PREFACE.

THE present volume is the first of an intended series, which it is hoped will form, when complete, a cyclopædia of the industry, the want, and the vice of the great Metropolis.

It is believed that the book is curious for many reasons :

It surely may be considered curious as being the first attempt to publish the history of a people, from the lips of the people themselves—giving a literal description of their labour, their earnings, their trials, and their sufferings, in their own "unvarnished" language; and to pourtray the condition of their homes and their families by personal observation of the places, and direct communion with the individuals.

It may be considered curious also as being the first commission of inquiry into the state of the people, undertaken by a private individual, and the first "blue book" ever published in twopenny numbers.

It is curious, moreover, as supplying information concerning a large body of persons, of whom the public had less knowledge than of the most distant tribes of the earth—the government population returns not even numbering them among the inhabitants of the kingdom ; and as adducing facts so extraordinary, that the traveller in the undiscovered country of the poor must, like Bruce, until his stories are corroborated by after investigators, be content to lie under the imputation of telling such tales, as travellers are generally supposed to delight in.

Be the faults of the present volume what they may, assuredly they are rather short-comings than exaggerations, for in every instance the author and his coadjutors have sought to understate, and most assuredly never to exceed the truth. For the omissions, the author would merely remind the reader of the entire novelty of the task—there being no other similar work in the language by which to guide or check his inquiries. When the following leaves are turned over, and the two or three pages of information derived from books contrasted with the hundreds of pages of facts obtained by positive observation and investigation, surely some allowance will be made for the details which may still be left for others to supply. Within the last two years some thousands of the humbler classes of society must have been seen and visited with the especial view of noticing their condition and learning their histories ; and it is but right that the truthfulness of the poor generally should be made known ; for though checks have been usually adopted, the people have been mostly found to be astonishingly correct in their statements,—so much so indeed, that the attempts at deception are certainly the exceptions rather than the rule. Those persons who, from an ignorance of the simplicity of the honest poor, might be inclined to think otherwise, have, in order

to be convinced of the justice of the above remarks, only to consult the details given in the present volume, and to perceive the extraordinary agreement in the statements of all the vast number of individuals who have been seen at different times, and who cannot possibly have been supposed to have been acting in concert.

The larger statistics, such as those of the quantities of fish and fruit, &c., sold in London, have been collected from tradesmen connected with the several markets, or from the wholesale merchants belonging to the trade specified—gentlemen to whose courtesy and co-operation I am indebted for much valuable information, and whose names, were I at liberty to publish them, would be an indisputable guarantee for the facts advanced. The other statistics have been obtained in the same manner—the best authorities having been invariably consulted on the subject treated of.

It is right that I should make special mention of the assistance I have received in the compilation of the present volume from Mr. HENRY WOOD and Mr. RICHARD KNIGHT (late of the City Mission), gentlemen who have been engaged with me from nearly the commencement of my inquiries, and to whose hearty co-operation both myself and the public are indebted for a large increase of knowledge. Mr. Wood, indeed, has contributed so large a proportion of the contents of the present volume that he may fairly be considered as one of its authors.

The subject of the Street-Folk will still require another volume, in order to complete it in that comprehensive manner in which I am desirous of executing the modern history of this and every other portion of the people. There still remain —the *Street-Buyers*, the *Street-Finders*, the *Street-Performers*, the *Street-Artizans*, and the *Street-Labourers*, to be done, among the several classes of street-people; and the *Street Jews*, the *Street Italians and Foreigners*, and the *Street Mechanics*, to be treated of as varieties of the order. The present volume refers more particularly to the *Street-Sellers*, and includes special accounts of the *Costermongers* and the *Patterers* (the two broadly-marked varieties of street tradesmen), the *Street Irish*, the *Female Street-Sellers*, and the *Children Street-Sellers* of the metropolis.

