the hide, which in the average-sized bullock that is slaughtered in London is worth 12*s.*; but with the hide are sold the horns, which are worth about 10*d.* to the comb-makers, who use them to make their "tortoise-shell" articles, and for similar purposes. The hoofs are worth 2*d.* to the glue-makers, or prussiate of potash manufacturers. What "comes out of a bullock," to use the trade term, is the liver, the lights (or lungs), the stomach, the intestinal canal (sometimes 36 yards when extended), and the gall duct. These portions, with the legs (called "feet" in the trade), form what is styled the tripe-man's portion, and are disposed of to him by the butcher for 5*s.* 6*d.* Separately, the value of the liver is 8*d.*, of the lights, 6*d.* (both for dogs'-meat), and of the legs which are worked into tooth-brush handles, dominoes, &c., 1*s.* The remaining 3*s.* 4*d.* is the worth of the other portion. The heart averages rather more than 1*s.*; the kidneys the same; the head, 1*s.* 9*d.*; the blood (which is "let down the drain" in all but the larger slaughtering houses) 1½*d.* (being 3*d.* for 9 gallons); the tallow (7 stone) 14*s.*; and the tail, I was told, "from nothing to 2*s.*," averaging about 6*d.*; the tongue, 2*s.* 6*d.* Thus the offal sells, altogether, first hand, for 1*l.* 18*s.* 6*d.*

I will now show the uses to which what is far more decidedly pronounced "offal," and what is much more "second-hand" in popular estimation, viz., a dead horse, is put, and even a dead horse's offal, and I will then show the difference in this curious trade between the Parisian and London horse offal.

The greatest horse-slaughtering establishments in France are at Montfaucon, a short distance from the capital. When the animal has been killed, it is "cut up," and the choicer portions of the flesh are eaten by the work-people of the establishment, and by the hangers-on and jobbers who haunt the locality of such places, and are often men of a desperate character. The rest of the carcass is sold for the feeding of dogs, cats, pigs, and poultry, a portion being also devoted to purposes of manure. The flesh on a horse of average size and fatness is 350 lbs., which sells for 1*l.* 12*s.* 6*d.* But this is only one of the uses of the dead animal.

The skin is sold to a tanner for 10*s.* 6*d.* The hoofs to a manufacturer of sal ammonia, or similar preparations, or of Prussian blue, or to a comb or toy-maker, for 1*s.* 4*d.* The old shoes and the shoe-nails are worth 2½d. The hair of the mane and tail realizes 1½*d.* The tendons are disposed of, either fresh or dried, to glue-makers for 3*d.*—a pound of dried tendons (separated from the muscles) being about the average per horse. The

Original from HARVARD UNIVERSITY

bones are bought by the turners, cutlers, fan-makers, and the makers of ivory black and sal ammoniac, 90 lbs. being an average weight of the animal's bones, and realizing 2*s.* The intestines wrought into the different preparations required of the gut-makers, or for manure, are worth 2*d.*

The blood is used by the sugar-refiners, and by the fatteners of poultry, pigeons, and turkeys (which devour it greedily), or else for manure. When required for manure it is dried—20 lbs. of dried blood, which is the average weight, being worth 1*s.* 9*d.* The fat is removed from the carcass and melted down. It is in demand for the making of gas, of soap, and (when very fine) of—bear's grease; also for the dubbing or grease applied to harness and to shoe-leather. This fat when consumed in lamps communicates a greater portion of heat than does oil, and is therefore preferred by the makers of glass toys, and by enamellers and polishers. A horse at Montfaucon has been known to yield 60 lbs. of fat, but this is an extreme case; a yield of 12 lbs. is the produce of a horse in fair condition, but at these slaughter-houses there are so many lean and sorry jades that 8 lbs. may be taken as an average of fat, and at a value of 6*d.* per lb. Nor does the list end here; the dead and putrid flesh is made to teem with life, and to produce food for other living creatures. A pile of pieces of flesh, six inches in height, layer on layer, is slightly covered with hay or straw; the flies soon deposit their eggs in the attractive matter, and thus maggots are bred, the most of which are used as food for pheasants, and in a smaller degree of domestic fowls, and as baits for fish. These maggots give, or are supposed to give, a "game flavour" to poultry, and a very "high" flavour to pheasants. One horse's flesh thus produces maggots worth 1*s.* 5*d.* The total amount, then, realized on the dead horse, which may cost 10*s.* 6*d.*, is as follows:—

	£	*s.*	*d.*
The flesh	1	12	6
The skin	0	10	6
The hoofs	0	1	4
The shoes and nails	0	0	2½
The mane and tail	0	0	1½
The tendons	0	0	3
The bones	0	2	0
The intestines	0	0	2
The blood	0	1	9
The fat	0	4	0
The maggots	0	1	5
	£2	14	3

The carcass of a French horse is also made available in another way, and which relates to a subject I have lately treated of—the destruction of rats; but this is not a regularly-accruing emolument. Montfaucon swarms with rats, and to kill them the carcass of a horse is placed in a room, into which the rats gain access through openings in the floor contrived for the purpose. At night the rats are lured by their keenness of scent to the room, and lured in numbers; the openings are then closed, and they are prisoners. In one room 16,000 were killed in four weeks. The Paris furriers gave from three to four francs for 100 skins, so that, taking the average at 3*s.* of our money, 16,000 rat-skins would return 24*l.*

In London the uses of the dead horse's flesh, bones, blood, &c., are different.

Horse-flesh is not—as yet—a portion of human food in this country. In a recent parliamentary inquiry, witnesses were examined as to whether horse-flesh was used by the sausage-makers. There was some presumption that such might be the case, but no direct evidence. I found, however, among butchers who had the best means of knowing, a strong conviction that such *was* the case. One highly-respectable tradesman told me he was as certain of it as that it was the month of June, though, if called upon to produce legal evidence proving either that such was the sausage-makers' practice, or that this *was* the month of June, he might fail in both instances.

I found among street-people who dealt in provisions a strong, or, at any rate, a strongly-expressed, opinion that the tongues, kidneys, and hearts of horses were sold as those of oxen. One man told me, somewhat triumphantly, as a result of his ingenuity in deduction, that he had thoughts at one time of trying to establish himself in a cats'-meat walk, and made inquiries into the nature of the calling: "I 'm satisfied the 'osses' arts," he said, "is sold for beastesses'; 'cause you see, sir, there 's nothing as 'ud be better liked for favourite cats and pet dogs, than a nice piece of 'art, but ven do you see the 'osses' 'arts on a barrow! If they don't go to the cats, vere does they go to! Vy, to the Christians."

I am assured, however, by tradesmen whose interest (to say nothing of other considerations) would probably make them glad to expose such practices, that this substitution of the equine for the bovine heart is not attempted, and is hardly possible. The bullock's heart, kidneys, and tongue, are so different in shape (the heart, more especially), and in the colour of the fat, while the rough tip of the ox's tongue is not found in that of the horse, that this second-hand, or offal kind of animal food could not be palmed off upon any one who had ever purchased the heart, kidneys, or tongue of an ox. "If the horse's tongue be used as a substitute for that of any other," said one butcher to me, "it is for the dried reindeer's—a savoury dish for the breakfast table!" Since writing the above, I have had convincing proof given me that the horses' tongues are cured and sold as "neats." The heart and kidneys are also palmed, I find, for those of oxen ! ! Thus, in one respect, there is a material difference between the usages, in respect of this food, between Paris and London.

One tradesman, in a large way of business—with many injunctions that I should make no allusion that might lead to his being known, as he said it might be his ruin, even though he never slaughtered the meat he sold, but was, in fact, a dead salesman or a vendor of meat consigned to him—one tradesman, I say, told me that he fancied there was an *unreasonable* objection to the eating of horse-flesh among us. The horse was

Original from HARVARD UNIVERSITY

quite as dainty in his food as the ox, he was quite as graminivorous, and shrunk more, from a nicer sense of smell, from anything pertaining to a contact with animal food than did the ox. The principal objection lies in the number of diseased horses sold at the knackers. My informant reasoned only from analogy, as he had never tasted horse-flesh; but a great-uncle of his, he told me, had relished it highly in the peninsular war.

The uses to which a horse's carcass are put in London are these:—The skin, for tanning, sells for 6*s*. as a low average; the hoofs, for glue, are worth 2*d*.; the shoes and nails, 1½*d*.; the mane and tail, 1½*d*.; the bones, which in London (as it was described to me) are "cracked up" for manure, bring 1*s*. 6*d*.; the fat is melted down and used for cart-grease and common harness oil; one person acquainted with the trade thought that the average yield of fat was 10 lbs. per horse ("taking it low"), another that it was 12 lbs. ("taking it square"), so that if 11 lbs. be accepted as an average, the fat, at 2*d*. per lb., would realize 1*s*. 10*d*. Of the tendons no use is made; of the blood none; and no maggots are reared upon putrid horse-flesh, but a butcher, who had been twenty years a farmer also, told me that he knew from experience that there was nothing so good as maggots for the fattening of poultry, and he thought, from what I told him of maggot-breeding in Montfaucon, that we were *behind* the French in this respect.

Thus the English dead horse—the vendor receiving on an average 1*l*. from the knacker,—realizes the following amount, without including the knacker's profit in disposing of the flesh to the cats'-meat man; but computing it merely at 2*l*. we have the subjoined receipts:—

	£	*s*	*d*.
The flesh (averaging 2 cwt., sold at 2½*d*. per lb.	2	0	0
The skin	0	6	0
The hoofs	0	0	2
The shoes and nails	0	0	1½
The bones	0	1	6
The fat	0	1	10
The tendons	0	0	0
The tongue, &c.	———		?
The blood	0	0	0
The intestines	0	0	0
	£2	9	7½

The French dead horse, then, is made a source of nearly 5*s*. higher receipt than the English. On my inquiring the reason of this difference, and why the blood, &c., were not made available, I was told that the demand by the Prussian blue manufacturers and the sugar refiners was so fully supplied, and over-supplied, from the great cattle slaughter-houses, that the private butchers, for the trifling sum to be gained, let the blood be wasted. One bullock slaughterer in Fox and Knot-yard, who kills 180 cattle in a week, receives only 1*l*. for the blood of the whole number, which is received in a well in the slaughter-house. The amount paid for blood a few year's back was more than double its present rate. Under these circumstances, I was told, it would be useless trying to turn the wasted offal of a horse to any profitable purpose. There is, I am told, on an average, 1000 horses slaughtered every week in London, and this, at 2*l*. 10*s*. each animal, would make the value of the dead horses of the metropolis amount to 130,000*l*. per annum.

Were it not that I might be dwelling too long on the subject, I might point out how the offal of the skins was made to subserve other purposes from the Bermondsey tan-yards; and how the parings and scrapings went to the makers of glue and size, and the hair to the builders to mix with lime, &c., &c.

I may instance another thing in which the worth of what in many places is valueless refuse is exemplified, in the matter of "waste," as waste paper is always called in the trade. Paper in all its glossiest freshness is but a reproduction of what had become in some measure "waste," viz. the rags of the cotton or linen fabric after serving their original purpose. There is a body of men in London who occupy themselves entirely in collecting waste paper. It is no matter of what kind; a small prayer-book, a once perfumed and welcome love-note, lawyers' or tailors' bills, acts of parliament, and double sheets of the *Times*, form portions of the waste dealer's stock. Tons upon tons are thus consumed yearly. Books of every description are ingredients of this waste, and in every language; modern poems or pamphlets and old romances (perfect or imperfect), Shakespeare, Molière, Bibles, music, histories, stories, magazines, tracts to convert the heathen or to prove how easily and how immensely our national and individual wealth might be enhanced, the prospectuses of a thousand companies, each certain to prove a mine of wealth, schemes to pay off the national debt, or recommendations to wipe it off, auctioneers' catalogues and long-kept letters, children's copy-books and last century ledgers, printed effusions which have progressed no further than the unfolded sheets, uncut works and books mouldy from age—all these things are found in the insatiate bag of the waste collector, who of late has been worried because he could not supply enough! "I don't know how it is, sir," said one waste collector, with whom I had some conversation on the subject of street-sold books, with which business he was also connected, "I can't make it out, but paper gets scarcer or else I'm out of luck. Just at this time my family and me really couldn't live on my waste if we had to depend entirely upon it."

I am assured that in no place in the world is this traffic carried on to anything approaching the extent that it is in London. When I treat of the street-buyers I shall have some curious information to publish on the subject. I do but allude to it here as one strongly illustrative of "second-hand" appliances.

Of the Street-Sellers of Second-Hand Metal Articles.

I have in the preceding remarks specified the wares sold by the vendors of the second-hand articles of metal manufacture, or (as they are

Generated at University of Pennsylvania on 2022-01-19 21:04 GMT / https://hdl.handle.net/2027/hvd.hwx4x9

Original from HARVARD UNIVERSITY

called in the streets) the "old metal" men. The several articles I have specified may never be all found at one time upon one stall, but they are all found on the respective stalls. "Aye, sir," said one old man whom I conversed with, "and there's more things every now and then comes to the stalls, and there used to be still more when I were young, but I can't call them all to mind, for times is worse with me, and so my memory fails. But there used to be a good many bayonets, and iron tinder-boxes, and steels for striking lights; I can remember them."

Some of the sellers have strong heavy barrows, which they wheel from street to street. As this requires a considerable exertion of strength, such part of the trade is carried on by strong men, generally of the costermongering class. The weight to be propelled is about 300 lbs. Of this class there are now a few, rarely more than half-a-dozen, who sell on commission in the way I have described concerning the swag-barrowmen.

These are the "old metal swags" of street classification, but their remuneration is less fixed than that of the other swag-barrowmen. It is sometimes a quarter, sometimes a third, and sometimes even a half of the amount taken. The men carrying on this traffic are the servants of the marine-store dealers, or vendors of old metal articles, who keep shops. If one of these people be "lumbered up," that is, if he find his stock increase too rapidly, he furnishes a barrow, and sends a man into the streets with it, to sell what the shopkeeper may find to be excessive. Sometimes if the tradesman can gain only the merest trifle more than he could gain from the people who buy for the melting-pot, he is satisfied.

There is, or perhaps was, an opinion prevalent that the street "old metals" in this way of business got rid of stolen goods in such a manner as the readiest mode of sale, some of which were purposely rusted, and sold at almost any price, so that they brought but a profit to the "fence," whose payment to the thief was little more than the price of old metal at the foundry. I understand, however, that this course is not now pursued, nor is it likely that it ever was pursued to any extent. The street-seller is directly under the eye of the police, and when there is a search for stolen goods, it is not very likely that they would be paraded, however battered or rusted for the purpose, before men who possessed descriptions of all goods stolen. Until the establishment of the present system of police, this might have been an occasional practice. One street-seller had even heard, and he "had it from the man what did it," that a last-maker's shop was some years back broken into in the expectation that money would be met with, but none was found; and as the thieves could not bring away such heavy lumbering things as lasts, they cursed their ill-luck, and brought away such tools as they could stow about their persons, and cover with their loose great coats. These were the large knives, fixed to swivels, and resembling a small scythe, used by the artizan to rough hew the block of beech-wood; and a variety of excellent rasps and files (for they must be of the best), necessary for the completion of the last. These very tools were, in ten days after the robbery, sold from a street-barrow.

The second-hand metal goods are sold from stalls as well as from barrows, and these stalls are often tended by women whose husbands may be in some other branch of street-commerce. One of these stalls I saw in the care of a stout elderly Jewess, who was fast asleep, nodding over her locks and keys. She was awakened by the passing policeman, lest her stock should be pilfered by the boys: "Come, wake up, mother, and shake yourself," he said, "I shall catch a weazel asleep next."

Some of these barrows and stalls are heaped with the goods, and some are very scantily supplied, but the barrows are by far the best stocked. Many of them (especially the swag) look like collections of the different stages of rust, from its incipient spots to its full possession of the entire metal. But amongst these seemingly useless things there is a gleam of brass or plated ware. On one barrow I saw an old brass door-plate, on which was engraven the name of a late learned judge, Baron B—— ; another had formerly announced the residence of a dignitary of the church, the Rev. Mr. ——.

The second-hand metal-sellers are to be seen in all the street-markets, especially on the Saturday nights; also in Poplar, Limehouse, and the Commercial-road, in Golden-lane, and in Old-street and Old-street-road, St. Luke's, in Hoxton and Shoreditch, in the Westminster Broadway, and the Whitechapel-road, in Rosemary-lane, and in the district where perhaps every street calling is pursued, but where some special street-trades seem peculiar to the genius of the place, in Petticoat-lane. A person unacquainted with the last-named locality may have formed an opinion that Petticoat-lane is merely a lane or street. But Petticoat-lane gives its name to a little district. It embraces Sandys-row, Artillery-passage, Artillery-lane, Frying-pan-alley, Catherine Wheel-alley, Tripe-yard, Fisher's-alley, Wentworth-street, Harper's-alley, Marlborough-court, Broad-place, Providence-place, Ellison-street, Swan-court, Little Love-court, Hutchinson-street, Little Middlesex-street, Hebrew-place, Boar's-head-yard, Black-horse-yard, Middlesex-street, Stoney-lane, Meeting-house-yard, Gravel-lane, White-street, Cutler-street, and Borer's-lane, until the wayfarer emerges into what appears the repose and spaciousness of Devonshire-square, Bishopsgate-street, up Borer's-lane, or into what in the contrast really looks like the aristocratic thoroughfare of the Aldgate High-street, down Middlesex-street; or into Houndsditch through the halls of the Old Clothes Exchange.

All these narrow streets, lanes, rows, passages, alleys, yards, courts, and places, are the sites of the street-trade carried on in this quarter. The whole neighbourhood rings with street cries, many uttered in those strange east-end Jewish tones which do not sound like English. Mixed with the incessant invitations to buy Hebrew

dainties, or the "sheepest pargains," is occasionally heard the guttural utterance of the Erse tongue, for the "native Irish," as they are sometimes called, are in possession of some portion of the street-traffic of Petticoat-lane, the original Rag Fair. The savour of the place is moreover peculiar. There is fresh fish, and dried fish, and fish being fried in a style peculiar to the Jews; there is the fustiness of old clothes; there is the odour from the pans on which (still in the Jewish fashion) frizzle and hiss pieces of meat and onions; puddings are boiling and enveloped in steam; cakes with strange names are hot from the oven; tubs of big pickled cucumbers or of onions give a sort of acidity to the atmosphere; lemons and oranges abound; and altogether the scene is not only such as can only be seen in London, but only such as can be seen in this one part of the metropolis.

When I treat of the street-Jews, I shall have information highly curious to communicate, and when I come to the fifth division of my present subject, I shall more particularly describe Petticoat-lane, as the head-quarters of the second-hand clothes business.

I have here alluded to the character of this quarter as being one much resorted to formerly, and still largely used by the sellers of second-hand metal goods. Here I was informed that a strong-built man, known as Jack, or (appropriately enough) as Iron Jack, had, until his death six or seven years ago, one of the best-stocked barrows in London. This, in spite of remonstrances, and by a powerful exercise of his strength, the man lifted, as it were, on to the narrow foot-path, and every passer-by had his attention directed almost perforce to the contents of the barrow, for he must make a "*détour*" to advance on his way. One of this man's favourite pitches was close to the lofty walls of what, before the change in their charter, was one of the East India Company's vast warehouses. The contrast to any one who indulged a thought on the subject—and there is great food for thought in Petticoat-lane—was striking enough. Here towered the store-house of costly teas, and silks, and spices, and indigo; while at its foot was carried on the most minute, and apparently worthless of all street-trades, rusty screws and nails, such as only few would care to pick up in the street, being objects of earnest bargaining!

An experienced man in the business, who thought he was "turned 50, or somewhere about that," gave me the following account of his trade, his customers, &c.

"I've been in most street-trades," he said, "and was born to it, like, for my mother was a rag-gatherer—not a bad business once—and I helped her. I never saw my father, but he was a soldier, and it's suppsed lost his life in foreign parts. No, I don't remember ever having heard what foreign parts, and it don't matter. Well, perhaps, this is about as tidy a trade for a bit of bread as any that's going now. Perhaps selling fish may be better, but that's to a man what knows fish well. I can't say I ever did. I'm more a dab at cooking it (with a laugh). I like a bloater best on what's an Irish gridiron. Do you know what that is, sir? I know, though I'm not Irish, but I married an Irish wife, and as good a woman as ever was a wife. It's done on the tongs, sir, laid across the fire, and the bloater's laid across the tongs. Some says it's best turned and turned very quick on the coals themselves, but the tongs is best, for you can raise or lower." [My informant seemed interested in his account of this and other modes of cookery, which I need not detail.] "This is really a very trying trade. O, I mean it tries a man's patience so. Why, it was in Easter week a man dressed like a gentleman—but I don't think he was a real gentleman—looked out some bolts, and a hammer head, and other things, odds and ends, and they came to 10½*d.* He said he'd give 6*d.* 'Sixpence!' says I; 'why d'you think I stole 'em?' 'Well,' says he, 'if I didn't think you'd stole 'em, I shouldn't have come to *you*.' I don't think he was joking. Well, sir, we got to high words, and I said, 'Then I'm d—d if you have them for less than 1*s.*' And a bit of a crowd began to gather, they was most boys, but the p'liceman came up, as slow as you please, and so my friend flings down 1*s.*, and puts the things in his pocket and marches off, with a few boys to keep him company. That's the way one's temper's tried. Well, it's hard to say what sells best. A latch-lock and keys goes off quick. I've had them from 2*d.* to 6*d.*; but it's only the lower-priced things as sells now in any trade. Bolts is a fairish stock, and so is all sorts of tools. Well, not saws so much as such things as screwdrivers, or hammers, or choppers, or tools that if they're rusty people can clean up theirselves. Saws ain't so easy to manage; bed-keys is good. No, I don't clean the metal up unless it's very bad; I think things don't sell so well that way. People's jealous that they're just done up on purpose to deceive, though they may cost only 1*d.* or 2*d.* There's that cheese-cutter now, it's getting rustier and there'll be very likely a better chance to sell it. This is how it is, sir, I know. You see if a man's going to buy old metal, and he sees it all rough and rusty, he says to himself, 'Well, there's no gammon about it; I can just see what it is.' Then folks like to clean up a thing theirselves, and it's as if it was something made from their own cleverness. That was just my feeling, sir, when I bought old metals for my own use, before I was in the trade, and I goes by that. O, working people's by far my best customers. Many of 'em's very fond of jobbing about their rooms or their houses, and they come to such as me. Then a many has fancies for pigeons, or rabbits, or poultry, or dogs, and they mostly make up the places for them theirselves, and as money's an object, why them sort of fancy people buys hinges, and locks, and screws, and hammers, and what they want of me. A clever mechanic can turn his hand to most things that he wants for his own use. I know a shoemaker that makes beautiful rabbit-hutches and sells them along with his prize cattle, as I calls his great big long-eared rabbits. Perhaps I take 2*s.* 6*d.* or 3*s.* a day, and it's about half profit.

Yes, this time of the year I make good 10*s.* 6*d.* a week, but in winter not 1*s.* a day. That would be very poor pickings for two people to live on, and I can't do without my drop of beer, but my wife has constant work with a first-rate laundress at Mile End, and so we rub on, for we 've no family living."

This informant told me further of the way in which the old metal stocks sold in the streets were provided; but that branch of the subject relates to street-buying. Some of the street-sellers, however, buy their stocks of the shopkeepers.

I find a difficulty in estimating the number of the second-hand metal-ware street-sellers. Many of the stalls or barrows are the property of the marine-store shopkeepers, or old metal dealers (marine stores being about the only things the marine-store men do not sell), and these are generally placed near the shop, being indeed a portion of its contents out of doors. Some of the marine-store men (a class of traders, by the by, not superior to street-sellers, making no "odious" comparison as to the honesty of the two), when they have purchased largely—the refuse iron for instance after a house has been pulled down—establish two or three pitches in the street, confiding the stalls or barrows to their wives and children. I was told by several in the trade that there were 200 old metal sellers in the streets, but from the best information at my command not more than 50 appear to be strictly *street*-sellers, unconnected with shop-keeping. Estimating a weekly receipt, per individual, of 15*s.* (half being profit), the yearly street outlay among this body alone amounts to 1950*l.*

Of the Street-Sellers of Second-Hand Metal Trays, &c.

There are still some few portions of the old metal trade in the streets which require specific mention.

Among these is the sale of second-hand trays, occasionally with such things as bread-baskets. Instead of these wares, however, being matters of daily traffic, they are offered in the streets only at intervals, and generally on the Saturday and Monday evenings, while a few are hawked to public-houses. An Irishman, a rather melancholy looking man, but possessed of some humour, gave me the following account. His dress was a worn suit, such as masons work in; but I have seldom seen so coarse, and never on an Irishman of his class, except on a Sunday, so clean a shirt, and he made as free a display of it as if it were the choicest cambric. He washed it, he told me, with his own hands, as he had neither wife, nor mother, nor sister. "I was a cow-keeper's man, your honour," he said, "and he sent milk to Dublin. I thought I might do betthur, and I got to Liverpool, and walked here. Have I done betthur, is it? Sorry a betthur. Would I like to returren to Dublin? Well, perhaps, plaze God, I 'll do betthur here yit. I 've sould a power of different things in the sthreets, but I 'm off for counthry work now. I have a few therrays left if your honour wants such a thing. I first sould a few for a man I lodged along wid in Kent-street, when he was sick, and so I got to know the therrade. He tould me to say, and it 's the therruth, if anybody said, 'They 're only second-hand,' that they was all the betthur for that, for if they hadn't been real good therrays at first, they would niver have lived to be second-hand ones. I calls the bigghur therrays butlers, and the smhaller, waithers. It 's a poor therrade. One woman 'll say, 'Pooh! ould-fashioned things.' 'Will, thin, ma'am,' I 'll say, 'a good thing like this is niver ould-fashioned, no more than the bhutiful mate and berrid, and the bhutiful new praties a coming in, that you 'll be atin off of it, and thratin' your husband to, God save him. No lady iver goes to supper widout her therray.' Yes, indeed, thin, and it is a poor therrade. It 's the bhutiful therrays I 've sould for 6*d.* I buys them of a shop which dales in sich things. The perrofit! Sorry a perrofit is there in it at all at all; but I thries to make 4*d.* out of 1*s.* If I makes 6*d.* of a night it 's good worruk."

These trays are usually carried under the arm, and are sometimes piled on a stool or small stand, in a street market. The prices are from 2*d.* to 10*d.*, sometimes 1*s.* The stronger descriptions are sold to street-sellers to display their goods upon, as much as to any other class. Women and children occasionally sell them, but it is one of the callings which seems to be disappearing from the streets. From two men, who were familiar with this and other second-hand trades, I heard the following reasons assigned for the decadence. One man thought it was owing to "swag-trays" being got up so common and so cheap, but to look "stunning well," at least as long as the shininess lasted. The other contended that poor working people had enough to do now-a-days to get something to eat, without thinking of a tray to put it on.

If 20 persons, and that I am told is about the number of sellers, take in the one or two nights' sale 4*s.* a week each, on second-hand trays (33 per cent. being the rate of profit), the street expenditure is 208*l.* in a year.

In other second-hand metal articles there is now and then a separate trade. Two or three sets of small *fire-irons* may be offered in a street-market on a Saturday night; or a small stock of *flat and Italian irons* for the laundresses, who work cheap and must buy second-hand; or a *collection of tools* in the same way; but these are accidental sales, and are but ramifications from the general "old metal" trade that I have described. Perhaps, in the sale of these second-hand articles, 20 people may be regularly employed, and 300*l.* yearly may be taken.

In Petticoat-lane, Rosemary-lane, Whitecross-street, Ratcliff-highway, and in the street-markets generally, are to be seen men, women, and children selling *dinner knives and forks, razors, pocket-knives, and scissors.* The pocket-knives and scissors are kept well oiled, so that the weather does not rust them. These goods have been mostly repaired, ground, and polished for street-commerce. The women and children selling these

articles are the wives and families of the men who repair, grind, and polish them, and who belong, correctly speaking, to the class of street-artizans, under which head they will be more particularly treated of. It is the same also with the street-vendors of second-hand tin saucepans and other vessels (a trade, by the way, which is rapidly decreasing), for these are generally made of the old drums of machines retinned, or are old saucepans and pots mended for use by the vendors, who are mostly working tinmen, and appertain to the artizan class.

Of the Street-Sellers of Second-Hand Linen, &c.

I now come to the second variety of the several kinds of street-sellers of second-hand articles. The accounts of the street-trade in second-hand linens, however, need be but brief; for none of the callings I have now to notice supply a mode of subsistence to the street-sellers independently of other pursuits. They are resorted to whenever an opportunity or a prospect of remuneration presents itself by the class of general street-sellers, women as well as men—the women being the most numerous. The sale of these articles is on the Saturday and Monday nights, in the street-markets, and daily in Petticoat and Rosemary lanes.

One of the most saleable of all the second-hand textile commodities of the streets, is an article the demand for which is certainly creditable to the poorer and the working-classes of London—*towels*. The principal supply of this street-towelling is obtained from the several barracks in and near London. They are a portion of what were the sheets (of strong linen) of the soldiers' beds, which are periodically renewed, and the old sheeting is then sold to a contractor, of whom the street-folk buy it, and wash and prepare it for market. It is sold to the street-traders at 4*d*. per pound, 1 lb. making eight penny towels; some (inferior) is as low as 2*d*. The principal demand is by the working-classes.

"Why, for one time, sir," said a street-seller to me, "there wasn't much towelling in the streets, and I got a tidy lot, just when I knew it would go off, like a thief round a corner. I pitched in Whitecross-street, and not far from a woman that was making a great noise, and had a good lot of people about her, for cheap mackarel weren't so very plenty then as they are now. 'Here's your cheap mack'rel,' shouts she, 'cheap, cheap, cheap mac-mac-mac-*mack*'rel. Then *I* begins: 'Here's your cheap towelling; cheap, cheap, cheap, tow-tow-tow-*tow*-ellings. Here's towels a penny a piece, and two for twopence, or a double family towel for twopence.' I soon had a greater crowd than she had. O, yes! I gives 'em a good history of what I has to sell; patters, as you call it; a man that can't isn't fit for the streets. 'Here's what every wife should buy for her husband, and every husband for his wife,' I goes on. 'Domestic happiness is then secured. If a husband licks his wife, or a wife licks her husband, a towel is the handiest and most innocent thing it can be done with, and if it's wet it gives you a strong clipper on the cheek, as every respectable married person knows as well as I do. A clipper that way always does me good, and I'm satisfied it does more good to a gentleman than a lady.' Always patter for the women, sir, if you wants to sell. Yes, towels is good sale in London, but I prefer country business. I'm three times as much in the country as in town, and I'm just off to Ascot to sell cards, and do a little singing, and then I'll perhaps take a round to Bath and Bristol, but Bath 's not what it was once."

Another street-seller told me that, as far as his experience went, Monday night was a better time for the sale of second-hand sheetings, &c., than Saturday, as on Monday the wives of the working-classes who sought to buy cheaply what was needed for household use, usually went out to make their purchases. The Saturday-night's mart is more one for immediate necessities, either for the Sunday's dinner or the Sunday's wear. It appears to me that in all these little distinctions—of which street-folk tell you, quite unconscious that they tell anything new—there is something of the history of the character of a people.

"Wrappers," or "bale-stuff," as it is sometimes styled, are also sold in the streets as second-hand goods. These are what have formed the covers of the packages of manufactures, and are bought (most frequently by the Jews) at the wholesale warehouses or the larger retail shops, and re-sold to the street-people, usually at 1½*d*. and 2*d*. per pound. These goods are sometimes sold entire, but are far more often cut into suitable sizes for towels, strong aprons, &c. They soon get "bleached," I was told, by washing and wear.

"*Burnt*" *linen or calico* is also sold in the streets as a second-hand article. On the occasion of a fire at any tradesman's, whose stock of drapery had been injured, the damaged wares are bought by the Jewish or other keepers of the haberdashery swag-shops. Some of these are sold by the second-hand street dealers, but the traffic for such articles is greater among the hawkers. Of this I have already given an account. The street-sale of these burnt (and sometimes *designedly* burnt) wares is in pieces, generally from 6*d*. to 1*s*. 6*d*. each, or in yards, frequently at 6*d*. per yard, but of course the price varies with the quality.

I believe that no *second-hand sheets* are sold in the streets as sheets, for when tolerably good they are received at the pawn-shops, and if indifferent, at the dolly-shops, or illegal pawn-shops. Street folk have told me of sheets being sold in the street-markets, but so rarely as merely to supply an exception. In Petticoat-lane, indeed, they are sold, but it is mostly by the Jew shopkeepers, who also expose their goods in the streets, and they are sold by them very often to street-traders, who convert them into other purposes.

The statistics of this trade present great difficulties. The second-hand linen, &c., is not a regular street traffic. It may be offered to the public 20 days or nights in a month, or not one. If a "job-lot" have been secured, the second-hand street-seller may confine himself to that especial

HARVARD UNIVERSITY

stock. If his means compel him to offer only a paucity of second-hand goods, he may sell but one kind. Generally, however, the same man or woman trades in two, three, or more of the second-hand textile productions which I have specified, and it is hardly one street-seller out of 20, who if he have cleared his 10*s.* in a given time, by vending different articles, can tell the relative amount he cleared on each. The trade is, therefore, irregular, and is but a consequence, or—as one street-seller very well expressed it—a "tail" of other trades. For instance, if there has been a great auction of any corn-merchant's effects, there will be more sacking than usual in the street-markets; if there have been sales, beyond the average extent, of old household furniture, there will be a more ample street stock of curtains, carpeting, fringes, &c. Of the articles I have enumerated the sale of second-hand linen, more especially that from the barrack-stores, is the largest of any.

The most intelligent man whom I met with in this trade calculated that there were 80 of these second-hand street-folk plying their trade two nights in the week; that they took 8*s.* each weekly, about half of it being profit; thus the street expenditure would be 1664*l.* per annum.

OF THE STREET-SELLERS OF SECOND-HAND CURTAINS.

SECOND-HAND Curtains, but only good ones, I was assured, can now be sold in the streets. "because common new ones can be had so cheap." The "good second-hands," however, sell readily. The most saleable of all second-hand curtains are those of chintz, especially old-fashioned chintz, now a scarce article; the next in demand are what were described to me as "good check," or the blue and white cotton curtains. White dimity curtains, though now rarely seen in a street-market, are not bought to be re-used as curtains —"there's too much washing about them for London"—but for petticoats, the covering of large pincushions, dressing-table covers, &c., and for the last-mentioned purpose they are bought by the householders of a small tenement who let a "well-furnished" bed-room or two.

The uses to which the second-hand chintz or check curtains are put, are often for "Waterloo" or "tent" beds. It is common for a single woman, struggling to "get a decent roof over her head," or for a young couple wishing to improve their comforts in furniture, to do so piece-meal. An old bedstead of a better sort may first be purchased, and so on to the concluding "decency," or, in the estimation of some poor persons, "dignity" of curtains. These persons are customers of the street-sellers — the second hand curtains costing them from 8*d.* to 1*s.* 6*d.*

Moreen curtains have also a good sale. They are bought by working people (and by some of the dealers in second-hand furniture) for the re-covering of sofas, which had become ragged, the deficiency of stuffing being supplied with hay (which is likewise the "stuffing" of the new sofas sold by the "linen-drapers," or "slaughter-houses." Moreen curtains, too, are sometimes cut into pieces, for the re-covering of old horse-hair chairs, for which purpose they are sold at 3*d.* each piece.

Second-hand curtains are moreover cut into portions and sold for the hanging of the testers of bedsteads, but almost entirely for what the street-sellers call "half-testers." These are required for the Waterloo bedsteads, "and if it's a nice thing, sir," said one woman, "and perticler if it's a chintz, and to be had for 6*d.*, the women 'll fight for it."

The second-hand curtains, when sold entire, are from 6*d.* to 2*s.* 6*d.* One man had lately sold a pair of "good moreens, only faded, but dyeing 's cheap," for 3*s.* 6*d.*

OF THE STREET-SELLERS OF SECOND-HAND CARPETING, FLANNELS, STOCKING-LEGS, &c., &c.

I CLASS these second-hand wares together, as they are all of woollen materials.

Carpeting has a fair sale, and in the streets is vended not as an entire floor or stair-carpet, but in pieces. The floor-carpet pieces are from 2*d.* to 1*s.* each; the stair-carpet pieces are from 1*d.* to 4*d.* a yard. Hearth-rugs are very rarely offered to street-customers, but when offered are sold from 4*d.* to 1*s.* Drugget is also sold in the same way as the floor-carpeting, and sometimes for house-scouring cloths.

"I 've sold carpet, sir," said a woman street-seller, who called all descriptions — rugs and drugget too—by that title; "and I would like to sell it regular, but my old man—he buys every-thing—says it can't be had regular. I 've sold many things in the streets, but I 'd rather sell good second-hand in carpet or curtains, or fur in winter, than anything else. They 're nicer people as buys them. It would be a good business if it was regular. Ah! indeed, in my time, and before I was married, I have sold different things in a different way; but I 'd rather not talk about that, and I make no complaints, for seeing what I see. I 'm not so badly off. Them as buys carpet are very particular—I 've known them take a tape out of their pockets and measure—but they 're honourable customers. If they 're satisfied they buy, most of them does, at once; without any of your 'is that the lowest?' as ladies asks in shops, and that when they don't think of buying, either. Carpet is bought by working people, and they use it for hearth-rugs, and for bed-sides, and such like. I know it by what I 've heard them say when I 've been selling. One Monday evening, five or six years back, I took 10*s.* 9*d.* in carpet; there had been some great sales at old houses, and a good quantity of carpet and curtains was sold in the streets. Perhaps I cleared 3*s.* 6*d.* on that 10*s.* 9*d.* But to take 4*s.* or 5*s.* is good work now, and often not more than 3*d.* in the 1*s.* profit. Still, it 's a pretty good business, when you can get a stock of second-hands of different kinds to keep you going constantly."

What in the street-trade is known as *"Flannels,"* is for the most part second hand blankets, which having been worn as bed furniture, and then very probably, or at the same time, used for ironing cloths, are found in the street-markets, where

Digitized by Google
Original from HARVARD UNIVERSITY

they are purchased for flannel petticoats for the children of the poor, or when not good enough for such use, for house cloths, at 1*d*. each.

The trade in *stocking legs* is considerable. In these legs the feet have been cut off, further darning being impossible, and the fragment of the stocking which is worth preserving is sold to the careful housewives who attach to it a new foot. Sometimes for winter wear a new cheap sock is attached to the footless hose. These legs sell from ½*d*. to 3*d*. the pair, but very rarely 3*d*., and only when of the best quality, though the legs would not be saleable in the streets at all, had they not been of a good manufacture originally. Men's hose are sold in this way more largely than women's.

The trade in second-hand stockings is very considerable, but they form a part of the second-hand apparel of street-commerce, and I shall notice them under that head.

Of the Street-Sellers of Second-hand Bed-ticking, Sacking, Fringe, &c.

For *bed-ticking* there is generally a ready sale, but I was told "not near so ready as it was a dozen year or more back." One reason which I heard assigned for this was, that new ticking was made so cheap (being a thin common cotton, for the lining of common carpet-bags, portmanteaus, &c., that poor persons scrupled to give any equivalent price for good sound second-hand linen bed-ticking, "though," said a dealer, "it 'll still wear out half a dozen of their new slop rigs. I should like a few of them there slop-masters, that's making fortins out of foolish or greedy folks, to have to live a few weeks in the streets by this sort of second-hand trade; they'd hear what was thought of them then by all sensible people, which aren't so many as they should be by a precious long sight."

The ticking sold in the street is bought for the patching of beds and for the making of pillows and bolsters, and for these purposes is sold in pieces at from 2*d*. to 4*d*. as the most frequent price. One woman who used to sell bed-ticking, but not lately, told me that she knew poor women who cared nothing for such convenience themselves, buy ticking to make pillows for their children.

Second-hand Sacking is sold without much difficulty in the street-markets, and usually in pieces at from 2*d*. to 6*d*. This sacking has been part of a corn sack, or of the strong package in which some kinds of goods are dispatched by sea or railway. It is bought for the mending of bedstead sacking, and for the making of porters' knots, &c.

Second-hand Fringe is still in fair demand, but though cheaper than ever, does not, I am assured, "sell so well as when it was dearer." Many of my readers will have remarked, when they have been passing the apartments occupied by the working class, that the valance fixed from the top of the window has its adornment of fringe; a blind is sometimes adorned in a similar manner, and so is the valance from the tester of a bedstead. For such uses the second-hand fringe is bought in the street-markets in pieces, sometimes called "quantities," of from 1*d*. to 1*s*.

Second-hand Table-cloths used to be an article of street-traffic to some extent. If offered at all now—and one man, though he was a regular street-seller, thought he had not seen one offered in a market this year—they are worn things such as will not be taken by the pawnbrokers, while the dolly-shop people would advance no more than the table-cloth might be worth for the rag-bag. *The glazed table-covers*, now in such general use, are not as yet sold second-hand in the streets.

I was told by a street-seller that he had heard an old man (since dead), who was a buyer of second-hand goods, say that in the old times, after a great sale by auction—as at Wanstead-house (Mr. Wellesley Pole's), about 30 years ago—the open-air trade was very brisk, as the street-sellers, like the shop-traders, proclaimed all their second-hand wares as having been bought at "the great sale." For some years no such "*ruse*" has been practised by street-folk.

Of the Street-Sellers of Second-Hand Glass and Crockery.

These sellers are another class who are fast disappearing from the streets of London. Before glass and crockery, but more especially glass, became so low-priced when new, the second-hand glass-man was one of the most prosperous of the open-air traders; he is now so much the reverse that he must generally mix up some other calling with his original business. One man, whose address was given to me as an experienced glass-man, I found selling mackarel and "pound crabs," and complaining bitterly that mackarel were high, and that he could make nothing out of them that week at 2*d*. each, for poor persons, he told me, would not give more. "Yes, sir," he said, "I've been in most trades, besides having been a pot-boy, both boy and man, and I don't like this fish-trade at all. I could get a pot-boy's place again, but I'm not so strong as I were, and it's slavish work in the place I could get; and a man that's not so young as he was once is chaffed so by the young lads and fellows in the tap-room and the skittle-ground. For this last three year or more I had to do something in addition to my glass for a crust. Before I dropped it as a bad consarn, I sold old shoes as well as old glass, and made both ends meet that way, a leather end and a glass end. I sold off my glass to a rag and bottle shop for 9*s*., far less than it were worth, and I swopped my shoes for my fish-stall, and water-tub, and 3*s*. in money. I'll be out of this trade before long. The glass was good once; I've made my 15*s*. and 20*s*. a week at it: I don't know how long that is ago, but it's a good long time. Latterly I could do no business at all in it, or hardly any. The old shoes was middling, because they're a free-selling thing, but somehow it seems awkward mixing up any other trade with your glass."

The stall or barrow of a "second-hand glass-man" presented, and still, in a smaller degree,

presents, a variety of articles, and a variety of colours, but over the whole prevails that haziness which seems to be considered proper to this trade. Even in the largest rag and bottle shops, the second-hand bottles always look dingy. "It wouldn't pay to wash them all," said one shop-keeper to me, "so we washes none; indeed, I b'lieve people would rather buy them as they is, and clean them themselves."

The street-assortment of second-hand glass may be described as one of "odds and ends"—odd goblets, odd wine-glasses, odd decanters, odd cruet-bottles, salt-cellars, and mustard-pots; together with a variety of "tops" to fit mustard-pots or butter-glasses, and of "stoppers" to fit any sized bottle, the latter articles being generally the most profitable. Occasionally may still be seen a blue spirit-decanter, one of a set of three, with "brandy," in faded gold letters, upon it, or a brass or plated label, as dingy as the bottle, hung by a fine wire-chain round the neck. Blue finger-glasses sold very well for use as sugar-basins to the wives of the better-off working-people or small tradesmen. One man, apparently about 40, who had been in this trade in his youth, and whom I questioned as to what was the quality of his stock, told me of the demand for "blue sugars," and pointed out to me one which happened to be on a stand by the door of a rag and bottle shop. When I mentioned its original use, he asked further about it, and after my answers seemed sceptical on the subject. "People that 's quality," he said, "that 's my notion on it, that hasn't neither to yarn their dinner, nor to cook it, but just open their mouths and eat it, can't dirty their hands so at dinner as to have glasses to wash 'em in arterards. But there 's queer ways everywhere."

At one time what were called "doctors' bottles" formed a portion of the second-hand stock I am describing. These were phials bought by the poorer people, in which to obtain some physician's gratuitous prescription from the chemist's shop, or the time-honoured nostrum of some wonderful old woman. For a very long period, it must be borne in mind, all kinds of glass wares were dear. Small glass frames, to cover flower-roots, were also sold at these stalls, as were fragments of looking-glass. Beneath his stall or barrow, the "old glass-man" often had a few old wine or beer-bottles for sale.

At the period before cast-glass was so common, and, indeed, subsequently, until glass became cheap, it was not unusual to see at the second-hand stalls, rich cut-glass vessels which had been broken and cemented, for sale at a low figure, the glass-man being often a mender. It was the same with China punch-bowls, and the costlier kind of dishes, but this part of the trade is now unknown.

There is one curious sort of ornament still to be met with at these stalls—wide-mouthed bottles, embellished with coloured patterns of flowers, birds, &c., generally cut from "furniture prints," and kept close against the sides of the interior by the salt with which the bottles are filled. A few second-hand pitchers, tea-pots, &c., are still sold at from 1*d.* to 6*d.*

There are now not above six men (of the ordinary street-selling class) who carry on this trade regularly. Sometimes twelve stalls or barrows may be seen; sometimes one, and sometimes none. Calculating that each of the six dealers takes 12*s.* weekly, with a profit of 6*s.* or 7*s.*, we find 187*l.* 4*s.* expended in this department of street-commerce. The principal place for the trade is in High-street, Whitechapel.

Of the Street-Sellers of Second-Hand Miscellaneous Articles.

I have in a former page specified some of the goods which make up the sum of the second-hand miscellaneous commerce of the streets of London.

I may premise that the trader of this class is a sort of street broker; and it is no more possible minutely to detail his especial traffic in the several articles of his stock, than it would be to give a specific account of each and several of the "sundries" to be found in the closets or corners of an old-furniture broker's or marine-store seller's premises, in describing his general business.

The members of this trade (as will be shown in the subsequent statements) are also "miscellaneous" in their character. A few have known liberal educations, and have been established in liberal professions; others have been artisans or shopkeepers, but the mass are of the general class of street-sellers.

I will first treat of the *Second-Hand Street-Sellers of Articles for Amusement*, giving a wide interpretation to the word "amusement."

The backgammon, chess, draught, and cribbage-boards of the second-hand trade have originally been of good quality—some indeed of a very superior manufacture; otherwise the "cheap Germans" (as I heard the low-priced foreign goods from the swag-shops called) would by their superior cheapness have rendered the business a nullity. The backgammon-boards are bought of brokers, when they are often in a worn, unhinged, and what may be called ragged condition. The street-seller "trims them up," but in this there is nothing of artisanship, although it requires some little taste and some dexterity of finger. A new hinge or two, or old hinges re-screwed, and a little pasting of leather and sometimes the application of strips of bookbinder's gold, is all that is required. The backgammon-boards are sometimes offered in the streets by an itinerant; sometimes (and more frequently than otherwise in a deplorable state, the points of the table being hardly distinguishable) they are part of the furniture of a second-hand stall. I have seen one at an old book-stall, but most usually they are vended by being hawked to the better sort of public-houses, and there they are more frequently disposed of by raffle than by sale. It is not once in a thousand times, I am informed, that second-hand "men" are sold with the board. Before the board has gone through its series of hands to the street-seller, the men have been lost or scattered. New men are sometimes sold or raffled with the backgammon-boards (as with the draught) at from 6*d.* to 2*s.* 6*d.* the set, the best being of box-wood.

Chess-boards and men—for without the men of

course a draught, or the top of a backgammon-board suffices for chess — are a commodity now rarely at the disposal of the street-sellers; and, as these means of a leisurely and abstruse amusement are not of a ready sale, the second-hand dealers do not "look out" for them, but merely speculate in them when the article "falls in their way" and seems a palpable bargain. Occasionally, a second-hand chess apparatus is still sold by the street folk. One man—upon whose veracity I have every reason to rely—told me that he once sold a beautiful set of ivory men and a handsome "leather board" (second-hand) to a gentleman who accosted him as he saw him carry them along the street for sale, inviting him to step in doors, when the gentleman's residence was reached. The chess-men were then arranged and examined, and the seller asked 3*l.* 3*s.* for them, at once closing with the offer of 3*l.*; "for I found, sir," he said, "I had a gentleman to do with, for he told me he thought they were really cheap at 3*l.*, and he would give me that." Another dealer in second-hand articles, when I asked him if he had ever sold chess-boards and men, replied, "Only twice, sir, and then at 4*s.* and 5*s.* the set; they was poor. I 've seen chess played, and I should say it's a rum game; but I know nothing about it. I once had a old gent for a customer, and he was as nice and quiet a old gent as could be, and I always called on him when I thought I had a curus old tea-caddy, or knife-box, or any-thing that way. He didn't buy once in twenty calls, but he always gave me something for my trouble. He used to play at chess with another old gent, and if, after his servant had told him I'd come, I waited 'til I could wait no longer, and then knocked at his room door, he swore like a trooper.

Draught-boards are sold at from 3*d.* to 1*s.* second-hand. Cribbage-boards, also second-hand, and sometimes with cards, are only sold, I am informed, when they are very bad, at from 1*d.* to 3*d.*, or very good, at from 2*s.* 6*d.* to 5*s.* One street-seller told me that he once sold a "Chinee" cribbage-board for 18*s.*, which cost him 10*s.* "It was a most beautiful thing," he stated, "and was very high-worked, and was inlaid with ivory, and with green ivory too."

The Dice required for the playing of backgammon, or for any purpose, are bought of the waiters at the club-houses, generally at 2*l.* the dozen sets. They are retailed at about 25 per cent. profit. Dice in this way are readily disposed of by the street-people, as they are looked upon as "true," and are only about a sixth of the price they could be obtained for new ones in the duly-stamped covers. A few dice are sold at 6*d.* to 1*s.* the set, but they are old and battered.

There are but two men who support themselves wholly by the street-sale and the hawking of the different boards, &c., I have described. There are two, three, or sometimes four occasional participants in the trade. Of these one held a commission in Her Majesty's service, but was ruined by gaming, and when unable to live by any other means, he sells the implements with which he had been but too familiar. "He lost everything in Jermyn-street," a man who was sometimes his comrade in the sale of these articles said to me, "but he is a very gentlemanly and respectable man."

The profits in this trade are very uncertain. A man who was engaged in it told me that one week he had cleared 2*l.*, and the next, with greater pains-taking, did not sell a single thing.

The other articles which are a portion of the second-hand miscellaneous trade of this nature are sold as often, or more often, at stalls than elsewhere. Dominoes, for instance, may be seen in the winter, and they are offered only in the winter, on perhaps 20 stalls. They are sold at from 4*d.* a set, and I heard of one superior set which were described to me as "brass-pinned," being sold in a handsome box for 5*s.*, the shop price having been 15*s.* The great sale of dominoes is at Christmas.

Pope-Joan boards, which, I was told, were fifteen years ago sold readily in the streets, and were examined closely by the purchasers (who were mostly the wives of tradesmen), to see that the print or paint announcing the partitions for "intrigue," "matrimony," "friendship," "Pope," &c., were perfect, are now never, or rarely, seen. Formerly the price was 1*s.* to 1*s.* 9*d.* In the present year I could hear of but one man who had even offered a Pope-board for sale in the street, and he sold it, though almost new, for 3*d.*

"Fish," or the bone, ivory, or mother-o'-pearl card counters in the shape of fish, or sometimes in a circular form, used to be sold second-hand as freely as the Pope-boards, and are now as rarely to be seen.

Until about 20 years ago, as well as I can fix upon a term from the information I received, the apparatus for a game known as the "Devil among the tailors" was a portion of the miscellaneous second-hand trade or hawking of the streets. In it a top was set spinning on a long board, and the result depended upon the number of men, or "tailors," knocked down by the "devil" (top) of each player, these tailors being stationed, numbered, and scored (when knocked down) in the same way as when the balls are propelled into the numbered sockets in a bagatelle-board. I am moreover told that in the same second-hand calling were boards known as "solitaire-boards." These were round boards, with a certain number of holes, in each of which was a peg. One peg was removed at the selection of the player, and the game consisted in taking each remaining peg, by advancing another over its head into any vacant hole, and if at the end of the game only one peg remained in the board, the player won; if winning it could be called when the game could only be played by one person, and was for "solitary" amusement. Chinese puzzles, sometimes on a large scale, were then also a part of the second-hand traffic of the streets. These are a series of thin woods in geometrical shapes, which may be fitted into certain forms or patterns contained in a book, or on a sheet. These puzzles are sold in the streets

still, but in smaller quantity and diminished size. Different games played with the teetotum were also a part of second-hand street-sale, but none of these bygone pastimes were vended to any extent.

From the best data I have been able to obtain it appears that the amount received by the street-sellers or street-hawkers in the sale of these second-hand articles of amusement is 10*l.* weekly, about half being profit, divided in the proportions I have intimated, as respects the number of street-sellers and the periods of sale; or 520*l.* expended yearly.

I should have stated that the principal customers of this branch of second hand traders are found in the public houses and at the cigar-shops, where the goods are carried by street-sellers, who hawk from place to place.

These dealers also attend the neighbouring, and, frequently in the summer, the more distant races, where for dice and the better quality of their "boards," &c., they generally find a prompt market. The sale at the fairs consists only of the lowest-priced goods, and in a very scant proportion compared to the races.

Of the Street-Sellers of Second-hand Musical Instruments.

Of this trade there are two branches; the sale of instruments which are really second hand, and the sale of those which are pretendedly so; in other words, an honest and a dishonest business. As in street estimation the whole is a second-hand calling, I shall so deal with it.

At this season of the year, when fairs are frequent and the river steamers with their bands of music run oft and regularly, and out-door music may be played until late, the calling of the street-musician is "at its best." In the winter he is not unfrequently starving, especially if he be what is called "a chance hand," and have not the privilege of playing in public-houses when the weather renders it impossible to collect a street audience. Such persons are often compelled to part with their instruments, which they offer in the streets or the public-houses, for the pawnbrokers have been so often "stuck" (taken in) with inferior instruments, that it is difficult to pledge even a really good violin. With some of these musical men it goes hard to part with their instruments, as they have their full share of the pride of art. Some, however, sell them recklessly and at almost any price, to obtain the means of prolonging a drunken carouse.

From a man who is now a dealer in second-hand musical instruments, and is also a musician, I had the following account of his start in the second-hand trade, and of his feelings when he first had to part with his fiddle.

"I was a gent'eman's footboy," he said, "when I was young, but I was always very fond of music, and so was my father before me. He was a tailor in a village in Suffolk and used to play the bass-fiddle at church. I hardly know how or when I learned to play, but I seemed to grow up to it. There was two neighbours used to call at my father's and practise, and one or other was always showing me something, and so I learned to play very well. Everybody said so. Before I was twelve, I 've played nearly all night at a dance in a farm-house. I never played on anything but the violin. You must stick to one instrument, or you 're not up to the mark on any if you keep changing. When I got a place as footboy it was in a gentleman's family in the country, and I never was so happy as when master and mistress was out dining, and I could play to the servants in the kitchen or the servants' hall. Sometimes they got up a bit of a dance to my violin. If there was a dance at Christmas at any of the tenants', they often got leave for me to go and play. It was very little money I got given, but too much drink. At last master said, he hired me to be his servant and not for a parish fiddler, so I must drop it. I left him not long after—he got so cross and snappish. In my next place—no, the next but one—I was on board wages, in London, a goodish bit, as the family were travelling, and I had time on my hands, and used to go and play at public-houses of a night, just for the amusement of the company at first, but I soon got to know other musicians and made a little money. Yes, indeed, I could have saved money easily then, but I didn't; I got too fond of a public-house life for that, and was never easy at home."

I need not very closely pursue this man's course to the streets, but merely intimate it. He had several places, remaining in some a year or more, in others two, three, or six months, but always unsettled. On leaving his last place he married a fellow-servant, older than himself, who had saved "a goodish bit of money," and they took a beer-shop in Bermondsey. A "free and easy" (concert), both vocal and instrumental, was held in the house, the man playing regularly, and the business went on, not unprosperously, until the wife died in child-bed, the child surviving. After this everything went wrong, and at last the man was "sold up," and was penniless. For three or four years he lived precariously on what he could earn as a musician, until about six or seven years ago, when one bitter winter's night he was without a farthing, and had laboured all day in the vain endeavour to earn a meal. His son, a boy then of five, had been sent home to him, and an old woman with whom he had placed the lad was incessantly dunning for 12*s.* due for the child's maintenance. The landlord clamoured for 15*s.* arrear of rent for a furnished room, and the hapless musician did not possess one thing which he could convert into money except his fiddle. He must leave his room next day. He had held no intercourse with his friends in the country since he heard of his father's death some years before, and was, indeed, resourceless. After dwelling on the many excellences of his violin, which he had purchased, "a dead bargain," for 3*l.* 15*s.*, he said: "Well, sir, I sat down by the last bit of coal in the place, and sat a long time thinking, and didn't know what to do. There was nothing to hinder me going out in the morning, and working the streets with a mate, as I 'd done before, but then there was little James that

was sleeping there in his bed. He was very delicate then, and to drag him about and let him sleep in lodging-houses would have killed him, I knew. But then I couldn't think of parting with my violin. I felt I should never again have such another. I felt as if to part with it was parting with my last prop, for what was I to do? I sat a long time thinking, with my instrument on my knees, 'til—I 'm sure I don't know how to describe it—I felt as if I was drunk, though I hadn't even tasted beer. So I went out boldly, just as if I *was* drunk, and with a deal of trouble persuaded a landlord I knew to lend me 1*l.* on my instrument, and keep it by him for three months, 'til I could redeem it. I have it now, sir. Next day I satisfied my two creditors by paying each half, and a week's rent in advance, and I walked off to a shop in Soho, where I bought a dirty old instrument, broken in parts, for 2*s.* 3*d.* I was great part of the day in doing it up, and in the evening earned 7*d.* by playing solos by Watchorn's door, and the Crown and Cushion, and the Lord Rodney, which are all in the Westminster-road. I lodged in Stangate-street. There was a young man—he looked like a respectable mechanic—gave me 1*d.*, and said: 'I wonder how you can use your fingers at all such a freezing night. It seems a good fiddle.' I assure you, sir, I was surprised myself to find what I could do with my instrument. 'There 's a beer-shop over the way,' says the young man, 'step in, and I 'll pay for a pint, and try my hand at it.' And so it was done, and I sold him my fiddle for 7*s.* 6d. No, sir, there was no take in; it was worth the money. I 'd have sold it now that I've got a connection for half a guinea. Next day I bought such another instrument at the same shop for 3*s.*, and sold it after a while for 6*s.*, having done it up, in course. This it was that first put it into my head to start selling second-hand instruments, and so I began. Now I 'm known as a man to be depended on, and with my second-hand business, and engagements every now and then as a musician, I do middling."

In this manner is the honest second-hand street-business in musical instruments carried on. It is usually done by hawking. A few, however, are sold at miscellaneous stalls, but they are generally such as require repair, and are often without the bow, &c. The persons carrying on the trade have all, as far as I could ascertain, been musicians.

Of the street-sale of musical instruments by drunken members of the "profession" I need say little, as it is exceptional, though it is certainly a branch of the trade, for so numerous is the body of street-musicians, and of so many classes is it composed, that this description of second-hand business is being constantly transacted, and often to the profit of the more wary dealers in these goods. The statistics I shall show at the close of my remarks on this subject.

Of the Music "Duffers."

Second-Hand Guitars are vended by the street-sellers. The price varies from 7*s.* 6*d.* to 15*s.* *Harps* form no portion of the second-hand business of the streets. A *drum* is occasionally, and only occasionally, sold to a showman, but the chief second-hand traffic is in violins. *Accordions*, both new and old, used to sell readily in the streets, either from stalls or in hawking, "but," said a man who had formerly sold them, "they have been regularly 'duffed' out of the streets, so much cheap rubbish is made to sell. There 's next to nothing done in them now. If one 's offered to a man that 's no judge of it, he 'll be sure you want to cheat him, and perhaps abuse you; if he be a judge, of course it 's no go, unless with a really good article."

Among the purchasers of second-hand musical instruments are those of the working-classes who wish to "practise," and the great number of street-musicians, street-showmen, and the indifferently paid members of the orchestras of minor (and not always of minor) theatres. Few of this class ever buy new instruments. There are sometimes, I am informed, as many as 50 persons, one-fourth being women, engaged in this second-hand sale. Sometimes, as at present, there are not above half the number. A broker who was engaged in the traffic estimated—and an intelligent street-seller agreed in the computation—that, take the year through, at least 25 individuals were regularly, but few of them fully, occupied with this traffic, and that their weekly takings averaged 30*s.* each, or an aggregate yearly amount of 190*l.* The weekly profits run from 10*s.* to 15*s.*, and sometimes the well-known dealers clear 40*s.* or 50*s.* a week, while others do not take 5*s.* Of this amount about two-thirds is expended on violins, and one-tenth of the whole, or nearly a tenth, on "duffing" instruments sold as second-hand, in which department of the business the amount "turned over" used to be twice, and even thrice as much. The sellers have nearly all been musicians in some capacity, the women being the wives or connections of the men.

What I have called the "dishonest trade" is known among the street-folk as "music-duffing." Among the swag-shopkeepers, at one place in Houndsditch more especially, are dealers in "duffing fiddles." These are German-made instruments, and are sold to the street-folk at 2*s.* 6*d.* or 3*s.* each, bow and all. When purchased by the music-duffers, they are discoloured so as to be made to look old. A music-duffer, assuming the way of a man half-drunk, will enter a public-house or accost any party in the street, saying: "Here, I must have money, for I won't go home 'til morning, 'til morning, 'til morning, I won't go home 'til morning, 'til daylight does appear. And so I may as well sell my old fiddle myself as take it to a rogue of a broker. Try it anybody, it 's a fine old tone, equal to any Cremonar. It cost me two guineas and another fiddle, and a good 'un too, in exchange, but I may as well be my own broker, for I must have money any how, and I 'll sell it for 10*s.*"

Possibly a bargain is struck for 5*s.*; for the duffing violin is perhaps purposely damaged in some slight way, so as to appear easily reparable,

and any deficiency in tone may be attributed to that defect, which was of course occasioned by the drunkenness of the possessor. Or possibly the tone of the instrument may not be bad, but it may be made of such unsound materials, and in such a slop-way, though looking well to a little-practised eye, that it will soon fall to pieces. One man told me that he had often done the music-duffing, and had sold trash violins for 10*s*., 15*s*., and even 20*s*., "according," he said, "to the thickness of the buyer's head," but that was ten or twelve years ago.

It appears that when an impetus was given to the musical taste of the country by the establishment of cheap singing schools, or of music classes, (called at one time "singing for the million"), or by the prevalence of cheap concerts, where good music was heard, this duffing trade flourished, but now, I am assured, it is not more than a quarter of what it was. "There 'll always be something done in it," said the informant I have before quoted, "as long as you can find young men that 's conceited about their musical talents, fond of taking their medicine (drinking). If I 've gone into a public-house room where I 've seen a young gent that 's bought a duffing fiddle of me, it don't happen once in twenty times that he complains and blows up about it, and only then, perhaps, if he happens to be drunkish, when people don't much mind what 's said, and so it does me no harm. People 's too proud to confess that they 're ever 'done' at any time or in anything. Why, such gents has pretended, when I 've sold 'em a duffer, and seen them afterwards, that they 've done *me!*"

Nor is it to violins that this duffing or sham second-hand trade is confined. At the swag-shops *duffing cornopeans, French horns*, and *clarionets* are vended to the street-folk. One of these cornopeans may be bought for 14*s*.; a French horn for 10*s*.; and a clarionet for 7*s*. 6*d*.; or as a general rule at one-fourth of the price of a properly-made instrument sold as reasonably as possible. These things are also made to look old, and are disposed of in the same manner as the duffing violins. The sale, however, is and was always limited, for "if there be one working man," I was told, "or a man of any sort not professional in music, that tries his wind and his fingers on a clarionet, there 's a dozen trying their touch and execution on a violin."

Another way in which the duffing music trade at one time was made available as a second-hand business was this:—A band would play before a pawnbroker's door, and the duffing German brass instruments might be well-toned enough, the inferiority consisting chiefly in the materials, but which were so polished up as to appear of the best. Some member of the band would then offer his brass instrument in pledge, and often obtain an advance of more than he had paid for it.

One man who had been himself engaged in what he called this "artful" business, told me that when two pawnbrokers, whom he knew, found that they had been tricked into advancing 15*s*. on cornopeans, which they could buy new in Houndsditch for 14*s*., they got him to drop the tickets of the pledge, which they drew out for the purpose, in the streets. These were picked up by some passer-by—and as there is a very common feeling that there is no harm, or indeed rather a merit, in cheating a pawnbroker or a tax-gatherer—the instruments were soon redeemed by the fortunate finder, or the person to whom he had disposed of his prize. Nor did the roguery end here. The same man told me that he had, in collusion with a pawbroker, dropped tickets of (sham) second-hand musical instruments, which he had bought new at a swag-shop for the very purpose, the amount on the duplicate being double the cost, and as it is known that the pawnbrokers do not advance the value of any article, the finders were gulled into redeeming the pledge, as an advantageous bargain. "But I 've left off all that dodging now, sir," said the man with a sort of a grunt, which seemed half a sigh and half a laugh; "I 've left it off entirely, for I found I was getting into trouble."

The derivation of the term "duffing" I am unable to discover. The Rev. Mr. Dixon says, in his "Dovecote and Aviary," that the term "*Duffer*," applied to pigeons, is a corruption of *Dovehouse*,—but *query?* In the slang dictionaries a "*Duffer*" is explained as "a man who hawks things;" hence it would be equivalent to *Pedlar*, which means strictly beggar—being from the Dutch *Bedelaar*, and the German *Bettler*.

Of the Street-Sellers of Second-Hand Weapons.

The sale of second-hand pistols, for to that weapon the street-sellers' or hawkers' trade in arms seems confined, is larger than might be cursorily imagined.

There must be something seductive about the possession of a pistol, for I am assured by persons familiar with the trade, that they have sold them to men who were ignorant, when first invited to purchase, how the weapon was loaded or discharged, and seemed half afraid to handle it. Perhaps the possession imparts a sense of security.

The pistols which are sometimes seen on the street-stalls are almost always old, rusted, or battered, and are useless to any one except to those who can repair and clean them for sale.

There are three men now selling new or second-hand pistols, I am told, who have been gunmakers.

This trade is carried on almost entirely by hawking to public-houses. I heard of no one who depended solely upon it, "but this is the way," one intelligent man stated to me, "if I am buying second-hand things at a broker's, or in Petticoat-lane, or anywhere, and there 's a pistol that seems cheap, I 'll buy it as readily as anything I know, and I 'll soon sell it at a public-house, or I 'll get it raffled for. Second-hand pistols sell better than new by such as me. If I was to offer a new one I should be told it was some Brummagem slop rubbish. If there 's a little silver-plate let into the wood of the pistol, and a crest or initials engraved on it—I 've got it done sometimes—there 's a better chance of sale, for

people think it's been made for somebody of consequence that wouldn't be fobbed off with an inferior thing. I don't think I've often sold pistols to working-men, but I've known them join in raffles for them, and the winner has often wanted to sell it back to me, and has sold it to somebody. It's tradesmen that buy, or gentlefolks, if you can get at them. A pistol's a sort of a plaything with them."

On my talking with a street-dealer concerning the street-trade in second-hand pistols, he produced a handsome pistol from his pocket. I inquired if it was customary for men in his way of life to carry pistols, and he expressed his conviction that it was, but only when travelling in the country, and in possession of money or valuable stock. "I gave only 7*s.* 6*d.* for this pistol," he said, "and have refused 10*s.* 6*d.* for it, for I shall get a better price, as it's an excellent article, on some of my rounds in town. I bought it to take to Ascot races with me, and have it with me now, but it's not loaded, for I'm going to Moulsey Hurst, where Hampton races are held. You're not safe if you travel after a great muster at a race by yourself without a pistol. Many a poor fellow like me has been robbed, and the public hear nothing about it, or say it's all gammon. At Ascot, sir, I trusted my money to a booth-keeper I knew, as a few men slept in his booth, and he put my bit of tin with his own under his head where he slept, for safe keeping. There's a little doing in second-hand pistols to such as me, but we generally sell them again."

Of *second-hand guns*, or other offensive weapons, there is no street sale. A few "*life-preservers*," some of gutta percha, are hawked, but they are generally new. Bullets and powder are not sold by the pistol-hawkers, but a *mould* for the casting of bullets is frequently sold along with the weapon.

Of these second-hand pistol-sellers there are now, I am told, more than there were last year. "I really believe," said one man, laughing, but I heard a similar account from others, "people were afraid the foreigners coming to the Great Exhibition had some mischief in their noddles, and so a pistol was wanted for protection. In my opinion, a pistol's just one of the things that people don't think of buying, 'til it's shown to them, and then they're tempted to have it."

The principal street-sale, independently of the hawking to public-houses, is in such places as Ratcliffe-highway, where the mates and petty officers of ships are accosted and invited to buy a good second-hand pistol. The wares thus vended are generally of a well-made sort.

In this traffic, which is known as a "straggling" trade, pursued by men who are at the same time pursuing other street-callings, it may be estimated, I am assured, that there are 20 men engaged, each taking as an average 1*l.* a week. In some weeks a man may take 5*l.*; in the next month he may sell no weapons at all. From 30 to 50 per cent. is the usual rate of profit, and the yearly street outlay on these second-hand offensive or defensive weapons is 1040*l.*

One man who "did a little in pistols" told me, "that 25 or 30 years ago, when he was a boy, his father sometimes cleared 2*l.* a week in the street-sale and hawking of second-hand *boxing-gloves*, and that he himself had sometimes carried the 'gloves' in his hand, and pistols in his pocket for sale, but that now boxing-gloves were in no demand whatever among street-buyers, and were 'a complete drug.' He used to sell them at 3*s.* the set, which is four gloves."

OF THE STREET-SELLERS OF SECOND-HAND CURIOSITIES.

SEVERAL of the things known in the street-trade as "curiosities" can hardly be styled second-hand with any propriety, but they are so styled in the streets, and are usually vended by street-merchants who trade in second-hand wares.

Curiosities are displayed, I cannot say temptingly (except perhaps to a sanguine antiquarian), for there is a great dinginess in the display, on stalls. One man whom I met wheeling his barrow in High-street, Camden-town, gave me an account of his trade. He was dirtily rather than meanly clad, and had a very self-satisfied expression of face. The principal things on his barrow were *coins, shells*, and *old buckles*, with a pair of the very high and wooden-heeled *shoes*, worn in the earlier part of the last century.

The coins were all of copper, and certainly did not lack variety. Among them were tokens, but none very old. There was the head of "Charles Marquis Cornwallis" looking fierce in a cocked hat, while on the reverse was Fame with her trumpet and a wreath, and banners at her feet, with the superscription: "His fame resounds from east to west." There was a head of Wellington with the date 1811, and the legend of "Vincit amor patriæ." Also "The R. Hon. W. Pitt, Lord Warden Cinque Ports," looking courtly in a bag wig, with his hair brushed from his brow into what the curiosity-seller called a "topping." This was announced as a "Cinque Ports token payable at Dover," and was dated 1794. "Wellingtons," said the man, "is cheap; that one's only a halfpenny, but here's one here, sir, as you seem to understand coins, as I hope to get 2*d.* for, and will take no less. It's 'J. Lackington, 1794,' you see, and on the back there's a Fame, and round her is written—and it's a good speciment of a coin —'Halfpenny of Lackington, Allen & Co., cheapest booksellers in the world.' That's scarcer and more vallyballer than Wellingtons or Nelsons either." Of the current coin of the realm, I saw none older than Charles II., and but one of his reign, and little legible. Indeed the reverse had been ground quite smooth, and some one had engraved upon it "Charles Dryland Tunbridg." A small "e" over the "g" of Tunbridg perfected the orthography. This, the street-seller said, was a "love-token" as well as an old coin, and "them love-tokens was getting scarce." Of foreign and colonial coins there were perhaps 60. The oldest I saw was one of Louis XV. of France and Navarre, 1774. There was one also of the "Republique Francaise" when Napoleon was First Consul. The colonial coins were more numerous

Original from HARVARD UNIVERSITY

than the foreign. There was the "One Penny token" of Lower Canada; the "one quarter anna" of the East India Company; the "half stiver of the colonies of Essequibo and Demarara;" the "halfpenny token of the province of Nova Scotia," &c. &c. There were also counterfeit halfcrowns and bank tokens worn from their simulated silver to rank copper. The principle on which this man "priced" his coins, as he called it, was simple enough. What was the size of a halfpenny he asked a penny for; the size of a penny coin was 2*d*. "It's a difficult trade is mine, sir," he said, "to carry on properly, for you may be so easily taken in, if you're not a judge of coins and other curiosities."

The shells of this man's stock in trade he called "conks" and "king conks." He had no "clamps" then, he told me, but they sold pretty well; he described them as "two shells together, one fitting inside the other." He also had sold what he called "African cowries," which were as "big as a pint pot," and the smaller cowries, which were "money in India, for his father was a soldier and had been there and saw it." The shells are sold from 1*d*. to 2*s*. 6*d*.

The old buckles were such as used to be worn on shoes, but the plate was all worn off, and "such like curiosities," the man told me, "got scarcer and scarcer."

Many of the stalls which are seen in the streets are the property of adjacent shop or store-keepers, and there are not now, I am informed, more than six men who carry on this trade apart from other commerce. Their average takings are 15*s*. weekly each man, about two-thirds being profit, or 234*l*. in a year. Some of the stands are in Great Wyld-street, but they are chiefly the property of the second-hand furniture brokers.

Of the Street-Sellers of Second-hand Telescopes and Pocket Glasses.

In the sale of second-hand telescopes only one man is now engaged in any extensive way, except on mere chance occasions. Fourteen or fifteen years ago, I was informed, there was a considerable street sale in small telescopes at 1*s*. each. They were made at Birmingham, my informant believed, but were sold as second-hand goods in London. Of this trade there is now no remains.

The principal seller of second-hand telescopes takes a stand on Tower Hill or by the Coal Exchange, and his customers, as he sells excellent "glasses," are mostly sea-faring men. He has sold, and still sells, telescopes from 2*l*. 10*s*. to 5*l*. each, the purchasers generally "trying" them, with strict examination, from Tower Hill, or on the Custom-House Quay. There are, in addition to this street-seller, six and sometimes eight others, who offer telescopes to persons about the docks or wharfs, who may be going some voyage. These are as often new as second-hand, but the second-hand articles are preferred. This, however, is a Jewish trade which will be treated of under another head.

An old opera-glass, or the smaller articles best known as "pocket-glasses," are occasionally hawked to public-houses and offered in the streets, but so little is done in them that I can obtain no statistics. A spectacle seller told me that he had once tried to sell two second-hand opera-glasses at 2*s*. 6*d*. each, in the street, and then in the public-houses, but was laughed at by the people who were usually his customers. "Opera-glasses!" they said, "why, what did they want with opera-glasses? wait until they had opera-boxes." He sold the glasses at last to a shop-keeper.

Of the Street-Sellers of other Miscellaneous Second-hand Articles.

The other second hand articles sold in the streets I will give under one head, specifying the different characteristics of the trade, when any striking peculiarities exist. To give a detail of the whole trade, or rather of the several kinds of articles in the whole trade, is impossible. I shall therefore select only such as are sold the more extensively, or present any novel or curious features of second-hand street-commerce.

Writing-desks, tea-caddies, dressing-cases, and *knife-boxes* used to be a ready sale, I was informed, when "good second-hand;" but they are "got up" now so cheaply by the poor fancy cabinet-makers who work for the "slaughterers," or furniture warehouses, and for some of the general-dealing swag-shops, that the sale of anything second-hand is greatly diminished. In fact I was told that as regards second-hand writing-desks and dressing-cases, it might be said there was "no trade at all now." A few, however, are still to be seen at miscellaneous stalls, and are occasionally, but very rarely, offered at a public-house "used" by artisans who may be considered "judges" of work. The tea-caddies are the things which are in best demand. "Working people buy them," I was informed, and "working people's wives. When women are the customers they look closely at the lock and key, as they keep 'my uncle's cards' there" (pawnbroker's duplicates).

One man had lately sold second-hand tea-caddies at 9*d*., 1*s*., and 1*s*. 3*d*. each, and cleared 2*s*. in a day when he had stock and devoted his time to this sale. He could not persevere in it if he wished, he told me, as he might lose a day in looking out for the caddies; he might go to fifty brokers and not find one caddy cheap enough for his purpose.

Brushes are sold second-hand in considerable quantities in the streets, and are usually vended at stalls. Shoe-brushes are in the best demand, and are generally sold, when in good condition, at 1*s*. the set, the cost to the street-seller being 8*d*. They are bought, I was told, by the people who clean their own shoes, or have to clean other people's. Clothes' brushes are not sold to any extent, as the "hard brush" of the shoe set is used by working people for a clothes' brush. Of late, I am told, second-hand brushes have sold more freely than ever. They were hardly to be had just when wanted, in a sufficient quantity, for the demand by persons going to Epsom and Ascot races, who carry a brush of little value with them,

to brush the dust gathered on the road from their coats. The coster-girls buy very hard brushes, indeed mere stumps, with which they brush radishes; these brushes are vended at the street-stalls at 1*d.* each.

In *Stuffed Birds* for the embellishment of the walls of a room, there is still a small second-hand street sale, but none now in images or chimney-piece ornaments. "Why," said one dealer, "I can now buy new figures for 9*d.*, such as not many years ago cost 7*s.*, so what chance of a second-hand sale is there?" The stuffed birds which sell the best are starlings. They are all sold as second-hand, but are often "made up" for street-traffic; an old bird or two, I was told, in a new case, or a new bird in an old case. Last Saturday evening one man told me he had sold two "long cases" of starlings and small birds for 2*s.* 6*d.* each. There are no stuffed parrots or foreign birds in this sale, and no pheasants or other game, except sometimes wretched old things which are sold because they happen to be in a case.

The street-trade in second-hand *Lasts* is confined principally to Petticoat and Rosemary lanes, where they are bought by the "garret-masters" in the shoemaking trade who supply the large whole-sale warehouses; that is to say, by small masters who find their own materials and sell the boots and shoes by the dozen pairs. The lasts are bought also by mechanics, street-sellers, and other poor persons who cobble their own shoes. A shoemaker told me that he occasionally bought a last at a street stall, or rather from street hampers in Petticoat and Rosemary lanes, and it seemed to him that second-hand stores of street lasts got neither bigger nor smaller: "I suppose it's this way," he reasoned; "the garret-master buys lasts to do the slop-snobbing cheap, mostly women's lasts, and he dies or is done up and goes to the "great house," and his lasts find their way back to the streets. You notice, sir, the first time you're in Rosemary-lane, how little a great many of the lasts have been used, and that shows what a terrible necessity there was to part with them. In some there's hardly any peg-marks at all." The lasts are sold from 1*d.* to 3*d.* each, or twice that amount in pairs, "rights and lefts," according to the size and the condition. There are about 20 street last-sellers in the second-hand trade of London—"at least 20," one man said, after he seemed to have been making a mental calculation on the subject.

Second-hand harness is sold largely, and when good is sold very readily. There is, I am told, far less slop-work in harness-making than in shoe-making or in the other trades, such as tailoring, and "many a lady's pony harness," it was said to me by a second-hand dealer, "goes next to a tradesman, and next to a costermonger's donkey, and if it's been good leather to begin with—as it will if it was made for a lady—why the traces 'll stand clouting, and patching, and piecing, and mending for a long time, and they 'll do to cobble old boots last of all, for old leather 'll wear just in treading, when it might snap at a pull. Give me a good quality to begin with, sir, and it's serviceable to the end." In my inquiries among the costermongers I ascertained that if one of that body started his donkey, or rose from that to his pony, he never bought new harness, unless it were a new collar if he had a regard for the comfort of his beast, but bought old harness, and "did it up" himself, often using iron rivets, or clenched nails, to reunite the broken parts, where, of course, a harness-maker would apply a patch. Nor is it the costermongers alone who buy all their harness second-hand. The sweep, whose stock of soot is large enough to require the help of an ass and a cart in its transport; the collector of bones and offal from the butchers' slaughter-houses or shops; and the many who may be considered as co-traders with the coster-monger class—the greengrocer, the street coal-seller by retail, the salt-sellers, the gravel and sand dealer (a few have small carts)—all, indeed, of that class of traders, buy their harness second-hand, and generally in the streets. The chief sale of second-hand harness is on the Friday afternoons, in Smithfield. The more especial street-sale is in Petticoat and Rosemary lanes, and in the many off-streets and alleys which may be called the tributaries to those great second-hand marts. There is no sale of these wares in the Saturday night markets, for in the crush and bustle generally prevailing there at such times, no room could be found for things requiring so much space as sets of second-hand harness, and no time sufficiently to examine them. "There's so much to look at, you understand, sir," said one second-hand street-trader, who did a little in harness as well as in barrows, "if you wants a decent set, and don't grudge a shilling or two—and I never grudges them myself when I has 'em—so that it takes a little time. You must see that the buckles has good tongues—and it's a sort of joke in the trade that a bad tongue's a d——d bad thing—and that the pannel of the pad ain't as hard as a board (flocks is the best stuffing, sir), and that the bit, if it's rusty, can be polished up, for a animal no more likes a rusty bit in his mouth than we likes a musty bit of bread in our'n. O, a man as treats his ass as a ass ought to be treated—and it's just the same if he has a pony—can't be too perticler. If I had my way I'd 'act a law making people perticler about 'osses' and asses' shoes. If your boot pinches you, sir, you can sing out to your bootmaker, but a ass can't blow up a farrier." It seems to me that in these homely remarks of my informant, there is, so to speak, a sound practical kindliness. There can be little doubt that a fellow who maltreats his ass or his dog, maltreats his wife and children when he dares.

Clocks are sold second-hand, but only by three or four foreigners, Dutchmen or Germans, who hawk them and sell them at 2*s.* 6*d.* or 3*s.* each, Dutch clocks only been disposed of in this way. These traders, therefore, come under the head of STREET-FOREIGNERS. "Ay," one street-seller remarked to me, "it's only Dutch now as is second-handed in the streets, but it'll soon be Americans. The swags is some of them hung up

Original from HARVARD UNIVERSITY

with Slick's;" [so he called the American clocks, meaning the "Sam *Slicks*," in reference to Mr. Justice Hallyburton's work of that title;] "they 're hung up with 'em, sir, and no relation whatsomever (pawnbroker) 'll give a printed character of 'em (a duplicate), and so they must come to the streets, and jolly cheap they 'll be." The foreigners who sell the second-hand Dutch clocks sell also new clocks of the same manufacture, and often on tally, 1*s*. a week being the usual payment.

Cartouche-boxes are sold at the miscellaneous stalls, but only after there has been what I heard called a "Tower sale" (sale of military stores). When bought of the street-sellers, the use of these boxes is far more peaceful than that for which they were manufactured. Instead of the receptacles of cartridges, the divisions are converted into nail boxes, each with its different assortment, or contain the smaller kinds of tools, such as awl-blades. These boxes are sold in the streets at ½*d*. or 1*d*. each, and are bought by jobbing shoemakers more than by any other class.

Of the other second-hand commodities of the streets, I may observe that in *Trinkets* the trade is altogether Jewish; in *Maps*, with frames, it is now a nonentity, and so it is with *Fishing-rods, Cricket-bats, &c.*

In *Umbrellas* and *Parasols* the second-hand traffic is large, but those vended in the streets are nearly all "done up" for street-sale by the class known as "Mush," or more properly "Mushroom Fakers," that is to say, the makers or *fakers* (*facere*—the slang *fakement* being simply a corruption of the Latin *facimentum*) of those articles which are similar in shape to *mushrooms*. I shall treat of this class and the goods they sell under the head of Street-Artisans. The collectors of Old Umbrellas and Parasols are the same persons as collect the second-hand habiliments of male and female attire.

The men and women engaged in the street-commerce carried on in second-hand articles are, in all respects, a more mixed class than the generality of street-sellers. Some hawk in the streets goods which they also display in their shops, or in the windowless apartments known as their shops. Some are not in possession of shops, but often buy their wares of those who are. Some collect or purchase the articles they vend; others collect them by barter. The itinerant crock-man, the root-seller, the glazed table-cover seller, the hawker of spars and worked stone, and even the costermonger of the morning, is the dealer in second-hand articles of the afternoon and evening. The costermonger is, moreover, often the buyer and seller of second-hand harness in Smithfield. I may point out again, also, what a multifariousness of wares passes in the course of a month through the hands of a general street-seller; at one time new goods, at another second-hand; sometimes he is stationary at a pitch vending "lots," or "swag toys;" at others itinerant, selling braces, belts, and hose.

I found no miscellaneous dealer who could tell me of the proportionate receipts from the various articles he dealt in even for the last month. He "did well" in this, and badly in the other trade, but beyond such vague statements there is no precise information to be had. It should be recollected that the street sellers do not keep accounts, or those documents would supply references. "It 's all headwork with us," a street-seller said, somewhat boastingly, to me, as if the ignorance of book-keeping was rather commendable.

Of Second hand Store Shops.

Perhaps it may add to the completeness of the information here given concerning the trading in old refuse articles, and especially those of a miscellaneous character, the manner in which, and the parties by whom the business is carried on, if I conclude this branch of the subject by an account of the shops of the second-hand dealers. The distance between the class of these shop-keepers and of the stall and barrow-keepers I have described is not great. It may be said to be merely from the street to within doors. Marine-store dealers have often in their start in life been street-sellers, not unfrequently coster-mongers, and street-sellers they again become if their ventures be unsuccessful. Some of them, however, make a good deal of money in what may be best understood as a "hugger-mugger way."

On this subject I cannot do better than quote Mr. Dickens, one of the most minute and truthful of observers:—

"The reader must often have perceived in some by-street, in a poor neighbourhood, a small dirty shop, exposing for sale the most extraordinary and confused jumble of old, worn-out, wretched articles, that can well be imagined. Our wonder at their ever having been bought, is only to be equalled by our astonishment at the idea of their ever being sold again. On a board, at the side of the door, are placed about twenty books—all odd volumes; and as many wine-glasses—all different patterns; several locks, an old earthenware pan, full of rusty keys; two or three gaudy chimney ornaments—cracked, of course; the remains of a lustre, without any drops; a round frame like a capital O, which has once held a mirror; a flute, complete with the exception of the middle joint; a pair of curling-irons; and a tinder-box. In front of the shop-window, are ranged some half-dozen high-backed chairs, with spinal complaints and wasted legs; a corner cupboard; two or three very dark mahogany tables with flaps like mathematical problems; some pickle-bottles, some surgeons' ditto, with gilt labels and without stoppers; an unframed portrait of some lady who flourished about the beginning of the thirteenth century, by an artist who never flourished at all; an incalculable host of miscellanies of every description, including armour and cabinets, rags and bones, fenders and street-door knockers, fire-irons, wearing-apparel and bedding, a hall-lamp, and a room-door. Imagine, in addition to this incongruous mass, a black doll in a white frock, with two faces—one looking up the street, and the other looking down, swinging over the door; a

board with the squeezed-up inscription 'Dealer in marine stores,' in lanky white letters, whose height is strangely out of proportion to their width; and you have before you precisely the kind of shop to which we wish to direct your attention.

"Although the same heterogeneous mixture of things will be found at all these places, it is curious to observe how truly and accurately some of the minor articles which are exposed for sale—articles of wearing-apparel, for instance—mark the character of the neighbourhood. Take Drury-lane and Covent-garden for example.

"This is essentially a theatrical neighbourhood. There is not a potboy in the vicinity who is not, to a greater or less extent, a dramatic character. The errand-boys and chandlers'-shop-keepers' sons, are all stage-struck: they 'get up' plays in back kitchens hired for the purpose, and will stand before a shop-window for hours, contemplating a great staring portrait of Mr. somebody or other, of the Royal Coburg Theatre, 'as he appeared in the character of Tongo the Denounced.' The consequence is, that there is not a marine-store shop in the neighbourhood, which does not exhibit for sale some faded articles of dramatic finery, such as three or four pairs of soiled buff boots with turn-over red tops, heretofore worn by a 'fourth robber,' or 'fifth mob;' a pair of rusty broad-swords, a few gauntlets, and certain resplendent ornaments, which, if they were yellow instead of white, might be taken for insurance plates of the Sun Fire-office. There are several of these shops in the narrow streets and dirty courts, of which there are so many near the national theatres, and they all have tempting goods of this description, with the addition, perhaps, of a lady's pink dress covered with spangles; white wreaths, stage shoes, and a tiara like a tin lamp reflector. They have been purchased of some wretched supernumeraries, or sixth-rate actors, and are now offered for the benefit of the rising generation, who, on condition of making certain weekly payments, amounting in the whole to about ten times their value, may avail themselves of such desirable bargains.

"Let us take a very different quarter, and apply it to the same test. Look at a marine-store dealer's, in that reservoir of dirt, drunkenness, and drabs: thieves, oysters, baked potatoes, and pickled salmon — Ratcliff-highway. Here, the wearing-apparel is all nautical. Rough blue jackets, with mother-of-pearl buttons, oil-skin hats, coarse checked shirts, and large canvass trousers that look as if they were made for a pair of bodies instead of a pair of legs, are the staple commodities. Then, there are large bunches of cotton pocket-handkerchiefs, in colour and pattern unlike any one ever saw before, with the exception of those on the backs of the three young ladies without bonnets who passed just now. The furniture is much the same as elsewhere, with the addition of one or two models of ships, and some old prints of naval engagements in still older frames. In the window are a few compasses, a small tray containing silver watches in clumsy thick cases; and tobacco-boxes, the lid of each ornamented with a ship, or an anchor, or some such trophy. A sailor generally pawns or sells all he has before he has been long ashore, and if he does not, some favoured companion kindly saves him the trouble. In either case, it is an even chance that he afterwards unconsciously repurchases the same things at a higher price than he gave for them at first.

"Again: pay a visit, with a similar object, to a part of London, as unlike both of these as they are to each other. Cross over to the Surry side, and look at such shops of this description as are to be found near the King's Bench prison, and in 'the Rules.' How different, and how strikingly illustrative of the decay of some of the unfortunate residents in this part of the metropolis! Imprisonment and neglect have done their work. There is contamination in the profligate denizens of a debtors' prison; old friends have fallen off; the recollection of former prosperity has passed away; and with it all thoughts for the past, all care for the future. First, watches and rings, then cloaks, coats, and all the more expensive articles of dress, have found their way to the pawnbroker's. That miserable resource has failed at last, and the sale of some trifling article at one of these shops, has been the only mode left of raising a shilling or two, to meet the urgent demands of the moment. Dressing-cases and writing-desks, too old to pawn but too good to keep; guns, fishing-rods, musical instruments, all in the same condition; have first been sold, and the sacrifice has been but slightly felt. But hunger must be allayed, and what has already become a habit, is easily resorted to, when an emergency arises. Light articles of clothing, first of the ruined man, then of his wife, at last of their children, even of the youngest, have been parted with, piecemeal. There they are, thrown carelessly together until a purchaser presents himself, old, and patched and repaired, it is true; but the make and materials tell of better days: and the older they are, the greater the misery and destitution of those whom they once adorned."

Of the Street-sellers of Second-hand Apparel.

The multifariousness of the articles of this trade is limited only by what the uncertainty of the climate, the caprices of fashion, or the established styles of apparel in the kingdom, have caused to be worn, flung aside, and reworn as a revival of an obsolete style. It is to be remarked, however, that of the old-fashioned styles none that are costly have been revived. Laced coats, and embroidered and lappeted waistcoats, have long disappeared from second-hand traffic—the last stage of fashions—and indeed from all places but court or fancy balls and the theatre.

The great mart for second-hand apparel was, in the last century, in Monmouth-street; now, by one of those arbitrary, and almost always inappropriate, changes in the nomenclature of streets, termed Dudley-street, Seven Dials. "Monmouth-street finery" was a common term to express tawdriness and pretence. Now Monmouth-

street, for its new name is hardly legitimated, has no finery. Its second-hand wares are almost wholly confined to old boots and shoes, which are vamped up with a good deal of trickery; so much so that a shoemaker, himself in the poorer practice of the "gentle craft," told me that blacking and brown paper were the materials of Monmouth-street cobbling. Almost every master in Monmouth-street now is, I am told, an Irishman; and the great majority of the workmen are Irishmen also. There were a few Jews and a few cockneys in this well-known street a year or two back, but now this branch of the second-hand trade is really in the hands of what may be called a clan. A little business is carried on in second-hand apparel, as well as boots and shoes, but it is insignificant.

The head-quarters of this second-hand trade are now in Petticoat and Rosemary lanes, especially in Petticoat-lane, and the traffic there carried on may be called enormous. As in other departments of commerce, both in our own capital, in many of our older cities, and in the cities of the Continent, the locality appropriated to this traffic is one of narrow streets, dark alleys, and most oppressive crowding. The traders seem to judge of a Rag-fair garment, whether a cotton frock or a ducal coachman's great-coat, by the touch, more reliably than by the sight; they inspect, so to speak, with their fingers more than their eyes. But the business in Petticoat and Rosemary lanes is mostly of a retail character. The wholesale mart—for the trade in old clothes has both a wholesale and retail form—is in a place of especial curiosity, and one of which, as being little known, I shall first speak.

Of the Old Clothes Exchange.

The trade in second-hand apparel is one of the most ancient of callings, and is known in almost every country, but anything like the Old Clothes Exchange of the Jewish quarter of London, in the extent and order of its business, is unequalled in the world. There is indeed no other such place, and it is rather remarkable that a business occupying so many persons, and requiring such facilities for examination and arrangement, should not until the year 1843 have had its regulated proceedings. The Old Clothes Exchange is the latest of the central marts, established in the metropolis.

Smithfield, or the Cattle Exchange, is the oldest of all the markets; it is mentioned as a place for the sale of horses in the time of Henry II. Billingsgate, or the Fish Exchange, is of ancient, but uncertain era. Covent Garden—the largest Fruit, Vegetable, and Flower Exchange—first became established as the centre of such commerce in the reign of Charles II.; the establishment of the Borough and Spitalfields markets, as other marts for the sale of fruits, vegetables, and flowers, being nearly as ancient. The Royal Exchange dates from the days of Queen Elizabeth, and the Bank of England and the Stock-Exchange from those of William III., while the present premises for the Corn and Coal Exchanges are modern.

Were it possible to obtain the statistics of the last quarter of a century, it would, perhaps, be found that in none of the important interests I have mentioned has there been a greater increase of business than in the trade in old clothes. Whether this purports a high degree of national prosperity or not, it is not my business at present to inquire, and be it as it may, it is certain that, until the last few years, the trade in old clothes used to be carried on entirely in the open air, and this in the localities which I have pointed out in my account of the trade in old metal (p. 10, vol. ii.) as comprising the Petticoat-lane district. The old clothes trade was also pursued in Rosemary-lane, but then—and so indeed it is now—this was but a branch of the more centralized commerce of Petticoat-lane. The head-quarters of the traffic at that time were confined to a space not more than ten square yards, adjoining Cutler-street. The chief traffic elsewhere was originally in Cutler-street, White-street, Carter-street, and in Harrow-alley—the districts of the celebrated Rag-fair.

The confusion and clamour before the institution of the present arrangements were extreme. Great as was the extent of the business transacted, people wondered how it could be accomplished, for it always appeared to a stranger, that there could be no order whatever in all the disorder. The wrangling was incessant, nor were the trade-contests always confined to wrangling alone. The passions of the Irish often drove them to resort to cuffs, kicks, and blows, which the Jews, although with a better command over their tempers, were not slack in returning. The East India Company, some of whose warehouses adjoined the market, frequently complained to the city authorities of the nuisance. Complaints from other quarters were also frequent, and sometimes as many as 200 constables were necessary to restore or enforce order. The nuisance, however, like many a public nuisance, was left to remedy itself, or rather it was left to be remedied by individual enterprise. Mr. L. Isaac, the present proprietor, purchased the houses which then filled up the back of Phil's-buildings, and formed the present Old Clothes Exchange. This was eight years ago; now there are no more policemen in the locality than in other equally populous parts.

Of Old Clothes Exchanges there are now two, both adjacent, the one first opened by Mr. Isaac being the most important. This is 100 feet by 70, and is the mart to which the collectors of the cast-off apparel of the metropolis bring their goods for sale. The goods are sold wholesale and retail, for an old clothes merchant will buy either a single hat, or an entire wardrobe, or a sackful of shoes,—I need not say *pairs*, for odd shoes are not rejected. In one department of "Isaac's Exchange," however, the goods are not sold to parties who buy for their own wearing, but to the old clothes merchant, who buys to sell again. In this portion of the mart are 90 stalls, averaging about six square feet each.

In another department, which communicates with the first, and is two-thirds of the size, are assembled such traders as buy the old garments to

Original from HARVARD UNIVERSITY

dispose of them, either after a process of cleaning, or when they have been repaired and renovated. These buyers are generally shopkeepers, residing in the old clothes districts of Marylebone-lane, Holywell-street, Monmouth-street, Union-street (Borough), Saffron-hill (Field-lane), Drury-lane, Shoreditch, the Waterloo-road, and other places of which I shall have to speak hereafter.

The difference between the first and second class of buyers above mentioned, is really that of the merchant and the retail shopkeeper. The one buys literally anything presented to him which is vendible, and in any quantity, for the supply of the wholesale dealers from distant parts, or for exportation, or for the general trade of London. The other purchases what suits his individual trade, and is likely to suit regular or promiscuous customers.

In another part of the same market is carried on the *retail* old clothes trade to any one—shopkeeper, artisan, clerk, costermonger, or gentlemen. This indeed, is partially the case in the other parts. "Yesh, inteet," said a Hebrew trader, whom I conversed with on the subject, "I shall be clad to shell you one coat, sir. Dish von is shust your shize; it is verra sheep, and vosh made by one tip-top shnip." Indeed, the keenness and anxiety to trade—whenever trade seems possible—causes many of the frequenters of these marts to infringe the arrangements as to the manner of the traffic, though the proprietors endeavour to cause the regulations to be strictly adhered to.