My earnest hope is that the book may serve to give the rich a more intimate knowledge of the sufferings, and the frequent heroism under those sufferings, of the poor—that it may teach those who are beyond temptation to look with charity on the frailties of their less fortunate brethren—and cause those who are in "high places," and those of whom much is expected, to bestir themselves to improve the condition of a class of people whose misery, ignorance, and vice, amidst all the immense wealth and great knowledge of "the first city in the world," is, to say the very least, a national disgrace to us.

LONDON LABOUR

AND

THE LONDON POOR.

THE STREET-FOLK.

Of Wandering Tribes in General.

Of the thousand millions of human beings that are said to constitute the population of the entire globe, there are—socially, morally, and perhaps even physically considered—but two distinct and broadly marked races, viz., the wanderers and the settlers—the vagabond and the citizen—the nomadic and the civilized tribes. Between these two extremes, however, ethnologists recognize a mediate variety, partaking of the attributes of both. There is not only the race of hunters and manufacturers—those who live by shooting and fishing, and those who live by producing—but, say they, there are also the herdsmen, or those who live by tending and feeding, what they consume.

Each of these classes has its peculiar and distinctive physical as well as moral characteristics. "There are in mankind," says Dr. Pritchard, "three principal varieties in the form of the head and other physical characters. Among the rudest tribes of men—the hunters and savage inhabitants of forests, dependent for their supply of food on the accidental produce of the soil and the chase—a form of head is prevalent which is mostly distinguished by the term "*prognathous*," indicating a prolongation or extension forward of the jaws. A second shape of the head belongs principally to such races as wander with their herds and flocks over vast plains; these nations have broad lozenge-shaped faces (owing to the great development of the cheek bones), and pyramidal skulls. The most civilized races, on the other hand—those who live by the arts of cultivated life,—have a shape of the head which differs from both of those above mentioned. The characteristic form of the skull among these nations may be termed oval or elliptical."

These three forms of head, however, clearly admit of being reduced to two broadly-marked varieties, according as the bones of the face or those of the skull are more highly developed. A greater relative development of the jaws and cheek bones, says the author of the "Natural History of Man," indicates a more ample extension of the organs subservient to sensation and the animal faculties. Such a configuration is adapted to the wandering tribes; whereas, the greater relative development of the bones of the skull—indicating as it does a greater expansion of the brain, and consequently of the intellectual faculties—is especially adapted to the civilized races or settlers, who depend mainly on their knowledge of the powers and properties of things for the necessaries and comforts of life.

Moreover it would appear, that not only are all races divisible into wanderers and settlers, but that each civilized or settled tribe has generally some wandering horde intermingled with, and in a measure preying upon, it.

According to Dr. Andrew Smith, who has recently made extensive observations in South Africa, almost every tribe of people who have submitted themselves to social laws, recognizing the rights of property and reciprocal social duties, and thus acquiring wealth and forming themselves into a respectable caste, are surrounded by hordes of vagabonds and outcasts from their own community. Such are the Bushmen and *Sonquas* of the Hottentot race—the term "*sonqua*" meaning literally *pauper*. But a similar condition in society produces similar results in regard to other races; and the Kafirs have their Bushmen as well as the Hottentots—these are called *Fingoes*—a word signifying wanderers, beggars, or outcasts. The Lappes seem to have borne a somewhat similar relation to the Finns; that is to say, they appear to have been a wild and predatory tribe who sought the desert like the Arabian Bedouins, while the Finns cultivated the soil like the industrious Fellahs.

But a phenomenon still more deserving of

notice, is the difference of speech between the Bushmen and the Hottentots. The people of some hordes, Dr. Andrew Smith assures us, vary their speech designedly, and adopt new words, with the intent of rendering their ideas unintelligible to all but the members of their own community. For this last custom a peculiar name exists, which is called "*cuze-cat*." This is considered as greatly advantageous in assisting concealment of their designs.

Here, then, we have a series of facts of the utmost social importance. (1) There are two distinct races of men, viz.: — the wandering and the civilized tribes; (2) to each of these tribes a different form of head is peculiar, the wandering races being remarkable for the development of the bones of the face, as the jaws, cheek-bones, &c., and the civilized for the development of those of the head; (3) to each civilized tribe there is generally a wandering horde attached; (4) such wandering hordes have frequently a different language from the more civilized portion of the community, and that adopted with the intent of concealing their designs and exploits from them.

It is curious that no one has as yet applied the above facts to the explanation of certain anomalies in the present state of society among ourselves. That we, like the Kafirs, Fellahs, and Finns, are surrounded by wandering hordes —the "Sonquas" and the "Fingoes" of this country—paupers, beggars, and outcasts, possessing nothing but what they acquire by depredation from the industrious, provident, and civilized portion of the community;—that the heads of these nomades are remarkable for the greater development of the jaws and cheekbones rather than those of the head;—and that they have a secret language of their own—an English "*cuze-cat*" or "slang" as it is called—for the concealment of their designs: these are points of coincidence so striking that, when placed before the mind, make us marvel that the analogy should have remained thus long unnoticed.

The resemblance once discovered, however, becomes of great service in enabling us to use the moral characteristics of the nomade races of other countries, as a means of comprehending the more readily those of the vagabonds and outcasts of our own. Let us therefore, before entering upon the subject in hand, briefly run over the distinctive, moral, and intellectual features of the wandering tribes in general.

The nomad then is distinguished from the civilized man by his repugnance to regular and continuous labour—by his want of providence in laying up a store for the future—by his inability to perceive consequences ever so slightly removed from immediate apprehension —by his passion for stupefying herbs and roots, and, when possible, for intoxicating fermented liquors—by his extraordinary powers of enduring privation—by his comparative insensibility to pain—by an immoderate love of gaming, frequently risking his own personal liberty upon a single cast—by his love of libidinous dances—by the pleasure he experiences in witnessing the suffering of sentient creatures—by his delight in warfare and all perilous sports—by his desire for vengeance—by the looseness of his notions as to property—by the absence of chastity among his women, and his disregard of female honour—and lastly, by his vague sense of religion—his rude idea of a Creator, and utter absence of all appreciation of the mercy of the Divine Spirit.

Srange to say, despite its privations, its dangers, and its hardships, those who have once adopted the savage and wandering mode of life, rarely abandon it. There are countless examples of white men adopting all the usages of the Indian hunter, but there is scarcely one example of the Indian hunter or trapper adopting the steady and regular habits of civilized life; indeed, the various missionaries who have visited nomade races have found their labours utterly unavailing, so long as a wandering life continued, and have succeeded in bestowing the elements of civilization, only on those compelled by circumstances to adopt a settled habitation.

Of the Wandering Tribes of this Country.

The nomadic races of England are of many distinct kinds—from the habitual vagrant—half-beggar, half-thief—sleeping in barns, tents, and casual wards—to the mechanic on tramp, obtaining his bed and supper from the trade societies in the different towns, on his way to seek work. Between these two extremes there are several mediate varieties — consisting of pedlars, showmen, harvest-men, and all that large class who live by either selling, showing, or doing something through the country. These are, so to speak, the rural nomads—not confining their wanderings to any one particular locality, but ranging often from one end of the land to the other. Besides these, there are the urban and suburban wanderers, or those who follow some itinerant occupation in and round about the large towns. Such are, in the metropolis more particularly, the pickpockets — the beggars — the prostitutes — the street-sellers—the street-performers—the cabmen—the coachmen—the watermen—the sailors and such like. In each of these classes—according as they partake more or less of the purely vagabond, doing nothing whatsoever for their living, but moving from place to place preying upon the earnings of the more industrious portion of the community, so will the attributes of the nomade tribes be found to be more or less marked in them. Whether it be that in the mere act of wandering, there is a greater determination of blood to the surface of the body, and consequently a less quantity sent to the brain, the muscles being thus nourished at the expense of the mind, I leave physiologists to say. But certainly be the physical cause what it may, we must all allow that in each of the classes above-mentioned, there is

a greater development of the animal than of the intellectual or moral nature of man, and that they are all more or less distinguished for their high cheek-bones and protruding jaws—for their use of a slang language—for their lax ideas of property—for their general improvidence—their repugnance to continuous labour—their disregard of female honour—their love of cruelty—their pugnacity—and their utter want of religion.