The second Exchange, which is a few yards apart from the other is known as Simmons and Levy's Clothes Exchange, and is unemployed, for its more especial business purposes, except in the mornings. The commerce is then wholesale, for here are sold collections of unredeemed pledges in wearing apparel, consigned there by the pawnbrokers, or the buyers at the auctions of unredeemed goods; as well as draughts from the stocks of the wardrobe dealers; a quantity of military or naval stores, and, such like articles. In the afternoon the stalls are occupied by retail dealers. The ground is about as large as the first-mentioned exchange, but is longer and narrower.

In neither of these places is there even an attempt at architectural elegance, or even neatness. The stalls and partitions are of unpainted wood, the walls are bare, the only care that seems to be manifested is that the places should be dry. In the first instance the plainness was no doubt a necessity from motives of prudence, as the establishments were merely speculations, and now everything but *business* seems to be disregarded. The Old Clothes Exchanges have assuredly one recommendation as they are now seen—their appropriateness. They have a threadbare, patched, and *second-hand* look. The dresses worn by the dealers, and the dresses they deal in, are all in accordance with the genius of the place. But the eagerness, crowding, and energy, are the grand features of the scene; and of all the many curious sights in London there is none so picturesque (from the various costumes of the buyers and sellers), none so novel, and none so animated as that of the Old Clothes Exchange.

Business is carried on in the wholesale department of the Old Clothes Exchanges every day during the week; and in the retail on each day except the Hebrew Sabbath (Saturday). The Jews in the old clothes trade observe strictly the command that on their Sabbath day they shall do no manner of work, for on a visit I paid to the Exchange last Saturday, not a single Jew could I see engaged in any business. But though the Hebrew Sabbath is observed by the Jews and disregarded by the Christians, the Christian Sabbath, on the other hand, is disregarded by Jew and Christian alike, some few of the Irish excepted, who may occasionally go to early mass, and attend at the Exchange afterwards. Sunday, therefore, in "Rag-fair," is like the other days of the week (Saturday excepted); business closes on the Sunday, however, at 2 instead of 6.

On the Saturday the keen Jew-traders in the neighbourhood of the Exchanges may be seen standing at their doors—after the synagogue hours—or looking out of their windows, dressed in their best. The dress of the men is for the most part not distinguishable from that of the English on the Sunday, except that there may be a greater glitter of rings and watch-guards. The dress of the women is of every kind; becoming, handsome, rich, tawdry, but seldom neat.

Of the Wholesale Business at the Old Clothes Exchange.

A considerable quantity of the old clothes disposed of at the Exchange are bought by merchants from Ireland. They are then packed in bales by porters, regularly employed for the purpose, and who literally *build* them up square and compact. These bales are each worth from 50*l*. to 300*l*., though seldom 300*l*., and it is curious to reflect from how many classes the pile of old garments has been collected —how many privations have been endured before some of these habiliments found their way into the possession of the old clothes-man—what besotted debauchery put others in his possession—with what cool calculation others were disposed of—how many were procured for money, and how many by the tempting offers of flowers, glass, crockery, spars, table-covers, lace, or millinery—what was the clothing which could first be spared when rent was to be defrayed or bread to be bought, and what was treasured until the last—in what scenes of gaiety or gravity, in the opera-house or the senate, had the perhaps departed wearers of some of that heap of old clothes figured—through how many possessors, and again through what new scenes of middle-class or artizan comfort had these dresses passed, or through what accidents of "genteel" privation and destitution—and lastly through what necessities of squalid wretchedness and low debauchery.

Every kind of old attire, from the highest to the *very lowest*, I was emphatically told, was sent to Ireland.

Some of the bales are composed of garments

originally made for the labouring classes. These are made up of every description of colour and material—cloth, corduroy, woollen cords, fustian, moleskin, flannel, velveteen, plaids, and the several varieties of those substances. In them are to be seen coats, great-coats, jackets, trousers, and breeches, but no other habiliments, such as boots, shirts, or stockings. I was told by a gentleman, who between 40 and 50 years ago was familiar with the liberty and poorer parts of Dublin, that the most coveted and the most saleable of all second-hand apparel was that of leather breeches, worn commonly in some of the country parts of England half a century back, and sent in considerable quantities at that time from London to Ireland. These nether habiliments were coveted because, as the Dublin sellers would say, they "would wear for ever, and look illigant after that." Buck-skin breeches are now never worn except by grooms in their liveries, and gentlemen when hunting, so that the trade in them in the Old Clothes Exchange, and their exportation to Ireland, are at an end. The next most saleable thing—I may mention, incidentally—vended cheap and second-hand in Dublin, to the poor Irishmen of the period I speak of, was a wig! And happy was the man who could wear two, one over the other.

Some of the Irish buyers who are regular frequenters of the London Old Clothes Exchange, take a small apartment, often a garret or a cellar, in Petticoat-lane or its vicinity, and to this room they convey their purchases until a sufficient stock has been collected. Among these old clothes the Irish possessors cook, or at any rate eat, their meals, and upon them they sleep. I did not hear that such dealers were more than ordinarily unhealthy; though it may, perhaps, be assumed that such habits are fatal to health. What may be the average duration of life among old clothes sellers who live in the midst of their wares, I do not know, and believe that no facts have been collected on the subject; but I certainly saw among them some very old men.

Other wholesale buyers from Ireland occupy decent lodgings in the neighbourhood—decent considering the locality. In Phil's-buildings, a kind of wide alley which forms one of the approaches to the Exchange, are eight respectable apartments, almost always let to the Irish old clothes merchants.

Tradesmen of the same class come also from the large towns of England and Scotland to buy for their customers some of the left-off clothes of London.

Nor is this the extent of the wholesale trade. Bales of old clothes are exported to Belgium and Holland, but principally to Holland. Of the quantity of goods thus exported to the Continent not above one-half, perhaps, can be called old *clothes,* while among these the old livery suits are in the best demand. The other goods of this foreign trade are old serges, duffles, carpeting, drugget, and heavy woollen goods generally, of all the descriptions which I have before enumerated as parcel of the second-hand trade of the streets. Old merino curtains, and any second-hand decorations of fringes, woollen lace, &c., are in demand for Holland.

Twelve bales, averaging somewhere about 100*l.* each in value, but not fully 100*l.*, are sent direct every week of the year from the Old Clothes Exchange to distant places, and this is not the whole of the traffic, apart from what is done retail. I am informed on the best authority, that the average trade may be stated at 1500*l.* a week all the year round. When I come to the conclusion of the subject, however, I shall be able to present statistics of the amount turned over in the respective branches of the old clothes trade, as well as of the number of the traffickers, only one-fourth of whom are now Jews.

The conversation which goes on in the Old Clothes Exchange during business hours, apart from the "larking" of the young sweet-stuff and orange or cake-sellers, is all concerning business, but there is, even while business is being transacted, a frequent interchange of jokes, and even of practical jokes. The business talk—I was told by an old clothes collector, and I heard similar remarks—is often to the following effect:—

"How much is this here?" says the man who comes to buy. "One pound five," replies the Jew seller. "I won't give you above half the money." "Half de money," cries the salesman, "I can't take dat. Vat above the 16*s.* dat you offer now vill you give for it? Vill you give me eighteen? Vell, come, give ush your money, I 've got ma rent to pay." But the man says, "I only bid you 12*s.* 6*d.*, and I shan't give no more." And then, if the seller finds he can get him to "spring" or advance no further, he says, "I shupposh I musht take your money even if I loosh by it. You'll be a better cushtomer anoder time." [This is still a common "deal," I am assured by one who began the business at 13 years old, and is now upwards of 60 years of age. The Petticoat-laner will always ask at least twice as much as he means to take.]

For a more detailed account of the mode of business as conducted at the Old Clothes Exchange I refer the reader to p. 368, vol. i. Subsequent visits have shown me nothing to alter in that description, although written (in one of my letters in the *Morning Chronicle*), nearly two years ago. I have merely to add that I have there mentioned the receipt of a halfpenny toll; but this, I find, is not levied on Saturdays and Sundays.

I ought not to omit stating that pilfering one from another by the poor persons who have collected the second-hand garments, and have carried them to the Old Clothes Exchange to dispose of, is of very rare occurrence. This is the more commendable, for many of the wares could not be identified by their owner, as he had procured them only that morning. If, as happens often enough, a man carried a dozen pairs of old shoes to the Exchange, and one pair were stolen, he might have some difficulty in swearing to the

identity of the pair purloined. It is true that the Jews, and crock-men, and others, who collect, by sale or barter, masses of old clothes, note all their defects very minutely, and might have no moral doubt as to identity, nevertheless the magistrate would probably conclude that the legal evidence—were it only circumstantial—was insufficient. The young thieves, however, who flock from the low lodging-houses in the neighbourhood, are an especial trouble in Petticoat-lane, where the people robbed are generally too busy, and the article stolen of too little value, to induce a prosecution—a knowledge which the juvenile pilferer is not slow in acquiring. Sometimes when these boys are caught pilfering, they are severely beaten, especially by the women, who are aided by the men, if the thief offers any formidable resistance, or struggles to return the blows.

Of the Uses of Second-hand Garments.

I have now to describe the uses to which the several kinds of garments which constitute the commerce of the Old Clothes Exchange are devoted, whether it be merely in the re-sale of the apparel, to be worn in its original form or in a repaired or renovated form; or whether it be "worked up" into other habiliments, or be useful for the making of other descriptions of woollen fabrics; or else whether it be fit merely for its last stages—the rag-bag for the paper-maker, or the manure heap for the hop-grower.

Each "left-off" garment has its peculiar after *uses*, according to its material and condition. The practised eye of the old clothes man at once embraces every capability of the apparel, and the amount which these capabilities will realize; whether they be woollen, linen, cotton, leathern, or silken goods; or whether they be articles which cannot be classed under any of those designations, such as macintoshes and furs.

A *surtout* coat is the most serviceable of any second-hand clothing, originally good. It can be re-cuffed, re-collared, or the skirts re-lined with new or old silk, or with a substitute for silk. It can be "restored" if the seams be white and the general appearance what is best understood by the expressive word "seedy." This restoration is a sort of re-dyeing, or rather re-colouring, by the application of gall and logwood with a small portion of copperas. If the under sleeve be worn, as it often is by those whose avocations are sedentary, it is renewed, and frequently with a second-hand piece of cloth "to match," so that there is no perceptible difference between the renewal and the other parts. Many an honest artisan in this way becomes possessed of his Sunday frock-coat, as does many a smarter clerk or shopman, impressed with a regard to his personal appearance.

In the last century, I may here observe, and perhaps in the early part of the present, when woollen cloth was much dearer, much more substantial, and therefore much more durable, it was common for economists to have a good coat "turned." It was taken to pieces by the tailor and re-made, the inner part becoming the outer. This mode prevailed alike in France and England; for Molière makes his miser, *Harpagon*, magnanimously resolve to incur the cost of his many-years'-old coat being "turned," for the celebration of his expected marriage with a young and wealthy bride. This way of dealing with a second-hand garment is not so general now as it was formerly in London, nor is it in the country.

If the surtout be incapable of restoration to the appearance of a "respectable" garment, the skirts are sold for the making of cloth caps; or for the material of boys' or "youths'" waistcoats; or for "poor country curates' gaiters; but not so much now as they once were. The poor journeymen parsons," I was told, "now goes for the new slops; they're often green, and is had by 'vertisements, and bills, and them books about fashions which is all over both country and town. Do you know, sir, why them there books is always made so small? The leaves is about four inches square. That's to prevent their being any use as waste paper. I'll back a coat such as is sometimes sold by a gentleman's servant to wear out two new slops."

Cloaks are things of as ready sale as any kind of old garments. If good, or even reparable, they are in demand both for the home and foreign trades, as cloaks; if too far gone, which is but rarely the case, they are especially available for the same purposes as the surtout. The same may be said of the great-coat.

Dress-coats are far less useful, as if cleaned up and repaired they are not in demand among the working classes, and the clerks and shopmen on small salaries are often tempted by the price, I was told, to buy some wretched new slop thing rather than a superior coat second-hand. The dress-coats, however, are used for caps. Sometimes a coat, for which the collector may have given 9*d*., is cut up for the repairs of better garments.

Trousers are re-seated and repaired where the material is strong enough; and they are, I am informed, now about the only habiliment which is ever "turned," and that but exceptionally. The repairs to trousers are more readily effected than those to coats, and trousers are freely bought by the collectors, and as freely re-bought by the public.

Waistcoats—I still speak of woollen fabrics—are sometimes used in cap-making, and were used in gaiter-making. But generally, at the present time, the worn edges are cut away, the buttons renewed or replaced by a new set, sometimes of glittering glass, the button-holes repaired or their jaggedness gummed down, and so the waistcoat is reproduced as a waistcoat, a size smaller. Sometimes a "vest," as waistcoats are occasionally called, is used by the cheap boot-makers for the "legs" of a woman's cloth boots, either laced or buttoned, but not a quarter as much as they would be, I was told, if the buttons and button-holes of the waistcoat would "do again" in the boot.

Nor is the woollen garment, if too thin, too worn, or too rotten to be devoted to any of the uses I have specified, flung away as worthless. To

the traders in second-hand apparel, or in the remains of second-hand apparel, a dust-hole is an unknown receptacle. The woollen rag, for so it is then considered, when unravelled can be made available for the manufacture of cheap yarns, being mixed with new wool. It is more probable, however, that the piece of woollen fabric which has been rejected by those who make or mend, and who must make or mend so cheaply that the veriest vagrant may be their customer, is formed not only into a new material, but into a material which sometimes is made into a new garment. These garments are inferior to those woven of new wool, both in look and wear; but in some articles the re-manufacture is beautiful. The fabric thus snatched, as it were, from the ruins of cloth, is known as shoddy, the chief seat of manufacture being in Dewsbury, a small town in Yorkshire. The old material, when duly prepared, is torn into wool again by means of fine machinery, but the recovered wool is shorter in its fibre and more brittle in its nature; it is, indeed, more a woollen pulp than a wool.

Touching this peculiar branch of manufacture, I will here cite from the *Morning Chronicle* a brief description of a Shoddy Mill, so that the reader may have as comprehensive a knowledge as possible of the several uses to which his left-off clothes may be put.

"The small town of Dewsbury holds, in the woollen district, very much the same position which Oldham does in the cotton country—the spinning and preparing of waste and refuse materials. To this stuff the name of "shoddy" is given, but the real and orthodox "shoddy" is a production of the woollen districts, and consists of the second-hand wool manufactured by the tearing up, or rather the grinding, of woollen rags by means of coarse willows, called devils; the operation of which sends forth choking clouds of dry pungent dirt and floating fibres—the real and original "devil's dust." Having been, by the agency of the machinery in question, reduced to something like the original raw material, fresh wool is added to the pulp in different proportions, according to the quality of the stuff to be manufactured, and the mingled material is at length reworked in the usual way into a little serviceable cloth.

"There are some shoddy mills in the neighbourhood of Huddersfield, but the mean little town of Dewsbury may be taken as the metropolis of the manufacture. Some mills are devoted solely to the sorting, preparing, and grinding of rags, which are worked up in the neighbouring factories. Here great bales, choke full of filthy tatters, lie scattered about the yard, while the continual arrival of loaded waggons keeps adding to the heap. A glance at the exterior of these mills shows their character. The walls and part of the roof are covered with the thick clinging dust and fibre, which ascends in choky volumes from the open doors and glassless windows of the ground floor, and which also pours forth from a chimney, constructed for the purpose, exactly like smoke. The mill is covered as with a mildewy fungus, and upon the gray slates of the roof the frowzy deposit is often not less than two inches in depth.

In the upper story of these mills the rags are stored. A great ware-room is piled in many places from the floor to the ceiling with bales of woollen rags, torn strips and tatters of every colour peeping out from the bursting depositories. There is hardly a country in Europe which does not contribute its quota of material to the shoddy manufacturer. Rags are brought from France, Germany, and in great quantities from Belgium. Denmark, I understand, is favourably looked upon by the tatter merchants, being fertile in morsels of clothing, of fair quality. Of domestic rags, the Scotch bear off the palm; and possibly no one will be surprised to hear, that of all rags Irish rags are the most worn, the filthiest, and generally the most unprofitable. The gradations of value in the world of rags are indeed remarkable. I was shown rags worth 50*l.* per ton, and rags worth only 30*s.* The best class is formed of the remains of fine cloth, the produce of which, eked out with a few bundles of fresh wool, is destined to go forth to the world again as broad cloth, or at all events as pilot cloth. Fragments of damask and skirts of merino dresses form the staple of middle-class rags; and even the very worst bales —they appear unmitigated mashes of frowzy filth—afford here and there some fragments of calico, which are wrought up into brown paper. The refuse of all, mixed with the stuff which even the shoddy-making devil rejects, is packed off to the agricultural districts for use as manure, to fertilize the hop-gardens of Kent.

"Under the rag ware-room is the sorting and picking room. Here the bales are opened, and their contents piled in close, poverty-smelling masses, upon the floor. The operatives are entirely women. They sit upon low stools, or half sunk and half enthroned amid heaps of the filthy goods, busily employed in arranging them according to the colour and the quality of the morsels, and from the more pretending quality of rags carefully ripping out every particle of cotton which they can detect. Piles of rags of different sorts, dozens of feet high, are the obvious fruits of their labour. All these women are over eighteen years of age, and the wages which they are paid for ten hours' work are 6*s.* per week. They look squalid and dirty enough; but all of them chatter and several sing over their noisome labour. The atmosphere of the room is close and oppressive; and although no particularly offensive smell is perceptible, there is a choky, mildewy sort of odour—a hot, moist exhalation—arising from the sodden smouldering piles, as the workwomen toss armfuls of rags from one heap to another. This species of work is the lowest and foulest which any phase of the factory system can show.

"The devils are upon the ground floor. The choking dust bursts out from door and window, and it is not until a minute or so that the visitor can see the workmen moving amid the clouds, catching up armfuls of the sorted rags and tossing them into the machine to be torn into fibry frag-

ments by the whirling revolutions of its teeth. The place in which this is done is a large bare room—the uncovered beams above, the rough stone walls, and the woodwork of the unglazed windows being as it were furred over with clinging woolly matter. On the floor, the dust and coarse filaments lie as if 'it had been snowing snuff.' The workmen are coated with the flying powder. They wear bandages over their mouths, so as to prevent as much as possible the inhalation of the dust, and seem loath to remove the protection for a moment. The rag grinders, with their squalid, dust-strewn garments, powdered to a dull grayish hue, and with their bandages tied over the greater part of their faces, move about like reanimated mummies in their swathings, looking most ghastly. The wages of these poor creatures do not exceed 7*s.* or 8*s.* a week. The men are much better paid, none of them making less than 18*s.* a week, and many earning as much as 22*s.* Not one of them, however, will admit that he found the trade injurious. The dust tickles them a little, they say, that is all. They feel it most of a Monday morning, after being all Sunday in the fresh air. When they first take to the work it hurts their throats a little, but they drink mint tea, and that soon cures them. They are all more or less subject to 'shoddy fever,' they confess, especially after tenting the grinding of the very dusty sorts of stuff—worsted stockings, for example. The shoddy fever is a sort of stuffing of the head and nose, with sore throat, and it sometimes forces them to give over work for two or three days, or at most a week; but the disorder, the workmen say, is not fatal, and leaves no particularly bad effects.

"In spite of all this, however, it is manifestly impossible for human lungs to breathe under such circumstances without suffering. The visitor exposed to the atmosphere for ten minutes experiences an unpleasant choky sensation in the throat, which lasts all the remainder of the day. The rag grinders, moreover, according to the best accounts, are very subject to asthmatic complaints, particularly when the air is dull and warm. The shoddy fever is said to be like a bad cold, with constant acrid running from the nose, and a great deal of expectoration. It is when there is a particularly dirty lot of rags to be ground that the people are usually attacked in this way, but the fever seldom keeps them more than two or three days from their work.

"In other mills the rags are not only ground, but the shoddy is worked up into coarse bad cloth, a great proportion of which is sent to America for slave clothing (and much now sold to the slop-shops).

"After the rags have been devilled into shoddy, the remaining processes are much the same, although conducted in a coarser way, as those performed in the manufacture of woollen cloth. The weaving is, for the most part, carried on at the homes of the workpeople. The domestic arrangements consist, in every case, of two tolerably large rooms, one above the other, with a cellar beneath—a plan of construction called in Yorkshire a "house and a chamber." The chamber has generally a bed amid the looms. The weavers complain of irregular work and diminished wages. Their average pay, one week with another, with their wives to wind for them—*i. e.*, to place the thread upon the bobbin which goes into the shuttle—is hardly so much as 10*s.* a week. They work long hours, often fourteen per day. Sometimes the weaver is a small capitalist with perhaps half a dozen looms, and a hand-jenny for spinning thread, the workpeople being within his own family as regular apprentices and journeymen."

Dr. Hemingway, a gentleman who has a large practice in the shoddy district, has given the following information touching the "shoddy fever":—

"The disease popularly known as 'shoddy fever,' and which is of frequent occurrence, is a species of bronchitis, caused by the irritating effect of the floating particles of dust upon the mucous membrane of the trachea and its ramifications. In general, the attack is easily cured—particularly if the patient has not been for any length of time exposed to the exciting cause—by effervescing saline draughts to allay the symptomatic febrile action, followed by expectorants to relieve the mucous membrane of the irritating dust; but a long continuance of employment in the contaminated atmosphere, bringing on as it does repeated attacks of the disease, is too apt, in the end, to undermine the constitution, and produce a train of pectoral diseases, often closing with pulmonary consumption. Ophthalmic attacks are by no means uncommon among the shoddy-grinders, some of whom, however, wear wire-gauze spectacles to protect the eyes. As regards the effect of the occupation upon health, it may shorten life by about five years on a rough average, taking, of course, as the point of comparison, the average longevity of the district in which the manufacture is carried on."

"Shoddy fever" is, in fact, a modification of the very fatal disease induced by what is called "dry grinding" at Sheffield; but of course the particles of woollen filament are less fatal in their influence than the floating steel dust produced by the operation in question.

At one time shoddy cloth was not good and firm enough to be used for other purposes than such as padding by tailors, and in the inner linings of carriages, by coach-builders. It was not used for purposes which would expose it to stress, but only to a moderate wear or friction. Now shoddy, which modern improvements have made susceptible of receiving a fine dye (it always looked a dead colour at one period), is made into cloth for soldiers' and sailors' uniforms and for pilot-coats; into blanketing, drugget, stair and other carpeting, and into those beautiful table-covers, with their rich woollen look, on which elegantly drawn and elaborately coloured designs are printed through the application of aquafortis. Thus the rags which the beggar could no longer hang about him to cover his nakedness, may be a component of the soldier's or sailor's uniform, the carpet of a palace, or the library table-cover of a prime-minister.

There is yet another use for old woollen clothes.

What is not good for shoddy is good for manure, and more especially for the manure prepared by the agriculturists in Kent, Sussex, and Herefordshire, for the culture of a difficult plant—hops. It is good also for corn land (judiciously used), so that we again have the remains of the old garment in our beer or our bread.

I have hitherto spoken of *woollen* fabrics. The garments of other materials are seldom diverted from their original use, for as long as they will hold together they can be sold for exportation to Ireland, though of course for very trifling amounts.

The black *Velvet* and *Satin Waistcoats*—the latter now so commonly worn—are almost always resold as waistcoats, and oft enough, when rebound and rebuttoned, make a very respectable looking garment. Nothing sells better to the working-classes than a *good* second-hand vest of the two materials of satin or velvet. If the satin, however, be so worn and frayed that mending is impossible, the back, if not in the same plight, is removed for rebacking of any waistcoat, and the satin thrown away, one of the few things which in its last stage is utterly valueless. It is the same with silk waistcoats, and for the most part with velvet, but a velvet waistcoat may be thrown in the refuse heap with the woollen rags for manure. The coloured waistcoats of silk or velvet are dealt with in the same way. At one time, when under-waistcoats were worn, the edges being just discernible, quantities were made out of the full waistcoats where a sufficiency of the stuff was unworn. This fashion is now becoming less and less followed, and is principally in vogue in the matter of white under-waistcoats. For the jean and other vests—even if a mixture of materials—there is the same use as what I have described of the black satin, and failing that, they are generally transferable to the rag-bag.

Hats have become in greater demand than ever among the street-buyers since the introduction into the London trade, and to so great an extent, of the silk, velvet, French, or Parisian hats. The construction of these hats is the same, and the easy way in which the hat-bodies are made, has caused a number of poor persons, with no previous knowledge of hat-making, to enter into the trade. "There 's hundreds starving at it," said a hat-manufacturer to me, "in Bermondsey, Lock's-fields, and the Borough; ay, hundreds." This facility in the making of the bodies of the new silk hats is quite as available in the restoration of the bodies of the old hats, as I shall show from the information of a highly-intelligent artisan, who told me that of all people he disliked rich slop-sellers; but there was another class which he disliked more, and that was rich slop-buyers.

The bodies of the stuff or beaver hats of the best quality are made of a firm felt, wrought up of fine wool, rabbits' hair, &c., and at once elastic, firm, and light. Over this is placed the nap, prepared from the hair of the beaver. The bodies of the silk hats are made of calico, which is blocked (as indeed is the felt) and stiffened and pasted up until "only a hat-maker can tell," as it was expressed to me, "good sound bodies from bad; and the slop-masters go for the cheap and bad." The covering is not a nap of any hair, but is of silk or velvet (the words are used indifferently in the trade) manufactured for the purpose. Thus if an old hat be broken, or rather crushed out of all shape, the body can be glazed and sized up again so as to suit the slop hatter, if sold to him as a body, and that whether it be of felt or calico. If, however, the silk cover of the hat be not worn utterly away, the body, without stripping off the cover, can be re-blocked and re-set, and the silk-velvet trimmed up and "set," or re-dyed, and a decent hat is sometimes produced by these means. More frequently, however, a steeping shower of rain destroys the whole fabric.

Second-hand Caps are rarely brought into this trade.

Such things as *drawers, flannel waistcoats,* and what is sometimes called "inner wear," sell very well when washed up, patched—for patches do not matter in a garment hidden from the eye when worn—or mended in any manner. Flannel waistcoats and drawers are often in demand by the street-sellers and the street-labourers, as they are considered "good against the rheumatics." These habiliments are often sold unrepaired, having been merely washed, as the poor men's wives may be competent to execute an easy bit of tailoring; or perhaps the men themselves, if they have been reared as mechanics; and they believe (perhaps erroneously) that so they obtain a better bargain. *Shirts* are repaired and sold as shirts, or for old linen; the trade is not large.

Men's Stockings are darned up, but only when there is little to be done in darning, as they are retailed at 2*d.* the pair. The sale is not very great, for the supply is not. "Lots might be sold," I was informed, "if they was to be had, for them flash coves never cares what they wears under their Wellingtons."

The Women's Apparel is sold to be re-worn in its original form quite as frequently, or more frequently, than it is mended up by the sellers; the purchasers often preferring to make the alterations themselves. A gown of stuff, cotton, or any material, if full-sized, is frequently bought and altered to fit a smaller person or a child, and so the worn parts may be cut away. It is very rarely also that the apparel of the middle-classes is made into any other article, with the sole exception, perhaps, of *silk gowns.* If a silk gown be not too much frayed, it is easily cleaned and polished up, so as to present a new gloss, and is sold readily enough; but if it be too far gone for this process, the old clothes renovator is often puzzled as to what uses to put it. A portion of a black silk dress may be serviceable to re-line the cuffs of the better kind of coats. There is seldom enough, I was told, to re-line the two skirts of a surtout, and it is difficult to match old silk; a man used to buying a good second-hand surtout, I was assured, would soon detect a difference in the shade of the silk, if the skirts were re-lined from the remains of different gowns, and say, "I 'll not give any such money for that piebald thing."

Skirts may be sometimes re-lined this way on the getting up of frock coats, but very rarely. There is the same difficulty in using a coloured silk gown for the re-covering of a parasol. The quantity may not be enough for the gores, and cannot be matched to satisfy the eye, for the buyer of a silk parasol even in Rosemary-lane may be expected to be critical. When there is enough of good silk for the purposes I have mentioned, then, it must be borne in mind, the gown may be more valuable, because saleable to be re-worn as a gown. It is the same with satin dresses, but only a few of them, in comparison with the silk, are to be seen at the Old Clothes' Exchange.

Among the purposes to which portions of worn silk gowns are put are the making of spencers for little girls (usually by the purchasers, or by the dress-maker, who goes out to work for 1*s.* a day), of children's bonnets, for the lining of women's bonnets, the re-lining of muffs and fur-tippets, the patching of quilts (once a rather fashionable thing), the inner lining or curtains to a book-case, and other household appliances of a like kind. This kind of silk, too, no matter in how minute pieces, is bought by the fancy cabinet-makers (the small masters) for the lining of their dressing-cases and work-boxes supplied to the warehouses, but these poor artisans have neither means nor leisure to buy such articles of those connected with the traffic of the Old Clothes' Exchange, but must purchase it, of course at an enhanced price, of a broker who has bought it at the Exchange, or in some establishment connected with it. The second-hand silk is bought also for the dressing of dolls for the toy-shops, and for the lining of some toys. The hat-manufacturers of the cheaper sort, at one time, used second-hand silk for the padded lining of hats, but such is rarely the practice now. It was once used in the same manner by the bookbinders for lining the inner part of the back of a book. If there be any part of silk in a dress not suitable for any of these purposes it is wasted, or what is accounted wasted, although it may have been in wear for years. It is somewhat remarkable, that while woollen and even cotton goods can be "shoddied"—and if they are too rotten for that, they are made available for manure, or in the manufacture of paper—no use is made of the refuse of silk. Though one of the most beautiful and costly of textile fabrics, its "remains" are thrown aside, when a beggar's rags are preserved and made profitable. There can be little doubt that silk, like cotton, could be shoddied, but whether such a speculation would be remunerative or not is no part of my present inquiry.

There is not, as I shall subsequently show, so great an exportation of female attire as might be expected in comparison with male apparel; the poorer classes of the metropolis being too anxious to get any decent gown when within their slender means.

Stays, unless of superior make and in good condition, are little bought by the classes who are the chief customers of the old-clothes' men in London. I did not hear any reason for this from any of the old-clothes' people. One man thought, if there was a family of daughters, the stays which had became too small for the elder girl were altered for the younger, and that poor women liked to mend their old stays as long as they would stick together. Perhaps, there may be some repugnance—especially among the class of servant-maids who have not had "to rough it"—to wear street-collected stays; a repugnance not, perhaps, felt in the wearing of a gown which probably can be washed, and is not worn so near the person. The stays that are collected are for the most part exported, a great portion being sent to Ireland. If they are "worn to rags," the bones are taken out; but in the slop-made stays, it is not whalebone, but wood that is used to give, or preserve the due shape of the corset, and then the stays are valueless.

Old Stockings are of great sale both for home wear and foreign trade. In the trade of women's stockings there has been in the last 20 or 25 years a considerable change. Before that period black stockings were worn by servant girls, and the families of working people and small tradesmen; they "saved washing." Now, even in Petticoat-lane, women's stockings are white, or "mottled," or some light-coloured, very rarely black. I have heard this change attributed to what is rather vaguely called "pride." May it not be owing to a more cultivated sense of cleanliness? The women's stockings are sold darned and undarned, and at (retail) prices from 1*d.* to 4*d.*; 1*d.* or 2*d.* being the most frequent prices.

The *petticoats* and other under clothing are not much bought second-hand by the poor women of London, and are exported.

Women's caps used to be sold second-hand, I was told, both in the streets and the shops, but long ago, and before muslin and needlework were so cheap.

I heard of one article which formerly supplied considerable "stuff" (the word used) for second-hand purposes, and was a part, but never a considerable part, of the trade at Rag-fair. These were the "*pillions*," or large, firm, solid cushions which were attached to a saddle, so that a horse "carried double." Fifty years ago the farmer and his wife, of the more prosperous order, went regularly to church and market on one horse, a pillion sustaining the good dame. To the best sort of these pillions was appended what was called the "pillion cloth," often of a fine, but thin quality, which being really a sort of housing to the horse, cut straight and with few if any seams, was an excellent material for what I am informed was formerly called "making and mending." The colour was almost exclusively drab or blue. The pillion on which the squire's lady rode—and Sheridan makes his *Lady Teazle* deny "the pillion and the coach-horse," the butler being her cavalier—was a perfect piece of upholstery, set off with lace and fringes, which again were excellent for second-hand sale. Such a means of conveyance may still linger in some secluded country parts, but it is generally speaking obsolete.

Boots and *Shoes* are not to be had, I am told, in sufficient quantity for the demand from the

slop-shops, the "translators," and the second-hand dealers. Great quantities of second-hand boots and shoes are sent to Ireland to be "translated" there. Of all the wares in this traffic, the clothing for the feet is what is most easily prepared to cheat the eye of the inexperienced, the imposition having the aids of heel-ball, &c., to fill up crevices, and of blacking to hide defects. Even when the boots or shoes are so worn out that no one will put a pair on his feet, though purchaseable for about 1*d.*, the insoles are ripped out; the soles, if there be a sufficiency of leather, are shaped into insoles for children's shoes, and these insoles are sold in bundles of two dozen pairs at 2*d.* the bundle. So long as the boot or shoe be not in many holes, it can be cobblered up in Monmouth-street or elsewhere. Of the "translating" business transacted in those localities I had the following interesting account from a man who was lately engaged in it.

"Translation, as I understand it (said my informant), is this—to take a worn, old pair of shoes or boots, and by repairing them make them appear as if left off with hardly any wear—as if they were only soiled. I'll tell you the way they manage in Monmouth-street. There are in the trade 'horses' heads'—a 'horse's head' is the foot of a boot with sole and heel, and part of a front—the back and the remainder of the front having been used for refooting boots. There are also 'stand-bottoms' and 'lick-ups.' A 'stand-bottom' is where the shoe appears to be only soiled, and a 'lick-up' is a boot or shoe re-lasted to take the wrinkles out, the edges of the soles having been rasped and squared, and then blacked up to hide blemishes, and the bottom covered with a 'smother,' which I will describe. There is another article called a 'flyer,' that is, a shoe soled without having been welted. In Monmouth-street a 'horse's head' is generally retailed at 2*s.* 6*d.*, but some fetch 4*s.* 6*d.*—that's the extreme price. They cost the translator from 1*s.* a dozen pair to 8*s.*, but those at 8*s.* are good, and are used for the making up of Wellington boots. Some 'horses' heads'—such as are cut off that the boots may be re-footed on account of old fashion, or a misfit, when hardly worn—fetch 2*s.* 6*d.* a pair, and they are made up as new-footed boots, and sell from 10*s.* to 15*s.* The average price of feet (that is, for the 'horse's head,' as we call it) is 4*d.*, and a pair of backs say 2*d.*; the back is attached loosely by chair stitching, as it is called, to the heel, instead of being stitched to the insole, as in a new boot. The wages for all this is 1*s.* 4*d.* in Monmouth-street (in Union-street, Borough, 1*s.* 6*d.*); but I was told by a master that he had got the work done in Gray's-inn-lane at 9*d.* Put it, however, at 1*s.* 4*d.* wages—then, with 4*d.* and 2*d.* for the feet and back, we have 1*s.* 10*d.* outlay (the workman finds his own grindery), and 8*d.* profit on each pair sold at a rate of 2*s.* 6*d.* Some masters will sell from 70 to 80 pairs per week: that's under the mark; and that's in 'horses' heads' alone. One man employs, or did lately employ, seven men on 'horses' heads' solely. The profit generally, in fair shops, in 'stand-bottoms,' is from 1*s.* 6*d.* to 2*s.* per pair, as they sell generally at 3*s.* 6*d.* One man takes, or did take, 100*l.* in a day (it was calculated as an average) over the counter, and all for the sort of shoes I have described. The profit of a 'lick-up' is the same as that of a 'stand-bottom.' To show the villanous way the 'stand-bottoms' are got up, I will tell you this. You have seen a broken upper-leather; well, we place a piece of leather, waxed, underneath the broken part, on which we set a few stitches through and through. When dry and finished, we take what is called a 'soft-heel-ball' and 'smother' it over, so that it sometimes would deceive a currier, as it appears like the upper leather. With regard to the bottoms, the worn part of the sole is opened from the edge, a piece of leather is made to fit exactly into the hole or worn part, and it is then nailed and filed until level. Paste is then applied, and 'smother' put over the part, and that imitates the dust of the road. This 'smother' is obtained from the dust of the room. It is placed in a silk stocking, tied at both ends, and then shook through, just like a powder-puff, only we shake at both ends. It is powdered out into our leather apron, and mixed with a certain preparation which I will describe to you (he did so), but I would rather not have it published, as it would lead others to practise similar deceptions. I believe there are about 2000 translators, so you may judge of the extent of the trade; and translators are more constantly employed than any other branch of the business. Many make a great deal of money. A journeyman translator can earn from 3*s.* to 4*s.* a day. You can give the average at 20*s.* a week, as the wages are good. It must be good, for we have 2*s.* for soling, heeling, and welting a pair of boots; and some men don't get more for making them. Monmouth-street is nothing like what it was; as to curious old garments, that's all gone. There's not one English master in the translating business in Monmouth-street—they are all Irish; and there is now hardly an English workman there—perhaps not one. I believe that all the tradesmen in Monmouth-street make their workmen lodge with them. I was lodging with one before I married a little while ago, and I know the system to be the same now as it was then, unless, indeed, it be altered for the worse. To show how disgusting these lodgings must be, I will state this:—I knew a Roman Catholic, who was attentive to his religious duties, but when pronounced on the point of death, and believing firmly that he was dying, he would not have his priest administer extreme unction, for the room was in such a filthy and revolting state he would not allow him to see it. Five men worked and slept in that room, and they were working and sleeping there in the man's illness—all the time that his life was despaired of. He was ill nine weeks. Unless the working shoemaker lodged there he would not be employed. Each man pays 2*s.* a week. I was there once, but I couldn't sleep in such a den; and five nights out of the seven I slept at my mother's, but my lodging had to be paid all the same. These men (myself excepted) were all Irish, and all tee-

totallers, as was the master. How often was the room cleaned out, do you say? Never, sir, never. The refuse of the men's labour was generally burnt, smudged away in the grate, smelling terribly. It would stifle you, though it didn't me, because I got used to it. I lodged in Union-street once. My employer had a room known as the 'barracks;' every lodger paid him 2*s.* 6*d.* a week. Five men worked and slept there, and three were *sitters*—that is, men who paid 1*s.* a week to sit there and work, lodging elsewhere. A little before that there were six sitters. The furniture was one table, one chair, and two beds. There was no place for purposes of decency: it fell to bits from decay, and was never repaired. This barrack man always stopped the 2*s.* 6*d.* for lodging, if he gave you only that amount of work in the week. The beds were decent enough; but as to Monmouth-street! you don't see a clean sheet there for nine weeks; and, recollect, such snobs are dirty fellows. There was no chair in the Monmouth-street room that I have spoken of, the men having only their seats used at work; but when the beds were let down for the night, the seats had to be placed in the fire-place because there was no space for them in the room. In many houses in Monmouth-street there is a system of sub-letting among the journeymen. In one room lodged a man and his wife (a laundress worked there), four children, and two single young men. The wife was actually delivered in this room whilst the men kept at their work—they never lost an hour's work; nor is this an unusual case—it's not an isolated case at all. I could instance ten or twelve cases of two or three married people living in one room in that street. The rats have scampered over the beds that lay huddled together in the kitchen. The husband of the wife confined as I have described paid 4*s.* a week, and the two single men paid 2*s.* a week each, so the master was rent free; and he received from each man 1*s.* 6*d.* a week for tea (without sugar), and no bread and butter, and 2*d.* a day for potatoes—that's the regular charge."

In connection with the translation of old boots and shoes, I have obtained the following statistics. There are—

In Drury-lane and streets adjacent, about	....	50	shops.
Seven-dials do.	do.	100	do.
Monmouth-street do.	do.	40	do.
Hanway-court, Oxford-street	do.	4	do.
Lisson-grove do.	do.	100	do.
Paddington do.	do.	30	do.
Petticoat-lane (shops, stands, &c.)	do.	200	do.
Somers'-town do.	do.	50	do.
Field-lane, Saffron-hill	do.	40	do.
Clerkenwell	do.	30	do.
Bethnal-green, Spitalfields	do.	100	do.
Rosemary-lane, &c.	do.	30	do.
		774	shops,

employing upwards of 2000 men in making-up and repairing old boots and shoes; besides hundreds of poor men and women who strive for a crust by buying and selling the old material, previously to translating it, and by mending up what will mend. They or their children stand in the street and try to sell them.

Monmouth-street, now the great old shoe district, has been "sketched" by Mr. Dickens, not as regards its connection with the subject of street-sale or of any particular trade, but as to its general character and appearance. I first cite Mr. Dickens' description of the Seven Dials, of which Monmouth-street is a seventh:—

"The stranger who finds himself in 'The Dials' for the first time, and stands, Belzoni-like, at the entrance of seven obscure passages, uncertain which to take, will see enough around him to keep his curiosity and attention awake for no inconsiderable time. From the irregular square into which he has plunged, the streets and courts dart in all directions, until they are lost in the unwholesome vapour which hangs over the house-tops, and renders the dirty perspective uncertain and confined; and, lounging at every corner, as if they came there to take a few gasps of such fresh air as has found its way so far, but is too much exhausted already, to be enabled to force itself into the narrow alleys around, are groups of people, whose appearance and dwellings would fill any mind but a regular Londoner's with astonishment.

"In addition to the numerous groups who are idling about the gin-shops and squabbling in the centre of the road, every post in the open space has its occupant, who leans against it for hours, with listless perseverance. It is odd enough that one class of men in London appear to have no enjoyment beyond leaning against posts. We never saw a regular bricklayer's labourer take any other recreation, fighting excepted. Pass through St. Giles's in the evening of a week-day, there they are in their fustian dresses, spotted with brick-dust and whitewash, leaning against posts. Walk through Seven Dials on Sunday morning: there they are again, drab or light corduroy trowsers, Blucher boots, blue coats, and great yellow waistcoats, leaning against posts. The idea of a man dressing himself in his best clothes, to lean against a post all day!

"The peculiar character of these streets, and the close resemblance each one bears to its neighbour, by no means tends to decrease the bewilderment in which the unexperienced wayfarer through 'the Dials' finds himself involved. He traverses streets of dirty, straggling houses, with now and then an unexpected court, composed of buildings as ill-proportioned and deformed as the half-naked children that wallow in the kennels. Here and there, a little dark chandler's shop, with a cracked bell hung up behind the door to announce the entrance of a customer, or betray the presence of some young gentleman in whom a passion for shop tills has developed itself at an early age; others, as if for support, against some handsome lofty building, which usurps the place of a low dingy public-house; long rows of broken and patched windows expose plants that may have flourished when 'The Dials' were built, in vessels as dirty as 'The Dials' themselves; and shops for the purchase of rags, bones, old iron, and kitchen-stuff, vie in cleanliness with the bird-fanciers and rabbit-dealers, which one might fancy so many

arks, but for the irresistible conviction that no bird in its proper senses, who was permitted to leave one of them would ever come back again. Brokers' shops, which would seem to have been established by humane individuals, as refuges for destitute bugs, interspersed with announcements of day-schools, penny theatres, petition-writers, mangles, and music for balls or routs, complete the 'still-life' of the subject; and dirty men, filthy women, squalid children, fluttering shuttlecocks, noisy battledores, reeking pipes, bad fruit, more than doubtful oysters, attenuated cats, depressed dogs, and anatomical fowls, are its cheerful accompaniments.

"If the external appearance of the houses, or a glance at their inhabitants, present but few attractions, a closer acquaintance with either is little calculated to alter one's first impression. Every room has its separate tenant, and every tenant is, by the same mysterious dispensation which causes a country curate to 'increase and multiply' most marvellously, generally the head of a numerous family.

"The man in the shop, perhaps, is in the baked 'jemmy' line, or the fire-wood and hearth-stone line, or any other line which requires a floating capital of eighteen pence or thereabouts: and he and his family live in the shop, and the small back parlour behind it. Then there is an Irish labourer and *his* family in the back kitchen, and a jobbing-man — carpet-beater and so forth — with *his* family, in the front one. In the front one pair there's another man with another wife and family, and in the back one-pair there's 'a young 'oman as takes in tambour-work, and dresses quite genteel,' who talks a good deal about 'my friend,' and can't 'abear anything low.' The second floor front, and the rest of the lodgers, are just a second edition of the people below, except a shabby-genteel man in the back attic, who has his half-pint of coffee every morning from the coffee-shop next door but one, which boasts a little front den called a coffee-room, with a fire-place, over which is an inscription, politely requesting that, 'to prevent mistakes,' customers will 'please to pay on delivery.' The shabby-genteel man is an object of some mystery, but as he leads a life of seclusion, and never was known to buy anything beyond an occasional pen, except half-pints of coffee, penny loaves, and ha'porths of ink, his fellow-lodgers very naturally suppose him to be an author; and rumours are current in the Dials, that he writes poems for Mr. Warren.

"Now any body who passed through the Dials on a hot summer's evening, and saw the different women of the house gossiping on the steps, would be apt to think that all was harmony among them, and that a more primitive set of people than the native Diallers could not be imagined. Alas! the man in the shop illtreats his family; the carpet-beater extends his professional pursuits to his wife; the one-pair front has an undying feud with the two-pair front, in consequence of the two-pair front persisting in dancing over his (the one-pair front's) head, when he and his family have retired for the night; the two-pair back *will* interfere with the front kitchen's children: the Irishman comes home drunk every other night, and attacks every body; and the one-pair back screams at everything. Animosities spring up between floor and floor; the very cellar asserts his equality. Mrs. A. 'smacks' Mrs. B.'s child for 'making faces.' Mrs. B. forthwith throws cold water over Mrs. A.'s child for 'calling names.' The husbands are embroiled—the quarrel becomes general—an assault is the consequence, and a police-officer the result."

Of Monmouth-street the same author says:—

"We have always entertained a particular attachment towards Monmouth-street, as the only true and real emporium for second-hand wearing apparel. Monmouth-street is venerable from its antiquity, and respectable from its usefulness. Holywell-street we despise; the red-headed and red-whiskered Jews who forcibly haul you into their squalid houses, and thrust you into a suit of clothes whether you will or not, we detest.

"The inhabitants of Monmouth-street are a distinct class; a peaceable and retiring race, who immure themselves for the most part in deep cellars, or small back parlours, and who seldom come forth into the world, except in the dusk and coolness of evening, when they may be seen seated, in chairs on the pavement, smoking their pipes, or watching the gambols of their engaging children as they revel in the gutter, a happy troop of infantine scavengers. Their countenances bear a thoughtful and a dirty cast, certain indications of their love of traffic; and their habitations are distinguished by that disregard of outward appearance, and neglect of personal comfort, so common among people who are constantly immersed in profound speculations, and deeply engaged in sedentary pursuits.

"Through every alteration and every change Monmouth-street has still remained the burial-place of the fashions; and such, to judge from all present appearances, it will remain until there are no more fashions to bury."

Of the Street-Sellers of Petticoat and Rosemary-Lanes.

Immediately connected with the trade of the central mart for old clothes are the adjoining streets of Petticoat-lane, and those of the not very distant Rosemary-lane. In these localities is a second-hand garment-seller at almost every step, but the whole stock of these traders, decent, frowsy, half-rotten, or smart and good habilments, has first passed through the channel of the Exchange. The men who sell these goods have all bought them at the Exchange—the exceptions being insignificant—so that this street-sale is but an extension of the trade of the central mart, with the addition that the wares have been made ready for use.

A cursory observation might lead an inexperienced person to the conclusion, that these old clothes traders who are standing by the bundles of gowns, or lines of coats, hanging from their door-posts, or in the place from which the window has been removed, or at the sides of their houses, or

Original from HARVARD UNIVERSITY

piled in the street before them, are drowsy people, for they seem to sit among their property, lost in thought, or caring only for the fumes of a pipe. But let any one indicate, even by an approving glance, the likelihood of his becoming a customer, and see if there be any lack of diligence in business. Some, indeed, pertinaciously invite attention to their wares; some (and often well-dressed women) leave their premises a few yards to accost a stranger pointing to a "good dress-coat" or "an excellent frock" (coat). I am told that this practice is less pursued than it was, and it seems that the solicitations are now addressed chiefly to strangers. These strangers, persons happening to be passing, or visitors from curiosity, are at once recognised; for as in all not very extended localities, where the inhabitants pursue a similar calling, they are, as regards their knowledge of one another, as the members of one family. Thus a stranger is as easily recognised as he would be in a little rustic hamlet where a strange face is not seen once a quarter. Indeed so narrow are some of the streets and alleys in this quarter, and so little is there of privacy, owing to the removal, in warm weather, even of the casements, that the room is commanded in all its domestic details; and as among these details there is generally a further display of goods similar to the articles outside, the jammed-up places really look like a great family house with merely a sort of channel, dignified by the name of a street, between the right and left suites of apartments.

In one off-street, where on a Sunday there is a considerable demand for Jewish sweet-meats by Christian boys, and a little sly, and perhaps not very successful gambling on the part of the ingenuous youth to possess themselves of these confectionaries at the easiest rate, there are some mounds of builders' rubbish upon which, if an inquisitive person ascended, he could command the details of the upper rooms, probably the bed chambers—if in their crowded apartments these traders can find spaces for beds.

It must not be supposed that old clothes are more than the great staple of the traffic of this district. Wherever persons are assembled there are certain to be purveyors of provisions and of cool or hot drinks for warm or cold weather. The interior of the Old Clothes Exchange has its oyster-stall, its fountain of ginger-beer, its coffee-house, and ale-house, and a troop of peripatetic traders, boys principally, carrying trays. Outside the walls of the Exchange this trade is still thicker. A Jew boy thrusts a tin of highly-glazed cakes and pastry under the people's noses here; and on the other side a basket of oranges regales the same sense by its proximity. At the next step the thoroughfare is interrupted by a gaudy-looking ginger-beer, lemonade, raspberryade, and nectar fountain; "a halfpenny a glass, a halfpenny a glass, sparkling lemonade!" shouts the vendor as you pass. The fountain and the glasses glitter in the sun, the varnish of the wood-work shines, the lemonade really does sparkle, and all looks clean—except the owner. Close by is a brawny young Irishman, his red beard unshorn for perhaps ten days, and his neck, where it had been exposed to the weather, a far deeper red than his beard, and he is carrying a small basket of nuts, and selling them as gravely as if they were articles suited to his strength. A little lower is the cry, in a woman's voice, "Fish, fried fish! Ha'penny; fish, fried fish!" and so monotonously and mechanically is it ejaculated that one might think the seller's life was passed in uttering these few words, even as a rook's is in crying "Caw, caw." Here I saw a poor Irishwoman who had a child on her back buy a piece of this fish (which may be had "hot" or "cold"), and tear out a piece with her teeth, and this with all the eagerness and relish of appetite or hunger; first eating the brown outside and then *sucking* the bone. I never saw fish look firmer or whiter. That fried fish is to be procured is manifest to more senses than one, for you can hear the sound of its being fried, and smell the fumes from the oil. In an open window opposite frizzle on an old tray, small pieces of thinly-cut meat, with a mixture of onions, kept hot by being placed over an old pan containing charcoal. In another room a mess of batter is smoking over a grate. "Penny a lot, oysters," resounds from different parts. Some of the sellers command two streets by establishing their stalls or tubs at a corner. Lads pass, carrying sweet-stuff on trays. I observed one very dark-eyed Hebrew boy chewing the hard-bake he vended—if it were not a substitute—with an expression of great enjoyment. Heaped up trays of fresh-looking sponge-cakes are carried in tempting pyramids. Youths have stocks of large hard-looking biscuits, and walk about crying, "Ha'penny biscuits, ha'penny; three a penny, biscuits;" these, with a morsel of cheese, often supply a dinner or a luncheon. Dates and figs, as dry as they are cheap, constitute the stock in trade of other street-sellers. "Coker-nuts" are sold in pieces and entire; the Jew boy, when he invites to the purchase of an entire nut, shaking it at the ear of the customer. I was told by a costermonger that these juveniles had a way of drumming with their fingers on the shell so as to satisfy a "green" customer that the nut offered was a sound one.

Such are the summer eatables and drinkables which I have lately seen vended in the Petticoat-lane district. In winter there are, as long as daylight lasts—and in no other locality perhaps does it last so short a time—other street provisions, and, if possible, greater zeal in selling them, the hours of business being circumscribed. There is then the potato-can and the hot elder-wine apparatus, and smoking pies and puddings, and roasted apples and chestnuts, and walnuts, and the several fruits which ripen in the autumn—apples, pears, &c.

Hitherto I have spoken only of such eatables and drinkables as are ready for consumption, but to these the trade in the Petticoat-lane district is by no means confined. There is fresh fish, generally of the cheaper kinds, and smoked or dried fish (smoked salmon, moreover, is sold ready

Original from HARVARD UNIVERSITY

cooked), and costermongers' barrows, with their loads of green vegetables, looking almost out of place amidst the surrounding dinginess. The cries of "Fine cauliflowers," "Large penny cabbages," "Eight a shilling, mackarel," "Eels, live eels," mix strangely with the hubbub of the busier street.

Other street-sellers also abound. You meet one man who says mysteriously, and rather bluntly, "Buy a good knife, governor." His tone is remarkable, and if it attract attention, he may hint that he has smuggled goods which he *must* sell anyhow. Such men, I am told, look out mostly for seamen, who often resort to Petticoat-lane; for idle men like sailors on shore, and idle uncultivated men often love to lounge where there is bustle. Pocket and pen knives and scissors, "Penny a piece, penny a pair," rubbed over with oil, both to hide and prevent rust, are carried on trays, and spread on stalls, some stalls consisting of merely a tea-chest lid on a stool. Another man, carrying perhaps a sponge in his hand, and well-dressed, asks you, in a subdued voice, if you want a good razor, as if he almost suspected that you meditated suicide, and were looking out for the means! This is another ruse to introduce smuggled (or "duffer's") goods. Account-books are hawked. "Penny-a-quire," shouts the itinerant street stationer (who, if questioned, always declares he said "Penny half quire"). "Stockings, stockings, two pence a pair." "Here's your chewl-ry; penny, a penny; pick 'em and choose 'em." [I may remark that outside the window of one shop, or rather parlour, if there be any such distinction here, I saw the handsomest, as far as I am able to judge, and the best cheap jewellery I ever saw in the streets.] "Pencils, sir, pencils; steel-pens, steel-pens; ha'penny, penny; pencils, steel-pens; sealing-wax, wax, wax, wax!" shouts one, "Green peas, ha'penny a pint!" cries another.

These things, however, are but the accompaniments of the main traffic. But as such things accompany all traffic, not on a small scale, and may be found in almost every metropolitan thoroughfare, where the police are not required, by the householders, to interfere, I will point out, to show the distinctive character of the street-trade in this part, what is *not* sold and not encouraged. I saw no old books. There were no flowers: no music, which indeed could not be heard except at the outskirts of the din; and no beggars plying their vocation among the trading class.

Another peculiarity pertaining alike to this shop and street locality is, that everything is at the veriest minimum of price; though it may not be asked, it will assuredly be taken. The bottle of lemonade which is elsewhere a penny is here a halfpenny. The tarts, which among the street-sellers about the Royal Exchange are a halfpenny each, are here a farthing. When lemons are two a-penny in St. George's-market, Oxford-street, as the long line of street stalls towards the western extremity is called—they are three and four a-penny in Petticoat and Rosemary lanes. Certainly there is a difference in size between the dearer and the cheaper tarts and lemons, and perhaps there is a difference in quality also, but the rule of a minimized cheapness has no exceptions in this cheap-trading quarter.

But Petticoat-lane is essentially the old clothes district. Embracing the streets and alleys adjacent to Petticoat-lane, and including the rows of old boots and shoes on the ground, there is perhaps between two and three miles of old clothes. Petticoat-lane proper is long and narrow, and to look down it is to look down a vista of many coloured garments, alike on the sides and on the ground. The effect sometimes is very striking, from the variety of hues, and the constant flitting, or gathering, of the crowd into little groups of bargainers. Gowns of every shade and every pattern are hanging up, but none, perhaps, look either bright or white; it is a vista of dinginess, but many coloured dinginess, as regards female attire. Dress coats, frock coats, great coats, livery and game-keepers' coats, paletots, tunics, trowsers, knee-breeches, waistcoats, capes, pilot coats, working jackets, plaids, hats, dressing gowns, shirts, Guernsey frocks, are all displayed. The predominant colours are black and blue, but there is every colour; the light drab of some aristocratic livery; the dull brown-green of velveteen; the deep blue of a pilot jacket; the variegated figures of the shawl dressing-gown; the glossy black of the restored garments; the shine of newly turpentined black satin waistcoats; the scarlet and green of some flaming tartan; these things—mixed with the hues of the women's garments, spotted and striped—certainly present a scene which cannot be beheld in any other part of the greatest city of the world, nor in any other portion of the world itself.

The ground has also its array of colours. It is covered with lines of boots and shoes, their shining black relieved here and there by the admixture of females' boots, with drab, green, plum or lavender-coloured "legs," as the upper part of the boot is always called in the trade. There is, too, an admixture of men's "button-boots" with drab cloth legs; and of a few red, yellow, and russet coloured slippers; and of children's coloured morocco boots and shoes. Handkerchiefs, sometimes of a gaudy orange pattern, are heaped on a chair. Lace and muslins occupy small stands or are spread on the ground. Black and drab and straw hats are hung up, or piled one upon another and kept from falling by means of strings; while, incessantly threading their way through all this intricacy, is a mass of people, some of whose dresses speak of a recent purchase in the lane.

I have said little of the shopkeepers of Petticoat-lane, nor is it requisite for the full elucidation of my present subject (which relates more especially to *street-sale*), that I should treat of them otherwise than as being in a great degree connected with street-trade. They stand in the street (in front of their premises), they trade in the street, they smoke and read the papers in the street; and indeed the greater part of their lives seems passed in the street, for, as I have elsewhere remarked, the Saturday's or Sabbath's recreation to some of them, after synagogue hours, seems to be to stand by their doors looking about them.

In the earlier periods of the day—the Jewish Sabbath excepted, when there is no market at all in Petticoat-lane, not even among the Irish and other old clothes people, or a mere nothing of a market—the goods of these shops seem consigned to the care of the wives and female members of the families of the proprietors. The Old Clothes Exchange, like other places known by the name—the Royal Exchange, for example—has its daily season of "high change." This is, in summer, from about half-past two to five, in winter, from two to four o'clock. At those hours the crockman, and the bartering costermonger, and the Jew collector, have sought the Exchange with their respective bargains; and business there, and in the whole district, is at its fullest tide. Before this hour the master of the shop or *store* (the latter may be the more appropriate word) is absent buying, collecting, or transacting any business which requires him to leave home. It is curious to observe how, during this absence, the women, but with most wary eyes to the business, sit in the street carrying on their domestic occupations. Some, with their young children about them, are shelling peas; some are trimming vegetables; some plying their needles; some of the smaller traders' wives, as well as the street-sellers with a "pitch," are eating dinners out of basins (laid aside when a customer approaches), and occasionally some may be engaged in what Mrs. Trollope has called (in noticing a similar procedure in the boxes of an American theatre) "the most maternal of all offices." The females I saw thus occupied were principally Jewesses, for though those resorting to the Old Clothes Exchange and its concomitant branches may be but one-fourth Jews, more than half of the remainder being Irish people, the householders or shopkeepers of the locality, when capital is needed, are generally Israelites.

It must be borne in mind that, in describing Petticoat-lane, I have described it as seen on a fine summer's day, when the business is at its height. Until an hour or two after midday the district is quiet, and on very rainy days its aspect is sufficiently lamentable, for then it appears actually deserted. Perhaps on a winter's Saturday night—as the Jewish Sabbath terminates at sunset—the scene may be the most striking of all. The flaring lights from uncovered gas, from fat-fed lamps, from the paper-shaded candles, and the many ways in which the poorer street-folk throw some illumination over their goods, produce a multiplicity of lights and shadows, which, thrown and blended over the old clothes hanging up along the line of street, cause them to assume mysterious forms, and if the wind be high make them, as they are blown to and fro, look more mysterious still.

On one of my visits to Petticoat-lane I saw two foreign Jews—from Smyrna I was informed. An old street-seller told me he believed it was their first visit to the district. But, new as the scene might be to them, they looked on impassively at all they saw. They wore the handsome and peculiar dresses of their country. A glance was cast after them by the Petticoat-lane people, but that was all. In the Strand they would have attracted considerable attention; not a few heads would have been turned back to gaze after them; but it seems that only to those who may possibly be customers is any notice paid in Petticoat-lane.

Rosemary-lane.

Rosemary-lane, which has in vain been re-christened Royal Mint-street, is from half to three-quarters of a mile long—that is, if we include only the portion which runs from the junction of Leman and Dock streets (near the London Docks) to Sparrow-corner, where it abuts on the Minories. Beyond the Leman-street termination of Rosemary-lane, and stretching on into Shadwell, are many streets of a similar character as regards the street and shop supply of articles to the poor; but as the old clothes trade is only occasionally carried on there, I shall here deal with Rosemary-lane proper.

This lane partakes of some of the characteristics of Petticoat-lane, but without its so strongly marked peculiarities. Rosemary-lane is wider and airier, the houses on each side are loftier (in several parts), and there is an approach to a gin palace, a thing unknown in Petticoat-lane: there is no room for such a structure there.

Rosemary-lane, like the quarter I have last described, has its off-streets, into which the traffic stretches. Some of these off-streets are narrower, dirtier, poorer in all respects than Rosemary-lane itself, which indeed can hardly be stigmatized as very dirty. These are Glasshouse-street, Russell-court, Hairbrine-court, Parson's-court, Blue Anchor-yard (one of the poorest places and with a half-built look), Darby-street, Cartwright-street, Peter's-court, Princes-street, Queen-street, and beyond these and in the direction of the Minories, Rosemary-lane becomes Sharp's-buildings and Sparrow-corner. There are other small non-thoroughfare courts, sometimes called blind alleys, to which no name is attached, but which are very well known to the neighbourhood as Union-court, &c.; but as these are not scenes of street-traffic, although they may be the abodes of street-traffickers, they require no especial notice.

The dwellers in the neighbourhood or the off-streets of Rosemary-lane, differ from those of Petticoat-lane by the proximity of the former place to the Thames. The lodgings here are occupied by dredgers, ballast-heavers, coal-whippers, watermen, lumpers, and others whose trade is connected with the river, as well as the slop-workers and sweaters working for the Minories. The poverty of these workers compels them to lodge wherever the rent of the rooms is the lowest. As a few of the wives of the ballast-heavers, &c., are street-sellers in or about Rosemary-lane, the locality is often sought by them. About Petticoat-lane the off-streets are mostly occupied by the old clothes merchants.

In Rosemary-lane is a greater *street*-trade, as regards things placed on the ground for retail sale, &c., than in Petticoat-lane; for though the traffic in the last-mentioned lane is by far the greatest, it is more connected with the shops, and fewer

Original from HARVARD UNIVERSITY

traders whose dealings are strictly those of the street alone resort to it. Rosemary-lane, too, is more Irish. There are some cheap lodging-houses in the courts, &c., to which the poor Irish flock; and as they are very frequently street-sellers, on busy days the quarter abounds with them. At every step you hear the Erse tongue, and meet with the Irish physiognomy; Jews and Jewesses are also seen in the street, and they abound in the shops. The street-traffic does not begin until about one o'clock, except as regards the vegetable, fish, and oyster-stalls, &c.; but the chief business of this lane, which is as inappropriately as that of Petticoat is suitably named, is in the vending of the articles which have often been thrown aside as refuse, but from which numbers in London wring an existence.

One side of the lane is covered with old boots and shoes; old clothes, both men's, women's, and children's; new lace for edgings, and a variety of cheap prints and muslins (also new); hats and bonnets; pots, and often of the commonest kinds; tins; old knives and forks, old scissors, and old metal articles generally; here and there is a stall of cheap bread or American cheese, or what is announced as American; old glass; different descriptions of second-hand furniture of the smaller size, such as children's chairs, bellows, &c. Mixed with these, but only very scantily, are a few bright-looking swag-barrows, with china ornaments, toys, &c. Some of the wares are spread on the ground on wrappers, or pieces of matting or carpet; and some, as the pots, are occasionally placed on straw. The cotton prints are often heaped on the ground; where are also ranges or heaps of boots and shoes, and piles of old clothes, or hats, or umbrellas. Other traders place their goods on stalls or barrows, or over an old chair or clothes-horse. And amidst all this motley display the buyers and sellers smoke, and shout, and doze, and bargain, and wrangle, and eat and drink tea and coffee, and sometimes beer. Altogether Rosemary-lane is more of a *street* market than is Petticoat-lane.

This district, like the one I have first described, is infested with young thieves and vagrants from the neighbouring lodging-houses, who may be seen running about, often bare-footed, bare-necked, and shirtless, but "larking" one with another, and what may be best understood as "full of fun." In what way these lads dispose of their plunder, and how their plunder is in any way connected with the trade of these parts, I shall show in my account of the Thieves. One pickpocket told me that there was no person whom he delighted so much to steal from as any Petticoat-laner with whom he had professional dealings!

In Rosemary-lane there is a busy Sunday morning trade; there is a street-trade, also, on the Saturday afternoons, but the greater part of the shops are then closed, and the Jews do not participate in the commerce until after sunset.

The two marts I have thus fully described differ from all other street-markets, for in these two second-hand garments, and second-hand merchandize generally (although but in a small proportion), are the grand staple of the traffic. At the other street-markets, the second-hand commerce is the exception.

OF THE STREET-SELLERS OF MEN'S SECOND-HAND CLOTHES.

IN the following accounts of street-selling, I shall not mix up any account of the retailers' modes of buying, collecting, repairing, or "restoring" the second-hand garments, otherwise than incidentally. I have already sketched the systems pursued, and more will have to be said concerning them under the head of STREET-BUYERS. Neither have I thought it necessary, in the further accounts I have collected, to confine myself to the trade carried on in the Petticoat and Rosemary-lane districts. The greater portion relates to those places, but my aim, of course, is to give an account which will show the character of the second-hand trade of the metropolis generally.

"People should remember," said an intelligent shoemaker (not a street-seller) with whom I had some conversation about cobbling for the streets, "that such places as Rosemary-lane have their uses this way. But for them a very poor industrious widow, say, with only 2*d.* or 3*d.* to spare, couldn't get a pair of shoes for her child; whereas now, for 2*d.* or 3*d.*, she can get them there, of some sort or other. There 's a sort of decency, too, in wearing shoes. And what 's more, sir—for I 've bought old coats and other clothes in Rosemary-lane, both for my own wear and my family's, and know something about it—how is a poor creature to get such a decency as a petticoat for a poor little girl, if she 'd only a penny, unless there were such places?"

In the present state of the very poor, it may be that such places as those described have, on the principle that half a loaf is better than no bread, their benefits. But whether the state of things in which an industrious widow, or a host of industrious persons, *can* spare but 1*d.* for a child's clothing (and nothing, perhaps, for their own), is one to be lauded in a Christian country, is another question, fraught with grave political and social considerations.

The man from whom I received the following account of the sale of men's wearing apparel was apparently between 30 and 40 years of age. His face presented something of the Jewish physiognomy, but he was a Christian, he said, though he never had time to go to church or chapel, and Sunday was often a busy day; besides, a man must live as others in his way lived. He had been connected with the sale of old clothes all his life, as were his parents, so that his existence had been monotonous enough, for he had never been more than five miles, he thought, from Whitechapel, the neighbourhood where he was born. In winter he liked a concert, and was fond of a hand at cribbage, but he didn't care for the play. His goods he sometimes spread on the ground—at other times he had a stall or a "horse" (clothes-horse).

"My customers," he said, "are nearly all working people, some of them very poor, and with large families. For anything I know, some

of them works with their heads, though, as well, and not their hands, for I've noticed that their hands is smallish and seems smoothish, and suits a tight sleeve very well. I don't know what they are. How should I? I asks no questions, and they'll tell me no fibs. To such as them I sell coats mostly; indeed, very little else. They're often very perticler about the fit, and often asks, 'Does it look as if it was made for me?' Sometimes they is seedy, very seedy, and comes to such as me, most likely, 'cause we're cheaper than the shops. They don't like to try things on in the street, and I can always take a decent customer, or one as looks sich, in there, to try on (pointing to a coffee-shop). Bob-tailed coats (dress-coats) is far the cheapest. I've sold them as low as 1*s*., but not often; at 2*s*. and 3*s*. often enough; and sometimes as high as 5*s*. Perhaps a 3*s*. or 3*s*. 6*d*. coat goes off as well as any, but bob-tailed coats is little asked for. Now, I've never had a frock (surtout or frock coat), as well as I can remember, under 2*s*. 6*d*., except one that stuck by me a long time, and I sold it at last for 20*d*., which was 2*d*. less than what it cost. It was only a poor thing, in course, but it had such a rum-coloured velvet collar, that was faded, and had had a bit let in, and was all sorts of shades, and that hindered its selling, I fancy. Velvet collars isn't worn now, and I'm glad of it. Old coats goes better with their own collars (collars of the same cloth as the body of the coat). For frocks, I've got as much as 7*s*. 6*d*., and cheap at it too, sir. Well, perhaps (laughing) at an odd time they wasn't so very cheap, but that's all in the way of trade. About 4*s*. 6*d*. or 5*s*. is perhaps the ticket that a frock goes off best at. It's working people that buys frocks most, and often working people's wives or mothers—that is as far as I knows. They're capital judges as to what'll fit their men; and if they satisfy me it's all right, I'm always ready to undertake to change it for another if it don't fit. O, no, I never agree to give back the money if it don't fit; in course not; that wouldn't be business.

"No, sir, we're very little troubled with people larking. I have had young fellows come, half drunk, even though it might be Sunday morning, and say, 'Guv'ner, what'll you give me to wear that coat for you, and show off your cut?' We don't stand much of their nonsense. I don't know what such coves are. Perhaps 'torneys' journeymen, or pot-boys out for a Sunday morning's spree." [This was said with a bitterness that surprised me in so quiet-speaking a man.] "In greatcoats and cloaks I don't do much, but it's a very good sale when you can offer them well worth the money. I've got 10*s*. often for a greatcoat, and higher and lower, oftener lower in course; but 10*s*. is about the card for a good thing. It's the like with cloaks. Paletots don't sell well. They're mostly thinner and poorer cloth to begin with at the tailors—them new-fashioned named things often is so—and so they show when hard worn. Why no, sir, they can be done up, certainly; anything can be touched up; but they get thin, you see, and there's nothing to work upon as there is in a good cloth greatcoat. You'll excuse me, sir, but I saw you a little bit since take one of them there square books that a man gives away to people coming this way, as if to knock up the second-hand business, but he won't, though; I'll tell you how them slops, if they come more into wear, is sure to injure us. If people gets to wear them low-figured things, more and more, as they possibly may, why where's the second-hand things to come from? I'm not a tailor, but I understands about clothes, and I believe that no person ever saw anything green in my eye. And if you find a slop thing marked a guinea, I don't care what it is, but I'll undertake that you shall get one that'll wear longer, and look better to the very last, second-hand, at less than half the money, plenty less. It was good stuff and good make at first, and hasn't been abused, and that's the reason why it always bangs a slop, because it was good to begin with.

"Trousers sells pretty well. I sell them, cloth ones, from 6*d*. up to 4*s*. They're cheaper if they're not cloth, but very seldom less or so low as 6*d*. Yes, the cloth ones at that is poor worn things, and little things too. They're not men's, they're youth's or boy's size. Good strong cords goes off very well at 1*s*. and 1*s*. 6*d*., or higher. Irish bricklayers buys them, and paviours, and such like. It's easy to fit a man with a pair of second-hand trousers. I can tell by his build what'll fit him directly. Tweeds and summer trousers is middling, but washing things sells worse and worse. It's an expense, and expenses don't suit my customers—not a bit of it.

"Waistcoats isn't in no great call. They're often worn very hard under any sort of a tidy coat, for a tidy coat can be buttoned over anything that's 'dicky,' and so, you see, many of 'em's half-way to the rag-shop before they comes to us. Well, I'm sure I can hardly say what sort of people goes most for weskets" [so he pronounced it]. "If they're light, or there's anything 'fancy' about them, I thinks it's mothers as makes them up for their sons. What with the strings at the back and such like, it aint hard to make a wesket fit. They're poor people as buys certainly, but genteel people buys such things as fancy weskets, or how do you suppose they'd all be got through? O, there's ladies comes here for a bargain, I can tell you, and gentlemen, too; and many on 'em would go through fire for one. Second-hand satins (waistcoats) is good still, but they don't fetch the tin they did. I've sold weskets from 1½*d*. to 4*s*. Well, it's hard to say what the three-ha'pennies is made of; all sorts of things; we calls them 'serge.' Three-pence is a common price for a little wesket. There's no under-weskets wanted now, and there's no rolling collars. It was better for us when there was, as there was more stuff to work on. The double-breasted gets scarcer, too. Fashions grows to be cheap things now-a-days.

"I can't tell you anything about knee-breeches; they don't come into my trade, and they're never asked for. Gaiters is no go either. Liveries isn't

a street-trade. I fancy all those sort of things is sent abroad. I don't know where. Perhaps where people doesn't know they was liveries. I wouldn't wear an old livery coat, if it was the Queen's, for five bob. I don't think wearing one would hinder trade. You may have seen a black man in a fine livery giving away bills of a slop in Holborn. If we was to have such a thing we'd be pulled up (apprehended) for obstructing.

"I sells a few children's (children's clothes), but only a few, and I can't say so much about them. They sells pretty freely though, and to very decent people. If they're good, then they're ready for use. If they ain't anything very prime, they can be mended—that is, if they was good to begin with. But children's woollen togs is mostly hardworn and fit only for the 'devil' (the machine which tears them up for shoddy). I've sold suits, which was tunics and trousers, but no weskets, for 3*s.* 6*d.* when they was tidy. That's a common price.

"Well, really, I hardly know how much I make every week; far too little, I know that. I could no more tell you how many coats I sell in a year, or how many weskets, than I could tell you how many days was fine, and how many wasn't. I can carry all in my head, and so I keeps no accounts. I know exactly what every single thing I sell has cost me. In course I must know *that*. I dare say I may clear about 12*s.* bad weeks, and 18*s.* good weeks, more and less both ways, and there's more bad weeks than good. I have cleared 50*s.* in a good week; and when it's been nothing but fog and wet, I haven't cleared 3*s.* 6*d.* But mine's a better business than common, perhaps. I can't say what others clears; more and less than I does."

The profit in this trade, from the best information I could obtain, runs about 50 per cent.

Of the Street-Sellers of Second-hand Boots and Shoes.

The man who gave me the following account of this trade had been familiar with it a good many years, fifteen he believed, but was by no means certain. I saw at his lodgings a man who was finishing his day's work there, in cobbling and "translating." He was not in the employ of my informant, who had two rooms, or rather a floor; he slept in one and let the other to the "translator" who was a relation, he told me, and they went on very well together, as he (the street-seller) liked to sit and smoke his pipe of a night in the translator's room, which was much larger than his own; and sometimes, when times were "pretty bobbish," they clubbed together for a good supper of tripe, or had a "prime hot Jemmy a-piece," with a drop of good beer. A "Jemmy" is a baked sheep's head. The room was tidy enough, but had the strong odour of shoemaker's wax proper to the craft.

"I've been in a good many street-trades, and others too," said my informant, "since you want to know, and for a good purpose as well as I can understand it. I was a 'prentice to a shoemaker in Northampton, with a lot more; why, it was more like a factory than anything else, was my master's, and the place we worked in was so confined and hot, and we couldn't open the window, that it was worse than the East Ingees. O, I know what they is. I've been there. I was so badly treated I ran away from my master, for I had only a father, and he cared nothing about me, and so I broke my indentures. After a good bit of knocking about and living as I could, and starving when I couldn't, but I never thought of going back to Northampton, I 'listed and was a good bit in the Ingees. Well, never mind, sir, how long, or what happened me when I was soldier. I did nothing wrong, and that ain't what you was asking about, and I'd rather say no more about it."

I have met with other street-folk, who had been soldiers, and who were fond of talking of their "service," often enough to grumble about it, so that I am almost tempted to think my informant had deserted, but I questioned him no further on the subject.

"I had my ups and downs again, sir," he continued, "when I got back to England. God bless us all; I'm very fond of children, but I never married, and when I've been at the worst, I've been really glad that I hadn't no one depending on me. It's bad enough for oneself, but when there's others as you must love, what must it be then? I've smoked a pipe when I was troubled in mind, and couldn't get a meal, but could only get a pipe, and baccy's shamefully dear here; but if I'd had a young daughter now, what good would it have been my smoking a pipe to comfort her? I've seen that in people that's akin to me, and has been badly off, and with families. I had a friend or two in London, and I applied to them when I couldn't hold out no longer, and they gave me a bit of a rise, so I began as a costermonger. I was living among them as was in that line. Well, now, it's a pleasant life in fine weather. Why it was only this morning Joe (the translator) was reading the paper at breakfast time;—he gets it from the public-house, and if it's two, three, or four day's old, it's just as good for us;—and there was 10,000 pines had been received from the West Ingees. There's a chance for the costermongers, says I, if they don't go off too dear. Then cherries is in; and I was beginning to wish I was a costermonger myself still, but my present trade is *surer*. My boots and shoes 'll keep. They don't spoil in hot weather. Cherries and strawberries does, and if it comes thunder and wet, you can't sell. I worked a barrow, and sometimes had only a bit of a pitch, for a matter of two year, perhaps, and then I got into this trade, as I understood it. I sells all sorts, but not so much women's or children's.

"Why, as to prices, there's two sorts of prices. You may sell as you buy, or you may sell new soled and heeled. They're never new welted for the streets. It wouldn't pay a bit. Not long since I had a pair of very good Oxonians that had been new welted, and the very first day I had them on sale—it was a dull drizzly day—a lad tried to prig them. I just caught him in time.

Did I give him in charge? I hope I've more sense. I've been robbed before, and I've caught young rips in the act. If it's boots or shoes they've tried to prig, I gives them a stirruping with whichever it is, and a kick, and lets them go."

"Men's shoes, the regular sort, isn't a very good sale. I get from 10*d.* to 4*s.* 6*d.* a pair; but the high priced 'uns is either soled and heeled, and mudded well, or they've been real well-made things, and not much worn. I've had gentlemen's shooting-shoes sometimes, that's flung aside for the least thing. The plain shoes don't go off at all. I think people likes something to cover their stocking-feet more. For cloth button-boots I get from 1*s.*—that's the lowest I ever sold at—to 2*s.* 6*d.* The price is according to what condition the things is in, and what's been done to them, but there's no regular price. They're not such good sale as they would be, because they soon show worn. The black 'legs' gets to look very seamy, and it's a sort of boot that won't stand much knocking about, if it ain't right well made at first. I've been selling Oxonian button-overs ('Oxonian' shoes, which cover the instep, and are closed by being buttoned instead of being stringed through four or five holes) at 3*s.* 6*d.* and 4*s.* but they was really good, and soled and heeled; others I sell at 1*s.* 6*d.* to 2*s.* 3*d.* or 2*s.* 6*d.* Bluchers is from 1*s.* to 3*s.* 6*d.* Wellingtons from 1*s.*—yes, indeed, I've had them as low as 1*s.*, and perhaps they weren't very cheap at that, them very low-priced things never is, neither new nor old—from 1*s.* to 5*s.*; but Wellingtons is more for the shops than the street. I do a little in children's boots and shoes. I sell them from 3*d.* to 15*d.* Yes, you can buy lower than 3*d.*, but I'm not in that way. They sell quite as quick, or quicker, than anything. I've sold children's boots to poor women that wanted shoeing far worse than the child; aye, many a time, sir. Top boots (they're called 'Jockeys' in the trade) isn't sold in the streets. I've never had any, and I don't see them with others in my line. O no, there's no such thing as Hessians or back-straps (a top-boot without the light-coloured top) in my trade now. Yes, I always have a seat handy where anybody can try on anything in the street; no, sir, no boot-hooks nor shoe-horn; shoe-horns is rather going out, I think. If what we sell in the streets won't go on without them they won't be sold at all. A good many will buy if the thing's only big enough—they can't bear pinching, and don't much care for a fine fit.

"Well, I suppose I take from 30*s.* to 40*s.* a week, 14*s.* is about my profit—that's as to the year through.

"I sell little for women's wear, though I do sell their boots and shoes sometimes."

Of the Street-Sellers of Old Hats.

The two street-sellers of old coats, waistcoats, and trousers, and of boots and shoes, whose statements precede this account, confined their trade, generally, to the second-hand merchandize I have mentioned as more especially constituting their stock. But this arrangement does not wholly prevail. There are many street-traders "in second-hand," perhaps two-thirds of the whole number, who sell indiscriminately anything which they can buy, or what they hope to turn out an advantage; but even they prefer to deal more in one particular kind of merchandize than another, and this is most of all the case as concerns the street-sale of old boots and shoes. Hats, however, are among the second-hand wares which the street-seller rarely vends unconnected with other stock. I was told that this might be owing to the hats sold in the streets being usually suitable only for one class, grown men; while clothes and boots and shoes are for boys as well as men. Caps may supersede the use of hats, but nothing can supersede the use of boots or shoes, which form the *steadiest* second-hand street-trade of any.

There are, however, occasions, when a street-seller exerts himself to become possessed of a cheap stock of hats, by the well-known process of "taking a quantity," and sells them without, or with but a small admixture of other goods. One man who had been lately so occupied, gave me the following account. He was of Irish parentage, but there was little distinctive in his accent:—

"Hats," he said, "are about the awkwardest things of any for the streets. Do as you will, they require a deal of room, so that what you'll mostly see isn't hats quite ready to put on your head and walk away in, but to be made ready. I've sold hats that way though, I mean ready to wear, and my father before me has sold hundreds—yes, I've been in the trade all my life—and it's the best way for a profit. You get, perhaps, the old hat in, or you buy it at 1*d.* or 2*d.* as may be, and so you kill two birds. But there's very little of that trade except on Saturday nights or Sunday mornings. People wants a decent tile for Sundays and don't care for work-days. I never hawks hats, but I sells to those as do. My customers for hats are mechanics, with an odd clerk or two. Yes, indeed, I sell hats now and then to my own countrymen to go decent to mass in. I go to mass myself as often as I can; sometimes I go to vespers. No, the Irish in this trade ain't so good in going to chapel as they ought, but it takes such a time; not just while you're there, but in shaving, and washing, and getting ready. My wife helps me in selling second-hand things; she's a better hand than I am. I have two boys; they're young yet, and I don't know what we shall bring them up to; perhaps to our own business; and children seems to fall naturally into it, I think, when their fathers and mothers is in it. They're at school now.

"I have sold hats from 6*d.* to 3*s.* 6*d.*, but very seldom 3*s.* 6*d.* The 3*s.* 6*d.* ones would wear out two new gossamers, I know. It's seldom you see beaver hats in the street-trade now, they're nearly all silk. They say the beavers have got scarce in foreign parts where they're caught. I haven't an idea how many hats I sell in a year, for I don't stick to hats, you see, sir, but I like doing in them as well or better than in anything else. Sometimes I've sold nothing but hats for weeks together, wholesale and retail that is. It's

only the regular-shaped hats I can sell. If you offer swells' hats, people 'll say: 'I may as well buy a new "wide-awake" at once.' I have made 20*s.* in a week on hats alone. But if I confined my trade to them now, I don't suppose I could clear 5*s.* one week with another the year through. It 's only the hawkers that can sell them in wet weather. I wish we could sell under cover in all the places where there 's what you call 'street-markets.' It would save poor people that lives by the street many a twopence by their things not being spoiled, and by people not heeding the rain to go and examine them."

Of the Street-Sellers of Women's Second-hand Apparel.

This trade, as regards the sale to retail customers in the streets, is almost entirely in the hands of women, seven-eighths of whom are the wives, relatives, or connections of the men who deal in second-hand male apparel. But gowns, cloaks, bonnets, &c., are collected more largely by men than by women, and the wholesale old clothes' merchants of course deal in every sort of habiliment. Petticoat and Rosemary-lanes are the grand marts for this street-sale, but in Whitecross-street, Leather-lane, Old-street (St. Luke's), and some similar Saturday-night markets in poor neighbourhoods, women's second-hand apparel is sometimes offered. "It is often of little use offering it in the latter places," I was told by a lace-seller who had sometimes tried to do business in second-hand shawls and cloaks, "because you are sure to hear, 'Oh, we can get them far cheaper in Petticoat-lane, when we like to go as far.'"

The different portions of female dress are shown and sold in the street, as I have described in my account of Rosemary-lane, and of the trading of the men selling second-hand male apparel. There is not so much attention paid to "set off" gowns that there is to set off coats. "If the gown be a washing gown," I was informed, "it is sure to have to be washed before it can be worn, and so it is no use bothering with it, and paying for soap and labour beforehand. If it be woollen, or some stuff that wont wash, it has almost always to be altered before it is worn, and so it is no use doing it up perhaps to be altered again." Silk goods, however, are carefully enough re-glossed and repaired. Most of the others "just take their chance."

A good-looking Irishwoman gave me the following account. She had come to London and had been a few years in service, where she saved a little money, when she married a cousin, but in what degree of cousinship she did not know. She then took part in his avocation as a crockman, and subsequently as a street-seller of second-hand clothes.

"Why, yis, thin and indeed, sir," she said, "I did feel rather quare in my new trade, going about from house to house, the Commercial-road and Stepney way, but I soon got not to mind, and indeed thin it don't matter much what way one gets one's living, so long as it 's honest. O, yis, I know there 's goings on in old clothes that isn't always honest, but my husband's a fair dealing man. I felt quarer, too, whin I had to sell in the strate, but I soon got used to that, too; and it 's not such slavish work as the 'crocks.' But we sometimes 'crocks' in the mornings a little still, and sells in the evenings. No, not what we 've collected—for that goes to Mr. Isaac's market almost always—but stock that 's ready for wear.

"For *Cotton Gowns* I 've got from 9*d.* to 2*s.* 3*d.* O, yis, and indeed thin, there 's gowns chaper, 4*d.* and 6*d.*, but there's nothing to be got out of them, and we don't sell them. From 9*d.* to 18*d.* is the commonest price. It 's poor people as buys: O, yis, and indeed thin it is, thim as has families, and must look about thim. Many 's the poor woman that 's said to me, 'Well, and indeed, marm, it isn't my inclination to chapen anybody as I thinks is fair, and I was brought up quite different to buying old gowns, I assure you'—yis, that 's often said; no, sir, it isn't my countrywomen that says it (laughing), it 's yours. 'I wouldn't think,' says she, 'of offering you 1*d.* less than 1*s.*, marm, for that frock for my daughter, marm, but it 's such a hard fight to live.' Och, thin, and it is indeed; but to hear some of them talk you 'd think they was born ladies. *Stuff-gowns* is from 2*d.* to 8*d.* higher than cotton, but they don't sell near so well. I hardly know why. Cotton washes, and if a dacent woman gets a chape second-hand cotton, she washes and does it up, and it seems to come to her fresh and new. That can't be done with stuff. *Silk* is very little in my way, but silk gowns sell from 3*s.* 6*d.* to 4*s.* Of satin and velvet gowns I can tell you nothing; they 're never in the streets.

"*Second-hand Bonnets* is a very poor sale—very. The milliners, poor craitchers, as makes them up and sells them in the strate, has the greatest sale, but they makes very little by it. Their bonnets looks new, you see, sir, and close and nice for poor women. I 've sold bonnets from 6*d.* to 3*s.* 6*d.*, and some of them cost 3*l.* But whin they git faded and out of fashion, they 're of no vally at all at all. *Shawls* is a very little sale; very little. I 've got from 6*d.* to 2*s.* 6*d.* for them. Plaid shawls is as good as any, at about 1*s.* 6*d.*; but they 're a winter trade. *Cloaks* (they are what in the dress-making trade are called mantles) isn't much of a call. I 've had them from 1*s.* 6*d.* as high as 7*s.*—but only once 7*s.*, and it was good silk. They 're not a sort of wear that suits poor people. Will and indeed thin, I hardly know who buys them second-hand. Perhaps bad women buys a few, or they get men to buy them for them. I think your misses don't buy much second-hand thin in gineral; the less the better, the likes of them; yis, indeed, sir. *Stays* I don't sell, but you can buy them from 3*d.* to 15*d.*; it 's a small trade. And I don't sell *Under Clothing*, or only now and thin, except *Children's*. Dear me, I can hardly tell the prices I get for the poor little things' dress—I 've a little girl myself—the prices vary so, just as the frocks and other things is made for big children or little, and what they 're made of. I 've sold frocks—they sell best on Saturday and

Monday nights—from 2*d.* to 1*s.* 6*d.* Little petticoats is 1*d.* to 3*d.*; shifts is 1*d.* and 2*d.*, and so is little shirts. If they wasn't so low there would be more rags than there is, and sure there's plinty.

"Will, thin and indeed, I don't know what we make in a week, and if I did, why should I tell? O, yes, sir, I know from the gentleman that sent you to me that you're asking for a good purpose: yis, indeed, thin; but I ralely can't say. We do pritty well, God's name be praised! Perhaps a good second-hand gown trade and such like is worth from 10*s.* to 15*s.* a week, and nearer 15*s.* than 10*s.* ivery week; but that's a *good* second-hand trade you understand, sir. A poor trade's about half that, perhaps. But thin my husband sells men's wear as well. Yis, indeed, and I find time to go to mass, and I soon got my husband to go after we was married, for he'd got to neglect it, God be praised; and what's all you can get here compared to making your sowl" [saving your soul —*making* your soul is not an uncommon phrase among some of the Irish people]. "Och, and indeed thin, sir, if you've met Father ——, you've met a good gintleman."

Of the street-selling of *women and children's second-hand boots and shoes*, I need say but little, as they form part of the stock of the men's ware, and are sold by the same men, not unfrequently assisted by their wives. The best sale is for black *cloth boots*, whether laced or buttoned, but the prices run only from 5*d.* to 1*s.* 9*d.* If the "legs" of a second-hand pair be good, they are worth 5*d.*, no matter what the leather portion, including the soles, may be. Coloured boots sell very indifferently. Children's boots and shoes are sold from 2*d.* to 15*d.*

Of the Street-Sellers of Second-hand Furs.

Of furs the street-sale is prompt enough, or used to be prompt; but not so much so, I am told, last season, as formerly. A fur tippet is readily bought for the sake of warmth by women who thrive pretty well in the keeping of coffee-stalls, or any calling which requires attendance during the night, or in the chilliness of early morning, even in summer, by those who go out at early hours to their work. By such persons a big tippet is readily bought when the money is not an impediment, and to many it is a strong recommendation, that when new, the tippet, most likely, was worn by a real lady. So I was assured by a person familiar with the trade.

One female street-seller had three stalls or stands in the New Cut (when it was a great street market), about two years back, and all for the sale of second-hand furs. She has now a small shop in second-hand wearing apparel (women's) generally, furs being of course included. The business carried on in the street (almost always "the Cut") by the fur-seller in question, who was both industrious and respectable, was very considerable. On a Monday she has not unfrequently taken 8*l.*, one-half of which, indeed more than half, was profit, for the street-seller bought in the summer, when furs "were no money at all," and sold in the winter, when they "were really tin, and no mistake." Before the season began, she sometimes had a small room nearly full of furs.

This trade is less confined to Petticoat-lane and the old clothes district, as regards the supply to retail customers, than is anything else connected with dress. But the fur trade is now small. The money, prudence, and forethought necessary to enable a fur-seller to buy in the summer, for ample profit in the winter, as regards street-trade, is not in accordance with the habits of the general run of street-sellers, who think but of the present, or hardly think even of that.

The old furs, like all the other old articles of wearing apparel, whether garbs of what may be accounted primary necessaries, as shoes, or mere comforts or adornments, as boas or muffs, are bought in the first instance at the Old Clothes Exchange, and so find their way to the street-sellers. The exceptions as to this first transaction in the trade I now speak of, are very trifling, and, perhaps, more trifling than in other articles, for one great supply of furs, I am informed, is from their being swopped in the spring and summer for flowers with the "root-sellers," who carry them to the Exchange.

Last winter there were sometimes as many as ten persons—three-fourths of the number of second-hand fur sellers, which fluctuates, being women—with fur-stands. They frequent the street-markets on the Saturday and Monday nights, not confining themselves to any one market in particular. The best sale is for *Fur Tippets*, and chiefly of the darker colours. These are bought, one of the dealers informed me, frequently by maid-servants, who could run of errands in them in the dark, or wear them in wet weather. They are sold from 1*s.* 6*d.* to 4*s.* 6*d.*, about 2*s.* or 2*s.* 6*d.* being a common charge. Children's tippets "go off well," from 6*d.* to 1*s.* 3*d.* *Boas* are not vended to half the extent of tippets, although they are lower-priced, one of tolerably good gray squirrel being 1*s.* 6*d.* The reason of the difference in the demand is that boas are as much an ornament as a garment, while the tippet answers the purpose of a shawl. *Muffs* are not at all vendible in the streets, the few that are disposed of being principally for children. As muffs are not generally used by maid-servants, or by the families of the working classes, the absence of demand in the second-hand traffic is easily accounted for. They are bought sometimes to cut up for other purposes. *Victorines* are disposed of readily enough at from 1*s.* to 2*s.* 6*d.*, as are *Cuffs*, from 4*d.* to 8*d.*

One man, who told me that a few years since he and his wife used to sell second-hand furs in the street, was of opinion that his best customers were women of the town, who were tolerably well-dressed, and who required some further protection from the night air. He could readily sell any "tidy" article, tippet, boa, or muff, to those females, if they had from 2*s.* 6*d.* to 5*s.* at command. He had so sold them in Clare-market, in Tottenham-court-road, and the Brill.

OF THE SECOND-HAND SELLERS OF SMITHFIELD-MARKET.

No small part of the second-hand trade of London is carried on in the market-place of Smithfield, on the Friday afternoons. Here is a mart for almost everything which is required for the harnessing of beasts of draught, or is required for any means of propulsion or locomotion, either as a whole vehicle, or in its several parts, needed by street-traders: also of the machines, vessels, scales, weights, measures, baskets, stands, and all other appliances of street-trade.

The scene is animated and peculiar. Apart from the horse, ass, and goat trade (of which I shall give an account hereafter), it is a grand Second-hand Costermongers' Exchange. The trade is not confined to that large body, though they are the principal merchants, but includes greengrocers (often the costermonger in a shop), carmen, and others. It is, moreover, a favourite resort of the purveyors of street-provisions and beverages, of street dainties and luxuries. Of this class some of the most prosperous are those who are "well known in Smithfield."

The space devoted to this second-hand commerce and its accompaniments, runs from St. Bartholomew's Hospital towards Long-lane, but isolated peripatetic traders are found in all parts of the space not devoted to the exhibition of cattle or of horses. The crowd on the day of my visit was considerable, but from several I heard the not-always-very-veracious remarks of "Nothing doing" and "There 's nobody at all here to-day." The weather was sultry, and at every few yards arose the cry from men and boys, "Ginger-beer, ha'penny a glass! Ha'penny a glass," or "Iced lemonade here! Iced raspberriade, as cold as ice, ha'penny a glass, only a ha'penny!" A boy was elevated on a board at the end of a splendid affair of this kind. It was a square built vehicle, the top being about 7 feet by 4, and flat and surmounted by the lemonade fountain; long, narrow, champagne glasses, holding a raspberry coloured liquid, frothed up exceedingly, were ranged round, and the beverage dispensed by a woman, the mother or employer of the boy who was bawling. The sides of the machine, which stood on wheels, were a bright, shiny blue, and on them sprawled the lion and unicorn in gorgeous heraldry, yellow and gold, the artist being, according to a prominent announcement, a "herald painter." The apparatus was handsome, but with that exaggeration of handsomeness which attracts the high and low vulgar, who cannot distinguish between gaudiness and beauty. The sale was brisk. The ginger-beer sold in the market was generally dispensed from carts, and here I noticed, what occurs yearly in street-commerce, an innovation on the established system of the trade. Several sellers disposed of their ginger-beer in clear glass bottles, somewhat larger and fuller-necked than those introduced by M. Soyer for the sale of his "nectar," and the liquid was drank out of the bottle the moment the cork was undrawn, and so the necessity of a glass was obviated.

Near the herald-painter's work, of which I have just spoken, stood a very humble stall on which were loaves of bread, and round the loaves were pieces of fried fish and slices of bread on plates, all remarkably clean. "Oysters! Penny-a lot! Penny-a-lot, oysters!" was the cry, the most frequently heard after that of ginger-beer, &c. "Cherries! Twopence a-pound! Penny-a pound, cherries!" "Fruit-pies! Try my fruit-pies!" The most famous dealer in all kinds of penny pies is, however, not a pedestrian, but an equestrian hawker. He drives a very smart, handsome pie-cart, sitting behind after the manner of the Hansom cabmen, the lifting up of a lid below his knees displaying his large stock of pies. His "drag" is whisked along rapidly by a brisk chestnut poney, well-harnessed. The "whole set out," I was informed, poney included, cost 50*l.* when new. The proprietor is a keen Chartist and teetotalier, and loses no opportunity to inculcate to his customers the excellence of teetotalism, as well as of his pies. "Milk! ha'penny a pint! ha'penny a pint, good milk!" is another cry. "Raspberry cream! Iced raspberry-cream, ha'penny a glass!" This street-seller had a capital trade. Street-ices, or rather ice-creams, were somewhat of a failure last year, more especially in Greenwich-park, but this year they seem likely to succeed. The Smithfield man sold them in very small glasses, which he merely dipped into a vessel at his feet, and so filled them with the cream. The consumers had to use their fingers instead of a spoon, and no few seemed puzzled how to eat their ice, and were grievously troubled by its getting among their teeth. I heard one drover mutter that he felt "as if it had snowed in his belly!" Perhaps at Smithfield-market on the Friday afternoons every street-trade in eatables and drinkables has its representative, with the exception of such things as sweet-stuff, curds and whey, &c., which are bought chiefly by women and children. There were plum-dough, plum-cake, pastry, pea-soup, whelks, periwinkles, ham-sandwiches, hot-eels, oranges, &c., &c., &c.

These things are the usual accompaniment of street-markets, and I now come to the subject matter of the work, the sale of second-hand articles.