Of the London Street-folk.

Those who obtain their living in the streets of the metropolis are a very large and varied class; indeed, the means resorted to in order "to pick up a crust," as the people call it, in the public thoroughfares (and such in many instances it *literally* is,) are so multifarious that the mind is long baffled in its attempts to reduce them to scientific order or classification.

It would appear, however, that the street-people may be all arranged under six distinct genera or kinds.

These are severally:

I. Street-sellers.
II. Street-buyers.
III. Street-Finders.
IV. Street-Performers, Artists, and Showmen.
V. Street-Artizans, or Working Pedlars; and
VI. Street-Labourers.

The first of these divisions—the Street-Sellers—includes many varieties; viz.—

1. *The Street-sellers of Fish, &c.*—"wet," "dry," and shell-fish—and poultry, game, and cheese.

2. *The Street-sellers of Vegetables*, fruit (both "green" and "dry"), flowers, trees, shrubs, seeds, and roots, and "green stuff" (as water-cresses, chickweed and grun'sel, and turf).

3. *The Street-sellers of Eatables and Drinkables*,—including the vendors of fried fish, hot eels, pickled whelks, sheep's trotters, ham sandwiches, peas'-soup, hot green peas, penny pies, plum "duff," meat-puddings, baked potatoes, spice-cakes, muffins and crumpets, Chelsea buns, sweetmeats, brandy-balls, cough drops, and cat and dog's meat—such constituting the principal eatables sold in the street; while under the head of street-drinkables may be specified tea and coffee, ginger-beer, lemonade, hot wine, new milk from the cow, asses milk, curds and whey, and occasionally water.

4. *The Street-sellers of Stationery, Literature, and the Fine Arts*—among whom are comprised the flying stationers, or standing and running patterers; the long-song-sellers; the wall-song-sellers (or "pinners-up," as they are technically termed); the ballad sellers; the vendors of play-bills, second editions of newspapers, back numbers of periodicals and old books, almanacks, pocket books, memorandum books, note paper, sealing-wax, pens, pencils, stenographic cards, valentines, engravings, manuscript music, images, and gelatine poetry cards.

5. *The Street-sellers of Manufactured Articles*, which class comprises a large number of individuals, as, (*a*) the vendors of chemical articles of manufacture—viz., blacking, lucifers, corn-salves, grease-removing compositions, plating-balls, poison for rats, crackers, detonating-balls, and cigar-lights. (*b*) The vendors of metal articles of manufacture—razors and pen-knives, tea-trays, dog-collars, and key-rings, hardware, bird-cages, small coins, medals, jewellery, tin-ware, tools, card-counters, red-herring-toasters, trivets, gridirons, and Dutch ovens. (*c*) The vendors of china and stone articles of manufacture—as cups and saucers, jugs, vases, chimney ornaments, and stone fruit. (*d*) The vendors of linen, cotton, and silken articles of manufacture—as sheeting, table-covers, cotton, tapes and thread, boot and stay-laces, haberdashery, pretended smuggled goods, shirt-buttons, etc., etc.; and (*e*) the vendors of miscellaneous articles of manufacture—as cigars, pipes, and snuff-boxes, spectacles, combs, "lots," rhubarb, sponges, wash-leather, paper-hangings, dolls, Bristol toys, sawdust, and pin-cushions.

6. *The Street-sellers of Second-hand Articles*, of whom there are again four separate classes; as (*a*) those who sell old metal articles—viz. old knives and forks, keys, tin-ware, tools, and marine stores generally; (*b*) those who sell old linen articles—as old sheeting for towels; (*c*) those who sell old glass and crockery—including bottles, old pans and pitchers, old looking glasses, &c.; and (*d*) those who sell old miscellaneous articles—as old shoes, old clothes, old saucepan lids, &c., &c.