In this trade, since the introduction of a new arrangement two months ago, there has been a great change. The vendors are not allowed to vend barrows in the market, unless indeed with a poney or donkey harnessed to them, or unless they are wheeled about by the owner, and they are not allowed to spread their wares on the ground. When it is considered of what those wares are composed, the awkwardness of the arrangement, to the sales-people, may be understood. They consist of second-hand collars, pads, saddles, bridles, bits, traces, every description of worn harness, whole or in parts; the wheels, springs, axles, &c., of barrows and carts; the beams, chains, and bodies of scales;—these, perhaps, are the chief things which are sold separately, as parts of a whole. The traders have now no other option but to carry them as they best

THE STREET DOG-SELLER.

can, and offer them for sale. You saw men who really appear clad in harness. Portions were fastened round their bodies, collars slung on their arms, pads or small cart-saddles, with their shaft-gear, were planted on their shoulders. Some carried merely a collar, or a harness bridle, or even a bit or a pair of spurs. It was the same with the springs, &c., of the barrows and small carts. They were carried under men's arms, or poised on their shoulders. The wheels and other things which are too heavy for such modes of transport had to be placed in some sort of vehicle, and in the vehicles might be seen trestles, &c.

The complaints on the part of the second-hand sellers were neither few nor mild: "If it had been a fat ox that had to be accommodated," said one, "before he was roasted for an alderman, they'd have found some way to do it. But it don't matter for poor men; though why we shouldn't be suited with a market as well as richer people is not the ticket, that's the fact."

These arrangements are already beginning to be infringed, and will be more and more infringed, for such is always the case. The reason why they were adopted was that the ground was so littered, that there was not room for the donkey traffic and other requirements of the market. The donkeys, when "shown," under the old arrangement, often trod on boards of old metal, &c., spread on the ground, and tripped, sometimes to their injury, in consequence. Prior to the change, about twenty persons used to come from Petticoat-lane, &c., and spread their old metal or other stores on the ground.

Of these there are now none. These Petticoat-laners, I was told by a Smithfield frequenter, were men "who knew the price of old rags,"—a new phrase expressive of their knowingness and keenness in trade.

The statistics of this trade will be found under that head; the prices are often much higher and much lower. I speak of the regular trades. I have not included the sale of the superior butchers' carts, &c., as that is a traffic not in the hands of the regular second-hand street-sellers. I have not thought it requisite to speak of the hawking of whips, sticks, wash-leathers, brushes, curry-combs, &c., &c., of which I have already treated distinctively.

The accounts of the Capital and Income of the Street-Sellers of Second-Hand Articles I am obliged to defer till a future occasion.

OF THE STREET-SELLERS OF LIVE ANIMALS.

The live animals sold in the streets include beasts, birds, fish, and reptiles, all sold in the streets of London.

The class of men carrying on this business—for they are nearly all men—is mixed; but the majority are of a half-sporting and half-vagrant kind. One informant told me that the bird-catchers, for instance, when young, as more than three-fourths of them are, were those who "liked to be after a loose end," first catching their birds, as a sort of sporting business, and then sometimes selling them in the streets, but far more frequently disposing of them in the bird-shops. "Some of these boys," a bird-seller in a large way of business said to me, "used to become rat-catchers or dog-sellers, but there's not such great openings in the rat and dog line now. As far as I know, they're the same lads, or just the same sort of lads, anyhow, as you may see 'helping,' holding horses, or things like that, at concerns like them small races at Peckham or Chalk Farm, or helping any way at the foot-races at Camberwell." There is in this bird-catching a strong manifestation of the vagrant spirit. To rise long before daybreak; to walk some miles before daybreak; from the earliest dawn to wait in some field, or common, or wood, watching the capture of the birds; then a long trudge to town to dispose of the fluttering captives; all this is done cheerfully, because there are about it the irresistible charms, to this class, of excitement, variety, and free and open-air life. Nor do these charms appear one whit weakened when, as happens often enough, all this early morn business is carried on fasting.

The old men in the bird-catching business are not to be ranked as to their enjoyment of it with the juveniles, for these old men are sometimes infirm, and can but, as one of them said to me some time ago, "hobble about it." But they have the same spirit, or the sparks of it. And in this part of the trade is one of the curious characteristics of a street-life, or rather of an open-air pursuit for the requirements of a street-trade. A man, worn out for other purposes, incapable of anything but a passive, or sort of lazy labour—such as lying in a field and watching the action of his trap-cages—will yet in a summer's morning, decrepid as he may be, possess himself of a dozen or even a score of the very freest and most aspiring of all our English small birds, a creature of the air beyond other birds of his "order"—to use an ornithological term—of sky-larks.

The dog-sellers are of a sporting, trading, idling class. Their sport is now the rat-hunt, or the ferret-match, or the dog-fight; as it was with the predecessors of their stamp, the cock-fight; the bull, bear, and badger bait; the shrove-tide cock-shy, or the duck hunt. Their trading spirit is akin to that of the higher-class sporting fraternity, the trading members of the turf. They love to sell and to bargain, always with a quiet exultation at the time—a matter of loud tavern boast afterwards, perhaps, as respects the street-folk—how they "do" a customer, or "do" one another. "It's not cheating," was the remark and apology of a very famous jockey of the old times, touching such measures; "it's not cheating, it's outwitting." Perhaps this expresses the code of honesty

of such traders; not to cheat, but to outwit or over-reach. Mixed with such traders, however, are found a few quiet, plodding, fair-dealing men, whom it is difficult to classify, otherwise than that they are "in the line, just because they likes it." The idling of these street-sellers is a part of their business. To walk by the hour up and down a street, and with no manual labour except to clean their dogs' kennels, and to carry them in their arms, is but an idleness, although, as some of these men will tell you, "they work hard at it."

Under the respective heads of dog and bird-sellers, I shall give more detailed characteristics of the class, as well as of the varying qualities and inducements of the buyers.

The street-sellers of foreign birds, such as parrots, parroquets, and cockatoos; of gold and silver fish; of goats, tortoises, rabbits, leverets, hedgehogs; and the collectors of snails, worms, frogs, and toads, are also a mixed body. Foreigners, Jews, seamen, countrymen, costermongers, and boys form a part, and of them I shall give a description under the several heads. The prominently-characterized street-sellers are the traders in dogs and birds.

OF THE FORMER STREET-SELLERS, "FINDERS," STEALERS, AND RESTORERS OF DOGS.

BEFORE I describe the present condition of the street-trade in dogs, which is principally in spaniels, or in the description well known as lap-dogs, I will give an account of the former condition of the trade, if trade it can properly be called, for the "finders" and "stealers" of dogs were the more especial subjects of a parliamentary inquiry, from which I derive the official information on the matter. The Report of the Committee was ordered by the House of Commons to be printed, July 26, 1844.

In their Report the Committee observe, concerning the value of pet dogs:—"From the evidence of various witnesses it appears, that in one case a spaniel was sold for 105*l*., and in another, under a sheriff's execution, for 95*l*. at the hammer; and 50*l*. or 60*l*. are not unfrequently given for fancy dogs of first-rate breed and beauty." The hundred guineas' dog above alluded to was a "black and tan King Charles's spaniel;"—indeed, Mr. Dowling, the editor of *Bell's Life in London*, said, in his evidence before the Committee, "I have known as much as 150*l*. given for a dog." He said afterwards: "There are certain marks about the eyes and otherwise, which are considered 'properties;' and it depends entirely upon the property which a dog possesses as to its value."

I need not dwell on the general fondness of the English for dogs, otherwise than as regards what were the grand objects of the dog-finders' search—ladies' small spaniels and lap-dogs, or, as they are sometimes called, "carriage-dogs," by their being the companions of ladies inside their carriages. These animals first became fashionable by the fondness of Charles II. for them. That monarch allowed them undisturbed possession of the gilded chairs in his palace of Whitehall, and seldom took his accustomed walk in the park without a tribe of them at his heels. So "fashionable" were spaniels at that time and afterwards, that in 1712 Pope made the chief of all his sylphs and sylphides the guard of a lady's lapdog. The fashion has long continued, and still continues; and it was on this fashionable fondness for a toy, and on the regard of many others for the noble and affectionate qualities of the dog, that a traffic was established in London, which became so extensive and so lucrative, that the legislature interfered, in 1844, for the purpose of checking it.

I cannot better show the extent and lucrativeness of this trade, than by citing a list which one of the witnesses before Parliament, Mr. W. Bishop, a gunmaker, delivered in to the Committee, of "cases in which money had recently been extorted from the owners of dogs by dog-stealers and their confederates." There is no explanation of the space of time included under the vague term "recently;" but the return shows that 151 ladies and gentlemen had been the victims of the dog-stealers or dog-finders, for in this business the words were, and still are to a degree, synonymes, and of these 62 had been so victimized in 1843 and in the six months of 1844, from January to July. The total amount shown by Mr. Bishop to have been paid for the restoration of stolen dogs was 977*l*. 4*s*. 6*d*., or an average of 6*l*. 10*s*. per individual practised upon. This large sum, it is stated on the authority of the Committee, was only that which came within Mr. Bishop's knowledge, and formed, perhaps, "but a *tenth* part in amount" of the whole extortion. Mr. Bishop was himself in the habit of doing business "in obtaining the restitution of dogs," and had once known 18*l*.—the dog-stealers asked 25*l*.— given for the restitution of a spaniel. The full amount realized by this dog-stealing was, according to the above proportion, 9772*l*. 5*s*. In 1843, 227*l*. 3*s*. 6*d*. was so realized, and 97*l*. 14*s*. 6*d*. in the six months of 1844, within Mr. Bishop's personal knowledge; and if this be likewise a *tenth* of the whole of the commerce in this line, a year's business, it appears, averaged 2166*l*. to the stealers or finders of dogs. I select a few names from the list of those robbed of dogs, either from the amount paid, or because the names are well known. The first payment cited is from a public board, who owned a dog in their corporate capacity:

	£	*s*.	*d*.
Board of Green Cloth	8	0	0
Hon. W. Ashley (v. t.*)	15	0	0

Thus these 36 ladies and gentlemen paid 438*l.* 5*s.* 6*d.* to rescue their dogs from professional dog-stealers, or an average, per individual, of upwards of 12*l.*

These dog appropriators, as they found that they could levy contributions not only on royalty, foreign ambassadors, peers, courtiers, and ladies of rank, but on public bodies, and on the dignitaries of the state, the law, the army, and the church, became bolder and more expert in their avocations —a boldness which was encouraged by the existing law. Prior to the parliamentary inquiry, dog-stealing was not an indictable offence. To show this, Mr. Commissioner Mayne quoted Blackstone to the Committee: "As to those animals which do not serve for food, and which therefore the law holds to have no intrinsic value, as dogs of all sorts, and other creatures kept for whim and pleasure—though a man may have a base property therein, and maintain a civil action for the loss of them, yet they are not of such estimation as that the crime of stealing them amounts to larceny." The only mode of punishment for dog-stealing was by summary conviction, the penalty being fine or imprisonment; but Mr. Commissioner Mayne did not know of any instance of a dog-stealer being sent to prison in default of payment. Although the law recognised no property in a dog, the animal was taxed; and it was complained at the time that an unhappy lady might have to pay tax for the full term upon her dog, perhaps a year and a half after he had been stolen from her. One old offender, who stole the Duke of Beaufort's dog, was transported, not for stealing the dog, but his collar.

The difficulty of proving the positive theft of a dog was extreme. In most cases, where the man was not seen actually to seize a dog which could be identified, he escaped when carried before a magistrate. "The dog-stealers," said Inspector Shackell, "generally go two together; they have a piece of liver; they say it is merely bullock's liver, which will entice or tame the wildest or savagest dog which there can be in any yard; they give it him, and take him from his chain. At other times," continues Mr. Shackell, "they will go in the street with a little dog, rubbed over with some sort of stuff, and will entice valuable dogs away. . . . . If there is a dog lost or stolen, it is generally known within five or six hours where that dog is, and they know almost exactly what they can get for it, so that it is a regular system of plunder." Mr. G. White, "dealer in live stock, dogs, and other animals," and at one time a "dealer in lions, and tigers, and all sorts of things," said of the dog-stealers: "In turning the corners of streets there are two or three of them together; one will snatch up a dog and put into his apron, and the others will stop the lady and say, 'What is the matter?' and direct the party who has lost the dog in a contrary direction to that taken."

In this business were engaged from 50 to 60 men, half of them actual stealers of the animals. The others were the receivers, and the go-betweens or "restorers." The thief kept the dog perhaps for a day or two at some public-house, and he then took it to a dog-dealer with whom he was connected in the way of business. These dealers carried on a trade in "honest dogs," as one of the witnesses styled them (meaning dogs honestly acquired), but some of them dealt principally with the dog-stealers. Their depots could not be entered by the police, being private premises, without a search-warrant—and direct evidence was necessary to obtain a search-warrant—and of course a stranger in quest of a stolen dog would not be admitted. Some of the dog-dealers would not purchase or receive dogs known to have been stolen, but others bought and speculated in them. If an advertisement appeared offering a reward for the dog, a negotiation was entered into. If no reward was offered, the owner of the dog, who was always either known or made out, was waited upon by a restorer, who undertook "to restore the dog if terms could be come to." A dog belonging to Colonel Fox was once kept six weeks before the thieves would consent to the Colonel's terms. One of the most successful restorers was a shoemaker, and mixed little with the actual stealers; the dog-dealers, however, acted as restorers frequently enough. If the person robbed paid a good round sum for the restoration of a dog, and paid it speedily, the animal was almost certain to be stolen a second time, and a higher sum was then demanded. Sometimes the thieves threatened that if they were any longer trifled with they would inflict torture on the dog, or cut its throat. One lady, Miss Brown of Bolton-street, was so worried by these threats, and by having twice to redeem her dog, "that she has left England," said Mr. Bishop, "and I really do believe for the sake of keeping the dog." It does not appear, as far as the evidence shows, that these threats of torture or death were ever carried into execution;

some of the witnesses had merely heard of such things.

The shoemaker alluded to was named Taylor, and Inspector Shackell thus describes this person's way of transacting business in the dog "restoring" line: "There is a man named Taylor, who is one of the greatest restorers in London of stolen dogs, through Mr. Bishop." [Mr. Bishop was a gun-maker in Bond-street.] "It is a disgrace to London that any person should encourage a man like that to go to extort money from ladies and gentlemen, especially a respectable man. A gentleman applied to me to get a valuable dog that was stolen, with a chain on his neck, and the name on the collar; and I heard Mr. Bishop himself say that it cost 6*l*.; that it could not be got for less. Capt. Vansittart (the owner of the dog) came out; I asked him particularly, 'Will you give me a description of the dog on a piece of paper,' and that is his writing (producing a paper). I went and made inquiry; and the captain himself, who lives in Belgrave-square, said he had no objection to give 4*l*. for the recovery of the dog, but would not give the 6*l*. I went and took a good deal of trouble about it. I found out that Taylor went first to ascertain what the owner of the dog would give for it, and then went and offered 1*l*. for the dog, then 2*l*., and at last purchased it for 3*l*.; and went and told Capt. Vansittart that he had given 4*l*. for the dog; and the dog went back through the hands of Mr. Bishop."

The "restorers" had, it appears, the lion's share in the profits of this business. One witness had known of as much as ten guineas being given for the recovery of a favourite spaniel, or, as the witness styled it, for "working a dog back," and only two of these guineas being received by "the party." The wronged individual, thus delicately intimated as the "party," was the thief. The same witness, Mr. Hobdell, knew 14*l*. given for the restoration of a little red Scotch terrier, which he, as a dog-dealer, valued at four shillings!

One of the coolest instances of the organization and boldness of the dog-stealers was in the case of Mr. Fitzroy Kelly's "favourite Scotch terrier." The "parties," possessing it through theft, asked 12*l*. for it, and urged that it was a reasonable offer, considering the trouble they were obliged to take. "The dog-stealers were obliged to watch every night," they contended, through Mr. Bishop, "and very diligently; Mr. Kelly kept them out very late from their homes, before they could get the dog; he used to go out to dinner or down to the Temple, and take the dog with him; they had a deal of trouble before they could get it." So Mr. Kelly was expected not only to pay more than the value of his dog, but an extra amount on account of the care he had taken of his terrier, and for the trouble his vigilance had given to the thieves! The matter was settled at 6*l*. Mr. Kelly's case was but one instance.

Among the most successful of the practitioners in this street-finding business were Messrs. "Ginger" and "Carrots," but a parliamentary witness was inclined to believe that Ginger and Carrots were nicknames for the same individual, one Barrett: although he had been in custody several times, he was considered "a very superior dog-stealer."

If the stolen dog were of little value, it was safest for the stealers to turn him loose; if he were of value, and unowned and unsought for, there was a ready market abroad. The stewards, stokers, or seamen of the Ostend, Antwerp, Rotterdam, Hamburgh, and all the French steamers, readily bought stolen fancy dogs; sometimes twenty to thirty were taken at a voyage. A steward, indeed, has given 12*l*. for a stolen spaniel as a private speculation. Dealers, too, came occasionally from Paris, and bought numbers of these animals, and at what the dog fongers considered fair prices. One of the witnesses (Mr. Baker, a game dealer in Leadenhall-market) said:—"I have seen perhaps twenty or thirty dogs tied up in a little room, and I should suppose every one of them was stolen; a reward not sufficiently high being offered for their restoration, the parties get more money by taking them on board the different steam-ships and selling them to persons on board, or to people coming to this country to buy dogs and take them abroad."

The following statement, derived from Mr. Mayne's evidence, shows the extent of the dog-stealing business, but only as far as came under the cognizance of the police. It shows the number of dogs "lost" or "stolen," and of persons "charged" with the offence, and "convicted" or "discharged." Nearly all the dogs returned as lost, I may observe, were stolen, but there was no evidence to show the positive theft:—

	Dogs Stolen.	Dogs Lost.	Persons Charged.	Convicted.	Discharged.
1841	43	521	51	19	32
1842	54	561	45	17	28
1843	60	606	38	18	20

In what proportion the police-known thefts stood to the whole number, there was no evidence given; nor, I suppose, could it be given.

The dog-stealers were not considered to be connected with housebreakers, though they might frequent the same public-houses. Mr. Mayne pronounced these dog-stealers a genus, a peculiar class, "what they call dog-fanciers and dog-stealers; a sort of half-sporting, betting characters."

The law on the subject of dog-stealing (8 and 9 Vict., c. 47) now is, that "If any person shall steal any dog, every such offender shall be deemed guilty of a misdemeanor, and, being convicted thereof before any two or more justices of the peace, shall, for the first offence, at the discretion of the said justices, either be committed to the common gaol or house of correction, there to be imprisoned only, or be imprisoned and kept to hard labour, for any term not exceeding six calendar months, or shall forfeit and pay over and above the value of the said dog such sum of money, not exceeding 20*l*., as to the said justices shall seem meet. And if any person so convicted shall

afterwards be guilty of the same offence, every such offender shall be guilty of an indictable misdemeanor, and, being convicted thereof, shall be liable to suffer such punishment, by fine or imprisonment, with or without hard labour, or by both, as the court in its discretion shall award, provided such imprisonment do not exceed eighteen months."

Of a Dog-"Finder."—A "Lurker's" Career.

Concerning a dog-finder, I received the following account from one who had received the education of a gentleman, but whom circumstances had driven to an association with the vagrant class, and who has written the dog-finder's biography from personal knowledge—a biography which shows the *variety* that often characterizes the career of the "lurker," or street-adventurer.

"If your readers," writes my informant, "have passed the Rubicon of 'forty years in the wilderness,' memory must bring back the time when the feet of their childish pilgrimage have trodden a beautiful grass-plot—now converted into Belgrave-square; when Pimlico was a 'village out of town,' and the 'five fields' of Chelsea were fields indeed. To write the biography of a living character is always delicate, as to embrace all its particulars is difficult; but of the truthfulness of my account there is no question.

"Probably about the year of the great frost (1814), a French Protestant refugee, named La Roche, sought asylum in this country, not from persecution, but from difficulties of a commercial character. He built for himself, in Chelsea, a cottage of wood, nondescript in shape, but pleasant in locality, and with ample accommodations for himself and his son. Wife he had none. This little bazaar of mud and sticks was surrounded with a bench of rude construction, on which the Sunday visitors to Ranelagh used to sit and sip their curds and whey, while from the entrance—far removed in those days from competition—

'There stood uprear'd, as ensign of the place,
Of blue and red and white, a chequer'd mace,
On which the paper lantern hung to tell
How cheap its owner shaved you, and how well.'

Things went on smoothly for a dozen years, when the old Frenchman departed this life.

"His boy carried on the business for a few months, when frequent complaints of 'Sunday gambling' on the premises, and loud whispers of suspicion relative to the concealment of stolen goods, induced 'Chelsea George'—the name the youth had acquired—to sell the good-will of the house, fixtures, and all, and at the eastern extremity of London to embark in business as a 'mush or mushroom-faker.' Independently of his appropriation of umbrellas, proper to the mush-faker's calling, Chelsea George was by no means scrupulous concerning other little matters within his reach, and if the proprietors of the 'swell cribs' within his 'beat' had no 'umbrellas to mend,' or 'old 'uns to sell,' he would ease the pegs in the passage of the incumbrance of a greatcoat, and telegraph the same out of sight (by a colleague), while the servant went in to make the desired inquiries. At last he was 'bowl'd out' in the very act of 'nailing a yack' (stealing a watch). He 'expiated,' as it is called, this offence by three months' exercise on the 'cockchafer' (tread-mill). Unaccustomed as yet to the novelty of the exercise, he fell through the wheel and broke one of his legs. He was, of course, permitted to finish his time in the infirmary of the prison, and on his liberation was presented with five pounds out of 'the Sheriffs' Fund.'

"Although, as I have before stated, he had never been out of England since his childhood, he had some little hereditary knowledge of the French language, and by the kind and voluntary recommendation of one of the police-magistrates of the metropolis, he was engaged by an Irish gentleman proceeding to the Continent as a sort of supernumerary servant, to 'make himself generally useful.' As the gentleman was unmarried, and mostly stayed at hotels, George was to have permanent wages and 'find himself,' a condition he invariably fulfilled, if anything was left in his way. Frequent intemperance, neglect of duty, and unaccountable departures of property from the portmanteau of his master, led to his dismissal, and Chelsea George was left, without friends or character, to those resources which have supported him for some thirty years.

"During his 'umbrella' enterprise he had lived in lodging-houses of the lowest kind, and of course mingled with the most depraved society, especially with the vast army of trading sturdy mendicants, male and female, young and old, who assume every guise of poverty, misfortune, and disease, which craft and ingenuity can devise or well-tutored hypocrisy can imitate. Thus initiated, Chelsea George could 'go upon any lurk,' could be in the last stage of consumption—actually in his dying hour—but now and then convalescent for years and years together. He could take fits and counterfeit blindness, be a respectable broken-down tradesman, or a soldier maimed in the service, and dismissed without a pension.

"Thus qualified, no vicissitudes could be either very new or very perplexing, and he commenced operations without delay, and pursued them long without desertion. The 'first move' in his mendicant career was *taking them on the fly;* which means meeting the gentry on their walks, and beseeching or at times menacing them till something is given; something in general *was* given to get rid of the annoyance, and, till the 'game got stale,' an hour's work, morning and evening, produced a harvest of success, and ministered to an occasion of debauchery.

"His less popular, but more upright father, had once been a dog-fancier, and George, after many years vicissitude, at length took a 'fancy' to the same profession, but not on any principles recognised by commercial laws. With what success he has practised, the ladies and gentlemen about the West-end have known, to their loss and disappointment, for more than fifteen years past.

"Although the police have been and still are on the alert, George has, in every instance, hitherto

Original from HARVARD UNIVERSITY

escaped punishment, while numerous detections connected with escape have enabled the offender to hold these officials at defiance. The 'modus operandi' upon which George proceeds is to varnish his hands with a sort of gelatine, composed of the coarsest pieces of liver, fried, pulverised, and mixed up with tincture of myrrh." [This is the composition of which Inspector Shackell spoke before the Select Committee, but he did not seem to know of what the lure was concocted. My correspondent continues]: "Chelsea George caresses every animal who seems 'a likely spec,' and when his fingers have been rubbed over the dogs' noses they become easy and perhaps willing captives. A bag carried for the purpose, receives the victim, and away goes George, bag and all, to his printer's in Seven Dials. Two bills and no less—two and no more, for such is George's style of work—are issued to describe the animal that has thus been *found*, and which will be 'restored to its owner on payment of expenses.' One of these George puts in his pocket, the other he pastes up at a public-house whose landlord is 'fly' to its meaning, and poor 'bow-wow' is sold to a 'dealer in dogs,' not very far from Sharp's alley. In course of time the dog is discovered; the possessor refers to the 'establishment' where he bought it; the 'dealer makes himself *square*,' by giving the address of 'the chap he bought 'un of,' and Chelsea George shows a copy of the advertisement, calls in the publican as a witness, and leaves the place 'without the slightest imputation on his character.' Of this man's earnings I cannot speak with precision: it is probable that in a 'good year' his clear income is 200*l.*; in a bad year but 100*l.*, but, as he is very adroit, I am inclined to believe that the 'good' years somewhat predominate, and that the average income may therefore exceed 150*l.* yearly."

Of the Present Street-Sellers of Dogs.

It will have been noticed that in the accounts I have given of the former street-transactions in dogs, there is no mention of the *sellers*. The information I have adduced is a condensation of the evidence given before the Select Committee of the House of Commons, and the inquiry related only to the stealing, finding, and restoring of dogs, the selling being but an incidental part of the evidence. Then, however, as now, the street-sellers were not implicated in the thefts or restitution of dogs, "just except," one man told me, "as there was a black sheep or two in every flock." The black sheep, however, of this street-calling more frequently meddled with restoring, than with "finding."

Another street dog-seller, an intelligent man,—who, however did not know so much as my first informant of the state of the trade in the olden time,—expressed a positive opinion, that no dog-stealer was now a street-hawker ("hawker" was the word I found these men use). His reasons for this opinion, in addition to his own judgment from personal knowledge, are cogent enough: "It isn't possible, sir," he said, "and this is the reason why. We are not a large body of men. We stick pretty closely, when we are out, to the same places. We are as well-known to the police, as any men whom they most know, by sight at any rate, from meeting them every day. Now, if a lady or gentleman has lost a dog, or it's been stolen or strayed—and the most petted will sometimes stray unaccountably and follow some stranger or other—why where does she, and he, and all the family, and all the servants, first look for the lost animal? Why, where, but at the dogs we are hawking? No, sir, it can't be done now, and it isn't done in my knowledge, and it oughtn't to be done. I'd rather make 5*s.* on an honest dog than 5*l.* on one that wasn't, if there was no risk about it either." Other information convinces me that this statement is correct.

Of these street-sellers or hawkers there are now about twenty-five. There may be, however, but twenty, if so many, on any given day in the streets, as there are always some detained at home by other avocations connected with their line of life. The places they chiefly frequent are the Quadrant and Regent-street generally, but the Quadrant far the most. Indeed before the removal of the colonnade, one-half at least of all the dog-sellers of London would resort there on a very wet day, as they had the advantage of shelter, and generally of finding a crowd assembled, either lounging to pass the time, or waiting "for a fair fit," and so with leisure to look at dogs. The other places are the West-end squares, the banks of the Serpentine, Charing-cross, the Royal Exchange, and the Bank of England, and the Parks generally. They visit, too, any public place to which there may be a temporary attraction of the classes likely to be purchasers — a mere crowd of people, I was told, was no good to the dog-hawkers, it must be a crowd of people that had money—such as the assemblage of ladies and gentlemen who crowd the windows of Whitehall and Parliament-street, when the Queen opens or prorogues the houses. These spectators fill the street and the Horse-guards' portion of the park as soon as the street mass has dispersed, and they often afford the means of a good day's work to the dog people.

Two dogs, carefully cleaned and combed, or brushed, are carried in a man's arms for street-vending. A fine chain is generally attached to a neat collar, so that the dog can be relieved from the cramped feel he will experience if kept off his feet too long. In carrying these little animals for sale—for it is the smaller dogs which are carried—the men certainly display them to the best advantage. Their longer silken ears, their prominent dark eyes and black noses, and the delicacy of their fore-paws, are made as prominent as possible, and present what the masses very well call "quite a pictur." I have alluded to the display of the *Spaniels*, as they constitute considerably more than half of the street trade in dogs, the "King Charleses" and the "Blenheims" being disposed of in nearly equal quantities. They are sold for lap-dogs, pets, carriage companions or companions in a walk, and are often intelligent and affectionate. Their colours are black, black and tan, white and liver-colour, chestnut, black and white, and entirely

Original from HARVARD UNIVERSITY

white, with many shades of these hues, and inter-blendings of them, one with another, and with gray.

The small *Terriers* are, however, coming more into fashion, or, as the hawkers call it, into "vogue." They are usually black, with tanned muzzles and feet, and with a keen look, their hair being short and smooth. Some, however, are preferred with long and somewhat wiry hair, and the colour is often strongly mixed with gray. A small Isle of Skye terrier—but few, I was informed know a "real Skye"—is sometimes carried in the streets, as well as the little rough dogs known as Scotch terriers. When a street-seller has a litter of terrier pups, he invariably selects the handsomest for the streets, for it happens—my informant did not know why, but he and others were positive that so it was—that the handsomest is the worst; "the worst," it must be understood as regards the possession of choice sporting qualities, more especially of pluck. The terrier's education, as regards his prowess in a rat-pit, is accordingly neglected; and if a gentleman ask, "Will he kill rats?" the answer is in the negative; but this is no disparagement to the sale, because the dog is sold, perhaps, for a lady's pet, and is not wanted to kill rats, or to "fight any dog of his weight."

The *Pugs*, for which, 40 to 50 years ago, and, in a diminished degree, 30 years back, there was, in the phrase of the day, "quite a rage," provided only the pug was hideous, are now never offered in the streets, or so rarely, that a well-known dealer assured me he had only sold one in the streets for two years. A Leadenhall tradesman, fond of dogs, but in no way connected with the trade, told me that it came to be looked upon, that a pug was a fit companion for only snappish old maids, and "so the women wouldn't have them any longer, least of all the old maids."

French Poodles are also of rare street-sale. One man had a white poodle two or three years ago, so fat and so round, that a lady, who priced it, was told by a gentleman with her, that if the head and the short legs were removed, and the inside scooped out, the animal would make a capital muff; yet even *that* poodle was difficult of sale at 50*s*.

Occasionally also an *Italian Greyhound*, seeming cold and shivery on the warmest days, is borne in a hawker's arms, or if following on foot, trembling and looking sad, as if mentally murmuring at the climate.

In such places as the banks of the Serpentine, or in the Regent's-park, the hawker does not carry his dogs in his arms, so much as let them trot along with him in a body, and they are sure to attract attention; or he sits down, and they play or sleep about him. One dealer told me that children often took such a fancy for a pretty spaniel, that it was difficult for either mother, governess, or nurse, to drag them away until the man was requested to call in the evening, bringing with him the dog, which was very often bought, or the hawker recompensed for his loss of time. But sometimes the dog-dealers, I heard from several, meet with great shabbiness among rich people, who recklessly give them no small trouble, and sometimes put them to expense without the slightest return, or even an acknowledgment or a word of apology. "There's one advantage in my trade," said a dealer in live animals, "we always has to do with principals. There's never a lady would let her most favouritest maid choose her dog for her. So no parkisits."

The species which I have enumerated are all that are now sold in the streets, with the exception of an odd "plum-pudding," or coach-dog (the white dog with dark spots which runs after carriages), or an odd bull-dog, or bull-terrier, or indeed with the exception of "odd dogs" of every kind. The hawkers are, however, connected with the trade in sporting dogs, and often through the medium of their street traffic, as I shall show under the next head of my subject.

There is one peculiarity in the hawking of fancy dogs, which distinguishes it from all other branches of street-commerce. The purchasers are all of the wealthier class. This has had its influence on the manners of the dog-sellers. They will be found, in the majority of cases, quiet and deferential men, but without servility, and with little of the quality of speech; and I speak only of speech which among English people is known as "gammon," and among Irish people as "blarney." This manner is common to many; to the established trainer of race-horses for instance, who is in constant communication with persons in a very superior position in life to his own, and to whom he is exceedingly deferential. But the trainer feels that in all points connected with his not very easy business, as well, perhaps, as in general turf knowingness, his royal highness (as was the case once), or his grace, or my lord, or Sir John, was inferior to himself; and so with all his deference there mingles a strain of quiet contempt, or rather, perhaps, of conscious superiority, which is one ingredient in the formation of the manners I have hastily sketched.

The customers of the street-hawkers of dogs are ladies and gentlemen, who buy what may have attracted their admiration. The kept mistresses of the wealthier classes are often excellent customers. "Many of 'em, I know," was said to me, "dotes on a nice spaniel. Yes, and I've known gentlemen buy dogs for their misses; I couldn't be mistaken when I might be sent on with them, which was part of the bargain. If it was a two-guinea dog or so, I was told never to give a hint of the price to the servant, or to anybody. *I* know why. It's easy for a gentleman that wants to please a lady, and not to lay out any great matter of tin, to say that what had really cost him two guineas, cost him twenty." If one of the working classes, or a small tradesman, buy a dog in the streets, it is generally because he is "of a fancy turn," and breeds a few dogs, and traffics in them in hopes of profit.

The homes of the dog-hawkers, as far as I had means of ascertaining—and all I saw were of the same character—are comfortable and very cleanly. The small spaniels, terriers, &c.,—I do not now

allude to sporting dogs—are generally kept in kennels, or in small wooden houses erected for the purpose in a back garden or yard. These abodes are generally in some open court, or little square or "grove," where there is a free access of air. An old man who was sitting at his door in the summer evening, when I called upon a dog-seller, and had to wait a short time, told me that so quiet were his next-door neighbour's (the street-hawker's) dogs, that for some weeks, he did not know his newly-come neighbour was a dog-man; although he was an old nervous man himself, and couldn't bear any unpleasant noise or smell. The scrupulous observance of cleanliness is necessary in the rearing or keeping of small fancy dogs, for without such observance the dog would have a disagreeable odour about it, enough to repel any lady-buyer. It is a not uncommon declaration among dog-sellers that the animals are "as sweet as nuts." Let it be remembered that I have been describing the class of regular dog-sellers, making, by an open and established trade, a tolerable livelihood.

The spaniels, terriers, &c., the stock of these hawkers, are either bred by them—and they all breed a few or a good many dogs—or they are purchased of dog-dealers (not street-sellers), or of people who having a good fancy breed of "King Charleses," or "Blenheims," rear dogs, and sell them by the litter to the hawkers. The hawkers also buy dogs brought to them, "in the way of business," but they are wary how they buy any animal suspected to be stolen, or they may get into "trouble." One man, a carver and gilder, I was informed, some ten years back, made a good deal of money by his "black-patched" spaniels. These dogs had a remarkable black patch over their eyes, and so fond was the dog-fancier, or breeder of them, that when he disposed of them to street-sellers or others, he usually gave a portrait of the animals, of his own rude painting, into the bargain. These paintings he also sold, slightly framed, and I have seen them—but not so much lately—offered in the streets, and hung up in poor persons' rooms. This man lived in York-square, behind the Colosseum, then a not very reputable quarter. It is now Munster-square, and of a reformed character, but the seller of dogs and the donor of their portraits has for some time been lost sight of.

The prices at which fancy-dogs are sold in the streets are about the same for all kinds. They run from 10*s.* to 5*l.* 5*s.*, but are very rarely so low as 10*s.*, as "it's only a very scrubby thing for that." Two and three guineas are frequent street prices for a spaniel or small terrier. Of the dogs sold, as I have before stated, more than one-half are spaniels. Of the remainder, more than one-half are terriers; and the surplusage, after this reckoning, is composed in about equal numbers of the other dogs I have mentioned. The exportation of dogs is not above a twentieth of what it was before the appointment of the Select Committee, but a French or Belgium dealer sometimes comes to London to buy dogs.

It is not easy to fix upon any per-centage as to the profit of the street dog-sellers. There is the keep and the rearing of the animal to consider; and there is the same uncertainty in the traffic as in all traffics which depend, not upon a demand for use, but on the caprices of fashion, or—to use the more appropriate word, when writing on such a subject—of "fancy." A hawker may sell three dogs in one day, without any extraordinary effort, or, in the same manner of trading, and frequenting the very same places, may sell only one in three days. In the winter, the dogs are sometimes offered in public houses, but seldom as regards the higher-priced animals.

From the best data I can command, it appears that each hawker sells "three dogs and a half, if you take it that way, splitting a dog like, every week the year through; that is, sir, four or five one week in the summer, when trade 's brisk and days are long, and only two or three the next week, when trade may be flat, and in winter when there isn't the same chance." Calculating, then, that seven dogs are sold by each hawker in a fortnight, at an average price of 50*s.* each, which is not a high average, and supposing that but twenty men are trading in this line the year through, we find that no less a sum than 9100*l.* is yearly expended in this street-trade. The weekly profit of the hawker is from 25*s.* to 40*s.* More than seven-eighths of these dogs are bred in this country, Italian greyhounds included.

A hawker of dogs gave me a statement of his life, but it presented so little of incident or of change, that I need not report it. He had assisted and then succeeded his father in the business; was a pains-taking, temperate, and industrious man, seldom taking even a glass of ale, so that the tenour of his way had been even, and he was prosperous enough.

I will next give an account of the connection of the hawkers of dogs with the "sporting" or "fancy" part of the business; and of the present state of dog "finding," to show the change since the parliamentary investigation.

I may observe that in this traffic the word "fancy" has two significations. A dog recommended by its beauty, or any peculiarity, so that it be suitable for a pet dog, is a "fancy" animal; so is he if he be a fighter, or a killer of rats, however ugly or common-looking; but the term "sporting dog" seems to become more and more used in this case: nor is the first-mentioned use of the word "fancy," at all strained or very original, for it is lexicographically defined as "an opinion bred rather by the imagination than the reason, inclination, liking, caprice, humour, whim, frolick, idle scheme, vagary."

Of the Street-Sellers of Sporting Dogs.

The use, if use it may be styled, of sporting, or fighting dogs, is now a mere nothing to what it once was. There are many sports—an appellation of many a brute cruelty—which have become extinct, some of them long extinct. Herds of bears, for instance, were once maintained in this country, merely to be baited by dogs. It was even a part of royal merry-making. It was a sport altogether

congenial to the spirit of Henry VIII.; and when his daughter, then Queen Mary, visited her sister Elizabeth at Hatfield House, now the residence of the Marquess of Salisbury, there was a bear-baiting for their delectation—*after mass.* Queen Elizabeth, on her accession to the throne, seems to have been very partial to the baiting of bears and of bulls; for she not unfrequently welcomed a foreign ambassador with such exhibitions. The historians of the day intimate—they dared do no more—that Elizabeth affected these rough sports the most in the decline of life, when she wished to seem still sprightly, active, and healthful, in the eyes of her courtiers and her subjects. Laneham, whose veracity has not been impeached—though Sir Walter Scott has pronounced him to be as thorough a coxcomb as ever blotted paper—thus describes a bear-bait in presence of the Queen, and after quoting his description I gladly leave the subject. I make the citation in order to show and contrast the former with the present use of sporting dogs.

"It was a sport very pleasant to see the bear, with his pink eyes leering after his enemies, approach; the nimbleness and wait of the dog to take his advantage; and the force and experience of the bear again to avoid his assaults: if he were bitten in one place, how he would pinch in another to get free; that if he were taken once, then by what shift with biting, with clawing, with roaring with tossing and tumbling, he would work and wind himself from them; and, when he was loose, to shake his ears twice or thrice, with the blood and the slaver hanging about his physiognomy."

The suffering which constituted the great delight of the *sport* was even worse than this, in bull-baiting, for the bull gored or tossed the dogs to death more frequently than the bear worried or crushed them.

The principal place for the carrying on of these barbarities was at Paris Garden, not far from St. Saviour's Church, Southwark. The clamour, and wrangling, and reviling, with and without blows, at these places, gave a proverbial expression to the language. "The place was like a bear-garden," for "gardens" they were called. These pastimes beguiled the *Sunday* afternoons more than any other time, and were among the chief delights of the people, "until," writes Dr. Henry, collating the opinions of the historians of the day, "until the refined amusements of the drama, possessing themselves by degrees of the public taste, if they did not mend the morals of the age, at least forced brutal barbarity to quit the stage."

Of this sport in Queen Anne's days, Strutt's industry has collected advertisements telling of bear and bull-baiting at Hockley-in-the-Hole, and "Tuttle"-fields, Westminster, and of dog-fights at the same places. Marylebone was another locality famous for these pastimes, and for its breed of mastiffs, which dogs were most used for baiting the bears, whilst bull-dogs were the antagonists of the bull. Gay, who was a sufficiently close observer, and a close observer of street-life too, as is well shown in his "Trivia," specifies these localities in one of his fables:—

"Both Hockley-hole and Mary-bone
The combats of my dog have known."

Hockley-hole was not far from Smithfield-market.

In the same localities the practice of these sports lingered, becoming less and less every year, until about the middle of the last century. In the country, bull-baiting was practised twenty times more commonly than bear-baiting; for bulls were plentiful, and bears were not. There are, perhaps, none of our older country towns without the relic of its bull-ring—a strong iron ring inserted into a large stone in the pavement, to which the baited bull was tied; or a knowledge of the site where the bull-ring was. The deeds of the baiting-dogs were long talked of by the vulgar. These sports, and the dog-fights, maintained the great demand for sporting dogs in former times.

The only sporting dogs now in request—apart, of course, from hunting and shooting (remnants of the old barbarous delight in torture or slaughter), for I am treating only of the street-trade, to which fox-hounds, harriers, pointers, setters, cockers, &c., &c., are unknown—are terriers and bull-terriers. Bull-dogs cannot now be classed as sporting, but only as fancy dogs, for they are not good fighters, I was informed, one with another, their mouths being too small.

The way in which the sale of sporting dogs is connected with street-traffic is in this wise: Occasionally a sporting-dog is offered for sale in the streets, and then, of course, the trade is direct. At other times, gentlemen buying or pricing the smaller dogs, ask the cost of a bull-dog, or a bull-terrier or rat-terrier, and the street-seller at once offers to supply them, and either conducts them to a dog-dealer's, with whom he may be commercially connected, and where they can purchase those dogs, or he waits upon them at their residences with some "likely animals." A dog-dealer told me that he hardly knew what made many gentlemen so fond of bull-dogs, and they were "the fonder on 'em the more blackguarder and varmint-looking the creatures was," although now they were useless for sport, and the great praise of a bull-dog, "never flew but at head in his life," was no longer to be given to him, as there were no bulls at whose heads he could now fly.

Another dog-dealer informed me—with what truth as to the judgment concerning horses I do not know, but no doubt with accuracy as to the purchase of the dogs—that Ibrahim Pacha, when in London, thought little of the horses which he saw, but was delighted with the bull-dogs, "and he weren't so werry unlike one in the face hisself," was said at the time by some of the fancy. Ibrahim, it seems, bought two of the finest and largest bull-dogs in London, of Bill George, giving no less than 70*l.* for the twain. The bull-dogs now sold by the street-folk, or through their agency in the way I have described, are from 5*l.* to 25*l.* each. The bull-terriers, of the best blood, are about the same price, or perhaps 10 to 15 per cent. lower, and rarely attaining the tip-top prise.

The bull-terriers, as I have stated, are now the chief fighting-dogs, but the patrons of those combats—of those small imitations of the savage tastes of the Roman Colosseum, may deplore the decay of the amusement. From the beginning, until well on to the termination of the last century, it was not uncommon to see announcements of "twenty dogs to fight for a collar," though such advertisements were far more common at the commencement than towards the close of the century. Until within these twelve years, indeed, dog-matches were not unfrequent in London, and the favourite time for the regalement was on Sunday mornings. There were dog-pits in Westminster, and elsewhere, to which the admission was not very easy, for only known persons were allowed to enter. The expense was considerable, the risk of punishment was not a trifle, and it is evident that this Sunday game was *not supported by the poor or working classes.* Now dog-fights are rare. "There 's not any public dog-fights," I was told, "and very seldom any in a pit at a public-house, but there 's a good deal of it, I know, *at the private houses of the nobs.*" I may observe that "the nobs" is a common designation for the rich among these sporting people.

There are, however, occasionally dog-fights in a sporting-house, and the order of the combat is thus described to me: "We 'll say now that it 's a scratch fight; two dogs have each their corner of a pit, and they 're set to fight. They 'll fight on till they go down together, and then if one leave hold, he 's sponged. Then they fight again. If a dog has the worst of it he mustn't be picked up, but if he gets into his corner, then he can stay for as long as may be agreed upon, minute or half-minute time, or more than a minute. If a dog won't go to the scratch out of his corner, he loses the fight. If they fight on, why to settle it, one must be killed—though that very seldom happens, for if a dog 's very much punished, he creeps to his corner and don't come out to time, and so the fight 's settled. Sometimes it 's agreed beforehand, that the master of a dog may give in for him; sometimes that isn't to be allowed; but there 's next to nothing of this now, unless it 's in private among the nobs."

It has been said that a sportsman—perhaps in the relations of life a benevolent man—when he has failed to kill a grouse or pheasant outright, and proceeds to grasp the fluttering and agonised bird and smash its skull against the barrel of his gun, reconciles himself to the sufferings he inflicts by the *pride of art*, the consciousness of skill—he has brought down his bird at a long shot; that, too, when he cares nothing for the possession of the bird. The same feeling hardens him against the most piteous, woman-like cry of the hare, so shot that it cannot run. Be this as it may, it cannot be urged that in matching a favourite dog there can be any such feeling to destroy the sympathy. The men who thus amuse themselves are then utterly insensible to any pang at the infliction of pain upon animals, witnessing the infliction of it merely for a passing excitement: and in this insensibility the whole race who cater to such recreations of the wealthy, as well as the wealthy themselves, participate. There is another feeling too at work, and one proper to the sporting character—every man of this class considers the glories of his horse or his dog his own, a feeling very dear to selfishness.

The main sport now, however, in which dogs are the agents is rat-hunting. It is called hunting, but as the rats are all confined in a pit it is more like mere killing. Of this sport I have given some account under the head of rat-catching. The dogs used are all terriers, and are often the property of the street-sellers. The most accomplished of this terrier race was the famous dog Billy, the eclipse of the rat pit. He is now enshrined—for a stuffed carcase is all that remains of Billy—in a case in the possession of Charley Heslop of the Seven Bells behind St. Giles's Church, with whom Billy lived and died. His great feat was that he killed 100 rats in five minutes. I understand, however, that it is still a moot point in the sporting world, whether Billy did or did not exceed the five minutes by a very few seconds. A merely average terrier will easily kill fifty rats in a pit in eight minutes, but many far exceed such a number. One dealer told me that he would back a terrier bitch which did not weigh 12 lbs. to kill 100 rats in six minutes. The price of these dogs ranges with that of the bull-terriers.

The passion for rat-hunting is evidently on the increase, and seems to have attained the popularity once vouchsafed to cock-fighting. There are now about seventy regular pits in London, besides a few that are run up for temporary purposes. The landlord of a house in the Borough, familiar with these sports, told me that they would soon have to breed rats for a sufficient supply!

But it is not for the encounter with dogs alone, the issue being that so many rats shall be killed in a given time, that these vermin are becoming a trade commodity. Another use for them is announced in the following card:—

A FERRET MATCH.

A Rare Evening's Sport for the Fancy will take place at the

"——— ———,"

——— STREET, NEW ROAD,

On Tuesday Evening next, May 27.

MR. ———

has backed his Ferret against Mr. W. B——'s Ferret to kill 6 Rats each, for 10*s.* a-side.

He is still open to match his Ferret for £1 to £5 to kill against any other Ferret in London.

Two other Matches with Terriers will come off the same Evening.

Matches take place every —— Evening. Rats always on hand for the accommodation of Gentlemen to try their dogs.

Under the Management of ———

As a rat-killer, a ferret is not to be compared to a dog; but his use is to kill rats in holes,

inaccessible to dogs, or to drive the vermin out of their holes into some open space, where they can be destroyed. Ferrets are worth from 1*l.* to 4*l.* They are not animals of street-sale.

The management of these sports is principally in the hands of the street dog-sellers, as indeed is the dog-trade generally. They are the breeders, dealers, and sellers. They are compelled, as it were, to exhibit their dogs in the streets, that they may attract the attention of the rich, who would not seek them in their homes in the suburbs. The evening business in rat-hunting, &c., for such it is principally, perhaps doubles the incomes I have specified as earned merely by street-*sale*. The amount "turned over" in the trade in sporting-dogs yearly in London, was computed for me by one of the traders at from 12,000*l.* to 15,000*l.* He could not, however, lay down any very precise statistics, as some bull-dogs, bull-terriers, &c., were bred by butchers, tanners, publicans, horse-dealers, and others, and disposed of privately.

In my account of the former condition of the dog-trade, I had to dwell principally on the stealing and restoring of dogs. This is now the least part of the subject. The alteration in the law, consequent upon the parliamentary inquiry, soon wrought a great change, especially the enactment of the 6th Sect. in the Act 8 and 9 Vict. c. 47. "Any person who shall corruptly take any money or reward, directly or indirectly, under pretence or upon account of aiding any person to recover any dog which shall have been stolen, or which shall be in the possession of any person not being the owner thereof, shall be guilty of a misdemeanour, and punishable accordingly."

There may now, I am informed, be half a dozen fellows who make a precarious living by dog-stealing. These men generally keep out of the way of the street dog-sellers, who would not scruple, they assure me, to denounce their practices, as the more security a purchaser feels in the property and possession of a dog, the better it is for the regular business. One of these dog-stealers, dressed like a lime-burner—they generally appear as mechanics—was lately seen to attempt the enticing away of a dog. Any idle good-for-nothing fellow, slinking about the streets, would also, I was informed, seize any stray dog within his reach, and sell it for any trifle he could obtain. One dealer told me that there might still be a little doing in the "restoring" way, and with that way of life were still mixed up names which figured in the parliamentary inquiry, but it was a mere nothing to what it was formerly.

From a man acquainted with the dog business I had the following account. My informant was not at present connected with the dog and rat business, but he seemed to have what is called a "hankering after it." He had been a pot-boy in his youth, and had assisted at the bar of public-houses, and so had acquired a taste for sporting, as some "fancy coves" were among the frequenters of the tap-room and skittle-ground. He had speculated a little in dogs, which a friend reared, and he sold to the public-house customers. "At last I went slap into the dog-trade," he said, "but I did no good at all. There 's a way to do it, I dare say, or perhaps you must wait to get known, but then you may starve as you wait. I tried Smithfield first—it 's a good bit since, but I can't say how long—and I had a couple of tidy little terriers that we 'd bred; I thought I 'd begin cheap to turn over money quick, so I asked 12*s.* a-piece for them. O, in course they weren't a werry pure sort. But I couldn't sell at all. If a grazier, or a butcher, or anybody looked at them, and asked their figure, they 'd say, 'Twelve shillings! a dog what ain't worth more nor 12*s.* ain't worth a d——n!' I asked one gent a sovereign, but there was a lad near that sung out, 'Why, you only axed 12*s.* a bit since; ain't you a-coming it?' After that, I was glad to get away. I had five dogs when I started, and about 1*l.* 8*s.* 6*d.* in money, and some middling clothes; but my money soon went, for I could do no business, and there was the rent, and then the dogs must be properly fed, or they 'd soon show it. At last, when things grew uncommon taper, I almost grudged the poor things their meat and their sop, for they were filling their bellies, and I was an 'ung'ring. I got so seedy, too, that it was no use trying the streets, for any one would think I 'd stole the dogs. So I sold them one by one. I think I got about 5*s.* apiece for them, for people took their advantage on me. After that I fasted oft enough. I helped about the pits, and looked out for jobs of any kind, cleaning knives and spittoons at a public-house, and such-like, for a bite and sup. And I sometimes got leave to sit up all night in a stable or any out-house with a live rat trap that I could always borrow, and catch rats to sell to the dealers. If I could get three lively rats in a night, it was good work, for it was as good as 1*s.* to me. I sometimes won a pint, or a tanner, when I could cover it, by betting on a rat-hunt with helpers like myself—but it was only a few places we were let into, just where I was known—'cause I 'm a good judge of a dog, you see, and if I had it to try over again, I think I could knock a tidy living out of dog-selling. Yes, I 'd like to try well enough, but it 's no use trying if you haven't a fairish bit of money. I 'd only myself to keep all this time, but that was one too many. I got leave to sleep in hay-lofts, or stables, or anywhere, and I have slept in the park. I don't know how many months I was living this way. I got not to mind it much at last. Then I got to carry out the day and night beers for a potman what had hurt his foot and couldn't walk quick and long enough for supplying his beer, as there was five rounds every day. He lent me an apron and a jacket to be decent. After that I got a potman's situation. No, I 'm not much in the dog and rat line now, and don't see much of it, for I 've very little opportunity. But I 've a very nice Scotch terrier to sell if you should be wanting such a thing, or hear of any of your friends wanting one. It 's dirt cheap at 30*s.*, just about a year old. Yes, I generally has a dog, and swops and sells. Most masters allows that in a quiet respectable way."

Of the Street-Sellers of Live Birds.

The bird-*sellers* in the streets are also the bird-*catchers* in the fields, plains, heaths, and woods, which still surround the metropolis; and in compliance with established precedent it may be proper that I should give an account of the catching, before I proceed to any further statement of the procedures subsequent thereunto. The bird-catchers are precisely what I have described them in my introductory remarks. An intelligent man, versed in every part of the bird business, and well acquainted with the character of all engaged in it, said they might be represented as of "the fancy," in a small way, and always glad to run after, and full of admiration of, fighting men. The bird-catcher's life is one essentially vagrant; a few gipsies pursue it, and they mix little in street-trades, except as regards tinkering; and the mass, not gipsies, who become bird-catchers, rarely leave it for any other avocation. They "catch" unto old age. During last winter two men died in the parish of Clerkenwell, both turned seventy, and both bird-catchers—a profession they had followed from the age of six.

The mode of catching I will briefly describe. It is principally effected by means of nets. A bird-net is about twelve yards square; it is spread flat upon the ground, to which it is secured by four "stars." These are iron pins, which are inserted in the field, and hold the net, but so that the two "wings," or "flaps," which are indeed the sides of the nets, are not confined by the stars. In the middle of the net is a cage with a fine wire roof, widely worked, containing the "call-bird." This bird is trained to sing loudly and cheerily, great care being bestowed upon its tuition, and its song attracts the wild birds. Sometimes a few stuffed birds are spread about the cage as if a flock were already assembling there. The bird-catcher lies flat and motionless on the ground, 20 or 30 yards distant from the edge of the net. As soon as he considers that a sufficiency of birds have congregated around his decoy, he rapidly draws towards him a line, called the "pull-line," of which he has kept hold. This is so looped and run within the edges of the net, that on being smartly pulled, the two wings of the net collapse and fly together, the stars still keeping their hold, and the net encircles the cage of the call-bird, and incloses in its folds all the wild birds allured round it. In fact it then resembles a great cage of net-work. The captives are secured in cages—the call-bird continuing to sing as if in mockery of their struggles—or in hampers proper for the purpose, which are carried on the man's back to London.

The use of the call-bird as a means of decoy is very ancient. Sometimes—and more especially in the dark, as in the taking of nightingales—the bird-catcher imitates the notes of the birds to be captured. A small instrument has also been used for the purpose, and to this Chaucer, although figuratively, alludes: "So, the birde is begyled with the merry voice of the foulers' whistel, when it is closed in your nette."

Sometimes, in the pride of the season, a bird-catcher engages a costermonger's poney or donkey cart, and perhaps his boy, the better to convey the birds to town. The net and its apparatus cost 1*l*. The call-bird, if he have a good wild note—goldfinches and linnets being principally so used—is worth 10*s*. at the least.

The bird-cather's life has many, and to the constitution of some minds, irresistible charms. There is the excitement of "sport"—not the headlong excitement of the chase, where the blood is stirred by motion and exercise—but still sport surpassing that of the angler, who plies his finest art to capture one fish at a time, while the bird-catcher despises an individual capture, but seeks to ensnare a flock at one twitch of a line. There is, moreover, the attraction of idleness, at least for intervals, and sometimes long intervals—perhaps the great charm of fishing—and basking in the lazy sunshine, to watch the progress of the snares. Birds, however, and more especially linnets, are caught in the winter, when it is not quite such holiday work. A bird-dealer (not a street-seller) told me that the greatest number of birds he had ever heard of as having been caught at one pull was nearly 200. My informant happened to be present on the occasion. "Pulls" of 50, 100, and 150 are not very unfrequent when the young broods are all on the wing.

Of the bird-catchers, including all who reside in Woolwich, Greenwich, Hounslow, Isleworth, Barnet, Uxbridge, and places of similar distance, all working for the London market, there are about 200. The localities where these men "catch," are the neighbourhoods of the places I have mentioned as their residences, and at Holloway, Hampstead, Highgate, Finchley, Battersea, Blackheath, Putney, Mortlake, Chiswick, Richmond, Hampton, Kingston, Eltham, Carshalton, Streatham, the Tootings, Woodford, Epping, Snaresbrook, Walthamstow, Tottenham, Edmonton—wherever, in fine, are open fields, plains, or commons around the metropolis.

I will first enumerate the several birds sold in the streets, as well as the supply to the shops by the bird-catchers. I have had recourse to the best sources of information. Of the number of birds which I shall specify as "supplied," or "caught," it must be remembered that a not-very-small proportion die before they can be trained to song, or inured to a cage life. I shall also give the street prices. All the birds are caught by the nets with call-birds, excepting such as I shall notice. I take the singing birds first.

The *Linnet* is the cheapest and among the most numerous of what may be called the London-caught birds, for it is caught in the nearer suburbs, such as Holloway. The linnet, however,—the brown linnet being the species—is not easily reared, and for some time ill brooks confinement. About one-half of those birds die after having been caged a few days. The other evening a bird-catcher supplied 26 fine linnets to a shopkeeper in Pentonville, and next morning ten were dead. But in some of those bird shops, and bird chambers connected with the shops, the heat at the time

the new broods are caught and caged, is excessive; and the atmosphere, from the crowded and compulsory fellowship of pigeons, and all descriptions of small birds, with white rats, hedgehogs, guinea-pigs, and other creatures, is often very foul; so that the wonder is, not that so many die, but that so many survive.

Some bird-connoisseurs prefer the note of the linnet to that of the canary, but this is far from a general preference. The young birds are sold in the streets at 3*d.* and 4*d.* each; the older birds, which are accustomed to sing in their cages, from 1*s.* to 2*s.* 6*d.* The "catch" of linnets—none being imported—may be estimated, for London alone, at 70,000 yearly. The mortality I have mentioned is confined chiefly to that year's brood. One-tenth of the catch is sold in the streets. Of the quality of the street-sold birds I shall speak hereafter.

The *Bullfinch*, which is bold, familiar, docile, and easily attached, is a favourite cage-bird among the Londoners; I speak of course as regards the body of the people. It is as readily sold in the streets as any other singing bird. Piping bullfinches are also a part of street-trade, but only to a small extent, and with bird-sellers who can carry them from their street pitches, or call on their rounds, at places where they are known, to exhibit the powers of the bird. The piping is taught to these finches when very young, and they must be brought up by their tutor, and be familiar with him. When little more than two months old, they begin to whistle, and then their training as pipers must commence. This tuition, among professional bullfinch-trainers, is systematic. They have schools of birds, and teach in bird-classes of from four to seven members in each, six being a frequent number. These classes, when their education commences, are kept unfed for a longer time than they have been accustomed to, and they are placed in a darkened room. The bird is wakeful and attentive from the want of his food, and the tune he is to learn is played several times on an instrument made for the purpose, and known as a bird-organ, its notes resembling those of the bullfinch. For an hour or two the young pupils mope silently, but they gradually begin to imitate the notes of the music played to them. When one commences—and he is looked upon as the most likely to make a good piper—the others soon follow his example. The light is then admitted and a portion of food, but not a full meal, is given to the birds. Thus, by degrees, by the playing on the bird-organ (a flute is sometimes used), by the admission of light, which is always agreeable to the finch, and by the reward of more and more, and sometimes more relishable food, the pupil "practises" the notes he hears continuously. The birds are then given into the care of boys, who attend to them without intermission in a similar way, their original teacher still overlooking, praising, or rating his scholars, till they acquire a tune which they pipe as long as they live. It is said, however, that only five per cent. of the number taught pipe in *perfect* harmony. The bullfinch is often pettish in his piping, and will in many instances not pipe at all, unless in the presence of some one who feeds it, or to whom it has become attached.

The system of training I have described is that practised by the Germans, who have for many years supplied this country with the best piping bullfinches. Some of the dealers will undertake to procure English-taught bullfinches which will pipe as well as the foreigners, but I am told that this is a prejudice, if not a trick, of trade. The mode of teaching in this country, by barbers, weavers, and bird-fanciers generally, who seek for a profit from their pains-taking, is somewhat similar to that which I have detailed, but with far less elaborateness. The price of a piping bullfinch is about three guineas. These pipers are also reared and taught in Leicestershire and Norfolk, and sent to London, as are the singing bullfinches which do not "pipe."

The bullfinches netted near London are caught more numerously about Hounslow than elsewhere. In hard winters they are abundant in the outskirts of the metropolis. The yearly supply, including those sent from Norfolk, &c., is about 30,000. The bullfinch is "hearty compared to the linnet," I was told, but of the amount which are the objects of trade, not more than two-thirds live many weeks. The price of a good young bullfinch is 2*s.* 6*d.* and 3*s.* They are often sold in the streets for 1*s.* The hawking or street trade comprises about a tenth of the whole.

The sale of piping bullfinches is, of course, small, as only the rich can afford to buy them. A dealer estimated it at about 400 yearly.

The *Goldfinch* is also in demand by street customers, and is a favourite from its liveliness, beauty, and sometimes sagacity. It is, moreover, the longest lived of our caged small birds, and will frequently live to the age of fifteen or sixteen years. A goldfinch has been known to exist twenty-three years in a cage. Small birds, generally, rarely live more than nine years. This finch is also in demand because it most readily of any bird pairs with the canary, the produce being known as a "mule," which, from its prettiness and powers of song, is often highly valued.

Goldfinches are sold in the streets at from 6*d.* to 1*s.* each, and when there is an extra catch, and they are nearly all caught about London, and the shops are fully stocked, at 3*d.* and 4*d.* each. The yearly catch is about the same as that of the linnet, or 70,000, the mortality being perhaps 30 per cent. If any one casts his eye over the stock of hopping, chirping little creatures in the window of a bird-shop, or in the close array of small cages hung outside, or at the stock of a street-seller, he will be struck by the preponderating number of goldfinches. No doubt the dealer, like any other shopkeeper, dresses his window to the best advantage, putting forward his smartest and prettiest birds. The demand for the goldfinch, especially among women, is steady and regular. The street-sale is a tenth of the whole.

The *Chaffinch* is in less request than either of its congeners, the bullfinch or the goldfinch, but the catch is about half that of the bullfinch, and

with the same rate of mortality. The prices are also the same.

Greenfinches (called *green birds*, or sometimes *green linnets*, in the streets) are in still smaller request than are chaffinches, and that to about one-half. Even this smaller stock is little saleable, as the bird is regarded as "only a middling singer." They are sold in the open air, at 2*d.* and 3*d.* each, but a good "green bird" is worth 2*s.* 6*d.*

Larks are of good sale and regular supply, being perhaps more readily caught than other birds, as in winter they congregate in large quantities. It may be thought, to witness the restless throwing up of the head of the caged sky-lark, as if he were longing for a soar in the air, that he was very impatient of restraint. This does not appear to be so much the fact, as the lark adapts himself to the poor confines of his prison—poor indeed for a bird who soars higher and longer than any of his class—more rapidly than other wild birds, like the linnet, &c. The mortality of larks, however, approaches one-third.

The yearly "take" of larks is 60,000. This includes sky-larks, wood-larks, tit-larks, and mud-larks. The sky-lark is in far better demand than any of the others for his "stoutness of song," but some prefer the tit-lark, from the very absence of such stoutness. "Fresh-catched" larks are vended in the streets at 6*d.* and 8*d.*, but a seasoned bird is worth 2*s.* 6*d.* One-tenth is the street-sale.

The larks for the supply of fashionable tables are never provided by the London bird-catchers, who catch only "singing larks," for the shop and street-traffic. The edible larks used to be highly esteemed in pies, but they are now generally roasted for consumption. They are principally the produce of Cambridgeshire, with some from Bedfordshire, and are sent direct (killed) to Leadenhall-market, where about 215,000 are sold yearly, being nearly two-thirds of the gross London consumption.

It is only within these twelve or fifteen years that the London dealers have cared to trade to any extent in *Nightingales*, but they are now a part of the stock of every bird-shop of the more flourishing class. Before that they were merely exceptional as cage-birds. As it is, the "domestication," if the word be allowable with reference to the nightingale, is but partial. Like all migratory birds, when the season for migration approaches, the caged nightingale shows symptoms of great uneasiness, dashing himself against the wires of his cage or his aviary, and sometimes dying in a few days. Many of the nightingales, however, let the season pass away without showing any consciousness that it was, with the race of birds to which they belonged, one for a change of place. To induce the nightingale to sing in the daylight, a paper cover is often placed over the cage, which may be gradually and gradually withdrawn until it can be dispensed with. This is to induce the appearance of twilight or night. On the subject of this night-singing, however, I will cite a short passage.

"The Nightingale is usually supposed to withhold his notes till the sun has set, and then to be the only songster left. This is, however, not quite true, for he sings in the day, often as sweetly and as powerfully as at night; but amidst the general chorus of other singing birds, his efforts are little noticed. Neither is he by any means the only feathered musician of the night. The Wood-lark will, to a very late hour, pour forth its rich notes, flying in circles round the female, when sitting on her nest. The Sky-lark, too, may frequently be heard till near midnight high in the air, soaring as if in the brightness of a summer's morning. Again we have listened with pleasure long after dark to the warblings of a Thrush, and been awakened at two in the morning by its sweet serenade." It appears, however, that this night-singing, as regards England, is on fine summer nights when the darkness is never very dense. In far northern climates larks sing all night.

I am inclined to believe that the mortality among nightingales, before they are reconciled to their new life, is higher than that of any other bird, and much exceeding one-half. The dealers may be unwilling to admit this; but such mortality is, I have been assured on good authority, the case; besides that, the habits of the nightingale unfit him for a cage existence.

The capture of the nightingale is among the most difficult achievements of the profession. None are caught nearer than Epping, and the catchers travel considerable distances before they have a chance of success. These birds are caught at night, and more often by their captor's imitation of the nightingale's note, than with the aid of the call-bird. Perhaps 1000 nightingales are reared yearly in London, of which three-fourths may be, more or less, songsters. The inferior birds are sold at about 2*s.* each, the street-sale not reaching 100, but the birds, "caged and singing," are worth 1*l.* each, when of the best; and 10*s.* 12*s.* and 15*s.* each when approaching the best. The mortality I have estimated.

Redbreasts are a portion of the street-sold birds, but the catch is not large, not exceeding 3000, with a mortality of about a third. Even this number, small as it is, when compared with the numbers of other singing birds sold, is got rid of with difficulty. There is a popular feeling repugnant to the imprisonment, or coercion in any way, of "a robin," and this, no doubt has its influence in moderating the demand. The redbreast is sold, when young, both in the shops and streets for 1*s.*, when caged and singing, sometimes for 1*l.* These birds are considered to sing best by candlelight. The street-sale is a fifth, or sometimes a quarter, all young birds, or with the rarest exceptions.

The *Thrush, Throstle*, or (in Scottish poetry) *Mavis*, is of good sale. It is reared by hand, for the London market, in many of the villages and small towns at no great distance, the nests being robbed of the young, wherever they can be found. The nestling food of the infant thrush is grubs, worms, and snails, with an occasional moth or butterfly. On this kind of diet the young thrushes are reared until they are old enough for sale to the shopkeeper, or to any private patron. Thrushes are also netted, but

Original from HARVARD UNIVERSITY

those reared by hand are much the best, as such a rearing disposes the bird the more to enjoy his cage life, as he has never experienced the delights of the free hedges and thickets. This process the catchers call "rising" from the nest. A throstle thus "rose" soon becomes familiar with his owner—always supposing that he be properly fed and his cage duly cleaned, for all birds detest dirt—and among the working-men of England no bird is a greater favourite than the thrush; indeed few other birds are held in such liking by the artisan class. About a fourth of the thrushes supplied to the metropolitan traders have been thus "rose," and as they must be sufficiently grown before they will be received by the dealers, the mortality among them, when once able to feed themselves, in their wicker-work cages, is but small. Perhaps somewhere about a fourth perish in this hand-rearing, and some men, the aristocrats of the trade, let a number go when they have ascertained that they are hens, as these men exert themselves to bring up thrushes to sing well, and then they command good prices. Often enough, however, the hens are sold cheap in the streets. Among the catch supplied by netting, there is a mortality of perhaps more than a third. The whole take is about 35,000. Of the sale the streets have a tenth proportion. The prices run from 2*s.* 6*d.* and 3*s.* for the "fresh-caught," and 10*s.*, 1*l.*, and as much as 2*l.* for a seasoned throstle in high song. Indeed I may observe that for any singing bird, which is considered greatly to excel its mates, a high price is obtainable.

Blackbirds appear to be less prized in London than thrushes, for, though with a mellower note, the blackbird is not so free a singer in captivity. They are "rose" and netted in the same manner as the thrush, but the supply is less by one-fifth. The prices, mortality, street-sale, &c., are in the same ratio.

The street-sale of *Canaries* is not large; not so large, I am assured by men in the trade, as it was six or seven years ago, more especially as regarded the higher-priced birds of this open-air traffic. Canaries are now never brought from the group of islands, thirteen in number, situate in the North Atlantic and near the African coast, and from which they derive their name. To these islands and to these alone (as far as is known to ornithologists) are they indigenous. The canary is a slow flyer and soon wearied; this is one reason no doubt for its not migrating. This delightful songster was first brought into England in the reign of Elizabeth, at the era when so many foreign luxuries (as they were then considered, and stigmatised accordingly) were introduced; of these were potatoes, tobacco, turkeys, nectarines, and canaries. I have seen no account of what was the cost of a canary-bird when first imported, but there is no doubt that they were very dear, as they were found only in the abodes of the wealthy. This bird-trade seems, moreover, to have been so profitable to the Spaniards, then and now the possessors of the isles, that a government order for the killing or setting at liberty of all hen canaries, caught with the males, was issued in order that the breed might be confined to its native country; a decree not attended with successful results as regards the intention of the then ruling powers.

The foreign supply to this country is now principally from Holland and Germany, where canaries are reared in great numbers, with that care which the Dutch in especial bestow upon everything on which money-making depends, and whence they are sent or brought over in the spring of every year, when from nine to twelve months old. Thirty years ago, the Tyrolese were the principal breeders and purveyors of canaries for the London market. From about the era of the peace of 1814, on the first abdication of Napoleon, for ten or twelve years they brought over about 2000 birds yearly. They travelled the whole way on foot, carrying the birds in cages on their backs, until they reached whatever port in France or the Netherlands (as Belgium then was) they might be bound for. The price of a canary of an average quality was then from 5*s.* to 8*s.* 6*d.*, and a fair proportion were street-sold. At that period, I was told, the principal open-air sale for canaries (and it is only of that I now write) was in Whitechapel and Bethnal-green. All who are familiar with those localities may smile to think that the birds chirping and singing in these especially urban places, were bred for such street-traffic in the valleys of the Rhætian Alps! I presume that it was the greater rapidity of communication, and the consequent diminished cost of carriage, between England, Holland, and Germany, that caused the Tyrolese to abandon the trade as one unremunerative—even to men who will live on bread, onions, and water.

I have, perhaps, dwelt somewhat at length on this portion of the subject, but it is the most curious portion of all, for the canary is the only one of all our singing-birds which is *solely* a household thing. Linnets, finches, larks, nightingales, thrushes, and blackbirds, are all free denizens of the open air, as well as prisoners in our rooms, but the canary with us is unknown in a wild state. "Though not very handy," wrote, in 1848, a very observant naturalist, the late Dr. Stanley, Bishop of Norwich, "canaries might possibly be naturalized in our country, by putting their eggs in the nests of sparrows, chaffinches, or other similar birds. The experiment has been partially tried in Berkshire, where a person for years kept them in an exposed aviary out of doors, and where they seemed to suffer no inconvenience from the severest weather."

The breeding of canaries in this country for the London supply has greatly increased. They are bred in Leicester and Norwich, weavers being generally fond of birds. In London itself, also, they are bred to a greater extent than used to be the case, barbers being among the most assiduous rearers of the canary. A dealer who trades in both foreign and home-bred birds thought that the supply from the country, and from the Continent, was about the same, 8000 to 9000 each, not including what were sold by the barbers, who are regarded as "fanciers," not to say interlopers,

by the dealers. No species of birds are ever bred by the shop-dealers. The price of a brisk canary is 5s. or 6s.; but they are sold in the streets as low as 1s. each, a small cage worth 6d. being sometimes included. These, however, are hens. As in the life of a canary there is no transition from freedom to enthralment, for they are in a cage in the egg, and all their lives afterwards, they are subject to a far lower rate of mortality than other street-sold birds. A sixteenth of the number above stated as forming the gross supply are sold in the streets.

The foregoing enumeration includes all the singing-birds of street-traffic and street-folk's supply. The trade I have thus sketched is certainly one highly curious. We find that there is round London a perfect belt of men, employed from the first blush of a summer's dawn, through the heats of noon, in many instances during the night, and in the chills of winter; and all labouring to give to city-pent men of humble means one of the peculiar pleasures of the country—the song of the birds. It must not be supposed that I would intimate that the bird-catcher's life, as regards his field and wood pursuits, is one of hardship. On the contrary, it seems to me to be the very one which, perhaps unsuspected by himself, is best suited to his tastes and inclinations. Nor can we think similar pursuits partake much of hardship when we find independent men follow them for mere sport, to be rid of lassitude.

But the detail of the birds captured for the Londoners by no means ends here. I have yet to describe those which are not songsters, and which are a staple of street-traffic to a greater degree than birds of song. Of these my notice may be brief.

The trade in *Sparrows* is almost exclusively a street-trade and, numerically considered, not an inconsiderable one. They are netted in quantities in every open place near London, and in many places in London. It is common enough for a bird-catcher to obtain leave to catch sparrows in a wood-yard, a brick-field, or places where is an open space certain to be frequented by these bold and familiar birds. The sparrows are sold in the streets generally at 1d. each, sometimes halfpenny, and sometimes 1½d., and for no purpose of enjoyment (as in the case of the cheap song birds), but merely as playthings for children; in other words, for creatures wilfully or ignorantly to be tortured. Strings are tied to their legs and so they have a certain degree of freedom, but when they offer to fly away they are checked, and kept fluttering in the air as a child will flutter a kite. One man told me that he had sometimes sold as many as 200 sparrows in the back streets about Smithfield on a fine Sunday. These birds are not kept in cages, and so they can only be bought for a plaything. They oft enough escape from their persecutors.

But it is not merely for the sport of children that sparrows are purveyed, but for that of grown men, or—as Charles Lamb, if I remember rightly, qualifies it, when he draws a Pentonville sportsman with a little shrubbery for his preserve—for grown cockneys. The birds for adult recreation are shot in sparrow-matches: the gentleman slaughtering the most being, of course, the hero of a sparrow "*battue*." One dealer told me that he had frequently supplied dozens of sparrows for these matches, at 2s the dozen, but they were required to be fine bold birds! One dealer thought that during the summer months there were as many sparrows caught close to and within London as there were goldfinches in the less urban districts. These birds are sold direct from the hands of the catcher, so that it is less easy to arrive at statistics than when there is the intervention of dealers who know the extent of the trade carried on. I was told by several, who had no desire to exaggerate, that to estimate this sparrow-sale at 10,000 yearly, sold to children and idlers in the streets, was too low, but at that estimate, the outlay, at 1d. a sparrow, would be 850l. The adult sportsmen may slaughter half that number yearly in addition. The sporting sparrows are derived from the shopkeepers, who, when they receive the order, instruct the catchers to go to work.

Starlings used to be sold in very great quantities in the streets, but the trade is now but the shadow of its former state. The starling, too, is far less numerous than it was, and has lost much of its popularity. It is now seldom seen in flocks of more than 40, and it is rare to see a flock at all, although these birds at one period mustered in congregations of hundreds and even thousands. Ruins, and the roofs of ancient houses and barns—for they love the old and decaying buildings—were once covered with them. The starling was moreover the poor man's and the peasant's parrot. He was taught to speak, and sometimes to swear. But now the starling, save as regards his own note, is mute. He is seldom tamed or domesticated and taught tricks. It is true starlings may be seen carried on sticks in the street as if the tamest of the tame, but they are "braced." Tapes are passed round their bodies, and so managed that the bird cannot escape from the stick, while his fetters are concealed by his feathers, the street-seller of course objecting to allow his birds to be handled.

Starlings are caught chiefly Ilford way, I was told, and about Turnham-green. Some are "rose" from the nest. The price is from 9d. to 2s. each. About 3000 are sold annually, half in the streets. After having been braced, or ill-used, the starling, if kept as a solitary bird, will often mope and die.

Jackdaws and *Magpies* are in less demand than might be expected from their vivacity. Many of the other birds are supplied the year round, but daws and pies for only about two months, from the middle of June to the middle of August. The price is from 6d. to 1s. and about 1000 are thus disposed of, in equal quantities, one-half in the streets. These birds are for the most part reared from the nest, but little pains appear to be taken with them.

The *Redpole* is rather a favourite bird among street-buyers, especially where children are allowed to choose birds from a stock. I am told that they most frequently select a goldfinch or a redpole. These birds are supplied for about two months. About 800 or 1000 is the extent of the take. The mortality and prices are the same as with the goldfinch. but a goldfinch in high song is worth twice as much as the best redpole. About a third of the sale of the redpole is in the streets.

There are also 150 or 200 *Black-caps* sold annually in the open air, at from 3*d*. to 5*d*. each.

These are the chief birds, then, that constitute the trade of the streets, with the addition of an occasional yellow-hammer, wren, jay, or even cuckoo. They also, with the addition of pigeons, form the stock of the bird-shops.

I have shown the number of birds caught, the number which survive for sale, and the cost; and, as usual, under the head of "Statistics," will be shown the whole annual expenditure. This, however, is but a portion of the London outlay on birds. There is, in addition, the cost of their cages and of their daily food. The commonest and smallest cage costs 6*d*., a frequent price being 1*s*. A thrush's basket-cage cannot be bought, unless rubbish, under 2*s*. 6*d*. I have previously shown the amount paid for the green food of birds, and for their turfs, &c., for these are all branches of street-commerce. Of their other food, such as rape and canary-seed, German paste, chopped eggs, biscuit, &c., I need but intimate the extent by showing what birds will consume, as it is not a portion of street-trade.

A goldfinch, it has been proved by experimentalising ornithologists, will consume 90 grains, in weight, of canary-seed in 24 hours. A greenfinch, for whose use 80 grains of wheat were weighed out, ate 79 of them in 24 hours; and, on another occasion ate, in the same space of time, 100 grains of a paste of eggs and flour. Sixteen canaries consumed 100 grains' weight of food, each bird, in 24 hours. The amount of provision thus eaten was about one-sixth of the full weight of the bird's body, or an equivalent, were a man to swallow victuals in the same proportion, of 25 lbs. in 24 hours. I may remark, moreover, that the destruction of caterpillars, insects, worms, &c., by the small birds, is enormous, especially during the infancy of their nestlings. A pair of sparrows fed their brood 36 times an hour for 14 hours of a long spring day, and, it was calculated, administered to them in one week 3400 caterpillars. A pair of chaffinches, also, carried nearly as great a number of caterpillars for the maintenance of their young.

The singing-birds sold in the street are offered either singly in small cages, when the cage is sold with the bird, or they are displayed in a little flock in a long cage, the buyer selecting any he prefers. They always appear lively in the streets, or indeed a sale would be hopeless, for no one would buy a dull or sick bird. The captives are seen to hop and heard to chirp, but they are not often heard to sing when thus offered to the public, and it requires some little attention to judge what is but an impatient flutter, and what is the fruit of mere hilarity.

The places where the street-sellers more especially offer their birds are—Smithfield, Clerkenwell-green, Lisson-grove, the City and New roads, Shepherdess-walk, Old Street-road, Shoreditch, Spitalfields, Whitechapel, Tower-hill, Ratcliffe-highway, Commercial-road East, Poplar, Billingsgate, Westminster Broadway, Covent-garden, Blackfriars-road, Bermondsey (mostly about Dock-head), and in the neighbourhood of the Borough Market. The street-sellers are also itinerant, carrying the birds in cages, holding them up to tempt the notice of people whom they see at the windows, or calling at the houses. The sale used to be very considerable in the "Cut" and Lambeth-walk. Sometimes the cages with their inmates are fastened to any contiguous rail; sometimes they are placed on a bench or stall; and occasionally in cages on the ground.

To say nothing, in this place, of the rogueries of the bird-trade, I will proceed to show how the street-sold birds are frequently inferior to those in the shops. The catcher, as I have stated, is also the street-seller. He may reach the Dials, or whatever quarter the dealer he supplies may reside in, with perhaps 30 linnets and as many goldfinches. The dealer selects 24 of each, refusing the remaining dozen, on account of their being hens, or hurt, or weakly birds. The man then resorts to the street to effect a sale of that dozen, and thus the streets have the refuse of the shops. On the other hand, however, when the season is at its height, and the take of birds is the largest, as at this time of year, the shops are "stocked." The cages and recesses are full, and the dealer's anxiety is to sell before he purchases more birds. The catchers proceed in their avocation; they must dispose of their stock; the shopkeeper will not buy "at any figure," and so the streets are again resorted to, and in this way fine birds are often sold very cheap. Both these liabilities prevail the year through, but most in the summer, and keep up a sort of poise; but I apprehend that the majority, perhaps the great majority, of the street-sold birds, are of an inferior sort, but then the price is much lower. On occasions when the bird-trade is overdone, the catchers will sell a few squirrels, or gather snails for the shops.

The buyers of singing-birds are eminently the working people, along with the class of tradesmen whose means and disposition are of the same character as those of the artisan. Grooms and coachmen are frequently fond of birds; many are kept in the several mews, and often the larger singing-birds, such as blackbirds and thrushes. The fondness of a whole body of artificers for any particular bird, animal, or flower, is remarkable. No better instance need be cited than that of the Spitalfields weavers. In the days of their prosperity they were the cultivators of choice tulips, afterwards, though not in so full a degree, of dahlias, and their pigeons were the best "fliers" in England. These things were

Original from HARVARD UNIVERSITY

accomplished with little cost, comparatively, for the weavers were engaged in tasks, grateful and natural to their tastes and habitudes; and what was expense in the garden or aviary of the rich, was an exercise of skill and industry on the part of the silk-weaver. The humanising and even refining influence of such pursuits is very great, and as regards these pure pleasures it is not seldom that the refinement which can appreciate them has proceeded not to but *from* the artisans. The operatives have often been in the van of those who have led the public taste from delighting in the cruelty and barbarity of bear and bull-baiting and of cock-fighting—among the worst of all possible schools, and very influential those schools were—to the delight in some of the most beautiful works of nature. It is easy to picture the difference of mood between a man going home from a dog-fight at night, or going home from a visit to his flowers, or from an examination to satisfy himself that his birds were "all right." The families of the two men felt the difference. Many of the rich appear to remain mere savages in their tastes and sports. Battues, lion and hippopotamus hunting, &c.,—all are mere civilized barbarisms. When shall we learn, as Wordsworth says,

> "Never to blend our pleasure or our pride
> With sorrow of the meanest thing that feels."

But the change in Spitalfields is great. Since the prevalence of low wages the weaver's garden has disappeared, and his pigeon-cote, even if its timbers have not rotted away, is no longer stocked with carriers, dragoons, horsemen, jacobins, monks, poulters, turtles, tumblers, fantails, and the many varieties of what is in itself a variety—the fancy-pigeon. A thrush, or a linnet, may still sing to the clatter of the loom, but that is all. The culture of the tulip, the dahlia, and (sometimes) of the fuchsia, was attended, as I have said, with small cost, still it *was* cost, and the weaver, as wages grew lower, could not afford either the outlay or the loss of time. To cultivate flowers, or rear doves, so as to make them a means of subsistence, requires a man's whole time, and to such things the Spitalfields man did not devote his time, but his leisure.

The readers who have perused this work from its first appearance will have noticed how frequently I have had to comment on the always realized indication of good conduct, and of a superior taste and generally a superior intelligence, when I have found the rooms of working people contain flowers and birds. I could adduce many instances. I have seen and heard birds in the rooms of tailors, shoemakers, coopers, cabinet-makers, hatters, dressmakers, curriers, and street-sellers,—all people of the best class. One of the most striking, indeed, was the room of a street-confectioner. His family attended to the sale of the sweets, and he was greatly occupied at home in their manufacture, and worked away at his peppermint-rock, in the very heart of one of the thickliest populated parts of London, surrounded by the song of thrushes, linnets, and gold-finches, all kept, not for profit, but because he "loved" to have them about him. I have seldom met a man who impressed me more favourably.

The flowers in the room are more attributable to the superintending taste of a wife or daughter, and are found in the apartments of the same class of people.

There is a marked difference between the buyers or keepers of birds and of dogs in the working classes, especially when the dog is of a sporting or "varmint" sort. Such a dog-keeper is often abroad and so his home becomes neglected; he is interested about rat-hunts, knows the odds on or against the dog's chance to dispatch his rats in the time allotted, loses much time and customers, his employers grumbling that the work is so slowly executed, and so custom or work falls off. The bird-lover, on the other hand, is generally a more domestic, and, perhaps consequently, a more prosperous and contented man. It is curious to mark the refining qualities of particular trades. I do not remember seeing a bull-dog in the possession of any of the Spitalfields silk-weavers: with them all was flowers and birds. The same I observed with the tailors and other kindred occupations. With slaughterers, however, and drovers, and Billingsgatemen, and coachmen, and cabmen, whose callings naturally tend to blunt the sympathy with suffering, the gentler tastes are comparatively unknown. The dogs are almost all of the "varmint" kind, kept either for rat-killing, fighting, or else for their ugliness. For "pet" or "fancy" dogs they have no feeling, and in singing birds they find little or no delight.

Of the Bird-Catchers who are Street-Sellers.

The street-sellers of birds are called by themselves "hawkers," and sometimes "bird hawkers."

Among the bird-catchers I did not hear of any very prominent characters at present, three of the best known and most prominent having died within these ten months. I found among all I saw the vagrant characteristics I have mentioned, and often united with a quietness of speech and manner which might surprise those who do not know that any pursuit which entails frequent silence, watchfulness, and solitude, forms such manners. Perhaps the man most talked of by his fellow-labourers, was Old Gilham, who died lately. Gilham was his real name, for among the bird-catchers there is not that prevalence of nicknames which I found among the costermongers and patterers. One reason no doubt is, that these bird-folk do not meet regularly in the markets. It is rarely, however, that they know each other's surnames, Old Gilham being an exception. It is Old Tom, or Young Mick, or Jack, or Dick, among them. I heard of no John or Richard.

For 60 years, almost without intermission, Old Gilham caught birds. I am assured that to state that his "catch" during this long period averaged 100 a week, hens included, is within the mark, for he was a most indefatigable man; even at that computation, however, he would have been the captor, in his lifetime, of three hundred and twelve

thousand birds! A bird-catcher who used sometimes to start in the morning with Old Gilham, and walk with him until their roads diverged, told me that of late years the old man's talk was a good deal of where he had captured his birds in the old times: 'Why, Ned,' he would say to me, proceeded his companion, 'I've catched goldfinches in lots at Chalk Farm, and all where there's that railway smoke and noise just by the hill (Primrose Hill). I can't think where they'll drive all the birds to by and bye. I dare say the first time the birds saw a railway with its smoke, and noise to frighten them, and all the fire too, they just thought it was the devil was come.' He wasn't a fool, wasn't old Gilham, sir. 'Why,' he'd go on for to say, 'I've laid many a day at Ball's Pond there, where it's nothing but a lot of houses now, and catched hundreds of birds. And I've catched them where there's all them grand squares Pimlico way, and in Britannia Fields, and at White Condic. What with all these buildings, and them barbers, I don't know what the bird-trade'll come to. It's hard for a poor man to have to gó to Finchley for birds that he could have catched at Holloway once, but people never thinks of that. When I were young I could make three times as much as I do now. I've got a pound for a good sound chaffinch as I brought up myself.' Ah, poor old Gilham, sir; I wish you could have seen him, he'd have told you of some queer changes in his time."

A shopkeeper informed me that a bird-catcher had talked to him of even "queerer" changes. This man died eight or ten years ago at an advanced age, but beyond the fact of his offering birds occasionally at my informant's shop, where he was known merely as "the old man," he could tell me nothing of the ancient bird-catcher, except that he was very fond of a talk, and used to tell how he had catched birds between fifty and sixty years, and had often, when a lad, catched them where many a dock in London now stands. "Where there's many a big ship now in deep water, I've catched flocks of birds. I never catched birds to be sure at them docks," he would add, "as was dug out of the houses. Why, master, you'll remember their pulling down St. Katherine's Church, and all them rummy streets the t'other side of the Tower, for a dock." As I find that the first dock constructed on the north side of the Thames, the West India dock, was not commenced until the year 1800, there seems no reason to discredit the bird-catcher's statement. Among other classes of street-sellers I have had to remark the little observation they extended to the changes all around, such as the extension of street-traffic to miles and miles of suburbs, unknown till recently. Two thousand miles of houses have been built in London within the last 20 years. But with the bird-catchers this want of observance is not so marked. Of necessity they must notice the changes which have added to the fatigues and difficulties of their calling, by compelling them, literally, to "go further a-field."

A young man, rather tall, and evidently active, but very thin, gave me the following account. His manners were quiet and his voice low. His dress could not so well be called mean as hard worn, with the unmistakable look of much of the attire of his class, that it was not made for the wearer; his surtout, for instance, which was fastened in front by two buttons, reached down to his ancles, and could have inclosed a bigger man. He resided in St. Luke's, in which parish there are more bird-catchers living than in any other. The furniture of his room was very simple. A heavy old sofa, in the well of which was a bed, a table, two chairs, a fender, a small closet containing a few pots and tins, and some twenty empty bird-cages of different sizes hung against the walls. In a sort of wooden loft, which had originally been constructed, he believed, for the breeding of fancy-pigeons, and which was erected on the roof, were about a dozen or two of cages, some old and broken, and in them a few live goldfinches, which hopped about very merrily. They were all this year's birds, and my informant, who had "a little connection of his own," was rearing them in hopes they would turn out good specs, quite "birds beyond the run of the streets." The place and the cages, each bird having its own little cage, were very clean, but at the time of my visit the loft was exceedingly hot, as the day was one of the sultriest. Lest this heat should prove too great for the finches, the timbers on all sides were well wetted and re-wetted at intervals, for about an hour at noon, at which time only was the sun full on the loft.

"I shall soon have more birds, sir," he said, "but you see I only put aside here such as are the very best of the take; all cocks, of course. O, I've been in the trade all my life; I've had a turn at other things, certainly, but this life suits me best, I think, because I have my health best in it. My father—he's been dead a goodish bit—was a bird-catcher as well, and he used to take me out with him as soon as I was strong enough; when I was about ten, I suppose. I don't remember my mother. Father was brought up to brick-making. I believe that most of the bird-catchers that have been trades, and that's not half a quarter perhaps, were brick-makers, or something that way. Well, I don't know the reason. The brick-making was, in my father's young days, carried on more in the country, and the bird-catchers used to fall in with the brick-makers, and so perhaps that led to it. I've heard my father tell of an old soldier that had been discharged with a pension being the luckiest bird-catcher he knowed. The soldier was a catcher before he first listed, and he listed drunk. I once—yes, sir, I dare say that's fifteen year back, for I was quite a lad—walked with my father and captain" (the pensioner's sobriquet) "till they parted for work, and I remember very well I heard him tell how, when on march in Portingal—I think that's what he called it, but it's in foreign parts—he saw flocks of birds; he wished he could be after catching them, for he was well tired of sogering. I was sent to school twice or thrice, and can read a little and write a little; and I should like reading better if I could manage it better. I read a penny number,

or the 'police' in a newspaper, now and then, but very seldom. But on a fine day I hated being at school. I wanted to be at work, to make something at bird-catching. If a boy can make money, why shouldn't he? And if I'd had a net, or cage, and a mule of my own, then, I thought, I could make money." [I may observe that the mule longed for by my informant was a "cross" between two birds, and was wanted for the decoy. Some bird-catchers contend that a mule makes the best call-bird of any; others that the natural note of a linnet, for instance, was more alluring than the song of a mule between a linnet and a goldfinch. One birdman told me that the excellence of a mule was, that it had been bred and taught by its master, had never been at large, and was "better to manage;" it was bolder, too, in a cage, and its notes were often loud and ringing, and might be heard to a considerable distance.]

"I couldn't stick to school, sir," my informant continued, "and I don't know why, lest it be that one man's best suited for one business, and another for another. That may be seen every day. I was sent on trial to a shoemaker, and after that to a ropemaker, for father didn't seem to like my growing up and being a bird-catcher, like he was. But I never felt well, and knew I should never be any great hand at them trades, and so when my poor father went off rather sudden, I took to the catching at once and had all his traps. Perhaps, but I can't say to a niceness, that was eleven year back. Do I like the business, do you say, sir? Well, I'm forced to like it, for I've no other to live by." [The reader will have remarked how this man attributed the course he pursued, evidently from natural inclination, to its being the best and most healthful means of subsistence in his power.] "Last Monday, for my dealers like birds on a Monday or Tuesday best, and then they've the week before them,—I went to catch in the fields this side of Barnet, and started before two in the morning, when it was neither light nor dark. You must get to your place before daylight to be ready for the first flight, and have time to lay your net properly. When I'd done that, I lay down and smoked. No, smoke don't scare the birds; I think they're rather drawn to notice anything new, if all's quite quiet. Well, the first pull I had about 90 birds, nearly all linnets. There was, as well as I can remember, three hedge-sparrows among them, and two larks, and one or two other birds. Yes, there's always a terrible flutter and row when you make a catch, and often regular fights in the net. I then sorted my birds, and let the hens go, for I didn't want to be bothered with them. I might let such a thing as 35 hens go out of rather more than an 80 take, for I've always found, in catching young broods, that I've drawn more cocks than hens. How do I know the difference when the birds are so young? As easy as light from dark. You must lift up the wing, quite tender, and you'll find that a cock linnet has black, or nearly black, feathers on his shoulder, where the hens are a deal lighter. Then the cock has a broader and whiter stripe on the wing than the hen has. It's quite easy to distinguish, quite. A cock goldfinch is straighter and more larger in general than a hen, and has a broader white on his wing, as the cock linnet has; he's black round the beak and the eye too, and a hen's greenish thereabouts. There's some gray-pates (young birds) would deceive any one until he opens their wings. Well, I went on, sir, until about one o'clock, or a little after, as well as I could tell from the sun, and then came away with about 100 singing birds. I sold them in the lump to three shopkeepers at 2*s.* 2*d.* and 2*s.* 6*d.* the doxen. That was a good day, sir; a very lucky day. I got about 17*s.*, the best I ever did but once, when I made 19*s.* in a day.

"Yes, it's hard work is mine, because there's such a long walking home when you've done catching. O, when you're at work it's not work but almost a pleasure. I've laid for hours though, without a catch. I smoke to pass the time when I'm watching; sometimes I read a bit if I've had anything to take with me to read; then at other times I thinks. If you don't get a catch for hours, it's only like an angler without a nibble. O, I don't know what I think about; about nothing, perhaps. Yes, I've had a friend or two go out catching with me just for the amusement. They must lie about and wait as I do. We have a little talk of course: well, perhaps about sporting; no, not horse-racing, I care nothing for that, but it's hardly business taking any one with you. I supply the dealers and hawk as well. Perhaps I make 12*s.* a week the year through. Some weeks I've made between 3*l.* and 4*l.*, and in winter, when there's rain every day, perhaps I haven't cleared a penny in a fortnight. That's the worst of it. But I make more than others because I have a connection and raise good birds.

"Sometimes I'm stopped by the farmers when I'm at work, but not often, though there is some of 'em very obstinate. It's no use, for if a catcher's net has to be taken from one part of a farm, after he's had the trouble of laying it, why it must be laid in another part. Some country people likes to have their birds catched."

My informant supplied shopkeepers and hawked his birds in the streets and to the houses. He had a connection, he said, and could generally get through them, but he had sometimes put a bird or two in a fancy house. These are the public-houses resorted to by "the fancy," in some of which may be seen two or three dozen singing-birds for sale on commission, through the agency of the landlord or the waiter. They are the property of hawkers or dealers, and must be good birds, or they will not be admitted.

The number of birds caught, and the proportion sold in the streets, I have already stated. The number of bird-catchers, I may repeat, is about the same as that of street bird-sellers, 200.

Of the Crippled Street Bird-Seller.

From the bird-seller whose portrait will be given in the next number of this work I have received the following account. The statement previously

given was that of a catcher and street-seller, as are the great majority in the trade; the following narrative is that of one who, from his infirmities, is merely a street-*seller*.

The poor man's deformity may be best understood by describing it in his own words: "I have no ancle." His right leg is emaciated, the bone is smaller than that of his other leg (which is not deformed), and there is no ancle joint. The joints of the wrists and shoulders are also defective, though not utterly wanting, as in the ancle. In walking this poor cripple seems to advance by means of a series of jerks. He uses his deformed leg, but must tread, or rather support his body, on the ball of the misformed foot, while he advances his sound leg; then, with a twist of his body, after he has advanced and stands upon his undeformed leg and foot, he throws forward the crippled part of his frame by the jerk I have spoken of. His arms are usually pressed against his ribs as he walks, and convey to a spectator the notion that he is unable to raise them from that position. This, however, is not the case; he can raise them, not as a sound man does, but with an effort and a contortion of his body to humour the effort. His speech is also defective, his words being brought out, as it were, by jerks; he has to prepare himself, and to throw up his chin, in order to converse, and then he speaks with difficulty. His face is sun-burnt and healthy-looking. His dress was a fustian coat with full skirts, cloth trowsers somewhat patched, and a clean coarse shirt. His right shoe was suited to his deformity, and was strapped with a sort of leather belt round the lower part of the leg.

A considerable number of book-stall keepers, as well as costermongers, swag-barrowmen, ginger-beer and lemonade sellers, orange-women, sweet-stuff vendors, root-sellers, and others, have established their pitches—some of them having stalls with a cover, like a roof—from Whitechapel workhouse to the Mile End turnpike-gate; near the gate they are congregated most thickly, and there they are mixed with persons seated on the forms belonging to adjacent innkeepers, which are placed there to allow any one to have his beer and tobacco in the open air. Among these street-sellers and beer-drinkers is seated the crippled bird-seller, generally motionless.

His home is near the Jews' burial-ground, and in one of the many "places" which by a misnomer, occasioned by the change in the character and appearance of what *were* the outskirts, are still called "Pleasant." On seeking him here, I had some little difficulty in finding the house, and asking a string of men, who were chopping fire-wood in an adjoining court, for the man I wanted, mentioning his name, no one knew anything about him; though when I spoke of his calling, "O," they said, "you want Old Billy." I then found Billy at his accustomed pitch, with a very small stock of birds in two large cages on the ground beside him, and he accompanied me to his residence. The room in which we sat had a pile of fire-wood opposite the door; the iron of the upper part of the door-latch being wanting was replaced by a piece of wood—and on the pile sat a tame jackdaw, with the inquisitive and askant look peculiar to the bird. Above the pile was a large cage, containing a jay—a bird seldom sold in the streets now—and a thrush, in different compartments. A table, three chairs, and a hamper or two used in the wood-cutting, completed the furniture. Outside the house were cages containing larks, goldfinches, and a very fine starling, of whose promising abilities the bird-seller's sister had so favourable an opinion that she intended to try and teach it to talk, although that was very seldom done now.

The following is the statement I obtained from the poor fellow. The man's sister was present at his desire, as he was afraid I could not understand him, owing to the indistinctness of his speech; but that was easy enough, after awhile, with a little patience and attention.

"I was born a cripple, sir," he said, "and I shall die one. I was born at Lewisham, but I don't remember living in any place but London. I remember being at Stroud though, where my father had taken me, and bathed me often in the sea himself, thinking it might do me good. I 've heard him say, too, that when I was very young he took me to almost every hospital in London, but it was of no use. My father and mother were as kind to me and as good parents as could be. He 's been dead nineteen years, and my mother died before him. Father was very poor, almost as poor as I am. He worked in a brick-field, but work weren't regular. I couldn't walk at all until I was six years old, and I was between nine and ten before I could get up and down stairs by myself. I used to slide down before, as well as I could, and had to be carried up. When I could get about and went among other boys, I was in great distress, I was teased so. Life was a burthen to me, as I 've read something about. They used to taunt me by offering to jump me" (invite him to a jumping match), "and to say, I 'll run you a race on one leg. They were bad to me then, and they are now. I 've sometimes sat down and cried, but not often. No, sir, I can't say that I ever wished I was dead. I hardly know why I cried. I suppose because I was miserable. I learned to read at a Sunday school, where I went a long time. I like reading. I read the Bible and tracts, nothing else; never a newspaper. It don't come in my way, and if it did I shouldn't look at it, for I can't read over well and it 's nothing to me who 's king or who 's queen. It can never have anything to do with me. It don't take my attention. There 'll be no change for me in this world. When I was thirteen my father put me into the bird trade. He knew a good many catchers. I 've been bird-selling in the streets for six-and-twenty years and more, for I was 39 the 24th of last January. Father didn't know what better he could put me to, as I hadn't the right use of my hands or feet, and at first I did very well. I liked the birds and do still. I used to think at first that they was like me; they was prisoners, and I was a cripple. At first I sold birds in Poplar, and

Limehouse, and Blackwall, and was a help to my parents, for I cleared 9*s.* or 10*s.* every week. But now, oh dear, I don't know where all the money 's gone to. I think there 's very little left in the country. I 've sold larks, linnets, and goldfinches, to captains of ships to take to the West Indies. I 've sold them, too, to go to Port Philip. O, and almost all those foreign parts. They bring foreign birds here, and take back London birds. I don't know anything about foreign birds. I know there 's men dressed as sailors going about selling them; they 're duffers—I mean the men. There 's a neighbour of mine, that 's very likely never been 20 miles out of London, and when he hawks birds he always dresses like a countryman, and duffs that way.

"When my father died," continued the man, "I was completely upset; everything in the world was upset. I was forced to go into the workhouse, and I was there between four and five months. O, I hated it. I'd rather live on a penny loaf a day than be in it again. I 've never been near the parish since, though I 've often had nothing to eat many a day. I'd rather be lamer than I am, and be oftener called silly Billy—and that sometimes makes me dreadful wild—than be in the workhouse. It was starvation, but then I know I 'm a hearty eater, very hearty. Just now I know I could eat a shilling plate of meat, but for all that I very seldom taste meat. I live on bread and butter and tea, sometimes bread without butter. When I have it I eat a quartern loaf at three meals. It depends upon how I 'm off. My health 's good. I never feel in any pain now; I did when I first got to walk, in great pain. Beer I often don't taste once in two or three months, and this very hot weather one can't help longing for a drop, when you see people drinking it all sides of you, but they have the use of their limbs." [Here two little girls and a boy rushed into the room, for they had but to open the door from the outside, and, evidently to tease the poor fellow, loudly demanded "a ha'penny bird." When the sister had driven them away, my informant continued.] "I 'm still greatly teased, sir, with children; yes, and with men too, both when they 're drunk and sober. I think grown persons are the worst. They swear and use bad language to me. I 'm sure I don 't know why. I know no name they call me by in particular when I 'm teased, if it isn't 'Old Hypocrite.' I can 't say why they call me 'hypocrite.' I suppose because they know no better. Yes, I think I 'm religious, rather. I would be more so, if I had clothes. I get to chapel sometimes." [A resident near the bird-seller's pitch, with whom I had some conversation, told me of "Billy" being sometimes teased in the way described. Some years ago, he believed it was at Limehouse, my informant heard a gentlemanly-looking man, tipsy, d—n the street bird-seller for Mr. *Hobbler*, and bid him go to the Mansion House, or to h—l. I asked the cripple about this, but he had no recollection of it; and, as he evidently did not understand the allusion to Mr. Hobbler, I was not surprised at his forgetfulness.]

"I like to sit out in the sunshine selling my birds," he said. "If it 's rainy, and I can't go out, because it would be of no use, I 'm moped to death. I stay at home and read a little; or I chop a little fire-wood, but you may be very sure, sir, its little I can do that way. I never associate with the neighbours. I never had any pleasure, such as going to a fair, or like that. I don't remember having ever spent a penny in a place of amusement in my life. Yes, I 've often sat all day in the sun, and of course a deal of thoughts goes through my head. I think, shall I be able to afford myself plenty of bread when I get home? And I think of the next world sometimes, and feel quite sure, quite, that I shan't be a cripple there. Yes, that 's a comfort, for this world will never be any good to me. I feel that I shall be a poor starving cripple, till I end, perhaps, in the workhouse. Other poor men can get married, but not such as me. But I never was in love in my life, never." [Among the vagrants and beggars, I may observe, there are men more terribly deformed than the bird-seller, who are married, or living in concubinage.] "Yes, sir," he proceeded, "I 'm quite reconciled to my lameness, quite; and have been for years. O, no, I never fret about that now; but about starving, perhaps, and the workhouse.

"Before father died, the parish allowed us 1*s.* 6*d.* and a quartern loaf a week; but after he was buried, they 'd allow me nothing; they 'd only admit me into the house. I hadn't a penny allowed to me when I discharged myself and came out. I hardly know how ever I *did* manage to get a start again with the birds. I knew a good many catchers, and they trusted me. Yes, they was all poor men. I did pretty tidy by bits, but only when it was fine weather, until these five years or so, when things got terrible bad. Particularly just the two last years with me. Do you think times are likely to mend, sir, with poor people? If working-men had only money, they 'd buy innocent things like birds to amuse them at home; but if they can't get the money, as I 've heard them say when they 've been pricing my stock, why in course they can't spend it."

"Yes, indeed," said the sister, "trade 's very bad. Where my husband and I once earned 18*s.* at the fire-wood, and then 15*s.*, we can't now earn 12*s.* the two of us, slave as hard as we will. I always dread the winter a-coming. Though there may be more fire-wood wanted, there 's greater expenses, and it 's a terrible time for such as us."

"I dream sometimes, sir," the cripple resumed in answer to my question, "but not often. I often have more than once dreamed I was starving and dying of hunger. I remember that, for I woke in a tremble. But most dreams is soon forgot. I 've never seemed to myself to be a cripple in my dreams. Well, I can't explain how, but I feel as if my limbs was all free like—so beautiful. I dream most about starving I think, than about anything else. Perhaps that 's when I have to go to sleep hungry. I sleep very well, though, take it altogether. If I had only plenty to live upon there would be

nobody happier. I'm happy enough when times is middling with me, only one feels it won't last. I like a joke as well as anybody when times is good; but that's been very seldom lately.

"It's all small birds I sell in the street now, except at a very odd time. That jackdaw there, sir, he's a very fine bird. I've tamed him myself, and he's as tame as a dog. My sister's a very good hand among birds, and helps me. She once taught a linnet to say 'Joey' as plain as you can speak it yourself, sir. I buy birds of different catchers, but haven't money to buy the better kinds, as I have to sell at *3d.*, and *4d.*, and *6d.* mostly. If I had a pound to lay out in a few nice cages and good birds, I think I could do middling, this fine weather particler, for I'm a very good judge of birds, and know how to manage them as well as anybody. Then birds is rather dearer to buy than they was when I was first in the trade. The catchers have to go further, and I'm afeared the birds is getting scarcer, and so there's more time taken up. I buy of several catchers. The last whole day that I was at my pitch I sold nine birds, and took about *3s.* If I could buy birds ever so cheap, there's always such losses by their dying. I've had three parts of my young linnets die, do what I might, but not often so many. Then if they die all the food they've had is lost. There goes all for nothing the rape and flax-seed for your linnets, canary and flax for your goldfinches, chopped eggs for your nightingales, and German paste for your sky-larks. I've made my own German paste when I've wanted a sufficient quantity. It's made of pea-meal, treacle, hog's-lard, and moss-seed. I sell more goldfinches than anything else. I used to sell a good many sparrows for shooting, but I haven't done anything that way these eight or nine years. It's a fash'nable sport still, I hear. I've reared nightingales that sung beautiful, and have sold them at *4s.* a piece, which was very cheap. They often die when the time for their departure comes. A shopkeeper as supplied such as I've sold would have charged *1l.* a piece for them. One of my favouritest birds is redpoles, but they're only sold in the season. I think it's one of the most knowingest little birds that is; more knowing than the goldfinch, in my opinion.

"My customers are all working people, all of them. I sell to nobody else; I make *4s.* or *5s.*; I call *5s.* a good week at this time of year, when the weather suits. I lodge with a married sister; her husband's a wood-chopper, and I pay *1s. 6d.* a week, which is cheap, for I've no sticks of my own. If I earn *4s.* there's only *2s. 6d.* left to live on the week through. In winter, when I can make next to nothing, and must keep my birds, it is terrible—oh yes, sir, if you believe me, terrible!"

Of the Tricks of the Bird-Duffers.

The tricks practised by the bird-sellers are frequent and systematic. The other day a man connected with the bird-trade had to visit Holloway, the City, and Bermondsey. In Holloway he saw six men, some of whom he recognised as regular bird-catchers and street-sellers, offering sham birds; in the City he found twelve; and in Bermondsey six, as well as he could depend upon his memory. These, he thought, did not constitute more than a half of the number now at work as bird-"duffers," not including the sellers of foreign birds. In the summer, indeed, the duffers are most numerous, for birds are cheapest then, and these tricksters, to economise time, I presume, buy of other catchers any cheap hens suited to their purpose. Some of them, I am told, never catch their birds at all, but purchase them.

The greenfinch is the bird on which these men's art is most commonly practised, its light-coloured plumage suiting it to their purposes. I have heard these people styled "bird-swindlers," but by street-traders I heard them called "bird-duffers," yet there appears to be no very distinctive name for them. They are nearly all men, as is the case in the bird trade generally, although the wives may occasionally assist in the street-sale. The means of deception, as regards the greenfinch especially, are from paint. One aim of these artists is to make their finch resemble some curious foreign bird, "not often to be sold so cheap, or to be sold at all in this country." They study the birds in the window of the naturalists' shops for this purpose. Sometimes they declare these painted birds are young Java sparrows (at one time "a fashionable bird"), or St. Helena birds, or French or Italian finches. They sometimes get *5s.* for such a "duffing bird;" one man has been known to boast that he once got a sovereign. I am told, however, by a bird-catcher who had himself supplied birds to these men for duffing, that they complained of the trade growing worse and worse.

It is usually a hen which is painted, for the hen is by far the cheapest purchase, and while the poor thing is being offered for sale by the duffers, she has an unlimited supply of hemp-seed, without other food, and hemp-seed beyond a proper quantity, is a very strong stimulus. This makes the hen look brisk and bold, but if newly caught, as is usually the case, she will perhaps be found dead next morning. The duffer will object to his bird being handled on account of its timidity; "but it is timid only with strangers!" When you've had him a week, ma'am," such a bird-seller will say, "you'll find him as lovesome and tame as can be." One jealous lady, when asked *5s.* for a "very fine Italian finch, an excellent singer," refused to buy, but offered a deposit of *2s. 6d.*, if the man would leave his bird and cage, for the trial of the bird's song, for two or three days. The duffer agreed; and was bold enough to call on the third day to hear the result. The bird was dead, and after murmuring a little at the lady's mismanagement, and at the loss he had been subjected to, the man brought away his cage. He boasted of this to a dealer's assistant who mentioned it to me, and expressed his conviction that it was true enough. The paints used for the transformation of native birds into foreign are bought at the colour-shops, and applied with camel-hair brushes in the usual way.

When canaries are "a bad colour," or have

grown a paler yellow from age, they are re-dyed, by the application of a colour sold at the colour-shops, and known as "the Queen's yellow." Blackbirds are dyed a deeper black, the "grit" off a frying-pan being used for the purpose. The same thing is done to heighten the gloss and blackness of a jackdaw, I was told, by a man who acknowledged he had duffed a little; "people liked a gay bright colour." In the same way the tints of the goldfinch are heightened by the application of paint. It is common enough, moreover, for a man to paint the beaks and legs of the birds. It is chiefly the smaller birds which are thus made the means of cheating.

Almost all the "duffing birds" are hawked. If a young hen be passed off for a good singing bird, without being painted, as a cock in his second singing year, she is "brisked up" with hemp-seed, is half tipsy in fact, and so passed off deceitfully. As it is very rarely that even the male birds will sing in the streets, this is often a successful ruse, the bird appearing so lively.

A dealer calculated for me, from his own knowledge, that 2000 small birds were "duffed" yearly, at an average of from 2*s.* 6*d.* to 3*s.* each.

As yet I have only spoken of the "duffing" of English birds, but similar tricks are practised with the foreign birds.

In parrot-selling there is a good deal of "duffing." The birds are "painted up," as I have described in the case of the greenfinches, &c. Varnish is also used to render the colours brighter; the legs and beak are frequently varnished. Sometimes a spot of red is introduced, for as one of these duffers observed to a dealer in English birds, "the more outlandish you make them look, the better's the chance to sell." Sometimes there is little injury done by this paint and varnish, which disappear gradually when the parrot is in the cage of a purchaser; but in some instances when the bird picks himself where he has been painted, he dies from the deleterious compound. Of this mortality, however, there is nothing approaching that among the duffed small birds.

Occasionally the duffers carry really fine cockatoos, &c., and if they can obtain admittance into a lady's house, to display the beauty of the bird, they will pretend to be in possession of smuggled silk, &c., made of course for duffing purposes. The bird-duffers are usually dressed as seamen, and sometimes pretend they must sell the bird before the ship sails, for a parting spree, or to get the poor thing a good home. This trade, however, has from all that I can learn, and in the words of an informant, "seen its best days." There are now sometimes six men thus engaged; sometimes none: and when one of these men is "hard up," he finds it difficult to start again in a business for which a capital of about 1*l.* is necessary, as a cage is wanted generally. The duffers buy the very lowest priced birds, and have been known to get 2*l.* 10*s.* for what cost but 8*s.*, but that is a very rare occurrence, and the men are very poor, and perhaps more dissipated than the generality of street-sellers. Parrot duffing, moreover, is seldom carried on regularly by any one, for he will often duff cigars and other things in preference, or perhaps vend really smuggled and good cigars or tobacco. Perhaps 150 parrots, paroquets, or cockatoos, are sold in this way annually, at from 15*s.* to 1*l.* 10*s.* each, but hardly averaging 1*l.*, as the duffer will sell, or raffle, the bird for a small sum if he cannot dispose of it otherwise.

Of the Street-Sellers of Foreign Birds.

This trade is curious, but far from extensive as regards street-sale. There is, moreover, contrary to what might be expected, a good deal of "duffing" about it. The "duffer" in English birds disguises them so that they shall look like foreigners; the duffer in what are unquestionably foreign birds disguises them that they may look *more* foreign—more Indian than in the Indies.

The word "Duffer," I may mention, appears to be connected with the German *Durffen*, to want, to be needy, and so to mean literally a needy or indigent man, even as the word *Pedlar* has the same origin—being derived from the German *Bettler*, and the Dutch *Bedelaar*—a beggar. The verb *Durffen* means also to dare, to be so bold as to do; hence, to *Durff*, or *Duff*, would signify to resort to any impudent trick.

The supply of parrots, paroquets, cockatoos, Java sparrows, or St. Helena birds, is not in the regular way of consignment from a merchant abroad to one in London. The commanders and mates of merchant vessels bring over large quantities; and often enough the seamen are allowed to bring parrots or cockatoos in the homeward-bound ship from the Indies or the African coast, or from other tropical countries, either to beguile the tedium of the voyage, for presents to their friends, or, as in some cases, for sale on their reaching an English port. More, I am assured, although statistics are hardly possible on such a subject, are brought to London, and perhaps by one-third, than to all the other ports of Great Britain collectively. Even on board the vessels of the royal navy, the importation of parrots used to be allowed as a sort of boon to the seamen. I was told by an old naval officer that once, after a long detention on the west coast of Africa, his ship was ordered home, and, as an acknowledgment of the good behaviour of his men, he permitted them to bring parrots, cockatoos, or any foreign birds, home with them, not limiting the number, but of course under the inspection of the petty officers, that there might be no violation of the cleanliness which always distinguishes a vessel of war. Along the African coast, to the southward of Sierra Leone, the men were not allowed to land, both on account of the unhealthiness of the shores, and of the surf, which rendered landing highly dangerous, a danger, however, which the seamen would not have scrupled to brave, and recklessly enough, for any impulse of the minute. As if by instinct, however, the natives seemed to know what was wanted, for they came off from the shores in their light canoes, which danced like feathers on the surf, and brought boat-loads of birds; these the seamen bought of them, or possessed themselves of in the way of barter.

Original from HARVARD UNIVERSITY

Before the ship took her final departure, however, she was reported as utterly uninhabitable below, from the incessant din and clamour: "We might as well have a pack of women aboard, sir," was the ungallant remark of one of the petty officers to his commander. Orders were then given that the parrots, &c., should be "thinned," so that there might not be such an unceasing noise. This was accordingly done. How many were set at liberty and made for the shore—for the seamen in this instance did not kill them for their skins, as is not unfrequently the case—the commander did not know. He could but conjecture; and he conjectured that something like a thousand were released; and even after that, and after the mortality which takes place among these birds in the course of a long voyage, a very great number were brought to Plymouth. Of these, again, a great number were sent or conveyed under the care of the sailors to London, when the ship was paid off. The same officer endeavoured on this voyage to bring home some very large pine-apples, which flavoured, and most deliciously, parts of the ship when she had been a long time at sea; but every one of them rotted, and had to be thrown overboard. He fell into the error, Captain—— said, of having the finest fruit selected for the experiment; an error which the Bahama merchants had avoided, and consequently they succeeded where he failed. How the sailors fed the parrots, my informant could hardly guess, but they brought a number of very fine birds to England, some of them with well-cultivated powers of speech.

This, as I shall show, is one of the ways by which the London supply of parrots, &c., is obtained; but the permission, as to the importation of these brightly-feathered birds, is, I understand, rarely allowed at present to the seamen in the royal navy. The far greater supply, indeed more than 90 per cent. of the whole of the birds imported, is from the merchant-service. I have already stated, on the very best authority, the motives which induce merchant-seamen to bring over parrots and cockatoos. That to bring them over is an inducement to some to engage in an African voyage is shown by the following statement, which was made to me, in the course of a long inquiry, published in my letters in the *Morning Chronicle*, concerning the condition of the merchant-seamen.

"I would never go to that African coast again, only I make a pound or two in birds. We buy parrots, gray parrots chiefly, of the natives, who come aboard in their canoes. We sometimes pay 6*s.* or 7*s.*, in Africa, for a fine bird. I have known 200 parrots on board; they make a precious noise; but half the birds die before they get to England. Some captains won't allow parrots."

When the seamen have settled themselves after landing in England, they perhaps find that there is no room in their boarding-houses for their parrots; these birds are not admitted into the Sailors' Home; the seamen's friends are stocked with the birds, and look upon another parrot as but another intruder, an unwelcome pensioner. There remains but one course—to sell the birds, and they are generally sold to a highly respectable man, Mr. M. Samuel, of Upper East Smithfield; and it is from him, though not always directly, that the shopkeepers and street-sellers derive their stock-in-trade. There is also a further motive for the disposal of parrots, paroquets, and cockatoos to a merchant. The seafaring owner of those really magnificent birds, perhaps, squanders his money, perhaps he gets "skinned" (stripped of his clothes and money from being hocussed, or tempted to helpless drunkenness), or he chooses to sell them, and he or his boarding-house keeper takes the birds to Mr. Samuel, and sells them for what he can get; but I heard from three very intelligent seamen whom I met with in the course of my inquiry, and by mere chance, that Mr. Samuel's price was fair and his money sure, considering everything, for there is usually a qualification to every praise. It is certainly surprising, under these circumstances, that such numbers of these birds should thus be disposed of.

Parrots are as gladly, or more gladly, got rid of, in any manner, in different regions in the continents of Asia and America, than with us are even rats from a granary. Dr. Stanley, after speaking of the beauty of a flight of parrots, says:—"The husbandman who sees them hastening through the air, with loud and impatient screams, looks upon them with dismay and detestation, knowing that the produce of his labour and industry is in jeopardy, when visited by such a voracious multitude of pilferers, who, like the locusts of Egypt, desolate whole tracts of country by their unsparing ravages." A contrast with their harmlessness, in a gilded cage in the houses of the wealthy, with us! The destructiveness of these birds, is, then, one reason why seamen can obtain them so readily and cheaply, for the natives take pleasure in catching them; while as to plentifulness, the tropical regions teem with bird, as with insect and reptile, life.

Of parrots, paroquets, and cockatoos, there are 3000 imported to London in the way I have described, and in about equal proportions. They are sold, wholesale, from 5*s.* to 30*s.* each.

There are now only three men selling these brilliant birds regularly in the streets, and in the fair way of trade; but there are sometimes as many as 18 so engaged. The price given by a hawker for a cockatoo, &c., is 8*s.* or 10*s.*, and they are retailed at from 15*s.* to 30*s.*, or more, "if it can be got." The purchasers are the wealthier classes who can afford to indulge their tastes. Of late years, however, I am told, a parrot or a cockatoo seems to be considered indispensable to an inn (not a gin-palace), and the innkeepers have been among the best customers of the street parrot-sellers. In the neighbourhood of the docks, and indeed along the whole river side below London-bridge, it is almost impossible for a street-seller to dispose of a parrot to an innkeeper, or indeed to any one, as they are supplied by the seamen. A parrot which has been taught to talk is worth from 4*l.* to 10*l.*, according to its proficiency in speech. About 500 of these birds are sold yearly by the

street-hawkers, at an outlay to the public of from 500*l.* to 600*l.*

Java sparrows, from the East Indies, and from the Islands of the Archipelago, are brought to London, but considerable quantities die during the voyage and in this country; for, though hardy enough, not more than one in three survives being "taken off the paddy seed." About 10,000, however, are sold annually, in London, at 1*s.* 6*d.* each, but a very small proportion by street-hawking, as the Java sparrows are chiefly in demand for the aviaries of the rich in town and country. In some years not above 100 may be sold in the streets; in others, as many as 500.

In St. Helena birds, known also as wax-bills and red-backs, there is a trade to the same extent, both as regards number and price; but the street-sale is perhaps 10 per cent. lower.

Of the Street-Sellers of Birds'-Nests.

The young gypsy-looking lad, who gave me the following account of the sale of birds'-nests in the streets, was peculiarly picturesque in his appearance. He wore a dirty-looking smock-frock with large pockets at the side; he had no shirt; and his long black hair hung in curls about him, contrasting strongly with his bare white neck and chest. The broad-brimmed brown Italian-looking hat, broken in and ragged at the top, threw a dark half-mask-like shadow over the upper part of his face. His feet were bare and black with mud: he carried in one hand his basket of nests, dotted with their many-coloured eggs; in the other he held a live snake, that writhed and twisted as its metallic-looking skin glistened in the sun; now over, and now round, the thick knotty bough of a tree that he used for a stick. The portrait of the youth is here given. I have never seen so picturesque a specimen of the English nomade. He said, in answer to my inquiries:—

"I am a seller of birds'-nesties, snakes, slow-worms, adders, 'effets'—lizards is their common name—hedgehogs (for killing black beetles); frogs (for the French—they eats 'em); snails (for birds); that's all I sell in the summer-time. In the winter I get all kinds of wild flowers and roots, primroses, 'butter-cups' and daisies and snow-drops, and 'backing' off of trees; ('backing' it's called, because it's used to put at the back of nosegays, it's got off the yew trees, and is the green yew fern. I gather bulrushes in the summer-time, besides what I told you; some buys bulrushes for stuffing; they're the fairy rushes the small ones, and the big ones is bulrushes. The small ones is used for 'stuffing,' that is, for showing off the birds as is stuffed, and make 'em seem as if they was alive in their cases, and among the rushes; I sell them to the bird-stuffers at 1*d.* a dozen. The big rushes the boys buys to play with and beat one another—on a Sunday evening mostly. The birds'-nesties I get from 1*d.* to 3*d.* a-piece for. I never have young birds, I can never sell em; you see the young things generally dies of the cramp before you can get rid of them. I sell the birds'-nesties in the streets; the three-penny ones has six eggs, a half-penny a egg. The linnets has mostly four eggs, they're 4*d.* the nest; they're for putting under canaries, and being hatched by them. The thrushes has from four to five—five is the most; they're 2*d.*; they're merely for cur'osity—glass cases or anything like that. Moor-hens, wot build on the moors, has from eight to nine eggs, and is 1*d.* a-piece; they're for hatching underneath a bantam-fowl, the same as partridges. Chaffinches has five eggs; they're 3*d.*, and is for cur'osity. Hedge-sparrows, five eggs; they're the same price as the other, and is for cur'osity. The Bottletit—the nest and the bough are always put in glass cases; it's a long hanging nest, like a bottle, with a hole about as big as a sixpence, and there's mostly as many as eighteen eggs; they've been known to lay thirty-three. To the house-sparrow there is five eggs; they're 1*d.* The yellow-hammers, with five eggs, is 2*d.* The water-wagtails, with four eggs, 2*d.* Black-birds, with five eggs, 2*d.* The golden-crest wren, with ten eggs—it has a very handsome nest—is 6*d.* Bulfinches, four eggs, 1*s.*; they're for hatching, and the bulfinch is a very dear bird. Crows, four eggs, 4*d.* Magpies, four eggs, 4*d.* Starlings, five eggs, 3*d.* The egg-chats, five eggs, 2*d.* Goldfinches, five eggs, 6*d.*, for hatching. Martins, five eggs, 3*d.* The swallow, four eggs, 6*d*; it's so dear because the nest is such a cur'osity, they build up again the house. The butcher-birds—hedge-murderers some calls them, for the number of birds they kills—five eggs, 3*d.* The cuckoo—they never has a nest, but lays in the hedge-sparrow's; there's only one egg (it's very rare you see the two, they has been got, but that's seldom) that is 4*d.*, the egg is such a cur'osity. The greenfinches has four or five eggs, and is 3*d.* The sparrer-hawk has four eggs, and they're 6*d.* The reed-sparrow—they builds in the reeds close where the bulrushes grow; they has four eggs, and is 2*d.* The wood-pigeon has two eggs, and they're 4*d.* The horned owl, four eggs; they're 6*d.* The wood-pecker—I never see no more nor two—they're 6*d.* the two; they're a great cur'osity, very seldom found. The kingfishers has four eggs, and is 6*d.* That's all I know of.

"I gets the eggs mostly from Witham and Chelmsford, in Essex; Chelmsford is 20 mile from Whitechapel Church, and Witham, 8 mile further. I know more about them parts than anywhere else, being used to go after moss for Mr. Butler, of the herb-shop in Covent Garden. Sometimes I go to Shirley Common and Shirley Wood, that's three miles from Croydon, and Croydon is ten from Westminster-bridge. When I'm out bird-nesting I take all the cross country roads across fields and into the woods. I begin bird-nesting in May and leave off about August, and then comes the bulrushing, and they last till Christmas; and after that comes the roots and wild flowers, which serves me up to May again. I go out bird-nesting three times a week. I go away at night, and come up on the morning of the day after. I'm away a day and two nights. I start between one and two in the morning and walk all night—for the coolness—you see the weather's so hot you can't

do it in the daytime. When I get down I go to sleep for a couple of hours. I 'skipper it'—turn in under a hedge or anywhere. I get down about nine in the morning, at Chelmsford, and about one if I go to Witham. After I 've had my sleep I start off to get my nests and things. I climb the trees, often I go up a dozen in the day, and many a time there 's nothing in the nest when I get up. I only fell once; I got on the end of the bough and slipped off. I p'isoned my foot once with the stagnant water going after the bulrushes,—there was horseleeches, and effets, and all kinds of things in the water, and they stung me, I think. I couldn't use my foot hardly for six weeks afterwards, and was obliged to have a stick to walk with. I couldn't get about at all for four days, and should have starved if it hadn't been that a young man kept me. He was a printer by trade, and almost a stranger to me, only he seed me and took pity on me. When I fell off the bough I wasn't much hurt, nothing to speak of. The house-sparrow is the worst nest of all to take; it 's no value either when it *is* got, and is the most difficult of all to get at. You has to get up a sparapet (a parapet) of a house, and either to get permission, or run the risk of going after it without. Partridges' eggs (they has no nest) they gives you six months for, if they see you selling them, because it 's game, and I haven't no licence; but while you 're hawking, that is showing 'em, they can't touch you. The owl is a very difficult nest to get, they builds so high in the trees. The bottle-tit is a hard nest to find; you may go all the year round, and, perhaps, only get one. The nest I like best to get is the chaffinch, because they 're in the hedge, and is no bother. Oh, you hasn't got the skylark down, sir; they builds on the ground, and has five eggs; I sell them for 4*d*. The robin-redbreast has five eggs, too, and is 3*d*. The ringdove has two eggs, and is 6*d*. The tit-lark—that 's five blue eggs, and very rare—I get 4*d*. for them. The jay has five eggs, and a flat nest, very wiry, indeed; it's a ground bird; that 's 1*s*.—the egg is just like a partridge egg. When I first took a kingfisher's nest, I didn't know the name of it, and I kept wondering what it was. I daresay I asked three dozen people, and none of them could tell me. At last a bird-fancier, the lame man at the Mile-end gate, told me what it was. I likes to get the nesties to sell, but I havn't no fancy for birds. Sometimes I get squirrels' nesties with the young in 'em—about four of 'em there mostly is, and they 're the only young things I take—the young birds I leaves; they 're no good to me. The four squirrels brings me from 6*s*. to 8*s*. After I takes a bird's nest, the old bird comes dancing over it, chirupping, and crying, and flying all about. When they lose their nest they wander about, and don't know where to go. Oftentimes I wouldn't take them if it wasn't for the want of the victuals, it seems such a pity to disturb 'em after they 've made their little bits of places. Bats I never take myself—I can't get over 'em. If I has an order for 'em, I buys 'em of boys.

"I mostly start off into the country on Monday and come up on Wednesday. The most nesties as ever I took is twenty-two, and I generally get about twelve or thirteen. These, if I 've an order, I sell directly, or else I may be two days, and sometimes longer, hawking them in the street. Directly I 've sold them I go off again that night, if it 's fine; though I often go in the wet, and then I borrow a tarpaulin of a man in the street where I live. If I 've a quick sale I get down and back three times in a week, but then I don't go so far as Witham, sometimes only to Rumford; that is 12 miles from Whitechapel Church. I never got an order from a bird-fancier; they gets all the eggs they want of the countrymen who comes up to market.

"It 's gentlemen I gets my orders of, and then mostly they tells me to bring 'em one nest of every kind I can get hold of, and that will often last me three months in the summer. There 's one gentleman as I sells to is a wholesale dealer in window-glass—and he has a hobby for them. He puts 'em into glass cases, and makes presents of 'em to his friends. He has been one of my best customers. I 've sold him a hundred nesties, I 'm sure. There 's a doctor at Dalston I sell a great number to—he 's taking one of every kind of me now. The most of my customers is stray ones in the streets. They 're generally boys. I sells a nest now and then to a lady with a child; but the boys of twelve to fifteen years of age is my best friends. They buy 'em only for cur'osity. I sold three partridges' eggs yesterday to a gentlemen, and he said he would put them under a bantam he 'd got, and hatch 'em.

"The snakes, and adders, and slow-worms I get from where there 's moss or a deal of grass. Sunny weather's the best for them, they won't come out when it 's cold; then I go to a dung-heap, and turn it over. Sometimes, I find five or six there, but never so large as the one I had to-day, that 's a yard and five inches long, and three-quarters of a pound weight. Snakes is 5*s*. a pound. I sell all I can get to Mr. Butler, of Covent-garden. He keeps 'em alive, for they 're no good dead. I think it's for the skin they 're kept. Some buys 'em to dissect: a gentleman in Theobalds-road does so, and so he does hedge-hogs. Some buys 'em for stuffing, and others for cur'osities. Adders is the same price as snakes, 5*s*. a pound after they first comes in, when they 're 10*s*. Adders is wanted dead; it's only the fat and skin that 's of any value; the fat is used for curing p'isoned wounds, and the skin is used for any one as has cut their heads. Farmers buys the fat, and rubs it into the wound when they gets bitten or stung by anything p'isonous. I kill the adders with a stick, or, when I has shoes, I jumps on 'em. Some fine days I get four or five snakes at a time; but then they 're mostly small, and won't weigh above half a pound. I don't get many adders—they don't weigh many ounces, adders don't—and I mostly has 9*d*. a-piece for each I gets. I sells *them* to Mr. Butler as well.

"The hedgehogs is 1*s*. each; I gets them mostly in Essex. I 've took one hedgehog with three

Original from HARVARD UNIVERSITY

young ones, and sold the lot for 2*s.* 6*d.* People in the streets bought them of me—they 're wanted to kill the black-beetles; they 're fed on bread and milk, and they 'll suck a cow quite dry in their wild state. They eat adders, and can't be p'isoned, at least it says so in a book I 've got about 'em at home.

"The effets I gets orders for in the streets. Gentlemen gives me their cards, and tells me to bring them one; they 're 2*d.* apiece. I get them at Hampstead and Highgate, from the ponds. They 're wanted for cur'osity.

"The snails and frogs I sell to Frenchmen. I don't know what part they eat of the frog, but I know they buy them, and the dandelion root. The frogs is 6*d.* and 1*s.* a dozen. They like the yellow-bellied ones, the others they 're afraid is toads. They always pick out the yellow-bellied first; I don't know how to feed 'em, or else I might fatten them. Many people swallows young frogs, they 're reckoned very good things to clear the inside. The frogs I catch in ponds and ditches up at Hampstead and Highgate, but I only get them when I 've a order. I 've had a order for as many as six dozen, but that was for the French hotel in Leicester-square; but I *have* sold three dozen a week to one man, a Frenchman, as keeps a cigar shop in R—r's-court.

"The snails I sell by the pailful—at 2*s.* 6*d.* the pail. There is some hundreds in a pail. The wet weather is the best times for catching 'em; the French people eats 'em. They boils 'em first to get 'em out of the shell and get rid of the green froth; then they boils them again, and after that in vinegar. They eats 'em hot, but some of the foreigners likes 'em cold. They say they 're better, if possible, than whelks. I used to sell a great many to a lady and gentleman in Soho-square, and to many of the French I sell 1*s.*'s worth, that 's about three or four quarts. Some persons buys snails for birds, and some to strengthen a sickly child's back; they rub the back all over with the snails, and a very good thing they tell me it is. I used to take 2*s.*'s worth a week to one woman; it 's the green froth that does the greatest good. There are two more birds'-nest sellers besides myself, they don't do as many as me the two of 'em. They 're very naked, their things is all to ribbins; they only go into the country once in a fortnight. They was never nothing, no trade—they never was in place—from what I 've heard—either of them. I reckon I sell about 20 nesties a week take one week with another, and that I do for four months in the year. (This altogether makes 320 nests.) Yes, I should say, I do sell about 300 birds'-nests every year, and the other two, I 'm sure, don't sell half that. Indeed they don't want to sell; they does better by what they gets give to them. I can't say what they takes, they 're Irish, and I never was in conversation with them. I get about 4*s.* to 5*s.* for the 20 nests, that 's between 2*d.* and 3*d.* apiece. I sell about a couple of snakes every week, and for some of them I get 1*s.*, and for the big ones 2*s.* 6*d.*; but them I seldom find. I 've only had three hedgehogs this season, and I 've done a little in snails and frogs, perhaps about 1*s.* The many foreigners in London this season hasn't done me no good. I haven't been to Leicester-square lately, or perhaps I might have got a large order or two for frogs."

Life of a Bird's-Nest Seller.

"I am 22 years of age. My father was a dyer, and I was brought up to the same trade. My father lived at Arundel, in Sussex, and kept a shop there. He had a good business as dyer, scourer, calico glazer, and furniture cleaner. I have heard mother say his business in Arundel brought him in 300*l.* a year at least. He had eight men in his employ, and none under 30*s.* a week. I had two brothers and one sister, but one of my brothers is since dead. Mother died five years ago in the Consumption Hospital, at Chelsea, just after it was built. I was very young indeed when father died; I can hardly remember him. He died in Middlesex Hospital: he had abscesses all over him; there were six-and-thirty at the time of his death. I 've heard mother say many times that she thinked it was through exerting himself too much at his business that he fell ill. The ruin of father was owing to his house being burnt down; the fire broke out at two in the morning; he wasn't insured: I don't remember the fire; I 've only heerd mother talk about it. It was the ruin of us all she used to tell me; father had so much work belonging to other people; a deal of moreen curtains, five or six hundred yards. It was of no use his trying to start again: he lost all his glazing machines and tubs, and his drugs and 'punches.' From what I 've heerd from mother they was worth some hundreds. The Duke of Norfolk, after the fire, gave a good lot of money to the poor people whose things father had to clean, and father himself came up to London. I wasn't two year old when that happened. We all come up with father, and he opened a shop in London and bought all new things. He had got a bit of money left, and mother's uncle lent him 60*l.* We lived two doors from the stage door of the Queen's Theatre, in Pitt-street, Charlotte-street, Fitzroy-square; but father didn't do much in London; he had a new connection to make, and when he died his things was sold for the rent of the house. There was only money enough to bury him. I don't know how long ago that was, but I think it was about three years after our coming to London, for I 've heerd mother say I was six years old when father died. After father's death mother borrowed some more money of her uncle, who was well to do. He was perfumer to her Majesty: he 's dead now, and left the business to his foreman. The business was worth 2000*l.* His wife, my mother's aunt, is alive still, and though she 's a woman of large property, she won't so much as look at me. She keeps her carriage and two footmen; her address is, Mrs. Lewis, No. 10, Porchester-terrace, Bayswater. I have been in her drawing-room two or three times. I used to take letters to her from mother: she was very kind to me then, and give me several half-crowns. She

knows the state I am in now. A young man wrote a letter to her, saying I had no clothes to look after work in, and that I was near starving, but she sent no answer to it. The last time I called at her house she sent me down nothing, and bid the servant tell me not to come any more. Ever since I 've wanted it I 've never had nothing from her, but before that she used to give me something whenever I took a letter from mother to her. The last half-crown I got at her house was from the cook, who gave it me out of her own money because she 'd known my mother.

"I 've got a grandmother living in Woburn-place; she 's in service there, and been in the family for twenty years. The gentleman died lately and left her half his property. He was a foreigner and had no relations here. My grandmother used to be very good to me, and when I first got out of work she always gave me something when I called, and had me down in her room. She was housekeeper then. She never offered to get me a situation, but only gave me a meal of victuals and a shilling or eighteen-pence whenever I called. I was tidy in my dress then. At last a new footman came, and he told me as I wasn't to call again; he said, the family didn't allow no followers. I 've never seen my grandmother since that time but once, and then I was passing with my basket of birds' nests in my hand just as she was coming out of the door. I was dressed about the same then as you seed me yesterday. I was without a shirt to my back. I don't think she saw me, and I was ashamed to let her see me as I was. She was kind enough to me, that is, she wouldn't mind about giving me a shilling or so at a time, but she never would do nothing else for me, and yet she had got plenty of money in the bank, and a gold watch, and all, at her side.

After father died, as I was saying, mother got some money from her uncle and set up on her own account; she took in glazing for the trade. Father had a few shops that he worked for, and they employed mother after his death. She kept on at this for eighteen months and then she got married again. Before this an uncle of mine, my father's brother, who kept some lime-kilns down in Bury St. Edmunds, consented to take my brother and sister and provide for them, and four or five year ago he got them both into the Duke of Norfolk's service, and there they are now. They 've never seen me since I was a child but once, and that was a few year ago. I 've never sent to them to say how badly I was off. They 're younger than I am, and can only just take care of theirselves. When mother married again, her husband came to live at the house; he was a dyer. He behaved very well to me. Mother wouldn't send me down to uncle's, she was too fond of me. I was sent to school for about eighteen months, and after that I used to assist in the glazing at home, and so I went on very comfortable for some time. Nine year ago I went to work at a French dyer's, in Rathbone-place. My step-father got me there, and there I stopped six year. I lived in the house after the first eighteen months of my service. Five year ago mother fell ill; she had been ailing many years, and she got admitted into the Consumption Hospital, at Brompton. She was there just upon three months and was coming out the next day (her term was up), when she died on the over night. After that my step-father altered very much towards me. He didn't want me at home at all. He told me so a fortnight after mother was in her grave. He took to drinking very hearty directly she was gone. He would do anything for me before that. He used to take me with him to every place of amusement what he went to, but when he took to drinking he quite changed; then he got to beat me, and at last he told me I needn't come there any more.

"After that, I still kept working in Rathbone-place, and got a lodging of my own; I used to have 9*s.* a week where I was, and I paid 2*s.* a week for my bed, and washing, and mending. I had half a room with a man and his wife; I went on so for about two years, and then I was took bad with the scarlet fever and went to Gray's-inn-lane hospital. After I was cured of the scarlet fever, I had the brain fever, and was near my death; I was altogether eight weeks in the hospital, and when I come out I could get no work where I had been before. The master's nephew had come from Paris, and they had all French hands in the house. He wouldn't employ an English hand at all. He give me a trifle of money, and told me he would pay my lodgings for a week or two while I looked for work. I sought all about and couldn't find any; this was about three year ago. People wouldn't have me because I didn't know nothing about the English mode of business. I couldn't even tell the names of the English drugs, having been brought up in a French house. At last, my master got tired of paying for my lodging, and I used to try and pick up a few pence in the streets by carrying boxes and holding horses, it was all as I could get to do; I tried all I could to find employment, and they was the only jobs I could get. But I couldn't make enough for my lodging this way, and over and over again I 've had to sleep out. Then I used to walk the streets most of the night, or lie about in the markets till morning came in the hopes of getting a job. I'm a very little eater, and perhaps that 's the luckiest thing for such as me; half a pound of bread and a few potatoes will do me for the day. If I could afford it, I used to get a ha'porth of coffee and a ha'porth of sugar, and make it do twice. Sometimes I used to have victuals give to me, sometimes I went without altogether; and sometimes I couldn't eat. I can't always.

"Six weeks after I had been knocking about in the streets in the manner I 've told you, a man I met in Covent-Garden market told me he was going into the country to get some roots (it was in the winter time and cold indeed; I was dressed about the same as I am now, only I had a pair of boots); and he said if I chose to go with him, he 'd give me half of whatever he earned. I went to Croydon and got some primroses; my share came to 9*d.*, and that was quite a God-send to me, after getting nothing. Sometimes before that I'd been two days without tasting

anything; and when I got some victuals after that, I couldn't touch them. All I felt was giddy; I wasn't to say hungry, only weak and sicklified. I went with this man after the roots two or three times; he took me to oblige me, and show me the way how to get a bit of food for myself; after that, when I got to know all about it, I went to get roots on my own account. I never felt a wish to take nothing when I was very hard up. Sometimes when I got cold and was tired, walking about and weak from not having had nothing to eat, I used to think I'd break a window and take something out to get locked up; but I could never make my mind up to it; they never hurt me, I'd say to myself. I do fancy though, if anybody had refused me a bit of bread, I should have done something again them, but I couldn't, do you see, in cold blood like.

"When the summer came round a gentleman whom I seed in the market asked me if I'd get him half a dozen nesties—he didn't mind what they was, so long as they was small, and of different kinds—and as I'd come across a many in my trips after the flowers, I told him I would do so—and that first put it into my head; and I've been doing that every summer since then. It's poor work, though, at the best. Often and often I have to walk 30 miles out without any victuals to take with me, or money to get any, and 30 miles again back, and bring with me about a dozen nesties; and, perhaps, if I'd no order for them, and was forced to sell them to the boys, I shouldn't get more than a shilling for the lot after all. When the time comes round for it, I go Christmasing and getting holly, but that's more dangerous work than bird-nesting; the farmers don't mind your taking the nesties, as it prevents the young birds from growing up and eating their corn. The greater part of the holly used in London for trimming up the churches and sticking in the puddings, is stolen by such as me, at the risk of getting six months for it. The farmers brings a good lot to market, but we is obligated to steal it. Take one week with another, I'm sure I don't make above 5*s*. You can tell that to look at me. I don't drink, and I don't gamble; so you can judge how much I get when I've had to pawn my shirt for a meal. All last week I only sold two nesties—they was a partridge's and a yellow-hammer's; for one I got 6*d*., and the other 3*d*., and I had been thirteen miles to get them. I got beside that a fourpenny piece for some chickweed which I'd been up to Highgate to gather for a man with a bad leg (it's the best thing there is for a poultice to a wound), and then I earned another 4*d*. by some mash (marsh) mallow leaves (that there was to purify the blood of a poor woman): that, with 4*d*. that a gentleman give to me, was all I got last week; 1*s*. 9*d*. I think it is altogether. I had some victuals give to me in the street, or else I daresay I should have had to go without; but, as it was, I gave the money to the man and his wife I live with. You see they had nothing, and as they're good to me when I want, why, I did what I could for them. I've tried to get out of my present life, but there seems to be an ill luck again me. Sometimes I gets a good turn. A gentleman gives me an order, and then I saves a shilling or eighteenpence, so as to buy something with that I can sell again in the streets; but a wet day is sure to come, and then I'm cracked up, obligated to eat it all away. Once I got to sell fish. A gentleman give me a crown-piece in the street, and I borrowed a barrow at 2*d*. a day, and did pretty well for a time. In three weeks I had saved 18*s*.; then I got an order for a sack of moss from one of the flower-sellers, and I went down to Chelmsford, and stopped for the night in Lower Nelson-street, at the sign of "The Three Queens." I had my money safe in my fob the night before, and a good pair of boots to my feet then; when I woke in the morning my boots was gone, and on feeling in my fob my money was gone too. There was four beds in the rooms, feather and flock; the feather ones was 4*d*., and the flock 3*d*. for a single one, and 2½*d*. each person for a double one. There was six people in the room that night, and one of 'em was gone before I awoke—he was a cadger—and had took my money with him. I complained to the landlord—they call him George—but it was no good; all I could get was some victuals. So I've been obliged to keep to birds'-nesting ever since.

"I've never been in prison but once. I was took up for begging. I was merely leaning again the railings of Tavistock-square with my birds'-nesties in my hand, and the policemen took me off to Clerkenwell, but the magistrates, instead of sending me to prison, gave me 2*s*. out of the poors'-box. I feel it very much going about without shoes or without shirt, and exposed to all weathers, and often out all night. The doctor at the hospital in Gray's-inn-lane gave me two flannels, and told me that whatever I did I was to keep myself wrapped up; but what's the use of saying that to such as me who is obligated to pawn the shirt off our back for food the first wet day as comes? If you haven't got money to pay for your bed at a lodging-house, you must take the shirt off your back and leave it with them, or else they'll turn you out. I know many such. Sometimes I go to an artist. I had 5*s*. when I was drawed before the Queen. I wasn't 'xactly drawed before her, but my portrait was shown to her, and I was told that if I'd be there I might receive a trifle. I was drawed as a gipsy fiddler. Mr. Oakley in Regent-street was the gentleman as did it. I was dressed in some things he got for me. I had an Italian's hat, one with a broad brim and a peaked crown, a red plush waistcoat, and a yellow hankercher tied in a good many knots round my neck. I'd a black velveteen Newmarket-cut coat, with very large pearl buttons, and a pair of black knee-breeches tied with fine red strings. Then I'd blue stripe stockings and high-ancle boots with very thin soles. I'd a fiddle in one hand and a bow in the other. The gentleman said he drawed me for my head of hair. I've never been a gipsy, but he told me he didn't mind that, for I should make as good a gipsy fiddler as the real thing. The artists

mostly give me 2*s*. I 've only been three times. I only wish I could get away from my present life. Indeed I would do any work if I could get it. I 'm sure I could have a good character from my masters in Rathbone-place, for I never done nothing wrong. But if I couldn't get work I might very well, if I 'd money enough, get a few flowers to sell. As it is it 's more than any one can do to save at bird-nesting, and I 'm sure I 'm as prudent as e'er a one in the streets. I never took the pledge, but still I never take no beer nor spirits—I never did. Mother told me never to touch 'em, and I haven't tasted a drop. I 've often been in a public-house selling my things, and people has offered me something to drink, but I never touch any. I can't tell why I dislike doing so—but something seems to tell me not to taste such stuff. I don't know whether it 's what my mother said to me. I know I was very fond of her, but I don't say it 's that altogether as makes me do it. I don't feel to want it. I smoke a good bit, and would sooner have a bit of baccy than a meal at any time. I could get a goodish rig-out in the lane for a few shillings. A pair of boots would cost me 2*s*., and a coat I could get for 2*s*. 6*d*. I go to a ragged school three times a week if I can, for I 'm but a poor scholar still, and I should like to know how to read; it 's always handy you know, sir."

This lad has been supplied with a suit of clothes and sufficient money to start him in some of the better kind of street-trades. It was thought advisable not to put him to any more *settled* occupation on account of the vagrant habits he has necessarily acquired during his bird-nesting career. Before doing this he was employed as errand-boy for a week, with the object of testing his trustworthiness, and was found both honest and attentive. He appears a prudent lad, but of course it is difficult, as yet, to speak positively as to his character. He has, however, been assured that if he shows a disposition to follow some more reputable calling he shall at least be put in the way of so doing.

Of the Street-Sellers of Squirrels.

The street squirrel-sellers are generally the same men as are engaged in the open-air traffic in cage-birds. There are, however, about six men who devote themselves more particularly to squirrel-selling, while as many more sometimes "take a turn at it." The squirrel is usually carried in the vendor's arms, or is held against the front of his coat, so that the animal's long bushy tail is seen to advantage. There is usually a red leather collar round its neck, to which is attached some slender string, but so contrived that the squirrel shall not appear to be a prisoner, nor in general—although perhaps the hawker became possessed of his squirrel only that morning—does the animal show any symptoms of fear.

The chief places in which squirrels are offered for sale, are Regent-street and the Royal Exchange, but they are offered also in all the principal thoroughfares—especially at the West End. The purchasers are gentlefolk, tradespeople, and a few of the working classes who are fond of animals. The wealthier persons usually buy the squirrels for their children, and, even after the free life of the woods, the animal seems happy enough in the revolving cage, in which it "thinks it climbs."

The prices charged are from 2*s*. to 5*s*., "or more if it can be got," from a third to a half being profit. The sellers will oft enough state, if questioned, that they caught the squirrels in Epping Forest, or Caen Wood, or any place sufficiently near London, but such is hardly ever the case, for the squirrels are bought by them of the dealers in live animals. Countrymen will sometimes catch a few squirrels and bring them to London, and nine times out of ten they sell them to the shop-keepers. To sell three squirrels a day in the street is accounted good work.

I am assured by the best-informed parties that for five months of the year there are 20 men selling squirrels in the streets, at from 20 to 50 per cent. profit, and that they average a weekly sale of six each. The average price is from 2*s*. to 2*s*. 6*d*., although not very long ago one man sold a "wonderfully fine squirrel" in the street for three half-crowns, but they are sometimes parted with for 1*s*. 6*d*. or less, rather than be kept over-night. Thus 2400 squirrels are vended yearly in the streets, at a cost to the public of 240*l*.

Of the Street-Sellers of Leverets, Wild Rabbits, etc.

There are a few leverets, or young hares, sold in the streets, and they are vended for the most part in the suburbs, where the houses are somewhat detached, and where there are plenty of gardens. The softness and gentleness of the leveret's look pleases children, more especially girls, I am informed, and it is usually through their importunity that the young hares are bought, in order that they may be fed from the garden, and run tame about an out-house. The leverets thus sold, however, as regards nine out of ten, soon die. They are rarely supplied with their natural food, and all their natural habits are interrupted. They are in constant fear and danger, moreover, from both dogs and cats. One shopkeeper who sold fancy rabbits in a street off the Westminster-road told me that he had once tried to tame and rear leverets in hutches, as he did rabbits, but to no purpose. He had no doubt it might be done, he said, but not in a shop or a small house. Three or four leverets are hawked by the street-people in one basket and are seen lying on hay, the basket having either a wide-worked lid, or a net thrown over it. The hawkers of live poultry sell the most leverets, but they are vended also by the singing-bird sellers. The animals are nearly all bought, for this traffic, at Leadenhall, and are retailed at 1*s*. to 2*s*. each, one-third to one-half being profit. Perhaps 300 are sold this way yearly, producing 22*l*. 10*s*.

About 400 young wild rabbits are sold in the street in a similar way, but at lower sums, from 3*d*. to 6*d*. each, 4*d*. being the most frequent rate.

The yearly outlay is thus 6*l.* 13*s.* They thrive, in confinement, no better than the leverets.

OF THE STREET-SELLERS OF GOLD AND SILVER FISH.

OF these dealers, residents in London, there are about 70; but during my inquiry (at the beginning of July) there were not 20 in town. One of their body knew of ten who were at work live-fish selling, and there might be as many more, he thought, "working" the remoter suburbs of Blackheath, Croydon, Richmond, Twickenham, Isleworth, or wherever there are villa residences of the wealthy. This is the season when the gold and silver fish-sellers, who are altogether a distinct class from the bird-sellers of the streets, resort to the country, to vend their glass globes, with the glittering fish swimming ceaselessly round and round. The gold fish-hawkers are, for the most part, of the very best class of the street-sellers. One of the principal fish-sellers is in winter a street-vendor of cough drops, horehound candy, coltsfoot-sticks, and other medicinal confectionaries, which he himself manufactures. Another leading gold-fish seller is a costermonger now "on pine-apples." A third, "with a good connection among the innkeepers," is in the autumn and winter a hawker of game and poultry.

There are in London three wholesale dealers in gold and silver fish; two of whom—one in the Kingsland-road and the other close by Billingsgate—supply more especially the street-sellers, and the street-traffic is considerable. Gold fish is one of the things which people buy when brought to their doors, but which they seldom care to "order." The importunity of children when a man unexpectedly tempts them with a display of such brilliant creatures as gold fish, is another great promotive of the street-trade; and the street-traders are the best customers of the wholesale purveyors, buying somewhere about three-fourths of their whole stock. The dealers keep their fish in tanks suited to the purpose, but goldfish are never bred in London. The English-reared gold fish are "raised" for the most part, as respects the London market, in several places in Essex. In some parts they are bred in warm ponds, the water being heated by the steam from adjacent machinery, and in some places they are found to thrive well. Some are imported from France, Holland, and Belgium; some are brought from the Indies, and are usually sold to the dealers to improve their breed, which every now and then, I was told, "required a foreign mixture, or they didn't keep up their colour." The Indian and foreign fish, however, are also sold in the streets; the dealers, or rather the Essex breeders, who are often in London, have "just the pick of them," usually through the agency of their town customers. The English-reared gold fish are not much short of three-fourths of the whole supply, as the importation of these fishes is troublesome; and unless they are sent under the care of a competent person, or unless the master or steward of a vessel is made to incur a share in the venture, by being paid so much freight-money for as many gold and silver fishes as are landed in good health, and nothing for the dead or dying, it is very hazardous sending them on shipboard at all, as in case of neglect they may all die during the voyage.

The gold and silver fish are of the carp species, and are natives of China, but they were first introduced into this country from Portugal about 1690. Some are still brought from Portugal. They have been common in England for about 120 years.

These fish are known in the street-trade as "globe" and "pond" fish. The distinction is not one of species, nor even of the "variety" of a species, but merely a distinction of size. The larger fish are "pond;" the smaller, "globe." But the difference on which the street-sellers principally dwell is that the pond fish are far more troublesome to keep by them in a "slack time," as they must be fed and tended most sedulously. Their food is stale bread or biscuit. The "globe" fish are not fed at all by the street-dealer, as the animalcules and the minute insects in the water suffice for their food. Soft, rain, or sometimes Thames water, is used for the filling of the globe containing a street-seller's gold fish, the water being changed twice a day, at a public-house or elsewhere, when the hawker is on a round. Spring-water is usually rejected, as the soft water contains "more feed." One man, however, told me he had recourse to the street-pumps for a renewal of water, twice, or occasionally thrice a day, when the weather was sultry; but spring or well water "wouldn't do at all." He was quite unconscious that he was using it from the pump.

The wholesale price of these fish ranges from 5*s.* to 18*s.* per dozen, with a higher charge for "picked fish," when high prices must be paid. The cost of "large silvers," for instance, which are scarcer than "large golds," so I heard them called, is sometimes 5*s.* apiece, even to a retailer, and rarely less than 3*s.* 6*d.* The most frequent price, retail from the hawker—for almost all the fish are hawked, but only there, I presume, for a temporary purpose—is 2*s.* the pair. The gold fish are now always hawked in glass globes, containing about a dozen occupants, within a diameter of twelve inches. These globes are sold by the hawker, or, if ordered, supplied by him on his next round that way, the price being about 2*s.* Glass globes, for the display of gold fish, are indeed manufactured at from 6*d.* to 1*l.* 10*s.* each, but 2*s.* or 2*s.* 6*d.* is the usual limit to the price of those vended in the street. The fish are lifted out of the water in the globe to consign to a purchaser, by being caught in a neat net, of fine and different-coloured cordage, always carried by the hawker, and manufactured for the trade at 2*s.* the dozen. Neat handles for these nets, of stained or plain wood, are 1*s.* the dozen. The dealers avoid touching the fish with their hands. Both gold fish and glass globes are much cheaper than they were ten years ago; the globes are cheaper, of course, since the alteration in the

tax on glass, and the street-sellers are, numerically, nearly double what they were.

From a well-looking and well-spoken youth of 21 or 22, I had the following account. He was the son, and grandson, of costermongers, but was —perhaps, in consequence of his gold-fish selling lying among a class not usually the costermongers' customers—of more refined manners than the generality of the costers' children.

"I've been in the streets, sir," he said, "helping my father, until I was old enough to sell on my own account, since I was six years old. *Yes, I like a street life, I'll tell you the plain truth, for I was put by my father to a paperstainer, and found I couldn't bear to stay in doors. It would have killed me.* Gold fish are as good a thing to sell as anything else, perhaps, but I've been a costermonger as well, and have sold both fruit and good fish—salmon and fine soles. Gold fish are not good for eating. I tried one once, just out of curiosity, and it tasted very bitter indeed; I tasted it boiled. I've worked both town and country on gold fish. I've served both Brighton and Hastings. The fish were sent to me by rail, in vessels with air-holes, when I wanted more. I never stopped at lodging-houses, but at respectable public-houses, where I could be well suited in the care of my fish. It's an expense, but there's no help for it." [A costermonger, when I questioned him on the subject, told me that he had sometimes sold gold fish in the country, and though he had often enough slept in common lodging-houses, he never could carry his fish there, for he felt satisfied, although he had never tested the fact, that in nine out of ten such places, the fish, in the summer season, would half of them die during the night from the foul air.] "Gold fish sell better in the country than town," the street-dealer continued; "much better. They're more thought of in the country. My father's sold them all over the world, as the saying is. I've sold both foreign and English fish. I prefer English. They're the hardiest; Essex fish. The foreign—I don't just know what part—are bred in milk ponds; kept fresh and sweet, of course; and when they're brought here, and come to be put in cold water, they soon die. In Essex they're bred in cold water. They live about three years; that's their lifetime if they're properly seen to. I don't know what kind of fish gold fish are. I've heard that they first came from China. No, I can't read, and I'm very sorry for it. If I have time next winter I'll get taught. Gentlemen sometimes ask me to sit down, and talk to me about fish, and their history (natural history), and I'm often at a loss, which I mightn't be if I could read. If I have fish left after my day's work, I never let them stay in the globe I've hawked them in, but put them into a large pan, a tub sometimes, three-parts full of water, where they have room. My customers are ladies and gentlemen, but I have sold to shopkeepers, such as buttermen, that often show gold fish and flowers in their shops. The fish don't live long in the very small globes, but they're put in them sometimes just to satisfy children. I've sold as many as two dozen at a time to stock a pond in a gentleman's garden. It's the best sale a little way out of town, in any direction. I sell six dozen a week, I think, one week with another; they'll run as to price at 1*s.* apiece. That six dozen includes what I sell both in town and country. Perhaps I sell them nearly three-parts of the year. Some hawk all the year, but it's a poor winter trade. Yes, I make a very fair living; 2*s.* 6*d.* or 3*s.* or so, a day, perhaps, on gold fish, when the weather suits."

A man, to whom I was referred as an experienced gold fish-seller, had just returned, when I saw him, from the sale of a stock of new potatoes, peas, &c., which he "worked" in a donkey cart. He had not this season, he said, started in the gold-fish line, and did very little last year in it, as his costermongering trade kept steady, but his wife thought gold fish-selling was a better trade, and she always accompanied him in his street rounds; so he might take to it again. In his youth he was in the service of an old lady who had several pets, and among them were gold fish, of which she was very proud, always endeavouring to procure the finest, a street-seller being sure of her as a customer if he had fish larger or deeper or brighter-coloured than usual. She kept them both in stone cisterns, or small ponds, in her garden, and in glass globes in the house. Of these fish my informant had the care, and was often commended for his good management of them. After his mistress's death he was very unlucky, he said, in his places. His last master having been implicated, he believed, in some gambling and bill-discounting transactions, left the kingdom suddenly, and my informant was without a character, for the master he served previously to the one who went off so abruptly was dead, and a character two years back was of no use, for people said, "But where have you been living since? Let me know all about that." The man did not know what to do, for his money was soon exhausted: "I had nothing left," he said, "which I could turn into money except a very good great coat, which had belonged to my last master, and which was given to me because he went off without paying me my wages. I thought of 'listing, for I was tired of a footman's life, *almost always in the house in such places as I had*, but I was too old, I feared, and if I could have got over that I knew I should be rejected because I was getting bald. I was sitting thinking whatever could be done—I wasn't married then—and had nobody to consult with; when I heard the very man as used to serve my old lady crying gold fish in the street. It struck me all of a heap, and I wonder I hadn't thought of it before, when I recollected how well I'd managed the fish, that I'd sell gold fish too, and hawk it as he did, as it didn't seem such a bad trade. So I asked the man all about it, and he told me, and I raised a sovereign on my great coat, and that was my start in the streets. I was nervous, and a little 'shamed at first, but I soon got over that, and in time turned my hand to fruit and other things. Gold fish saved my life, sir; I do believe that, for I might have pined into a consumption if I'd been

without something to do, and something to eat much longer."

If we calculate, in order to allow for the cessation of the trade during the winter, and often in the summer when costermongering is at its best, that but half the above-mentioned number of gold-fish sellers hawk in the streets and that for but half a year, each selling six dozen weekly at 12*s.* the dozen, we find 65,520 fish sold, at an outlay of 3276*l.* As the country is also "worked" by the London street-sellers, and the supply is derived from London, the number and amount may be doubled to include this traffic, or 131,040 fish sold, and 6552*l.* expended.

Of the Street-Sellers of Tortoises.

The number of tortoises sold in the streets of London is far greater than might be imagined, for it is a creature of no utility, and one which is inanimate in this country for half its life.

Of live tortoises, there are 20,000 annually imported from the port of Mogadore in Morocco. They are not brought over, as are the parrots, &c., of which I have spoken, for amusement or as private ventures of the seamen, but are regularly consigned from Jewish houses in Mogadore, to Jewish merchants in London. They are a freight of which little care is taken, as they are brought over principally as ballast in the ship's hold, where they remain torpid.

The street-sellers of tortoises are costermongers of the smarter class. Sometimes the vendors of shells and foreign birds "work" also a few tortoises, and occasionally a wholesale dealer (the consignee of the Jewish house in Africa) will send out his own servants to sell barrow-loads of tortoises in the street on his own account. They are regularly ranged on the barrows, and certainly present a curious appearance—half-alive creatures as they are (when the weather is not of the warmest), brought from another continent for sale by thousands in the streets of London, and retention in the gardens and grounds of our civic villas. Of the number imported, one-half, or 10,000, are yearly sold in the streets by the several open-air dealers I have mentioned. The wholesale price is from 4*s.* to 6*s.* the dozen; they are retailed from 6*d.* to 1*s.*, a very fine well-grown tortoise being sometimes worth 2*s.* 6*d.* The mass, however, are sold at 6*d.* to 9*d.* each, but many fetch 1*s.* They are bought for children, and to keep in gardens as I have said, and when properly fed on lettuce leaves, spinach, and similar vegetables, or on white bread sopped in water, will live a long time. If the tortoise be neglected in a garden, and have no access to his favourite food, he will eat almost any green thing which comes in his way, and so may commit ravages. During the winter, and the later autumn and earlier spring, the tortoise is torpid, and may be kept in a drawer or any recess, until the approach of summer "thaws" him, as I heard it called.

Calculating the average price of tortoises in street-sale at 8*d.* each, we find upwards of 333*l.* thus expended yearly.

Of the Street-Sellers of Snails, Frogs, Worms, Snakes, Hedgehogs, etc.

I class together these several kinds of live creatures, as they are all "gathered" and sold by the same persons—principally by the men who supply bird-food, of whom I have given accounts in my statements concerning groundsel, chickweed, plaintain, and turf-selling.

The principal *snail-sellers*, however, are the turf-cutters, who are young and active men, while the groundsel-sellers are often old and infirm and incapable of working all night, as the necessities of the snail-trade often require. Of turf-cutters there were, at the time of my inquiry last winter, 42 in London, and of these full one-third are regular purveyors of snails, such being the daintier diet of the caged blackbirds and thrushes. These men obtain their supply of snails in the market-gardens, the proprietors willingly granting leave to any known or duly recommended person who will rid them of these depredators. Seven-eighths of the quantity gathered are sold to the bird-dealers, to whom the price is 2*d.* a quart. The other eighth is sold on a street round at from 3*d.* to 6*d.* the quart. A quart contains at least 80 snails, not heaped up, their shells being measured along with them. One man told me there were "100 snails to a fair quart."

When it is moonlight at this season of the year, the snail gatherers sometimes work all night; at other times from an hour before sunset to the decline of daylight, the work being resumed at the dawn. To gather 12 quarts in a night, or a long evening and morning, is accounted a prosperous harvest. Half that quantity is "pretty tidy." An experienced man said to me:—

"The best snail grounds, sir, you may take my word for it, is in Putney and Barnes. It's the 'greys' we go for, the fellows with the shells on 'em; the black snails or slugs is no good to us. I think snails is the slowest got money of any. I don't suppose they get's scarcer, but there's good seasons for snails and there's bad. Warm and wet is best. We don't take the little 'uns. They come next year. I may make 1*l.* a year, or a little more, in snails. In winter there's hardly anything done in them, and the snails is on the ground; in summer they're on the walls or leaves. They'll keep six months without injury; they'll keep the winter round indeed in a proper place."

I am informed that the 14 snail gatherers on the average gather six dozen quarts each in a year, which supplies a total of 12,096 quarts, or individually, 1,189,440 snails. The labourers in the gardens, I am informed, may gather somewhat more than an equal quantity,—all being sold to the bird-shops; so that altogether the supply of snails for the caged thrushes and blackbirds of London is about two millions and a half. Computing them at 24,000 quarts, and only at 2*d.* a quart, the outlay is 200*l.* per annum.

The *Frogs* sold by street-people are, at the rate of about 36 dozen a year, disposed of in equal proportion to University and King's Colleges. Only two men collect the frogs, one for each hos-

Original from HARVARD UNIVERSITY

pital. They are charged 1*d*. each :—"I 've sometimes," said one of the frog-purveyors, "come on a place where I could have got six or seven dozen in a day, but that 's mostly been when I didn't want them. At other times I 've gone days without collaring a single frog. I only want them four times a year, and four or five dozen at a time. The low part of Hampstead 's the best ground for them, I think. The doctors like big fellows. They keep them in water 'til they 're wanted to dissect." One man thought that there might be 50 more frogs or upwards ordered yearly, through the bird-shops, for experiments under air-pumps, &c. This gives about 500 frogs sold yearly by the street-people. One year, however, I was told, the supply was larger, for a Camberwell gentleman ordered 40 frogs to stock a watery place at the foot of his garden, as he liked to hear and see them.

The *Toad* trade is almost a nonentity. One man, who was confident he had as good a trade in that line as any of his fellows, told me that last year he only supplied one toad; in one year, he forgot the precise time, he collected ten. He was confident that from 12 to 24 a year was now the extent of the toad trade, perhaps 20. There was no regular price, and the men only "work to order." "It 's just what the shopkeeper, mostly a herbalist, likes to give." I was told, from 1*d*. to 6*d*. according to size. "I don't know what they 're wanted for, something about the doctors, I believe. But if you want any toads, sir, for anything, I know a place between Hampstead and Willesden, where there 's real stunners."

Worms are collected in small quantities by the street-sellers, and very grudgingly, for they are to be supplied gratuitously to the shopkeepers who are the customers of the turf-cutters, and snail and worm collectors. "They expects it as a parquisite, like." One man told me that they only gathered ground worms for the bird-fanciers.

Of the *Snakes* and *Hedgehogs* I have already spoken, when treating of the collection of birds'-nests. I am told that some few *glow-worms* are collected.

OF THE STREET-SELLERS OF MINERAL PRODUCTIONS AND NATURAL CURIOSITIES.

THE class of which I have now to treat, including as it does the street-sellers of coal, coke, tan-turf, salt, and sand, seem to have been called into existence principally by the necessities of the poorer classes. As the earnings of thousands of men, in all the slop, "slaughter-house," or "scamping" branches of tailoring, shoemaking, cabinet-making, joining, &c. have become lower and lower, they are compelled to purchase the indispensable articles of daily consumption in the smallest quantities, and at irregular times, just as the money is in their possession. This is more especially the case as regards chamber-masters and garret-masters (among the shoemakers) and cabinet-makers, who, as they are small masters, and working on their own account, have not even such a regularity of payment as the journeyman of the slop-tailor. Among these poor artizans, moreover, the wife must slave with the husband, and it is often an object with them to save the time lost in going out to the chandler's-shop or the coal-shed, to have such things as coal, and coke brought to their very doors, and vended in the smallest quantities. It is the same with the women who work for the slop-shirt merchants, &c., or make cap-fronts, &c., on their own account, for the supply of the shopkeepers, or the wholesale swag-men, who sell low-priced millinery. The street-sellers of the class I have now to notice are, then, the principal purveyors of the very poor.

The men engaged in the street-sale of coal and coke—the chief articles of this branch of the street-sale—are of the costermonger class, as, indeed, is usually the case where an exercise of bodily strength is requisite. Costermongers, too, are better versed than any other street-folk in the management of barrows, carts, asses, ponies, or horses, so that when these vehicles and these animals are a necessary part of any open-air business, it will generally be found in the hands of the coster class.

Nor is this branch of the street-traffic confined solely to articles of necessity. Under my present enumeration will be found the street-sale of *shells*, an ornament of the mantel-piece above the fire-grate to which coal is a necessity.

The present division will complete the subject of Street *Sale* in the metropolis.

OF THE STREET-SELLERS OF COALS.

ACCORDING to the returns of the coal market for the last few years, there has been imported into London, on an average, 3,500,000 tons of sea-borne coal annually. Besides this immense supply, the various railways have lately poured in a continuous stream of the same commodity from the inland districts, which has found a ready sale without sensibly affecting the accustomed vend of the north country coals, long established on the Coal Exchange.

To the very poor the importance of coal can be scarcely estimated. Physiological and medical writers tell us that carbonaceous food is that which produces heat in the body, and is therefore the fuel of the system. Experience tells us that this is true; for who that has had an opportunity of visiting the habitations of the poor—the dwellers in ill-furnished rooms and garrets—has not remarked the more than half-starved slop needle-woman, the wretched half-naked children of the casually employed labourer, as the dock-man, or those whose earnings are extorted from them by their employers, such as the ballast-man, sitting crouched around the smouldering embers in the place where the fire ought to be? The reason of this is, because the system of the sufferer by long

Original from HARVARD UNIVERSITY

want of food has been deprived of the necessary internal heat, and so seeks instinctively to supply the deficiency by imbibing it from some outward source. It is on this account chiefly, I believe, that I have found the ill-paid and ill-fed work-people prize warmth almost more than food. Among the poorest Irish, I have invariably found them crowding round the wretched fire when they had nothing to eat.

The census returns of the present year (according to the accounts published in the newspapers) estimate the number of the inhabitants of London at 2,363,141, and the number of inhabited houses as 307,722. Now if we take into consideration that in the immense suburbs of the metropolis, there are branching off from almost every street, labyrinths of courts and alleys, teeming with human beings, and that almost every room has its separate family—for it takes a multitude of poor to make one rich man—we may be able to arrive at the conclusion that by far the greater proportion of coals brought into London are consumed by the poorer classes. It is on this account of the highest importance, that honesty should be the characteristic of those engaged in the vend and distribution of an article so necessary not only to the comfort but to the very existence of the great masses of the population.

The modes in which the coals imported into London are distributed to the various classes of consumers are worthy of observation, as they unmistakably exhibit not only the wealth of the few, but the poverty of the many. The inhabitants of Belgravia, the wealthy shopkeepers, and many others periodically see at their doors the well-loaded waggon of the coal merchant, with two or three swarthy "coal-porters" bending beneath the black heavy sacks, in the act of laying in the 10 or 20 tons for yearly or half-yearly consumption. But this class is supplied from a very different quarter from that of the artizans, labourers, and many others, who, being unable to spare money sufficient to lay in at once a ton or two of coals, must have recourse to other means. To meet their limited resources, there may be found in every part, always in back streets, persons known as coal-shed men, who get the coals from the merchant in 7, 14, or 20 tons at a time, and retail them from ¼ cwt. upwards. The coal-shed men are a very numerous class, for there is not a low neighbourhood in any part of the city which contains not two or three of them in every street.

There is yet another class of purchasers of coals, however, which I have called the 'very poor,'—the inhabitants of two pairs back—the dwellers in garrets, &c. It seems to have been for the purpose of meeting the wants of this class that the street-sellers of coals have sprung into existence. Those who know nothing of the decent pride which often lingers among the famishing poor, can scarcely be expected to comprehend the great boon that the street-sellers of coals, if they could only be made honest and conscientious dealers, are calculated to confer on these people. "I have seen," says a correspondent, "the starveling child of misery, in the gloom of the evening, steal timidly into the shop of the coal-shed man, and in a tremulous voice ask, as if begging a great favour, for *seven pound of coals*. The coal-shed man has set down his pint of beer, taken the pipe from his mouth, blowing after it a cloud of smoke, and in a gruff voice, at which the little wretch has shrunk up (if it were possible) into a less space than famine had already reduced her to, and demanded —'Who told you as how I sarves seven pound o' coal?—Go to Bill C—— he may sarve you if he likes—I won't, and that's an end on 't—I wonders what people wants with seven pound o' coal.' The coal-shed man, after delivering himself of this enlightened observation, has placidly resumed his pipe, while the poor child, gliding out into the drizzling sleet, disappeared in the darkness."

The street-sellers vend any quantity at the very door of the purchaser, without rendering it necessary for them to expose their poverty to the prying eyes of the neighbourhood; and, as I have said were the street dealers only honest, they would be conferring a great boon upon the poorer portion of the people, but unhappily it is scarcely possible for them to be so, and realize a profit for themselves. The police reports of the last year show that many of the coal merchants, standing high in the estimation of the world, have been heavily fined for using false weights; and, did the present inquiry admit of it, there might be mentioned many other infamous practices by which the public are shamefully plundered in this commodity, and which go far to prove that the coal trade, *in toto*, is a gigantic fraud. May I ask how it is possible for the street-sellers, with such examples of barefaced dishonesty before their eyes, even to dream of acting honestly? If not actually certain, yet strongly suspecting, that they themselves are defrauded by the merchant, how can it be otherwise than that they should resort to every possible mode of defrauding their customers, and so add to the already almost unendurable burdens of the poorest of the poor, who by one means or other are made to bear all the burdens of the country?

The usual quantity of coals consumed in the poorest rooms, in which a family resides, is ½ cwt. per week in summer, and 1 cwt. do. in winter, or about 2 tons per annum.

The street sale of coals was carried on to a considerable extent during the earlier part of the last century, "small coalmen" being among the regular street-traders. The best known of these was Tom Britton, who died through fright occasioned by a practical joke. He was a great fosterer of a taste for music among the people; for, after hawking his coals during the day, he had a musical gathering in his humble abode in the evening, to which many distinguished persons resorted. This is alluded to in the lines, by Hughes, under Tom Britton's portrait, and the allusion, according to the poetic fashion of the time being made by means of a strained classicality :—

"Cyllenius so, as fables tell, and Jove,
Came willing guests to poor Philemon's grove."

HARVARD UNIVERSITY

The trade seems to have disappeared gradually, but has recently been revived in another form.

Some few years ago an ingenious and enterprising costermonger, during a "slack" in his own business, conceived the idea of purchasing some of the refuse of the coals at the wharfs, conveying them round the poorer localities of his beat, in his ass- or pony-cart, and vending them to "room-keepers" and others, in small quantities and at a reduced rate, so as to undersell the coal-shed men, while making for himself a considerable profit. The example was not lost upon his fraternity, and no long time had elapsed before many others had started in the same line; this eventually took so much custom from the regular coal-shed men, that, as a matter of self-defence, those among them who had a horse and cart, found it necessary to compete with the originators of the system in their own way, and, being possessed of more ample means, they succeeded, in a great measure, in driving the costers out of the field. The success of the coal-shed men was for a time so well followed up, that they began by degrees to edge away from the lanes and alleys, extending their excursions into quarters somewhat more aristocratic, and even there establishing a trade amongst those who had previously taken their ton or half ton of coals from the "brass-plate merchant," as he is called in the trade, being a person who merely procures orders for coals, gets some merchant who buys in the coal market to execute them in his name, and manages to make a living by the profits of these transactions. Some of this latter class consequently found themselves compelled to adopt a mode of doing their business somewhat similar, and for that purpose hired vans from the proprietors of those vehicles, loaded them with sacks of coals, drove round among their customers, prepared to furnish them with sacks or half sacks, as they felt disposed. Finally, many of the van proprietors themselves, finding that business might be done in this way, started in the line, and, being in general men of some means, established it as a regular trade. The van proprietors at the present time do the greater part of the business, but there may occasionally be seen, employed in this traffic, all sorts of conveyances, from the donkey-cart of the costermonger, or dock labourer, the latter of whom endeavours to make up for the miserable pittance he can earn at the rate of fourpence per hour, by the profits of this calling, to the aristocratic van, drawn along by two plump, well-fed horses, the property of a man worth 800*l*. or 900*l*.

The van of the street-seller of coals is easily distinguished from the waggon of the regular merchant. The merchant's waggon is always loaded with sacks standing perpendicularly; it is drawn by four immense horses, and is driven along by a gaunt figure, begrimed with coal-dust, and "sporting" ancle boots, or shoes and gaiters, white, or what ought to be white, stockings, velvet knee-breeches, short tarry smock-frock, and a huge fan-tail hat slouching half-way down his back. The street-seller's vehicle, on the contrary, has the coals shot into it without sacks; while, on a tailboard, extending behind, lie weights and scales. It is most frequently drawn by one horse, but sometimes by two, with bells above their collars jingling as they go, or else the driver at intervals rings a bell like a dustman's, to announce his approach to the neighbourhood.

The street-sellers formerly purchased their coals from any of the merchants along the river-side; generally the refuse, or what remained after the best had been picked out by "skreening" or otherwise; but always taking a third or fourth quality as most suitable for their purpose. But since the erection of machinery for getting coals out of the ships in the Regent's Canal basin, they have resorted to that place, as the coals are at once shot from the box in which they are raised from the hold of the ship, into the cart or van, saving all the trouble of being filled in sacks by coal porters, and carried on their backs from the ship, barge, or heap, preparatory to their being emptied into the van; thus getting them at a cheaper rate, and consequently being enabled to realize a greater profit.

Since the introduction of inland coals, also, by the railways, many of the street-sellers have either wholly, or in part, taken to sell them on account of the lower rate at which they can be purchased; sometimes they vend them unmixed, but more frequently they mix them up with "the small" of north country coals of better quality, and palm off the compound as "genuine Wallsend direct from the ship:" this (together with short weights) being, in fact, the principal source of their profit.

It occasionally happens that a merchant purchases in the market a cargo of coals which turns out to be damaged, very small, or of inferior quality. In such cases he usually refuses to take them, and it is difficult to dispose of them in any regular way of trade. Such cargoes, or parts of cargoes, are consequently at times bought up by some of the more wealthy van proprietors engaged in the coal line, who realize on them a great profit.

To commence business as a street-seller of coals requires little capital beyond the possession of a horse and cart. The merchants in all cases let street-sellers have any quantity of coals they may require till they are able to dispose of them; and the street-trade being a ready-money business, they can go on from day to day, or from week to week, according to their pre-arrangements, so that, as far as the commodity in which they deal is concerned, there is no outlay of capital whatever.

There are about 30 two-horse vans continually engaged in this trade, the price of each van

being 70*l*. This gives	£2100
100 horses at 20*l*. each	1200
160 carts at 10*l*. each	1600
160 horses at 10*l*. each . . .	1600
20 donkey or pony carts, value 1*l*. each	20
20 donkeys or ponies at 1*l*. 10*s*. each	30
Making a total of 210 vehicles continually employed, which, with the horses, &c., may be valued at	6550
This sum, with the price of 210 sets of weights and scales, at 1*l*. 10*s*. per set	315
Makes a total of	£6865

This may be fairly set down as the gross amount of capital at present employed in the street-sale of coals.

It is somewhat difficult to ascertain correctly the amount of coals distributed in this way among the poorer classes. But I have found that they generally take two turns per day; that is they go to the wharfs in the morning, get their vans or carts loaded, and proceed on their various rounds. This first turn usually occupies them till dinner-time, after which they get another load, which is sufficient to keep them employed till night. Now if we allow each van to carry two and a half tons, it will make for all 150 tons per day, or 900 tons per week. In the same manner allowing the 160 carts to carry a ton each, it will give 320 tons per day, or 1920 tons per week, and the twenty pony carts half a ton each, 40 tons per day, or 240 tons per week, making a total of 3060 tons per week, or 159,120 tons per annum. This quantity purchased from the merchants at 14*s*. 6*d*. per ton amounts to 115,362*l*. annually, and sold at the rate of 1*s*. per cwt., or 1*l*. per ton, leaves 5*s*. 6*d*. per ton profit, or a total profit of 43,758*l*., and this profit divided according to the foregoing account gives the subjoined amounts, viz.:—

To each two-horse van regularly employed throughout the year, a profit of . .	£429	0
To each one-horse cart, ditto, ditto,	171	12
To each pony cart, ditto, ditto,	121	12

From which must, of course, be made the necessary deductions for the keep of the animals and the repair of vehicles, harness, &c.

The keep of a good horse is 10*s*. per week; a pony 6*s*. Three horses can be kept for the price of two, and so on; the more there are, the less cost for each.

The localities where the street-sellers of coals may most frequently be met with, are Blackwall, Poplar, Limehouse, Stepney, St. George's East, Twig Folly, Bethnal Green, Spitalfields, Shoreditch, Kingsland, Haggerstone, and Islington. It is somewhat remarkable that they are almost unknown on the south side of the Thames, and are seldom or never to be encountered in the low streets and lanes in Westminster lying contiguous to the river, nor in the vicinity of Marylebone, nor in any place farther west than Shoreditch; this is on account of the distance from the Regent's Canal basin precluding the possibility of their making more than one turn in the day, which would greatly diminish their profits, even though they might get a higher price for their commodity.

It may be observed that the foregoing statement in figures is rather under the mark than otherwise, as it is founded on the amount of coals purchased at a certain rate, and sold at a certain profit, without taking into account any of the "dodges" which almost all classes of coal dealers, from the highest to the lowest, are known to practise, so that the rate of profit arising from this business may be fairly supposed to amount to much more than the above account can show in figures.

I received the following statement from a person engaged in the street traffic:—

"I kept a coal-shed and greengrocer's shop, and as I had a son grown up, I wanted to get something for him to do; so about six years ago, having a pony and cart, and seeing others selling coals through the street, I thought I'd make him try his hand at it. I went to Mr. B——'s, at Whiting's wharf, and got the cart loaded, and sent my son round our own neighbourhood. I found that he soon disposed of them, and so he went on by degrees. People think we get a great deal of profit, but we don't get near as much as they think. I paid 16*s*. a ton all the winter for coals and sold them for a shilling a hundred, and when I came to feed the horse I found that he'll nearly eat it all up. A horse's belly is not so easy to fill. I don't think my son earns much more now, in summer, than feeds the horse. It's different in winter; he does not sell more nor half a ton a day now the weather's so warm. In winter he can always sell a ton at the least, and sometimes two, and on the Saturday he might sell three or four. My cart holds a ton; the vans hold from two to three tons. I can't exactly tell how many people are engaged in selling coals in the street, but there are a great many, that's certain. About eight o'clock what a number of carts and vans you'll see about the Regent's Canal! They like to get away before breakfast, because then they may have another turn after dinner. There's a great many go to other places for coals. The people who have vans do much better than those with the carts, because they carry so much that they save time. There are no great secrets in our business; we haven't the same chance of 'doing the thing' as the merchants have. They can mix the coals up as they like for their customers, and sell them for best; all we can do is to buy a low quality; then we may lose our customers if we play any tricks. To be sure, after that we can go to parts where we're not known. I don't use light weights, but I know it's done by a good many, and they mix up small coals a good deal, and that of course helps their profits. My son generally goes four or five miles before he sells a ton of coals, and in summer weather a great deal farther. It's hard-earned money that's got at it, I can tell you. My cart is worth 12*l*.; I have a van worth 20*l*. I wouldn't take 20*l*. for my horse. My van holds two tons of coals, and the horse draws it easily. I send the van out in the winter when there's a good call, but in the summer I only send it out on the Saturday. I never calculated how much profit I made. I haven't the least idea how much is got by it, but I'm sure there's not near as much as you say. Why, if there was, I ought to have made a fortune by this time." [It is right I should state that I received the foregoing account of the profits of the street trade in coals from one practically and eminently acquainted with it.] "Some in the trade have done very well, but they were well enough off before. I know very well I'll never make a fortune at anything; I'll be satisfied if I keep moving along, so as to keep out of the Union."

As to the habits of the street-sellers of coals,

they are as various as their different circumstances will admit; but they closely resemble each other in one general characteristic—their provident and careful habits. Many of them have risen from struggling costermongers, to be men of substance, with carts, vans, and horses of their own. Some of the more wealthy of the class may be met with now and then in the parlours of respectable public houses, where they smoke their pipes, sip their brandy and water, and are remarkable for the shrewdness of their remarks. They mingle freely with the respectable tradesmen of their own localities, and may be seen, especially on the Sunday afternoons, with their wives and showily-dressed daughters in the gardens of the New Globe, or Green Dragon—the Cremorne and Vauxhall of the east. I visited the house of one of those who I was told had originally been a costermonger. The front portion of the shop was almost filled with coals, he having added to his occupation of street-seller the business of a coal-shed man; this his wife and a little boy managed in his absence; while, true to his early training, the window-ledge and a bench before it were heaped up with cabbages, onions, and other vegetables. In an open space opposite his door, I observed a one-horse cart and two or three trucks with his name painted thereon. At his invitation, I passed through what may be termed the shop, and entered the parlour, a neat room nicely carpeted, with a round table in the centre, chairs ranged primly round the walls, and a long looking-glass reflecting the china shepherds and shepherdesses on the mantel-piece, while, framed and glazed, all around were highly-coloured prints, among which, Dick Turpin, in flash red coat, gallantly clearing the toll-gate in his celebrated ride to York, and Jack Sheppard lowering himself down from the window of the lock-up house, were most conspicuous. In the window lay a few books, and one or two old copies of *Bell's Life.* Among the well-thumbed books, I picked out the *Newgate Calendar*, and the "*Calendar of Orrers*," as he called it, of which he expressed a very high opinion. "Lor bless you," he exclaimed, "them there stories is the vonderfullest in the vorld! I 'd never ha believed it, if I adn't seed it vith my own two hies, but there can't be no mistake ven I read it hout o' the book, can there, now? I jist asks yer that ere plain question."

Of his career he gave me the following account:—"I vos at von time a coster, riglarly brought up to the business, the times vas good then; but lor, ve used to lush at sich a rate! About ten year ago, I ses to meself, I say Bill, I 'm blowed if this here game 'ill do any longer. I had a good moke (donkey), and a tidyish box ov a cart; so vot does I do, but goes and sees von o' my old pals that gits into the coal-line somehow. He and I goes to the Bell and Siven Mackerels in the Mile End Road, and then he tells me all he knowed, and takes me along vith hisself, and from that time I sticks to the coals.

"I niver cared much about the lush myself, and ven I got avay from the old uns, I didn't mind it no how; but Jack my pal vos a awful lushy cove, he couldn't do no good at nothink, votsomever; he died they say of *lirium trumans*" [not understanding what he meant, I inquired of what it was he died]; "why, of *lirium trumans*, vich I takes to be too much of Trueman and Hanbury's heavy; so I takes varnin by poor Jack, and cuts the lush; but if you thinks as ve don't enjoy ourselves sometimes, I tells you, you don't know nothink about it. I 'm gittin on like a riglar house a fire."

Of the Street-Sellers of Coke.

Among the occupations that have sprung up of late years is that of the purchase and distribution of the refuse cinders or coke obtained from the different gas-works, which are supplied at a much cheaper rate than coal. Several of the larger gas companies burn as many as 100,000 tons of coals per annum, and some even more, and every ton thus burnt is stated to leave behind two chaldrons of coke, returning to such companies 50 per cent. of their outlay upon the coal. The distribution of coke is of the utmost importance to those whose poverty forces them to use it instead of coal.

It is supposed that the ten gas companies in and about the metropolis produce at least 1,400,000 chaldrons of coke, which are distributed to the poorer classes by vans, one-horse carts, donkey carts, trucks, and itinerant vendors who carry one, and in some cases two sacks lashed together on their backs, from house to house.

The van proprietors are those who, having capital, contract with the companies at a fixed rate per chaldron the year through, and supply the numerous retail shops at the current price, adding 3*d.* per chaldron for carriage; thus speculating upon the rise or fall of the article, and in most cases carrying on a very lucrative business. This class numbers about 100 persons, and are to be distinguished by the words "coke contractor," painted on a showy ground on the exterior of their handsome well-made vehicles; they add to their ordinary business the occupation of conveying to their destination the coke that the companies sell from time to time. These men have generally a capital, or a reputation for capital, to the extent of 400*l.* or 500*l.*, and in some cases more, and they usually enter into their contracts with the companies in the summer, when but small quantities of fuel are required, and the gas-works are incommoded for want of space to contain the quantity made. They are consequently able, by their command of means, to make advantageous bargains, and several instances are known of men starting with a wheelbarrow in this calling and who are now the owners of the dwellings in which they reside, and have goods, vans, and carts besides.

Another class, to whom may be applied much that has been said of the van proprietors, are the possessors of one-horse carts, who in many instances keep small shops for the sale of greens, coals, &c. These men are scattered over the whole metropolis, but as they do not exclusively obtain their

living by vending this article, they do not properly belong to this portion of the inquiry.

A very numerous portion of the distributors of coke are the donkey-cart men, who are to be seen in all the poorer localities with a quantity shot in the bottom of their cart, and two or three sacks on the top or fastened underneath—for it is of a light nature—ready to meet the demand, crying "Coke! coke! coke!" morning, noon, and night. This they sell as low as 2*d.* per bushel, coke having, in consequence of the cheapness of coals, been sold at the gas-works by the single sack as low as 7*d.*, and although there is here a seeming contradiction—that of a man selling and living by the loss—such is not in reality the case. It should be remembered that a bushel of good coke will weigh 40 lbs., and that the bushels of these men rarely exceed 25 lbs.; so that it will be seen that by this unprincipled mode of dealing they can seemingly sell for less than they give, and yet realize a good profit. The two last classes are those who own a truck or wheelbarrow or are the fortunate possessors of an athletic frame and broad shoulders, who roam about near the vicinity of the gas-works, soliciting custom, obtaining ready cash if possible, but in most cases leaving one sack on credit, and obtaining a profit of from 2*d.*, 3*d.*, 4*d.*, or more. These men are to be seen going from house to house cleverly regulating their arrival to such times as when the head of the family returns home with his weekly wage, and in possession of ready cash enough to make a bargain with the coke contractor. Another fact in connection with this class, many of whom are women, who employ boys to drag or carry their wares to their customers, is this: when they fail through any cause, they put their walk up for sale, and find no difficulty to obtain purchasers from 2*l.* to as high as 8*l.*, 10*l.*, and 12*l.* The street-sellers of coke number in all not less than 1500 persons, who may be thus divided: van proprietors, 100; single horse carts, 300; donkey-cart men, 500; trucks, wheelbarrows, and "physical force men," 550; and women about 50, who penetrate to all the densely-crowded districts about town distributing this useful article; the major portion of those who are of anything like sober habits, live in comfort; and in spite of the opinion held by many, that the consumption of coke is injurious to health and sight, they carry on a large and increasing business.

At the present time coke may be purchased at the gas factories at 6*s.* per chaldron; but in winter it generally rises to 10*s.*, so that, taking the average, 8*s.*, it will be found, that the gas factories of the metropolis realize no less a sum than 560,000*l.* per annum, by the *coke* produced in the course of their operations. And 4*s.* per chaldron being considered a fair profit, it will be found, that the total profit arising from its sale by the various vendors is 280,000*l.*

It is impossible to arrive with any degree of certainty at the actual amount of business done by each of the above-named classes, and the profits consequent on that business: by dividing the above amount equally among all the coke sellers, it will be found to give 186*l.* per annum to each person. But it will be at once seen, that the same rule holds good in the coke trade that has already been explained in connection with coals: those possessing vans reaping the largest amount of profit; the one-horse cart men next; then the donkey carts, trucks, and wheelbarrows; and, least of all, the "backers," as they are sometimes called.

Concerning the amount of capital invested in the street-sale of coals it may be estimated as follows:—

If we allow 70*l.* for each of the 100 vans, it will give	£7,000
20*l.* for each of the horses . .	2,000
300 carts at 10*l.* each . . .	3,000
300 horses at 10*l.* each . . .	3,000
500 donkey-carts at 1*l.* each . .	500
500 donkeys at 1*l.* each . . .	500
200 trucks and barrows at 10*s.* each .	100
making a total of	£16,000

To this must be added			
4800 sacks for the 100 vans at 3*s.* 6*d.* each	840	0	0
3600 sacks for the 300 carts .	630	0	0
3000 " " 500 donkey carts	525	0	0
1652 " " 550 trucks and backers	288	15	0
300 " " 50 women.	52	10	0
	£18,336	5	0

Which being added to the value of vans, carts, and horses employed in the street-sale of coals, viz.	6,865
gives a capital of	£252,015

employed in the street-sale of coal and coke.

The profits of both these trades added together, namely, that on coals . .	43,758
and the profit on coke . . .	280,000
shows a total profit of . . .	£323,758

to be divided among 1710 persons, who compose the class of itinerant coal and coke vendors of the metropolis.

The following statement as to the street-sale of coke was given by a man in good circumstances, who had been engaged in the business for many years:—

"I am a native of the south of Ireland. More nor twenty years ago I came to London. I had friends here working in a gas factory, and afther a time they managed to get me into the work too. My business was to keep the coals to the stokers, and when they emptied the retorts to wheel the coke in barrows and empty it on the coke heap. I worked for four or five years, off and on, at this place. I was sometimes put out of work in the summer-time, because they don't want as many hands then. There's not near so much gas burned in summer, and then, of course, it takes less hands

to make it. Well, at last I got to be a stoker; I had betther wages thin, and a couple of pots of beer in the day. It was dhreadful hard work, and as hot, aye, as if you were in the inside of an oven. I don't know how I ever stood it. Be me soul, I don't know how anybody stands it; it's the divil's place of all you ever saw in your life, standing there before them retorts with a long heavy rake, pullin out the red-hot coke for the bare life, and then there's the rake red-hot in your hands, and the hissin and the bubblin of the wather, and the smoke and the smell—it's fit to melt a man like a rowl of fresh butther. I wasn't a bit too fond of it, at any rate, for it 'ud kill a horse; so I ses to the wife, 'I can't stand this much longer, Peggy.' Well, behold you, Peggy begins to cry and wring her hands, thinkin we'd starve; but I knew a grate dale betther nor that, for I was two or three times dhrinkin with some of thim that carry the coke out of the yard in sacks to sell to the poor people, and they had twice as much money to spind as me, that was working like a horse from mornin to night. I had a pound or two by me, for I was always savin, and by this time I knew a grate many people round about; so off I goes, and asks one and another to take a sack of coke from me, and bein knoun in the yard, and standin a dhrop o' dhrink now and thin for the fillers, I alway got good measure, and so I used to make four sacks out of three, and often three out of two. Well, at last I got tired carryin sacks on me back all day, and now I know I was a fool for doin it at all, for it's asier to dhrag a thruck with five or six sacks than to carry one; so I got a second-hand thruck for little or nothin, and thin I was able to do five times as much work in half the time. At last, I took a notion of puttin so much every Sathurday night in the savin bank, and faith, sir, that was the lucky notion for me, although Peggy wouldn't hear of it at all at all. She swore the bank 'ud be broke, and said she could keep the goold safer in her own stockin; that thim gintlemin in banks were all a set of blickards, and only desaved the poor people into givin them their money to keep it thimselves. But in spite of Peggy I put the money in, and it was well for me that I did so, for in a short time I could count up 30 or 40 guineas in bank, and whin Peggy saw that the bank wasn't broke she was quite satisfied; so one day I ses to myself, What the divil's the use of me breakin my heart mornin, noon, and night, dhraggin a thruck behind me, whin ever so little a bit of a horse would dhrag ten time as much as I can? so off I set to Smithfield, and bought a stout stump of a horse for 12*l.* 10*s.*, and thin wint to a sale and bought an ould cart for little or nothin, and in less nor a month I had every farthin back again in the bank. Well, afther this, I made more and more every day, and findin that I paid more for the coke in winther than in summer, I thought as I had money if I could only get a place to put a good lot in summer to sell in winther it would be a good thing; so I begun to look about, and found this house for sale, so I bought it out and out. It was an ould house to be sure; but it's sthrong enough, and dune up well enough for a poor man—besides there's the yard, and see in that yard there's a hape o'coke for the winther. I'm buyin it up now, an it 'ill turn a nice pinny whin the could weather comes again. To make a long story short, I needn't call the king my cousin. I'm sure any one can do well, if he likes; but I don't mane that they can do well brakin their heart workin; divil a one that sticks to work 'ill ever be a hapenny above a beggar; and I know if I'd stuck to it myself I'd be a grate dale worse off now than the first day, for I'm not so young nor near so sthrong as I was thin, and if I hadn't lift it off in time I'd have nothin at all to look to in a few years more but to ind my days in the workhouse—bad luck to it."