7. *The Street-sellers of Live Animals*—including the dealers in dogs, squirrels, birds, gold and silver fish, and tortoises.

8. *The Street-sellers of Mineral Productions and Curiosities*—as red and white sand, silver sand, coals, coke, salt, spar ornaments, and shells.

These, so far as my experience goes, exhaust the whole class of street-sellers, and they appear to constitute nearly three-fourths of the entire number of individuals obtaining a subsistence in the streets of London.

The next class are the Street-Buyers, under which denomination come the purchasers of hare-skins, old clothes, old umbrellas, bottles, glass, broken metal, rags, waste paper, and dripping.

After these we have the Street-Finders, or those who, as I said before, literally "pick up" their living in the public thoroughfares. They are the "pure" pickers, or those who live by gathering dogs'-dung; the cigar-end finders, or "hard-ups," as they are called, who collect the refuse pieces of smoked cigars from the gutters, and having dried them, sell them as tobacco to the very poor; the dredgermen or coal-finders; the mud-larks, the bone-grubbers; and the sewer-hunters.

Under the fourth division, or that of the Street-Performers, Artists, and Showmen, are likewise many distinct callings.

1. *The Street-Performers*, who admit of being classified into (*a*) mountebanks—or those who enact puppet-shows, as Punch and Judy, the fan-

Original from HARVARD UNIVERSITY

toccini, and the Chinese shades. (*b*) The street-performers of feats of strength and dexterity—as "acrobats" or posturers, "equilibrists" or balancers, stiff and bending tumblers, jugglers, conjurors, sword-swallowers, "salamanders" or fire-eaters, swordsmen, etc. (*c*) The street-performers with trained animals—as dancing dogs, performing monkeys, trained birds and mice, cats and hares, sapient pigs, dancing bears, and tame camels. (*d*) The street-actors—as clowns, "Billy Barlows," "Jim Crows," and others.

2. *The Street Showmen*, including shows of (*a*) extraordinary persons—as giants, dwarfs, Albinoes, spotted boys, and pig-faced ladies. (*b*) Extraordinary animals—as alligators, calves, horses and pigs with six legs or two heads, industrious fleas, and happy families. (*c*) Philosophic instruments—as the microscope, telescope, thaumascope. (*d*) Measuring-machines—as weighing, lifting, measuring, and striking machines; and (*e*) miscellaneous shows—such as peep-shows, glass ships, mechanical figures, wax-work shows, pugilistic shows, and fortune-telling apparatus.

3. *The Street-Artists*—as black profile-cutters, blind paper-cutters, "screevers" or draughtsmen in coloured chalks on the pavement, writers without hands, and readers without eyes.

4. *The Street Dancers*—as street Scotch girls, sailors, slack and tight rope dancers, dancers on stilts, and comic dancers.

5. *The Street Musicians*—as the street bands (English and German), players of the guitar, harp, bagpipes, hurdy-gurdy, dulcimer, musical bells, cornet, tom-tom, &c.

6. *The Street Singers*, as the singers of glees, ballads, comic songs, nigger melodies, psalms, serenaders, reciters, and improvisatori.

7. *The Proprietors of Street Games*, as swings, highflyers, roundabouts, puff-and-darts, rifle shooting, down the dolly, spin-'em-rounds, prick the garter, thimble-rig, etc.

Then comes the Fifth Division of the Street-Folk, viz., the STREET-ARTIZANS, or WORKING PEDLARS;

These may be severally arranged into three distinct groups—(1) Those who *make* things in the streets; (2) Those who *mend* things in the streets; and (3) Those who *make* things *at home* and *sell* them in the *streets*.

1. Of *those who make things in the streets* there are the following varieties: (*a*) the metal workers—such as toasting-fork makers, pin makers, engravers, tobacco-stopper makers. (*b*) The textile-workers—stocking-weavers, cabbage-net makers, night-cap knitters, doll-dress knitters. (*c*) The miscellaneous workers,—the wooden spoon makers, the leather brace and garter makers, the printers, and the glass-blowers.

2. *Those who mend things in the streets*, consist of broken china and glass menders, clock menders, umbrella menders, kettle menders, chair menders, grease removers, hat cleaners, razor and knife grinders, glaziers, travelling bell hangers, and knife cleaners.

3. *Those who make things at home and sell them in the streets*, are (*a*) the wood workers—as the makers of clothes-pegs, clothes-props, skewers, needle-cases, foot-stools and clothes-horses, chairs and tables, tea-caddies, writing-desks, drawers, work-boxes, dressing-cases, pails and tubs. (*b*) The trunk, hat, and bonnet-box makers, and the cane and rush basket makers. (*c*) The toy makers—such as Chinese roarers, children's windmills, flying birds and fishes, feathered cocks, black velvet cats and sweeps, paper houses, cardboard carriages, little copper pans and kettles, tiny tin fireplaces, children's watches, Dutch dolls, buy-a-brooms, and gutta-percha heads. (*d*) The apparel makers—viz., the makers of women's caps, boys and men's cloth caps, night-caps, straw bonnets, children's dresses, watch-pockets, bonnet shapes, silk bonnets, and gaiters. (*e*) The metal workers,—as the makers of fire-guards, bird-cages, the wire workers. (*f*) The miscellaneous workers—or makers of ornaments for stoves, chimney ornaments, artificial flowers in pots and in nose-gays, plaster-of-Paris night-shades, brooms, brushes, mats, rugs, hearthstones, firewood, rush matting, and hassocks.

Of the last division, or STREET-LABOURERS, there are four classes:

1. *The Cleansers*—such as scavengers, night-men, flushermen, chimney-sweeps, dustmen, crossing-sweepers, "street-orderlies," labourers to sweeping-machines and to watering-carts.

2. *The Lighters and Waterers*—or the turn-cocks and the lamplighters.

3. *The Street-Advertisers*—viz., the bill-stickers, bill-deliverers, boardmen, men to advertising vans, and wall and pavement stencillers.

4. *The Street-Servants*—as horse holders, link-men, coach-hirers, street-porters, shoe-blacks.

OF THE NUMBER OF COSTERMONGERS AND OTHER STREET-FOLK.

THE number of costermongers,—that it is to say, of those street-sellers attending the London "green" and "fish markets,"—appears to be, from the best data at my command, now 30,000 men, women, and children. The census of 1841 gives only 2,045 "hawkers, hucksters, and pedlars," in the metropolis, and no costermongers or street-sellers, or street-performers at all. This number is absurdly small, and its absurdity is accounted for by the fact that not one in twenty of the costermongers, or of the people with whom they lodged, troubled themselves to fill up the census returns—the majority of them being unable to read and write, and others distrustful of the purpose for which the returns were wanted.

The costermongering class extends itself yearly; and it is computed that for the last five years it has increased considerably faster than the general metropolitan population. This increase is derived partly from *all* the children of costermongers following the father's trade, but chiefly from working men, such as the servants of greengrocers or of innkeepers, when out of

Original from HARVARD UNIVERSITY

employ, "taking to a coster's barrow" for a livelihood; and the same being done by mechanics and labourers out of work. At the time of the famine in Ireland, it is calculated, that the number of Irish obtaining a living in the London streets must have been at least doubled.