Of the Street-Sellers of Tan-Turf.

Tan-turf is oak bark made into turf after its virtues have been exhausted in the tan-pits. To make it into turf the manufacturers have a mill which is turned by horse-power, in which they grind the bark to a considerable degree of fineness, after which it is shaped by a mould into thin cakes about six inches square, put out to dry and harden, and when thoroughly hardened it is fit for sale and for all the uses for which it is intended.

There is only one place in London or its neighbourhood where there are tan-pits—in Bermondsey—and there only is the turf made. There are not more than a dozen persons in London engaged in the sale of this commodity in the streets, and they are all of the tribe of the costermongers. The usual capital necessary for starting in the line being a donkey and cart, with 9*s.* or 10*s.* to purchase a few hundreds of the turf.

There is a tradition extant, even at the present day, that during the prevalence of the plague in London the houses where the tan-turf was used in a great measure escaped that awful visitation; and to this moment many people purchase and burn it in their houses on account of the peculiar smell, and under the belief that it is efficacious in repelling infectious diseases from the localities in which it is used.

The other purposes for which it is used are for forming a sort of compost or manure for plants of the heath kind, which delight in a soil of this description, growing naturally among mosses and bogs where the peat fuel is obtained. It is used also by small bakers for heating their ovens, as preferable for their purposes, and more economical than any other description of fuel. Sometimes it is used for burning under coppers; and very often for keeping alight during the night, on account of the slowness of its decomposition by fire, for a single cake will continue burning for a whole night, will be found in the morning completely enveloped in a white ash, which, on being removed, discovers the live embers in the centre.

The rate at which the tan-turf is sold to the dealers, at the tan-pits, is from 6*d.* to 9*d.* per hun-

Original from HARVARD UNIVERSITY

dred cakes. Those at 9*d*. per hundred are perfect and unbroken, while those at 6*d*. have been injured in some way or other. The quality of the article, however, remains the same, and by purchasing some of each sort the vendors are able to make somewhat more profit, which may be, on an average, about 4½*d*. per hundred, as they sell it at 1*s*.

While seeking information on this subject I obtained the address of a person in T—— mews, T—— square, engaged in the business. Running out of the square is a narrow street, which, about mid-way through, leads on the right-hand side to a narrow alley, at the bottom of which is the mews, consisting of merely an oblong court, surrounded by stables of the very smallest dimensions, not one of them being more than twelve feet square. Three or four men, in the long waistcoats and full breeches peculiar to persons engaged among horses, were lounging about, and, with the exception of the horses, appeared to be the only inhabitants of the place. On inquiring of one of the loungers, I was shown a stable in one corner of the court, the wide door of which stood open. On entering I found it occupied by a donkey-cart, containing a couple of hundred cakes of tan-turf; another old donkey-cart was turned up opposite, the tailboard resting on the ground, the shafts pointing to the ceiling, while a cock and two or three draggle-tailed hens were composing themselves to roost on the front portion of the cart between the shafts. Within the space thus inclosed by the two carts lay a donkey and two dogs, that seemed keeping him company, and were busily engaged in mumbling and crunching some old bones. On the wall hung "Jack's harness." In one corner of the ceiling was an opening giving access to the place above, which was reached by means of a long ladder. On ascending this I found myself in a very small attic, with a sloping ceiling on both sides. In the highest part, the middle of the room, it was not more than six feet high, but at the sides it was not more than three feet. In this confined apartment stood a stump bedstead, taking up the greater portion of the floor. In a corner alongside the fire-place I noticed what appeared to be a small turn-up bedstead. A little ricketty deal table, an old smoke-dried Dutch clock, and a poor old woman, withered and worn, were the only other things to be seen in the place. The old woman had been better off, and, as is not uncommon under such circumstances, she endeavoured to make her circumstances appear better than they really were. She made the following statement:—

"My husband was 23 years selling the tan turf. There used to be a great deal more of it sold than there is now; people don't seem to think so much of it now, as they once did, but there are some who still use it. There 's an old lady in Kentish-town, who must have it regularly; she burns it on account of the smell, and has burned it for many years: my husband used to serve her. There 's an old doctor at Hampstead —or rather he was there, for he died a few days ago—he always bought a deal of it, but I don't know whether he burned it or not; he used to buy 500 or 600 at a time, he was a very good customer, and we miss him now. The gardeners buy some of it, for their plants, they say it makes good manure, though you wouldn't think so to look at it, it 's so hard and dry. My husband is dead three years; we were better off when he was alive; he was a very sober and careful man, and never put anything to waste. My youngest son goes with the cart now; he don't do as well as his father, poor little fellow! he 's only fourteen years of age, but he does very well for a boy of his age. He sometimes travels 30 miles of a day, and can't sell a load—sometimes not half a load; and then he comes home of a night so foot-sore that you 'd pity him. Sometimes he 's not able to stir out, for a day or two, but he must do something for a living; there 's nothing to be got by idleness. The cart will hold 1000 or 1200, and if he could sell that every day we 'd do very well; it would leave us about 3*s*. 6*d*. profit, after keeping the donkey. It costs 9*d*. a day to keep our donkey; he 's young yet, but he promises to be a good strong animal, and I like to keep him well, even if I go short myself, for what could we do without him? I believe there are one or two persons selling tan-turf who use trucks, but they 're strong; besides they can't do much with a truck, they can't travel as far with a truck as a donkey can, and they can't take as much out with them. My son goes of a morning to Bermondsey for a load, and is back by breakfast time; from this to Bermondsey is a long way—then he goes out and travels all round Kentish-town and Hampstead, and what with going up one street and down another, by the time he comes home at night, he don't travel less than from 25 to 30 miles a day. I have another son, the eldest. He used to go with his father when he was alive; he was reared to the business, but after he died he thought it was useless for both to go out with the cart, so he left it to the little fellow, and now the eldest works among horses. He don't do much, only gets an odd job now and then among the ostlers, and earns a shilling now and then. They 're both good lads, and would do well if they could; they do as well as they can, and I have a right to be thankful for it."

The poor woman, notwithstanding the extraordinary place in which she lived, and the confined dimensions of her single apartment (I ascertained that the two sons slept in the stump bedstead, while she used the turn-up), was nevertheless cleanly in her person and apparel, and superior in many respects to persons of the same class, and I give her statement verbatim, as it corroborates, in almost every particular, the statement of the unfortunate seller of salt, who is afflicted with a drunken disorderly wife, and who is also a man superior to the people with whom he is compelled to associate, but who in evident bitterness of spirit made this assertion: "Bad as I 'm off now, if I had only a careful partner, I wouldn't want for anything."

Concerning the dogs that I have spoken of as being with the donkey, there is a curious story. During his rounds the donkey frequently met the bitch, and an extraordinary friendship grew up between the two animals, so that the dog at last forsook its owner, and followed the donkey in all his travels. For some time back she has accompanied him home, together with her puppy, and they all sleep cozily together during the night, Jack taking especial care not to hurt the young one. In the morning, when about to go out for the day's work, it is of no use to expect Jack to go without his friends, as he will not budge an inch, so he is humoured in his whim. The puppy, when tired, is put into the cart, and the mother forages for her living along the way; the poor woman not being able to feed them. The owner of the dogs came to see them on the day previous to my visit.

Of the Street-Sellers of Salt.

Until a few years after the repeal of the duty on the salt, there were no street-sellers of it. It was first taxed in the time of William III., and during the war with Napoleon the impost was 15*s.* the bushel, or nearly thirty times the cost of the article taxed. The duty was finally repealed in 1823. When the tax was at the highest, salt was smuggled most extensively, and retailed at 4*d.* and 4½*d.* the pound. A licence to sell it was also necessary. Street salt-selling is therefore a trade of some twenty years standing. Considering the vast consumption of salt, and the trifling amount of capital necessary to start in the business, it might be expected that the street-sellers would be a numerous class, but they do not number above 150 at the outside. The reason assigned by a well-informed man was, that in every part of London there are such vast numbers of shopkeepers who deal in salt.

	£	s.	d.
About one-half of those employed in street salt-selling have donkeys and carts, and the rest use the two-wheeled barrow of the costermonger, to which class the street salt-sellers, generally, belong. The value of the donkey and cart may be about 2*l.* 5*s.* on an average, so that 75 of the number possessing donkeys and carts will have a capital among them equal to the sum of	£168	15	0
The barrows of the remainder are worth about 10*s.* each, which will amount to	37	10	0
To sell 3 cwt. of salt in a day is considered good work; and this, if purchased at 2*s.* per cwt., gives for stock-money the sum total of	45	0	0
Thus the amount of capital which may be reasonably assumed to be embarked in this business is .	£251	5	0

The street-sellers pay at the rate of 2*s.* per cwt. for the salt, and retail it at 3 lbs. for 1*d.*, which leaves 1*s.* 1*d.* profit on every cwt. One day with another, taking wet and dry, for from the nature of the article it cannot be hawked in wet weather, the street-sellers dispose of about 2½ cwt. per day, or 18 tons 15 cwt. per day for all hands, which, deducting Sundays, makes 5825 tons in the course of the year. The profit of 1*s.* 1*d.* per cwt. amounts to a yearly aggregate profit of 6310*l.* 8*s.* 4*d.*, or about 42*l.* per annum for each person in the trade.

The salt dealers, generally, endeavour to increase their profits by the sale of mustard, and sometimes by the sale of rock-salt, which is used for horses; but in these things they do little, the most profit they can realize in a day averaging about 4*d.*

The salt men who merely use the barrow are much better off than the donkey-cart men; the former are young men, active and strong, well able to drive their truck or barrow about from one place to another, and they can thereby save the original price and subsequent keep of the donkey. The latter are in general old men, broken down and weak, or lads. The daily cost of keeping a donkey is from 6*d.* to 9*d.*; if we reckon 7½*d.* as the average, it will annually amount to 11*l.* 8*s.* 1*d.* the year, which will reduce the profit of 42*l.* to about 30*l.*, and so leave a balance of 11*l.* 8*s.* 1*d.* in favour of the truck or barrow man.

There are nine or ten places where the street-sellers purchase the salt:—Moore's, at Paddington, who get their salt by the canal, from Staffordshire; Welling's, at Battle-bridge; Baillie, of Thames-street, &c. Great quantities are brought to London by the different railways. The street-sellers have all regular beats, and seldom intrude on each other, though it sometimes happens, especially when any quarrel occurs among them, that they oppose and undersell one another in order to secure the customers.

During my inquiries on this subject, I visited Church-lane, Bloomsbury, to see a street-seller, about seven in the evening. Since the alterations in St. Giles's, Church-lane has become one of the most crowded places in London. The houses, none of which are high, are all old, time-blackened, and dilapidated, with shattered window-frames and broken panes. Stretching across the narrow street, from all the upper windows, might be seen lines crossing and recrossing each other, on which hung yellow-looking shirts, stockings, women's caps, and handkerchiefs looking like soiled and torn paper, and throwing the whole lane into shade. Beneath this ragged canopy, the street literally swarmed with human beings—young and old, men and women, boys and girls, wandering about amidst all kinds of discordant sounds. The footpaths on both sides of the narrow street were occupied here and there by groups of men and boys, some sitting on the flags and others leaning against the wall, while their feet, in most instances bare, dabbled in the black channel alongside the kerb, which being disturbed sent up a sickening stench. Some of these groups were playing cards for money, which lay on the ground near them. Men and women at intervals lay stretched out in

sleep on the pathway; over these the passengers were obliged to jump; in some instances they stood on their backs as they stepped over them, and then the sleeper languidly raised his head, growled out a drowsy oath, and slept again. Three or four women, with bloated countenances, blood-shot eyes, and the veins of their necks swollen and distended till they resembled strong cords, staggered about violently quarrelling at the top of their drunken voices.

The street salt-seller—whom I had great difficulty in finding in such a place—was a man of about 50, rather sickly in his look. He wore an old cloth cap without a peak, a sort of dun-coloured waistcoat, patched and cobbled, a strong check shirt, not remarkable for its cleanliness, and what seemed to me to be an old pair of buckskin breeches, with fragments hanging loose about them like fringes. To the covering of his feet—I can hardly say shoes—there seemed to be neither soles nor uppers. How they kept on was a mystery.

In answer to my questions, he made the following statement, in language not to be anticipated from his dress, or the place in which he resided: "For many years I lived by the sale of toys, such as little chairs, tables, and a variety of other little things which I made myself and sold in the streets; and I used to make a good deal of money by them; I might have done well, but when a man hasn't got a careful partner, it 's of no use what he does, he 'll never get on, he may as well give it up at once, for the money 'll go out ten times as fast as he can bring it in. I hadn't the good fortune to have a careful woman, but one who, when I wouldn't give her money to waste and destroy, took out my property and made money of it to drink; where a bad example like that is set, it 's sure to be followed; the good example is seldom taken, but there 's no fear of the bad one. You may want to find out where the evil lies, I tell you it lies in that pint pot, and in that quart pot, and if it wasn't for so many pots and so many pints, there wouldn't be half so much misery as there is. I know that from my own case. I used to sell toys, but since the foreign things were let come over, I couldn't make anything of them, and was obliged to give them up. I was forced to do something for a living, for a half loaf is better than no bread at all, so seeing two or three selling salt, I took to it myself. I buy my salt at Moore's wharf, Paddington; I consider it the purest; I could get salt 3*d*. or 2*d*. the cwt., or even cheaper, but I 'd rather have the best. A man 's not ashamed when he knows his articles are good. Some buy the cheap salt, of course they make more profit. We never sell by measure, always by weight; some of the street weights, a good many of them, are slangs, but I believe they are as honest as many of the shopkeepers after all; every one does the best he can to cheat everybody else. I go two or three evenings in the week, or as often as I want it, to the wharf for a load. I 'm going there to-night, three miles out and three miles in. I sell, considering everything, about 2 cwt. a day; I sold 1½ to-day, but to-morrow (Saturday) I 'll sell 3 or 4 cwt., and perhaps more. I pay 2*s*. the cwt. for it, and make about 1*s*. a cwt. profit on that. I sold sixpennyworth of mustard to-day; it might bring me in 2*d*. profit, every little makes something. If I wasn't so weak and broke down, I wouldn't trouble myself with a donkey, it 's so expensive; I 'd easily manage to drive about all I 'd sell, and then I 'd save the expense. It costs me 7*d*. or 8*d*. a day to keep him, besides other things. I got him a set of shoes yesterday, I said I 'd shoe him first and myself afterwards; so you see there's other expenses. There 's my son, too, paid off the other day from the *Prince of Wales*, after a four years' voyage, and he came home without a sixpence in his pocket. He might have done something for me, but I couldn't expect anything else from him after the example that was set to him. Even now, bad as I am, I wouldn't want for anything if I had a careful woman; but she 's a shocking drunkard, and I can do nothing with her." This poor fellow's mind was so full of his domestic troubles that he recurred to them again and again, and was more inclined to talk about what so nearly concerned himself than on any matter of business.

Of the Street-Sellers of Sand.

Two kinds of sand only are sold in the streets, scouring or floor sand, and bird sand for birds. In scouring sand the trade is inconsiderable to what it was, saw-dust having greatly superseded it in the gin-palace, the tap-room, and the butcher's shop. Of the supply of sand, a man, who was working at the time on Hampstead-heath, gave the following account:—"I 've been employed here for five-and-thirty years, under Sir Thomas Wilson. Times are greatly changed, sir; we used to have from 25 to 30 carts a day hawking sand, and taking six or seven men to fill them every morning; besides large quantities which went to brass-founders, and for cleaning dentists' cutlery, for stone-sawing, lead and silver casting, and such like. This heath, sir, contains about every kind of sand, but Sir Thomas won't allow us to dig it. The greatest number of carts filled now is eight or ten a day, which I fill myself. Sir Thomas has raised the price from 3*s*. 6*d*. to 4*s*. a load, of about 2½ tons. Bless you, sir, some years ago, one might go into St. Luke's, and sell five or six cart-loads of house-sand a week; now, a man may roar himself hoarse, and not sell a load in a fortnight. Saw-dust is used in all the public-houses and gin-palaces. People 's sprung up who don't use sand at all; and many of the old people are too poor to buy it. The men who get sand here now are old customers, who carry it all over the town, and round Holloway, Islington, and such parts. Twelve year ago I would have taken here 6*l*. or 7*l*. in a morning, to-day I have only taken 9*s*. Fine weather is greatly against the sale of house-sand; in wet, dirty weather, the sale is greater."

One street sand-seller gave the following account of his calling:—

"I have been in the sand business, man and

boy, for 40 years. I was at it when I was 12 years old, and am now 52. I used to have two carts hawking sand, but it wouldn't pay, so I have just that one you see there. Hawking sand is a poor job now. I send two men with that 'ere cart, and pay one of 'em 3s. 4d. and the other 3s. a day. Now, with beer-money, 2s. a week, to the man at the heath, and turnpike gates, I reckon every load of sand to cost me 5s. Add to that 6s. 4d. for the two men, the wear and tear, and horse's keep (and, to do a horse justice, you cannot in these cheap times keep him at less than 10s. a week, in dear seasons, it will cost 15s.), and you will find each load of sand stands me in a good sum. So suppose we get a guinea a load, you see we have no great pull. Then there 's the licence, 8l. a year. Many years ago we resisted this, and got Mr. Humphreys to defend us before the magistrates at Clerkenwell; but we were 'cast,' several hawkers were fined 10l., and I was brought up before old Sir Richard Birnie, at Bow-street, and had to find bail that I would not sell another bushel of sand till I took out a licence. Soon after that Sir Thomas Wilson shut up the heath from us; he said he would not have it cut about any more, for that a poor animal could not pick up a crumb without being in danger of breaking its leg. This was just after we took out our licences, and, as we 'd paid dearly for being allowed to sell the sand, some of us, and I was one, we waited upon Sir Thomas, and asked to be allowed to work out our licences, which was granted, and we have gone on ever since. My men work very hard for their money, sir; they are up at 3 o'clock of the morning, and are knocking about the streets, perhaps till 5 or 6 o'clock in the evening."

The yellow house-sand is also found at Kingsland, and at the Kensington Gravel-pits; but at the latter place street-sellers are not supplied. The sand here is very fine, and mostly disposed of to plasterers. There is also some of this kind of sand at Wandsworth. In the street-selling of house-sand, there are now not above 30 men employed, and few of these trade on their own account. Reckoning the horses and carts employed in the trade at the same price as our Camden-town informant sets on his stock, we have 20 horses, at 10l. each, and 20 carts, at 3l. each, with 3 baskets to each, at 2s. apiece, making a total of 236l. of capital employed in the carrying machinery of the street-selling of sand. Allowing 3s. a day for each man, the wages would amount for 30 men to 27l. weekly; and the expenses for horses' keep, at 10s. a head, would give, for 20 horses, 10l. weekly, making a total of 38l. weekly, or an annual expenditure for man and horse of 2496l. Calculating the sale at a load per day, for each horse and cart, at 21s. a load, we have 6573l. annually expended in the purchase of house or floor-sand.

Bird-sand, or the fine and dry sand required for the use of cage-birds, is now obtained altogether of a market gardener in Hackney. It is sold at 8d. the barrow-load; as much being shovelled on to a coster's barrow "as it will carry." A good-sized barrow holds 3½ bushels; a smaller size, 3 bushels, and the buyer is also the shoveller. Three-fourths of the quantity conveyed by the street-sellers from Hackney is sold to the bird-shop keepers at 6d. for 3 pecks. The remainder is disposed of to such customers as purchase it in the street, or is delivered at private houses, which receive a regular supply. The usual charge to the general public is a halfpenny or a penny for sand to fill any vessel brought to contain it. A penny a gallon is perhaps an average price in this retail trade.

A man, "in a good way of business," disposes of a barrow-load once a week; the others once a fortnight. In wet or windy weather great care is necessary, and much trouble incurred in supplying this sand to the street-sellers, and again in their vending it in the streets. The street-vendors are the same men as supply the turf, &c., for cage-birds, of whom I have treated, p. 156, vol. i. They are 40 in number, and although they do not all supply sand, a matter beyond the strength of the old and infirm, a few costermongers convey a barrow-load of sand now and then to the bird-sellers, and this addition ensures the weekly supply of 40 barrow-loads. Calculating these at the wholesale, or bird-dealer's price—2s. 3d. a barrow being an average—we find 234l. yearly expended in this sand. What is vended at 2s. 3d. costs but 8d. at the wholesale price; but the profit is hardly earned considering the labour of wheeling a heavy barrow of sand for miles, and the trouble of keeping over night what is unsold during the day.

Of the Street-Sellers of Shells.

The street-trade in shells presents the characteristics I have before had to notice as regards the trade in what are not necessaries, or an approach to necessaries, in contradistinction of what men must have to eat or wear. Shells, such as the green snail, ear shell, and others of that class, though extensively used for inlaying in a variety of ornamental works, are comparatively of little value; for no matter how useful, if shells are only well known, they are considered of but little importance; while those which are rarely seen, no matter how insignificant in appearance, command extraordinary prices. As an instance I may mention that on the 23rd of June there was purchased by Mr. Sowerby, shell-dealer, at a public sale in King-street, Covent-garden, a small shell not two inches long, broken and damaged, and withal what is called a "dead shell," for the sum of 30 guineas. It was described as the *Conus Glory Mary*, and had it only been perfect would have fetched 100 guineas.

Shells, such as conches, cowries, green snails, and ear shells (the latter being so called from their resemblance to the human ear), are imported in large quantities, as parts of cargoes, and are sold to the large dealers by weight. Conch shells are sold at 8s. per cwt; cowries and clams from 10s. to 12s. per cwt; the green snail, used for inlaying, fetches from 1l. to 1l. 10s. per cwt.; and the ear shell, on account of its superior quality and richer variety of colours, as much as 3l. and 5l. per cwt.

The conches are found only among the West India Islands, and are used principally for garden ornaments and grotto-work. The others come principally from the Indian Ocean and the China seas, and are used as well for chimney ornaments, as for inlaying, for the tops of work-tables and other ornamental furniture.

The shells which are considered of the most value are almost invariably small, and of an endless variety of shape. They are called "cabinet" shells, and are brought from all parts of the world —land as well as sea—lakes, rivers, and oceans furnishing specimens to the collection. The Australian forests are continually ransacked to bring to light new varieties. I have been informed that there is not a river in England but contains valuable shells; that even in the Thames there are shells worth from 10*s.* to 1*l.* each. I have been shown a shell of the snail kind, found in the woods of New Holland, and purchased by a dealer for 2*l.*, and on which he confidently reckoned to make a considerable profit.

Although "cabinet" shells are collected from all parts, yet by far the greater number come from the Indian Ocean. They are generally collected by the natives, who sell them to captains and mates of vessels trading to those parts, and very often to sailors, all of whom frequently speculate to a considerable extent in these things, and have no difficulty in disposing of them as soon as they arrive in this country, for there is not a shell dealer in London who has not a regular staff of persons stationed at Gravesend to board the homeward-bound ships at the Nore, and sometimes as far off as the Downs, for the purpose of purchasing shells. It usually happens that when three or four of these persons meet on board the same ship, an animated competition takes place, so that the shells on board are generally bought up long before the ship arrives at London. Many persons from this country go out to various parts of the world for the sole purpose of procuring shells, and they may be found from the western coast of Africa to the shores of New South Wales, along the Persian Gulf, in Ceylon, the Malaccas, China, and the Islands of the Pacific, where they employ the natives in dredging the bed of the ocean, and are by this means continually adding to the almost innumerable varieties which are already known.

To show the extraordinary request in which shells are held in almost every place, while I was in the shop of Mr. J. C. Jamrach, naturalist, and agent to the Zoological Society at Amsterdam—one of the largest dealers in London, and to whom I am indebted for much valuable information on this subject—a person, a native of High Germany, was present. He had arrived in London the day before, and had purchased on that day a collection of shells of a low quality for which he paid Mr. Jamrach 36*l.*; to this he added a few birds. Placing his purchase in a box furnished with a leather strap, he slung it over his shoulder, shook hands with Mr. Jamrach, and departed. Mr. Jamrach informed me that the next morning he was to start by steam for Rotterdam, then continue his journey up the Rhine to a certain point, from whence he was to travel on foot from one place to another, till he could dispose of his commodities; after which he would return to London, as the great mart for a fresh supply. He was only a very poor man, but there are a great many others far better off, continually coming backwards and forwards, who are able to purchase a larger stock of shells and birds, and who, in the course of their peregrinations, wander through the greater part of Germany, extending their excursions sometimes through Austria, the Tyrol, and the north of Italy. A visit to the premises of Mr. Jamrach, Ratcliff-highway, or Mr. Samuel, Upper East Smithfield, would well repay the curious observer. The front portion of Mr. Jamrach's house is taken up with a wonderful variety of strange birds that keep up an everlasting screaming; in another portion of the house are collected confusedly together heaps of nondescript articles, which might appear to the uninitiated worth little or nothing, but on which the possessor places great value. In a yard behind the house, immured in iron cages, are some of the larger species of birds, and some beautiful varieties of foreign animals—while in large presses ranged round the other rooms, and furnished with numerous drawers, are placed his real valuables, the cabinet shells. The establishment of Mr. Samuel is equally curious.

In London, the dealers in shells, keeping shops for the sale of them, amount to no more than ten; they are all doing a large business, and are men of good capital, which may be proved by the following quotation from the day-books of one of the class for the present year, viz.:—

Shells sold in February . . .	£275	0	0
Ditto, ditto, March	471	0	0
Ditto, ditto, April	1389	0	0
Ditto, ditto, May	475	0	0
Total	£2610	0	0
Profit on same, February . . .	£75	12	0
Ditto, ditto, March	140	0	0
Ditto, ditto, April	323	0	0
Ditto, ditto, May	127	0	0
Total	£665	12	0

Besides these there are about 20 private dealers who do not keep shops, but who nevertheless do a considerable business in this line among persons at the West End of London. All shell dealers add to that occupation the sale of foreign birds and curiosities.

There is yet another class of persons who seem to be engaged in the sale of shells, but it is only seeming. They are dressed as sailors, and appear at all times to have just come ashore after a long voyage, as a man usually follows them with that sort of canvas bag in use among sailors, in which they stow away their clothes; the men themselves go on before carrying a parrot or some rare bird in one hand, and in the other a large shell. These men are the "duffers" of whom I have spoken

in my account of the sale of foreign birds. They make shells a more frequent medium for the introduction of their real avocation, as a shell is a far less troublesome thing either to hawk or keep by them than a parrot.

I now give a description of these men, as general duffers, and from good authority.

"They are known by the name of '*duffers*,' and have an exceedingly cunning mode of transacting their business. They are all united in some secret bond; they have persons also bound to them, who are skilled in making shawls in imitation of those imported from China, and who, according to the terms of their agreement, must not work for any other persons. The duffers, from time to time, furnish these persons with designs for shawls, such as cannot be got in this country, which, when completed, they (the duffers) conceal about their persons, and start forward on their travels. They contrive to gain admission to respectable houses by means of shells and sometimes of birds, which they purchase from the regular dealers, but always those of a low quality; after which they contrive to introduce the shawls, their real business, for which they sometimes have realized prices varying from 5*l.* to 20*l.* In many instances, the cheat is soon discovered, when the duffers immediately decamp, to make place for a fresh batch, who have been long enough out of London to make their faces unknown to their former victims. These remain till they also find danger threaten them, when they again start away, and others immediately take their place. While away from London, they travel through all parts of the country, driving a good trade among the country gentlemen's houses; and sometimes visiting the seaports, such as Liverpool, Portsmouth, and Plymouth."

An instance of the skill with which the duffers sometimes do business, is the following. One of these persons some time ago came into the shop of a shell dealer, having with him a beautiful specimen of a three-coloured cockatoo, for which he asked 10*l.* The shell dealer declined the purchase at that price, saying, that he sold these birds at 4*l.* a piece, but offered to give 3*l.* 10*s.* for it, which was at once accepted; while pocketing the money, the man remarked that he had paid ten guineas for that bird. The shell dealer, surprised that so good a judge should be induced to give so much more than the value of the bird, was desirous of hearing further, when the duffer made this statement:—"I went the other day to a gentleman's house, he was an old officer, where I saw this bird, and, in order to get introduced, I offered to purchase it. The gentleman said he knew it was a valuable bird, and couldn't think of taking less than ten guineas. I then offered to barter for it, and produced a shawl, for which I asked twenty-five guineas, but offered to take fifteen guineas and the bird. This was at length agreed to, and now, having sold it for 3*l.* 10*s.*, it makes 19*l.* 5*s.* I got for the shawl, and not a bad day's work either."

Of shells there are about a million of the commoner sorts bought by the London street-sellers at 3*s.* the gross. They are retailed at 1*d.* apiece, or 12*s.* the gross, when sold separately; a large proportion, as is the case with many articles of taste or curiosity rather than of usefulness, being sold by the London street-folk on country rounds; some of these rounds stretch half-way to Bristol or to Liverpool.

Of the River Beer-Sellers, or Purl-Men.

There is yet another class of itinerant dealers who, if not traders in the streets, are traders in what was once termed the silent highway—the river beer-sellers, or purl-men, as they are more commonly called. These should strictly have been included among the sellers of eatables and drinkables; they have, however, been kept distinct, being a peculiar class, and having little in common with the other out-door sellers.

I will begin my account of the river-sellers by enumerating the numerous classes of labourers, amounting to many thousands, who get their living by plying their respective avocations on the river, and who constitute the customers of these men. There are first the sailors on board the corn, coal, and timber ships; then the "lumpers," or those engaged in discharging the timber ships; the "stevedores," or those engaged in stowing craft; and the "riggers," or those engaged in rigging them; ballast-heavers, ballast-getters, corn-porters, coal-whippers, watermen and lightermen, and coal-porters, who, although engaged in carrying sacks of coal from the barges or ships at the river's side to the shore, where there are public-houses, nevertheless, when hard worked and pressed for time, frequently avail themselves of the presence of the purl-man to quench their thirst, and to naval stimulate them to further exertion.

It would be a remarkable circumstance if the fact of so many persons continually employed in severe labour, and who, of course, are at times in want of refreshment, had not called into existence a class to supply that which was evidently required; under one form or the other, therefore, river-dealers boast of an antiquity as old as the navel commerce of the country.

The prototype of the river beer-seller of the present day is the bumboat-man. Bumboats (or rather *Baum*-boats, that is to say, the boats of the harbour, from the German *Baum*, a haven or bar) are known in every port where ships are obliged to anchor at a distance from the shore. They are stored with a large assortment of articles, such as are likely to be required by people after a long voyage. Previously to the formation of the various docks on the Thames, they were very numerous on the river, and drove a good trade with the homeward-bound shipping. But since the docks came into requisition, and steam-tugs brought the ships from the mouth of the river to the dock entrance, their business died away, and they gradually disappeared; so that a bumboat on the Thames at the present day would be a sort of curiosity, a relic of times past.

In former times it was *not* in the power of any person who chose to follow the calling of a bumboat man on the Thames. The Trinity Com-

pany had the power of granting licences for this purpose. Whether they were restrained by some special clause in their charter, or not, from giving licences indiscriminately, it is difficult to say. But it is certain that none got a licence but a sailor—one who had "served his country;" and it was quite common in those days to see an old fellow with a pair of wooden legs, perhaps blind of an eye, or wanting an arm, and with a face rugged as a rock, plying about among the shipping, accompanied by a boy whose duty it was to carry the articles to the purchasers on shipboard, and help in the management of the boat. In the first or second year of the reign of her present Majesty, however, when the original bumboat-men had long degenerated into the mere beer-sellers, and any one who wished traded in this line on the river (the Trinity Company having for many years paid no attention to the matter), an inquiry took place, which resulted in a regulation that all the beer-sellers or purl-men should thenceforward be regularly licensed for the river-sale of beer and spirits from the Waterman's Hall, which regulation is in force to the present time.

It appears to have been the practice at some time or other in this country to infuse wormwood into beer or ale previous to drinking it, either to make it sufficiently bitter, or for some medicinal purpose. This mixture was called *purl*—why I know not, but Bailey, the philologist of the seventeenth century, so designates it. The drink originally sold on the river was purl, or this mixture, whence the title, purl-man. Now, however, the wormwood is unknown; and what is sold under the name of purl is beer warmed nearly to boiling heat, and flavoured with gin, sugar, and ginger. The river-sellers, however, still retain the name, of *purl*-men, though there is not one of them with whom I have conversed that has the remotest idea of the meaning of it.

To set up as a purl-man, some acquaintance with the river, and a certain degree of skill in the management of a boat, are absolutely necessary; as, from the frequently-crowded state of the pool, and the rapidity with which the steamers pass and repass, twisting and wriggling their way through craft of every description, the unskilful adventurer would run in continual danger of having his boat crushed like a nutshell. The purl-men, however, through long practice, are scarcely inferior to the watermen themselves in the management of their boats; and they may be seen at all times easily working their way through every obstruction, now shooting athwart the bows of a Dutch galliot or sailing-barge, then dropping astern to allow a steam-boat to pass till they at length reach the less troubled waters between the tiers of shipping.

The first thing required to become a purl-man is to procure a licence from the Waterman's Hall, which costs 3*s.* 6*d.* per annum. The next requisite is the possession of a boat. The boats used are all in the form of skiffs, rather short, but of a good breadth, and therefore less liable to capsize through the swell of the steamers, or through any other cause. Thus equipped he then goes to some of the small breweries, where he gets two "pins," or small casks of beer, each containing eighteen pots; after this he furnishes himself with a quart or two of gin from some publican, which he carries in a tin vessel with a long neck, like a bottle—an iron or tin vessel to hold the fire, with holes drilled all round to admit the air and keep the fuel burning, and a huge bell, by no means the least important portion of his fit out. Placing his two pins of beer on a frame in the stern of the boat, the spiles loosened and the brass cocks fitted in, and with his tin gin bottle close to his hand beneath the seat, two or three measures of various sizes, a black tin pot for heating the beer, and his fire pan secured on the bottom of the boat, and sending up a black smoke, he takes his seat early in the morning and pulls away from the shore, resting now and then on his oars, to ring the heavy bell that announces his approach. Those on board the vessels requiring refreshment, when they hear the bell, hail "Purl ahoy;" in an instant the oars are resumed, and the purl-man is quickly alongside the ship.

The bell of the purl-man not unfrequently performs another very important office. During the winter, when dense fogs settle down on the river, even the regular watermen sometimes lose themselves, and flounder about bewildered perhaps for hours. The direction once lost, their shouting is unheeded or unheard. The purl-man's bell, however, reaches the ear through the surrounding gloom, and indicates his position; when near enough to hear the hail of his customers, he makes his way unerringly to the spot by now and then sounding his bell; this is immediately answered by another shout, so that in a short time the glare of his fire may be distinguished as he emerges from the darkness, and glides noiselessly alongside the ship where he is wanted.

The amount of capital necessary to start in the purl line may be as follows:—I have said that the boats are all of the skiff kind—generally old ones, which they patch up and repair at but little cost. They purchase these boats at from 3*l.* to 6*l.* each. If we take the average of these two sums, the items will be—

	£	*s.*	*d.*
Boat	4	10	0
Pewter measures	0	5	0
Warming-pot	0	1	6
Fire stove	0	5	0
Gallon can	0	2	6
Two pins of beer	0	8	0
Quart of gin	0	2	6
Sugar and ginger	0	1	0
Licence	0	3	6
Total	£5	19	0

Thus it requires, at the very least, a capital of 6*l.* to set up as a purl-man.

Since the Waterman's Hall has had the granting of licences, there have been upwards of 140 issued; but out of the possessors of these many are dead, some have left for other business, and others are too old and feeble to follow the occupation

Original from HARVARD UNIVERSITY

any longer, so that out of the whole number there remain only 35 purl-men on the river, and these are thus divided:—23 ply their trade in what is called "the pool," that is, from Execution Dock to Ratcliff Cross, among the coal-laden ships, and do a tolerable business amongst the sailors and the hard-working and thirsty coal-whippers; 8 purl-men follow their calling from Execution Dock to London Bridge, and sell their commodity among the ships loaded with corn, potatoes, &c.; and 4 are known to frequent the various reaches below Limehouse Hole, where the colliers are obliged to lie at times in sections, waiting till they are sold on the Coal Exchange, and some even go down the river as far as the ballast-lighters of the Trinity Company, for the purpose of supplying the ballast-getters. The purl-men cannot sell much to the unfortunate ballast-heavers, for they are suffering under all the horrors of an abominable truck system, and are compelled to take from the publicans about Wapping and Shadwell, who are their employers, large quantities of filthy stuff compounded especially for their use, for which they are charged exorbitant prices, being thus and in a variety of other ways mercilessly robbed of their earnings, so that they and their families are left in a state of almost utter destitution. One of the purl-men, whose boat is No. 44, has hoops like those used by gipsies for pitching their tents; these he fastens to each side of the boat, over which he draws a tarred canvas covering, water-proof, and beneath this he sleeps the greater part of the year, seldom going ashore except for the purpose of getting a fresh supply of liquors for trade, or food for himself. He generally casts anchor in some unfrequented nook down the river, where he enjoys all the quiet of a Thames hermit, after the labour of the day. To obtain the necessary heat during the winter, he fits a funnel to his fire-stove to carry away the smoke, and thus warmed he sleeps away in defiance of the severest weather.

It appears from the facts above given that 210*l.* is the gross amount of capital employed in this business. On an average all the year round each purl-man sells two "pins" of beer weekly, independent of gin; but little gin is thus sold in the summer, but in the winter a considerable quantity of it is used in making the purl. The men purchase the beer at 4*s.* per pin, and sell it at 4*d.* per pot, which leaves them a profit of 4*s.* on the two pins, and, allowing them 6*d.* per day profit on the gin, it gives 1*l.* 7*s.* per week profit to each, or a total to all hands of 47*l.* 5*s.* per week, and a gross total of 2457*l.* profit made on the sale of 98,280 gallons of beer, beside gin sold on the Thames in the course of the year. From this amount must be deducted 318*l.* 10*s.*, which is paid to boys, at the rate of 3*s.* 6*d.* per week; it being necessary for each purl-man to employ a lad to take care of the boat while he is on board the ships serving his customers, or traversing the tiers. This deduction being made leaves 61*l.* 2*s.* per annum to each purl-man as the profit on his year's trading.

The present race of purl-men, unlike the weather-beaten tars who in former times alone were licensed, are generally young men, who have been in the habit of following some river employment, and who, either from some accident having befallen them in the course of their work, or from their preferring the easier task of sitting in their boat and rowing leisurely about to continuous labour, have started in the line, and ultimately superseded the old river dealers. This is easily explained. No man labouring on the river would purchase from a stranger when he knew that his own fellow-workman was afloat, and was prepared to serve him with as good an article; besides he might not have money, and a stranger could not be expected to give trust, but his old acquaintance would make little scruple in doing so. In this way the customers of the purl-men are secured; and many of these people do so much more than the average amount of business above stated, that it is no unusual thing to see some of them, after four or five years on the river, take a public-house, spring up into the rank of licensed victuallers, and finally become men of substance.

I conversed with one who had been a coal-whipper. He stated that he had met with an accident while at work which prevented him from following coal-whipping any longer. He had fallen from the ship's side into a barge, and was for a long time in the hospital. When he came out he found he could not work, and had no other prospect before him but the union. "I thought I'd be by this time toes up in Stepney churchyard," he said, "and grinning at the lid of an old coffin." In this extremity a neighbour, a waterman, who had long known him, advised him to take to the purl business, and gave him not only the advice, but sufficient money to enable him to put it in practice. The man accordingly got a boat, and was soon afloat among his old workmates. In this line he now makes out a living for himself and his family, and reckons himself able to clear, one week with the other, from 18*s.* to 20*s.* "I should do much better," he said, "if people would only pay what they owe; but there are some who never think of paying anything." He has between 10*l.* and 20*l.* due to him, and never expects to get a farthing of it.

The following is the form of licence issued by the Watermen's Company:—

INCORPORATED 1827.

BUMBOAT.

Height 5 feet 8 inches, 30 years of age, dark hair, sallow complexion. 2nd & 3rd Vic. cap. 47, sec. 25.

I hereby certify that , of , in the parish of in the county of Middlesex, is this day registered in a book of the Company of the Master, Wardens, and Commonalty of Watermen and Lightermen of the river Thames, kept for that purpose, to use, work, or navigate a boat called a skiff, named , number , for the purpose of selling, disposing of, or exposing for sale to and amongst the seamen, or other per-

sons employed in and about any of the ships or vessels upon the said river, any liquors, slops, or other articles whatsoever, between London Bridge and Limehouse Hole; but the said boat is not to be used on the said river for any other purpose than the aforesaid.

Waterman's Hall,

JAS. BANYON, *Clerk*.

Beside the regular purl-men, or, as they may be called, bumboat-men, there are two or three others who, perhaps unable to purchase a boat, and take out the licence, have nevertheless for a number of years contrived to carry on a traffic in spirits among the ships in the Thames. Their practice is to carry a flat tin bottle concealed about their person, with which they go on board the first ship in a tier, where they are well known by those who may be there employed. If the seamen wish for any spirit the river-vendor immediately supplies it, entering the name of the customers served, as none of the vendors ever receive, at the time of sale, any money for what they dispose of; they keep an account till their customers receive their wages, when they always contrive to be present, and in general succeed in getting what is owing to them. What their profits are it is impossible to tell, perhaps they may equal those of the regular purl-man, for they go on board of almost every ship in the course of the day. When their tin bottle is empty they go on shore to replenish it, doing so time after time if necessary.

It is remarkable that although these people are perfectly well known to every purl-man on the river, who have seen them day by day, for many years going on board the various ships, and are thoroughly cognizant of the purpose of their visits, there has never been any information laid against them, nor have they been in any way interrupted in their business.

There is one of these river spirit-sellers who has pursued the avocation for the greater part of his life; he is a native of the south of Ireland, now very old, and a little shrivelled-up man. He may still be seen every day, going from ship to ship by scrambling over the quarters where they are lashed together in tiers—a feat sometimes attended with danger to the young and strong; yet he works his way with the agility of a man of 20, gets on board the ship he wants, and when there, were he not so well known, he might be thought to be some official sent to take an inventory of the contents of the ship, for he has at all times an ink-bottle hanging from one of his coat buttons, a pen stuck over his ear, spectacles on his nose, a book in his hand, and really has all the appearance of a man determined on doing business of some sort or other. He possesses a sort of ubiquity, for go where you will through any part of the pool you are sure to meet him. He seems to be expected everywhere; no one appears to be surprised at his presence. Captains and mates pass him by unnoticed and unquestioned. As suddenly as he comes does he disappear, to start up in some other place. His visits are so regular, that it would scarcely look like being on board ship if "old D——, the whiskey man," as he is called, did not make his appearance some time during the day, for he seems to be in some strange way identified with the river, and with every ship that frequents it.

OF THE NUMBERS, CAPITAL, AND INCOME OF THE STREET-SELLERS OF SECOND-HAND ARTICLES, LIVE ANIMALS, MINERAL PRODUCTIONS, ETC.

THE hawkers of second-hand articles, live animals, mineral productions, and natural curiosities, form, as we have seen, large important classes of the street-sellers. According to the facts already given, there appear to be at present in the streets, 90 sellers of metal wares, including the sellers of second-hand trays and Italian-irons; 30 sellers of old linen, as wrappers and towelling; 80 vendors of second-hand (burnt) linen and calico; 30 sellers of curtains; 30 sellers of carpeting, &c.; 30 sellers of bed-ticking, &c.; 6 sellers of old crockery and glass; 25 sellers of old musical instruments; 6 vendors of second-hand weapons; 6 sellers of old curiosities; 6 vendors of telescopes and pocket glasses; 30 to 40 sellers of other miscellaneous second-hand articles; 100 sellers of men's second-hand clothes; 30 sellers of old boots and shoes; 15 vendors of old hats; 50 sellers of women's second-hand apparel; 30 vendors of second-hand bonnets, and 10 sellers of old furs; 116 sellers of second-hand articles at Smithfield-market;—making altogether 725 street-sellers of second-hand commodities.

But some of the above trades are of a temporary character only, as in the case of the vendors of old linen towelling or wrappers, carpets, bed-ticking, &c.—the same persons who sell the one often selling the others; the towels and wrappers, moreover, are offered for sale only on the Monday and Saturday nights. Assuming, then, that upwards of 100 or one-sixth of the above number sell two different second-hand articles, or are not continually employed at that department of street-traffic, we find the total number of street-sellers belonging to this class to be about 500.

Concerning the number selling live animals in the streets, there are 50 men vending fancy and sporting dogs; 200 sellers and "duffers" of English birds; 10 sellers of parrots and other foreign birds; 3 sellers of birds'-nests, &c.; 20 vendors of squirrels; 6 sellers of leverets and wild rabbits; 35 vendors of gold and silver fish; 20 vendors of tortoises; and 14 sellers of snails, frogs, worms, &c.; or, allowing for the temporary and mixed character of many of these trades, we may say that there are 200 constantly engaged in this branch of street-commerce.

Original from HARVARD UNIVERSITY

Then of the street-sellers of mineral productions and natural curiosities, there are 216 vendors of coals; 1500 sellers of coke; 14 sellers of tan-turf; 150 vendors of salt; 70 sellers of sand; 26 sellers of shells; or 1969 in all. From this number the sellers of shells must be deducted, as the shell-trade is not a special branch of street-traffic. We may, therefore, assert that the number of people engaged in this latter class of street-business amounts to about 1900.

Now, adding all these sums together, we have the following table as to the numbers of individuals comprised in the *first* division of the London street-folk, viz. the street-sellers:—

1. Costermongers (including men, women, and children engaged in the sale of fish, fruit, vegetables, game, poultry, flowers, &c.)	30,000
2. Street-sellers of "green stuff," including water-cresses, chickweed and gru'n'sel, turf, &c.	2,000
3. Street-sellers of eatables and drinkables	4,000
4. Street-sellers of stationery, literature, and fine arts	1,000
5. Street-sellers of manufactured articles of metal, crockery, glass, textile, chemical, and miscellaneous substances	4,000
6. Street-sellers of second-hand articles, including the sellers of old metal articles, old glass, old linen, old clothes, old shoes, &c.	500
7. Street-sellers of live animals, as dogs, birds, gold and silver fish, squirrels, leverets, tortoises, snails, &c.	200
8. Street-sellers of mineral productions and natural curiosities, as coals, coke, tan-turf, salt, sand, shells, &c.	1,900
TOTAL NUMBER OF STREET-SELLERS	43,640

These numbers, it should be remembered, are given rather as an approximation to the truth than as the absolute fact. It would therefore be safer to say, making all due allowance for the temporary and mixed character of many branches of street-commerce, that there are about 40,000 people engaged in selling articles in the streets of London. I am induced to believe that this is very near the real number of street-sellers, from the *wholesale* returns of the places where the street-sellers purchase their goods, and which I have always made a point of collecting from the best authorities connected with the various branches of street-traffic. The statistics of the fish and green markets, the swag-shops, the old clothes exchange, the bird-dealers, which I have caused to be collected for the first time in this country, all tend to corroborate this estimate.

The next fact to be evolved is the amount of capital invested in the street-sale of Second-hand Articles, of Live Animals, and of Mineral Productions. And, first, as to the money employed in the Second-hand Street-Trade.

The following tables will show the amount of capital invested in this branch of street-business.

	£	s.	d.
Street-Sellers of Second-hand Metal Wares.			
30 stalls, 5s. each; 20 barrows, 1l. each; stock-money for 50 vendors, at 10s. per head	52	10	0
Street-Sellers of Second-hand Metal Trays.			
Stock-money for 20 sellers, at 5s. each	5	0	0
Street-Sellers of other Second-hand Metal Articles, as Italian and Flat Irons.			
Stock-money for 20 vendors, at 5s. each; 20 stalls, at 3s. each	8	0	0
Street-Sellers of Second-hand Linen, &c.			
Stock-money for 30 vendors, at 5s. per head	7	10	0
Street-Sellers of Second-hand (burnt) Linen and Calico.			
Stock-money for 80 vendors, at 10s. each	40	0	0
Street-Sellers of Second-hand Curtains.			
Stock-money for 30 sellers, at 5s. each	7	10	0
Street-Sellers of Second-hand Carpeting, Flannels, Stocking-legs, &c.			
Stock-money for 30 sellers, at 6s. each	9	0	0
Street-Sellers of Second-hand Bed-ticking, Sacking, Fringe, &c.			
Stock-money for 30 sellers, at 4s. each	6	0	0
Street-Sellers of Second-hand Glass and Crockery.			
6 barrows, 15s. each; 6 baskets, 1s. 6d. each; stock-money for 6 vendors, at 5s. each	6	9	0
Street-Sellers of Second-hand Miscellaneous Articles.			
Stock-money for 5 vendors, at 15s. each	3	15	0
Street-Sellers and Duffers of Second-hand Music.			
Stock-money for 25 sellers, at 1l. each	25	0	0
Street-Sellers of Second-hand Weapons.			
Stock-money for 6 vendors, at 1l. each	6	0	0
Street-Sellers of Second-hand Curiosities.			
6 barrows, 15s. each; stock-money for 6 vendors, at 15s. per head	9	0	0
Street-Sellers of Second-hand Telescopes and Pocket-Glasses.			
Stock-money for 6 vendors, at 4l. each	24	0	0
Street-Sellers of other Miscellaneous Articles.			
30 stalls, 5s. each; stock-money for 30 sellers, at 15s. each	30	0	0

Street-Sellers of Men's Second-hand Clothes.

	£	s.	d.
100 linen bags, at 2s. each; stock-money for 100 sellers, at 15s. each .	85	0	0

Street-Sellers of Second-hand Boots and Shoes.

10 stalls, at 3s. each; 30 baskets, at 2s. 6d. each; stock-money for 30 sellers, at 10s. each	20	5	0

Street-Sellers of Second-hand Hats.

30 irons, two to each man, at 2s. each; 60 blocks, at 1s. 6d. per block; stock-money for 15 vendors, at 10s. each .	15	0	0

Street-Sellers of Women's Second-hand Apparel.

Stock-money for 50 sellers, at 10s. each; 50 baskets, at 2s. 6d. each .	31	5	0

Street-Sellers of Second-hand Bonnets.

10 umbrellas, at 3s. each; 30 baskets, at 2s. 6d. each; stock-money for 30 sellers, at 5s. each	12	15	0

Street-Sellers of Second-hand Furs.

Stock-money for 10 vendors, at 7s. 6d. each	3	15	0

Street-Sellers of Second-hand Articles in Smithfield-market.

30 sellers of harness sets and collars, at an average capital of 15s. each; 6 sellers of saddles and pads, at 15s. each; 10 sellers of bits, at 3s. each; 6 sellers of wheel-springs and trays, at 15s. each; 6 sellers of boards and trestles for stalls, at 10s. each; 20 sellers of barrows, small carts, and trucks, at 5l. each; 6 sellers of goat carriages, at 3l. each; 6 sellers of shooting galleries and guns for ditto, and drums for costers, at 15s. each; 10 sellers of measures, weights, and scales, at 25s. each; 5 sellers of potato cans and roasted-chestnut apparatus, at 5l. each; 3 sellers of ginger-beer trucks, at 5l. each; 6 sellers of pea-soup cans and pickled-eel kettles, 15s. each; 2 sellers of elder-wine vessels, at 15s. each. Thus we find that the average number of street-sellers frequenting Smithfield-market once a week is 116, and the average capital	217	0	0

TOTAL AMOUNT OF CAPITAL BELONGING TO STREET-SELLERS OF SECOND-HAND ARTICLES	621	14	0

STREET-SELLERS OF LIVE ANIMALS.

Street-Sellers of Dogs.

Stock-money for 20 sellers (including kennels and keep), at 5l. 15s. each seller	115	0	0

Street-Sellers and Duffers of Birds (English).

	£	s.	d.
2400 small cages (reckoning 12 to each seller), at 6d. each; 1200 long cages (allowing 6 cages to each seller), at 2s. each; 1800 large cages (averaging 9 cages to each seller), at 2s. 6d. each. Stock-money for 200 sellers, at 20s. each	605	0	0

Street-Sellers of Parrots, &c.

20 cages, at 10s. each; stock-money for 10 sellers, at 30s. each .	25	0	0

Street-Sellers of Birds'-Nests.

3 hamper baskets, at 6d. each . .		1	6

Street-Sellers of Squirrels.

Stock-money for 20 vendors, at 10s. each	10	0	0

Street-Sellers of Leverets, Wild Rabbits, &c.

6 baskets, at 2s. each; stock-money for 6 vendors, at 5s. each	2	2	0

Street-Sellers of Gold and Silver Fish.

35 glass globes, at 2s. each; 35 small nets, at 6d. each; stock-money for 35 vendors, at 15s. each . . .	30	12	6

Street-Sellers of Tortoises.

Stock-money for 20 vendors, at 10s. each	25	0	0

Street-Sellers of Snails, Frogs, Worms, Snakes, Hedgehogs, &c.

14 baskets, at 1s. each		14	0

TOTAL AMOUNT OF CAPITAL BELONGING TO STREET-SELLERS OF LIVE ANIMALS	798	10	0

STREET-SELLERS OF MINERAL PRODUCTIONS AND NATURAL CURIOSITIES.

Street-Sellers of Coals.

30 two-horse vans, at 70l. each; 100 horses, at 20l. each; 100 carts, at 10l. each; 160 horses, at 10l. each; 20 donkey or pony carts, at 1l. each; 20 donkeys or ponies, at 1l. 10s. each; 210 sets of weights and scales, at 1l. 10s. each; stock-money for 210 vendors, at 2l. each	7,485	0	0

Street-Sellers of Coke.

100 vans, at 70l. each; 100 horses, at 20l. each; 300 carts, at 10l. each; 300 horses, at 10l. each; 500 donkey-carts, at 1l. each; 500 donkeys, at 1l. each; 200 trucks and barrows, at 10s. each; 4800 sacks for the 100 vans, at 3s. 6d. each; 3600 sacks for the 300 carts; 3000 sacks for the 500 donkey carts; 1652 sacks for the 550 trucks and barrows; 300 sacks for the 50 women; stock-money for 1500 vendors, at 1l. per head . . .	19,936	12	0

Street-Sellers of Tan-Turf.

12 donkeys and carts, at 2l. each;

	£	s.	d.
2 trucks, at 15s. each; stock-money for 14 vendors, at 10s. each . . .	32	10	0

Street-Sellers of Salt.

75 donkeys and carts, at 2l. 5s. each; 75 barrows, at 10s. each; stock-money for 150 vendors, at 6s. each	251	5	0

Street-Sellers of Sand.

20 horses, at 10l. each; 20 carts, at 3l. each; 60 baskets, at 2s. each; wages of 30 men, at 3s. per day for each; expenses for keep of 20 horses, at 10s. per head; estimated stock-money for 30 sellers, at 5s. each; 40 barrows, at 15s. each; stock-money for the barrow-men, at 1s. 6d. each .	320	5	0

Street-Sellers of Shells.

Stock-money for 70 vendors, at 5s. each	17	10	0

TOTAL CAPITAL BELONGING TO STREET-SELLERS OF MINERAL PRODUCTIONS, ETC.	28,043	2	0

River-Sellers of Purl.

35 boats, at 4l. 10s. each; 35 sets of measures, at 5s. the set; 35 warming pots, at 1s. 6d. each; 35 fire-stoves, at 5s. each; 35 gallon cans, at 2s. 6d. each; 70 "pins" of beer, at 4s. per "pin;" 35 quarts of gin, at 2s. 6d. the quart; 35 licences, at 3s. 6d.; stock-money for spice, &c., at 1s. each	208	5	0

Hence it would appear that the gross amount of property belonging to the street-sellers may be reckoned as follows:—

Value of stock-in-trade belonging to costermongers	25,000	0	0
Ditto street-sellers of green-stuff .	149	0	0
Ditto street-sellers of eatables and drinkables	9,000	0	0
Ditto street-sellers of stationery, literature, and the fine arts . . .	400	0	0
Ditto street-sellers of manufactured articles	2,800	0	0
Ditto street-sellers of second-hand articles	621	14	0
Ditto street-sellers of live animals	798	10	0
Ditto street-sellers of mineral productions, &c.	28,043	2	0
Ditto river-sellers of purl . . .	208	5	0

TOTAL AMOUNT OF CAPITAL BELONGING TO THE LONDON STREET-SELLERS	67,023	11	0

The gross value of the stock in trade of the London street-sellers may then be estimated at about 60,000l.

INCOME, OR "TAKINGS," OF THE STREET-SELLERS OF SECOND-HAND ARTICLES.

We have now to estimate the receipts of each of the above-mentioned classes.

Street-Sellers of Second-hand Metal Wares.

	£	s.	d.
I was told by several in this trade that there were 200 old metal sellers in the streets, but, from the best information at my command, not more than 50 appear to be strictly *street*-sellers, unconnected with shopkeeping. Estimating a weekly receipt, per individual, of 15s. (half being profit), the yearly street outlay among this body amounts to . .	1,950	0	0

Street-Sellers of Second-hand Metal-Trays, &c.

Calculating that 20 persons take in the one or two nights' sale 4s. a week each, on second-hand trays (33 per cent. being the rate of profit), the street expenditure amounts yearly to	208	0	0

Street-Sellers of other Second-hand Metal Articles, as Italian and Flat Irons, &c.

There are, I am informed, 20 persons selling Italian and flat irons regularly throughout the year in the streets of London; each takes upon an average 6s. weekly, which gives an annual expenditure of upwards of	312	0	0

Street-Sellers of Second-hand Linen, &c.

There are at present 30 men and women who sell towelling and canvas wrappers in the streets on Saturday and Monday nights, each taking in the sale of those articles 9s. per week, thus giving an annual outlay of	702	0	0

Street-Sellers of Second-hand (burnt) Linen and Calico.

The most intelligent man whom I met with in this trade calculated that there were 80 of these second-hand street-folk plying their trade two nights in the week; and that they took 8s. each weekly, about half of it being profit; thus the annual street expenditure would be	1,664	0	0

Street-Sellers of Second-hand Curtains.

From the best data at my command there are 30 individuals who are engaged in the street-sale of second-hand curtains, and reckoning the weekly takings of each to be 5s., we find the yearly sum spent in the streets upon second-hand curtains amounts to	390	0	0

Street-Sellers of Second-hand Carpeting, Flannels, Stocking-legs, &c.

I am informed that the same persons selling curtains sell also second-hand carpeting, &c.; their weekly average takings appear to be about 6s. each in the sale of the above articles, thus we have a yearly outlay of. . . .	468	0	0

Street-Sellers of Second-hand Bed-ticking, Sacking, Fringe, &c.

The street-sellers of curtains, car-

Original from HARVARD UNIVERSITY

peting, &c., of whom there are 30, are also the street-sellers of bed-ticking, sacking, fringe, &c. Their weekly takings for the sale of these articles amount to 4s. each. Hence we find that the sum spent yearly in the streets upon the purchase of bed-ticking, &c., amounts to . . . . . £312 0s. 0d.

Street-Sellers of Second-hand Glass and Crockery.

Calculating that each of the six dealers takes 12s. weekly, with a profit of 6s. or 7s., we find there is annually expended in this department of street-commerce 187 4 0

Street-Sellers of Second-hand Miscellaneous Articles.

From the best data I have been able to obtain, it appears that there are five street-sellers engaged in the sale of these second-hand articles of amusement, and the receipts of the whole are 10*l.* weekly, about half being profit, thus giving a yearly expenditure of 520 0 0

Street-Sellers and Duffers of Second-hand Music.

A broker who was engaged in this traffic estimated—and an intelligent street-seller agreed in the computation—that, take the year through, at least 25 individuals are regularly, but few of them fully, occupied with this traffic, and that their weekly takings average 30s. each, or an aggregate yearly amount of 1950*l.* The weekly profits run from 10s. to 15s., and sometimes the well-known dealers clear 40s. or 50s. a week, while others do not take 5s. 1,950 0 0

Street-Sellers of Second-hand Weapons.

In this traffic it may be estimated, I am assured, that there are 20 men engaged, each taking, as an average, 1*l.* a week. In some weeks a man may take 5*l.*; in the next month he may sell no weapons at all. From 30 to 50 per cent. is the usual rate of profit, and the yearly street outlay on these second-hand offensive or defensive weapons is 1,040 0 0

Street-Sellers of Second-hand Curiosities.

There are not now more than six men who carry on this trade apart from other commerce. Their average takings are 15s. weekly each man, about two-thirds being profit, or early 234 0 0

Street-Sellers of Second-hand Telescopes and Pocket-Glasses.

There are only six men at present engaged in the sale of telescopes and pocket-glasses, and their weekly average takings are 30s. each, giving a yearly expenditure in the streets of £468 0s. 0d.

Street-Sellers of other Second-hand Miscellaneous Articles.

If we reckon that there are 30 street-sellers carrying on a traffic in second-hand miscellaneous articles, and that each takes 10s. weekly, we find the annual outlay in the streets upon these articles amounts to . . 780 0 0

Street-Sellers of Men's Second-hand Clothes.

The street-sale of men's second-hand wearing apparel is carried on principally by the Irish and others. From the best information I can gather, there appear to be upwards of 1200 old clothes men buying left-off apparel in the metropolis, one-third of whom are Irish. There are, however, not more than 100 of these who sell in the streets the articles they collect; the average-takings of each of the sellers are about 20s. weekly, their trading being chiefly on the Saturday nights and Sunday mornings. Their profits are from 50 to 60 per cent. Estimating the number of sellers at 100, and their weekly takings at 20s. each, we have an annual expenditure of 5,200 0 0

Street-Sellers of Second-hand Boots and Shoes.

There are at present about 30 individuals engaged in the street-sale of second-hand boots and shoes of all kinds; some take as much as 30s. weekly, while others do not take more than half that amount; their profits being about 50 per cent. Reckoning that the weekly average takings are 20s. each, we have a yearly expenditure on second-hand boots and shoes of 1,560 0 0

Street-Sellers of Second-hand Hats.

Throughout the year there are not more than 15 men constantly "working" this branch of street-traffic. The average weekly gains of each are about 10s., and in order to clear that sum they must take 20s. Hence the gross gains of the class will be 390*l.* per annum, while the sum yearly expended in the streets upon second-hand hats will amount altogether to 780 0 0

Street-Sellers of Women's Second-hand Apparel.

The number of persons engaged in the street-sale of women's second-hand apparel is about 50, each of whom take, upon an average, 15s. per week; one-half of this is clear gain. Thus we find the annual outlay in

the streets upon women's second-hand apparel is no less than . . . . £1,950 0s. 0d.

Street-Sellers of Second-hand Bonnets.

There are at present 30 persons (nearly one-half of whom are milliners, and the others street-sellers) who sell second-hand straw and other bonnets; some of these are placed in an umbrella turned upside down, while others are spread upon a wrapper on the stones. The average takings of this class of street-sellers are about 12*s.* each per week, and their clear gains not more than one-half, thus giving a yearly expenditure of 936 0 0

Street-Sellers of Second-hand Furs.

During five months of the year there are as many as 8 or 12 persons who sell furs in the street-markets on Saturday nights, Sunday mornings, and Monday nights. The weekly average takings of each is about 12*s.*, nearly three-fourths of which is clear profit. Reckoning that 10 individuals are engaged 20 weeks during the year, and that each of these takes weekly 12*s.*, we find the sum annually expended in the streets on furs amounts to 120 0 0

Street-Sellers of Second-hand Articles in Smithfield-market.

I am informed, by those who are in a position to know, that there are sold on an average every year in Smithfield-market about 624 sets of harness, at 14*s.* per set; 1560 collars, at 2*s.* each; 686 pads, at 1*s.* each; 1560 saddles, at 5*s.* each; 936 bits, at 6*d.* each; 520 pair of wheels, at 10*s.* per pair; 624 pair of springs, at 8*s.* 4*d.* per pair; 832 pair of trestles, at 2*s.* 6*d.* per pair; 520 boards, at 4*s.* each; 1820 barrows, at 25*s.* each; 312 trucks, at 50*s.* each; 208 trays, at 1*s.* 3*d.* each; 1040 small carts, at 63*s.* each; 156 goat-carriages, at 20*s.* each; 520 shooting-galleries, at 14*s.* each; 312 guns for shooting-galleries, at 10*s.* each; 1040 drums for costers, at 3*s.* each; 2080 measures, at 3*d.* each; 2080 pair of large scales, at 5*s.* per pair; 2080 pair of hand-scales, at 5*d.* per pair; 30 roasted chestnut-apparatus, at 20*s.* each; 100 ginger-beer trucks, at 30*s.* each; 20 eel-kettles, at 5*s.* each; 100 potato-cans, at 17*s.* each; 10 pea-soup cans, at 5*s.* each; 40 elderwine vessels, at 8*s.* each; giving a yearly expenditure of 10,242 3 8

TOTAL SUM OF MONEY ANNUALLY TAKEN BY THE STREET-SELLERS OF SECOND-HAND ARTICLES . . . 33,461 1 4

STREET-SELLERS OF LIVE ANIMALS.

Street-Sellers of Dogs (Fancy Pets).

From the best data it appears that each hawker sells "four or five occasionally in one week in the summer, when trade's brisk and days are long, and only two or three the next week, when trade may be flat, and during each week in winter, when there isn't the same chance." Calculating, then, that seven dogs are sold by each hawker in a fortnight, at an average price of 50*s.* each (many fetch 3*l.*, 4*l.*, and 5*l.*), and supposing that but 20 men are trading in this line the year through, we find that no less a sum is yearly expended in this street-trade than . . £9,100 0*s.* 0*d.*

Street-Sellers of Sporting Dogs.

The amount "turned over" in the trade in sporting dogs yearly, in London, is computed by the best informed at about 12,000 0 0

Street-Sellers and Duffers of Live Birds. (English).

There are in the metropolis 200 street-sellers of English birds, who may be said to sell among them 7000 linnets, at 3*d.* each; 3000 bullfinches, at 2*s.* 6*d.* each; 400 piping bullfinches, at 63*s.* each; 7000 goldfinches, at 9*d.* each; 1500 chaffinches, at 2*s.* 6*d.* each; 700 greenfinches, at 3*d.* each; 6000 larks, at 1*s.* each; 200 nightingales, at 1*s.* each; 600 redbreasts, at 1*s.* each; 3500 thrushes and thrustles, at 2*s.* 6*d.* each; 1400 blackbirds, at 2*s.* 6*d.* each; 1000 canaries, at 1*s.* each; 10,000 sparrows, at 1*d.* each; 1500 starlings, at 1*s.* 6*d.* each; 500 magpies and jackdaws, at 9*d.* each; 300 redpoles, at 9*d.* each; 150 blackcaps, at 4*d.* each; 2000 "duffed," birds, at 2*s.* 6*d.* each. Thus making the sum annually expended in the purchase of birds in the streets, amount to 3,624 12 2

Street-Sellers of Parrots, &c.

The number of individuals at present hawking parrots and other foreign birds in the streets is 10, who sell among them during the year about 500 birds. Reckoning each bird to sell at 1*l.*, we find the annual outlay upon parrots bought in the streets to be 500*l.*; adding to this the sale of 110 Java sparrows and St. Helena birds, as Wax-bills and Red-beaks at 1*s.* 6*d.* each, we have for the sum yearly expended in the streets on the sale of foreign birds 508 5 0

Original from HARVARD UNIVERSITY

Street-Sellers of Birds'-Nests.

	£	s.	d.
There are at present only three persons hawking birds'-nests, &c., in the streets during the season, which lasts from May to August; these street-sellers sell among them 400 nests, at 2½d. each; 144 snakes, at 1s. 6d. each; 4 hedgehogs, at 1s. each; and about 2s.'s worth of snails. This makes the weekly income of each amount to about 8s. 6d. during a period of 12 weeks in the summer, and the sum annually expended on these articles to come to	15	6	0

Street-Sellers of Squirrels.

For five months of the year there are 20 men selling squirrels in the streets, at from 20 to 50 per cent. profit, and averaging a weekly sale of six each. The average price is from 2s. to 2s. 6d. Thus 2400 squirrels are vended yearly in the streets, at a cost to the public of 240 0 0

Street-Sellers of Leverets, Wild Rabbits, &c.

During the year there are about six individuals exposing for sale in the streets young hares and wild rabbits. These persons sell among them 300 leverets, at 1s. 6d. each; and 400 young wild-rabbits, at 4d. each, giving a yearly outlay of 29 3 4

Street-Sellers of Gold and Silver Fish.

If we calculate, in order to allow for the cessation of the trade during the winter, and often in the summer when costermongering is at its best, that but 35 gold-fish sellers hawk in the streets and that for but half a year, each selling six dozen weekly, at 12s. the dozen, we find 65,520 fish sold, at an outlay of 3,276 0 0

Street-Sellers of Tortoises.

Estimating the number of individuals selling tortoises to be 20, and the number of tortoises sold to be 10,000, at an average price of 8d. each, we find there is expended yearly upon these creatures upwards of . . 333 6 8

Street-Sellers of Snails, Frogs, &c.

There are 14 snail gatherers, and they, on an average, gather six dozen quarts each in a year, which supplies a total of 12,096 quarts of snails. The labourers in the gardens, I am informed, gather somewhat more than an equal quantity, the greater part being sold to the bird-shops; so that altogether the supply of snails for the caged thrushes and blackbirds of London is about two millions and a half. Computing them at 24,000 quarts, and at 2d. a quart, the annual outlay is 200l. Besides snails, there are collected annually 500 frogs and 18 toads, at 1d. each, giving a yearly expenditure of 202 3 2

TOTAL, OR GROSS "TAKINGS," OF THE STREET-SELLERS OF LIVE ANIMALS 23,868 16 4

INCOME, OR "TAKINGS," OF THE STREET-SELLERS OF MINERAL PRODUCTIONS AND NATURAL CURIOSITIES.

Street-Sellers of Coals.

The number of individuals engaged in the street-sale of coals is 210; these distribute 2940 tons of coals weekly, giving an annual trade of 152,880 tons, at 1l. per ton, and consequently a yearly expenditure by the poor of 152,880 0 0

Street-Sellers of Coke.

The number of individuals engaged in the street-sale of coke is 1500; and the total quantity of coke sold annually in the streets is computed at about 1,400,000 chaldrons. These are purchased at the gas factories at an average price of 8s. per chaldron. Reckoning that this is sold at 4s. per chaldron for profit, we find that the total gains of the whole class amount to 280,000l. per annum, and their gross annual takings to . . . 840,000 0 0

Street-Sellers of Tan-Turf.

The number of tan-turf sellers in the metropolis is estimated at 14; each of these dispose of, upon an average, 20,000 per week, during the year; selling them at 1s. per hundred, and realizing a profit of 4½d. for each hundred. This makes the annual outlay in the street-sale of the above article amount to . . 7,280 0 0

Street-Sellers of Salt.

There are at present 150 individuals hawking salt in the several streets of London; each of these pay at the rate of 2s. per cwt. for the salt, and retail it at 3 lbs. for 1d., which leaves 1s. 1d. profit on every cwt. One day with another, wet and dry, each of the street-sellers disposes of about 2½ cwt., or 18 tons 15 cwt. per day for all hands, and this, deducting Sundays, makes 5868 tons 15 cwt. in the course of the year. The profit of 1s. 1d. per cwt. amounts to a yearly aggregate profit of 6357l. 16s. 8d., or about 42l. per annum for each person in the trade; while the sum annually expended upon this article in the streets amounts to 18,095 6 3

Original from HARVARD UNIVERSITY

Street-Sellers of Sand. £ s. d.

Calculating the sale at a load of sand per day, for each horse and cart, at 21*s.* per load, we find the sum annually expended in house-sand to be 6573*l.*; adding to this the sum of 234*l.* spent yearly in bird-sand, the total street-expenditure is . 6,807 0 0

Street-Sellers of Shells.

There are about 50 individuals disposing of shells at different periods of the year. These sell among them 1,000,000 at 1*d.* each, giving an annual expenditure of 4,166 13 4

TOTAL, OR GROSS TAKINGS, OF THE STREET-SELLERS OF MINERAL PRODUCTIONS AND NATURAL CURIOSITIES £1,029,228 19 7

River-Sellers of Purl.

There are at present 35 men following the trade of purl-selling on the river Thames to colliers. The weekly profits of this class amount to 117*l.* 5*s.* per week, and yearly to 6097*l.*, while their annual takings is 8,190 0 0

Now, adding together the above and the other foregone results, we arrive at the following estimate as to the amount of money annually expended on the several articles purchased in the streets of the metropolis.

		£
"Wet" fish	£1,177,200	
Dry fish	127,000	
Shell fish	156,600	
Fish of all kinds		£1,460,800
Vegetables	£292,400	
Green fruit	332,200	
Dry fruit	1,000	
Fruit and Vegetables		625,600
Game, poultry, rabbits, &c.		80,000
Flowers, roots, &c.		14,800
Water-cresses		13,900
Chickweed, gru'nsel, and turf for birds		14,570
Eatables and drinkables		203,100
Stationery, literature, and fine arts		33,400
Manufactured articles		188,200
Second-hand articles		29,900
Live animals (*including dogs, birds, and gold fish*)		29,300
Mineral productions (*as coals, coke, salt, sand, &c.*)		1,022,700
TOTAL SUM EXPENDED UPON THE VARIOUS ARTICLES VENDED BY THE STREET-SELLERS		£3,716,270

Hence it appears that the street-sellers, of all ages, in the metropolis are about forty thousand in number—their stock-in-trade is worth about sixty thousand pounds—and their gross annual takings or receipts amount to no less than three millions and a half sterling.

OF THE STREET-BUYERS.

THE persons who traverse the streets, or call periodically at certain places to purchase articles which are usually sold at the door or within the house, are—according to the division I laid down in the first number of this work—STREET-BUYERS. The largest, and, in every respect, the most remarkable body of these traders, are the buyers of old clothes, and of them I shall speak separately, devoting at the same time some space to the STREET-JEWS. It will also be necessary to give a brief account of the Jews generally, for they are still a peculiar race, and street and shop-trading among them are in many respects closely blended.

The principal things bought by the itinerant purchasers consist of waste-paper, hare and rabbit skins, old umbrellas and parasols, bottles and glass, broken metal, rags, dripping, grease, bones, tea-leaves, and old clothes.

With the exception of the buyers of waste-paper, among whom are many active, energetic, and intelligent men, the street-buyers are of the lower sort, both as to means and intelligence. The only further exception, perhaps, which I need notice here is, that among some umbrella-buyers, there is considerable smartness, and sometimes, in the repair or renewal of the ribs, &c., a slight degree of skill. The other street-purchasers—such as the hare-skin and old metal and rag buyers, are often old and infirm people of both sexes, of whom—perhaps by reason of their infirmities—not a few have been in the trade from their childhood, and are as well known by sight in their respective rounds, as was the "long-remembered beggar" in former times.

It is usually the lot of a poor person who has been driven to the streets, or has adopted such a life when an adult, to *sell* trifling things—such as are light to carry and require a small outlay—in advanced age. Old men and women totter about offering lucifer-matches, boot and stay-laces, penny memorandum books, and such like. But the elder portion of the street-folk I have now to speak of do not sell, but *buy*. The street-seller commends his wares, their cheapness, and excellence. The same sort of man, when a buyer, depreciates everything offered to him, in order to ensure a cheaper bargain, while many of the things thus obtained find their way into street-sale, and are then as much commended for cheapness and goodness, as if they were the stock-in-trade of an acute slop advertisement-monger, and this is done sometimes by the very man who, when a buyer, condemned them as utterly valueless. But this is common to all trades.

OF THE STREET-BUYERS OF RAGS, BROKEN METAL, BOTTLES, GLASS, AND BONES.

I CLASS all these articles under one head, for, on inquiry, I find no individual supporting himself by the trading in any one of them. I shall, therefore, describe the buyers of rags, broken metal, bottles, glass, and bones, as a body of street-traders, but take the articles in which they traffic seriatim, pointing out in what degree they are, or have been, wholly or partially, the staple of several distinct callings.

The traders in these things are not unprosperous men. The poor creatures who may be seen picking up rags in the street are "street-finders," and not buyers. It is the same with the poor old men who may be seen bending under an unsavoury sack of bones. The bones have been found, or have been given for charity, and are not purchased. One feeble old man whom I met with, his eyes fixed on the middle of the carriage-way in the Old St. Pancras-road, and with whom I had some conversation, told me that the best friend he had in the world was a gentleman who lived in a large house near the Regent's-park, and gave him the bones which his dogs had done with! "If I can only see hisself, sir," said the old man, "he's sure to give me any coppers he has in his coat-pocket, and that's a very great thing to a poor man like me. O, yes, I'll buy bones, if I have any ha'pence, rather than go without them; but I pick them up, or have them given to me mostly."

The street-buyers, who are only buyers, have barrows, sometimes even carts with donkeys, and, as they themselves describe it, they "buy everything." These men are little seen in London, for they "work" the more secluded courts, streets, and alleys, when in town; but their most frequented rounds are the poorer parts of the populous suburbs. There are many in Croydon, Woolwich, Greenwich, and Deptford. "It's no use," a man who had been in the trade said to me, "such as us calling at fine houses to know if they've any old keys to sell! No, we trades with the poor." Often, however, they deal with the servants of the wealthy; and their usual mode of business in such cases is to leave a bill at the house a few hours previous to their visit. This document has frequently the royal arms at the head of it, and asserts that the "firm" has been established since the year ——, which is seldom less than half a century. The hand-bill usually consists of a short preface as to the increased demand for rags on the part of the paper-makers, and this is followed by a liberal offer to give the very best prices for any old linen, or old metal, bottles, rope, stair-rods, locks, keys, dripping, carpeting, &c., "in fact, no rubbish or lumber, however worthless, will be refused;" and generally concludes with a request that this "bill" may be shown to the mistress of the house and preserved, as it will be called for in a couple of hours.

The papers are delivered by one of the "firm," who marks on the door a sign indicative of the houses at which the bill has been taken in, and the probable reception there of the gentleman who is to follow him. The road taken is also pointed by marks before explained, see vol. i. pp. 218 and 247. These men are residents in all quarters within 20 miles of London, being most numerous in the places at no great distance from the Thames. They work their way from their suburban residences to London, which, of course, is the mart, or "exchange," for their wares. The reason why the suburbs are preferred is that in those parts the possessors of such things as broken metal, &c., cannot so readily resort to a marine-store dealer's as they can in town. I am informed, however, that the shops of the marine-store men are on the increase in the more densely-peopled suburbs; still the dwellings of the poor are often widely scattered in those parts, and few will go a mile to sell any old thing. They wait in preference, unless very needy, for the *visit* of the street-buyer.

A good many years ago—perhaps until 30 years back—*rags*, and especially white and good linen rags, were among the things most zealously inquired for by street-buyers, and then 3*d*. a pound was a price readily paid. Subsequently the paper-manufacturers brought to great and economical perfection the process of boiling rags in lye and bleaching them with chlorine, so that colour became less a desideratum. A few years after the peace of 1815, moreover, the foreign trade in rags increased rapidly. At the present time, about 1200 tons of woollen rags, and upwards of 10,000 tons of linen rags, are imported yearly. These 10,000 tons give us but a vague notion of the real amount. I may therefore mention that, when reduced to a more definite quantity, they show a total of no less than twenty-two millions four hundred thousand pounds. The woollen rags are imported the most largely from Hamburg and Bremen, the price being from 5*l*. to 17*l*. the ton. Linen rags, which average nearly 20*l*. the ton, are imported from the same places, and from several Italian ports, more especially those in Sicily. Among these ports are Palermo, Messina, Ancona, Leghorn, and Trieste (the Trieste rags being gathered in Hungary). The value of the rags annually brought to this country is no less than 200,000*l*. What the native rags may be worth, there are no facts on which to ground an estimate; but supposing each person of the 20,000,000 in Great Britain to produce one pound of rags annually, then the rags of this country may be valued at very nearly the same price as the foreign ones, so that the gross value of the rags of Great Britain imported and produced at home, would, in such a case, amount to 400,000*l*. From France, Belgium, Holland, Spain, and other continental kingdoms, the exportation of rags is prohibited, nor can so bulky and low-priced a commodity be smuggled to advantage.

Of this large sum of rags, which is independent of what is collected in the United Kingdom, the Americans are purchasers on an extensive scale. The wear of cotton is almost unknown in many parts of Italy, Germany, and Hungary; and al-

although the linen in use is coarse and, compared to the Irish, Scotch, or English, rudely manufactured, the foreign rags *are* generally linen, and therefore are preferred at the paper mills. The street-buyers in this country, however, make less distinction than ever, as regards price, between linen and cotton rags.

The linen rag-buying is still prosecuted extensively by itinerant "gatherers" in the country, and in the further neighbourhoods of London, but the collection is not to the extent it was formerly. The price is lower, and, owing to the foreign trade, the demand is less urgent; so common, too, is now the wear of cotton, and so much smaller that of linen, that many people will not sell linen rags, but reserve them for use in case of cuts and wounds, or for giving to their poor neighbours on any such emergency. This was done doubtlessly to as great, or to a greater extent, in the old times, but linen rags were more plentiful then, for cotton shirting was not woven to the perfection seen at present, and many good country housewives spun their own linen sheetings and shirtings.

A street-buyer of the class I have described, upon presenting himself at any house, offers to buy rags, broken metal, or glass, and for rags especially there is often a serious bargaining, and sometimes, I was told by an itinerant street-seller, who had been an ear-witness, a little joking not of the most delicate kind. For coloured rags these men give ½*d.* a pound, or 1*d.* for three pounds; for inferior white rags ½*d.* a pound, and up to 1½*d.*; for the best, 2*d.* the pound. It is common, however, and even more common, I am assured, among masters of the old rag and bottle shops, than among street-buyers, to announce 2*d.* or 3*d.*, or even as much as 6*d.*, for the *best* rags, but, somehow or other, the rags taken for sale to those buyers never are of the best. To offer 6*d.* a pound for rags is ridiculous, but such an offer may be seen at some rag-shops, the figure **6**, perhaps, crowning a painting of a large plum-pudding, as a representation of what may be a Christmas result, merely from the thrifty preservation of rags, grease, and dripping. Some of the street-buyers, when working the suburbs or the country, attach a similar "illustration" to their barrows or carts. I saw the winter placard of one of these men, which he was reserving for a country excursion as far as Rochester, "when the plum-pudding time was a-coming." In this pictorial advertisement a man and woman, very florid and full-faced, were on the point of enjoying a huge plum-pudding, the man flourishing a large knife, and looking very hospitable. On a scroll which issued from his mouth were the words: "From our rags! The best prices given by —— ——, of London." The woman in like manner exclaimed: "From dripping and house fat! The best prices given by —— ——, of London."

This man told me that at some times, both in town and country, he did not buy a pound of rags in a week. He had heard the old hands in the trade say, that 20 or 30 years back they could "gather" (the word generally used for buying) twice and three times as many rags as at present. My informant attributed this change to two causes, depending more upon what he had heard from experienced street-buyers than upon his own knowledge. At one time it was common for a mistress to allow her maid-servant to "keep a rag-bag," in which all refuse linen, &c., was collected for sale for the servant's behoof; a privilege now rarely accorded. The other cause was that working-people's wives had less money at their command now than they had formerly, so that instead of gathering a good heap for the man who called on them periodically, they ran to a marine store-shop and sold them by one, two, and three pennyworths at a time. This related to all the things in the street-buyer's trade, as well as to rags.

"I 've known this trade ten years or so," said my informant, "I was a costermonger before that, and I work coster-work now in the summer, and buy things in the winter. Before Christmas is the best time for second-hand trade. When I set out on a country round—and I 've gone as far as Guildford and Maidstone, and St. Alban's—I lays in as great a stock of glass and crocks as I can raise money for, or as my donkey or pony—I 've had both, but I 'm working a ass now—can drag without distressing him. I swops my crocks for anythink in the second-hand way, and when I 've got through them I buys outright, and so works my way back to London. I bring back what I 've bought in the crates and hampers I 've had to pack the crocks in. The first year as I started I got hold of a few very tidy rags, coloured things mostly. The Jew I sold 'em to when I got home again gave me more than I expected. O, lord no, not more than I asked! He told me, too, that he 'd buy any more I might have, as they was wanted at some town not very far off, where there was a call for them for patching quilts. I haven't heard of a call for any that way since. I get less and less rags every year, I think. Well, I can't say what I got last year; perhaps about two stone. No, none of them was woollen. They 're things as people 's seldom satisfied with the price for, is rags. I 've bought muslin window curtains or frocks as was worn, and good for nothink but rags, but there always seems such a lot, and they weighs so light and comes to so little, that there 's sure to be grumbling. I 've sometimes bought a lot of old clothes, by the lump, or I 've swopped crocks for them, and among them there 's frequently been things as the Jew in Petticoat-lane, what I sells them to, has put o' one side as rags. If I 'd offered to give rag prices, them as I got 'em of would have been offended, and have thought I wanted to cheat. When you get a lot at one go, and 'specially if it 's for crocks, you must make the best of them. This for that, and t'other for t'other. I stay at the beer-shops and little inns in the country. Some of the landlords looks very shy at one, if you 're a stranger, acause, if the police detectives is after anythink, they go as hawkers, or barrowmen, or somethink that way." [This statement as to the police is correct; but the man did not know how it came to his knowledge; he had "heard of it," he believed.] "I 've very seldom slept in a common lodging-house. I 'd

rather sleep on my barrow." [I have before had occasion to remark the aversion of the costermonger class to sleep in low lodging-houses. These men, almost always, and from the necessities of their calling, have rooms of their own in London; so that, I presume, they hate to sleep *in public*, as the accommodation for repose in many a lodging-house may very well be called. At any rate the costermongers, of all classes of street-sellers, when on their country excursions, resort the least to the lodging-houses.] "The last round I had in the country, as far as Reading and Pangbourne, I was away about five weeks, I think, and came back a better man by a pound; that was all. I mean I had 30 shillings' worth of things to start with, and when I 'd got back, and turned my rags, and old metal, and things into money, I had 50*s*. To be sure Jenny (the ass) and me lived well all the time, and I bought a pair of half-boots and a pair of stockings at Reading, so it weren't so bad. Yes, sir, there 's nothing I likes better than a turn into the country. It does one's health good, if it don't turn out so well for profits as it might."

My informant, the rag-dealer, belonged to the best order of costermongers; one proof of this was in the evident care which he had bestowed on Jenny, his donkey. There were no loose hairs on her hide, and her harness was clean and whole, and I observed after a pause to transact business on his round, that the animal held her head towards her master to be scratched, and was petted with a mouthful of green grass and clover, which the costermonger had in a corner of his vehicle.

Tailor's cuttings, which consist of cloth, satin, lining materials, fustian, waistcoatings, silk, &c., are among the things which the street-buyers are the most anxious to become possessed of on a country round; for, as will be easily understood by those who have read the accounts before given of the Old Clothes Exchange, and of Petticoat and Rosemary lanes, they are available for many purposes in London.

Dressmaker's cuttings are also a portion of the street-buyer's country traffic, but to no great extent, and hardly ever, I am told, unless the street-buyer, which is not often the case, be accompanied on his round by his wife. In town, tailor's cuttings are usually sold to the piece-brokers, who call or send men round to the shops or workshops for the purpose of buying them, and it is the same with the dressmaker's cuttings.

Old metal, or *broken metal*, for I heard one appellation used as frequently as the other, is bought by the same description of traders. This trade, however, is prosecuted in town by the street-buyers more largely than in the country, and so differs from the rag business. The carriage of old iron bolts and bars is exceedingly cumbersome; nor can metal be packed or stowed away like old clothes or rags. This makes the street-buyer indifferent as to the collecting of what I heard one of them call "country iron." By "metal" the street-folk often mean copper (most especially), brass, or pewter, in contradistinction to the cheaper substances of iron or lead. In the country they are most anxious to buy "metal;" whereas, in town, they as readily purchase "iron." When the street-buyers give merely the worth of any metal by weight to be disposed of, in order to be re-melted, or re-wrought in some manner, by the manufacturers, the following are the average prices:—Copper, 6*d*. per lb.; pewter, 5*d*.; brass, 5*d*.; iron, 6 lbs. for 1*d*., and 8 lbs. for 2*d*. (a smaller quantity than 6 lbs. is seldom bought); and 1*d*. and 1¼*d*. per lb. for lead. Old zinc is not a metal which "comes in the way" of the street-buyer, nor—as one of them told me with a laugh—old silver. Tin is never bought by weight in the streets.

It must be understood that the prices I have mentioned are those given for old or broken metal, valueless unless for re-working. When an old metal article is still available, or may be easily made available, for the use for which it was designed, the street-purchase is by "the piece," rather than the weight.

The broken pans, scuttles, kettles, &c., concerning one of the uses of which I have quoted Mr. Babbage, in page 6 of the present volume, as to the conversion of these worn-out vessels into the light and japanned edgings, or clasps, called "clamps," or "clips," by the trunk-makers, and used to protect or strengthen the corners of boxes and packing-cases, are purchased sometimes by the street-buyers, but fall more properly under the head of what constitutes a portion of the stock-in-trade of the street-finder. They are not bought by weight, but so much for the pan, perhaps so much along with other things; a halfpenny, a penny, or occasionally two-pence, and often only a farthing, or three pans for a penny. The uses for these things which the street-buyers have more especially in view, are not those mentioned by Mr. Babbage (the trunk clamps), but the conversion of them into the "iron shovels," or strong dust-pans sold in the streets. One street artisan supports himself and his family by the making of dust-pans from such grimy old vessels.

As in the result of my inquiry among the street-*sellers* of old metal, I am of opinion that the street-*buyers* also are not generally mixed up with the receipt of stolen goods. That they may be so to some extent is probable enough; in the same proportion, perhaps, as highly respectable tradesmen have been known to buy the goods of fraudulent bankrupts, and others. The street-buyers are low itinerants, seen regularly by the police and easy to be traced, and therefore, for one reason, cautious. In one of my inquiries among the young thieves and pickpockets in the low lodging-houses, I heard frequent accounts of their selling the metal goods they stole, to "fences," and in one particular instance, to the mistress of a lodging-house, who had conveniences for the melting of pewter pots (called "cats and kittens" by the young thieves, according to the size of the vessels), but I never heard them speak of any connection, or indeed any transactions, with street-folk.

Among the things purchased in great quantities by the street-buyers of old metal are keys. The

Original from HARVARD UNIVERSITY

keys so bought are of every size, are generally very rusty, and present every form of manufacture, from the simplest to the most complex wards. On my inquiring how such a number of keys without locks came to be offered for street-sale, I was informed that there were often duplicate or triplicate keys to one lock, and that in sales of household furniture, for instance, there were often numbers of odd keys found about the premises and sold "in a lump;" that locks were often spoiled and unsaleable, wearing out long before the keys. Twopence a dozen is an usual price for a dozen "mixed keys," to a street-buyer. Bolts are also freely bought by the street-people, as are holdfasts, bed-keys, and screws, "and everything," I was told, "which some one or other among the poor is always a-wanting."

A little old man, who had been many years a street-buyer, gave me an account of his purchases of *bottles* and *glass*. This man had been a soldier in his youth; had known, as he said, "many ups and downs;" and occasionally wheels a barrow, somewhat larger and shallower than those used by masons, from which he vends iron and tin wares, such as cheap gridirons, stands for hand-irons, dust-pans, dripping trays, &c. As he sold these wares, he offered to buy, or swop for, any second-hand commodities. "As to the bottle and glass buying, sir," he said, "it's dead and buried in the streets, and in the country too. I've known the day when I've cleared 2*l.* in a week by buying old things in a country round. How long was that ago, do you say, sir? Why perhaps twenty years; yes, more than twenty. Now, I'd hardly pick up odd glass in the street." [He called imperfect glass wares "odd glass."] "O, I don't know what's brought about such a change, but everything changes. I can't say anything about the duty on glass. No, I never paid any duty on my glass; it ain't likely. I buy glass still, certainly I do, but I think if I depended on it I should be wishing myself in the East Injes again, rather than such a poor consarn of a business—d——n me if I shouldn't. The last glass bargain I made about two months back, down Limehouse-way, and about the Commercial-road, I cleared 7*d.* by; and then I had to wheel what I bought—it was chiefly bottles—about five mile. It's a trade would starve a cat, the buying of old glass. I never bought glass by weight, but I've heard of some giving a halfpenny and a penny a pound. I always bought by the piece: from a halfpenny to a shilling (but that's long since) for a bottle; and farthings and halfpennies, and higher and sometimes lower, for wine and other glasses as was chipped or cracked, or damaged, for they could be sold in them days. People's got proud now, I fancy that's one thing, and must have everything slap. O, I do middling: I live by one thing or other, and when I die there'll just be enough to bury the old man." [This is the first street-trader I have met with who made such a statement as to having provided for his interment, though I have heard these men occasionally express repugnance at the thoughts of being buried by the parish.] "I have a daughter, that's all my family now; she does well as a laundress, and is a real good sort; I have my dinner with her every Sunday. She's a widow without any young ones. I often go to church, both with my daughter and by myself, on Sunday evenings. It does one good. I'm fond of the music and singing too. The sermon I can very seldom make anything of, as I can't hear well if any one's a good way off me when he's saying anythink. I buy a little old metal sometimes, but it's coming to be all up with street glass-people; everybody seems to run with their things to the rag-and-bottle-shops."

The same body of traders buy also *old sacking, carpeting, and moreen bed-curtains and window-hangings;* but the trade in them is sufficiently described in my account of the buying of rags, for it is carried on in the same way, so much per pound (1*d.* or 1½*d.* or 2*d.*), or so much for the lot.

Of *Bones* I have already spoken. They are bought by any street-collector with a cart, on his round in town, at a halfpenny a pound, or three pounds for a penny; but it is a trade, on account of the awkwardness of carriage, little cared for by the regular street-buyers. Men, connected with some bone-grinding-mill, go round with a horse and cart to the knackers and butchers to collect bones; but this is a portion, not of street, but of the mill-owner's, business. These bones are ground for manure, which is extensively used by the agriculturists, having been first introduced in Yorkshire and Lincolnshire about 30 years ago. The importation of bones is now very great; more than three times as much as it was 20 years back. The value of the foreign bones imported is estimated at upwards of 300,000*l.* yearly. They are brought from South America (along with hides), from Germany, Holland, and Belgium.

The men who most care to collect bones in the streets of London are old and infirm, and they barter toys for them with poor children; for those children sometimes gather bones in the streets and put them on one side, or get them from dustholes, for the sake of exchanging them for a plaything; or, indeed, for selling them to any shopkeeper, and many of the rag-and-bottle-tradesmen buy bones. The toys most used for this barter are paper "wind-mills." These toy-barterers, when they have a few pence, will buy bones of children or any others, if they cannot become possessed of them otherwise; but the carriage of the bones is a great obstacle to much being done in this business.

In the regular way of street-buying, such as I have described it, there are about 100 men in London and the suburbs. Some buy only during a portion of the year, and none perhaps (except in the way of barter) the year round. They are chiefly of the costermonger class, some of the street-buyers however, have been carmen's servants, or connected with trades in which they had the care of a horse and cart, and so became habituated to a street-life.

There are still many other ways in which the commerce in refuse and the second-hand street-trade is supplied. As the windmill-seller for bones, so will the puppet-show man for old bottles or broken table-spoons, or almost any old trifle, allow children to regale their eyes on the beauties of his exhibition.

The trade expenditure of the street-buyers it is not easy to estimate. Their calling is so mixed with selling and bartering, that very probably not one among them can tell what he expends in *buying*, as a separate branch of his business. If 100 men expend 15*s*. each weekly, in the purchase of rags, old metal, &c., and if this trade be prosecuted for 30 weeks of the year, we find 2250*l*. so expended. The profits of the buyers range from 20 to 100 per cent.

Of the "Rag-and-Bottle," and the "Marine-Store," Shops.

The principal purchasers of any refuse or worn-out articles are the proprietors of the rag-and-bottle-shops. Some of these men make a good deal of money, and not unfrequently unite with the business the letting out of vans for the conveyance of furniture, or for pleasure excursions, to such places as Hampton Court. The stench in these shops is positively sickening. Here in a small apartment may be a pile of rags, a sack-full of bones, the many varieties of grease and "kitchen-stuff," corrupting an atmosphere which, even without such accompaniments, would be too close. The windows are often crowded with bottles, which exclude the light; while the floor and shelves are thick with grease and dirt. The inmates seem unconscious of this foulness,—and one comparatively wealthy man, who showed me his horses, the stable being like a drawing-room compared to his shop, in speaking of the many deaths among his children, could not conjecture to what cause it could be owing. This indifference to dirt and stench is the more remarkable, as many of the shopkeepers have been gentlemen's servants, and were therefore once accustomed to cleanliness and order. The door-posts and windows of the rag-and-bottle-shops are often closely placarded, and the front of the house is sometimes one glaring colour, blue or red; so that the place may be at once recognised, even by the illiterate, as the "red house," or the "blue house." If these men are not exactly street-buyers, they are street-billers, continually distributing hand-bills, but more especially before Christmas. The more aristocratic, however, now send round cards, and to the following purport:—

No. — No. —

THE —— HOUSE IS ——'S
RAG, BOTTLE, AND KITCHEN STUFF
WAREHOUSE,
—— STREET, —— TOWN,
Where you can obtain Gold and Silver to any amount.
ESTABLISHED ——.
THE HIGHEST PRICE GIVEN
For all the undermentioned articles, viz:—

Wax and Sperm Pieces	Old Copper, Brass, Pewter, &c.
Kitchen Stuff, &c.	Lead, Iron, Zinc, Steel, &c., &c.
Wine & Beer Bottles	Old Horse Hair, Mattresses, &c.
Eau de Cologne, Soda Water	Old Books, Waste Paper, &c.
Doctors' Bottles, &c.	All kinds of Coloured Rags
White Linen Rags	
Bones, Phials, & Broken Flint Glass	

The utmost value given for all kinds of Wearing Apparel.
Furniture and Lumber of every description bought, and full value given at his Miscellaneous Warehouse.
Articles sent for.