The great discrepancy between the government returns and the accounts of the costermongers themselves, concerning the number of people obtaining a living by the sale of fish, fruit, and vegetables, in the streets of London, caused me to institute an inquiry at the several metropolitan markets concerning the number of street-sellers attending them: the following is the result:

During the summer months and fruit season, the average number of costermongers attending Covent-garden market is about 2,500 per market-day. In the strawberry season there are nearly double as many, there being, at that time, a large number of Jews who come to buy; during that period, on a Saturday morning, from the commencement to the close of the market, as many as 4,000 costers have been reckoned purchasing at Covent-garden. Through the winter season, however, the number of costermongers does not exceed upon the average 1,000 per market morning. About one-tenth of the fruit and vegetables of the least expensive kind sold at this market is purchased by the costers. Some of the better class of costers, who have their regular customers, are very particular as to the quality of the articles they buy; but others are not so particular; so long as they can get things cheap, I am informed, they do not care much about the quality. The Irish more especially look out for damaged articles, which they buy at a low price. One of my informants told me that the costers were the best customers to the growers, inasmuch as when the market is flagging on account of the weather, they (the costers) wait and make their purchases. On other occasions, such as fine mornings, the costers purchase as early as others. There is no trust given to them—to use the words of one of my informants, they are such slippery customers; here to-day and gone to-morrow.

At Leadenhall market, during the winter months, there are from 70 to 100 costermongers general attendants; but during the summer not much more than one-half that number make their appearance. Their purchases consist of warren-rabbits, poultry, and game, of which about one-eighth of the whole amount brought to this market is bought by them. When the market is slack, and during the summer, when there is "no great call" for game, etc., the costers attending Leadenhall-market turn their hand to crockery, fruit, and fish.

The costermongers frequenting Spitalfields-market average all the year through from 700 to 1,000 each market-day. They come from all parts, as far as Edmonton, Edgeware, and Tottenham; Highgate, Hampstead, and even from Greenwich and Lewisham. Full one-third of the produce of this market is purchased by them.

The number of costermongers attending the Borough-market is about 250 during the fruit season, after which time they decrease to about 200 per market morning. About one-sixth of the produce that comes into this market is purchased by the costermongers. One gentleman informed me, that the salesmen might shut up their shops were it not for these men. "In fact," said another, "I don't know what would become of the fruit without them."

The costers at Billingsgate-market, daily, number from 3,000 to 4,000 in winter, and about 2,500 in summer. A leading salesman told me that he would rather have an order from a costermonger than a fishmonger; for the one paid ready money, while the other required credit. The same gentleman assured me, that the costermongers bought excellent fish, and that very largely. They themselves aver that they purchase half the fish brought to Billingsgate—some fish trades being entirely in their hands. I ascertained, however, from the authorities at Billingsgate, and from experienced salesmen, that of the quantity of fish conveyed to that great mart, the costermongers bought one-third; another third was sent into the country; and another disposed of to the fishmongers, and to such hotel-keepers, or other large purchasers, as resorted to Billingsgate.

The salesmen at the several markets all agreed in stating that no trust was given to the costermongers. "Trust them!" exclaimed one, "O, certainly, as far as I can see them."

Now, adding the above figures together, we have the subjoined sum for the gross number of

COSTERMONGERS ATTENDING THE LONDON MARKETS.

Billingsgate-market	3,500
Covent-garden	4,000
Spitalfields	1,000
Borough	250
Leadenhall	100
	9,350

Besides these, I am credibly informed, that it may be assumed there are full 1,000 men who are unable to attend market, owing to the dissipation of the previous night; another 1,000 are absent owing to their having "stock on hand," and so requiring no fresh purchases; and further, it may be estimated that there are at least 2,000 boys in London at work for costers, at half profits, and who consequently have no occasion to visit the markets. Hence, putting these numbers together, we arrive at the conclusion that there are in London upwards of 13,000 street-sellers, dealing in fish, fruit, vegetables, game, and poultry alone. To be on the safe side, however, let us assume the number of London costermongers to be 12,000, and that one-half of these are married and have two children (which from all accounts appears to be about the proportion); and then we have 30,000 for the

Original from HARVARD UNIVERSITY

sum total of men, women, and children dependent on "costermongering" for their subsistence.