Some content themselves with sending hand-bills to the houses in their neighbourhood, which many of the cheap printers keep in type, so that an alteration in the name and address is all which is necessary for any customer.

I heard that suspicions were entertained that it was to some of these traders that the facilities with which servants could dispose of their pilferings might be attributed, and that a stray silver spoon might enhance the weight and price of kitchen-stuff. It is not pertaining to my present subject to enter into the consideration of such a matter; and I might not have alluded to it, had not I found the regular street-buyers fond of expressing an opinion of the indifferent honesty of this body of traders; but my readers may have remarked how readily the street-people have, on several occasions, justified (as they seem to think) their own delinquencies by quoting what they declared were as great and as frequent delinquencies on the part of shopkeepers: "I know very well," said an intelligent street-seller on one occasion, "that two wrongs can never make a right; but tricks that shopkeepers practise to grow rich upon we must practise, just as they do, to live at all. As long as they give short weight and short measure, the streets can't help doing the same."

The *rag-and-bottle* and the *marine-store shops* are in many instances but different names for the same description of business. The chief distinction appears to be this: the marine-store shopkeepers (proper) do not meddle with what is a very principal object of traffic with the rag-and-bottle man, the purchase of dripping, as well as of every kind of refuse in the way of fat or grease. The marine-store man, too, is more miscellaneous in his wares than his contemporary of the rag-and-bottle-store, as the former will purchase any of the smaller articles of household furniture, old tea-caddies, knife-boxes, fire-irons, books, pictures, draughts and backgammon boards, bird-cages, Dutch clocks, cups and saucers, tools and brushes. The rag-and-bottle tradesman will readily purchase any of these things to be disposed of as old metal or waste-paper, but his brother tradesman buys them to be re-sold and re-used for the purposes for which they were originally manufactured. When furniture, however, is the staple of one of these second-hand storehouses, the proprietor is a furniture-broker, and not a marine-store dealer. If, again, the dealer in these stores confine his business to the purchase of old metals, for instance, he is classed as an old metal dealer, collecting it or buying it of collectors, for sale to iron-founders, coppersmiths, brass-founders, and plumbers. In perhaps the majority of instances there is little or no distinction between the establishments I have spoken of. The *dolly* business is common to both, but most common to the marine-store dealer, and of it I shall speak afterwards.

These shops are exceedingly numerous. Perhaps in the poorer and smaller streets they are more numerous even than the chandlers' or the beer-sellers' places. At the corner of a small

Original from HARVARD UNIVERSITY

street, both in town and the nearer suburbs, will frequently be found the chandler's shop, for the sale of small quantities of cheese, bacon, groceries, &c., to the poor. Lower down may be seen the beer-seller's; and in the same street there is certain to be one rag-and-bottle or marine-store shop, very often two, and not unfrequently another in some adjacent court.

I was referred to the owner of a marine-store shop, as to a respectable man, keeping a store of the best class. Here the counter, or table, or whatever it is to be called, for it was somewhat nondescript, by an ingenious contrivance could be pushed out into the street, so that in bad weather the goods which were at other times exposed in the street could be drawn inside without trouble. The glass frames of the window were removable, and were placed on one side in the shop, for in the summer an open casement seemed to be preferred. This is one of the remaining old trade customs still seen in London; for previously to the great fire in 1666, and the subsequent rebuilding of the city, shops with open casements, and protected from the weather by overhanging eaves, or by a sloping wooden roof, were general.

The house I visited was an old one, and abounded in closets and recesses. The fire-place, which apparently had been large, was removed, and the space was occupied with a mass of old iron of every kind; all this was destined for the furnace of the iron-founder, wrought iron being preferred for several of the requirements of that trade. A chest or range of very old drawers, with defaced or worn-out labels—once a grocer's or a chemist's—was stuffed, in every drawer, with old horse-shoe nails (valuable for steel manufacturers), and horse and donkey shoes; brass knobs; glass stoppers; small bottles (among them a number of the cheap cast "hartshorn bottles"); broken pieces of brass and copper; small tools (such as shoemakers' and harness-makers' awls), punches, gimlets, plane-irons, hammer heads, &c.; odd dominoes, dice, and backgammon-men; lock escutcheons, keys, and the smaller sort of locks, especially padlocks; in fine, any small thing which could be stowed away in such a place.

In one corner of the shop had been thrown, the evening before, a mass of old iron, then just bought. It consisted of a number of screws of different lengths and substance; of broken bars and rails; of the odds and ends of the cogged wheels of machinery, broken up or worn out; of odd-looking spikes, and rings, and links; all heaped together and scarcely distinguishable. These things had all to be assorted; some to be sold for re-use in their then form; the others to be sold that they might be melted and cast into other forms. The floor was intricate with hampers of bottles; heaps of old boots and shoes; old desks and work-boxes; pictures (all modern) with and without frames; waste-paper, the most of it of quarto, and some larger sized, soiled or torn, and strung closely together in weights of from 2 to 7 lbs.; and a fire-proof safe, stuffed with old fringes, tassels, and other upholstery goods, worn and discoloured. The miscellaneous wares were carried out into the street, and ranged by the door-posts as well as in front of the house. In some small out-houses in the yard were piles of old iron and tin pans, and of the broken or separate parts of harness.

From the proprietor of this establishment I had the following account:—

"I 've been in the business more than a dozen years. Before that, I was an auctioneer's, and then a furniture broker's, porter. I wasn't brought up to any regular trade, but just to jobbing about, and a bad trade it is, as all trades is that ain't regular employ for a man. I had some money when my father died—he kept a chandler's shop—and I bought a marine." [An elliptical form of speech among these traders.] "I gave 10*l.* for the stock, and 5*l.* for entrance and good-will, and agreed to pay what rents and rates was due. It was a smallish stock then, for the business had been neglected, but I have no reason to be sorry for my bargain, though it might have been better. There 's lots taken in about good-wills, but perhaps not so many in my way of business, because we 're rather 'fly to a dodge.' It 's a confined sort of life, but there 's no help for that. Why, as to my way of trade, you 'd be surprised, what different sorts of people come to my shop. I don't mean the regular hands; but the chance comers. I 've had men dressed like gentlemen—and no doubt they was respectable when they was sober—bring two or three books, or a nice cigar case, or anythink that don't show in their pockets, and say, when as drunk as blazes, 'Give me what you can for this; I want it sold for a particular purpose.' That particular purpose was more drink, I should say; and I 've known the same men come back in less than a week, and buy what they 'd sold me at a little extra, and be glad if I had it by me still. O, we sees a deal of things in this way of life. Yes, poor people run to such as me. I 've known them come with such things as teapots, and old hair mattresses, and flock beds, and *then* I 'm sure they 're hard up—reduced for a meal. I don't like buying big things like mattresses, though I do purchase 'em sometimes. Some of these sellers are as keen as Jews at a bargain; others seem only anxious to get rid of the things and have hold of some bit of money anyhow. Yes, sir, I 've known their hands tremble to receive the money, and mostly the women's. They haven't been used to it, I know, when that 's the case. Perhaps they comes to sell to me what the pawns won't take in, and what they wouldn't like to be seen selling to any of the men that goes about buying things in the street.

"Why, I 've bought everythink; at sales by auction there 's often 'lots' made up of different things, and they goes for very little. I buy of people, too, that come to me, and of the regular hands that supply such shops as mine. I sell retail, and I sell to hawkers. I sell to anybody, for gentlemen 'll come into my shop to buy anythink that 's took their fancy in passing. Yes, I 've bought old oil paintings. I 've heard of some being bought by people in my way as have turned out stunners, and was sold for a

hundred pounds or more, and cost, perhaps, half-a-crown or only a shilling. I never experienced such a thing myself. There 's a good deal of gammon about it. Well, it 's hardly possible to say anything about a scale of prices. I give 2*d.* for an old tin or metal teapot, or an old saucepan, and sometimes, two days after I 've bought such a thing, I 've sold it for 3*d.* to the man or woman I 've bought it of. I 'll sell cheaper to them than to anybody else, because they come to me in two ways—both as sellers and buyers. For pictures I've given from 3*d.* to 1*s.* I fancy they 're among the last things some sorts of poor people, which is a bit fanciful, parts with. I 've bought them of hawkers, but often I refuse them, as they 've given more than I could get. Pictures requires a judge. Some brought to me was published by newspapers and them sort of people. Waste-paper I buy as it comes. I can't read very much, and don't understand about books. I take the backs off and weighs them, and gives 1*d.*, and 1½*d.*, and 2*d.* a pound, and there 's an end. I sell them at about ½*d.* a pound profit, or sometimes less, to men as we calls 'waste' men. It 's a poor part of our business, but the books and paper takes up little room, and then it 's clean and can be stowed anywhere, and is a sure sale. Well, the people as sells 'waste' to me is not such as can read, I think; I don't know what they is; perhaps they 're such as obtains possession of the books and what-not after the death of old folks, and gets them out of the way as quick as they can. I know nothink about what they are. Last week, a man in black—he didn't seem rich—came into my shop and looked at some old books, and said 'Have you any black lead?' He didn't speak plain, and I could hardly catch him. I said, 'No, sir, I don't sell black lead, but you 'll get it at No. 27,' but he answered, 'Not black lead, but black letter,' speaking very pointed. I said, 'No,' and I haven't a notion what he meant.

"Metal (copper) that I give 5*d.* or 5½*d.* for, I can sell to the merchants from 6½*d.* to 8*d.* the pound. It 's no great trade, for they 'll often throw things out of the lot and say they 're not metal. Sometimes, it would hardly be a farthing in a shilling, if it war'n't for the draught in the scales. When we buys metal, we don't notice the quarters of the pounds; all under a quarter goes for nothink. When we buys iron, all under half pounds counts nothink. So when we buys by the pound, and sells by the hundredweight, there 's a little help from this, which we calls the draught.

"Glass bottles of all qualities I buys at three for a halfpenny, and sometimes four, up to 2*d.* a-piece for 'good stouts' (bottled-porter vessels), but very seldom indeed 2*d.*, unless it's something very prime and big like the old quarts (quart bottles). I seldom meddles with decanters. It 's very few decanters as is offered to me, either little or big, and I 'm shy of them when they are. There 's such a change in glass. Them as buys in the streets brings me next to nothing now to buy; they both brought and bought a lot ten year back and later. I never was in the street-trade in second-hand, but it 's not what it was. I sell in the streets, when I put things outside, and know all about the trade.

"It ain't a fortnight back since a smart female servant, in slap-up black, sold me a basket-full of doctor's bottles. I knew her master, and he hadn't been buried a week before she come to me, and she said, 'missus is glad to get rid of them, for they makes her cry.' They often say their missusses sends things, and that they 're not on no account to take less than so much. That 's true at times, and at times it ain't. I gives from 1½*d.* to 3*d.* a dozen for good new bottles. I 'm sure I can't say what I give for other odds and ends; just as they 're good, bad, or indifferent. It's a queer trade. Well, I pay my way, but I don't know what I clear a week—about 2*l.* I dare say, but then there 's rent, rates, and taxes to pay, and other expenses."

The *Dolly* system is peculiar to the rag-and-bottle man, as well as to the marine-store dealer. The name is derived from the black wooden doll, in white apparel, which generally hangs dangling over the door of the marine-store shops, or of the "rag-and-bottles," but more frequently the last-mentioned. This type of the business is sometimes swung above their doors by those who are not dolly-shop keepers. The dolly-shops are essentially pawn-shops, and pawn-shops for the very poorest. There are many articles which the regular pawnbrokers decline to accept as pledges. Among these things are blankets, rugs, clocks, flock-beds, common pictures, "translated" boots, mended trowsers, kettles, saucepans, trays, &c. Such things are usually styled "lumber." A poor person driven to the necessity of raising a few pence, and unwilling to part finally with his lumber, goes to the dolly-man, and for the merest trifle advanced, deposits one or other of the articles I have mentioned, or something similar. For an advance of 2*d.* or 3*d.*, a halfpenny a week is charged, but the charge is the same if the pledge be redeemed next day. If the interest be paid at the week's end, another 1*d.* is occasionally advanced, and no extra charge exacted for interest. If the interest be not paid at the week or fortnight's end, the article is forfeited, and is sold at a large profit by the dolly-shop man. For 4*d.* or 6*d.* advanced, the weekly interest is 1*d.*; for 9*d.* it is 1½*d.*; for 1*s.* it is 2*d.*, and 2*d.* on each 1*s.* up to 5*s.*, beyond which sum the "dolly" will rarely go; in fact, he will rarely advance as much. Two poor Irish flower girls, whom I saw in the course of my inquiry into that part of street-traffic, had in the winter very often to pledge the rug under which they slept at a dolly-shop in the morning for 6*d.*, in order to provide themselves with stock-money to buy forced violets, and had to redeem it on their return in the evening, when they could, for 7*d.* Thus 6*d.* a week was sometimes paid for a daily advance of that sum. Some of these "*illicit*" pawnbrokers even give tickets.

This incidental mention of what is really an immense trade, as regards the number of pledges, is all that is necessary under the present head of inquiry, but I purpose entering into this branch of the subject fully and minutely when I come to treat of the class of "distributors."

The *iniquities* to which the poor are subject are positively monstrous. A halfpenny a day interest on a loan of 2*d.* is at the rate of 7280 *per cent. per annum!*

Of the Buyers of Kitchen-Stuff, Grease, and Dripping.

This body of traders cannot be classed as street-buyers, so that only a brief account is here necessary. The buyers are not now chance people, itinerant on any round, as at one period they were to a great extent, but they are the proprietors of the rag and bottle and marine-store shops, or those they employ.

In this business there has been a considerable change. Until of late years women, often wearing suspiciously large cloaks and carrying baskets, ventured into perhaps every area in London, and asked for the cook at every house where they thought a cook might be kept, and this often at early morning. If the well-cloaked woman was known, business could be transacted without delay: if she were a stranger, she recommended herself by offering very liberal terms for "kitchen-stuff." The cook's, or kitchen-maid's, or servant-of-all-work's "perquisites," were then generally disposed of to these collectors, some of whom were charwomen in the houses they resorted to for the purchase of the kitchen-stuff. They were often satisfied to purchase the dripping, &c., by the lump, estimating the weight and the value by the eye. In this traffic was frequently mixed up a good deal of pilfering, directly or indirectly. Silver spoons were thus disposed of. Candles, purposely broken and crushed, were often part of the grease; in the dripping, butter occasionally added to the weight; in the "stock" (the remains of meat boiled down for the making of soup) were sometimes portions of excellent meat fresh from the joints which had been carved at table; and among the broken bread, might be frequently seen small loaves, unbroken.

There is no doubt that this mode of traffic by itinerant charwomen, &c., is still carried on, but to a much smaller extent than formerly. The cook's perquisites are in many cases sold under the inspection of the mistress, according to agreement; or taken to the shop by the cook or some fellow-servant; or else sent for by the shopkeeper. This is done to check the confidential, direct, and immediate trade-intercourse between merely two individuals, the buyer and seller, by making the transaction more open and regular. I did not hear of any persons who merely purchase the kitchen-stuff, as street-buyers, and sell it at once to the tallow-melter or the soap-boiler; it appears all to find its way to the shops I have described, even when bought by charwomen; while the shopkeepers send for it or receive it in the way I have stated, so that there is but little of street traffic in the matter.

One of these shopkeepers told me that in this trading, as far as his own opinion went, there was as much trickery as ever, and that many gentlefolk quietly made up their minds to submit to it, while others, he said, "kept the house in hot water" by resisting it. I found, however, the general opinion to be, that when servants could only dispose of these things to known people, the responsibility of the buyer as well as the seller was increased, and acted as a preventive check.

The price for kitchen-stuff is 1*d.* and 1½*d.* the pound; for dripping—used by the poor as a substitute for butter—3½*d.* to 5*d.*

Of the Street-Buyers of Hare and Rabbit Skins.

These buyers are for the most part poor, old, or infirm people, and I am informed that the majority have been in some street business, and often as buyers, all their lives. Besides having derived this information from well-informed persons, I may point out that this is but a reasonable view of the case. If a mechanic, a labourer, or a gentleman's servant, resorts to the streets for his bread, or because he is of a vagrant "turn," he does not become a *buyer*, but a *seller*. Street-selling is the easier process. It is easy for a man to ascertain that oysters, for example, are sold wholesale at Billingsgate, and if he buy a bushel (as in the present summer) for 5*s.*, it is not difficult to find out how many he can afford for "a penny a lot." But the street-buyer must not only know what to *give*, for hare-skins for instance, but what he can depend upon *getting* from the hat-manufacturers, or hat-furriers, and upon having a regular market. Thus a double street-trade knowledge is necessary, and a novice will not care to meddle with any form of open-air traffic but the simplest. Neither is street-buying (old clothes excepted) generally cared for by adults who have health and strength.

In the course of a former inquiry I received an account of hareskin-buying from a woman, upwards of fifty, who had been in the trade, she told me, from childhood, "as was her mother before her." The husband, who was lame, and older than his wife, had been all *his* life a field-catcher of birds, and a street-seller of hearth-stones. They had been married 31 years, and resided in a garret of a house, in a street off Drury-lane—a small room, with a close smell about it. The room was not unfurnished—it was, in fact, crowded. There were bird-cages, with and without birds, over what *was* once a bed; for the bed, just prior to my visit, had been sold to pay the rent, and a month's rent was again in arrear; and there were bird-cages on the wall by the door, and bird-cages over the mantelshelf. There was furniture, too, and crockery; and a vile oil painting of "still life;" but an eye used to the furniture in the rooms of the poor could at once perceive that there was not *one* article which could be sold to a broker or marine-store dealer, or pledged at a pawn-shop. I was told the man and woman both drank hard. The woman said:—

"I've sold hareskins all my life, sir, and was born in London; but when hareskins isn't in, I sells flowers. I goes about now (in November) for my skins every day, wet or dry, and all day long—that is, till it's dark. To-day I've not laid out a penny, but then it's been such a day

for rain. I reckon that if I gets hold of eighteen hare and rabbit skins in a day, that is my greatest day's work. I gives 2*d*. for good hares, what 's not riddled much, and sells them all for 2½*d*. I sells what I pick up, by the twelve or the twenty, if I can afford to keep them by me till that number 's gathered, to a Jew. I don't know what is done with them. I can't tell you just what use they 're for—something about hats." [The Jew was no doubt a hat-furrier, or supplying a hat-furrier.] "Jews gives us better prices than Christians, and buys readier; so I find. Last week I sold all I bought for 3*s*. 6*d*. I take some weeks as much as 8*s*. for what I pick up, and if I could get that every week I should think myself a lady. The profit left me a clear half-crown. There 's no difference in any perticler year—only that things gets worse. The game laws, as far as I knows, hasn't made no difference in my trade. Indeed, I can't say I knows anything about game laws at all, or hears anything consarning 'em. I goes along the squares and streets. I buys most at gentlemen's houses. We never calls at hotels. The servants, and the women that chars, and washes, and jobs, manages it there. Hareskins is in—leastways I c'lects them—from September to the end of March, when hares, they says, goes mad. I can't say what I makes one week with another—perhaps 2*s*. 6*d*. may be cleared every week."

These buyers go regular rounds, carrying the skins in their hands, and crying, "Any hare-skins, cook? Hareskins." It is for the most part a winter trade; but some collect the skins all the year round, as the hares are now vended the year through; but by far the most are gathered in the winter. Grouse may not be killed excepting from the 12th, and black-game from the 20th of August to the 10th of December; partridges from the 1st of September to the 1st of February; while the pheasant suffers a shorter season of slaughter, from the 1st of October to the 1st of February; but there is no time restriction as to the killing of hares or of rabbits, though custom causes a cessation for a few months.

A lame man, apparently between 50 and 60, with a knowing look, gave me the following account. When I saw him he was carrying a few tins, chiefly small dripping-pans, under his arm, which he offered for sale as he went his round collecting hare and rabbit-skins, of which he carried but one. He had been in the streets all his life, as his mother—he never knew any father—was a rag-gatherer, and at the same time a street-seller of the old brimstone matches and papers of pins. My informant assisted his mother to make and then to sell the matches. On her last illness she was received into St. Giles's workhouse, her son supporting himself out of it; she had been dead many years. He could not read, and had never been in a church or chapel in his life. "He had been married," he said, "for about a dozen years, and had a very good wife, who was also a street-trader until her death; but "we didn't go to church or anywhere to be married," he told me, in reply to my question, "for we really couldn't afford to pay the parson, and so we took one another's words. If it 's so good to go to church for being married, it oughtn't to cost a poor man nothing; he shouldn't be charged for being good. I doesn't do any business in town, but has my regular rounds. This is my Kentish and Camden-town day. I buys most from the servants at the bettermost houses, and I 'd rather buy of them than the missusses, for some missusses sells their own skins, and they often want a deal for 'em. Why, just arter last Christmas, a young lady in that there house (pointing to it), after ordering me round to the back-door, came to me with two hareskins. They certainly was fine skins—werry fine. I said I 'd give 4½*d*. 'Come now, my good man,' says she," and the man mimicked her voice, "'let me have no nonsense. I can't be deceived any longer, either by you or my servants; so give me 8*d*., and go about your business.' Well, I went about my business; and a woman called to buy them, and offered 4*d*. for the two, and the lady was so wild, the servant told me arter; howsomever she only got 4*d*. at last. She 's a regular screw, but a fine-dressed one. I don't know that there 's been any change in my business since hares was sold in the shops. If there 's more skins to sell, there 's more poor people to buy. I never tasted hares' flesh in my life, though I 've gathered so many of their skins. I 've smelt it when they 've been roasting them where I 've called, but don't think I could eat any. I live on bread and butter and tea, or milk sometimes in hot weather, and get a bite of fried fish or anything when I 'm out, and a drop of beer and a smoke when I get home, if I can afford it. I don't smoke in my own place, I uses a beer-shop. I pay 1*s*. 6*d*. a week for a small room; I want little but a bed in it, and have my own. I owe three weeks' rent now; but I do best both with tins and hareskins in the cold weather. Monday 's my best day. O, as to rabbit-skins, I do werry little in them. Them as sells them gets the skins. Still there *is* a few to be picked up; such as them as has been sent as presents from the country. Good rabbit-skins is about the same price as hares, or perhaps a halfpenny lower, take them all through. I generally clears 6*d*. a dozen on my hare and rabbit-skins, and sometimes 8*d*. Yes, I should say that for about eight months I gathers four dozen every week, often five dozen. I suppose I make 5*s*. or 6*s*. a week all the year, with one thing or other, and a lame man can't do wonders. I never begged in my life, but I 've twice had help from the parish, and that only when I was very bad (ill). O, I suppose I shall end in the great house."

There are, as closely as I can ascertain, at least 50 persons buying skins in the street; and calculating that each collects 50 skins weekly for 32 weeks of the year, we find 80,000 to be the total. This is a reasonable computation, for there are upwards of 102,000 hares consigned yearly to Newgate and Leadenhall markets; while the rabbits sold yearly in London amount to about

1,000,000; but, as I have shown, very few of their skins are disposed of to street-buyers.

OF THE STREET-BUYERS OF WASTE (PAPER).

BEYOND all others the street-purchase of waste paper is the most curious of any in the hands of the class I now treat of. Some may have formed the notion that waste paper is merely that which is soiled or torn, or old numbers of newspapers, or other periodical publications; but this is merely a portion of the trade, as the subsequent account will show.

The men engaged in this business have not unfrequently an apartment, or a large closet, or recess, for the reception of their purchases of paper. They collect their paper street by street, calling upon every publisher, coffee-shop keeper, printer, or publican (but rarely on a publican), who may be a seller of "waste." I heard the refuse paper called nothing but "waste" after the general elliptical fashion. Attorneys' offices are often visited by these buyers, as are the offices of public men, such as tax or rate collectors, generally.

One man told me that until about ten years ago, and while he was a youth, he was employed by a relation in the trade to carry out waste paper sold to, or ordered by cheesemongers, &c., but that he never "collected," or bought paper himself. At last he thought he would start on his own account, and the first person he called upon, he said, was a rich landlady, not far from Hungerford-market, whom he saw sometimes at her bar, and who was always very civil. He took an opportunity to ask her if she "happened to have any waste in the house, or would have any in a week or so?" Seeing the landlady look surprised and not very well pleased at what certainly appeared an impertinent inquiry, he hastened to explain that he meant old newspapers, or anything that way, which he would be glad to buy at so much a pound. The landlady however took in but one daily and one weekly paper (both sent into the country when a day or so old), and having had no dealings with men of my informant's avocation, could not understand his object in putting such questions.

Every kind of paper is purchased by the "waste-men." One of these dealers said to me: "I've often in my time 'cleared out' a lawyer's office. I've bought old briefs, and other law papers, and 'forms' that weren't the regular forms then, and any d——d thing they had in my line. You'll excuse me, sir, but I couldn't help thinking what a lot of misery was caused, perhaps, by the cwts. of waste I've bought at such places. If my father hadn't got mixed up with law he wouldn't have been ruined, and his children wouldn't have had such a hard fight of it; so I hate law. All that happened when I was a child, and I never understood the rights or the wrongs of it, and don't like to think of people that's so foolish. I gave 1½*d.* a pound for all I bought at the lawyers, and done pretty well with it, but very likely that's the only good turn such paper ever did any one—unless it were the lawyers themselves."

The waste-dealers do not confine their purchases to the tradesmen I have mentioned. They buy of any one, and sometimes act as middlemen or brokers. For instance, many small stationers and newsvendors, sometimes tobacconists in no extensive way of trade, sometimes chandlers, announce by a bill in their windows, "Waste Paper Bought and Sold in any Quantity," while more frequently perhaps the trade is carried on, as an understood part of these small shopmen's business, without any announcement. Thus the shop-buyers have much miscellaneous waste brought to them, and perhaps for only some particular kind have they a demand by their retail customers. The regular itinerant waste dealer then calls and "clears out everything" the "everything" being not an unmeaning word. One man, who "did largely in waste," at my request endeavoured to enumerate all the kinds of paper he had purchased as waste, and the packages of paper he showed me, ready for delivery to his customers on the following day, confirmed all he said as he opened them and showed me of what they were composed. He had dealt, he said—and he took great pains and great interest in the inquiry, as one very curious, and was a respectable and intelligent man—in "books on *every* subject" [I give his own words] "on which a book can be written." After a little consideration he added: "Well, perhaps *every* subject is a wide range; but if there are any exceptions, it's on subjects not known to a busy man like me, who is occupied from morning till night every week day. The only worldly labour I do on a Sunday is to take my family's dinner to the bakehouse, bring it home after chapel, and read *Lloyd's Weekly*. I've had Bibles—the backs are taken off in the waste trade, or it wouldn't be fair weight—Testaments, Prayer-books, Companions to the Altar, and Sermons and religious works. Yes, I've had the Roman Catholic books, as is used in their public worship—at least so I suppose, for I never was in a Roman Catholic chapel. Well, it's hard to say about proportions, but in my opinion, as far as it's good for anything, I've not had *them* in anything like the proportion that I've had Prayer-books, and Watts' and Wesley's hymns. More shame; but you see, sir, perhaps a godly old man dies, and those that follow him care nothing for hymn-books, and so they come to such as me, for they're so cheap now they're not to be sold second-hand at all, I fancy. I've dealt in tragedies and comedies, old and new, cut and uncut—they're best uncut, for you can make them into sheets then—and farces, and books of the opera. I've had scientific and medical works of every possible kind, and histories, and travels, and lives, and memoirs. I needn't go through them—everything, from a needle to an anchor, as the saying is. Poetry, ay, many a hundred weight; Latin and Greek (sometimes), and French, and other foreign languages. Well now, sir, as you mention it, I think I never *did* have a Hebrew work; I think not, and I know the Hebrew letters when I see them. Black letter, not once in a couple of years; no, nor in three or four years, when I think of it. I have met with it, but I always take anything I've got that way to Mr. ——, the

bookseller, who uses a poor man well. Don't you think, sir, I 'm complaining of poverty; though I have been very poor, when I was recovering from cholera at the first break-out of it, and I 'm anything but rich now. Pamphlets I 've had by the ton, in my time; I think we should both be tired if I could go through all they were about. Very many were religious, more 's the pity. I 've heard of a page round a quarter of cheese, though, touching a man's heart."

In corroboration of my informant's statement, I may mention that in the course of my inquiry into the condition of the fancy cabinet-makers of the metropolis, one elderly and very intelligent man, a first-rate artisan in skill, told me he had been so reduced in the world by the underselling of slop-masters (called "butchers" or "slaughterers," by the workmen in the trade), that though in his youth he could take in the *News* and *Examiner* papers (each he believed 9*d*. at that time, but was not certain), he could afford, and enjoyed, no reading when I saw him last autumn, beyond the book-leaves in which he received his quarter of cheese, his small piece of bacon or fresh meat, or his saveloys; and his wife schemed to go to the shops who "wrapped up their things from books," in order that he might have something to read after his day's work.

My informant went on with his specification: "Missionary papers of all kinds. Parliamentary papers, but not so often new ones, very largely. Railway prospectuses, with plans to some of them, nice engravings; and the same with other joint-stock companies. Children's copy-books, and cyphering-books. Old account-books of every kind. A good many years ago, I had some that must have belonged to a West End perfumer, there was such French items for Lady this, or the Honourable Captain that. I remember there was an Hon. Capt. G., and almost at every second page was '100 tooth-picks, 3*s*. 6*d*.' I think it was 3*s*. 6*d*.; in arranging this sort of waste one now and then gives a glance to it. Dictionaries of every sort, I 've had, but not so commonly. Music books, lots of them. Manuscripts, but only if they 're rather old; well, 20 or 30 years or so: I call that old. Letters on every possible subject, but not, in my experience, any very modern ones. An old man dies, you see, and his papers are sold off, letters and all; that's the way; get rid of all the old rubbish, as soon as the old boy's pointing his toes to the sky. What 's old letters worth, when the writers are dead and buried? why, perhaps 1½*d*. a pound, and it's a rattling big letter that will weigh half-an-ounce. O, it's a queer trade, but there 's many worse."

The letters which I saw in another waste-dealer's possession were 45 in number, a small collection, I was told; for the most part they were very dull and common-place. Among them, however, was the following, in an elegant, and I presume a female hand, but not in the modern fashionable style of handwriting. The letter is evidently old, the address is of West-end gentility, but I leave out name and other particularities:—

"Mrs. —— [it is not easy to judge whether the flourished letters are 'Mrs.' or 'Miss,' but certainly more like 'Mrs.'] Mrs. —— (Zoological Artist) presents her compliments to Mr. ——, and being commissioned to communicate with a gentleman of the name, recently arrived at Charing-cross, and presumed by description to be himself, in a matter of delicacy and confidence, indispensably verbal; begs to say, that if interested in the eeclaircissement and necessary to the same, she may be found in attendance, any afternoon of the current week, from 3 to 6 o'clock, and no other hours.

"—— street, —— square.

"Monday Morn. for the aftn., at home."

Among the books destined to a butcher, I found three perfect numbers of a sixpenny periodical, published a few years back. Three, or rather two and a half, numbers of a shilling periodical, with "coloured engravings of the fashions." Two (imperfect) volumes of French Plays, an excellent edition; among the plays were Athalie, Iphigénie, Phèdre, Les Frères Ennemis, Alexandre, Andromaque, Les Plaideurs, and Esther. A music sheet, headed "A lonely thing I would not be." A few pages of what seems to have been a book of tales: "Album d'un Sourd-Muet" (36 pages in the pamphlet form, quite new). All these constituted about twopennyworth to the butcher. Notwithstanding the variety of sources from which the supply is derived, I heard from several quarters that "waste never was so scarce" as at present; it was hardly to be had at all.

The purchasers of the waste-paper from the collectors are cheesemongers, buttermen, butchers, fishmongers, poulterers, pork and sausage-sellers, sweet-stuff-sellers, tobacconists, chandlers—and indeed all who sell provisions or such luxuries as I have mentioned in retail. Some of the wholesale provision houses buy very largely and sell the waste again to their customers, who pay more for it by such a medium of purchase, but they have it thus on credit. Any retail trader in provisions at all "in a large way," will readily buy six or seven cwt. at a time. The price given by them varies from 1½*d*. to 3½*d*. the pound, but it is very rarely either so low or so high. The average price may be taken at 18*s*. the cwt., which is not quite 2*d*. a pound, and at this rate I learn from the best-informed parties there are twelve tons sold weekly, or 1624 tons yearly (1,897,760 lbs.), at the cost of 11,232*l*. One man in the trade was confident the value of the waste paper sold could not be less than 12,000*l*. in a year.

There are about 60 men in this trade, nearly 50 of whom live entirely, as it was described to me, "by their waste," and bring up their families upon it. The others unite some other avocation with it. The earnings of the regular collectors vary from 15*s*. weekly to 35*s*. accordingly as they meet with a supply on favourable terms, or, as they call it, "a good pull in a lot of waste." They usually reside in a private room with a recess, or a second room, in which they sort, pack, and keep their paper.

One of these traders told me that he was satisfied that stolen paper seldom found its way, directly, into the collectors' hands, "particularly publisher's paper," he added. "Why, not long since there was a lot of sheets stolen from Alder-

Original from HARVARD UNIVERSITY

man Kelly's warehouse, and the thief didn't take them to a waste dealer; he knew better. He took them, sir, to a tradesman in a large respectable way over the water—a man that uses great lots of waste—and sold them at just what was handed to him: I suppose no questions asked. The thief was tried and convicted, but nothing was done to the buyer."

It must not be supposed that the waste-paper used by the London tradesmen costs no more than 12,000*l.* in a year. A large quantity is bought direct by butchers and others from poor persons going to them with a small quantity of their own accumulating, or with such things as copy-books.

Of the Street-Buyers of Umbrellas and Parasols.

The street-traders in old umbrellas and parasols are numerous, but the buying is but one part, and the least skilled part, of the business. Men, some tolerably well-dressed, some swarthy-looking, like gipsies, and some with a vagabond aspect, may be seen in all quarters of the town and suburbs, carrying a few ragged-looking umbrellas, or the sticks or ribs of umbrellas, under their arms, and crying "Umbrellas to mend," or "Any old umbrellas to sell?" The traffickers in umbrellas are also the crockmen, who are always glad to obtain them in barter, and who merely dispose of them at the Old Clothes Exchange, or in Petticoat-lane.

The umbrella-menders are known by an appellation of an appropriateness not uncommon in street language. They are *mushroom-fakers*. The form of the expanded umbrella resembles that of a mushroom, and it has the further characteristic of being rapidly or suddenly raised, the mushroom itself springing up and attaining its full size in a very brief space of time. The term, however, like all street or popular terms or phrases, has become very generally condensed among those who carry on the trade—they are now *mush-fakers*, a word which, to any one who has not heard the term in full, is as meaningless as any in the vocabulary of slang.

The mushroom-fakers will repair any umbrella on the owner's premises, and their work is often done adroitly, I am informed, and as often bunglingly, or, in the trade term, "botched." So far there is no traffic in the business, the mushroom-faker simply performing a piece of handicraft, and being paid for the job. But there is another class of street-folk who buy the old umbrellas in Petticoat-lane, or of the street buyer or collector, and "sometimes," as one of these men said to me, "we are our own buyers on a round." They mend the umbrellas—some of their wives, I am assured, being adepts as well as themselves—and offer them for sale on the approaches to the bridges, and at the corners of streets.

The street umbrella trade is really curious. Not so very many years back the use of an umbrella by a man was regarded as partaking of effeminacy, but now they are sold in thousands in the streets, and in the second-hand shops of Monmouth-street and such places. One of these street-traders told me that he had lately sold, but not to an extent which might encourage him to proceed, old silk umbrellas in the street for gentlemen to protect themselves from the rays of the sun.

The purchase of umbrellas is in a great degree mixed up with that of old clothes, of which I have soon to treat; but from what I have stated it is evident that the umbrella trade is most connected with street-artisanship, and under that head I shall describe it.

OF THE STREET-JEWS.

Although my present inquiry relates to London life in London streets, it is necessary that I should briefly treat of the Jews generally, as an integral, but distinct and peculiar part of street-life.

That this ancient people were engaged in what may be called street-traffic in the earlier ages of our history, as well as in the importation of spices, furs, fine leather, armour, drugs, and general merchandise, there can be no doubt; nevertheless concerning this part of the subject there are but the most meagre accounts.

Jews were settled in England as early as 730, and during the sway of the Saxon kings. They increased in number after the era of the Conquest; but it was not until the rapacity to which they were exposed in the reign of Stephen had in a great measure exhausted itself, and until the measures of Henry II. had given encouragement to commerce, and some degree of security to property in cities or congregated communities, that the Jews in England became numerous and wealthy. They then became active and enterprising attendants at fairs, where the greater portion of the internal trade of the kingdom was carried on, and especially the traffic in the more valuable commodities, such as plate, jewels, armour, cloths, wines, spices, horses, cattle, &c. The agents of the great prelates and barons, and even of the ruling princes, purchased what they required at these fairs. St. Giles's fair, held at St. Giles's hill, not far from Winchester, continued sixteen days. The fair was, as it were, a temporary city. There were streets of tents in every direction, in which the traders offered and displayed their wares. During the continuance of the fair, business was strictly prohibited in Winchester, Southampton, and in every place within seven miles of St. Giles's hill. Among the tent-owners at such fairs were the Jews.

At this period the Jews may be considered as one of the bodies of "merchant-strangers," as they were called, settled in England for purposes of commerce. Among the other bodies of these

"strangers" were the German "merchants of the steel-yard," the Lombards, the Caursini of Rome, the "merchants of the staple," and others. These were all corporations, and thriving corporations (when unmolested), and the Jews had also their Jewerie, or Judaisme, not for a "corporation" merely, but also for the requirements of their faith and worship, and for their living together. The London Jewerie was established in a place of which no vestige of its establishment now remains beyond the name—the Old Jewry. Here was erected the first synagogue of the Jews in England, which was defaced or demolished, Maitland states, by the citizens, after they had slain 700 Jews (other accounts represent that number as greatly exaggerated). This took place in 1263, during one of the many disturbances in the uneasy reign of Henry III.

All this time the Jews amassed wealth by trade and usury, in spite of their being plundered and maltreated by the princes and other potentates—every one has heard of King John's having a Jew's teeth drawn—and in spite of their being reviled by the priests and hated by the people. The sovereigns generally encouraged "merchant-strangers." When the city of London, in 1289, petitioned Edward I. for "the expulsion of all merchant-strangers," that monarch answered, with all a monarch's peculiar regard for "great" men and "great" men only, "No! the merchant-strangers are useful and beneficial to the great men of the kingdom, and I will not expel them." But though the King encouraged, the people detested, *all* foreign traders, though not with the same intensity as they detested and contemned the Jews, for in *that* detestation a strong religious feeling was an element. Of this dislike to the merchant-strangers, very many instances might be cited, but I need give only one. In 1379, nearly a century after the banishment of the Jews, a Genoese merchant, a man of great wealth, petitioned Richard II. for permission to deposit goods for safe keeping in Southampton Castle, promising to introduce so large a share of the commerce of the East into England, that pepper should be 4*d*. a pound. "Yet the Londoners," writes Walsingham, but in the quaint monkish Latin of the day, "enemies to the prosperity of their country, hired assassins, who murdered the merchant in the street. After this, what stranger will trust his person among a people so faithless and so cruel? who will not dread our treachery, and abhor our name?"

In 1290, by a decree of Edward I., the Jews were banished out of England. The causes assigned for this summary act, were "their extortions, their debasing and diminishing the coin, and for other crimes." I need not enter into the merits or demerits of the Jews of that age, but it is certain that any ridiculous charge, any which it was impossible could be true, was an excuse for the plundering of them at the hands of the rich, and the persecution of them at the hands of the people. At the period of this banishment, their number is represented by the contemporaneous historians to have been about 16,000, a number most probably exaggerated, as perhaps all statements of the numbers of a people are when no statistical knowledge has been acquired. During this period of their abode in England, the Jews were protected as the villeins or bondsmen of the king, a protection disregarded by the commonalty, and only giving to the executive government greater facilities of extortion and oppression.

In 1655 an Amsterdam Jew, Rabbi Manasseh Ben-Israel, whose name is still highly esteemed among his countrymen, addressed Cromwell on the behalf of the Jews that they should be re-admitted into England with the sanction, and under the protection, of the law. Despite the absence of such sanction, they had resided and of course traded in this country, but in small numbers, and trading often in indirect and sometimes in contraband ways. Chaucer, writing in the days of Richard II., three reigns after their expulsion, speaks of Jews as living in England. It is reputed that, in the reigns of Elizabeth and the first James, they supplied, at great profit, the materials required by the alchymists for their experiments in the transmutation of metals. In Elizabeth's reign, too, Jewish physicians were highly esteemed in England. The Queen at one time confided the care of her health to RodrigoLopez, a Hebrew, who, however, was convicted of an attempt to poison his royal mistress. Francis I., of France, carried his opinion of Jewish medical skill to a great height; he refused on one occasion, during an illness, to be attended by the most eminent of the Israelitish physicians, because the learned man had just before been converted to Christianity. The most Christian king, therefore, applied to his ally, the Turkish sultan, Solyman II., who sent him "a true hardened Jew," by whose directions Francis drank asses' milk and recovered.

Cromwell's response to the application of Manasseh Ben Israel was favourable; but the opposition of the Puritans, and more especially of Prynne, prevented any public declaration on the subject. In 1656, however, the Jews began to arrive and establish themselves in England, but not until after the restoration of Charles II., in 1660, could it be said that, as a body, they were settled in England. They arrived from time to time, and without any formal sanction being either granted or refused. One reason alleged at the time was, that the Jews were well known to be money-lenders, and Charles and his courtiers were as well known money-borrowers!

I now come to the character and establishment of the Jews in the capacity in which I have more especially to describe them—as street-traders. There appears no reason to doubt that they commenced their principal street traffic, the collecting of old clothes, soon after their settlement in London. At any rate the cry and calling of the Jew old clothesman were so established, 30 or 40 years after their return, or early in the last century, that one of them is delineated in Tempest's "Cries of London," published about that period. In this work the street Jew is represented as very different in his appearance to that which he presents in our

day. Instead of merely a dingy bag, hung empty over his arm, or carried, when partially or wholly filled, on his shoulder, he is depicted as wearing, or rather carrying, three cocked hats, one over the other, upon his head; a muff, with a scarf or large handkerchief over it, is attached to his right hand and arm, and two dress swords occupy his left hand. The apparel which he himself wears is of the full-skirted style of the day, and his long hair, or periwig, descends to his shoulders. This difference in appearance, however, between the street Jew of 1700 and of a century and a half later, is simply the effect of circumstances, and indicates no change in the character of the man. Were it now the fashion for gentlemen to wear muffs, swords, and cocked hats, the Jew would again have them in his possession.

During the eighteenth century the popular feeling ran very high against the Jews, although to the masses they were almost strangers, except as men employed in the not-very-formidable occupation of collecting and vending second-hand clothes. The old feeling against them seems to have lingered among the English people, and their own greed in many instances engendered other and lawful causes of dislike, by their resorting to unlawful and debasing pursuits. They were considered—and with that exaggeration of belief dear to any ignorant community—as an entire people of misers, usurers, extortioners, receivers of stolen goods, cheats, brothel-keepers, sheriff's-officers, clippers and sweaters of the coin of the realm, gaming-house keepers; in fine, the charges, or rather the accusations, of carrying on every disreputable trade, and none else, were "bundled at their doors." That there was too much foundation for many of these accusations, and still *is*, no reasonable Jew can now deny; that the wholesale prejudice against them was absurd, is equally indisputable.

So strong was this popular feeling against the Israelites, that it not only influenced, and not only controlled the legislature, but it coerced the Houses of Parliament to repeal, in 1754, an act which they had passed the previous session, and that act was merely to enable foreign Jews to be naturalised without being required to take the sacrament! It was at that time, and while the popular ferment was at its height, unsafe for a Hebrew old clothesman, however harmless a man, and however long and well known on his beat, to ply his street-calling openly; for he was often beaten and maltreated. Mobs, riots, pillagings, and attacks upon the houses of the Jews were frequent, and one of the favourite cries of the mob was certainly among the most preposterously stupid of any which ever tickled the ear and satisfied the mind of the ignorant:—

"No Jews!
No wooden shoes!!"

Some mob-leader, with a taste for rhyme, had in this distich cleverly blended the prejudice against the Jews with the easily excited but vague fears of a French invasion, which was in some strange way typified to the apprehensions of the vulgar as connected with slavery, popery, the compulsory wearing of wooden shoes (*sabots*), and the eating of frogs! And this sort of feeling was often revenged on the street Jew, as a man mixed up with wooden shoes! Cumberland, in the comedy of "The Jew," and some time afterwards Miss Edgeworth, in the tale of "Harrington and Ormond," and both at the request of Jews, wrote to moderate this rabid prejudice.

In what estimation the street, and, incidentally, all classes of Jews are held at the present time, will be seen in the course of my remarks; and in the narratives to be given. I may here observe, however, that among some the dominant feeling against the Jews on account of their faith still flourishes, as is shown by the following statement:—A gentleman of my acquaintance was one evening, about twilight, walking down Brydges-street, Covent-garden, when an elderly Jew was preceding him, apparently on his return from a day's work, as an old clothesman. His bag accidentally touched the bonnet of a dashing woman of the town, who was passing, and she turned round, abused the Jew, and spat at him, saying with an oath: "You old rags humbug! *You* can't do that!"—an allusion to a vulgar notion that Jews have been unable to do more than *slobber*, since spitting on the Saviour.

The number of Jews now in England is computed at 35,000. This is the result at which the Chief Rabbi arrived a few years ago, after collecting all the statistical information at his command. Of these 35,000, more than one-half, or about 18,000, reside in London. I am informed that there may now be a small increase to this population, but only small, for many Jews have emigrated—some to California. A few years ago—a circumstance mentioned in my account of the Street-Sellers of Jewellery—there were a number of Jews known as "hawkers," or "travellers," who traverse every part of England selling watches, gold and silver pencil-cases, eye-glasses, and all the more portable descriptions of jewellery, as well as thermometers, barometers, telescopes, and microscopes. This trade is now little pursued, except by the stationary dealers; and the Jews who carried it on, and who were chiefly foreign Jews, have emigrated to America. The foreign Jews who, though a fluctuating body, are always numerous in London, are included in the computation of 18,000; of this population two-thirds reside in the city, or the streets adjacent to the eastern boundaries of the city.

Of the Trades and Localities of the Street-Jews.

The trades which the Jews most affect, I was told by one of themselves, are those in which, as they describe it, "there's a chance;" that is, they prefer a trade in such commodity as is not subjected to a fixed price, so that there may be abundant scope for speculation, and something like a gambler's chance for profit or loss. In this way, Sir Walter Scott has said, trade has "all the fascination of gambling, without the moral guilt;" but the absence of moral guilt in connection with such trading is certainly dubious.

The wholesale trades in foreign commodities which are now principally or solely in the hands of the Jews, often as importers and exporters, are, watches and jewels, sponges—fruits, especially green fruits, such as oranges, lemons, grapes, walnuts, cocoa-nuts, &c., and dates among dried fruits—shells, tortoises, parrots and foreign birds, curiosities, ostrich feathers, snuffs, cigars, and pipes; but cigars far more extensively at one time.

The localities in which these wholesale and retail traders reside are mostly at the East-end—indeed the Jews of London, as a congregated body, have been, from the times when their numbers were sufficient to institute a "settlement" or "colony," peculiar to themselves, always resident in the eastern quarter of the metropolis.

Of course a wealthy Jew millionaire—merchant, stock-jobber, or stock-broker—resides where he pleases—in a villa near the Marquis of Hertford's in the Regent's-park, a mansion near the Duke of Wellington's in Piccadilly, a house and grounds at Clapham or Stamford-hill; but these are exceptions. The quarters of the Jews are not difficult to describe. The trading-class in the capacity of shopkeepers, warehousemen, or manufacturers, are the thickest in Houndsditch, Aldgate, and the Minories, more especially as regards the "swag-shops" and the manufacture and sale of wearing apparel. The wholesale dealers in fruit are in Duke's-place and Pudding-lane (Thames-street), but the superior retail Jew fruiterers—some of whose shops are remarkable for the beauty of their fruit—are in Cheapside, Oxford-street, Piccadilly, and most of all in Covent-garden market. The inferior jewellers (some of whom deal with the first shops) are also at the East-end, about Whitechapel, Bevis-marks, and Houndsditch; the wealthier goldsmiths and watchmakers having, like other tradesmen of the class, their shops in the superior thoroughfares. The great congregation of working watchmakers is in Clerkenwell, but in that locality there are only a few Jews. The Hebrew dealers in second-hand garments, and second-hand wares generally, are located about Petticoat-lane, the peculiarities of which place I have lately described. The manufacturers of such things as cigars, pencils, and sealing-wax; the wholesale importers of sponge, bristles and toys, the dealers in quills and in "looking-glasses," reside in large private-looking houses, when display is not needed for purposes of business, in such parts as Maunsell-street, Great Prescott-street, Great Ailie-street, Leman-street, and other parts of the eastern quarter known as Goodman's-fields. The wholesale dealers in foreign birds and shells, and in the many foreign things known as "curiosities," reside in East Smithfield, Ratcliffe-highway, High-street (Shadwell), or in some of the parts adjacent to the Thames. In the long range of river-side streets, stretching from the Tower to Poplar and Blackwall, are Jews, who fulfil the many capacities of slop-sellers, &c., called into exercise by the requirements of seafaring people on their return from or commencement of a voyage. A few Jews keep boarding-houses for sailors in Shadwell and Wapping. Of the localities and abodes of the poorest of the Jews I shall speak hereafter.

Concerning the street-trades pursued by the Jews, I believe there is not at present a single one of which they can be said to have a monopoly; nor in any one branch of the street-traffic are there so many of the Jew traders as there were a few years back.

This remarkable change is thus to be accounted for. Strange as the fact may appear, the Jew has been undersold in the streets, and he has been beaten on what might be called his own ground—the buying of old clothes. The Jew boys, and the feebler and elder Jews, had, until some twelve or fifteen years back, almost the monopoly of orange and lemon street-selling, or street-hawking. The costermonger class had possession of the theatre doors and the approaches to the theatres; they had, too, occasionally their barrows full of oranges; but the Jews were the daily, assiduous, and itinerant street-sellers of this most popular of foreign, and perhaps of all, fruits. In their hopes of sale they followed any one a mile if encouraged, even by a few approving glances. The great theatre of this traffic was in the stage-coach yards in such inns as the Bull and Mouth, (St. Martin's-le-Grand), the Belle Sauvage (Ludgate-hill), the Saracen's Head (Snow-hill), the Bull (Aldgate), the Swan-with-two-Necks (Ladlane, City), the George and Blue Boar (Holborn), the White Horse (Fetter-lane), and other such places. They were seen too, "with all their eyes about them," as one informant expressed it, outside the inns where the coaches stopped to take up passengers—at the White Horse Cellar in Piccadilly, for instance, and the Angel and the (now defunct) Peacock in Islington. A commercial traveller told me that he could never leave town by any "mail" or "stage," without being besieged by a small army of Jew boys, who most pertinaciously offered him oranges, lemons, sponges, combs, pocket-books, pencils, sealing-wax, paper, many-bladed pen-knives, razors, pocket-mirrors, and shaving-boxes—as if a man could not possibly quit the metropolis without requiring a stock of such commodities. In the whole of these trades, unless in some degree in sponges and blacklead-pencils, the Jew is now out-numbered or displaced.

I have before alluded to the underselling of the Jew boy by the Irish boy in the street-orange trade; but the characteristics of the change are so peculiar, that a further notice is necessary. It is curious to observe that the most assiduous, and hitherto the most successful of street-traders, were supplanted, not by a more persevering or more skilful body of street-sellers, but simply by a more *starving* body.

Some few years since poor Irish people, and chiefly those connected with the culture of the land, "came over" to this country in great numbers, actuated either by vague hopes of "bettering themselves" by emigration, or working on the railways, or else influenced by the restlessness common to an impoverished people. These men, when unable to obtain em-

HARVARD UNIVERSITY

ployment, without scruple became street-sellers. Not only did the adults resort to street-traffic, generally in its simplest forms, such as hawking fruit, but the children, by whom they were accompanied from Ireland, in great numbers, were put into the trade; and if two or three children earned 2*d.* a day each, and their parents 5*d.* or 6*d.* each, or even 4*d.*, the subsistence of the family was better than they could obtain in the midst of the miseries of the southern and western part of the Sister Isle. An Irish boy of fourteen, having to support himself by street-trade, as was often the case, owing to the death of parents and to divers casualties, would undersell the Jew boys similarly circumstanced.

The Irish boy could live *harder* than the Jew—often in his own country he subsisted on a stolen turnip a day; he could lodge harder—lodge for 1*d.* a night in any noisome den, or sleep in the open air, which is seldom done by the Jew boy; he could dispense with the use of shoes and stockings—a dispensation at which his rival in trade revolted; he drank only water, or if he took tea or coffee, it was as a meal, and not merely as a beverage; to crown the whole, the city-bred Jew boy required some evening recreation, the penny or twopenny concert, or a game at draughts or dominoes; but this the Irish boy, country bred, never thought of, for *his* sole luxury was a deep sleep, and, being regardless or ignorant of all such recreations, he worked longer hours, and so sold more oranges, than his Hebrew competitor. Thus, as the Munster or Connaught lad could live on less than the young denizen of Petticoat-lane, he could sell at smaller profit, and did so sell, until gradually the Hebrew youths were displaced by the Irish in the street orange trade.

It is the same, or the same in a degree, with other street-trades, which were at one time all but monopolised by the Jew adults. Among these were the street-sale of spectacles and sponges. The prevalence of slop-work and slop-wages, and the frequent difficulty of obtaining properly-remunerated employment—the pinch of want, in short—have driven many mechanics to street-traffic; so that the numbers of street-traffickers have been augmented, while no small portion of the new comers have adopted the more knowing street avocations, formerly pursued only by the Jews.

Of the other class of street-traders who have interfered largely with the old-clothes trade, which, at one time, people seemed to consider a sort of birthright among the Jews, I have already spoken, when treating of the dealings of the crockmen in bartering glass and crockery-ware for second-hand apparel. These traders now obtain as many old clothes as the Jew clothes men themselves; for, with a great number of "ladies," the offer of an ornament of glass or spar, or of a beautiful and fragrant plant, is more attractive than the offer of a small sum of money, for the purchase of the left-off garments of the family.

The crockmen are usually strong and in the prime of youth or manhood, and are capable of carrying heavy burdens of glass or china-wares, for which the Jews are either incompetent or disinclined.

Some of the Jews which have been thus displaced from the street-traffic have emigrated to America, with the assistance of their brethren.

The principal street-trades of the Jews are now in sponges, spectacles, combs, pencils, accordions, cakes, sweetmeats, drugs, and fruits of all kinds; but, in all these trades, unless perhaps in drugs, they are in a minority compared with the "Christian" street-sellers.

There is not among the Jew street-sellers generally anything of the concubinage or cohabitation common among the costermongers. Marriage is the rule.

Of the Jew Old-Clothes Men.

Fifty years ago the appearance of the street Jews, engaged in the purchase of second-hand clothes, was different to what it is at the present time. The Jew then had far more of the distinctive garb and aspect of a foreigner. He not unfrequently wore the gabardine, which is never seen now in the streets, but some of the long loose frock coats worn by the Jew clothes' buyers resemble it. At that period, too, the Jew's long beard was far more distinctive than it is in this hirsute generation.

In other respects the street Jew is unchanged. Now, as during the last century, he traverses every street, square, and road, with the monotonous cry, sometimes like a bleat, of "Clo'! Clo'!" On this head, however, I have previously remarked, when describing the street Jew of a hundred years ago.

In an inquiry into the condition of the old-clothes dealers a year and a half ago, a Jew gave me the following account. He told me, at the commencement of his statement, that he was of opinion that his people were far more speculative than the Gentiles, and therefore the English liked better to deal with them. "Our people," he said, "will be out all day in the wet, and begrudge themselves a bit of anything to eat till they go home, and then, may be, they 'll gamble away their crown, just for the love of speculation." My informant, who could write or speak several languages, and had been 50 years in the business, then said, "I am no bigot; indeed I do not care where I buy my meat, so long as I can get it. I often go into the Minories and buy some, without looking to how it has been killed, or whether it has a seal on it or not."

He then gave me some account of the Jewish children, and the number of men in the trade, which I have embodied under the proper heads. The itinerant Jew clothes man, he told me, was generally the son of a former old-clothes man, but some were cigar-makers, or pencil-makers, taking to the clothes business when those trades were slack; but that nineteen out of twenty had been born to it. If the parents of the Jew boy are poor, and the boy a sharp lad, he generally commences business at ten years of age, by selling lemons, or some trifle in the streets, and so, as he

expressed it, the boy "gets a round," or street-connection, by becoming known to the neighbourhoods he visits. If he sees a servant, he will, when selling his lemons, ask if she have any old shoes or old clothes, and offer to be a purchaser. If the clothes should come to more than the Jew boy has in his pocket, he leaves what silver he has as "an earnest upon them," and then seeks some regular Jew clothes man, who will advance the purchase money. This the old Jew agrees to do upon the understanding that he is to have "half Rybeck," that is, a moiety of the profit, and then he will accompany the boy to the house, to pass his judgment on the goods, and satisfy himself that the stripling has not made a blind bargain, an error into which he very rarely falls. After this he goes with the lad to Petticoat-lane, and there they share whatever money the clothes may bring over and above what has been paid for them. By such means the Jew boy gets his knowledge of the old-clothes business; and so quick are these lads generally, that in the course of two months they will acquire sufficient experience in connection with the trade to begin dealing on their own account. There are some, he told me, as sharp at 15 as men of 50.

"It is very seldom," my informant stated, "very seldom indeed, that a Jew clothes man takes away any of the property of the house he may be called into. I expect there's a good many of 'em," he continued, for he sometimes spoke of his co-traders, as if they were not of his own class, "is fond of cheating—that is, they won't mind giving only 2*s.* for a thing that's worth 5*s.* They are fond of money, and will do almost anything to get it. Jews are perhaps the most money-loving people in all England. There are certainly some old-clothes men who will buy articles at such a price that they must know them to have been stolen. Their rule, however, is to ask no questions, and to get as cheap an article as possible. A Jew clothes man is seldom or never seen in liquor. They gamble for money, either at their own homes or at public-houses. The favourite games are tossing, dominoes, and cards. I was informed, by one of the people, that he had seen as much as 30*l.* in silver and gold lying upon the ground when two parties had been playing at throwing three halfpence in the air. On a Saturday, some gamble away the morning and the greater part of the afternoon." [Saturday, I need hardly say, is the Hebrew Sabbath.] "They meet in some secret back place, about ten, and begin playing for 'one a time'—that is, tossing up three halfpence, and staking 1*s.* on the result. Other Jews, and a few Christians, will gather round and bet. Sometimes the bets laid by the Jew bystanders are as high as 2*l.* each; and on more than one occasion the old-clothes men have wagered as much as 50*l.*, but only after great gains at gambling. Some, if they *can*, will cheat, by means of a halfpenny with a head or a tail on both sides, called a 'gray.' The play lasts till the Sabbath is nearly over, and then they go to business or the theatre. They seldom or never say a word while they are losing, but merely stamp on the ground; it is dangerous, though, to interfere when luck runs against them. The rule is, when a man is losing to let him alone. I have known them play for three hours together, and nothing be said all that time but 'head' or 'tail.' They seldom go to synagogue, and on a Sunday evening have card parties at their own houses. They seldom eat anything on their rounds. The reason is, not because they object to eat meat killed by a Christian, but because they are afraid of losing a 'deal,' or the chance of buying a lot of old clothes by delay. They are generally too lazy to light their own fires before they start of a morning, and nineteen out of twenty obtain their breakfasts at the coffee-shops about Houndsditch.

"When they return from their day's work they have mostly some stew ready, prepared by their parents or wife. If they are not family men they go to an eating-house. This is sometimes a Jewish house, but if no one is looking they creep into a Christian 'cook-shop,' not being particular about eating 'tryfer'—that is, meat which has been killed by a Christian. Those that are single generally go to a neighbour and agree with him to be boarded on the Sabbath; and for this the charge is generally about 2*s.* 6*d.* On a Saturday there's cold fish for breakfast and supper; indeed, a Jew would pawn the shirt off his back sooner than go without fish then; and in holiday-time he *will* have it, if he has to get it out of the stones. It is not reckoned a holiday unless there's fish."

"Forty years ago I have made as much as 5*l.* in a week by the purchase of old clothes in the streets," said a Jew informant. "Upon an average then, I could earn weekly about 2*l.* But now things are different. People are more wide awake. Every one knows the value of an old coat now-a-days. The women know more than the men. The general average, I think, take the good weeks with the bad throughout the year, is about 1*l.* a week; some weeks we get 2*l.*, and some scarcely nothing."

I was told by a Jewish professional gentleman that the account of the *spirit* of gambling prevalent among his people was correct, but the amounts said to be staked, he thought, rare or exaggerated.

The Jew old-clothes men are generally far more cleanly in their habits than the poorer classes of English people. Their hands they always wash before their meals, and this is done whether the party be a strict Jew or "Meshumet," a convert, or apostate from Judaism. Neither will the Israelite ever use the same knife to cut his meat that he previously used to spread his butter, and he will not even put his meat on a plate that has had butter on it; nor will he use for his soup the spoon that has had melted butter in it. This objection to mix butter with meat is carried so far, that, after partaking of the one, Jews will not eat of the other for the space of two hours. The Jews are generally, when married, most exemplary family men. There are few fonder fathers than they are, and they will starve themselves sooner than their wives and children should want. Whatever their faults may be, they are good

fathers, husbands, and sons. Their principal characteristic is their extreme love of money; and, though the strict Jew does not trade himself on the Sabbath, he may not object to employ either one of his tribe, or a Gentile, to do so for him.

The capital required for commencing in the old-clothes line is generally about 1*l.* This the Jew frequently borrows, especially after holiday-time, for then he has generally spent all his earnings, unless he be a provident man. When his stock-money is exhausted, he goes either to a neighbour or to a publican in the vicinity, and borrows 1*l.* on the Monday morning, "to strike a light with," as he calls it, and agrees to return it on the Friday evening, with 1*s.* interest for the loan. This he always pays back. If he was to sell the coat off his back he would do this, I am told, because to fail in so doing would be to prevent his obtaining any stock-money for the future. With this capital he starts on his rounds about eight in the morning, and I am assured he will frequently begin his work without tasting food, rather than break into the borrowed stock-money. Each man has his particular walk, and never interferes with that of his neighbour; indeed, while upon another's beat he will seldom cry for clothes. Sometimes they go half "Rybeck" together—that is, they will share the profits of the day's business, and when they agree to do this the one will take one street, and the other another. The lower the neighbourhood the more old clothes are there for sale. At the east end of the town they like the neighbourhoods frequented by sailors, and there they purchase of the girls and the women the sailors' jackets and trowsers. But they buy most of the Petticoat-lane, the Old-Clothes Exchange, and the marine-store dealers; for as the Jew clothes man never travels the streets by night-time, the parties who then have old clothes to dispose of usually sell them to the marine-store or second-hand dealers over-night, and the Jew buys them in the morning. The first thing that he does on his rounds is to seek out these shops, and see what he can pick up there. A very great amount of business is done by the Jew clothes man at the marine-store shops at the west as well as at the east end of London.

At the West-end the itinerant clothes men prefer the mews at the back of gentlemen's houses to all other places, or else the streets where the little tradesmen and small genteel families reside. My informant assured me that he had once bought a Bishop's hat of his lordship's servant for 1*s.* 6*d.* on a Sunday morning.

These traders, as I have elsewhere stated, live at the East-end of the town. The greater number of them reside in Portsoken Ward, Houndsditch; and their favourite localities in this district are either Cobb's-yard, Roper's-building, or Wentworth-street. They mostly occupy small houses, about 4*s.* 6*d.* a week rent, and live with their families. They are generally sober men. It is seldom that a Jew leaves his house and owes his landlord money; and if his goods should be seized the rest of his tribe will go round and collect what is owing.

The rooms occupied by the old-clothes men are far from being so comfortable as those of the English artizans whose earnings are not superior to the gains of these clothes men. Those which I saw had all a littered look; the furniture was old and scant, and the apartment seemed neither shop, parlour, nor bed-room. For domestic and family men, as some of the Jew old-clothes men are, they seem very indifferent to the comforts of a home.

I have spoken of "Tryfer," or meat killed in the Christian fashion. Now, the meat killed according to the Jewish law is known as "Coshar," and a strict Jew will eat none other. In one of my letters in the *Morning Chronicle* on the meat markets of London, there appeared the following statement, respecting the Jew butchers in Whitechapel-market.

"To a portion of the meat here exposed for sale, may be seen attached the peculiar seal which shows that the animal was killed conformably to the Jewish rites. According to the injunctions of this religion the beast must die from its throat being cut, instead of being knocked on the head. The slaughterer of the cattle for Jewish consumption, moreover, must be a Jew. Two slaughterers are appointed by the Jewish authorities of the synagogue, and they can employ others, who must be likewise Jews, as assistants. The slaughterers I saw were quiet-looking and quiet-mannered men. When the animal is slaughtered and skinned, an examiner (also appointed by the synagogue) carefully inspects the 'inside.' 'If the lights be grown to the ribs,' said my informant, who had had many years' experience in this branch of the meat trade, 'or if the lungs have any disease, or if there be any disease anywhere, the meat is pronounced unfit for the food of the Jews, and is sent entire to a carcase butcher to be sold to the Christians. This, however, does not happen once in 20 times.' To the parts exposed for sale, when the slaughtering has been according to the Jewish law, there is attached a leaden seal, stamped in Hebrew characters with the name of the examining party sealing. In this way, as I ascertained from the slaughterers, are killed weekly from 120 to 140 bullocks, from 400 to 500 sheep and lambs, and about 30 calves. All the parts of the animal thus slaughtered may be and are eaten by the Jews, but three-fourths of the purchase of this meat is confined, as regards the Jews, to the fore-quarters of the respective animals; the hind-quarters, being the choicer parts, are sent to Newgate or Leadenhall-markets for sale on commission." The Hebrew butchers consider that the Christian mode of slaughter is a far less painful death to the ox than was the Jewish.

I am informed that of the Jew Old-Clothes Men there are now only from 500 to 600 in London; at one time there might have been 1000. Their average earnings may be something short of 20*s.* a week in second-hand clothes alone; but the gains are difficult to estimate.

OF A JEW STREET-SELLER.

AN elderly man, who, at the time I saw him, was vending spectacles, or bartering them for old clothes, old books, or any second-hand articles, gave me an account of his street-life, but it presented little remarkable beyond the not unusual vicissitudes of the lives of those of his class.

He had been in every street-trade, and had on four occasions travelled all over England, selling quills, sealing-wax, pencils, sponges, braces, cheap or superior jewellery, thermometers, and pictures. He had sold barometers in the mountainous parts of Cumberland, sometimes walking for hours without seeing man or woman. "*I liked it then,*" he said, "*for I was young and strong, and didn't care to sleep twice in the same town.* I was afterwards in the old-clothes line. I buy a few odd hats and light things still, but I'm not able to carry heavy weights, as my breath is getting rather short." [I find that the Jews generally object to the more laborious kinds of street-traffic.] "Yes, I've been twice to Ireland, and sold a good many quills in Dublin, for I crossed over from Liverpool. Quills and wax were a great trade with us once; now it's quite different. I've had as much as 60*l.* of my own, and that more than half-a-dozen times, but all of it went in speculations. Yes, some went in gambling. I had a share in a gaming-booth at the races, for three years. O, I dare say that's more than 20 years back; but we did very little good. There was such fees to pay for the tent on a race-ground, and often such delays between the races in the different towns, and bribes to be given to the town-officers—such as town-sergeants and chief constables, and I hardly know who—and so many expenses altogether, that the profits were mostly swamped. Once at Newcastle races there was a fight among the pitmen, and our tent was in their way, and was demolished almost to bits. A deal of the money was lost or stolen. I don't know how much, but not near so much as my partners wanted to make out. I wasn't on the spot just at the time. I got married after that, and took a shop in the second-hand clothes line in Bristol, but my wife died in child-bed in less than a year, and the shop didn't answer; so I got sick of it, and at last got rid of it. O, I work both the country and London still. I shall take a turn into Kent in a day or two. I suppose I clear between 10*s.* and 20*s.* a week in anything, and as I've only myself, I do middling, and am ready for another chance if any likely speculation offers. I lodge with a relation, and sometimes live with his family. No, I never touch any meat but 'Coshar.' I suppose my meat now costs me 6*d.* or 7*d.* a day, but it has cost me ten times that—and 2*d.* for beer in addition."

I am informed that there are about 50 adult Jews (besides old-clothes men) in the streets selling fruit, cakes, pencils, spectacles, sponge, accordions, drugs, &c.

OF THE JEW-BOY STREET-SELLERS.

I HAVE ascertained, and from sources where no ignorance on the subject could prevail, that there are now in the streets of London, rather more than 100 Jew-boys engaged principally in fruit and cake-selling in the streets. Very few Jewesses are itinerant street-sellers. Most of the older Jews thus engaged have been street-sellers from their boyhood. The young Jews who ply in street-callings, however, are all men in matters of traffic, almost before they cease, in years, to be children. In addition to the Jew-boy street-sellers above enumerated, there are from 50 to 100, but usually about 50, who are occasional, or "casual" street-traders, vending for the most part cocoa-nuts and grapes, and confining their sales chiefly to the Sundays.

On the subject of the street-Jew boys, a Hebrew gentleman said to me: "When we speak of street-Jew boys, it should be understood, that the great majority of them are but little more conversant with or interested in the religion of their fathers, than are the costermonger boys of whom you have written. They are Jews by the accident of their birth, as others in the same way, with equal ignorance of the assumed faith, are Christians."

I received from a Jew boy the following account of his trading pursuits and individual aspirations. There was somewhat of a thickness in his utterance, otherwise his speech was but little distinguishable from that of an English street-boy. His physiognomy was decidedly Jewish, but not of the handsomer type. His hair was light-coloured, but clean, and apparently well brushed, without being oiled, or, as I heard a street-boy style it, "greased"; it was long, and he said his aunt told him it "wanted cutting sadly;" but he "liked it that way;" indeed, he kept dashing his curls from his eyes, and back from his temples, as he was conversing, as if he were somewhat vain of doing so. He was dressed in a corduroy suit, old but not ragged, and wore a tolerably clean, very coarse, and altogether buttonless shirt, which he said "was made for one bigger than me, sir." He had bought it for 9½*d.* in Petticoat-lane, and accounted it a bargain, as its wear would be durable. He was selling sponges when I saw him, and of the commonest kind, offering a large piece for 3*d.*, which (he admitted) would be rubbed to bits in no time. This sponge, I should mention, is frequently "dressed" with sulphuric acid, and an eminent surgeon informed me that on his servant attempting to clean his black dress coat with a sponge that he had newly bought in the streets, the colour of the garment, to his horror, changed to a bright purple. The Jew boy said—

"I believe I'm twelve. I've been to school, but it's long since, and my mother was very ill then, and I was forced to go out in the streets to have a chance. I never was kept to school. I can't read; I've forgot all about it. I'd rather now that I could read, but very likely I could soon learn if I could only spare time, but if I stay long in the house I feel sick; it's not healthy. O, no, sir, inside or out it would be all the same to me, just to make a living and keep my health. I can't say how long it is since I began to sell, it's a good long time; one must do some-

thing. I could keep myself now, and do sometimes, but my father -- I live with him (my mother 's dead) is often laid up. Would you like to see him, sir? He knows a deal. No, he can't write, but he can read a little. Can I speak Hebrew? Well, I know what you mean. O, no, I can't. I don't go to synagogue; I haven't time. My father goes, but only sometimes; so he says, and he tells me to look out, for we must both go by-and-by." [I began to ask him what he knew of Joseph, and others recorded in the Old Testament, but he bristled up, and asked if I wanted to make a Meshumet (a convert) of him?] "I have sold all sorts of things," he continued, "oranges, and lemons, and sponges, and nuts, and sweets. I should like to have a real good ginger-beer fountain of my own; but I must wait, and there 's many in the trade. I only go with boys of my own sort. I sell to all sorts of boys, but that's nothing. Very likely they 're Christians, but that 's nothing to me. I don't know what 's the difference between a Jew and Christian, and I don't want to talk about it. The Meshumets are never any good. Anybody will tell you that. Yes, I like music and can sing a bit. I get to a penny and sometimes a two-penny concert. No, I haven't been to Sussex Hall—I know where it is—I shouldn't understand it. You get in for nothing, that's one thing. I've heard of Baron Rothschild. He has more money than I could count in shillings in a year. I don't know about his wanting to get into parliament, or what it means; but he 's sure to do it or anything else, with his money. He's very charitable, I've heard. I don't know whether he's a German Jew, or a Portegee, or what. He 's a cut above me, a precious sight. I only wish he was my uncle. I can't say what I should do if I had his money. Perhaps I should go a travelling, and see everything everywhere. I don't know how long the Jews have been in England; always perhaps. Yes, I know there 's Jews in other countries. This sponge is Greek sponge, but I don't know where it 's grown, only it 's in foreign parts. Jerusalem! Yes, I 've heard of it. I 'm of no tribe that I know of. I buy what I eat about Petticoat-lane. No, I don't like fish, but the stews, and the onions with them is beautiful for two-pence; you may get a pennor'th. The pickles—cowcumbers is best—are stunning. But they 're plummiest with a bit of cheese or anything cold—that 's my opinion, but you may think different. Pork! Ah! No, I never touched it; I 'd as soon eat a cat; so would my father. No, sir, I don't think pork smells nice in a cook-shop, but some Jew boys, as I knows, thinks it does. I don't know why it shouldn't be eaten, only that it 's wrong to eat it. No, I never touched a ham-sandwich, but other Jew boys have, and laughed at it, I know.

"I don't know what I make in a week. I think I make as much on one thing as on another. I 've sold strawberries, and cherries, and gooseberries, and nuts and walnuts in the season. O, as to what I make, that 's nothing to nobody. Sometimes 6*d.* a day, sometimes 1*s.*; sometimes a little more, and sometimes nothing. No, I never sells inferior things if I can help it, but if one hasn't stock-money one must do as one can, but it isn't so easy to try it on. There was a boy beaten by a woman not long since for selling a big pottle of strawberries that was rubbish all under the toppers. It was all strawberry leaves, and crushed strawberries, and such like. She wanted to take back from him the two-pence she 'd paid for it, and got hold of his pockets and there was a regular fight, but she didn't get a farthing back though she tried her very hardest, 'cause he slipped from her and hooked it. So you see it 's dangerous to try it on." [This last remark was made gravely enough, but the lad told of the feat with such manifest glee, that I'm inclined to believe that he himself was the culprit in question.] "Yes, it was a Jew boy it happened to, but other boys in the streets is just the same. Do I like the streets? I can't say I do, there's too little to be made in them. *No, I wouldn't like to go to school, nor to be in a shop, nor be anybody's servant but my own.* O, I don't know what I shall be when I'm grown up. I shall take my chance like others."

OF THE PURSUITS, DWELLINGS, TRAFFIC, ETC., OF THE JEW-BOY STREET-SELLERS.

To speak of the street Jew-boys as regards their traffic, manners, haunts, and associations, is to speak of the same class of boys who may not be employed regularly in street-sale, but are the comrades of those who are; a class, who, on any cessation of their employment in cigar manufactories, or indeed any capacity, will apply themselves temporarily to street-selling, for it seems to these poor and uneducated lads a sort of natural vocation.

These youths, *uncontrolled* or *incontrollable* by their parents (who are of the lowest class of the Jews, and who often, I am told, care little about the matter, so long as the child can earn his own maintenance), frequently in the evenings, after their day's work, resort to coffee-shops, in preference even to a cheap concert-room. In these places they amuse themselves as men might do in a tavern where the landlord leaves his guests to their own caprices. Sometimes one of them reads aloud from some exciting or degrading book, the lads who are unable to read listening with all the intentness with which many of the uneducated attend to any one reading. The reading is, however, not unfrequently interrupted by rude comments from the listeners. If a newspaper be read, the "police," or "crimes," are mostly the parts preferred. But the most approved way of passing the evening, among the Jew boys, is to play at draughts, dominoes, or cribbage, and to bet on the play. Draughts and dominoes are unpractised among the costermonger boys, but some of the young Jews are adepts in those games.

A gentleman who took an interest in the Jew lads told me that he had often heard the sort of reading and comments I have described, when he had called to talk to and perhaps expostulate with these youths in a coffee-shop, but he informed me that they seldom regarded any expostulation, and

Original from HARVARD UNIVERSITY

seemed to be little restrained by the presence of a stranger, the lads all muttering and laughing in a box among themselves. I saw seven of them, a little after eight in the evening, in a coffee-shop in the London-road,—although it is not much of a Jewish locality,—and two of them were playing at draughts for coffee, while the others looked on, betting halfpennies or pennies with all the eagerness of gamblers, unrestrained in their expressions of delight or disappointment as they thought they were winning or losing, and commenting on the moves with all the assurance of connoisseurship; sometimes they squabbled angrily and then suddenly dropped their voices, as the master of the coffee-shop had once or twice cautioned them to be quiet.

The dwellings of boys such as these are among the worst in London, as regards ventilation, comfort, or cleanliness. They reside in the courts and recesses about Whitechapel and Petticoat-lane, and generally in a garret. If not orphans they usually dwell with their father. I am told that the care of a mother is almost indispensable to a poor Jew boy, and having that care he seldom becomes an outcast. The Jewesses and Jew girls are rarely itinerant street-sellers—not in the proportion of one to twelve, compared with the men and boys; in this respect therefore the street Jews differ widely from the English costermongers and the street Irish, nor are the Hebrew females even stall-keepers in the same proportion.

One Jew boy's lodging which I visited was in a back garret, low and small. The boy lived with his father (a street-seller of fruit), and the room was very bare. A few sacks were thrown over an old palliass, a blanket seemed to be used for a quilt; there were no fire-irons nor fender; no cooking utensils. Beside the bed was an old chest, serving for a chair, while a board resting on a trestle did duty for a table (this was once, I presume, a small street-stall). The one not very large window was thick with dirt and patched all over. Altogether I have seldom seen a more wretched apartment. The man, I was told, was addicted to drinking.

The callings of which the Jew boys have the monopoly are not connected with the sale of any especial article, but rather with such things as present a variety from those ordinarily offered in the streets, such as cakes, sweetmeats, fried fish, and (in the winter) elder wine. The cakes known as "boolers"—a mixture of egg, flour, and candied orange or lemon peel, cut very thin, and with a slight colouring from saffron or something similar—are now sold principally, and used to be sold exclusively, by the Jew boys. Almond cakes (little round cakes of crushed almonds) are at present vended by the Jew boys, and their sponge biscuits are in demand. All these dainties are bought by the street-lads of the Jew pastry-cooks. The difference in these cakes, in their sweetmeats, and their elder wine, is that there is a dash of spice about them not ordinarily met with. It is the same with the fried fish, a little spice or pepper being blended with the oil. In the street-sale of pickles the Jews have also the monopoly; these, however, are seldom hawked, but generally sold from windows and door-steads. The pickles are cucumbers or gherkins, and onions—a large cucumber being 2*d*., and the smaller 1*d*. and ½*d*.

The faults of the Jew lad are an eagerness to make money by any means, so that he often grows up a cheat, a trickster, a receiver of stolen goods, though seldom a thief, for he leaves that to others. He is content to profit by the thief's work, but seldom *steals* himself, however he may cheat. Some of these lads become rich men; others are vagabonds all their lives. None of the Jew lads confine themselves to the sale of any one article, nor do they seem to prefer one branch of street-traffic to another. Even those who cannot read are exceedingly quick.

I may here observe in connection with the receipt of stolen goods, that I shall deal with this subject in my account of the LONDON THIEVES. I shall also show the connection of Jewesses and Jews with the *prostitution of the metropolis*, in my forthcoming exposition of the LONDON PROSTITUTES.

OF THE STREET JEWESSES AND STREET JEW-GIRLS.

I HAVE mentioned that the Jewesses and the young Jew girls, compared with the adult Jews and Jew boys, are not street-traders in anything like the proportion which the females were found to bear to the males among the Irish street-folk and the English costermongers. There are, however, a few Jewish females who are itinerant street-sellers as well as stall keepers, in the proportion, perhaps, of one female to seven or eight males. The majority of the street Jew-girls whom I saw on a round were accompanied by boys who were represented to be their brothers, and I have little doubt such was the facts, for these young Jewesses, although often pert and ignorant, are not unchaste. Of this I was assured by a medical gentleman who could speak with sufficient positiveness on the subject.

Fruit is generally sold by these boys and girls together, the lad driving the barrow, and the girl inviting custom and handing the purchases to the buyers. In tending a little stall or a basket at a regular pitch, with such things as cherries or strawberries, the little Jewess differs only from her street-selling sisters in being a brisker trader. The stalls, with a few old knives or scissors, or odds and ends of laces, that are tended by the Jew girls in the streets in the Jewish quarters (I am told there are not above a dozen of them) are generally near the shops and within sight of their parents or friends. One little Jewess, with whom I had some conversation, had not even heard the name of the Chief Rabbi, the Rev. Dr. Adler, and knew nothing of any distinction between German and Portuguese Jews; she had, I am inclined to believe, never heard of either. I am told that the whole, or nearly the whole, of these young female traders reside with parents or friends, and that there is among them far less than the average number of runaways. One Jew told me he thought that the young female members of his tribe did

not tramp with the juveniles of the other sex—no, not in the proportion of one to a hundred in comparison, he said with a laugh, with "young women of the Christian persuasion." My informant had means of knowing this fact, as although still a young man, he had traversed the greater part of England hawking perfumery, which he had abandoned as a bad trade. A wire-worker, long familiar with tramping and going into the country—a man upon whose word I have every reason to rely—told me that he could not remember a single instance of his having seen a young Jewess "travelling" with a boy.

There are a few adult Jewesses who are itinerant traders, but very few. I met with one who carried on her arm a not very large basket, filled with glass wares; chiefly salt-cellars, cigar-ash plates, blue glass dessert plates, vinegar-cruets, and such like. The greater part of her wares appeared to be blue, and she carried nothing but glass. She was a good-looking and neatly-dressed woman. She peeped in at each shop-door, and up at the windows of every private house, in the street in which I met her, crying, "Clo', old clo'!" She bartered her glass for old clothes, or bought the garments, dealing principally in female attire, and almost entirely with women. She declined to say anything about her family or her circumstances, except that she had nothing that way to complain about, but—when I had used some names I had authority to make mention of—she said she would, with pleasure, tell me all about her trade, which she carried on rather than do nothing. "When I hawk," she said with an English accent, her face being unmistakeably Jewish, "I hawk only good glass, and it can hardly be called hawking, as I swop it for more than I sell it. I always ask for the mistress, and if she wants any of my glass we come to a bargain if we can. O, it's ridiculous to see what things some ladies—I suppose they must be called ladies—offer for my glass. Children's green or blue gauze veils, torn or faded, and not worth picking up, because no use whatever; old ribbons, not worth dyeing, and old frocks, not worth washing. People say, 'as keen as a Jew,' but ladies can't think we're very keen when they offer us such rubbish. I do most at the middle kind of houses, both shops and private. I sometimes give a little money for such a thing as a shawl, or a fur tippet, as well as my glass—but only when I can't help it—to secure a bargain. Sometimes, but not often, I get the old thing and a trifle for my glass. Occasionally I buy outright. I don't do much, there's so many in the line, and I don't go out regularly. I can't say how many women are in my way—very few; O, I do middling. I told you I had no complaints to make. I don't calculate my profits or what I sell. My family do that and I don't trouble myself."

Of the Synagogues and the Religion of the Street and other Jews.

The Jews in this country are classed as "Portuguese" and "German." Among them are no distinctions of tribes, but there is of rites and ceremonies, as is set forth in the following extract (which shows also the mode of government) from a Jewish writer: "The Spanish and Portuguese Congregation of Jews, who are also called Sephardin (from the word Sepharad, which signifies Spain in Hebrew), are distinct from the German and Polish Jews in their ritual service. The prayers both daily and for the Sabbath materially differ from each other, and the festival prayers differ still more. Hence the Portuguese Jews have a distinct prayer-book, and the German Jews likewise.

"The fundamental laws are equally observed by both sects, but in the ceremonial worship there exists numerous differences. The Portuguese Jews eat some food during the Passover, which the German Jews are prohibited doing by *some* Rabbis, but their authority is not acknowledged by the Portuguese Rabbis. Nor are the present ecclesiastical authorities in London of the two sects the same. The Portuguese Jews have their own Rabbis, and the German have their own. The German Jews are much more numerous than the Portuguese; the chief Rabbi of the German Jews is the Rev. Dr. Nathan Marcus Adler, late Chief Rabbi of Hanover, who wears no beard, and dresses in the German costume. The presiding Rabbi of the Portuguese Jews is the Rev. David Meldola, a native of Leghorn; his father filled the same office in London. Each chief Rabbi is supported by three other Rabbis, called Dayamin, which signifies in Hebrew 'Judges.' Every Monday and Thursday the Chief Rabbi of the German Jews, Dr. Adler, supported by his three colleagues, sits for two hours in the Rabbinical College (Beth Hamedrash), Smith's-buildings, Leadenhall-street, to attend to all applications from the German Jews, which may be brought before him, and which are decided according to the Jewish law. Many disputes between Jews in religious matters are settled in this manner; and if the Lord Mayor or any other magistrate is told that the matter has already been settled by the Jewish Rabbi he seldom interferes. This applies only to civil and not to criminal cases. The Portuguese Jews have their own hospital and their own schools. Both congregations have their representatives in the Board of Deputies of British Jews, which board is acknowledged by government, and is triennial. Sir Moses Montefiore, a Jew of great wealth, who distinguished himself by his mission to Damascus, during the persecution of the Jews in that place, and also by his mission to Russia, some years ago, is the President of the Board. All political matters, calling for communications with government, are within the province of that useful board."

The Jews have eight synagogues in London, besides some smaller places which may perhaps, adopting the language of another church, be called synagogues of ease. The great synagogue in Duke's-place (a locality of which I have often had to speak) is the largest, but the new synagogue, St. Helen's, Bishopgate, is the one which most betokens the wealth of the worshippers. It is

Original from HARVARD UNIVERSITY

rich with ornaments, marble, and painted glass; the pavement is of painted marble, and presents a perfect round, while the ceiling is a half dome. There are besides these the Hamburg Synagogue, in Fenchurch-street; the Portuguese Synagogue, in Bevis-marks; two smaller places, in Cutler-street and Gun-yard, Houndsditch, known as Polish Synagogues; the Maiden-lane (Covent-garden), Synagogue; the Western Synagogue, St. Alban's-place, Pall-mall; and the West London Synagogue of British Jews, Margaret-street, Cavendish-square. The last-mentioned is the most aristocratic of the synagogues. The service there is curtailed, the ritual abbreviated, and the days of observance of the Jewish festival reduced from two to one. This alteration is strongly protested against by the other Jews, and the practices of this synagogue seem to show a yielding to the exactions or requirements of the wealthy. In the old days, and in almost every country in Europe, it was held to be sinful even for a king—reverenced and privileged as such a potentate then was—to prosecute any undertaking before he heard mass. In some states it was said in reproach of a noble or a sovereign, "he breakfasts before he hears mass," and, to meet the impatience of the Great, "hunting masses," as they were styled, or epitomes of the full service, were introduced. The Jews, some eight or nine years back in this country, seem to have followed this example; such was the case, at least, as regards London and the wealthier of the professors of this ancient faith.

The synagogues are not well attended, the congregations being smaller in proportion to the population than those of the Church of England. Neither, during the observance of the Jewish worship, is there any especial manifestation of the service being regarded as of a sacred and divinely-ordained character. There is a buzzing talk among the attendants during the ceremony, and an absence of seriousness and attention. Some of the Jews, however, show the greatest devotion, and the same may be said of the Jewesses, who sit apart in the synagogues, and are not required to attend so regularly as the men.

I should not have alluded to this absence of the solemnities of devotion, as regards the congregations of the Hebrews, had I not heard it regretted by Hebrews themselves. "It is shocking," one said. Another remarked, "To attend the synagogue is looked upon too much as a matter of *business;* but perhaps there is the same spirit in some of the Christian churches."

As to the street-Jews, religion is little known among them, or little cared for. They are indifferent to it—not to such a degree, indeed, as the costermongers, for they are not so ignorant a class—but yet contrasting strongly in their neglect with the religious intensity of the majority of the Roman Catholic Irish of the streets. In common justice I must give the remark of a Hebrew merchant with whom I had some conversation on the subject:—"I can't say much about street-Jews, for my engagements lead me away from them, and I don't know much about street-Christians. But if out of a hundred Jews you find that only ten of them care for their religion, how many out of a hundred Christians of any sort will care about theirs? Will ten of them care? If you answer, but they are only nominal Christians, my reply is, the Jews are only nominal Jews—Jews by birth, and not by faith."

Among the Jews I conversed with—and of course only the more intelligent understood, or were at all interested in, the question—I heard the most contemptuous denunciation of all converts from Judaism. One learned informant, who was by no means blind to the short-comings of his own people, expressed his conviction that no Jew had ever been really *converted.* He had abandoned his faith from interested motives. On this subject I am not called upon to express any opinion, and merely mention it to show a prevalent feeling among the class I am describing.

The street-Jews, including the majority of the more prosperous and most numerous class among them, the old-clothes men, are far from being religious in feeling, or well versed in their faith, and are, perhaps, in that respect on a level with the mass of the members of the Church of England; I say of the Church of England, because of that church the many who do not profess religion are usually accounted members.

In the Rabbinical College, I may add, is the finest Jewish library in the world. It has been collected for several generations under the care of the Chief Rabbis. The public are admitted, having first obtained tickets, given gratuitously, at the Chief Rabbi's residence in Crosby-square.

OF THE POLITICS, LITERATURE, AND AMUSEMENTS OF THE JEWS.

PERHAPS there is no people in the world, possessing the average amount of intelligence in busy communities, who care so little for politics as the general body of the Jews. The wealthy classes may take an interest in the matter, but I am assured, and by those who know their countrymen well, that even with them such a quality as patriotism is a mere word. This may be accounted for in a great measure, perhaps, from an hereditary feeling. The Jew could hardly be expected to love a land, or to strive for the promotion of its general welfare, where he felt he was but a sojourner, and where he was at the best but tolerated and often proscribed. But this feeling becomes highly reprehensible when it extends—as I am assured it does among many of the rich Jews—to their own people, for whom, apart from conventionalities, say my informants, *they care nothing whatever;* for so long as they are undisturbed in money-getting at home, their brethren may be persecuted all over the world, while the rich Jew merely shrugs his shoulders. An honourable exception, however, exists in Sir Moses Montefiore, who has honourably distinguished himself in the relief of his persecuted brethren on more than one occasion. The great of the earth no longer spit upon the gabardine of the Jewish millionaire, nor do they draw his teeth to get his money, but the great Jew capitalists, with powerful influence in

Original from HARVARD UNIVERSITY

many a government, do not seek to direct that influence for the bettering of the lot of their poorer brethren, who, at the same time, brook the restrictions and indignities which they have to suffer with a perfect philosophy. In fact, the Jews have often been the props of the courts who have persecuted them; that is to say, two or three Jewish firms occasionally have not hesitated to lend millions to the governments by whom they and their people have been systematically degraded and oppressed.

I was told by a Hebrew gentleman (a professional man) that so little did the Jews themselves care for "Jewish emancipation," that he questioned if one man in ten, actuated solely by his own feelings, would trouble himself to walk the length of the street in which he lived to secure Baron Rothschild's admission into the House of Commons. This apathy, my informant urged with perfect truth, in nowise affected the merits of the question, though he was convinced it formed a great obstacle to Baron Rothschild's success; "for governments," he said, "won't give boons to people who don't care for them; and, though this is called a boon, I look upon it as only a *right*."

When such is the feeling of the comparatively wealthier Jews, no one can wonder that I found among the Jewish street-sellers and old-clothes men with whom I talked on the subject—and their more influential brethren gave me every facility to prosecute my inquiry among them—a perfect indifference to, and nearly as perfect an ignorance of, politics. Perhaps no men buy so few newspapers, and read them so little, as the Jews generally. The street-traders, when I alluded to the subject, said they read little but the "Police Reports."

Among the body of the Jews there is little love of Literature. They read far less (let it be remembered I have acquired all this information from Jews themselves, and from men who could not be mistaken in the matter), and are far less familiar with English authorship, either historical or literary, than are the poorer English artizans. Neither do the wealthiest classes of the Jews care to foster literature among their own people. One author, a short time ago, failing to interest the English Jews, to promote the publication of his work, went to the United States, and his book was issued in Philadelphia, the city of Quakers!

The Amusements of the Jews—and here I speak more especially of the street or open-air traders—are the theatres and concert-rooms. The City of London Theatre, the Standard Theatre, and other playhouses at the East-end of London, are greatly resorted to by the Jews, and more especially by the younger members of the body, who sometimes constitute a rather obstreperous gallery. The cheap concerts which they patronize are generally of a superior order, for the Jews are fond of music, and among them have been many eminent composers and performers, so that the trash and jingle which delights the costermonger class would not please the street Jew boys; hence their concerts are superior to the general run of cheap concerts, and are almost always "got up" by their own people.

Sussex-hall, in Leadenhall-street, is chiefly supported by Israelites; there the "Jews' and General Literary and Scientific Institution" is established, with reading-rooms and a library; and there lectures, concerts, &c., are given as at similar institutions. Of late, on every Friday evening, Sussex-hall has been thrown open to the general public, without any charge for admission, and lectures have been delivered gratuitously, on literature, science, art, and general subjects, which have attracted crowded audiences. The lecturers are chiefly Jews, but the lectures are neither theological nor sectarian. The lecturers are Mr. M. H. Bresslau, the Rev. B. H. Ascher, Mr. J. L. Levison (of Brighton), and Mr. Clarke, a merchant in the City, a Christian, whose lectures are very popular among the Jews. The behaviour of the Jew attendants, and the others, the Jews being the majority, is decorous. They seem "to like to receive information," I was told; and a gentleman connected with the hall argued that this attention showed a readiness for proper instruction, when given in an attractive form, which favoured the opinion that the young Jews, when not thrown in childhood into the vortex of money-making, were very easily teachable, while their natural quickness made them both ready and willing to be taught.

My old-clothes buying informant mentioned a Jewish eating-house. I visited one in the Jew quarter, but saw nothing to distinguish it from Christian resorts of the same character and cheapness (the "plate" of good hot meat costing 4*d*., and vegetables 1*d*.), except that it was fuller of Jews than of Christians, by three to two, perhaps, and that there was no "pork" in the waiter's specification of the fare.

Of the Charities, Schools, and Education of the Jews.

The Jewish charities are highly honourable to the body, for they allow none of their people to live or die in a parish workhouse. It is true that among the Jews in London there are many individuals of immense wealth; but there are also many rich Christians who care not one jot for the need of their brethren. It must be borne in mind also, that not only do the Jews voluntarily support their own poor and institutions, but they contribute—compulsorily it is true—their quota to the support of the English poor and church; and, indeed, pay their due proportion of all the parliamentary or local imposts. This is the more honourable and the more remarkable among the Jews, when we recollect their indisputable greed of money.

If a Jew be worn out in his old age, and unable to maintain himself, he is either supported by the contributions of his friends, or out of some local or general fund, or provided for in some asylum, and all this seems to be done with a less than ordinary fuss and display, so that the

Original from HARVARD UNIVERSITY

recipient of the charity feels himself more a pensioner than a pauper.

The Jews' Hospital, in the Mile-end Road, is an extensive building, into which feeble old men and destitute children of both sexes are admitted. Here the boys are taught trades, and the girls qualified for respectable domestic service. The Widows' Home, in Duke-street, Aldgate, is for poor Hebrew widows. The Orphan Asylum, built at the cost of Mr. A. L. Moses, and supported by subscription, now contains 14 girls and 8 boys; a school is attached to the asylum, which is in the Tenter Ground, Goodman's-fields. The Hand-in-Hand Asylum, for decayed old people, men and women, is in Duke's-place, Aldgate. There are likewise alms-houses for the Jews, erected also by Mr. A. L. Moses, at Mile-end, and other alms-houses, erected by Mr. Joel Emanuel, in Wellclose-square, near the Tower. There are, further, three institutions for granting marriage dowers to fatherless children; an institution in Bevis-marks, for the burial of the poor of the congregation. "Beth Holim;" a house for the reception of the sick poor, and of poor lying-in women belonging to the congregation of the Spanish and Portuguese Jews; "Magasim Zobim," for lending money to aid apprenticeships among boys, to fit girls for good domestic service, and for helping poor children to proceed to foreign parts, when it is believed that the change will be advantageous to them; and "Noten Lebem Larcebim;" to distribute bread to the poor of the congregation on the day preceding the Sabbath.

I am assured that these institutions are well-managed, and that, if the charities are abused by being dispensed to undeserving objects, it is usually with the knowledge of the managers, who often let the abuse pass, as a smaller evil than driving a man to theft or subjecting him to the chance of starvation. One gentleman, familiar with most of these establishments, said to me with a laugh, "I believe, if you have had any conversation with the gentlemen who manage these matters, you will have concluded that they are not the people to be imposed upon very easily."

There are seven Jewish schools in London, four in the city, and three at the West-end, all supported by voluntary contributions. The Jews' Free School, in Bell-lane, Spitalfields, is the largest, and is adapted for the education of no fewer than 1200 boys and girls. The late Baroness de Rothschild provided clothing, yearly, for all the pupils in the school. In the Infant School, Houndsditch, are about 400 little scholars. There are also the Orphan Asylum School, previously mentioned; the Western Jewish schools, for girls, in Dean-street, and, for boys, in Greek-street, Soho, but considered as one establishment; and the West Metropolitan School, for girls, in Little Queen-street, and, for boys, in High Holborn, also considered as one establishment.

Notwithstanding these means of education, the body of the poorer, or what in other callings might be termed the working-classes, are not even tolerably well educated; they are indifferent to the matter. With many, the multiplication table seems to constitute what they think the acme of all knowledge needful to a man. The great majority of the Jew boys, in the street, cannot read. A smaller portion can read, but so imperfectly that their ability to read detracts nothing from their ignorance. So neglectful or so necessitous (but I heard the ignorance attributed to neglect far more frequently than necessity) are the poorer Jews, and so soon do they take their children away from school, "to learn and do something for themselves," and so irregular is their attendance, on the plea that the time cannot be spared, and the boy must do something for himself, that many children leave the free-schools not only about as ignorant as when they entered them, but almost with an incentive to continued ignorance; for they knew nothing of reading, except that to acquire its rudiments is a pain, a labour, and a restraint. On some of the Jew boys the vagrant spirit is strong; they *will* be itinerants, if not wanderers,—though this is a spirit in no way confined to the Jew boys.

Although the wealthier Jews may be induced to give money towards the support of their poor, I heard strong strictures passed upon them concerning their indifference towards their brethren in all other respects. Even if they subscribed to a school, they never cared whether or not it was attended, and that, much as was done, far more was in the power of so wealthy and distinct a people. "This is all the more inexcusable," was said to me by a Jew, "because there are so many rich Jews in London, and if they exerted and exercised a broader liberality, as they might in instituting Jewish colleges, for instance, to promote knowledge among the middle-classes, and if they cared more about employing their own people, their liberality would be far more fully felt than similar conduct in a Christian, because they have a smaller sphere to influence. As to employing their own people, there are numbers of the rich Jews who will employ any stranger in preference, if he work a penny a week cheaper. This sort of *clan* employment," continued my Jew informant, "should never be exclusive, but there might, I think, be a judicious preference."

I shall now proceed to set forth an account of the sums yearly subscribed for purposes of education and charity by the Jews.

The Jews' Free School in Spitalfields is supported by voluntary contributions to the amount of about 1200*l.* yearly. To this sum a few Christians contribute, as to some other Hebrew institutions (which I shall specify), while Jews often are liberal supporters of Christian public charities—indeed, some of the wealthier Jews are looked upon by the members of their own faith as inclined to act more generously where Christian charities, with the prestige of high aristocratic and fashionable patronage, are in question, than towards their own institutions. To the Jews' Free School the Court of Common Council of the Corporation of London lately granted 100*l.*, through the exertions of Mr. Benjamin S. Phillips, of Newgate-street, a

Digitized by Google
Original from HARVARD UNIVERSITY

member of the court. The Baroness Lionel de Rothschild (as I have formerly stated of the late Baroness) supplies clothing for the scholars. The school is adapted for the reception of 1200 boys and girls in equal proportion; about 900 is the average attendance.

The Jews' Infant School in Houndsditch, with an average attendance approaching 400, is similarly supported at a cost of from 800*l.* to 1000*l.* yearly.

The Orphan Asylum School, in Goodman's-fields, receives a somewhat larger support, but in the expenditure is the cost of an asylum (before mentioned, and containing 22 inmates). The funds are about 1500*l.* yearly. Christians subscribe to this institution also—Mr. Frederick Peel, M.P., taking great interest in it. The attendance of pupils is from 300 to 400.

It might be tedious to enumerate the other schools, after having described the principal; I will merely add, therefore, that the yearly contributions to each are from 700*l.* to 1000*l.*, and the pupils taught in each from 200 to 400. Of these further schools there are four already specified.

The Jews' Hospital, at Mile End, is maintained at a yearly cost of about 3000*l.*, to which Christians contribute, but not to a twentieth of the amount collected. The persons benefited are worn-out old men, and destitute children, while the number of almspeople is from 150 to 200 yearly.

The other two asylums, &c., which I have specified, are maintained at a cost of about 800*l.* each, as a yearly average, and the Almshouses, three in number, at about half that sum. The persons relieved by these last-mentioned institutions number about 250, two-thirds, or thereabouts, being in the asylums.

The Loan Societies are three: the Jewish Ladies Visiting and Benevolent Loan Society; the Linusarian Loan Society (why called Linusarian a learned Hebrew scholar could not inform me, although he had asked the question of others); and the Magasim Zobim (the Good Deeds), a Portuguese Jews' Loan Society.

The business of these three societies is conducted on the same principle. Money is lent on personal or any security approved by the managers, and no interest is charged to the borrower. The amount lent yearly is from 600*l.* to 700*l.* by each society, the whole being repaid and with sufficient punctuality; a few weeks' "grace" is occasionally allowed in the event of illness or any unforeseen event. The Loan Societies have not yet found it necessary to proceed against any of their debtors; my informant thought this forbearance extended over six years.

There is not among the Jewish street-traders, as among the costermongers and others, a class forming part, or having once formed part of themselves, and living by usury and loan mongering, where they have amassed a few pounds. Whatever may be thought of the Jews' usurious dealings as regards the general public, the poorer classes of their people are not subjected to the exactions of usury, with all its clogs to a struggling man's well-doing. Sometimes the amount required by an old-clothes man, or other street-trader, is obtained by or for him at one of these loan societies. Sometimes it is advanced by the usual buyer of the second-hand garments collected by the street-Jew. No security in such cases is given beyond—strange as it may sound—the personal honour of an old-clothes man! An experienced man told me, that taking all the class of Jew street-sellers, who are a very fluctuating body, with the exception of the old-clothes men, the sum thus advanced as stock-money to them might be seldom less in any one year than 300*l.*, and seldom more than 500*l.* There is a a prevalent notion that the poorer Jews, when seeking charity, are supplied with goods for street-sale by their wealthy brethren, and never with money—this appears to be unfounded.

Now to sum up the above items we find that the yearly cost of the Jewish schools is about 7000*l.*, supplying the means of instruction to 3000 children (out of a population of 18,000 of all ages, one-half of whom, perhaps, are under 20 years). The yearly outlay in the asylums, &c., is, it appears, 5800*l.* annually, benefiting or maintaining about 420 individuals (at a cost of nearly 14*l.* per head). If we add no more than 200*l.* yearly for the minor charities or institutions I have previously alluded to, we find 14,000*l.* expended annually in the public schools and charities of the Jews of London, independently of about 2000*l.*, which is the amount of the loans to those requiring temporary aid.

We have before seen that the number of Jews in London is estimated by the best informed at about 18,000; hence it would appear that the charitable donations of the Jews of London amount on an average to a little less than 1*l.* per head. Let us compare this with the benevolence of the Christians. At the same ratio the sum devoted to the charities of England and Wales should be very nearly 16,000,000*l.*, but, according to the most liberal estimates, it does not reach half that amount; the rent of the land and other fixed property, together with the interest of the money left for charitable purposes in England and Wales, is 1,200,000*l.* If, however, we add to the voluntary contributions the sum raised compulsorily by assessment in aid of the poor (about 7,000,000*l.* per annum), the ratio of the English Christian's contributions to his needy brethren throughout the country will be very nearly the same as that of the Jew's. Moreover, if we turn our attention to the benevolent bequests and donations of the Christians of London, we shall find that their munificence does not fall far short of that of the metropolitan Jews. The gross amounts of the charitable contributions of London are given below, together with the numbers of institutions; and it will thus be seen that the sum devoted to such purposes amounts to no less than 1,764,733*l.*, or upwards of a million and three-quarters sterling for a population of about two millions!

In connection with the statistical part of this subject I may mention that the Chief Rabbis each receive 1200*l.* a year; the Readers of the Synagogues, of whom there are twelve in London, from 300*l.* to 400*l.* a year each; the Secretaries of the Synagogues, of whom there are also twelve, from 200*l.* to 300*l.* each; the twelve under Secretaries from 100*l.* to 150*l.*; and six Dayanim 100*l.* a year each. These last-mentioned officers are looked upon by many of the Jews, as the "poor curates" may be by the members of the Church of England — as being exceedingly under-paid. The functions of the Dayanim have been already mentioned, and, I may add, that they must have received expensive scholarly educations, as for about four hours daily they have to read the Talmud in the places of worship.

The yearly payment of these sacerdotal officials, then, independent of other outlay, amounts to about 11,700*l.*; this is raised from the profits of the seats in the synagogues and voluntary contributions, donations, subscriptions, bequests, &c., among the Jews.

I have before spoken of a Board of Deputies, in connection with the Jews, and now proceed to describe its constitution. It is not a parliament among the Jews, I am told, nor a governing power, but what may be called a directing or regulating body. It is authorized by the body of Jews, and recognised by her Majesty's Government, as an established corporation, with powers to treat and determine on matters of civil and political policy affecting the condition of the Hebrews in this country, and interferes in no way with religious matters. It is neither a metropolitan nor a local nor a detached board, but, as far as the Jews in England may be so described, a national board. This board is elected triennially. The electors are the "seat-holders" in the Jewish synagogues; that is to say, they belong to the class of Jews who promote the support of the synagogues by renting seats, and so paying towards the cost of those establishments.

There are in England, Ireland, and Scotland, about 1000 of these seat-holders exercising the franchise, or rather entitled to exercise it, but many of them are indifferent to the privilege, as is often testified by the apathy shown on the days of election. Perhaps three-fourths of the privileged number may vote. The services of the representatives are gratuitous, and no qualification is required, but the elected are usually the leading metropolitan Jews. The proportion of the electors voting is in the ratio of the deputies elected. London returns 12 deputies; Liverpool, 2; Manchester, 2; Birmingham, 2; Edinburgh, Dublin, (the only places in either Scotland or Ireland returning deputies), Dover, Portsmouth, Southampton, Plymouth, Canterbury, Norwich, Swansea, Newcastle-on-Tyne, and two other places (according to the number of seat-holders), each one deputy, thus making up the number to 30. On election days the attendance, as I have said, is often small, but fluctuating according to any cause of excitement, which, however, is but seldom.

The question which has of late been discussed by this Board, and which is now under consideration, and negotiation with the Education Commissioners of her Majesty's Privy Council, is the obtaining a grant of money in the same proportion as it has been granted to other educational establishments. Nothing has as yet been given to the Jewish schools, and the matter is still undetermined.

With religious or sacerdotal questions the Board of Deputies does not, or is not required to meddle; it leaves all such matters to the bodies or tribunals I have mentioned. Indeed the deputies concern themselves only with what may be called the *public* interests of the Jews, both as a part of the community and as a distinct people. The Jewish institutions, however, are not an exception to the absence of unanimity among the professors of the same creeds, for the members of the Reform Synagogue in Margaret-street, Cavendish-square, are not recognised as entitled to vote, and do not vote, accordingly, in the election of the Jewish deputies. Indeed, the Reform members, whose synagogue was established eight years ago, were formally excommunicated by a declaration of the late Chief Rabbi, but this seems now to be regarded as a mere matter of form, for the members have lately partaken of all the rites to which orthodox Jews are entitled.

OF THE FUNERAL CEREMONIES, FASTS, AND CUSTOMS OF THE JEWS.

THE funeral ceremonies of the Jews are among the things which tend to preserve the distinctness and peculiarity of this people. Sometimes, though now rarely, the nearest relatives of the deceased wear sackcloth (a coarse crape), and throw ashes and dust on their hair, for the term during which the corpse remains unburied, this term being the same as among Christians. When the corpse is carried to the Jews' burial-ground for interment the coffin is frequently opened, and the corpse addressed, in a Hebrew formula, by any relative, friend, or acquaintance who may be present. The words are to the following purport: "If I have done anything that might be offensive—pardon, pardon, pardon." After that the coffin is carried round the burial-ground in a circuit, children chanting the 90th Psalm in its original Hebrew, "a prayer of Moses, the man of God." The passages which the air causes to be most emphatic are these verses:—

"3. Thou turnest man to destruction; and sayest, Return, ye children of men.

"4. For a thousand years in thy sight are but as yesterday when it is past, and as a watch in the night.

"5. Thou carriest them away as with a flood; they are as a sleep: in the morning they are like grass which groweth up.

"6. In the morning it flourisheth, and groweth up; in the evening it is cut down, and withereth.

"10. The days of our years are threescore years and ten; and if by reason of strength they be fourscore years, yet is their strength labour and sorrow; for it is soon cut off, and we fly away."

The coffin is then carried into a tent, and the funeral prayers, in Hebrew, are read. When it has been lowered into the grave, the relatives, and indeed all the attendants at the interment, fill up the grave, shovelling in the earth. In the Jews' burial-ground are no distinctions, no vaults or provisions for aristocratic sepulture. The very rich and the very poor, the outcast woman and the virtuous and prosperous gentlewoman, "grossly familiar, side by side consume." A Jewish funeral is a matter of high solemnity.

The burial fees are 12*s.* for children, and from 2*l.* to 3*l.* for adults. These fees are not the property of the parties officating, but form a portion of the synagogue funds for general purposes, payment of officers, &c. No fees are charged to the relatives of poor Jews.

Two fasts are rigidly observed by the Jews, and even by those Jews who are usually indifferent to the observances of their religion. These are the Black Fast, in commemoration of the destruction of Jerusalem, and the White Fast, in commemoration of the atonement. On each of those occasions the Jews abstain altogether from food for 24 hours, or from sunset to sunset.

OF THE JEW STREET-SELLERS OF ACCORDIONS, AND OF THEIR STREET MUSICAL PURSUITS.

I CONCLUDE my account of the Street-Jews with an account of the accordion sellers.

Although the Jews, as a people, are musical, they are little concerned at present either in the sale of musical instruments in the streets, or in street-music or singing. Until within a few years, however, the street-sale of accordions was carried on by itinerant Jews, and had previously been carried on most extensively in the country, even in the far north of England. Some years back well-dressed Jews "travelled" with stocks of accordions. In many country towns and in gentlemen's country mansions, in taverns, and schools also, these accordions were then a novelty. The Jew could play on the instrument, and carried a book of instructions, which usually formed part of the bargain, and by the aid of which, he made out, any one, even without previous knowledge of the practical art of music, could easily teach himself—nothing but a little practice in fingering being wanted to make a good accordion-player. At first the accordions sold by the Jew hawkers were good, two guineas being no unusual price to be paid for one, even to a street-seller, while ten and twenty shillings were the lower charges. But the accordions were in a few years "made slop," cheap instruments being sent to this country from Germany, and sold at less than half their former price, until the charge fell as low as 3*s.* 6*d.* or even 2*s.* 6*d.*—but only for "rubbish," I was told. When the fragility and inferior musical qualities of these instruments came to be known, it was found almost impossible to sell in the streets even superior instruments, however reasonable in price, and thus the trade sunk to a nonentity. So little demand is there now for these instruments that no pawnbroker, I am assured, will advance money on one, however well made.

The itinerant accordion trade was always much greater in the country than in London, for in town, I was told, few would be troubled to try, or even listen, to the tones of an accordion played by a street-seller, at their own doors, or in their houses. While there were 100 or 120 Jews hawking accordions in the country, there would not be 20 in London, including even the suburbs, where the sale was the best.

Calculating that, when the trade was at its best, 130 Jews hawked accordions in town and country, and that each sold three a week, at an average price of 20*s.* each, or six in a week at an average price of 10*s.* each, the profit being from 50 to 100 per cent., we find upwards of 20,000*l.* expended in the course of the year in accordions of which, however, little more than a sixth part, or about 3000*l.*, was expended in London. This was only when the trade had all the recommendations of novelty, and in the following year perhaps not half the amount was realized. One informant thought that the year 1828–9 was the best for the sale of these instruments, but he spoke only from memory. At the present time I could not find or hear of one street-Jew selling accordions; I re-

Original from HARVARD UNIVERSITY

member, however, having seen one within the present year. Most of the Jews who travelled with them have emigrated.

It is very rarely indeed that, fond as the Jews are of music, any of them are to be found in the bands of street-musicians, or of such street-performers as the Ethiopian serenaders. If there be any, I was told, they were probably not pure Jews, but of Christian parentage on one side or the other, and not associating with their own people. At the cheap concert-rooms, however, Jews are frequently singers, but rarely the Jewesses, while some of the twopenny concerts at the East-end are got up and mainly patronized by the poorer class of Jews. Jews are also to be found occasionally among the supernumeraries of the theatres; but, when not professionally engaged, these still live among their own people. I asked one young Jew who occasionally sang at a cheap concert-room, what description of songs they usually sung, and he answered "all kinds." He, it seems, sang comic songs, but his friend Barney, who had just left him, sang sentimental songs. He earned 1*s.* and sometimes 2*s.*, but more frequently 1*s.*, three or four nights in the week, as he had no regular engagement. In the daytime he worked at cigar-making, but did not like it, it was "*so confining*." He had likewise sung, but gratuitously, at concerts got up for the benefit of any person "bad off." He knew nothing of the science and art of music. Of the superior class of Jew vocalists and composers, it is not of course necessary here to speak, as they do not come within the scope of my present subject. Of Hebrew youths thus employed in cheap and desultory concert-singing, there are in the winter season, I am told, from 100 to 150, few, if any, depending entirely upon their professional exertions, but being in circumstances similar to those of my young informant.

Of the Street-Buyers of Hogs'-Wash.

The trade in hogs'-wash, or in the refuse of the table, is by no means insignificant. The street-buyers are of the costermonger class, and some of them have been costermongers, and "when not kept going regular on wash," I was told, are "costers still," but with the advantage of having donkeys, ponies, or horses and carts, and frequently shops, as the majority of the wash-buyers have; for they are often greengrocers as well as costermongers.

The hogs' food obtained by these street-folk, or, as I most frequently heard it called, the "wash," is procured from the eating-houses, the coffee-houses which are also eating-houses (with "hot joints from 12 to 4"), the hotels, the club-houses, the larger mansions, and the public institutions. It is composed of the scum and lees of all broths and soups; of the washings of cooking utensils, and of the dishes and plates used at dinners and suppers; of small pieces of meat left on the plates of the diners in taverns, clubs, or cook-shops; of pieces of potato, or any remains of vegetables; of any viands, such as puddings, left in the plates in the same manner; of gristle; of pieces of stale bread, or bread left at table; occasionally of meat kept, whether cooked or uncooked, until "blown," and unfit for consumption (one man told me that he had found whole legs of mutton in the wash he bought from a great eating-house, but very rarely): of potato-peelings; of old and bad potatoes; of "stock," or the remains of meat stewed for soup, which was not good enough for sale to be re-used by the poor; of parings of every kind of cheese or meat; and of the many things which are considered "only fit for pigs."

It is not always, however, that the unconsumed food of great houses or of public bodies (where the dinners are a part of the institution) goes to the wash-tub. At Buckingham-palace, I am told, it is given to poor people who have tickets for the receipt of it. At Lincoln's-inn the refuse or leavings of the bar dinners are sold to men who retail them, usually small chandlers, and the poor people, who have the means, buy this broken meat very readily at 4*d.*, 6*d.*, and 8*d.* the pound, which is cheap for good cooked meat. Pie-crust, obtained by its purveyors in the same way, is sold, perhaps with a small portion of the contents of the pie, in penny and twopenny-worths. A man familiar with this trade told me that among the best customers for this kind of second-hand food were women of the town of the poorer class, who were always ready, whenever they had a few pence at command, to buy what was tasty, cheap, and ready-cooked, because "they hadn't no trouble with it, but only just to eat it."

One of the principal sources of the "wash" supply is the cook-shops, or eating-houses, where the "leavings" on the plates are either the perquisites of the waiters or waitresses, or looked sharply after by master or mistress. There are also in these places the remains of soups, and the potato-peelings, &c., of which I have spoken, together with the keen appropriation to a profitable use of every crumb and scrap—when it is a portion of the gains of a servant, or when it adds to the receipts of the proprietor. In calculating the purchase-value of the good-will of an eating-house, the "wash" is as carefully considered as is the number of daily guests.

One of the principal street-buyers from the eating-houses, and in several parts of town, is Jemmy Divine, of Lambeth. He is a pig-dealer, but also sells his wash to others who keep pigs. He sends round a cart and horse under the care of a boy, or of a man, whom he may have employed, or drives it himself, and he often has more carts than one. In his cart are two or three tubs, well secured, so that they may not be jostled out, into which the wash is deposited. He contracts by the week, month, or quarter, with hotel-keepers and others, for their wash, paying from 10*l.* to as high as 50*l.* a year, about 20*l.* being an average for well-frequented taverns and "dining-rooms." The wash-tubs on the premises of these buyers are often offensive, sometimes sending forth very sour smells.

In Sharp's-alley, Smithfield, is another man buying quantities of wash, and buying fat and

Original from HARVARD UNIVERSITY

grease extensively. There is one also in Prince's-street, Lambeth, who makes it his sole business to collect hogs'-wash; he was formerly a coal-heaver and wretchedly poor, but is now able to make a decent livelihood in this trade, keeping a pony and cart. He generally keeps about 30 pigs, but also sells hogs' food retail to any pig-keeper, the price being 4*d.* to 6*d.* a pailfull, according to the quality, as the collectors are always anxious to have the wash "rich," and will not buy it if cabbage-leaves or the parings of green vegetables form a part of it. This man and the others often employ lads to go round for wash, paying them 2*s.* a week, and finding them in board. They are the same class of boys as those I have described as coster-boys, and are often strong young fellows. These lads—or men hired for the purpose—are sometimes sent round to the smaller cook-shops and to private houses, where the wash is given to them for the trouble of carrying it away, in preference to its being thrown down the drain. Sometimes only 1*d.* a pail is paid by the street-buyer, provided the stuff be taken away punctually and regularly. These youths or men carry pails after the fashion of a milkman.

The supply from the workhouses is very large. It is often that the paupers do not eat all the rice-pudding allowed, or all the bread, while soup is frequently left, and potatoes; and these leavings are worthless, except for pig-meat, as they would soon turn sour. It is the same, though not to the same extent, in the prisons.

What I have said of some of the larger eating-houses relates also to the club-houses.

There are a number of wash-buyers in the suburbs, who purchase, or obtain their stock gratuitously, at gentlemen's houses, and retail it either to those who feed pigs as a business, or else to the many, I was told, who live a little way out of town, and "like to grow their own bacon." Many of these men perform the work themselves, without a horse and cart, and are on their feet every day and all day long, except on Sundays, carrying hogs'-wash from the seller, or to the buyer. One man, who had been in this trade at Woolwich, told me that he kept pigs at one time, but ceased to do so, as his customers often murmured at the thin quality of the wash, declaring that he gave all the best to his own animals.

If it be estimated that there are 200 men daily buying hogs'-wash in London and the suburbs, within 15 miles, and that each collects only 20 pails per day, paying 2*d.* per pail (thus allowing for what is collected without purchase), we find 10,400*l.* expended annually in buying hogs'-wash.

Of the Street-Buyers of Tea-Leaves.

An extensive trade, but less extensive, I am informed, than it was a few years ago, is carried on in tea-leaves, or in the leaves of the herb after their having been subjected, in the usual way, to decoction. These leaves are, so to speak, re-manufactured, in spite of great risk and frequent exposure, and in defiance of the law. The 17th Geo. III., c. 29, is positive and stringent on the subject:—

"Every person, whether a dealer in or seller of tea, or not, who shall dye or fabricate any sloe-leaves, liquorice-leaves *or the leaves of tea that have been used*, or the leaves of the ash, elder or other tree, shrub or plant, in imitation of tea, or who shall mix or colour such leaves with terra Japonica, copperas, sugar, molasses, clay, logwood or other ingredient, or who shall sell or expose to sale, or have in custody, any such adulterations in imitation of tea, shall for every pound forfeit, on conviction, by the oath of one witness, before one justice, 5*l.*; or, on non-payment, be committed to the House of Correction for not more than twelve or less than six months."

The same act also authorizes a magistrate, on the oath of an excise officer, or any one, by whom he suspects this illicit trade to be carried on, to seize the herbs, or spurious teas, and the whole apparatus that may be found on the premises, the herbs to be burnt and the other articles sold, the proceeds of such a sale, after the payment of expenses, going half to the informer and half to the poor of the parish.

It appears evident, from the words of this act which I have *italicised*, that the use of tea-leaves for the robbery of the public and the defrauding of the revenue has been long in practice. The extract also shows what other cheats were formerly resorted to—the substitutes most popular with the tea-manufacturers at one time being sloe-leaves. If, however, one-tenth of the statements touching the applications of the leaves of the sloe-tree, and of the juice of its sour, astringent fruit, during the war-time, had any foundation in truth, the sloe must have been regarded commercially as one of the most valuable of our native productions, supplying our ladies with their tea, and our gentlemen with their port-wine.

Women and men, three-fourths of the number being women, go about buying tea-leaves of the female servants in the larger, and of the shop-keepers' wives in the smaller, houses. But the great purveyors of these things are the char-women. In the houses where they char the tea-leaves are often reserved for them to be thrown on the carpets when swept, as a means of allaying the dust, or else they form a part of their perquisites, and are often asked for if not offered. The mistress of a coffee-shop told me that her charwoman, employed in cleaning every other morning, had the tea-leaves as a part of her remuneration, or as a matter of course. What the charwoman did with them her employer never inquired, although she was always anxious to obtain them, and she referred me to the poor woman in question. I found her in a very clean apartment on the second floor of a decent house in Somers-town; a strong hale woman, with what may be called an industrious look. She was middle-aged, and a widow, with one daughter, then a nursemaid in the neighbourhood, and had regular employment.

"Yes," she said, "I get the tea-leaves whenever I can, and the most at two coffee-shops that I work at, but neither of them have so many as they used to have. I think it's because cocoa's come so much to be asked for in them, and so

they sell less tea. I buy tea-leaves only at one place. It's a very large family, and I give the servant 4*d.* and sometimes 3*d.* or 2*d.* a fortnight for them, but I'm nothing in pocket, for the young girl is a bit of a relation of mine, and it's like a trifle of pocket-money for her. She gives a penny every time she goes to her chapel, and so do I; there's a box for it fixed near the door. O yes, her mistress knows I buy them, for her mistress knew me before she was married, and that's about 15 or 16 years since. When I've got this basin (producing it) full I sell it, generally for 4*d.* I don't know what the leaves in it will weigh, and I have never sold them by weight, but I believe some have. Perhaps they might weigh, as damp as some of them are, about a pound. I sell them to a chandler now. I have sold them to a rag-and-bottle-shop. I've had men and women call upon me and offer to buy them, but not lately, and I never liked the looks of them, and never sold them any. I don't know what they're wanted for, but I've heard that they're mixed with new tea. I have nothing to do with that. I get them honestly and sell them honestly, and that's all I can say about it. Every little helps, and if rich people won't pay poor people properly, then poor people can't be expected to be very nice. But I don't complain, and that's all I know about it."

The chandler in question knew nothing of the trade in tea-leaves, he said; he bought none, and he did not know that any of the shopkeepers did, and he could not form a notion what they could be wanted for, if it wasn't to sweep carpets!

This mode of buying or collecting is, I am told the commonest mode of any, and it certainly presents some peculiarities. The leaves which are to form the spurious tea are collected, in great measure, by a class who are perhaps more likely than any other to have themselves to buy and drink the stuff which they have helped to produce! By charwomen and washer-women a "nice cup of tea" in the afternoon during their work is generally classed among the comforts of existence, yet they are the very persons who sell the tea-leaves which are to make their "much prized beverage." It is curious to reflect also, that as tea-leaves are used indiscriminately for being re-made into what is considered new tea, what must be the strength of our tea in a few years. Now all housewives complain that twice the quantity of tea is required to make the infusion of the same strength as formerly, and if the collection of old tea-leaves continues, and the refuse leaves are to be dried and re-dried perpetually, surely we must get to use pounds where we now do ounces.

A man formerly in the tea-leaf business, and very anxious not to be known—but upon whose information, I am assured from a respectable source, full reliance may be placed—gave me the following account:—

"My father kept a little shop in the general line, and I helped him; so I was partly brought up to the small way. But I was adrift by myself when I was quite young—18 or so perhaps. I can read and write well enough, but I was rather of too gay a turn to be steady. Besides, father was very poor at times, and could seldom pay me anything, if I worked ever so. He was very fond of his belly too, and I've known him, when he's had a bit of luck, or a run of business, go and stuff hisself with fat roast pork at a cook-shop till he could hardly waddle, and then come home and lock hisself upstairs in his bed-room and sleep three parts of the afternoon. (My mother was dead.) But father was a kind-hearted man for all that, and for all his roast pork, was as thin as a whipping-post. I kept myself when I left him, just off and on like, by collecting grease, and all that; it can't be done so easy now, I fancy; so I got into the tea-leaf business, but father had nothing to do with it. An elderly sort of a woman who I met with in my collecting, and who seemed to take a sort of fancy to me, put me up to the leaves. She was an out-and-out hand at anything that way herself. Then I bought tea-leaves with other things, for I suppose for four or five years. How long ago is it? O, never mind, sir, a few years. I bought them at many sorts of houses, and carried a box of needles, and odds and ends, as a sort of introduction. There wasn't much of that wanted though, for I called, when I could, soon in the mornings before the family was up, and some ladies don't get up till 10 or 11 you know. The masters wasn't much; it was the mistresses I cared about, because they are often such Tartars to the maids and always a-poking in the way.

"I've tried to do business in the great lords' houses in the squares and about the parks, but there was mostly somebody about there to hinder you. Besides, the servants in such places are often on board wages, and often, when they're not on board wages, find their own tea and sugar, and little of the tea-leaves is saved when every one has a separate pot of tea; so there's no good to be done there. Large houses in trade where a number of young men is boarded, drapers or grocers, is among the best places, as there is often a housekeeper there to deal with, and no mistress to bother. I always bought by the lot. If you offered to weigh you would not be able to clear anything, as they'd be sure to give the leaves a extra wetting. I put handfulls of the leaves to my nose, and could tell from the smell whether they were hard drawn or not. When they isn't hard drawn they answer best, and them I put to one side. I had a bag like a lawyer's blue bag, with three divisions in it, to put my leaves into, and so keep them 'sunder. Yes, I've bought of charwomen, but somehow I think they did'nt much admire selling to me. I hardly know how I made them out, but one told me of another. They like the shops better for their leaves, I think; because they can get a bit of cheese, or snuff, or candles for them there; though I don't know much about the shop-work in this line. I've often been tried to be took in by the servants. I've found leaves in the lot offered to me to buy what was all dusty, and had been used for sweeping; and if I'd sold them with my stock they'd have been stopped out of the next

money. I've had tea-leaves given me by servants oft enough, for I used to sweetheart them a bit, just to get over them; and they've laughed, and asked me whatever I could want with them. As for price, why, I judged what a lot was worth, and gave accordingly—from 1*d.* to 1*s.* I never gave more than 1*s.* for any one lot at a time, and that had been put to one side for me in a large concern, for about a fortnight I suppose. I can't say how many people had been tea'd on them. If it was a housekeeper, or anybody that way, that I bought of, there was never anything said about what they was wanted for. What *did* I want them for? Why, to sell again; and though him as I sold them to never said so, I knew they was to dry over again. I know nothing about who he was, or where he lived. The woman I told you of sent him to me. I suppose I cleared about 10*s.* a week on them, and did a little in other things beside; perhaps I cleared rather more than 10*s.* on leaves some weeks, and 5*s.* at others. The party as called upon me once a week to buy my leaves was a very polite man, and seemed quite the gentleman. There was no weighing. He examined the lot, and said 'so much.' He wouldn't stand 'bating, or be kept haggling; and his money was down, and no nonsense. What cost me 5*s.* I very likely got three half-crowns for. It was no great trade, if you consider the trouble. I've sometimes carried the leaves that he'd packed in papers, and put into a carpet-bag, where there was others, to a coffee-shop; they always had 'till called for' marked on a card then. I asked no questions, but just left them. There was two, and sometimes four boys, as used to bring me leaves on Saturday nights. I think they was charwomen's sons, but I don't know for a positive, and I don't know how they made me out. I think I was one of the tip-tops of the trade at one time; some weeks I've laid out a sov. (sovereign) in leaves. I haven't a notion how many's in the line, or what's doing now; but much the same I've no doubt. I'm glad *I've* done with it."

I am told by those who are as well-informed on the subject as is perhaps possible, when a surreptitious and dishonest traffic is the subject of inquiry, that less spurious tea is sold, there are more makers of it. Two of the principal manufacturers have of late, however, been prevented carrying on the business by the intervention of the excise officers. The spurious tea-men are also the buyers of "wrecked tea," that is, of tea which has been part of the salvage of a wrecked vessel, and is damaged or spoiled entirely by the salt water. This is re-dried and dyed, so as to appear fresh and new. It is dyed with Prussian blue, which gives it what an extensive tea-dealer described to me as an "intensely fine green." It is then mixed with the commonest Gunpowder teas and with the strongest Young Hysons, and has always a kind of "metallic" smell, somewhat like that of a copper vessel after friction in its cleaning. These teas are usually sold at 4*s.* the pound.

Sloe-leaves for spurious tea, as I have before stated, were in extensive use, but this manufacture ceased to exist about 20 years ago. Now the spurious material consists only of the old tea-leaves, at least so far as experienced tradesmen know. The adulteration is, however, I am assured, more skilfully conducted than it used to be, and its staple is of far easier procuration. The law, though it makes the use of old tea-leaves, as components of what is called tea, punishable, is nevertheless silent as to their sale or purchase; they can be collected, therefore, with a comparative impunity.

The tea-leaves are dried, dyed (or re-dyed), and shrivelled on plates of hot metal, carefully tended. The dyes used are those I have mentioned. These teas, when mixed, are hawked in the country, but not in town, and are sold to the hawkers at 7 lbs. for 21*s.* The quarters of pounds are retailed at 1*s.* A tea-dealer told me that he could recognise this adulterated commodity, but it was only a person skilled in teas who could do so, by its *coarse* look. For green tea—the mixture to which the prepared leaves are mostly devoted—the old tea is blended with the commonest Gunpowders and Hysons. No dye, I am told, is required when black tea is thus re-made; but I know that plumbago is often used to simulate the bloom. The inferior shopkeepers sell this adulterated tea, especially in neighbourhoods where the poor Irish congregate, or any of the lowest class of the poor English.

To obtain the statistics of a trade which exists in spite not only of the vigilance of the excise and police officers but of public reprobation, and which is essentially a secret trade, is not possible. I heard some, who were likely to be well-informed, conjecture—for it cannot honestly be called more than a conjecture—that between 500 and 1000 lbs., perhaps 700 lbs., of old tea-leaves were made up weekly in London; but of this he thought that about an eighth was spoilt by burning in the process of drying.

Another gentleman, however, thought that, at the very least, double the above quantity of old tea-leaves was weekly manufactured into new tea. According to his estimate, and he was no mean authority, no less than 1500 lbs. weekly, or 78,000 lbs. per annum of this trash are yearly poured into the London market. The average consumption of tea is about 1¼ lb. per annum for each man, woman, or child in the kingdom; coffee being the *principal* unfermented beverage of the poor. Those, however, of the poorest who drink tea consume about two ounces per week (half an ounce serving them twice), or one pound in the course of every two months. This makes the annual consumption of the adult tea-drinking poor amount to 6 lbs., and it is upon this class the spurious tea is chiefly foisted.

OF THE STREET-FINDERS OR COLLECTORS.

THESE men, for by far the great majority are men, may be divided, according to the nature of their occupations, into three classes:—

1. The bone-grubbers and rag-gatherers, who are, indeed, the same individuals, the pure-finders, and the cigar-end and old wood collectors.

2. The dredgermen, the mud-larks, and the sewer-hunters.

3. The dustmen and nightmen, the sweeps and the scavengers.

The first class go abroad daily to *find* in the streets, and carry away with them such things as bones, rags, "pure" (or dogs'-dung), which no one appropriates. These they sell, and on that sale support a wretched life. The second class of people are also as strictly *finders*; but their industry, or rather their labour, is confined to the river, or to that subterranean city of sewerage unto which the Thames supplies the great outlets. These persons may not be immediately connected with the *streets* of London, but their pursuits are carried on in the open air (if the sewer-air may be so included), and are all, at any rate, out-of-door avocations. The third class is distinct from either of these, as the labourers comprised in it are not finders, but *collectors* or *removers* of the dirt and filth of our streets and houses, and of the soot of our chimneys.

The two first classes also differ from the third in the fact that the sweeps, dustmen, scavengers, &c., are paid (and often large sums) for the removal of the refuse they collect; whereas the bone-grubbers, and mud-larks, and pure-finders, and dredgermen, and sewer-hunters, get for their pains only the value of the articles they gather.

Herein, too, lies a broad distinction between the street-finder, or collector, and the street-buyer: though both deal principally with refuse, the buyer *pays* for what he is permitted to take away; whereas the finder or collector is either paid (like the sweep), or else he neither pays nor is paid (like the bone-grubber), for the refuse that he removes.

The third class of street-collectors also presents another and a markedly distinctive characteristic. They act in the capacity of servants, and do not depend upon chance for the result of their day's labour, but are put to stated tasks, being employed and paid a fixed sum for their work. To this description, however, some of the sweeps present an exception; as when the sweep works on his own account, or, as it is worded, "is his own master."

The public health requires the periodical cleaning of the streets, and the removal of the refuse matter from our dwellings; and the man who contracts to carry on this work is decidedly a street-collector; for on what he collects or removes depends the amount of his remuneration. Thus a wealthy contractor for the public scavengery, is as entirely one of the street-folk as the unskilled and ignorant labourer he employs. The master lives, and, in many instances, has become rich, on the results of his street employment; for, of course, the actual workmen are but as the agents or sources of his profit. Even the collection of "pure" (dogs'-dung) in the streets, if conducted by the servants of any tanner or leather dresser, either for the purposes of his own trade or for sale to others, might be the occupation of a wealthy man, deriving a small profit from the labour of each particular collector. The same may also be said of bone-grubbing, or any similar occupation, however insignificant, and now abandoned to the outcast.

Were the collection of mud and dust carried on by a number of distinct individuals—that is to say, were each individual dustman and scavenger to collect on his own account, there is no doubt that no *one man* could amass a fortune by such means—while if the collection of bones and rags and even dogs'-dung were carried on "in the large way," that is to say, by a number of individual collectors working for one "head man," even the picking up of the most abject refuse of the metropolis might become the source of great riches.

The bone-grubber and the mud-lark (the searcher for refuse on the banks of the river) differ little in their pursuits or in their characteristics, excepting that the mud-larks are generally boys, which is more an accidental than a definite distinction. The grubbers are with a few exceptions stupid, unconscious of their degradation, and with little anxiety to be relieved from it. They are usually taciturn, but this taciturn habit is common to men whose callings, if they cannot be called solitary, are pursued with little communication with others. I was informed by a man who once kept a little beer-shop near Friar-street, Southwark Bridge-road (where then and still, he thought, was a bone-grinding establishment), that the bone-grubbers who carried their sacks of bones thither sometimes had a pint of beer at his house when they had received their money. They usually sat, he told me, silently looking at the corners of the floor—for they rarely lifted their eyes up—as if they were expecting to see some bones or refuse there available for their bags. Of this inertion, perhaps fatigue and despair may be a part. I asked some questions of a man of this class whom I saw pick up in a road in the suburbs something that appeared to have been a coarse canvas apron, although it was wet after a night's rain and half covered with mud. I inquired of him what he thought about when he trudged along looking on the ground on every side. His answer was, "Of nothing, sir." I believe that no better description could be given of that vacuity of mind or mental inactivity which seems to form a part of the most degraded callings. The minds of such men, even without an approach to idiotcy, appear to be a blank. One characteristic of these poor fellows, bone-grubbers and mud-larks, is that they

are very poor, although I am told some of them, the older men, have among the poor the reputation of being misers. It is not unusual for the youths belonging to these callings to live with their parents and give them the amount of their earnings.

The sewer-hunters are again distinct, and a far more intelligent and adventurous class; but they work in gangs. They must be familiar with the course of the tides, or they might be drowned at high water. They must have quick eyes too, not merely to descry the objects of their search, but to mark the points and bearings of the subterraneous roads they traverse; in a word, "to know their way underground." There is, moreover, some spirit of daring in venturing into a dark, solitary sewer, the chart being only in the memory, and in braving the possibility of noxious vapours, and the by no means insignificant dangers of the rats infesting these places.

The dredgermen, the finders of the water, are again distinct, as being watermen, and working in boats. In some foreign parts, in Naples, for instance, men carrying on similar pursuits are also divers for anything lost in the bay or its confluent waters. One of these men, known some years ago as "the Fish," could remain (at least, so say those whom there is no reason to doubt) three hours under the water without rising to the surface to take breath. He was, it is said, web-footed, naturally, and partially web-fingered. The King of the Two Sicilies once threw a silver cup into the sea for "the Fish" to bring up and retain as a reward, but the poor diver was never seen again. It was believed that he got entangled among the weeds on the rocks, and so perished. The dredgermen are necessarily well acquainted with the sets of the tide and the course of the currents in the Thames. Every one of these men works on his own account, being as it were a "small master," which, indeed, is one of the great attractions of open-air pursuits. The dredgermen also depend for their maintenance upon the sale of what they find, or the rewards they receive.

It is otherwise, however, as was before observed, with the third class of the street-finders, or rather collectors. In all the capacities of dustmen, nightmen, scavengers, and sweeps, the employers of the men are *paid* to do the work, the proceeds of the street-collection forming only a portion of the employer's remuneration. The sweep has the soot in addition to his 6*d.* or 1*s.*; the master scavenger has a payment from the parish funds to sweep the streets, though the clearance of the cesspools, &c., in private houses, may be an individual bargain. The whole refuse of the streets belongs to the contractor to make the best of, but it must be cleared away, and so must the contents of a dust-bin; for if a mass of dirt become offensive, the householder may be indicted for a nuisance, and municipal by-laws require its removal. It is thus made a matter of compulsion that the dust be removed from a private house; but it is otherwise with the soot. Why a man should be permitted to let soot accumulate in his chimney—perhaps exposing himself, his family, his lodgers, and his neighbours to the dangers of fire, it may not be easy to account for, especially when we bear in mind that the same man may not accumulate cabbage-leaves and fish-tails in his yard.

The dustmen are of the plodding class of labourers, mere labourers, who require only bodily power, and possess little or no mental development. Many of the agricultural labourers are of this order, and the dustman often seems to be the stolid ploughman, modified by a residence in a city, and engaged in a peculiar calling. They are generally uninformed, and no few of them are dustmen because their fathers were. The same may be said of nightmen and scavengers. At one time it was a popular, or rather a vulgar notion that many dustmen had become possessed of large sums, from the plate, coins, and valuables they found in clearing the dust-bins — a manifest absurdity; but I was told by a marine-store dealer that he had known a young woman, a dustman's daughter, sell silver spoons to a neighbouring marine-store man, who was "not very particular."

The circumstances and character of the chimney-sweeps have, since Parliament "put down" the climbing boys, undergone considerable change. The sufferings of many of the climbing boys were very great. They were often ill-lodged, ill-fed, barely-clad, forced to ascend hot and narrow flues, and subject to diseases—such as the chimney-sweep's cancer—peculiar to their calling. The child hated his trade, and was easily tempted to be a thief, for prison was an asylum; or he grew up a morose tyrannical fellow as journeyman or master. Some of the young sweeps became very bold thieves and house-breakers, and the most remarkable, as far as personal daring is concerned: the boldest feat of escape from Newgate was performed by a youth who had been brought up a chimney-sweep. He climbed up the two bare rugged walls of a corner of the interior of the prison, in the open air, to the height of some 60 feet. He had only the use of his hands, knees, and feet, and a single slip, from fear or pain, would have been death; he surmounted a parapet after this climbing, and gained the roof, but was recaptured before he could get clear away. He was, moreover, a sickly, and reputed a cowardly, young man, and ended his career in this country by being transported.

A master sweep, now in middle age, and a man "well to do," told me that when a mere child he had been apprenticed out of the workhouse to a sweep, such being at that time a common occurrence. He had undergone, he said, great hardships while learning his business, and was long, from the indifferent character of his class, ashamed of being a sweep, both as journeyman and master; but the sweeps were so much improved in character now, that he no longer felt himself disgraced in his calling.

The sweeps are more intelligent than the mere ordinary labourers I have written of under this head, but they are, of course, far from being an educated body.

The further and more minute characteristics of the curious class of street-finders or collectors will be found in the particular details and statements.

Among the finders there is perhaps the greatest poverty existing, they being the very lowest class of all the street-people. Many of the very old live on the hard dirty crusts they pick up out of the roads in the course of their rounds, washing them and steeping them in water before they eat them. Probably that vacuity of mind which is a distinguishing feature of the class is the mere atony or emaciation of the mental faculties proceeding from—though often producing in the want of energy that it necessarily begets—the extreme wretchedness of the class. But even their liberty and a crust—as it frequently literally is—appears preferable to these people to the restrictions of the workhouse. Those who are unable to comprehend the inertia of both body and mind begotten by the despair of long-continued misfortune are referred to page 357 of the first volume of this work, where it will be found that a tinman, in speaking of the misery connected with the early part of his street-career, describes the effect of extreme want as producing not only an absence of all hope, but even of a desire to better the condition. Those, however, who have studied the mysterious connection between body and mind, and observed what different creatures they themselves are before and after dinner, can well understand that a long-continued deficiency of food must have the same weakening effect on the muscles of the mind and energy of the thoughts and will, as it has on the limbs themselves.

Occasionally it will be found that the utter abjectness of the bone-grubbers has arisen from the want of energy begotten by intemperate habits. The workman has nothing but this same energy to live upon, and the permanent effect of stimulating liquors is to produce an amount of depression corresponding to the excitement momentarily caused by them in the frame. The operative, therefore, who spends his earnings on "drink," not only squanders them on a brutalising luxury, but deprives himself of the power, and consequently of the disposition, to work for more, and hence that idleness, carelessness, and neglect which are the distinctive qualities of the drunkard, and sooner or later compass his ruin.

For the poor wretched children who are reared to this the lowest trade of all, surely even the most insensible and unimaginative must feel the acutest pity. There is, however, this consolation: I have heard of none, with the exception of the more prosperous sewer-hunters and dredgermen, who have remained all their lives at street-finding. Still there remains much to be done by all those who are impressed with a sense of the trust that has been confided to them, in the possession of those endowments which render their lot in this world so much more easy than that of the less lucky street-finders.

Bone-Grubbers and Rag-Gatherers.

The habits of the bone-grubbers and rag-gatherers, the "pure," or dogs'-dung collectors, and the cigar-end finders, are necessarily similar. All lead a wandering, unsettled sort of life, being compelled to be continually on foot, and to travel many miles every day in search of the articles in which they deal. They seldom have any fixed place of abode, and are mostly to be found at night in one or other of the low lodging-houses throughout London. The majority are, moreover, persons who have been brought up to other employments, but who from some failing or mishap have been reduced to such a state of distress that they were obliged to take to their present occupation, and have never after been able to get away from it.

Of the whole class it is considered that there are from 800 to 1000 resident in London, one-half of whom, at the least, sleep in the cheap lodging-houses. The Government returns estimate the number of mendicants' lodging-houses in London to be upwards of 200. Allowing two bone-grubbers and pure-finders to frequent each of these lodging-houses, there will be upwards of 400 availing themselves of such nightly shelters. As many more, I am told, live in garrets and ill-furnished rooms in the lowest neighbourhoods. There is no instance on record of any of the class renting even the smallest house for himself.

Moreover there are in London during the winter a number of persons called "trampers," who employ themselves at that season in street-finding. These people are in the summer country labourers of some sort, but as soon as the harvest and potato-getting and hop-picking are over, and they can find nothing else to do in the country, they come back to London to avail themselves of the shelter of the night asylums or refuges for the destitute (usually called "straw-yards" by the poor), for if they remained in the provinces at that period of the year they would be forced to have recourse to the unions, and as they can only stay one night in each place they would be obliged to travel from ten to fifteen miles per day, to which in the winter they have a strong objection. They come up to London in the winter, not to look for any regular work or employment, but because they know that they can have a nightly shelter, and bread night and morning for nothing, during that season, and can during the day collect bones, rags, &c. As soon as the "straw-yards" close, which is generally about the beginning of April, the "trampers" again start off to the country in small bands of two or three, and without any fixed residence keep wandering about all the summer, sometimes begging their way through the villages and sleeping in the casual wards of the unions, and sometimes, when hard driven, working at hay-making or any other light labour.

Those among the bone-grubbers who do not belong to the regular "trampers" have been either navvies, or men who have not been able to obtain employment at their own business, and have been driven to it by necessity as a means of obtaining a little bread for the time being, and without any intention of pursuing the calling regularly; but, as I have said, when once in the

Original from HARVARD UNIVERSITY

business they cannot leave it, for at least they make certain of getting a few halfpence by it, and their present necessity does not allow them time to look after other employment. There are many of the street-finders who are old men and women, and many very young children who have no other means of living. Since the famine in Ireland vast numbers of that unfortunate people, particularly boys and girls, have been engaged in gathering bones and rags in the streets.

The bone-picker and rag-gatherer may be known at once by the greasy bag which he carries on his back. Usually he has a stick in his hand, and this is armed with a spike or hook, for the purpose of more easily turning over the heaps of ashes or dirt that are thrown out of the houses, and discovering whether they contain anything that is saleable at the rag-and-bottle or marine-store shop. The bone-grubber generally seeks out the narrow back streets, where dust and refuse are cast, or where any dust-bins are accessible. The articles for which he chiefly searches are rags and bones—rags he prefers—but waste metal, such as bits of lead, pewter, copper, brass, or old iron, he prizes above all. Whatever he meets with that he knows to be in any way saleable he puts into the bag at his back. He often finds large lumps of bread which have been thrown out as waste by the servants, and occasionally the housekeepers will give him some bones on which there is a little meat remaining; these constitute the morning meal of most of the class. One of my informants had a large rump of beef bone given to him a few days previous to my seeing him, on which "there was not less than a pound of meat."

The bone-pickers and rag-gatherers are all early risers. They have all their separate beats or districts, and it is most important to them that they should reach their district before any one else of the same class can go over the ground. Some of the beats lie as far as Peckham, Clapham, Hammersmith, Hampstead, Bow, Stratford, and indeed all parts within about five miles of London. In summer time they rise at two in the morning, and sometimes earlier. It is not quite light at this hour—but bones and rags can be discovered before daybreak. The "grubbers" scour all quarters of London, but abound more particularly in the suburbs. In the neighbourhood of Petticoat-lane and Ragfair, however, they are the most numerous on account of the greater quantity of rags which the Jews have to throw out. It usually takes the bone-picker from seven to nine hours to go over his rounds, during which time he travels from 20 to 30 miles with a quarter to a half hundredweight on his back. In the summer he usually reaches home about eleven of the day, and in the winter about one or two. On his return home he proceeds to sort the contents of his bag. He separates the rags from the bones, and these again from the old metal (if he be lucky enough to have found any). He divides the rags into various lots, according as they are white or coloured; and if he have picked up any pieces of canvas or sacking, he makes these also into a separate parcel. When he has finished the sorting he takes his several lots to the rag-shop or the marine-store dealer, and realizes upon them whatever they may be worth. For the white rags he gets from 2*d.* to 3*d.* per pound, according as they are clean or soiled. The white rags are very difficult to be found; they are mostly very dirty, and are therefore sold with the coloured ones at the rate of about 5 lbs. for 2*d.* The bones are usually sold with the coloured rags at one and the same price. For fragments of canvas or sacking the grubber gets about three-farthings a pound; and old brass, copper, and pewter about 4*d.* (the marine-store keepers say 5*d.*), and old iron one farthing per pound, or six pounds for 1*d.* The bone-grubber thinks he has done an excellent day's work if he can earn 8*d.*; and some of them, especially the very old and the very young, do not earn more than from 2*d.* to 3*d.* a day. To make 10*d.* a day, at the present price of rags and bones, a man must be remarkably active and strong,—"ay! and lucky, too," adds my informant. The average amount of earnings, I am told, varies from about 6*d.* to 8*d.* per day, or from 3*s.* to 4*s.* a week; and the highest amount that a man, the most brisk and persevering at the business, can by any possibility earn in one week is about 5*s.*, but this can only be accomplished by great good fortune and industry—the usual weekly gains are about half that sum. In bad weather the bone-grubber cannot do so well, because the rags are wet, and then they cannot sell them. The majority pick up bones only in wet weather; those who *do* gather rags during or after rain are obliged to wash and dry them before they can sell them. The state of the shoes of the rag and bone-picker is a very important matter to him; for if he be well shod he can get quickly over the ground; but he is frequently lamed, and unable to make any progress from the blisters and gashes on his feet, occasioned by the want of proper shoes.

Sometimes the bone-grubbers will pick up a stray sixpence or a shilling that has been dropped in the street. "The handkerchief I have round my neck," said one whom I saw, "I picked up with 1*s.* in the corner. The greatest prize I ever found was the brass cap of the nave of a coach-wheel; and I *did* once find a quarter of a pound of tobacco in Sun-street, Bishopsgate. The best bit of luck of all that I ever had was finding a cheque for 12*l.* 15*s.* lying in the gateway of the mourning-coach yard in Titchborne-street, Haymarket. I was going to light my pipe with it, indeed I picked it up for that purpose, and then saw it was a cheque. It was on the London and County Bank, 21, Lombard-street. I took it there, and got 10*s.* for finding it. I went there in my rags, as I am now, and the cashier stared a bit at me. The cheque was drawn by a Mr. Knibb, and payable to a Mr. Cox. I *did* think I should have got the odd 15*s.* though."

It has been stated that the average amount of the earnings of the bone-pickers is 6*d.* per day, or 3*s.* per week, being 7*l.* 16*s.* per annum for each person. It has also been shown that the number

Digitized by Google
Original from HARVARD UNIVERSITY

of persons engaged in the business may be estimated at about 800; hence the earnings of the entire number will amount to the sum of 20*l.* per day, or 120*l.* per week, which gives 6240*l.* as the annual earnings of the bone-pickers and rag-gatherers of London. It may also be computed that each of the grubbers gathers on an average 20 lbs. weight of bone and rags; and reckoning the bones to constitute three-fourths of the entire weight, we thus find that the gross quantity of these articles gathered by the street-finders in the course of the year, amounts to 3,744,000 lbs. of bones, and 1,240,000 lbs. of rags.

Between the London and St. Katherine's Docks and Rosemary Lane, there is a large district interlaced with narrow lanes, courts, and alleys ramifying into each other in the most intricate and disorderly manner, insomuch that it would be no easy matter for a stranger to work his way through the interminable confusion without the aid of a guide, resident in and well conversant with the locality. The houses are of the poorest description, and seem as if they tumbled into their places at random. Foul channels, huge dust-heaps, and a variety of other unsightly objects, occupy every open space, and dabbling among these are crowds of ragged dirty children who grub and wallow, as if in their native element. None reside in these places but the poorest and most wretched of the population, and, as might almost be expected, this, the cheapest and filthiest locality of London, is the head-quarters of the bone-grubbers and other street-finders. I have ascertained on the best authority, that from the centre of this place, within a circle of a mile in diameter, there dwell not less than 200 persons of this class. In this quarter I found a bone-grubber who gave me the following account of himself:—

"I was born in Liverpool, and when about 14 years of age, my father died. He used to work about the Docks, and I used to run on errands for any person who wanted me. I managed to live by this after my father's death for three or four years. I had a brother older than myself, who went to France to work on the railroads, and when I was about 18 he sent for me, and got me to work with himself on the Paris and Rouen Railway, under McKenzie and Brassy, who had the contract. I worked on the railroads in France for four years, till the disturbance broke out, and then we all got notice to leave the country. I lodged at that time with a countryman, and had 12*l.*, which I had saved out of my earnings. This sum I gave to my countryman to keep for me till we got to London, as I did not like to have it about me, for fear I'd lose it. The French people paid our fare from Rouen to Havre by the railway, and there put us on board a steamer to Southampton. There was about 50 of us altogether. When we got to Southampton, we all went before the mayor; we told him about how we had been driven out of France, and he gave us a shilling a piece; he sent some one with us, too, to get us a lodging, and told us to come again the next day. In the morning the mayor gave every one who was able to walk half-a-crown, and for those who were not able he paid their fare to London on the railroad. I had a sore leg at the time, and I came up by the train, and when I gave up my ticket at the station, the gentleman gave me a shilling more. I couldn't find the man I had given my money to, because he had walked up; and I went before the Lord Mayor to ask his advice; he gave me 2*s.* 6*d.* I looked for work everywhere, but could get nothing to do; and when the 2*s.* 6*d.* was all spent, I heard that the man who had my money was on the London and York Railway in the country; however, I couldn't get that far for want of money then; so I went again before the Lord Mayor, and he gave me two more, but told me not to trouble him any further. I told the Lord Mayor about the money, and then he sent an officer with me, who put me into a carriage on the railway. When I got down to where the man was at work, he wouldn't give me a farthing; I had given him the money without any witness bring present, and he said I could do nothing, because it was done in another country. I staid down there more than a week trying to get work on the railroad, but could not. I had no money and was nearly starved, when two or three took pity on me, and made up four or five shillings for me, to take me back again to London. I tried all I could to get something to do, till the money was nearly gone; and then I took to selling lucifers, and the fly-papers that they use in the shops, and little things like that; but I could do no good at this work, there was too many at it before me, and they knew more about it than I did. At last, I got so bad off I didn't know what to do; but seeing a great many about here gathering bones and rags, I thought I'd do so too—a poor fellow must do something. I was advised to do so, and I have been at it ever since. I forgot to tell you that my brother died in France. We had good wages there, four francs a day, or 3*s.* 4*d.* English; I don't make more than 3*d.* or 4*d.* and sometimes 6*d.* a day at bone-picking. I don't go out before daylight to gather anything, because the police takes my bag and throws all I've gathered about the street to see if I have anything stolen in it. I never stole anything in all my life, indeed I'd do anything before I'd steal. Many a night I've slept under an arch of the railway when I hadn't a penny to pay for my bed; but whenever the police find me that way, they make me and the rest get up, and drive us on, and tell us to keep moving. I don't go out on wet days, there's no use in it, as the things won't be bought. I can't wash and dry them, because I'm in a lodging-house. There's a great deal more than a 100 bone-pickers about here, men, women, and children. The Jews in this lane and up in Petticoat-lane give a good deal of victuals away on the Saturday. They sometimes call one of us in from the street to light the fire for them, or take off the kettle, as they must not do anything themselves on the Sabbath; and then they put some food on the footpath, and throw rags and bones into the street for us, because they must not hand anything to us. There are some about here who get a couple of shillings' worth of goods, and go on

board the ships in the Docks, and exchange them for bones and bits of old canvas among the sailors; I 'd buy and do so too if I only had the money, but can't get it. The summer is the worst time for us, the winter is much better, for there is more meat used in winter, and then there are more bones." (Others say differently.) "I intend to go to the country this season, and try to get something to do at the hay-making and harvest. I make about 2s. 6d. a week, and the way I manage is this: sometimes I get a piece of bread about 12 o'clock, and I make my breakfast of that and cold water; very seldom I have any dinner,—unless I earn 6d. I can't get any,—and then I have a basin of nice soup, or a penn'orth of plum-pudding and a couple of baked 'tatoes. At night I get ½d. worth of coffee, ½d. worth of sugar, and 1½d. worth of bread, and then I have 2d. a night left for my lodging; I always try to manage that, for I 'd do anything sooner than stop out all night. I 'm always happy the day when I make 4d., for then I know I won't have to sleep in the street. The winter before last, there was a straw-yard down in Black Jack's-alley, where we used to go after six o'clock in the evening, and get ½ lb. of bread, and another ½ lb. in the morning, and then we'd gather what we could in the daytime and buy victuals with what we got for it. We were well off then, but the straw-yard wasn't open at all last winter. There used to be 300 of us in there of a night, a great many of the dock-labourers and their families were there, for no work was to be got in the docks; so they weren't able to pay rent, and were obliged to go in. I 've lost my health since I took to bone-picking, through the wet and cold in the winter, for I 've scarcely any clothes, and the wet gets to my feet through the old shoes; this caused me last winter to be nine weeks in the hospital of the Whitechapel workhouse."

The narrator of this tale seemed so dejected and broken in spirit, that it was with difficulty his story was elicited from him. He was evidently labouring under incipient consumption. I have every reason to believe that he made a truthful statement,—indeed, he did not appear to me to have sufficient intellect to invent a falsehood. It is a curious fact, indeed, with reference to the London street-finders generally, that they seem to possess less rational power than any other class. They appear utterly incapable of trading even in the most trifling commodities, probably from the fact that buying articles for the purpose of selling them at a profit, requires an exercise of the mind to which they feel themselves incapable. Begging, too, requires some ingenuity or tact, in order to move the sympathies of the well-to-do, and the street-finders being incompetent for this, they work on day after day as long as they are able to crawl about in pursuit of their unprofitable calling. This cannot be fairly said of the younger members of this class, who are sent into the streets by their parents, and many of whom are afterwards able to find some more reputable and more lucrative employment. As a body of people, however, young and old, they mostly exhibit the same stupid, half-witted appearance.

To show how bone-grubbers occasionally manage to obtain shelter during the night, the following incident may not be out of place. A few mornings past I accidentally encountered one of this class in a narrow back lane; his ragged coat—the colour of the rubbish among which he toiled—was greased over, probably with the fat of the bones he gathered, and being mixed with the dust it seemed as if the man were covered with bird-lime. His shoes—torn and tied on his feet with pieces of cord—had doubtlessly been picked out of some dust-bin, while his greasy bag and stick unmistakably announced his calling. Desirous of obtaining all the information possible on this subject, I asked him a few questions, took his address, which he gave without hesitation, and bade him call on me in the evening. At the time appointed, however, he did not appear; on the following day therefore I made way to the address he had given, and on reaching the spot I was astonished to find the house in which he had said he lived was uninhabited. A padlock was on the door, the boards of which were parting with age. There was not a whole pane of glass in any of the windows, and the frames of many of them were shattered or demolished. Some persons in the neighbourhood, noticing me eyeing the place, asked whom I wanted. On my telling the man's name, which it appeared he had not dreamt of disguising, I was informed that he had left the day before, saying he had met the landlord in the morning (for such it turned out he had fancied me to be), and that the gentleman had wanted him to come to his house, but he was afraid to go lest he should be sent to prison for breaking into the place. I found, on inspection, that the premises, though locked up, could be entered by the rear, one of the window-frames having been removed, so that admission could be obtained through the aperture. Availing myself of the same mode of ingress, I proceeded to examine the premises. Nothing could well be more dismal or dreary than the interior. The floors were rotting with damp and mildew, especially near the windows, where the wet found easy entrance. The walls were even slimy and discoloured, and everything bore the appearance of desolation. In one corner was strewn a bundle of dirty straw, which doubtlessly had served the bone-grubber for a bed, while scattered about the floor were pieces of bones, and small fragments of dirty rags, sufficient to indicate the calling of the late inmate. He had had but little difficulty in removing his property, seeing that it consisted solely of his bag and his stick.

The following paragraph concerning the chiffoniers or rag-gatherers of Paris appeared in the London journals a few weeks since:—

"The fraternal association of rag-gatherers (chiffoniers) gave a grand banquet on Saturday last (21st of June). It took place at a public-house called the *Pot Tricolore*, near the *Barrière de Fontainbleau*, which is frequented by the rag-gathering fraternity. In this house there are three rooms, each of which is specially devoted to the use of different classes of rag-gatherers: one, the least dirty, is called the 'Chamber of Peers,'

and is occupied by the first class—that is, those who possess a basket in a good state, and a crook ornamented with copper; the second, called the 'Chamber of Deputies,' belonging to the second class, is much less comfortable, and those who attend it have baskets and crooks not of first-rate quality; the third room is in a dilapidated condition, and is frequented by the lowest class of rag-gatherers who have no basket or crook, and who place what they find in the streets in a piece of sackcloth. They call themselves the '*Réunion des Vrais Prolétaires*.' The name of each room is written in chalk above the door; and generally such strict etiquette is observed among the rag-gatherers that no one goes into the apartment not occupied by his own class. At Saturday's banquet, however, all distinctions of rank were laid aside, and delegates of each class united fraternally. The president was the oldest rag-gatherer in Paris; his age is 88, and he is called 'the Emperor.' The banquet consisted of a sort of *olla podrida*, which the master of the establishment pompously called *gibelotte*, though of what animal it was composed it was impossible to say. It was served up in huge earthen dishes, and before it was allowed to be touched payment was demanded and obtained; the other articles were also paid for as soon as they were brought in; and a deposit was exacted as a security for the plates, knives, and forks. The wine, or what did duty as such, was contained in an earthen pot called the *Petit Père Noir*, and was filled from a gigantic vessel named *Le Moricaud*. The dinner was concluded by each guest taking a small glass of brandy. Business was then proceeded to. It consisted in the reading and adoption of the statutes of the association, followed by the drinking of numerous toasts to the president, to the prosperity of rag-gathering, to the union of rag-gatherers, &c. A collection amounting to 6*f*. 75*c*. was raised for sick members of the fraternity. The guests then dispersed; but several of them remained at the counter until they had consumed in brandy the amount deposited as security for the crockery, knives, and forks."

Of the "Pure"-Finders.

Dogs'-dung is called "Pure," from its cleansing and purifying properties.

The name of "Pure-finders," however, has been applied to the men engaged in collecting dogs'-dung from the public streets only, within the last 20 or 30 years. Previous to this period there appears to have been no men engaged in the business, old women alone gathered the substance, and they were known by the name of "bunters," which signifies properly gatherers of rags; and thus plainly intimates that the rag-gatherers originally added the collecting of "Pure" to their original and proper vocation. Hence it appears that the bone-grubbers, rag-gatherers, and pure-finders, constituted formerly but one class of people, and even now they have, as I have stated, kindred characteristics.

The pure-finders meet with a ready market for all the dogs'-dung they are able to collect, at the numerous tanyards in Bermondsey, where they sell it by the stable-bucket full, and get from 8*d*. to 10*d*. per bucket, and sometimes 1*s*. and 1*s*. 2*d*. for it, according to its quality. The "dry limy-looking sort" fetches the highest price at some yards, as it is found to possess more of the alkaline, or purifying properties; but others are found to prefer the dark moist quality. Strange as it may appear, the preference for a particular kind has suggested to the finders of Pure the idea of adulterating it to a very considerable extent; this is effected by means of mortar broken away from old walls, and mixed up with the whole mass, which it closely resembles; in some cases, however, the mortar is rolled into small balls similar to those found. Hence it would appear, that there is no business or trade, however insignificant or contemptible, without its own peculiar and appropriate tricks.

The pure-finders are in their habits and mode of proceeding nearly similar to the bone-grubbers. Many of the pure-finders are, however, better in circumstances, the men especially, as they earn more money. They are also, to a certain extent, a better educated class. Some of the regular collectors of this substance have been mechanics, and others small tradesmen, who have been reduced. Those pure-finders who have "a good connection," and have been granted permission to cleanse some kennels, obtain a very fair living at the business, earning from 10*s*. to 15*s*. a week. These, however, are very few; the majority have to seek the article in the streets, and by such means they can obtain only from 6*s*. to 10*s*. a week. The average weekly earnings of this class are thought to be about 7*s*. 6*d*.

From all the inquiries I have made on this subject, I have found that there cannot be less than from 200 to 300 persons constantly engaged solely in this business. There are about 30 tanyards large and small in Bermondsey, and these all have their regular Pure collectors from whom they obtain the article. Leomont and Roberts's, Bavingtons', Beech's, Murrell's, Cheeseman's, Powell's, Jones's, Jourdans', Kent's, Moorcroft's, and Davis's, are among the largest establishments, and some idea of the amount of business done in some of these yards may be formed from the fact, that the proprietors severally employ from 300 to 500 tanners. At Leomont and Roberts's there are 23 regular street-finders, who supply them with pure, but this is a large establishment, and the number supplying them is considered far beyond the average quantity; moreover, Messrs. Leomont and Roberts do more business in the particular branch of tanning in which the article is principally used, viz., in dressing the leather for book-covers, kid-gloves, and a variety of other articles. Some of the other tanyards, especially the smaller ones, take the substance only as they happen to want it, and others again employ but a limited number of hands. If, therefore, we strike an average, and reduce the number supplying each of the several yards to eight, we shall have 240 persons regularly engaged in the business: besides these, it may be said that numbers of the starving and destitute Irish have taken to picking up the ma-

terial, but not knowing where to sell it, or how to dispose of it, they part with it for 2*d.* or 3*d.* the pailfull to the regular purveyors of it to the tan-yards, who of course make a considerable profit by the transaction. The children of the poor Irish are usually employed in this manner, but they also pick up rags and bones, and anything else which may fall in their way.

I have stated that some of the pure-finders, especially the men, earn a considerable sum of money per week; their gains are sometimes as much as 15*s.*; indeed I am assured that seven years ago, when they got from 3*s.* to 4*s.* per pail for the pure, that many of them would not exchange their position with that of the best paid mechanic in London. Now, however, the case is altered, for there are twenty now at the business for every one who followed it then; hence each collects so much the less in quantity, and, moreover, from the competition gets so much less for the article. Some of the collectors at present do not earn 3*s.* per week, but these are mostly old women who are feeble and unable to get over the ground quickly; others make 5*s.* and 6*s.* in the course of the week, while the most active and those who clean out the kennels of the dog fanciers may occasionally make 9*s.* and 10*s.* and even 15*s.* a week still, but this is of very rare occurrence. Allowing the finders, one with the other, to earn on an average 5*s.* per week, it would give the annual earnings of each to be 13*l.*, while the income of the whole 200 would amount to 50*l.* a week, or 2600*l.* per annum. The kennel "pure" is not much valued, indeed many of the tanners will not even buy it, the reason is that the dogs of the "fanciers" are fed on almost anything, to save expense; the kennel cleaners consequently take the precaution of mixing it with what is found in the street, previous to offering it for sale.

The pure-finder may at once be distinguished from the bone-grubber and rag-gatherer; the latter, as I have before mentioned, carries a bag, and usually a stick armed with a spike, while he is most frequently to be met with in back streets, narrow lanes, yards and other places, where dust and rubbish are likely to be thrown out from the adjacent houses. The pure-finder, on the contrary, is often found in the open streets, as dogs wander where they like. The pure-finders always carry a handle basket, generally with a cover, to hide the contents, and have their right hand covered with a black leather glove; many of them, however, dispense with the glove, as they say it is much easier to wash their hands than to keep the glove fit for use. The women generally have a large pocket for the reception of such rags as they may chance to fall in with, but they pick up those only of the very best quality, and will not go out of their way to search even for them. Thus equipped they may be seen pursuing their avocation in almost every street in and about London, excepting such streets as are now cleansed by the "street orderlies," of whom the pure-finders grieviously complain, as being an unwarrantable interference with the privileges of their class.

The pure collected is used by leather-dressers and tanners, and more especially by those engaged in the manufacture of morocco and kid leather from the skins of old and young goats, of which skins great numbers are imported, and of the roans and lambskins which are the sham morocco and kids of the "slop" leather trade, and are used by the better class of shoemakers, book-binders, and glovers, for the inferior requirements of their business. Pure is also used by tanners, as is pigeon's dung, for the tanning of the thinner kinds of leather, such as calf-skins, for which purpose it is placed in pits with an admixture of lime and bark.

In the manufacture of moroccos and roans the pure is rubbed by the hands of the workman into the skin he is dressing. This is done to "purify" the leather, I was told by an intelligent leather-dresser, and from that term the word "pure" has originated. The dung has astringent as well as highly alkaline, or, to use the expression of my informant, "scouring," qualities. When the pure has been rubbed into the flesh and grain of the skin (the "flesh" being originally the interior, and the "grain" the exterior part of the cuticle), and the skin, thus purified, has been hung up to be dried, the dung removes, as it were, all such moisture as, if allowed to remain, would tend to make the leather unsound or imperfectly dressed. This imperfect dressing, moreover, gives a disgreeable smell to the leather—and leather-buyers often use both nose and tongue in making their purchases—and would consequently prevent that agreeable odour being imparted to the skin which is found in some kinds of morocco and kid. The peculiar odour of the Russia leather, so agreeable in the libraries of the rich, is derived from the bark of young birch trees. It is now manufactured in Bermondsey.

Among the morocco manufacturers, especially among the old operatives, there is often a scarcity of employment, and they then dress a few roans, which they hawk to the cheap warehouses, or sell to the wholesale shoemakers on their own account. These men usually reside in small garrets in the poorer parts of Bermondsey, and carry on their trade in their own rooms, using and keeping the pure there; hence the "homes" of these poor men are peculiarly uncomfortable, if not unhealthy. Some of these poor fellows or their wives collect the pure themselves, often starting at daylight for the purpose; they more frequently, however, buy it of a regular finder.

The number of pure-finders I heard estimated, by a man well acquainted with the tanning and other departments of the leather trade, at from 200 to 250. The finders, I was informed by the same person, collected about a pailfull a day, clearing 6*s.* a week in the summer—1*s.* and 1*s.* 2*d.* being the charge for a pailfull; in the short days of winter, however, and in bad weather, they could not collect five pailfulls in a week.

In the wretched locality already referred to as lying between the Docks and Rosemary-lane, redolent of filth and pregnant with pestilential diseases, and whither all the outcasts of the metropolitan

population seem to be drawn, either in the hope of finding fitting associates and companions in their wretchedness (for there is doubtlessly something attractive and agreeable to them in such companionship), or else for the purpose of hiding themselves and their shifts and struggles for existence from the world,—in this dismal quarter, and branching from one of the many narrow lanes which interlace it, there is a little court with about half-a-dozen houses of the very smallest dimensions, consisting of merely two rooms, one over the other. Here in one of the upper rooms (the lower one of the same house being occupied by another family and apparently *filled* with little ragged children), I discerned, after considerable difficulty, an old woman, a pure finder. When I opened the door the little light that struggled through the small window, the many broken panes of which were stuffed with old rags, was not sufficient to enable me to perceive who or what was in the room. After a short time, however, I began to make out an old chair standing near the fire-place, and then to discover a poor old woman resembling a bundle of rags and filth stretched on some dirty straw in the corner of the apartment. The place was bare and almost naked. There was nothing in it except a couple of old tin kettles and a basket, and some broken crockeryware in the recess of the window. To my astonishment I found this wretched creature to be, to a certain extent, a "superior" woman; she could read and write well, spoke correctly, and appeared to have been a person of natural good sense, though broken up with age, want, and infirmity, so that she was characterized by all that dull and hardened stupidity of manner which I have noticed in the class. She made the following statement:—

"I am about 60 years of age. My father was a milkman, and very well off; he had a barn and a great many cows. I was kept at school till I was thirteen or fourteen years of age; about that time my father died, and then I was taken home to help my mother in the business. After a while things went wrong; the cows began to die, and mother, alleging she could not manage the business herself, married again. I soon found out the difference. Glad to get away, anywhere out of the house, I married a sailor, and was very comfortable with him for some years; as he made short voyages, and was often at home, and always left me half his pay. At last he was pressed, when at home with me, and sent away; I forget now where he was sent to, but I never saw him from that day to this. The only thing I know is that some sailors came to me four or five years after, and told me that he deserted from the ship in which he had gone out, and got on board the *Neptune*, East Indiaman, bound for Bombay, where he acted as boatswain's mate; some little time afterwards, he had got intoxicated while the ship was lying in harbour, and, going down the side to get into a bumboat, and buy more drink, he had fallen overboard and was drowned. I got some money that was due to him from the India House, and, after that was all gone, I went into service, in the Mile-end Road. There I stayed for several years, till I met my second husband, who was bred to the water, too, but as a waterman on the river. We did very well together for a long time, till he lost his health. He became paralyzed like, and was deprived of the use of all one side, and nearly lost the sight of one of his eyes; this was not very conspicuous at first, but when we came to get pinched, and to be badly off, then any one might have seen that there was something the matter with his eye. Then we parted with everything we had in the world; and, at last, when we had no other means of living left, we were advised to take to gathering 'Pure.' At first I couldn't endure the business; I couldn't bear to eat a morsel, and I was obliged to discontinue it for a long time. My husband kept at it though, for he could do *that* well enough, only he couldn't walk as fast as he ought. He couldn't lift his hands as high as his head, but he managed to work under him, and so put the Pure in the basket. When I saw that he, poor fellow, couldn't make enough to keep us both, I took heart and went out again, and used to gather more than he did; that's fifteen years ago now; the times were good then, and we used to do very well. If we only gathered a pail-full in the day, we could live very well; but we could do much more than that, for there wasn't near so many at the business then, and the Pure was easier to be had. For my part I can't tell where all the poor creatures have come from of late years; the world seems growing worse and worse every day. They have pulled down the price of Pure, that's certain; but the poor things must do something, they can't starve while there's anything to be got. Why, no later than six or seven years ago, it was as high as 3*s.* 6*d.* and 4*s.* a pail-full, and a ready sale for as much of it as you could get; but now you can only get 1*s.* and in some places 1*s.* 2*d.* a pail-full; and, as I said before, there are so many at it, that there is not much left for a poor old creature like me to find. The men that are strong and smart get the most, of course, and some of them do very well, at least they manage to live. Six years ago, my husband complained that he was ill, in the evening, and lay down in the bed—we lived in Whitechapel then—he took a fit of coughing, and was smothered in his own blood. O dear" (the poor old soul here ejaculated), "what troubles I have gone through! I had eight children at one time, and there is not one of them alive now. My daughter lived to 30 years of age, and then she died in childbirth, and, since then, I have had nobody in the wide world to care for me—none but myself, all alone as I am. After my husband's death I couldn't do much, and all my things went away, one by one, until I've nothing but bare walls, and that's the reason why I was vexed at first at your coming in, sir. I was yesterday out all day, and went round Aldgate, Whitechapel, St. George's East, Stepney, Bow, and Bromley, and then came home; after that, I went over to Bermondsey, and there I got only 6*d.* for my pains. To-day I wasn't out at all; I wasn't well; I had a bad headache, and I'm so much afraid of the fevers that are all about

here—though I don't know why I should be afraid of them—I was lying down, when you came, to get rid of my pains. There's such a dizziness in my head now, I feel as if it didn't belong to me. No, I have earned no money to-day. I have had a piece of dried bread that I steeped in water to eat. I haven't eat anything else to-day; but, pray, sir, don't tell anybody of it. I could never bear the thought of going into the 'great house' [workhouse]; I'm so used to the air, that I'd sooner die in the street, as many I know have done. I've known several of our people, who have sat down in the street with their basket alongside them, and died. I knew one not long ago, who took ill just as she was stooping down to gather up the Pure, and fell on her face; she was taken to the London Hospital, and died at three o'clock in the morning. I'd sooner die like them than be deprived of my liberty, and be prevented from going about where I liked. No, I'll never go into the workhouse; my master is kind to me" [the tanner whom she supplies]. "When I'm ill, he sometimes gives me a sixpence; but there's one gentleman has done us great harm, by forcing so many into the business. He's a poor-law guardian, and when any poor person applies for relief, he tells them to go and gather Pure, and that he'll buy it of them (for he's in the line), and so the parish, you see, don't have to give anything, and that's one way that so many have come into the trade of late, that the likes of me can do little or no good at it. Almost every one I've ever known engaged at Pure-finding were people who were better off once. I knew a man who went by the name of Brown, who picked up Pure for years before I went to it; he was a very quiet man; he used to lodge in Blue Anchor-yard, and seldom used to speak to anybody. We two used to talk together sometimes, but never much. One morning he was found dead in his bed; it was of a Tuesday morning, and he was buried about 12 o'clock on the Friday following. About 6 o'clock on that afternoon, three or four gentlemen came searching all through this place, looking for a man named Brown, and offering a reward to any who would find him out; there was a whole crowd about them when I came up. One of the gentlemen said that the man they wanted had lost the first finger of his right hand, and then I knew that it was the man that had been buried only that morning. Would you believe it, Mr. Brown was a real gentleman all the time, and had a large estate, of I don't know how many thousand pounds, just left him, and the lawyers had advertised and searched everywhere for him, but never found him, you may say, till he was dead. We discovered that his name was not Brown; he had only taken that name to hide his real one, which, of course, he did not want any one to know. I've often thought of him, poor man, and all the misery he might have been spared, if the good news had only come a year or two sooner."

Another informant, a Pure-collector, was originally in the Manchester cotton trade, and held a lucrative situation in a large country establishment. His salary one year exceeded 250*l.*, and his regular income was 150*l.* "This," he says, "I lost through drink and neglect. My master was exceedingly kind to me, and has even assisted me since I left his employ. He bore with me patiently for many years, but the love of drink was so strong upon me that it was impossible for him to keep me any longer." He has often been drunk, he tells me, for three months together; and he is now so reduced that he is ashamed to be seen. When at his master's it was his duty to carve and help the other assistants belonging to the establishment, and his hand used to shake so violently that he has been ashamed to lift the gravy spoon.

At breakfast he has frequently waited till all the young men had left the table before he ventured to taste his tea; and immediately, when he was alone, he has bent his head down to his cup to drink, being utterly incapable of raising it to his lips. He says he is a living example of the degrading influence of drink. All his friends have deserted him. He has suffered enough, he tells me, to make him give it up. He earned the week before I saw him 5*s.* 2*d.*; and the week before that, 6*s.*

Before leaving me I prevailed upon the man to "take the pledge." This is now eighteen months ago, and I have not seen him since.

Of the Cigar-end Finders.

There are, strictly speaking, none who make a living by picking up the ends of cigars thrown away as useless by the smokers in the streets, but there are very many who employ themselves from time to time in collecting them. Almost all the street-finders, when they meet with such things, pick them up, and keep them in a pocket set apart for that purpose. The men allow the ends to accumulate till they amount to two or three pounds weight, and then some dispose of them to a person residing in the neighbourhood of Rosemary-lane, who buys them all up at from 6*d.* to 10*d.* per pound, according to their length and quality. The long ends are considered the best, as I am told there is more sound tobacco in them, uninjured by the moisture of the mouth. The children of the poor Irish, in particular, scour Ratcliff-highway, the Commercial-road, Mile-end-road, and all the leading thoroughfares of the East, and every place where cigar smokers are likely to take an evening's promenade. The quantity that each of them collects is very trifling indeed—perhaps not more than a handful during a morning's search. I am informed, by an intelligent man living in the midst of them, that these children go out in the morning not only to gather cigar-ends, but to pick up out of dust bins, and from amongst rubbish in the streets, the smallest scraps and crusts of bread, no matter how hard or filthy they may be. These they put into a little bag which they carry for the purpose, and, after they have gone their rounds and collected whatever they can, they take the cigar-ends to the man who buys them—sometimes getting not more than a halfpenny or a penny for their morning's collection. With this they buy a halfpenny or a penny-

Original from HARVARD UNIVERSITY

worth of oatmeal, which they mix up with a large quantity of water, and after washing and steeping the hard and dirty crusts, they put them into the pot or kettle and boil all together. Of this mass the whole family partake, and it often constitutes all the food they taste in the course of the day. I have often seen the bone-grubbers eat the black and soddened crusts they have picked up out of the gutter.

It would, indeed, be a hopeless task to make any attempt to get at the number of persons who occasionally or otherwise pick up cigar-ends with the view of selling them again. For this purpose almost all who ransack the streets of London for a living may be computed as belonging to the class; and to these should be added the children of the thousands of destitute Irish who have inundated the metropolis within the last few years, and who are to be found huddled together in all the low neighbourhoods in every suburb of the City. What quantity is collected, or the amount of money obtained for the ends, there are no means of ascertaining.

Let us, however, make a conjecture. There are in round numbers 300,000 inhabited houses in the metropolis; and allowing the married people living in apartments to be equal in number to the unmarried "housekeepers," we may compute that the number of families in London is about the same as the inhabited houses. Assuming one young or old gentleman in every ten of these families to smoke one cigar per diem in the public thoroughfares, we have 30,000 cigar-ends daily, or 210,000 weekly cast away in the London streets. Now, reckoning 150 cigars to go to a pound, we may assume that each end so cast away weighs about the thousandth part of a pound; consequently the gross weight of the ends flung into the gutter will, in the course of the week, amount to about 2 cwt.; and calculating that only a sixth part of these are picked up by the finders, it follows that there is very nearly a ton of refuse tobacco collected annually in the metropolitan thoroughfares.

The aristocratic quarters of the City and the vicinity of theatres and casinos are the best for the cigar-end finders. In the Strand, Regent-street, and the more fashionable thoroughfares, I am told, there are many ends picked up; but even in these places they do not exclusively furnish a means of living to any of the finders. All the collectors sell them to some other person, who acts as middle-man in the business. How he disposes of the ends is unknown, but it is supposed that they are resold to some of the large manufacturers of cigars, and go to form the component part of a new stock of the "best Havannahs;" or, in other words, they are worked up again to be again cast away, and again collected by the finders, and so on perhaps, till the millennium comes. Some suppose them to be cut up and mixed with the common smoking tobacco, and others that they are used in making snuff. There are, I am assured, five persons residing in different parts of London, who are known to purchase the cigar-ends.

In Naples the sale of cigar-ends is a regular street-traffic, the street-seller carrying them in a small box suspended round the neck. In Paris, also, *le Remasseur de Cigares* is a well-known occupation: the "ends" thus collected are sold as cheap tobacco to the poor. In the low lodging-houses of London the ends, when dried, are cut up, and frequently vended by the finders to such of their fellow-lodgers as are anxious to enjoy their pipe at the cheapest possible rate.

Of the Old Wood Gatherers.

All that has been said of the cigar-end finders may, in a great measure, apply to the wood-gatherers. No one can make a living exclusively by the gathering of wood, and those who *do* gather it, gather as well rags, bones, and bits of metal. They gather it, indeed, as an adjunct to their other findings, on the principle that "every little helps." Those, however, who most frequently look for wood are the very old and feeble, and the very young, who are both unable to travel far, or to carry a heavy burden, and they may occasionally be seen crawling about in the neighbourhood of any new buildings in the course of construction, or old ones in the course of demolition, and picking up small odds and ends of wood and chips swept out amongst dirt and shavings; these they deposit in a bag or basket which they carry for that purpose. Should there happen to be what they call "pulling-down work," that is, taking down old houses, or palings, the place is immediately beset by a number of wood-gatherers, young and old, and in general all the poor people of the locality join with them, to obtain their share of the spoil. What the poor get they take home and burn, but the wood-gatherers sell all they procure for some small trifle.

Some short time ago a portion of the wood-pavement in the city was being removed; a large number of the old blocks, which were much worn and of no further use, were thrown aside, and became the perquisite of the wood-gatherers. During the repair of the street, the spot was constantly besieged by a motley mob of men, women, and children, who, in many instances, struggled and fought for the wood rejected as worthless. This wood they either sold for a trifle as they got it, or took home and split, and made into bundles for sale as firewood.

All the mudlarks (of whom I shall treat specially) pick up wood and chips on the bank of the river; these they sell to poor people in their own neighbourhood. They sometimes "find" large pieces of a greater weight than they can carry; in such cases they get some other mudlark to help them with the load, and the two "go halves" in the produce. The only parties among the street-finders who do not pick up wood are the Pure-collectors and the sewer-hunters, or, as they call themselves, shore-workers, both of whom pass it by as of no value.

It is impossible to estimate the quantity of wood which is thus gathered, or what the amount may be which the collector realizes in the course of the year.

Of the Dredgers, or River Finders.

The dredgermen of the Thames, or river finders, naturally occupy the same place with reference to the street-finders, as the purlmen or river beer-sellers do to those who get their living by selling in the streets. It would be in itself a curious inquiry to trace the origin of the manifold occupations in which men are found to be engaged in the present day, and to note how promptly every circumstance and occurrence was laid hold of, as it happened to arise, which appeared to have any tendency to open up a new occupation, and to mark the gradual progress, till it became a regularly-established employment, followed by a separate class of people, fenced round by rules and customs of their own, and who at length grew to be both in their habits and peculiarities plainly distinct from the other classes among whom they chanced to be located.

There has been no historian among the dredgers of the Thames to record the commencement of the business, and the utmost that any of the river-finders can tell is that his father had been a dredger, and so had his father before him, and that *that's* the reason why they are dredgers also. But no such people as dredgers were known on the Thames in remote days; and before London had become an important trading port, where nothing was likely to be got for the searching, it is not probable that people would have been induced to search. In those days, the only things searched for in the river were the bodies of persons drowned, accidentally or otherwise. For this purpose, the Thames fishermen of all others, appeared to be the best adapted. They were on the spot at all times, and had various sorts of tackle, such as nets, lines, hooks, &c. The fishermen well understood everything connected with the river, such as the various sets of the tide, and the nature of the bottom, and they were therefore on such occasions invariably applied to for these purposes.

It is known to all who remember anything of Old London Bridge, that at certain times of the tide, in consequence of the velocity with which the water rushed through the narrow apertures which the arches then afforded for its passage, to bring a boat in safety through the bridge was a feat to be attempted only by the skilful and experienced. This feat was known as "shooting" London Bridge; and it was no unusual thing for accidents to happen even to the most expert. In fact, numerous accidents occurred at this bridge, and at such times valuable articles were sometimes lost, for which high rewards were offered to the finder. Here again the fishermen came into requisition, the small drag-net, which they used while rowing, offering itself for the purpose; for, by fixing an iron frame round the mouth of the drag-net, this part of it, from its specific gravity, sunk first to the bottom, and consequently scraped along as they pulled forward, collecting into the net everything that came in its way; when it was nearly filled, which the rower always knew by the weight, it was hauled up to the surface, its contents examined, and the object lost generally recovered.

It is thus apparent that the fishermen of the Thames were the men originally employed as dredgermen; though casually, indeed, at first, and according as circumstances occurred requiring their services. By degrees, however, as the commerce of the river increased, and a greater number of articles fell overboard from the shipping, they came to be more frequently called into requisition, and so they were naturally led to adopt the dredging as part and parcel of their business. Thus it remains to the present day.

The fishermen all serve a regular apprenticeship, as they say themselves, "duly and truly" for seven years. During the time of their apprenticeship they are (or rather, in former times they *were*) obliged to sleep in their master's boat at night to take care of his property, and were subject to many other curious regulations, which are foreign to this subject.

I have said that the fishermen of the Thames to the present day unite the dredging to their proper calling. By this I mean that they employ themselves in fishing during the summer and autumn, either from Barking Creek downwards, or from Chelsea Reach upwards, catching dabs, flounders, eels, and other sorts of fish for the London markets. But in winter when the days are short and cold, and the weather stormy, they prefer stopping at home, and dredging the bed of the river for anything they may chance to find. There are others, however, who have started wholly in the dredging line, there being no hindrance or impediment to any one doing so, nor any licence required for the purpose: these dredge the river winter and summer alike, and are, in fact, the only real dredgermen of the present day living solely by that occupation.

There are in all about 100 dredgermen at work on the river, and these are located as follows:—

	Dredger-men.
From Putney to Vauxhall there are .	20
From Vauxhall to London Bridge . .	40
From London Bridge to Deptford . .	20
And from Deptford to Gravesend . .	20
	100

All these reside, in general, on the south side of the Thames, the two places most frequented by them being Lambeth and Rotherhithe. They do not, however, confine themselves to the neighbourhoods wherein they reside, but extend their operations to all parts of the river, where it is likely that they may pick up anything; and it is perfectly marvellous with what rapidity the intelligence of any accident calculated to afford them employment is spread among them; for should a loaded coal barge be sunk over night, by daylight the next morning every dredgerman would be sure to be upon the spot, prepared to collect what he could from the wreck at the bottom of the river.

The boats of the dredgermen are of a peculiar shape. They have no stern, but are the same

fore and aft. They are called Peter boats, but not one of the men with whom I spoke had the least idea as to the origin of the name. These boats are to be had at almost all prices, according to their condition and age—from 30s. to 20l. The boats used by the fishermen dredgermen are decidedly the most valuable. One with the other, perhaps the whole may average 10l. each; and this sum will give 1000l. as the value of the entire number. A complete set of tackle, including drags, will cost 2l., which comes to 200l. for all hands; and thus we have the sum of 1200l. as the amount of capital invested in the dredging of the Thames.

It is by no means an easy matter to form any estimate of the earnings of the dredgermen, as they are a matter of mere chance. In former years, when Indiamen and all the foreign shipping lay in the river, the river finders were in the habit of doing a good business, not only in their own line, through the greater quantities of rope, bones, and other things which then were thrown or fell overboard, but they also contrived to smuggle ashore great quantities of tobacco, tea, spirits, and other contraband articles, and thought it a bad day's work when they did not earn a pound independent of their dredging. An old dredger told me he had often in those days made 5l. before breakfast time. After the excavation of the various docks, and after the larger shipping had departed from the river, the finders were obliged to content themselves with the chances of mere dredging; and even then, I am informed, they were in the habit of earning one week with another throughout the year, about 25s. per week, each, or 6500l. per annum among all. Latterly, however, the earnings of these men have greatly fallen off, especially in the summer, for then they cannot get so good a price for the coal they find as in the winter—6d. per bushel being the summer price; and, as they consider three bushels a good day's work, their earnings at this period of the year amount only to 1s. 6d. per day, excepting when they happen to pick up some bones or pieces of metal, or to find a dead body for which there is a reward. In the winter, however, the dredgermen can readily get 1s. per bushel for all the coals they find; and far more coals are to be found then than in summer, for there are more colliers in the river, and far more accidents at that season. Coal barges are often sunk in the winter, and on such occasions they make a good harvest. Moreover there is the finding of bodies, for which they not only get the reward, but 5s., which they call inquest money; together with many other chances, such as the finding of money and valuables among the rubbish they bring up from the bottom; but as the last-mentioned are accidents happening throughout the year, I am inclined to think that they have understated the amount which they are in the habit of realizing even in the summer.

The dredgers, as a class, may be said to be altogether uneducated, not half a dozen out of the whole number being able to read their own name, and only one or two to write it; this select few are considered by the rest as perfect prodigies. "Lor bless you!" said one, "I ony wish you'd 'ear Bill S—— read; I ony jist wish you'd 'ear him. Why that ere Bill can read faster nor a dog can trot. And, what's more, I seed him write an ole letter hisself, ev'ry word on it! What do you think o' that now?" The ignorance of the dredgermen may be accounted for by the men taking so early to the water; the bustle and excitement of the river being far more attractive to them than the routine of a school. Almost as soon as they are able to do anything, the dredgermen's boys are taken by their fathers afloat to assist in picking out the coals, bones, and other things of any use, from the midst of the rubbish brought up in their drag-nets; or else the lads are sent on board as assistants to one or other of the fishermen during their fishing voyages. When once engaged in this way it has been found impossible afterwards to keep the youths from the water; and if they have learned anything previously they very soon forget it.

It might be expected that the dredgers, in a manner depending on chance for their livelihood, and leading a restless sort of life on the water, would closely resemble the costermongers in their habits; but it is far otherwise. There can be no two classes more dissimilar, except in their hatred of restraint. The dredgers are sober and steady; gambling is unknown amongst them; and they are, to an extraordinary degree, laborious, persevering, and patient. They are in general men of short stature, but square built, strong, and capable of enduring great fatigue, and have a silent and thoughtful look. Being almost always alone, and studying how they may best succeed in finding what they seek, marking the various sets of the tide, and the direction in which things falling into the water at a particular place must necessarily be carried, they become the very opposite to the other river people, especially to the watermen, who are brawling and clamorous, and delight in continually "chaffing" each other. In consequence of the sober and industrious habits of the dredgermen their homes are, as they say, "pretty fair" for working men, though there is nothing very luxurious to be found in them, nor indeed anything beyond what is absolutely necessary. After their day's work, especially if they have "done well," these men smoke a pipe over a pint or two of beer at the nearest public-house, get home early to bed, and if the tide answers may be found on the river patiently dredging away at two or three o'clock in the morning.

Whenever a loaded coal barge happens to sink, as I have already intimated, it is surprising how short a time elapses before that part of the river is alive with the dredgers. They flock thither from all parts. The river on such occasions presents a very animated appearance. At first they are all in a group, and apparently in confusion, crossing and re-crossing each other's course; some with their oars pulled in while they examine the contents of their nets, and empty the coals into the bottom of their boats; others rowing and tugging against the stream, to obtain an advan-

tageous position for the next cast; and when they consider they have found this, down go the dredging nets to the bottom, and away they row again with the stream, as if pulling for a wager, till they find by the weight of their net that it is full; then they at once stop, haul it to the surface, and commence another course. Others who have been successful in getting their boats loaded may be seen pushing away from the main body, and making towards the shore. Here they busily employ themselves, with what help they can get, in emptying the boat of her cargo—carrying it ashore in old coal baskets, bushel measures, or anything else which will suit their purpose; and when this is completed they pull out again to join their comrades, and commence afresh. They continue working thus till the returning tide puts an end to their labours, but these are resumed after the tide has fallen to a certain depth; and so they go on, working night and day while there is anything to be got.

The dredgerman and his boat may be immediately distinguished from all others; there is nothing similar to them on the river. The sharp cutwater fore and aft, and short rounded appearance of the vessel, marks it out at once from the skiff or wherry of the waterman. There is, too, always the appearance of labour about the boat, like a ship returning after a long voyage, daubed and filthy, and looking sadly in need of a thorough cleansing. The grappling irons are over the bow, resting on a coil of rope; while the other end of the boat is filled with coals, bones, and old rope, mixed with the mud of the river. The ropes of the dredging net hang over the side. A short stout figure, with a face soiled and blackened with perspiration, and surmounted by a tarred sou'-wester, the body habited in a soiled check shirt, with the sleeves turned up above the elbows, and exhibiting a pair of sunburnt brawny arms, is pulling at the sculls, not with the ease and lightness of the waterman, but toiling and tugging away like a galley slave, as he scours the bed of the river with his dredging net in search of some hoped-for prize.

The dredgers, as was before stated, are the men who find almost all the bodies of persons drowned. If there be a reward offered for the recovery of a body, numbers of the dredgers will at once endeavour to obtain it, while if there be no reward, there is at least the inquest money to be had—beside other chances. What these chances are may be inferred from the well-known fact, that no body recovered by a dredgerman ever happens to have any money about it, when brought to shore. There may, indeed, be a watch in the fob or waistcoat pocket, for that article would be likely to be traced. There may, too, be a purse or pocket-book forthcoming, but somehow it is invariably empty. The dredgers cannot by any reasoning or argument be made to comprehend that there is anything like dishonesty in emptying the pockets of a dead man. They consider them as their just perquisites. They say that any one who finds a body does precisely the same, and that if they did not do so the police would. After having had all the trouble and labour, they allege that they have a much better right to whatever is to be got, than the police who have had nothing whatever to do with it. There are also people who shrewdly suspect that some of the coals from the barges lying in the river, very often find their way into the dredgers' boats, especially when the dredgers are engaged in night-work; and there are even some who do not hold them guiltless of, now and then, when opportunity offers, smuggling things ashore from many of the steamers coming from foreign parts. But such things, I repeat, the dredgers consider in the fair way of their business.

One of the most industrious, and I believe one of the most skilful and successful of this peculiar class, gave me the following epitome of his history.

"Father was a dredger, and grandfather afore him; grandfather was a dredger and a fisherman too. A'most as soon as I was able to crawl, father took me with him in the boat to help him to pick the coals, and bones, and other things out of the net, and to use me to the water. When I got bigger and stronger, I was sent to the parish school, but I didn't like it half as well as the boat, and couldn't be got to stay two days together. At last I went above bridge, and went along with a fisherman, and used to sleep in the boat every night. I liked to sleep in the boat; I used to be as comfortable as could be. Lor bless you! there's a tilt to them boats, and no rain can't git at you. I used to lie awake of a night in them times, and listen to the water slapping ag'in the boat, and think it fine fun. I might a got bound 'prentice, but I got aboard a smack, where I stayed three or four year, and if I'd a stayed there, I'd a liked it much better. But I heerd as how father was ill, so I com'd home, and took to the dredging, and am at it off and on ever since. I got no larnin', how could I? There's ony one or two of us dredgers as knows anything of larnin', and they're no better off than the rest. Larnin's no use to a dredger, he hasn't got no time to read; and if he had, why it wouldn't tell him where the holes and furrows is at the bottom of the river, and where things is to be found. To be sure there's holes and furrows at the bottom. I know a good many. I know a furrow off Lime'us Point, no wider nor the dredge, and I can go there, and when others can't git anything but stones and mud, I can git four or five bushel o' coal. You see they lay there; they get in with the set of the tide, and can't git out so easy like. Dredgers don't do so well now as they used to do. You know Pelican Stairs? well, before the Docks was built, when the ships lay there, I could go under Pelican Pier and pick up four or five shilling of a morning. What was that tho' to father? I hear him say he often made 5*l.* afore breakfast, and nobody ever the wiser. Them were fine times! there was a good livin' to be picked up on the water them days. About ten year ago, the fishermen at Lambeth, them as sarves their time 'duly and truly' thought to put us off the water, and went afore the Lord Mayor, but they couldn't do nothink after all. They do better nor us, as they go

fishin' all the summer, when the dredgin' is bad, and come back in winter. Some on us down here" [Rotherhithe] "go a deal-portering in the summer, or unloading 'tatoes, or anything else we can get; when we have nothin' else to do, we go on the river. Father don't dredge now, he's too old for that; it takes a man to be strong to dredge, so father goes to ship scrapin'. He on'y sits on a plank outside the ship, and scrapes off the old tar with a scraper. We does very well for all that—why he can make his half a bull a day [2*s.* 6*d.*] when he gits work, but that's not always; howsomever I helps the old man at times, when I'm able. I've found a good many bodies. I got a many rewards, and a tidy bit of inquest money. There's 5*s.* 6*d.* inquest money at Rotherhithe, and on'y a shillin' at Deptford; I can't make out how that is, but that's all they give, I know. I never finds anythink on the bodies. Lor bless you! people don't have anythink in their pockets when they gits drowned, they are not such fools as all that. Do you see them two marks there on the back of my hand? Well, one day—I was on'y young then—I was grabblin' for old rope in Church Hole, when I brings up a body, and just as I was fixing the rope on his leg to tow him ashore, two swells comes down in a skiff, and lays hold of the painter of my boat, and tows me ashore. The hook of the drag went right thro' the trowsers of the drowned man and my hand, and I couldn't let go no how, and tho' I roared out like mad, the swells didn't care, but dragged me into the stairs. When I got there, my arm, and the corpse's shoe and trowsers, was all kivered with my blood. What do you think the gents said?—why, they told me as how they had done me good, in towin' the body in, and ran away up the stairs. Tho' times ain't near so good as they was, I manages purty tidy, and hasn't got no occasion to hollor much; but there's some of the dredgers as would hollor, if they was ever so well off."

Of the Sewer-Hunters.

Some few years ago, the main sewers, having their outlets on the river side, were completely open, so that any person desirous of exploring their dark and uninviting recesses might enter at the river side, and wander away, provided he could withstand the combination of villanous stenches which met him at every step, for many miles, in any direction. At that time it was a thing of very frequent occurrence, especially at the spring tides, for the water to rush into the sewers, pouring through them like a torrent, and then to burst up through the gratings into the streets, flooding all the low-lying districts in the vicinity of the river, till the streets of Shadwell and Wapping resembled a Dutch town, intersected by a series of muddy canals. Of late, however, to remedy this defect, the Commissioners have had a strong brick wall built within the entrance to the several sewers. In each of these brick walls there is an opening covered by a strong iron door, which hangs from the top and is so arranged that when the tide is low the rush of the water and other filth on the inner side, forces it back and allows the contents of the sewer to pass into the river, whilst when the tide rises the door is forced so close against the wall by the pressure of the water outside that none can by any possibility enter, and thus the river neighbourhoods are secured from the deluges which were heretofore of such frequent occurrence.

Were it not a notorious fact, it might perhaps be thought impossible, that men could be found who, for the chance of obtaining a living of some sort or other, would, day after day, and year after year, continue to travel through these underground channels for the offscouring of the city; but such is the case even at the present moment. In former times, however, this custom prevailed much more than now, for in those days the sewers were entirely open and presented no obstacle to any one desirous of entering them. Many wondrous tales are still told among the people of men having lost their way in the sewers, and of having wandered among the filthy passages—their lights extinguished by the noisome vapours—till, faint and overpowered, they dropped down and died on the spot. Other stories are told of sewer-hunters beset by myriads of enormous rats, and slaying thousands of them in their struggle for life, till at length the swarms of the savage things overpowered them, and in a few days afterwards their skeletons were discovered picked to the very bones. Since the iron doors, however, have been placed on the main sewers a prohibition has been issued against entering them, and a reward of 5*l.* offered to any person giving information so as to lead to the conviction of any offender. Nevertheless many still travel through these foul labyrinths, in search of such valuables as may have found their way down the drains.

The persons who are in the habit of searching the sewers, call themselves "shore-men" or "shore-workers." They belong, in a certain degree, to the same class as the "mud-larks," that is to say, they travel through the mud along shore in the neighbourhood of ship-building and ship-breaking yards, for the purpose of picking up copper nails, bolts, iron, and old rope. The shore-men, however, do not collect the lumps of coal and wood they meet with on their way, but leave them as the proper perquisites of the mud-larks. The sewer-hunters were formerly, and indeed are still, called by the name of "Toshers," the articles which they pick up in the course of their wanderings along shore being known among themselves by the general term "tosh," a word more particularly applied by them to anything made of copper. These "Toshers" may be seen, especially on the Surrey side of the Thames, habited in long greasy velveteen coats, furnished with pockets of vast capacity, and their nether limbs encased in dirty canvas trowsers, and any old slops of shoes, that may be fit only for wading through the mud. They carry a bag on their back, and in their hand a pole seven or eight feet long, on one end of which there is a large iron hoe. The uses of this instrument are various; with it they try the ground wherever it appears unsafe, before venturing on it, and, when

assured of its safety, walk forward steadying their footsteps with the staff. Should they, as often happens, even to the most experienced, sink in some quagmire, they immediately throw out the long pole armed with the hoe, which is always held uppermost for this purpose, and with it seizing hold of any object within their reach, are thereby enabled to draw themselves out; without the pole, however, their danger would be greater, for the more they struggled to extricate themselves from such places, the deeper they would sink; and even with it, they might perish, I am told, in some part, if there were nobody at hand to render them assistance. Finally, they make use of this pole to rake about the mud when searching for iron, copper, rope, and bones. They mostly exhibit great skill in discovering these things in unlikely places, and have a knowledge of the various sets of the tide, calculated to carry articles to particular points, almost equal to the dredgermen themselves. Although they cannot "pick up" as much now as they formerly did, they are still able to make what they call a fair living, and can afford to look down with a species of aristocratic contempt on the puny efforts of their less fortunate brethren the "mudlarks."

To enter the sewers and explore them to any considerable distance is considered, even by those acquainted with what is termed "working the shores," an adventure of no small risk. There are a variety of perils to be encountered in such places. The brick-work in many parts—especially in the old sewers—has become rotten through the continual action of the putrefying matter and moisture, and parts have fallen down and choked up the passage with heaps of rubbish; over these obstructions, nevertheless, the sewer-hunters have to scramble "in the best way they can." In such parts they are careful not to touch the brick-work over head, for the slightest tap might bring down an avalanche of old bricks and earth, and severely injure them, if not bury them in the rubbish. Since the construction of the new sewers, the old ones are in general abandoned by the "hunters;" but in many places the former channels cross and re-cross those recently constructed, and in the old sewers a person is very likely to lose his way. It is dangerous to venture far into any of the smaller sewers branching off from the main, for in this the "hunters" have to stoop low down in order to proceed; and, from the confined space, there are often accumulated in such places, large quantities of foul air, which, as one of them stated, will "cause instantious death." Moreover, far from there being any romance in the tales told of the rats, these vermin are really numerous and formidable in the sewers, and have been known, I am assured, to attack men when alone, and even sometimes when accompanied by others, with such fury that the people have escaped from them with difficulty. They are particularly ferocious and dangerous, if they be driven into some corner whence they cannot escape, when they will immediately fly at any one that opposes their progress. I received a similar account to this from one of the London flushermen. There are moreover, in some quarters, ditches or trenches which are filled as the water rushes up the sewers with the tide; in these ditches the water is retained by a sluice, which is shut down at high tide, and lifted again at low tide, when it rushes down the sewers with all the violence of a mountain torrent, sweeping everything before it. If the sewer-hunter be not close to some branch sewer, so that he can run into it, whenever the opening of these sluices takes place, he must inevitably perish. The trenches or water reservoirs for the cleansing of the sewers are chiefly on the south side of the river, and, as a proof of the great danger to which the sewer-hunters are exposed in such cases, it may be stated, that not very long ago, a sewer on the south side of the Thames was opened to be repaired; a long ladder reached to the bottom of the sewer, down which the bricklayer's labourer was going with a hod of bricks, when the rush of water from the sluice, struck the bottom of the ladder, and instantly swept away ladder, labourer, and all. The bricklayer fortunately was enjoying his "pint and pipe" at a neighbouring public-house. The labourer was found by my informant, a "shore-worker" near the mouth of the sewer quite dead, battered, and disfigured in a frightful manner. There was likewise great danger in former times from the rising of the tide in the sewers, so that it was necessary for the shore-men to have quitted them before the water had got any height within the entrance. At present, however, this is obviated in those sewers where the main is furnished with an iron door towards the river.

The shore-workers, when about to enter the sewers, provide themselves, in addition to the long hoe already described, with a canvas apron, which they tie round them, and a dark lantern similar to a policeman's; this they strap before them on their right breast, in such a manner that on removing the shade, the bull's-eye throws the light straight forward when they are in an erect position, and enables them to see everything in advance of them for some distance; but when they stoop, it throws the light directly under them, so that they can then distinctly see any object at their feet. The sewer-hunters usually go in gangs of three or four for the sake of company, and in order that they may be the better able to defend themselves from the rats. The old hands who have been often up (and every gang endeavours to include at least one experienced person), travel a long distance, not only through the main sewers, but also through many of the branches. Whenever the shore-men come near a street grating, they close their lanterns and watch their opportunity of gliding silently past unobserved, for otherwise a crowd might collect over head and intimate to the policeman on duty, that there were persons wandering in the sewers below. The shore-workers never take dogs with them, lest their barking when hunting the rats might excite attention. As the men go along they search the bottom of the sewer, raking away the mud with their hoe, and pick, from between the crevices of the brick-work, money, or anything else that may have lodged there. There

are in many parts of the sewers holes where the brick-work has been worn away, and in these holes clusters of articles are found, which have been washed into them from time to time, and perhaps been collecting there for years; such as pieces of iron, nails, various scraps of metal, coins of every description, all rusted into a mass like a rock, and weighing from a half hundred to two hundred weight altogether. These "conglomerates" of metal are too heavy for the men to take out of the sewers, so that if unable to break them up, they are compelled to leave them behind; and there are very many such masses, I am informed, lying in the sewers at this moment, of immense weight, and growing larger every day by continual additions. The shore-men find great quantities of money—of copper money especially; sometimes they dive their arm down to the elbow in the mud and filth and bring up shillings, sixpences, half-crowns, and occasionally half-sovereigns and sovereigns. They always find the coins standing edge uppermost between the bricks in the bottom, where the mortar has been worn away. The sewer-hunters occasionally find plate, such as spoons, ladles, silver-handled knives and forks, mugs and drinking cups, and now and then articles of jewellery; but even while thus "in luck" as they call it, they do not omit to fill the bags on their backs with the more cumbrous articles they meet with—such as metals of every description, rope and bones. There is always a great quantity of these things to be met with in the sewers, they being continually washed down from the cesspools and drains of the houses. When the sewer-hunters consider they have searched long enough, or when they have found as much as they can conveniently take away, the gang leave the sewers and, adjourning to the nearest of their homes, count out the money they have picked up, and proceed to dispose of the old metal, bones, rope, &c.; this done, they then, as they term it, "whack" the whole lot; that is, they divide it equally among all hands. At these divisions, I am assured, it frequently occurs that each member of the gang will realise from 30*s.* to 2*l.*—this at least *was* a frequent occurrence some few years ago. Of late, however, the shore-men are obliged to use far more caution, as the police, and especially those connected with the river, who are more on the alert, as well as many of the coal-merchants in the neighbourhood of the sewers, would give information if they saw any suspicious persons approaching them.

The principal localities in which the shore-hunters reside are in Mint-square, Mint-street, and Kent-street, in the Borough—Snow's-fields, Bermondsey—and that never-failing locality between the London Docks and Rosemary-lane which appears to be a concentration of all the misery of the kingdom. There were known to be a few years ago nearly 200 sewer-hunters, or "toshers," and, incredible as it may appear, I have satisfied myself that, taking one week with another, they could not be said to make much short of 2*l.* per week. Their probable gains, I was told, were about 6*s.* per day all the year round. At this rate the property recovered from the sewers of London would have amounted to no less than 20,000*l.* per annum, which would make the amount of property lost down the drains of each house amount to 1*s.* 4*d.* a year. The shore-hunters of the present day greatly complain of the recent restrictions, and inveigh in no measured terms against the constituted authorities. "They won't let us in to work the shores," say they, "'cause there's a little danger. They fears as how we'll get suffocated, at least they tells us so; but they don't care if we get starved! no, they doesn't mind nothink about that."

It is, however, more than suspected that these men find plenty of means to evade the vigilance of the sewer officials, and continue quietly to reap a considerable harvest, gathered whence it might otherwise have rotted in obscurity.

The sewer-hunters, strange as it may appear, are certainly smart fellows, and take decided precedence of all the other "finders" of London, whether by land or water, both on account of the greater amount of their earnings, and the skill and courage they manifest in the pursuit of their dangerous employment. But like all who make a living as it were by a game of chance, plodding, carefulness, and saving habits cannot be reckoned among their virtues; they are improvident, even to a proverb. With their gains, superior even to those of the better-paid artizans, and far beyond the amount received by many clerks, who have to maintain a "respectable appearance," the shore-men might, with but ordinary prudence, live well, have comfortable homes, and even be able to save sufficient to provide for themselves in their old age. Their practice, however, is directly the reverse. They no sooner make a "haul," as they say, than they adjourn to some low public-house in the neighbourhood, and seldom leave till empty pockets and hungry stomachs drive them forth to procure the means for a fresh debauch. It is principally on this account that, despite their large gains, they are to be found located in the most wretched quarter of the metropolis.

It might be supposed that the sewer-hunters (passing much of their time in the midst of the noisome vapours generated by the sewers, the odour of which, escaping upwards from the gratings in the streets, is dreaded and shunned by all as something pestilential) would exhibit in their pallid faces the unmistakable evidence of their unhealthy employment. But this is far from the fact. Strange to say, the sewer-hunters are strong, robust, and healthy men, generally florid in their complexion, while many of them know illness only by name. Some of the elder men, who head the gangs when exploring the sewers, are between 60 and 80 years of age, and have followed the employment during their whole lives. The men appear to have a fixed belief that the odour of the sewers contributes in a variety of ways to their general health; nevertheless, they admit that accidents occasionally occur from the air in some places being fully impregnated with mephitic gas.

I found one of these men, from whom I derived

much information, and who is really an active intelligent man, in a court off Rosemary-lane. Access is gained to this court through a dark narrow entrance, scarcely wider than a doorway, running beneath the first floor of one of the houses in the adjoining street. The court itself is about 50 yards long, and not more than three yards wide, surrounded by lofty wooden houses, with jutting abutments in many of the upper stories that almost exclude the light, and give them the appearance of being about to tumble down upon the heads of the intruders. This court is densely inhabited; every room has its own family, more or less in number; and in many of them, I am assured, there are two families residing, the better to enable the one to whom the room is let to pay the rent. At the time of my visit, which was in the evening, after the inmates had returned from their various employments, some quarrel had arisen among them. The court was so thronged with the friends of the contending individuals and spectators of the fight that I was obliged to stand at the entrance, unable to force my way through the dense multitude, while labourers and street-folk with shaggy heads, and women with dirty caps and fuzzy hair, thronged every window above, and peered down anxiously at the affray. There must have been some hundreds of people collected there, and yet all were inhabitants of this very court, for the noise of the quarrel had not yet reached the street. On wondering at the number, my informant, when the noise had ceased, explained the matter as follows: "You see, sir, there 's more than 30 houses in this here court, and there 's not less than eight rooms in every house; now there 's nine or ten people in some of the rooms, I knows, but just say four in every room, and calculate what that there comes to." I did, and found it, to my surprise, to be 960. "Well," continued my informant, chuckling and rubbing his hands in evident delight at the result, "you may as well just tack a couple a hundred on to the tail o' them for make-weight, as we 're not werry pertikler about a hundred or two one way or the other in these here places."

In this court, up three flights of narrow stairs that creaked and trembled at every footstep, and in an ill-furnished garret, dwelt the shore-worker —a man who, had he been careful, according to his own account at least, might have money in the bank and be the proprietor of the house in which he lived. The sewer-hunters, like the street-people, are all known by some peculiar nickname, derived chiefly from some personal characteristic. It would be a waste of time to inquire for them by their right names, even if you were acquainted with them, for none else would know them, and no intelligence concerning them could be obtained; while under the title of Lanky Bill, Long Tom, One-eyed George, Short-armed Jack, they are known to every one.

My informant, who is also dignified with a title, or as he calls it a "handle to his name," gave me the following account of himself: "I was born in Birmingham, but afore I recollects anythink, we came to London. The first thing I remembers is being down on the shore at Cuckold's P'int, when the tide was out and up to my knees in mud, and a gitting down deeper and deeper every minute till I was picked up by one of the shore-workers. I used to git down there every day, to look at the ships and boats a sailing up and down; I 'd niver be tired a looking at them at that time. At last father 'prenticed me to a blacksmith in Bermondsey, *and then I could'nt git down to the river when I liked, so I got to hate the forge and the fire, and blowing the bellows, and could'nt stand the confinement no how,—at last I cuts and runs.* After some time they gits me back agin, but I cuts agin. I was determined not to stand it. I wouldn't go home for fear I 'd be sent back, so I goes down to Cuckold's P'int and there I sits near half the day, when who should I see but the old un as had picked me up out of the mud when I was a sinking. I tells him all about it, and he takes me home along with hisself, and gits me a bag and an o, and takes me out next day, and shows me what to do, and shows me the dangerous places, and the places what are safe, and how to rake in the mud for rope, and bones, and iron, and that 's the way I comed to be a shore-worker. Lor' bless you, I 've worked Cuckold's P'int for more nor twenty year. I know places where you 'd go over head and ears in the mud, and jist alongside on 'em you may walk as safe as you can on this floor. But it don't do for a stranger to try it, he 'd wery soon git in, and it 's not so easy to git out agin, I can tell you. I stay'd with the old un a long time, and we used to git lots o' tin, specially when we 'd go to work the sewers. I liked that well enough. I could git into small places where the old un couldn't, and when I 'd got near the grating in the street, I 'd search about in the bottom of the sewer; I 'd put down my arm to my shoulder in the mud and bring up shillings and half-crowns, and lots of coppers, and plenty other things. I once found a silver jug as big as a quart pot, and often found spoons and knives and forks and every thing you can think of. Bless your heart the smells nothink; it 's a roughish smell at first, but nothink near so bad as you thinks, 'cause, you see, there 's sich lots o' water always a coming down the sewer, and the air gits in from the gratings, and that helps to sweeten it a bit. There 's some places, 'specially in the old sewers, where they say there 's foul air, and they tells me the foul air 'ill cause instantious death, but I niver met with anythink of the kind, and I think if there was sich a thing I should know somethink about it, for I 've worked the sewers, off and on, for twenty year. When we comes to a narrow-place as we don't know, we takes the candle out of the lantern and fastens it on the hend of the o, and then runs it up the sewer, and if the light stays in, we knows as there a'n't no danger. We used to go up the city sewer at Blackfriars-bridge, but that 's stopped up now; it 's boarded across inside. The city wouldn't let us up if they knew it, 'cause of the danger, they say, but they don't care if we hav'n't got nothink to eat nor a place to put our heads in, while there 's plenty of money

lying there and good for nobody. If you was caught up it and brought afore the Lord Mayor, he 'd give you fourteen days on it, as safe as the bellows, so a good many on us now is afraid to wenture in. We don't wenture as we used to, but still it 's done at times. There 's a many places as I knows on where the bricks has fallen down, and that there 's dangerous; it 's so delaberated that if you touches it with your head or with the bend of the o, it 'ill all come down atop o' you. I 've often seed as many as a hundred rats at once, and they 're woppers in the sewers, I can tell you; them there water rats, too, is far more ferociouser than any other rats, and they 'd think nothink of tackling a man, if they found they couldn't get away no how, but if they can why they runs by and gits out o' the road. I knows a chap as the rats tackled in the sewers; they bit him hawfully: you must ha' heard on it; it was him as the watermen went in arter when they heard him a-shouting as they was a rowin' by. Only for the watermen the rats would ha' done for him, safe enough. Do you recollect hearing on the man as was found in the sewers about twelve year ago?—oh you must—the rats eat every bit of him, and left nothink but his bones. I knowed him well, he was a riglar shore-worker.

"The rats is wery dangerous, that 's sartain, but we always goes three or four on us together, and the varmint 's too wide awake to tackle us then, for they know they 'd git off second best. You can go a long way in the sewers if you like; I don't know how far. I niver was at the end on them myself, for a cove can't stop in longer than six or seven hour, 'cause of the tide; you must be out before that 's up. There 's a many branches on ivery side, but we don't go into all; we go where we know, and where we 're always sure to find somethink. I know a place now where there 's more than two or three hundred weight of metal all rusted together, and plenty of money among it too; but it 's too heavy to carry it out, so it 'ill stop there I s'pose till the world comes to an end. I often brought out a piece of metal half a hundred in weight, and took it under the harch of the bridge, and broke it up with a large stone to pick out the money. I 've found sovereigns and half sovereigns over and over agin, and three on us has often cleared a couple of pound apiece in one day out of the sewers. But we no sooner got the money than the publican had it. I only wish I 'd back all the money I 've guv to the publican, and I wouldn't care how the wind blew for the rest of my life. I never thought about taking a hammer along with me into the sewer, no; I never thought I 'd want it. You can't go in every day, the tides don't answer, and they 're so pertikler now, far more pertikler than formerly; if you was known to touch the traps, you 'd git hauled up afore the beak. It 's done for all that, and though there *is* so many eyes about. The "Johnnys" on the water are always on the look out, and if they sees any on us about, we has to cut our lucky. We shore-workers sometimes does very well other ways. When we hears of a fire anywheres, we goes and watches where they shoots the rubbish, and then we goes and sifts it over, and washes it afterwards, then all the metal sinks to the bottom. The way we does it is this here: we takes a barrel cut in half, and fills it with water, and then we shovels in the siftings, and stirs 'em round and round and round with a stick; then we throws out that water and puts in some fresh, and stirs that there round agin; arter some time the water gets clear, and every thing heavy 's fell to the bottom, and then we sees what it is and picks it out. I 've made from a pound to thirty shilling a day, at that there work on lead alone. The time the Parliament Houses was burnt, the rubbish was shot in Hyde Park, and Long J— and I goes to work it, and while we were at it, we did'nt make less nor three pounds apiece a day; we found sovereigns and half sovereigns, and lots of silver half melted away, and jewellery, such as rings, and stones, and brooches; but we never got half paid for them. I found two sets of bracelets for a lady's arms, and took 'em to a jeweller, and he tried them jist where the "great" heat had melted the catch away, and found they was only metal double plated, or else he said as how he 'd give us thirty pounds for them; howsomever, we takes them down to a Jew in Petticoat-lane, who used to buy things of us, and he gives us 7*l.* 10*s.* for 'em. We found so many things, that at last Long J— and I got to quarrel about the "whacking;" there was cheatin' a goin' on; it wasn't all fair and above board as it ought to be, so we gits to fightin', and kicks up sich a jolly row, that they wouldn't let us work no more, and takes and buries the whole on the rubbish. There 's plenty o' things under the ground along with it now, if anybody could git at them. There was jist two loads o' rubbish shot at one time in Bishop Bonner's-fields, which I worked by myself, and what do you think I made out of that there?—why I made 3*l.* 5*s.* The rubbish was got out of a cellar, what hadn't been stirred for fifty year or more, so I thinks there ought to be somethink in it, and I keeps my eye on it, and watches where it 's shot; then I turns to work, and the first thing I gits hold on is a chain, which I takes to be copper; it was so dirty, but it turned out to be all solid goold, and I gets 1*l.* 5*s.* for it from the Jew; arter that I finds lots o' coppers, and silver money, and many things besides. *The reason I likes this sort of life is, 'cause I can sit down when I likes, and nobody can't order me about. When I 'm hard up, I knows as how I must work, and then I goes at it like sticks a breaking;* and tho' the times isn't as they was, I can go now and pick up my four or five bob a day, where another wouldn't know how to get a brass farden."

There is a strange tale in existence among the shore-workers, of a race of wild hogs inhabiting the sewers in the neighbourhood of Hampstead. The story runs, that a sow in young, by some accident got down the sewer through an opening, and, wandering away from the spot, littered and reared her offspring in the drain, feeding on the offal and garbage washed into it continually. Here, it is alleged, the breed multiplied exceedingly, and

have become almost as ferocious as they are numerous. This story, apocryphal as it seems, has nevertheless its believers, and it is ingeniously argued, that the reason why none of the subterranean animals have been able to make their way to the light of day is, that they could only do so by reaching the mouth of the sewer at the river-side, while, in order to arrive at that point, they must necessarily encounter the Fleet ditch, which runs towards the river with great rapidity, and as it is the obstinate nature of a pig to swim *against* the stream, the wild hogs of the sewers invariably work their way back to their original quarters, and are thus never to be seen. What seems strange in the matter is, that the inhabitants of Hampstead never have been known to see any of these animals pass beneath the gratings, nor to have been disturbed by their gruntings. The reader of course can believe as much of the story as he pleases, and it is right to inform him that the sewer-hunters themselves have never yet encountered any of the fabulous monsters of the Hampstead sewers.

Of the Mud-Larks.

There is another class who may be termed river-finders, although their occupation is connected only with the shore; they are commonly known by the name of "mud-larks," from being compelled, in order to obtain the articles they seek, to wade sometimes up to their middle through the mud left on the shore by the retiring tide. These poor creatures are certainly about the most deplorable in their appearance of any I have met with in the course of my inquiries. They may be seen of all ages, from mere childhood to positive decrepitude, crawling among the barges at the various wharfs along the river; it cannot be said that they are clad in rags, for they are scarcely half covered by the tattered indescribable things that serve them for clothing; their bodies are grimed with the foul soil of the river, and their torn garments stiffened up like boards with dirt of every possible description.

Among the mud-larks may be seen many old women, and it is indeed pitiable to behold them, especially during the winter, bent nearly double with age and infirmity, paddling and groping among the wet mud for small pieces of coal, chips of wood, or any sort of refuse washed up by the tide. These women always have with them an old basket or an old tin kettle, in which they put whatever they chance to find. It usually takes them a whole tide to fill this receptacle, but when filled, it is as much as the feeble old creatures are able to carry home.

The mud-larks generally live in some court or alley in the neighbourhood of the river, and, as the tide recedes, crowds of boys and little girls, some old men, and many old women, may be observed loitering about the various stairs, watching eagerly for the opportunity to commence their labours. When the tide is sufficiently low they scatter themselves along the shore, separating from each other, and soon disappear among the craft lying about in every direction. This is the case on both sides of the river, as high up as there is anything to be found, extending as far as Vauxhall-bridge, and as low down as Woolwich. The mud-larks themselves, however, know only those who reside near them, and whom they are accustomed to meet in their daily pursuits; indeed, with but few exceptions, these people are dull, and apparently stupid; this is observable particularly among the boys and girls, who, when engaged in searching the mud, hold but little converse one with another. The men and women may be passed and repassed, but they notice no one; they never speak, but with a stolid look of wretchedness they plash their way through the mire, their bodies bent down while they peer anxiously about, and occasionally stoop to pick up some paltry treasure that falls in their way.

The mud-larks collect whatever they happen to find, such as coals, bits of old-iron, rope, bones, and copper nails that drop from ships while lying or repairing along shore. Copper nails are the most valuable of all the articles they find, but these they seldom obtain, as they are always driven from the neighbourhood of a ship while being new-sheathed. Sometimes the younger and bolder mud-larks venture on sweeping some empty coal-barge, and one little fellow with whom I spoke, having been lately caught in the act of so doing, had to undergo for the offence seven days' imprisonment in the House of Correction: this, he says, he liked much better than mud-larking, for while he staid there he wore a coat and shoes and stockings, and though he had not over much to eat, he certainly was never afraid of going to bed without anything at all—as he often had to do when at liberty. He thought he would try it on again in the winter, he told me, saying, it would be so comfortable to have clothes and shoes and stockings then, and not be obliged to go into the cold wet mud of a morning.

The coals that the mud-larks find, they sell to the poor people of the neighbourhood at 1*d.* per pot, holding about 14 lbs. The iron and bones and rope and copper nails which they collect, they sell at the rag-shops. They dispose of the iron at 5 lbs. for 1*d.*, the bones at 3 lbs. a 1*d.*, rope a ½*d.* per lb. wet, and ¾*d.* per lb. dry, and copper nails at the rate of 4*d.* per lb. They occasionally pick up tools, such as saws and hammers; these they dispose of to the seamen for biscuit and meat, and sometimes sell them at the rag-shops for a few halfpence. In this manner they earn from 2½*d.* to 8*d.* per day, but rarely the latter sum; their average gains may be estimated at about 3*d.* per day. The boys, after leaving the river, sometimes scrape their trousers, and frequent the cab-stands, and try to earn a trifle by opening the cab-doors for those who enter them, or by holding gentlemen's horses. Some of them go, in the evening, to a ragged school, in the neighbourhood of which they live; more, as they say, because other boys go there, than from any desire to learn.

At one of the stairs in the neighbourhood of the pool, I collected about a dozen of these unfortunate children; there was not one of them

over twelve years of age, and many of them were but six. It would be almost impossible to describe the wretched group, so motley was their appearance, so extraordinary their dress, and so stolid and inexpressive their countenances. Some carried baskets, filled with the produce of their morning's work, and others old tin kettles with iron handles. Some, for want of these articles, had old hats filled with the bones and coals they had picked up; and others, more needy still, had actually taken the caps from their own heads, and filled them with what they had happened to find. The muddy slush was dripping from their clothes and utensils, and forming a puddle in which they stood. There did not appear to be among the whole group as many filthy cotton rags to their backs as, when stitched together, would have been sufficient to form the material of one shirt. There were the remnants of one or two jackets among them, but so begrimed and tattered that it would have been difficult to have determined either the original material or make of the garment. On questioning one, he said his father was a coal-backer; he had been dead eight years; the boy was nine years old. His mother was alive; she went out charing and washing when she could get any such work to do. She had 1s. a day when she could get employment, but that was not often; he remembered once to have had a pair of shoes, but it was a long time since. "It is very cold in winter," he said, "to stand in the mud without shoes," but he did not mind it in summer. He had been three years mud-larking, and supposed he should remain a mud-lark all his life. What else could he be? for there was nothing else that he knew *how* to do. Some days he earned 1*d*., and some days 4*d*.; he never earned 8*d*. in one day, that would have been a "jolly lot of money." He never found a saw or a hammer, he "only wished" he could, they would be glad to get hold of them at the dolly's. He had been one month at school before he went mud-larking. Some time ago he had gone to the ragged-school; but he no longer went there, for he forgot it. He could neither read nor write, and did not think he could learn if he tried "ever so much." He didn't know what religion his father and mother were, nor did know what religion meant. God was God, he said. He had heard he was good, but didn't know what good he was to him. He thought he was a Christian, but he didn't know what a Christian was. He had heard of Jesus Christ once, when he went to a Catholic chapel, but he never heard tell of who or what he was, and didn't "particular care" about knowing. His father and mother were born in Aberdeen, but he didn't know where Aberdeen was. London was England, and England, he said, was in London, but he couldn't tell in what part. He could not tell where he would go to when he died, and didn't believe any one could tell *that*. Prayers, he told me, were what people said to themselves at night. *He* never said any, and didn't know any; his mother sometimes used to speak to him about them, but he could never learn any. His mother didn't go to church or to chapel, because she had no clothes. All the money he got he gave to his mother, and she bought bread with it, and when they had no money they lived the best way they could.

Such was the amount of intelligence manifested by this unfortunate child.

Another was only seven years old. He stated that his father was a sailor who had been hurt on board ship, and been unable to go to sea for the last two years. He had two brothers and a sister, one of them older than himself; and his elder brother was a mud-lark like himself. The two had been mud-larking more than a year; they went because they saw other boys go, and knew that they got money for the things they found. They were often hungry, and glad to do anything to get something to eat. Their father was not able to earn anything, and their mother could get but little to do. They gave all the money they earned to their mother. They didn't gamble, and play at pitch and toss when they had got some money, but some of the big boys did on the Sunday, when they didn't go a mud-larking. He couldn't tell why they did nothing on a Sunday, "only they didn't;" though sometimes they looked about to see where the best place would be on the next day. He didn't go to the ragged school; he should like to know how to read a book, though he couldn't tell what good it would do him. He didn't like mud-larking, would be glad of something else, but didn't know anything else that he could do.

Another of the boys was the son of a dock labourer,—casually employed. He was between seven and eight years of age, and his sister, who was also a mud-lark, formed one of the group. The mother of these two was dead, and there were three children younger than themselves.

The rest of the histories may easily be imagined, for there was a painful uniformity in the stories of all the children: they were either the children of the very poor, who, by their own improvidence or some overwhelming calamity, had been reduced to the extremity of distress, or else they were orphans, and compelled from utter destitution to seek for the means of appeasing their hunger in the mud of the river. That the majority of this class are ignorant, and without even the rudiments of education, and that many of them from time to time are committed to prison for petty thefts, cannot be wondered at. Nor can it even excite our astonishment that, once within the walls of a prison, and finding how much more comfortable it is than their previous condition, they should return to it repeatedly. As for the females growing up under such circumstances, the worst may be anticipated of them; and in proof of this I have found, upon inquiry, that very many of the unfortunate creatures who swell the tide of prostitution in Ratcliff-highway, and other low neighbourhoods in the East of London, have originally been mud-larks; and only remained at that occupation till such time as they were capable of adopting the more easy and more lucrative life of the prostitute.

As to the numbers and earnings of the mud-

larks, the following calculations fall short of, rather than exceed, the truth. From Execution Dock to the lower part of Limehouse Hole, there are 14 stairs or landing-places, by which the mud-larks descend to the shore in order to pursue their employment. There are about as many on the opposite side of the water similarly frequented.

At King James' Stairs, in Wapping Wall, which is nearly a central position, from 40 to 50 mud-larks go down daily to the river; the mud-larks "using" the other stairs are not so numerous. If, therefore, we reckon the number of stairs on both sides of the river at 28, and the average number of mud-larks frequenting them at 10 each, we shall have a total of 280.' Each mud-lark, it has been shown, earns on an average 3*d.* a day, or 1*s.* 6*d.* per week; so that the annual earnings of each will be 3*l.* 18*s.*, or say 4*l.*, a year, and hence the gross earnings of the 280 will amount to rather more than 1000*l.* per annum.

But there are, in addition to the mud-larks employed in the neighbourhood of what may be called the pool, many others who work down the river at various places as far as Blackwall, on the one side, and at Deptford, Greenwich, and Woolwich, on the other. These frequent the neighbourhoods of the various "yards" along shore, where vessels are being built; and whence, at certain times, chips, small pieces of wood, bits of iron, and copper nails, are washed out into the river. There is but little doubt that this portion of the class earn much more than the mud-larks of the pool, seeing that they are especially convenient to the places where the iron vessels are constructed; so that the presumption is, that the number of mud-larks "at work" on the banks of the Thames (especially if we include those above bridge), and the value of the property extracted by them from the mud of the river, may be fairly estimated at double that which is stated above, or say 550 gaining 2000*l.* per annum.

As an illustration of the doctrines I have endeavoured to enforce throughout this publication, I cite the following history of one of the above class. It may serve to teach those who are still sceptical as to the degrading influence of circumstances upon the poor, that many of the humbler classes, if placed in the same easy position as ourselves, would become, perhaps, quite as "respectable" members of society.

The lad of whom I speak was discovered by me now nearly two years ago "mud-larking" on the banks of the river near the docks. He was a quick, intelligent little fellow, and had been at the business, he told me, about three years. He had taken to mud-larking, he said, because his clothes were too bad for him to look for anything better. He worked every day, with 20 or 30 boys, who might all be seen at day-break with their trowsers tucked up, groping about, and picking out the pieces of coal from the mud on the banks of the Thames. He went into the river up to his knees, and in searching the mud he often ran pieces of glass and long nails into his feet. When this was the case, he went home and dressed the wounds, but returned to the river-side directly, "for should the tide come up," he added, "without my having found something, why I must starve till next low tide." In the very cold weather he and his other shoeless companions used to stand in the hot water that ran down the river side from some of the steam-factories, to warm their frozen feet.

At first he found it difficult to keep his footing in the mud, and he had known many beginners fall in. He came to my house, at my request, the morning after my first meeting with him. It was the depth of winter, and the poor little fellow was nearly destitute of clothing. His trousers were worn away up to his knees, he had no shirt, and his legs and feet (which were bare) were covered with chilblains. On being questioned by me he gave the following account of his life:—

He was fourteen years old. He had two sisters, one fifteen and the other twelve years of age. His father had been dead nine years. The man had been a coal-whipper, and, from getting his work from one of the publican employers in those days, had become a confirmed drunkard. When he married he held a situation in a warehouse, where his wife managed the first year to save 4*l.* 10*s.* out of her husband's earnings; but from the day he took to coal-whipping she had never saved one halfpenny, indeed she and her children were often left to starve. The man (whilst in a state of intoxication) had fallen between two barges, and the injuries he received had been so severe that he had lingered in a helpless state for three years before his death. After her husband's decease the poor woman's neighbours subscribed 1*l.* 5*s.* for her; with this sum she opened a greengrocer's shop, and got on very well for five years.

When the boy was nine years old his mother sent him to the Red Lion school at Green-bank, near Old Gravel-lane, Ratcliffe-highway; she paid 1*d.* a week for his learning. He remained there for a year; then the potato-rot came, and his mother lost upon all she bought. About the same time two of her customers died 30*s.* in her debt; this loss, together with the potato-disease, completely ruined her, and the whole family had been in the greatest poverty from that period. Then she was obliged to take all her children from their school, that they might help to keep themselves as best they could. Her eldest girl sold fish in the streets, and the boy went to the river-side to "pick up" his living. The change, however, was so great that shortly afterwards the little fellow lay ill eighteen weeks with the ague. As soon as the boy recovered his mother and his two sisters were "taken bad" with a fever. The poor woman went into the "Great House,' and the children were taken to the Fever Hospital. When the mother returned home she was too weak to work, and all she had to depend on was what her boy brought from the river. They had nothing to eat and no money until the little fellow had been down to the shore and picked up some coals, selling them for a trifle. "And hard enough he had to work for what he got, poor boy," said his mother to me on a future

occasion, sobbing; "still he never complained, but was quite proud when he brought home enough for us to get a bit of meat with; and when he has sometimes seen me down-hearted, he has clung round my neck, and assured me that one day God would see us cared for if I would put my trust in Him." As soon as his mother was well enough she sold fruit in the streets, or went out washing when she could get a day's work.

The lad suffered much from the pieces of broken glass in the mud. Some little time before I met with him he had run a copper nail into his foot. This lamed him for three months, and his mother was obliged to carry him on her back every morning to the doctor. As soon, however, as he could "hobble" (to use his mother's own words) he went back to the river, and often returned (after many hours' hard work in the mud) with only a few pieces of coal, not enough to sell even to get them a bit of bread. One evening, as he was warming his feet in the water that ran from a steam factory, he heard some boys talking about the Ragged School in High-street, Wapping.

"They was saying what they used to learn there," added the boy. "They asked me to come along with them for it was great fun. They told me that all the boys used to be laughing and making game of the master. They said they used to put out the gas and chuck the slates all about. They told me, too, that there was a good fire there, so I went to have a warm and see what it was like. When I got there the master was very kind to me. They used to give us tea-parties, and to keep us quiet they used to show us the magic lantern. I soon got to like going there, and went every night for six months. There was about 40 or 50 boys in the school. The most of them was thieves, and they used to go thieving the coals out of barges along shore, and cutting the ropes off ships, and going and selling it at the rag-shops. They used to get ¾*d.* a lb. for the rope when dry, and ½*d.* when wet. Some used to steal pudding out of shops and hand it to those outside, and the last boy it was handed to would go off with it. They used to steal bacon and bread sometimes as well. About half of the boys at the school was thieves. Some had work to do at ironmongers, lead-factories, engineers, soap-boilers, and so on, and some had no work to do and was good boys still. After we came out of school at nine o'clock at night, some of the bad boys would go a thieving, perhaps half-a-dozen and from that to eight would go out in a gang together. There was one big boy of the name of C——; he was 18 years old, and is in prison now for stealing bacon; I think he is in the House of Correction. This C—— used to go out of school before any of us, and wait outside the door as the other boys came out. Then he would call the boys he wanted for his gangs on one side, and tell them where to go and steal. He used to look out in the daytime for shops where things could be 'prigged,' and at night he would tell the boys to go to them. He was called the captain of the gangs. He had about three gangs altogether with him, and there were from six to eight boys in each gang. The boys used to bring what they stole to C——, and he used to share it with them. I belonged to one of the gangs. There were six boys altogether in my gang; the biggest lad, that knowed all about the thieving, was the captain of the gang I was in, and C—— was captain over him and over all of us.

"There was two brothers of them; you seed them, sir, the night you first met me. The other boys, as was in my gang, was B—— B——, and B—— L——, and W—— B——, and a boy we used to call 'Tim;' these, with myself, used to make up one of the gangs, and we all of us used to go a thieving every night after school-hours. When the tide would be right up, and we had nothing to do along shore, we used to go thieving in the daytime as well. It was B—— B——, and B—— L——, as first put me up to go thieving; they took me with them, one night, up the lane [New Gravel-lane], and I see them take some bread out of a baker's, and they wasn't found out; and, after that, I used to go with them regular. Then I joined C——'s gang; and, after that, C—— came and told us that his gang could do better than ourn, and he asked us to join our gang to his'n, and we did so. Sometimes we used to make 3*s.* or 4*s.* a day; or about 6*d.* apiece. While waiting outside the school-doors, before they opened, we used to plan up where we would go thieving after school was over. I was taken up once for thieving coals myself, but I was let go again."

I was so much struck with the boy's truthfulness of manner, that I asked him, *would*, he really lead a different life, if he saw a means of so doing? He assured me he would, and begged me earnestly to try him. Upon his leaving me, 2*s.* were given him for his trouble. This small sum (I afterwards learned) kept the family for more than a fortnight. The girl laid it out in sprats (it being then winter-time); these she sold in the streets.

I mentioned the fact to a literary friend, who interested himself in the boy's welfare; and eventually succeeded in procuring him a situation at an eminent printer's. The subjoined letter will show how the lad conducted himself while there.

"Whitefriars, April 22, 1850.

"Messrs. Bradbury and Evans beg to say that the boy J. C. has conducted himself in a very satisfactory manner since he has been in their employment."

The same literary friend took the girl into his service. She is in a situation still, though not in the same family.

The boy now holds a good situation at one of the daily newspaper offices. So well has he behaved himself, that, a few weeks since, his wages were increased from 6*s.* to 9*s.* per week. His mother (owing to the boy's exertions) has now a little shop, and is doing well.

This simple story requires no comments, and is narrated here in the hope that it may teach many to know how often the poor boys reared in the gutter are thieves, merely because society forbids them being honest lads.

OF THE LONDON DUSTMEN, NIGHTMEN, SWEEPS, AND SCAVENGERS.

THESE men constitute a large body, and are a class who, all things considered, do their work silently and efficiently. Almost without the cognisance of the mass of the people, the refuse is removed from our streets and houses; and London, as if in the care of a tidy housewife, is *always* being cleaned. Great as are the faults and absurdities of many parts of our system of public cleansing, nevertheless, when compared with the state of things in any continental capital, the superiority of the metropolis of Great Britain is indisputable.

In all this matter there is little merit to be attributed to the workmen, except that they may be well drilled; for the majority of them are as much machines, apart from their animation, as are the cane and whalebone made to cleanse the chimney, or the clumsy-looking machine which, in its progress, is a vehicular scavenger, sweeping as it goes.

These public cleansers are to be thus classified:—

1. Dustmen, or those who empty and remove the collection of ashes, bones, vegetables, &c., deposited in the dust-bins, or other refuse receptacles throughout the metropolis.

2. Nightmen, or those who remove the contents of the cesspools.

3. Sweeps, or those who remove the soot from the chimneys.

4. Scavengers, or those who remove the dirt from the streets, roads, and markets.

Let me, however, before proceeding further with the subject, lay before the reader the following important return as to the extent and contents of this prodigious city: for this document I am indebted to the Commissioners of Police, gentlemen from whom I have derived the most valuable information since the commencement of my inquiries, and to whose courtesy and consideration I am anxious to acknowledge my many obligations.

RETURN SHOWING THE EXTENT, POPULATION, AND POLICE FORCE IN THE METROPOLITAN POLICE DISTRICT AND THE CITY OF LONDON IN SEPTEMBER, 1850.

	Metropolitan Police District *.			City of London ‡.	Grand Total.
	Inner District †.	Outer District.	Total.		
Area . . . . . (in square miles)	91	609½	700½	1¾	702¼
Parishes	82	136	218	97	315
Streets, Roads, &c., (length of, in miles)	1,700	1,936	3,636	50	3,686
Number of Houses inhabited . .	289,912	59,995	349,907	15,613	365,520
„ „ uninhabited .	11,868	1,437	13,305	387	13,692
„ „ being built .	4,634	1,097	5,731	23	5,754
Population	1,986,629	350,331	2,336,960	125,000	2,461,960
Police Force	4,844	660	5,504	568	6,072

18*th September*, 1850.

* The Metropolitan Police District comprises a circle, the radius of which is 15 miles from Charing Cross; the extreme boundary on the N. includes the parish of Cheshunt and South Mimms; on the S., Epsom; on the E., Dagenham and Crayford; and on the W., Uxbridge and Staines.

† The inner district includes the parish of St. John, Hampstead, on the N.; Tooting and Streatham on the S.; Ealing and Brentford on the W.; and Greenwich on the E.

The Registrar General's District is equal, or nearly so, to the Inner Metropolitan Police District.

‡ The City of London is bounded on the S. by the River, on the E. by Whitechapel, on the W. by Chancery Lane, and N. by Finsbury.

The total here given can hardly be considered as the dimensions of the metropolis; though, where the capital begins and ends, it is difficult to say. If, however, London be regarded as concentring within the Inner Police District, then, adding the extent and contents of that district to those of the City, as above detailed, we have the subjoined statement as to the dimensions and inhabitants of the

Metropolis Proper.

Area	92¾ square miles.
Parishes . . .	179
Length of street, roads, &c.	1750 miles.
Number of inhabited houses . .	305,525
Ditto uninhabited . .	12,255
Ditto being built . .	4657
Population . .	2,111,629
Police force . . .	5412

But if the extent of even this "inner district" be so vast as almost to overpower the mind with its magnitude—if its population be greater than that of the entire kingdom of Hanover, and almost equal to that of the republic of Switzerland—if its houses be so numerous that placed side by side they would form one continuous line of dwellings from its centre to Moscow—if its streets and roads be nearly equal in length to one quarter of the diameter of the earth itself,—what a task must the cleansing of such a bricken wilderness be, and yet, assuredly, though it be by far the greatest, it is at the same time by far the cleanest city in the world.

The removal of the refuse of a large town is, perhaps, one of the most important of social operations. Not only is it necessary for the well-being of a vast aggregation of people that the

ordure should be removed from both within and around their dwellings as soon as it is generated, but nature, ever working in a circle and reproducing in the same ratio as she destroys, has made this same ordure not only the cause of present disease when allowed to remain within the city, but the means of future health and sustenance when removed to the fields.

In a leading article in the *Morning Chronicle*, written about two years since, I said—

"That man gets his bones from the rocks and his muscles from the atmosphere, is beyond all doubt. The iron in his blood and the lime in his teeth were originally in the soil. But these could not be in his body unless they had previously formed part of his food. And yet we can neither live on air nor on stones. We cannot grow fat upon lime, and iron is positively indigestible in our stomachs. It is by means of the vegetable creation alone that we are enabled to convert the mineral into flesh and blood. The only apparent use of herbs and plants is to change the inorganic earth, air, and water, into organic substances fitted for the nutrition of animals. The little lichen, which, by means of the oxalic acid that it secretes, decomposes the rocks to which it clings, and fits their lime for 'assimilation' with higher organisms, is, as it were, but the primitive bone-maker of the world. By what subtle transmutation inorganic nature is changed into organic, and dead inert matter quickened with life, is far beyond us even to conjecture. Suffice it that an express apparatus is required for the process—a special mechanism to convert the '*crust* of the earth,' as it is called, into food for man and beast.

"Now, in Nature everything moves in a circle—perpetually changing, and yet ever returning to the point whence it started. Our bodies are continually decomposing and recomposing—indeed, the very process of breathing is but one of decomposition. As animals live on vegetables, even so is the refuse of the animal the vegetable's food. The carbonic acid which comes from our lungs, and which is poison for us to inhale, is not only the vital air of plants, but positively their nutriment. With the same wondrous economy that marks all creation, it has been ordained that what is unfitted for the support of the superior organisms, is of all substances the best adapted to give strength and vigour to the inferior. That which we excrete as pollution to our system, they secrete as nourishment to theirs. Plants are not only Nature's scavengers but Nature's purifiers. They remove the filth from the earth, as well as disinfect the atmosphere, and fit it to be breathed by a higher order of beings. Without the vegetable creation the animal could neither have been nor be. Plants not only fitted the earth originally for the residence of man and the brute, but to this day they continue to render it habitable to us. For this end their nature has been made the very antithesis to ours. The process by which we live is the process by which they are destroyed. That which supports respiration in us produces putrefaction in them. What our lungs throw off, their lungs absorb—what our bodies reject, their roots imbibe.

"Hence, in order that the balance of waste and supply should be maintained—that the principle of universal compensation should be kept up, and that what is rejected by us should go to the sustenance of plants, Nature has given us several instinctive motives to remove our refuse from us. She has not only constituted that which we egest the most loathsome of all things to our senses and imagination, but she has rendered its effluvium highly pernicious to our health—sulphuretted hydrogen being at once the most deleterious and offensive of all gases. Consequently, as in all other cases where the great law of Nature has to be enforced by special sanctions, a double motive has been given us to do that which it is necessary for us to do, and thus it has been made not only advantageous to us to remove our refuse to the fields, but positively detrimental to our health, and disgusting to our senses, to keep it in the neighbourhood of our houses.

"In every well-regulated State, therefore, an effective and rapid means for carrying off the ordure of the people to a locality where it may be fruitful instead of destructive, becomes a most important consideration. Both the health and the wealth of the nation depend upon it. If to make two blades of wheat grow where one grew before is to confer a benefit on the world, surely to remove that which will enable us at once to do this, and to purify the very air which we breathe, as well as the water which we drink, must be a still greater boon to society. It is, in fact, to give the community not only a double amount of food, but a double amount of health to enjoy it. We are now beginning to understand this. Up to the present time we have only thought of removing our refuse—the idea of using it never entered our minds. It was not until science taught us the dependence of one order of creation upon another, that we began to see that what appeared worse than worthless to us was Nature's capital—*wealth set aside for future production*."

In connection with this part of the subject, viz., the use of human refuse, I would here draw attention to those erroneous notions, as to the multiplication of the people, which teach us to look upon the increase of the population beyond certain limits as the greatest possible evil that can befall a community. Population, it is said, multiplies itself in a geometrical ratio, whereas the produce of the land is increased only in arithmetical proportion; that is to say, while the people are augmented after the rate of—

2 4 8 16 32 64

the quantity of food for them can be extended only in the following degrees:—

2 4 6 8 10 12

The cause of this is said to be that, after a certain stage in the cultivation of the soil, the increase of the produce from land is not in proportion to the increase of labour devoted to it; that is to say, doubling the labour does not double the crop; and hence it is asserted that the human race increasing at a quicker rate than the food, insufficient sustenance must be the necessary lot

of a portion of the people in every densely-populated community.

That men of intelligence and education should have been persuaded by so plausible a doctrine at the time of its first promulgation may be readily conceived, for then the notions concerning organic chemistry were vague in the extreme, and the great universal law of Waste and Supply remained to be fully developed; but that men pretending to the least scientific knowledge should in these days be found advocating the Population Theory is only another of the many proofs of the indisposition of even the strongest minds to abandon their pet prejudices. Assuredly Malthus and Liebig are incompatible. If the new notions as to the chemistry of vegetation be true, then must the old notions as to population be utterly unfounded. If what we excrete plants secrete—if what we exhale they inspire—if our refuse is their food—then it follows that to increase the population is to increase the quantity of manure, while to increase the manure is to augment the food of plants, and consequently the plants themselves. If the plants nourish us, we at least nourish them. It seems never to have occurred to the economists that plants themselves required sustenance, and consequently they never troubled themselves to inquire whence they derived the elements of their growth. Had they done this they would never have even expected that a double quantity of mere labour upon the soil should have doubled the produce; but they would rather have seen that it was utterly impossible for the produce to be doubled without the food in the soil being doubled likewise; that is to say, they would have perceived that plants could not, whatever the labour exerted upon their cultivation, extract the elements of their organization from the earth and air, unless those elements previously existed in the land and atmosphere in which they grew, and that such elements, moreover, could not exist there without some organic being to egest them.

This doctrine of the universal Compensation extending throughout the material world, and more especially through the animal and vegetable kingdom, is, perhaps, one of the grandest and most consoling that science has yet revealed to us, making each mutually dependent on the other, and so contributing each to the other's support. Moreover it is the more comforting, as enabling us almost to demonstrate the falsity of a creed which is opposed to every generous impulse of our nature, and which is utterly irreconcilable with the attributes of the Creator.

"Thanks to organic chemistry," I said two years ago in the *Morning Chronicle*, "we are beginning to wake up. Science has taught us that the removal of the ordure of towns to the fields is a question that concerns not only our health, but, what is a far more important consideration with us, our breeches pockets. What we, in our ignorance, had mistaken for refuse of the vilest kind, we have now learned to regard as being, with reference to its fertilizing virtues, 'a precious ore, running in rich veins beneath the surface of our streets.' Whereas, if allowed to reek and seethe in cesspools within scent of our very hearths, or to pollute the water that we use to quench our thirst and cook our food, it becomes, like all wealth badly applied, converted into 'poison:' as Romeo says of gold to the apothecary—

> 'Doing more murders in this loathsome world
> Than those poor compounds which thou mayst not sell.'

"Formerly, in our eagerness to get rid of the pollution, we had literally not looked beyond our noses: hence our only care was to carry off the nuisance from the immediate vicinity of our own residences. It was no matter to us what became of it, so long as it did not taint the atmosphere around us. This the very instincts of our nature had made objectionable to us; so we laid down just as many drains and sewers as would carry our night-soil to the nearest stream; and thus, instead of poisoning the air that we breathed, we poisoned the water that we drank. Then, as the town extended—for cities, like mosaic work, are put together piecemeal—street being dovetailed to street, like county to county in our children's geographical puzzles—each new row of houses tailed on its drains to those of its neighbours, without any inquiry being made as to whether they were on the same level or not. The consequence of this is, that the sewers in many parts of our metropolis are subject to an ebb and flood like their central stream, so that the pollution which they remove at low-water, they regularly bring back at high-water to the very doors of the houses whence they carried it.

"According to the average of the returns, from 1841 to 1846, we are paying two millions every year for guano, bone-dust, and other foreign fertilizers of our soil. In 1845, we employed no fewer than 683 ships to bring home 220,000 tons of animal manure from Ichaboe alone; and yet we are every day emptying into the Thames 115,000 tons of a substance which has been proved to be possessed of even greater fertilizing powers. With 200 tons of the sewage that we are wont to regard as refuse, applied to the irrigation of one acre of meadow land, seven crops, we are told, have been produced in the year, each of them worth from 6*l.* to 7*l.*; so that, considering the produce to have been doubled by these means, we have an increase of upwards of 20*l.* per acre per annum effected by the application of that refuse to the surface of our fields. This return is at the rate of 10*l.* for every 100 tons of sewage; and, since the total amount of refuse discharged into the Thames from the sewers of the metropolis is, in round numbers, 40,000,000 tons per annum, it follows that, according to such estimate, we are positively wasting 4,000,000*l.* of money every year; or, rather, *it costs us that amount to poison the waters about us.* Or, granting that the fertilizing power of the metropolitan refuse is—as it is said to be—as great for arable as for pasture-lands, then for every 200 tons of manure that we now cast away, we might have an increase of at least 20 bushels of corn per acre. Consequently the entire 40,000,000 tons of sewage, if

applied to fatten the land instead of to poison the water, would, at such a rate of increase, swell our produce to the extent of 4,000,000 bushels of wheat per annum. Calculating then that each of these bushels would yield 16 quartern loaves, it would follow that we fling into the Thames no less than 246,000,000 lbs. of bread every year; or, still worse, by pouring into the river that which, if spread upon our fields, would enable thousands to live, we convert the elements of life and health into the germs of disease and death, changing into slow but certain poisons that which, in the subtle transmutation of organic nature, would become acres of life-sustaining grain." I shall have more to say subsequently on this waste and its consequences.

These considerations show how vastly important it is that in the best of all possible ways we should *collect*, *remove*, and *use* the scavengery and excrementitious matter of our streets and houses.

Now the removal of the refuse of London is no slight task, consisting, as it does, of the cleansing of 1750 miles of streets and roads; of collecting the dust from 300,000 dust-bins; of emptying (according to the returns of the Board of Health) the same number of cesspools, and sweeping near upon 3,000,000 chimneys.

A task so vast it might naturally be imagined would give employment to a number of hands, and yet, if we trusted the returns of the Occupation Abstract of 1841, the whole of these stupendous operations are performed by a limited number of individuals.

RETURN OF THE NUMBER OF SWEEPS, DUSTMEN, AND NIGHTMEN IN THE METROPOLIS, ACCORDING TO THE CENSUS OF 1841.

	Total.	Males.		Females.	
		20 years and upwards.	Under 20.	20 years and upwards.	Under 20.
Chimney Sweepers	1033	619	370	44	
Scavengers and Nightmen . . .	254	227	10	17	

I am informed by persons in the trade that the "females" here mentioned as chimney-sweepers, and scavengers, and nightmen, must be such widows or daughters of sweeps and nightmen as have succeeded to their businesses, for that no women *work* at such trades; excepting, perhaps, in the management and care of the soot, in assisting to empty and fill the bags. Many females, however, are employed in sifting dust, but the calling of the dustman and dustwoman is not so much as noticed in the population returns.

According to the occupation abstract of the previous decennial period, the number of males of 20 years and upwards (for none others were mentioned) pursuing the same callings in the metropolis in 1831, were as follows:—

Soot and chimney-sweepers . . . 421
Nightmen and scavengers . . . 130

Hence the increase in the adult male operatives belonging to these trades, between 1831 and 1841, was, for Chimney-sweeps, 198; and Scavengers and Nightmen, 97.

But these returns are preposterously incorrect. In the first place it was not until 1842 that the parliamentary enactment prohibiting the further employment of climbing-boys for the purpose of sweeping chimneys came into operation. At that time the number of inhabited houses in the metropolis was in round numbers 250,000, and calculating these to have contained only eight rooms each, there would have been at the least 2,000,000 chimneys to sweep. Now, according to the government returns above cited—the London climbing-boys (for the masters did not and could not climb) in 1841 numbered only 370; at which rate there would have been but one boy to no less than 5400 chimneys! Pursuing the same mode of testing the validity of the "official" statements, we find, as the nightmen generally work in gangs of four, that each of the 63, or say 64, gangs comprised in the census returns, would have had 4000 cesspools to empty of their contents; while, working both as scavengers and nightmen (for, according to the census, they were the *only* individuals following those occupations in London), they would after their nocturnal labours have had about 27 miles of streets and roads to cleanse—a feat which would certainly have thrown the scavengering prowess of Hercules into the shade.

Under the respective heads of the dustmen, nightmen, sweeps, and scavengers, I shall give an account of the numbers, &c., employed, and a resumé of the whole. It will be sufficient here to mention that my investigations lead to the conclusion that, of men working as dustmen (a portion of whom are employed as nightmen and scavengers) there are at present about 1800 in the metropolis. The census of 1841, as I have pointed out, mentions no dustman whatever!

But I have so often had instances of the defects of this national numbering of the people that I have long since ceased to place much faith in its returns connected with the humbler grades of labour. The costermongers, for example, I estimate at about 10,000, whereas the government reports, as has been before mentioned, ignore the very existence of such a class of people, and make the entire hawkers, hucksters, and pedlars of the metropolis to amount to no more than 2045. Again, the London "coal labourers, heavers, and porters" are said, in the census of 1841, to be

Original from HARVARD UNIVERSITY

only 1700 in number; I find, however, that there are no less than 1800 "registered" coal-whippers, and as many coal porters; so that I am in no way inclined to give great credence to the "official enumerations." The difficulties which beset the perfection of such a document are almost insuperable, and I have already heard of returns for the forthcoming document, made by ignorant people as to their occupations, which already go far to nullify the facts in connection with the employment of the ignorant and profligate classes of the metropolis.

Before quitting this part of the subject, viz., the extent of surface, the length of streets, and the number of houses throughout the metropolis requiring to be continually cleansed of their refuse, as well as the number of people as continually engaged in so cleansing them, let me here append the last returns of the Registrar General, copied from the census of 1851, as to the dimensions and contents of the metropolis according to that functionary, so that they may be compared with those of the metropolitan police before given.

In Weale's "*London Exhibited*," which is by far the most comprehensive description of the metropolis that I have seen, it is stated that it is "only possible to adopt a general idea of the giant city," as its precise boundaries and extent cannot be defined. On the north of the Thames, we are told, London extends to Edmonton and Finchley; on the west it stretches to Acton and Hammersmith; on the east it reaches Leyton and Ham; while on the south of the Thames the metropolis is said to embrace Wandsworth, Streatham, Lewisham, Woolwich, and Plumstead. "To each of these points," says Mr. Weale, but upon what authority he does not inform us, "continuous streets of houses reach; but the solid mass of houses lies within narrow bounds—with these several long arms extending from it. The greatest length of street, from east to west," he adds, "is about fourteen miles, and from north to south about thirteen miles. The solid mass is about seven miles by four miles, so that the ground covered with houses is not less than 20 square miles."

Mr. McCulloch, in his "*London in* 1850-51," has a passage to the same effect. He says, "The continued and rapid increase of buildings renders it difficult to ascertain the extent of the metropolis at any particular period. If we include in it those parts only that present a solid mass of houses, its length from east to west may be taken at six miles, and its breadth from north to south at about three miles and a half. There is, however, a nearly continuous line of houses from Blackwall to Chelsea, a distance of about seven miles, and from Walworth to Holloway, of four and a half miles. The extent of surface covered by buildings is estimated at about sixteen square miles, or above 10,000 acres, so that M. Say, the celebrated French economist, did not really indulge in hyperbole when he said, '*Londres n'est plus une ville: c'est une province couverte de maisons!*' (London is no longer a town: it is a province covered with houses)."

The Government authorities, however, appear to have very different notions from either of the above gentlemen as to the extent of the metropolis.

The limits of London, as at present laid down by the Registrar General, include 176 parishes, besides several precincts, liberties, and extra-parochial places, comprising altogether about 115 square miles. According to the old bills of mortality, London formerly included only 148 parishes, which were located as follows:—

Parishes within the walls of the city	97
Parishes without the walls	17
Parishes in the city and liberties of Westminster	10
Out parishes in Middlesex and Surrey	24
	148

The parishes which have been annexed to the above at different periods since the commencement of the present century are:—

Parishes added by the late Mr. Rickman (see Pop. Abstracts, 1801-31) (including Chelsea, Kensington, Paddington, St. Marylebone, and St. Pancras)	5
Parishes added by the Registrar General, 1838 (including Hammersmith, Fulham, Stoke Newington, Stratford-le-Bow, Bromley, Camberwell, Deptford, Greenwich, and Woolwich)	10
Parishes added by the Registrar General in 1844 (including Clapham, Battersea, Wandsworth, Putney, Lower Tooting, and Streatham)	6
Parishes added by the Registrar General in 1846 (comprising Hampstead, Charlton, Plumstead, Eltham, Lee, Kidbroke, and Lewisham)	7
Total number of parishes in the metropolis, as defined by the Registrar General	176

The extent of London, according to the limits assigned to it at the several periods above mentioned, was—

	Stat. Acres.	Sq. miles.
London within the old bills of mortality, from 1726	21,080	32
London, within the limits adopted by the late Mr. Rickman, 1801-31	29,850	46
London, within the limits adopted by the Registrar General, 1838-43	44,850	70
London, within the limits adopted by the Registrar General, 1844-46	55,650	87
London, within the limits adopted by the Registrar General in 1847-51	74,070	115

"London," observes Mr. Weale, "has now swallowed up many cities, towns, villages, and separate jurisdictions. The four commonwealths, or kingdoms, of the Middle Saxons, East Saxons, the South Rick, and the Kentwaras, once ruled over

Original from HARVARD UNIVERSITY

its surface. It now embraces the episcopal cities of London and Westminster, the towns of Woolwich, Deptford, and Wandsworth, the watering places of Hampstead, Highgate, Islington, Acton, and Kilburn, the fishing town of Barking, the once secluded and ancient villages of Ham, Hornsey, Sydenham, Lee, Kensington, Fulham, Lambeth, Clapham, Paddington, Hackney, Chelsea, Stoke Newington, Newington Butts, Plumstead, and many others.

The 176 parishes now included by the Registrar General within the boundaries of the metropolis, are arranged by him into five districts, of which the areas, population, and number of inhabited houses were on the 31st of March, 1851, as undermentioned:—

TABLE SHOWING THE AREA, NUMBER OF INHABITED HOUSES, AND POPULATION OF THE DIFFERENT PARTS OF THE METROPOLIS, 1841–51.

Divisions of Metropolis.	Statute Acres.	Population.		Inhabited Houses.	
		1841.	1851.	1841.	1851.

In order to be able to compare the average density of the population in the various parts of London, I have made a calculation as to the number of persons and houses to the acre, as well as the number of inhabitants to each house. I have also computed the annual rate of increase of the population from 1841–51, in the several localities here mentioned, and append the result. It will be seen that, while what are popularly known as the suburbs have increased, both in houses and population, at a considerable rate, some of the more central parts of London, on the contrary, have decreased not only in the number of people, but in the number of dwellings as well. This has been the case in St. Martin's-in-the-Fields, St. James's, Westminster, St. Giles's, and the City of London.

TABLE SHOWING THE INCREASE OF THE POPULATION AND INHABITED HOUSES, AS WELL AS THE RATES OF THE NUMBER OF PEOPLE AND HOUSES TO EACH ACRE, AND THE NUMBER OF PERSONS TO EACH HOUSE IN THE DIFFERENT PARTS OF THE METROPOLIS IN 1841–51.

	Yearly Increase of Population per annum, from 1841–51.	Yearly Increase of Inhabited Houses, from 1841–51.	Number of People to the Acre, 1851.	Number of Inhabited Houses to the Acre, 1851.	Number of Persons to each House, 1851.

By the above table we perceive that St. Martin's-in-the-Fields, St. James's, Westminster, St. Giles's, the Strand, and the City have all decreased both in population and houses since 1841. The population has diminished most of all in St. James's, and the houses the most in the City. The suburban districts, however, such as Chelsea, Marylebone, St. Pancras, Islington, Hackney, Shoreditch, Bethnal-green, Stepney, Poplar, Bermondsey, Newington, Lambeth, Wandsworth, Camberwell, Greenwich, and Lewisham, have all increased greatly within the last ten years, both in dwellings and people. The greatest increase of the population, as well as houses, has been in Kensington, where the yearly addition has been 4500 people, and 630 houses.

The more densely-populated districts are, St. James's, Westminster, St. Giles's, the Strand, Holborn, Clerkenwell, St. Luke, Whitechapel, and St. George's-in-the-East, in all of which places there are upwards of 200 people to the acre, while in East and West London, in which the population is the most dense of all, the number of people exceeds 300 to the acre. The least densely populated districts are Hampstead, Wandsworth, and Lewisham, where the people are not more than six, and as few as two to the acre.

The districts in which there are the greatest number of houses to a given space, are St. James's, Westminster, the Strand, Holborn, Clerkenwell, St. Luke's, Shoreditch, and St. George's-in-the-East, in all of which localities there are upwards of 20 dwellings to each acre of ground, while in East and West London, which is the most closely built over of all, the number of houses to each acre are as many as 32. Hampstead and Lewisham appear to be the most open districts; for there the houses are not more than eight and three to every ten acres of ground.

The localities in which the houses are the most crowded with inmates are the Strand and St. Giles's, where there are more than eleven people to each house, and St. Martin's-in-the-Fields, and St. James's, Westminster, and Holborn, where each house has on an average ten inmates, while in Lewisham and Wandsworth the houses are the least crowded, for there we find only five people to every house.

Now, comparing this return with that of the metropolitan police, we have the following results as to the extent and contents of the Metropolis Proper:—

	According to Registrar General.	According to Metropolitan Police.
Area (in statute acres)	74,070	58,880
Parishes	176	179
Number of inhabited houses	307,722	305,525
Population	2,361,640	2,111,629

Hence it will be seen that both the extent and contents of these two returns differ most materially.

1st. The superficies of the Registrar General's metropolis is very nearly 13 square miles, or 15,190 statute acres, greater than the metropolis of the police commissioners.

2nd. The number of inhabited houses is 2197 more in the one than in the other.

3rd. The population of London, according to the Registrar General's limits, is 250,011, or a quarter of a million, more than it is according to the limits of the metropolitan police.

It were much to be desired that some more definite and scientific mode, not only of limiting, but of dividing the metropolis, were to be adopted. At present there are, perhaps, as many different metropolises, so to speak, and as many different modes of apportioning the several parts of the whole into districts, as there are public bodies whose operations are specially confined to the capital. The Registrar General has, as we have seen, one metropolis divided into western, northern, central, eastern, and southern districts. The metropolitan police commissioners have another metropolis apportioned into its A divisions, B divisions, and so forth; and the Post Office has a third metropolis parcelled out in a totally different manner; while the London City Mission, the Scripture Readers, the Ragged Schools, and the many other similar metropolitan institutions, all seem to delight in creating a distinct metropolis for themselves, thus tending to make the statistical "confusion worse confounded."

Of the Dustmen of London.

Dust and rubbish accumulate in houses from a variety of causes, but principally from the residuum of fires, the white ash and cinders, or small fragments of unconsumed coke, giving rise to by far the greater quantity. Some notion of the vast amount of this refuse annually produced in London may be formed from the fact that the consumption of coal in the metropolis is, according to the official returns, 3,500,000 tons per annum, which is at the rate of a little more than 11 tons per house; the poorer families, it is true, do not burn more than 2 tons in the course of the year, but then many such families reside in the same house, and hence the average will appear in no way excessive. Now the ashes and cinders arising from this enormous consumption of coal would, it is evident, if allowed to lie scattered about in such a place as London, render, ere long, not only the back streets, but even the important thoroughfares, filthy and impassable. Upon the Officers of the various parishes, therefore, has devolved the duty of seeing that the refuse of the fuel consumed throughout London is removed almost as fast as produced; this they do by entering into an agreement for the clearance of the "dust-bins" of the parishioners as often as required, with some person who possesses all necessary appliances for the purpose—such as horses, carts, baskets, and shovels, together with a plot of waste ground whereon to deposit the refuse. The persons with whom this agreement is made are called "dust-contractors," and are generally men of considerable wealth.

The collection of "dust," is now, more properly speaking, the removal of it. The collection of an

Original from HARVARD UNIVERSITY

article implies the voluntary seeking after it, and this the dustmen can hardly be said to do; for though they parade the streets shouting for the dust as they go, they do so rather to fulfil a certain duty they have undertaken to perform than in any expectation of profit to be derived from the sale of the article.

Formerly the custom was otherwise; but then, as will be seen hereafter, the residuum of the London fuel was far more valuable. Not many years ago it was the practice for the various master dustmen to send in their tenders to the vestry, on a certain day appointed for the purpose, offering to pay a considerable sum yearly to the parish authorities for liberty to collect the dust from the several houses. The sum formerly paid to the parish of Shadwell, for instance, though not a very extensive one, amounted to between 400*l.* or 500*l.* per annum; but then there was an immense demand for the article, and the contractors were unable to furnish a sufficient supply from London; ships were frequently freighted with it from other parts, especially from Newcastle and the northern ports, and at that time it formed an article of considerable international commerce—the price being from 15*s.* to 1*l.* per chaldron. Of late years, however, the demand has fallen off greatly, while the supply has been progressively increasing, owing to the extension of the metropolis, so that the Contractors have not only declined paying anything for liberty to collect it, but now stipulate to receive a certain sum for the removal of it. It need hardly be stated that the parishes always employ the man who requires the least money for the performance of what has now become a matter of duty rather than an object of desire. Some idea may be formed of the change which has taken place in this business, from the fact, that the aforesaid parish of Shadwell, which formerly received the sum of 450*l.* per annum for liberty to collect the dust, now pays the Contractor the sum of 240*l.* per annum for its removal.

The Court of Sewers of the City of London, in 1846, through the advice of Mr. Cochrane, the president of the National Philanthropic Association, were able to obtain from the contractors the sum of 5000*l.* for liberty to clear away the dirt from the streets and the dust from the bins and houses in that district. The year following, however, the contractors entered into a combination, and came to a resolution not to bid so high for the privilege; the result was, that they obtained their contracts at an expense of 2200*l.* By acting on the same principle in the year after, they not only offered no premium whatever for the contract, but the City Commissioners of Sewers were obliged to pay them the sum of 300*l.* for removing the refuse, and at present the amount paid by the City is as much as 4900*l.*! This is divided among four great contractors, and would, if equally apportioned, give them 1250*l.* each.

I subjoin a list of the names of the principal contractors and the parishes for which they are engaged:—

DISTRICTS CONTRACTED FOR.	NAMES OF CONTRACTORS.
Four divisions of the City.	Redding. Rook. J. Sinnott. J. Gould.
Finsbury square	J. Gould.
St. Luke's	H. Dodd.
Shoreditch	Ditto
Norton Folgate	J. Gould.
Bethnal-green	E. Newman.
Holborn	Pratt and Sewell.
Hatton-garden	Ditto.
Islington	Stroud, Brickmaker.
St. Martin's	Wm. Sinnott, Junior.
St. Mary-le-Strand	J. Gore.
St. Sepulchre	Ditto.
Savoy	Ditto.
St. Clement Danes	Rook.
St. James's, Clerkenwell	H. Dodd.
St. John's, ditto	J. Gould.
St. Margaret's, Westminster	W. Hearne.
St. John's, ditto	Stapleton and Holdsworth.
Lambeth	W. Hearne.
Chelsea	C. Humphries.
St. Marylebone	J. Gore.

Rolls (Liberty of the)	Pratt and Sewell.
Edward-square, Kensington	C. Humphries.

All the metropolitan parishes now pay the contractors various amounts for the removal of the dust, and I am credibly informed that there is a system of underletting and jobbing in the dust contracts extensively carried on. The contractor for a certain parish is often a different person from the master doing the work, and who is unknown in the contract. Occasionally the work would appear to be subdivided and underlet a second time.

The parish of St. Pancras is split into no less than 21 districts, each district having a separate and independent "Board," who are generally at war with each other, and make separate contracts for their several divisions. This is also the case in other large parishes, and these and other considerations confirm me in the conclusion that of large and small

dust-contractors, job-masters, and middle-men, of one kind or the other, throughout the metropolis, there cannot be less than the number I have stated—90. With the exception of Bermondsey, there are no parishes who remove their own dust.

It is difficult to arrive at any absolute statement as to the gross amount paid by the different parishes for the removal of the entire dust of the metropolis. From Shadwell the contractor, as we have seen, receives 250*l.*; from the city the four contractors receive as much as 5000*l.*; but there are many small parishes in London which do not pay above a tithe of the last-mentioned sum. Let us, therefore, assume, that one with another, the several metropolitan parishes pay 200*l.* a year each to the dust contractor. According to the returns before given, there are 176 parishes in London. Hence, the gross amount paid for the removal of the entire dust of the metropolis will be between 30,000*l.* and 40,000*l.* per annum.

The removal of the dust throughout the metropolis, is, therefore, carried on by a number of persons called Contractors, who undertake, as has been stated, for a certain sum, to cart away the refuse from the houses as frequently as the inhabitants desire it. To ascertain the precise numbers of these contractors is a task of much greater difficulty than might at first be conceived.

The London Post Office Directory gives the following number of tradesmen connected with the removal of refuse from the houses and streets of the metropolis.

Dustmen	9
Scavengers	10
Nightmen	14
Sweeps	32

But these numbers are obviously incomplete, for even a cursory passenger through London must have noticed a greater number of names upon the various dust carts to be met with in the streets than are here set down.

A dust-contractor, who has been in the business upwards of 20 years, stated that, from his knowledge of the trade, he should suppose that at present there might be about 80 or 90 contractors in the metropolis. Now, according to the returns before given, there are within the limits of the Metropolitan Police District 176 parishes, and comparing this with my informant's statement, that many persons contract for more than one parish (of which, indeed, he himself is an instance), there remains but little reason to doubt the correctness of his supposition—that there are, in all, between 80 or 90 dust-contractors, large and small, connected with the metropolis. Assuming the aggregate number to be 88, there would be one contractor to every two parishes.

These dust-contractors are likewise the contractors for the cleansing of the streets, except where that duty is performed by the Street-Orderlies; they are also the persons who undertake the emptying of the cesspools in their neighbourhood; the latter operation, however, is effected by an arrangement between themselves and the landlords of the premises, and forms no part of their parochial contracts. At the office of the Street Orderlies in Leicester Square, they have knowledge of only 30 contractors connected with the metropolis; but this is evidently defective, and refers to the "large masters" alone; leaving out of all consideration, as it does, the host of small contractors scattered up and down the metropolis, who are able to employ only two or three carts and six or seven men each; many of such small contractors being merely master sweeps who have managed to "get on a little in the world," and who are now able to contract, "in a small way," for the removal of dust, street-sweepings, and night-soil. Moreover, many of even the "great contractors" being unwilling to venture upon an outlay of capital for carts, horses, &c., when their contract is only for a year, and may pass at the end of that time into the hands of any one who may underbid them—many such, I repeat, are in the habit of underletting a portion of their contract to others possessing the necessary appliances, or of entering into partnership with them. The latter is the case in the parish of Shadwell, where a person having carts and horses shares the profits with the original contractor. The agreement made on such occasions is, of course, a secret, though the practice is by no means uncommon; indeed, there is so much secrecy maintained concerning all matters connected with this business, that the inquiry is beset with every possible difficulty. The gentleman who communicated to me the amount paid by the parish of Shadwell, and who informed me, moreover, that parishes in his neighbourhood paid twice and three times more than Shadwell did, hinted to me the difficulties I should experience at the commencement of my inquiry, and I have certainly found his opinion correct to the letter. I have ascertained that in one yard intimidation was resorted to, and the men were threatened with instant dismissal if they gave me any information but such as was calculated to mislead.

I soon discovered, indeed, that it was impossible to place any reliance on what the contractors said; and here I may repeat that the indisputable result of my inquiries has been to meet with far more deception and equivocation from employers generally than from the employed; working men have little or no motive for mis-stating their wages; they know well that the ordinary rates of remuneration for their labour are easily ascertainable from other members of the trade, and seldom or never object to produce accounts of their earnings, whenever they have been in the habit of keeping such things. With employers, however, the case is far different; to seek to ascertain from them the profits of their trade is to meet with evasion and prevarication at every turn; they seem to feel that their gains are dishonestly large, and hence resort to every means to prevent them being made public. That I have met with many honourable exceptions to this rule, I most cheerfully acknowledge; but that the *majority* of tradesmen are neither so frank, communicative, or truthful, as the men in their employ, the whole of my investigations go to prove. I have already, in the *Morning Chronicle*, recorded the character of my interviews with an eminent Jew slop-tailor, an

Digitized by Google Original from HARVARD UNIVERSITY

army clothier, and an enterprising free-trade staymaker (a gentleman who subscribed his 100 guineas to the League), and I must in candour confess that now, after two years' experience, I have found the industrious poor a thousand-fold more veracious than the trading rich.

With respect to the amount of business done by these contractors, or gross quantity of dust collected by them in the course of the year, it would appear that each employs, on an average, about 20 men, which makes the number of men employed as dustmen through the streets of London amount to 1800. This, as has been previously stated, is grossly at variance with the number given in the Census of 1841, which computes the dustmen in the metropolis at only 254. But, as I said before, I have long ceased to place confidence in the government returns on such subjects. According to the above estimate of 254, and deducting from this number the 88 master-dustmen, there would be only 166 labouring men to empty the 300,000 dust-bins of London, and as these men always work in couples, it follows that every two dustmen would have to remove the refuse from about 3600 houses; so that assuming each bin to require emptying once every six weeks they would have to cart away the dust from 2400 houses every month, or 600 every week, which is at the rate of 100 a day! and as each dust-bin contains about half a load, it would follow that at this rate each cart would have to collect 50 loads of dust daily, whereas 5 loads is the average day's work.

Computing the London dust-contractors at 90, and the inhabited houses at 300,000, it follows that each contractor would have 3333 houses to remove the refuse from. Now it has been calculated that the ashes and cinders alone from each house average about three loads per annum, so that each contractor would have, in round numbers, 10,000 loads of dust to remove in the course of the year. I find, from inquiries, that every two dustmen carry to the yard about five loads a day, or about 1500 loads in the course of the year, so that at this rate, there must be between six and seven carts, and twelve and fourteen collectors employed by each master. But this is exclusive of the men employed in the yards. In one yard that I visited there were fourteen people busily employed. Six of these were women, who were occupied in sifting, and they were attended by three men who shovelled the dust into their sieves, and the foreman, who was hard at work loosening and dragging down the dust from the heap, ready for the "fillers-in." Besides these there were two carts and four men engaged in conveying the sifted dust to the barges alongside the wharf. At a larger dust-yard, that formerly stood on the banks of the Regent's-canal, I am informed that there were sometimes as many as 127 people at work. It is but a small yard, indeed, which has not 30 to 40 labourers connected with it. The lesser dust-yards have generally from four to eight sifters, and six or seven carts. There must, therefore, be employed in even a small yard twelve collectors or cartmen, six sifters, and three fillers-in, besides the foreman or forewoman, making altogether 22 persons; so that, computing the contractors at 90, and allowing 20 men to be employed by each, there would be 1800 men thus occupied in the metropolis, which appears to be very near the truth.

One who has been all his life connected with the business estimated that there must be about ten dustmen to each metropolitan parish, large and small. In Marylebone he believed there were eighteen dust-carts, with two men to each, out every day; in some small parishes, however, two men are sufficient. There would be more men employed, he said, but some masters contracted for two or three parishes, and so "kept the same men going," working them hard, and enlarging their regular rounds. Calculating, then, that ten men are employed to each of the 176 metropolitan parishes, we have 1760 dustmen in London. The suburban parishes, my informant told me, were as well "dustmaned" as any he knew; for the residents in such parts were more particular about their dust than in busier places.

It is curious to observe how closely the number of men engaged in the collection of the "dust" from the coals burnt in London agrees, according to the above estimate, with the number of men engaged in delivering the coals to be burnt. The coal-whippers, who "discharge the colliers," are about 1800, and the coal-porters, who carry the coals from the barges to the merchants' wagons, are about the same in number. The amount of residuum from coal after burning cannot, of course, be equal either in bulk or weight to the original substance; but considering that the collection of the dust is a much slower operation than the delivery of the coals, the difference is easily accounted for.

We may arrive, approximately, at the quantity of dust annually produced in London, in the following manner:—

The consumption of coal in London, per annum, is about 3,500,000 tons, exclusive of what is brought to the metropolis per rail. Coals are made up of the following component parts, viz. (1) the inorganic and fixed elements; that is to say, the ashes, or the bones, as it were, of the fossil trees, which cannot be burnt; (2) coke, or the residuary carbon, after being deprived of the volatile matter; (3) the volatile matter itself given off during combustion in the form of flame and smoke.

The relative proportions of these materials in the various kinds of coals are as follows.—

	Carbon, per cent.	Volatile, per cent.	Ashes, per cent.
Cannel or gas coals.	40 to 60	60 to 40	10
Newcastle or "house" coals.	57	37	5
Lancashire and Yorkshire coals.	50 to 60	35 to 40	4
South Welsh or "steam" coals.	81 to 85	11 to 15	3
Anthracite or "stone" coals.	80 to 95	None	a little.

In the metropolis the Newcastle coal is chiefly

Digitized by Google
Original from HARVARD UNIVERSITY

used, and this, we perceive, yields five per cent. ashes and about 57 per cent. carbon. But a considerable part of the carbon is converted into carbonic acid during combustion; if, therefore, we assume that two-thirds of the carbon are thus consumed, and that the remaining third remains behind in the form of cinder, we shall have about 25 per cent. of "dust" from every ton of coal. On inquiry of those who have had long experience in this matter, I find that a ton of coal may be fairly said on an average to yield about one-fourth its weight in dust; hence the gross amount of "dust" annually produced in London would be 900,000 tons, or about three tons per house per annum.

It is impossible to obtain any definite statistics on this part of the subject. Not one in every ten of the contractors keeps any account of the amount that comes into the "yard." An intelligent and communicative gentleman whom I consulted on this matter, could give me no information on this subject that was in any way satisfactory. I have, however, endeavoured to check the preceding estimate in the following manner. There are in London upwards of 300,000 inhabited houses, and each house furnishes a certain quota of dust to the general stock. I have ascertained that an average-sized house will produce, in the course of a year, about three cart-loads of dust, while each cart holds about 40 bushels (baskets),—what the dustmen call a chaldron. There are, of course, many houses in the metropolis which furnish three and four times this amount of dust, but against these may be placed the vast preponderance of small and poor houses in London and the suburbs, where there is not one quarter of the quantity produced, owing to the small amount of fuel consumed. Estimating, then, the average annual quantity of dust from each house at three loads, or chaldrons, and the houses at 300,000, it follows that the gross quantity collected throughout the metropolis will be about 900,000 chaldrons per annum.

The next part of the subject is—what becomes of this vast quantity of dust—to what use it is applied.

The dust thus collected is used for two purposes, (1) as a manure for land of a peculiar quality; and (2) for making bricks. The fine portion of the house-dust called "soil," and separated from the "brieze," or coarser portion, by sifting, is found to be peculiarly fitted for what is called breaking up a marshy heathy soil at its first cultivation, owing not only to the dry nature of the dust, but to its possessing in an eminent degree a highly separating quality, almost, if not quite, equal to sand. In former years the demand for this finer dust was very great, and barges were continually in the river waiting their turn to be loaded with it for some distant part of the country. At that time the contractors were unable to supply the demand, and easily got 1*l.* per chaldron for as much as they could furnish, and then, as I have stated, many ships were in the habit of bringing cargoes of it from the North, and of realizing a good profit on the transaction. Of late years, however—and particularly, I am told, since the repeal of the corn-laws—this branch of the business has dwindled to nothing. The contractors say that the farmers do not cultivate their land now as they used; it will not pay them, and instead, therefore, of bringing fresh land into tillage, and especially such as requires this sort of manure, they are laying down that which they previously had in cultivation, and turning it into pasture grounds. It is principally on this account, say the contractors, that we cannot sell the dust we collect so well or so readily as formerly. There are, however, some cargoes of the dust still taken, particularly to the lowlands in the neighbourhood of Barking, and such other places in the vicinity of the metropolis as are enabled to realize a greater profit, by growing for the London markets. Nevertheless, the contractors are obliged now to dispose of the dust at 2*s.* 6*d.* per chaldron, and sometimes less.

The finer dust is also used to mix with the clay for making bricks, and barge-loads are continually shipped off for this purpose. The fine ashes are added to the clay in the proportion of one-fifth ashes to four-fifths clay, or 60 chaldrons to 240 cubic yards, which is sufficient to make 100,000 bricks (where much sand is mixed with the clay a smaller proportion of ashes may be used). This quantity requires also the addition of about 15 chaldrons, or, if mild, of about 12 chaldrons of "brieze," to aid the burning. The ashes are made to mix with the clay by collecting it into a sort of reservoir fitted up for the purpose; water in great quantities is let in upon it, and it is then stirred till it resembles a fine thin paste, in which state the dust easily mingles with every part of it. In this condition it is left till the water either soaks into the earth, or goes off by evaporation, when the bricks are moulded in the usual manner, the dust forming a component part of them.

The ashes, or cindered matter, which are thus dispersed throughout the substance of the clay, become, in the process of burning, gradually ignited and consumed. But the "brieze" (from the French *briser*, to break or crush), that is to say, the coarser portion of the coal ash, is likewise used in the burning of the bricks. The small spaces left among the lowest courses of the bricks in the kiln, or "clamp," are filled with "brieze," and a thick layer of the same material is spread on the top of the kilns, when full. Frequently the "brieze" is mixed with small coals, and after having been burnt the ashes are collected, and then mixed with the clay to form new bricks. The highest price at present given for "brieze" is 3*s.* per ton.

The price of the dust used by the brickmakers has likewise been reduced; this the contractors account for by saying that there are fewer brick-fields than formerly near London, as they have been nearly all built over. They assert, that while the amount of dust and cinders has increased proportionately to the increase of the houses, the demand for the article has decreased in a like ratio; and that, moreover, the greater portion

Generated at University of Pennsylvania on 2022-01-19 21:04 GMT / https://hdl.handle.net/2027/hvd.hwx4x9

Original from HARVARD UNIVERSITY

of the bricks now used in London for the new buildings come from other quarters. Such dust, however, as the contractors sell to the brick-makers, they in general undertake, for a certain sum, to cart to the brick-fields, though it often happens that the brick-makers' carts coming into town with their loads of bricks to new buildings, call on their return at the dust-yards, and carry thence a load of dust or cinders back, and so save the price of cartage.

But during the operation of sifting the dust, many things are found which are useless for either manure or brick-making, such as oyster shells, old bricks, old boots and shoes, old tin kettles, old rags and bones, &c. These are used for various purposes.

The bricks, &c., are sold for sinking beneath foundations, where a thick layer of concrete is spread over them. Many old bricks, too, are used in making new roads, especially where the land is low and marshy. The old tin is sold to trunk-makers to form the japanned fastenings for the corners of their boxes, as well as to other persons, who re-manufacture it into a variety of articles. The old shoes are sold to the London shoemakers, who use them as stuffing between the in-sole and the outer one; but by far the greater quantity is sold to the manufacturers of Prussian blue, that substance being formed out of refuse animal matter. The rags and bones are of course disposed of at the usual places—the marine-store shops.

A dust-heap, therefore, may be briefly said to be composed of the following things, which are severally applied to the following uses:—

1. "Soil," or fine dust, sold to brickmakers for making bricks, and to farmers for manure, especially for clover.

2. "Brieze," or cinders, sold to brickmakers, for burning bricks.

3. Rags, bones, and old metal, sold to marine-store dealers.

4. Old tin and iron vessels, sold to trunk-makers, for "clamps," &c.

5. Old bricks and oyster shells, sold to builders, for sinking foundations, and forming roads.

6. Old boots and shoes, sold to Prussian-blue manufacturers.

7. Money and jewellery, kept, or sold to Jews.

The dust-yards, or places where the dust is collected and sifted, are generally situated in the suburbs, and they may be found all round London, sometimes occupying open spaces adjoining back streets and lanes, and surrounded by the low mean houses of the poor; frequently, however, they cover a large extent of ground in the fields, and there the dust is piled up to a great height in a conical heap, and having much the appearance of a volcanic mountain. The reason why the dust-heaps are confined principally to the suburbs is, that more space is to be found in the outskirts than in a thickly-peopled and central locality. Moreover, the fear of indictments for nuisance has had considerable influence in the matter, for it was not unusual for the yards in former times, to be located within the boundaries of the city. They are now, however, scattered round London, and always placed as near as possible to the river, or to some canal communicating therewith. In St. George's, Shadwell, Ratcliffe, Limehouse, Poplar, and Blackwall, on the north side of the Thames, and in Redriffe, Bermondsey, and Rotherhithe, on the south, they are to be found near the Thames. The object of this is, that by far the greater quantity of the soil or ashes is conveyed in sailing-barges, holding from 70 to 100 tons each, to Feversham, Sittingbourne, and other places in Kent, which are the great brick-making manufactories for London. These barges come up invariably loaded with bricks, and take home in return a cargo of soil. Other dust-yards are situated contiguous to the Regent's and the Surrey canal; and for the same reason as above stated—for the convenience of water carriage. Moreover, adjoining the Limehouse cut, which is a branch of the Lea River, other dust-yards may be found; and again travelling to the opposite end of the metropolis, we discover them not only at Paddington on the banks of the canal, but at Maiden-lane in a similar position. Some time since there was an immense dust-heap in the neighbourhood of Gray's-inn-lane, which sold for 20,000*l.*; but that was in the days when 15*s.* and 1*l.* per chaldron could easily be procured for the dust. According to the present rate, not a tithe of that amount could have been realized upon it.

A visit to any of the large metropolitan dust-yards is far from uninteresting. Near the centre of the yard rises the highest heap, composed of what is called the "soil," or finer portion of the dust used for manure. Around this heap are numerous lesser heaps, consisting of the mixed dust and rubbish carted in and shot down previous to sifting. Among these heaps are many women and old men with sieves made of iron, all busily engaged in separating the "brieze" from the "soil." There is likewise another large heap in some other part of the yard, composed of the cinders or "brieze" waiting to be shipped off to the brickfields. The whole yard seems alive, some sifting and others shovelling the sifted soil on to the heap, while every now and then the dust-carts return to discharge their loads, and proceed again on their rounds for a fresh supply. Cocks and hens keep up a continual scratching and cackling among the heaps, and numerous pigs seem to find great delight in rooting incessantly about after the garbage and offal collected from the houses and markets.

In a dust-yard lately visited the sifters formed a curious sight; they were almost up to their middle in dust, ranged in a semicircle in front of that part of the heap which was being "worked;" each had before her a small mound of soil which had fallen through her sieve and formed a sort of embankment, behind which she stood. The appearance of the entire group at their work was most peculiar. Their coarse dirty cotton gowns were tucked up behind them, their arms were bared above their elbows, their black bonnets crushed and battered like

those of fish-women; over their gowns they wore a strong leathern apron, extending from their necks to the extremities of their petticoats, while over this, again, was another leathern apron, shorter, thickly padded, and fastened by a stout string or strap round the waist. In the process of their work they pushed the sieve from them and drew it back again with apparent violence, striking it against the outer leathern apron with such force that it produced each time a hollow sound, like a blow on the tenor drum. All the women present were middle aged, with the exception of one who was very old—68 years of age she told me—and had been at the business from a girl. She was the daughter of a dustman, the wife, or woman of a dustman, and the mother of several young dustmen—sons and grandsons—all at work at the dust-yards at the east end of the metropolis.

We now come to speak of the labourers engaged in collecting, sifting, or shipping off the dust of the metropolis.

The dustmen, scavengers, and nightmen are, to a certain extent, the same people. The contractors generally agree with the various parishes to remove both the dust from the houses and the mud from the streets, and the men in their employ being indiscriminately engaged in these two diverse occupations, collecting the dust to-day, and often cleansing the streets on the morrow, are designated either dustmen or scavengers, according to their particular avocation at the moment. The case is somewhat different, however, with respect to the nightmen. There is no such thing as a contract with the parish for removing the nightsoil. This is done by private agreement with the landlord of the premises whence the soil has to be removed. When a cesspool requires emptying, the occupying tenant communicates with the landlord, who makes an arrangement with a dust-contractor or sweep-nightman for this purpose. This operation is totally distinct from the regular or daily labour of the dust contractors' men, who receive extra pay for it; sometimes one set go out at night and sometimes another, according either to the selection of the master or the inclination of the men. There are, however, some dustmen who have never been at work as nightmen, and could not be induced to do so, from an invincible antipathy to the employment; still, such instances are few, for the men generally go whenever they can, and occasionally engage in nightwork for employers unconnected with their masters. It is calculated that there are some hundreds of men employed nightly in the removal of the nightsoil of the metropolis during the summer and autumn, and as these men have often to work at dust-collecting or cleansing the streets on the following day, it is evident that the same persons cannot be thus employed every night; accordingly the ordinary practice is for the dustmen to "take it in turns," thus allowing each set to be employed every third night, and to have two nights' rest in the interim.

The men, therefore, who collect the dust on one day may be cleaning the streets on the next, especially during wet weather, and engaged at night, perhaps, twice during the week, in removing nightsoil; so that it is difficult to arrive at any precise notion as to the number of persons engaged in any one of these branches *per se*.

But these labourers not only work indiscriminately at the collection of dust, the cleansing of the streets, or the removal of nightsoil, but they are employed almost as indiscriminately at the various branches of the dust business; with this qualification, however, that few men apply themselves continuously to any one branch of the business. The labourers employed in a dust-yard may be divided into two classes: those paid by the contractor; and those paid by the foreman or forewoman of the dust-heap, commonly called hill-man or hill-woman.

They are as follows:—

I. LABOURERS PAID BY THE CONTRACTORS, OR,
1. *Yard foreman*, or superintendent. This duty is often performed by the master, especially in small contracts.
2. *Carters* or *dust-collectors*. These are called "fillers" and "carriers," from the practice of one of the men who go out with the cart filling the basket, and the other carrying it on his shoulder to the vehicle.