Large as this number may seem, still I am satisfied it is rather within than beyond the truth. In order to convince myself of its accuracy, I caused it to be checked in several ways. In the first place, a survey was made as to the number of stalls in the streets of London—forty-six miles of the principal thoroughfares were travelled over, and an account taken of the "standings." Thus it was found that there were upon an average upwards of fourteen stalls to the mile, of which five-sixths were fish and fruit-stalls. Now, according to the Metropolitan Police Returns, there are 2,000 miles of street throughout London, and calculating that the stalls through the whole of the metropolis run upon an average only four to the mile, we shall thus find that there are 8,000 stalls altogether in London; of these we may reckon that at least 6,000 are fish and fruit-stalls. I am informed, on the best authority, that twice as many costers "go rounds" as have standings; hence we come to the conclusion that there are 18,000 itinerant and stationary street-sellers of fish, vegetables, and fruit, in the metropolis; and reckoning the same proportion of wives and children as before, we have thus 45,000 men, women, and children, obtaining a living in this manner. Further, "to make assurance doubly sure," the street-markets throughout London were severally visited, and the number of street-sellers at each taken down on the spot. These gave a grand total of 3,801, of which number two-thirds were dealers in fish, fruit, and vegetables; and reckoning that twice as many costers again were on their rounds, we thus make the total number of London costermongers to be 11,403, or calculating men, women, and children, 34,209. It would appear, therefore, that if we estimate the gross number of individuals subsisting on the sale of fish, fruit, and vegetables, in the streets of London, at between thirty and forty thousand, we shall not be very wide of the truth.

But, great as is this number, still the costermongers are only a portion of the street-folk. Besides these, there are, as we have seen, many other large classes obtaining their livelihood in the streets. The street musicians, for instance, are said to number 1,000, and the old clothesmen the same. There are supposed to be at the least 500 sellers of water-cresses; 200 coffee-stalls; 300 cats-meat men; 250 ballad-singers; 200 play-bill sellers; from 800 to 1,000 bone-grubbers and mud-larks; 1,000 crossing-sweepers; another thousand chimney-sweeps, and the same number of turncocks and lamp-lighters; all of whom, together with the street-performers and showmen, tinkers, chair, umbrella, and clock-menders, sellers of bonnet-boxes, toys, stationery, songs, last dying-speeches, tubs, pails, mats, crockery, blacking, lucifers, corn-salves, clothes-pegs, brooms, sweetmeats, razors, dog-collars, dogs, birds, coals, sand,—scavengers, dustmen, and others, make up, it may be fairly assumed, full thirty thousand adults, so that, reckoning men, women, and children, we may truly say that there are upwards of fifty thousand individuals, or about a fortieth-part of the entire population of the metropolis getting their living in the streets.

Now of all modes of obtaining subsistence, that of street-selling is the most precarious. Continued wet weather deprives those who depend for their bread upon the number of people frequenting the public thoroughfares of all means of living; and it is painful to think of the hundreds belonging to this class in the the metropolis who are reduced to starvation by three or four days successive rain. Moreover, in the winter, the street-sellers of fruit and vegetables are cut off from the ordinary means of gaining their livelihood, and, consequently, they have to suffer the greatest privations at a time when the severity of the season demands the greatest amount of physical comforts. To expect that the increased earnings of the summer should be put aside as a provision against the deficiencies of the winter, is to expect that a precarious occupation should beget provident habits, which is against the nature of things, for it is always in those callings which are the most uncertain, that the greatest amount of improvidence and intemperance are found to exist. It is not the well-fed man, be it observed, but the starving one that is in danger of surfeiting himself.

Moreover, when the religious, moral, and intellectual degradation of the great majority of these fifty thousand people is impressed upon us, it becomes positively appalling to contemplate the vast amount of vice, ignorance and want, existing in these days in the very heart of our land. The public have but to read the following plain unvarnished account of the habits, amusements, dealings, education, politics, and religion of the London costermongers in the nineteenth century, and then to say whether they think it safe—even if it be thought fit—to allow men, women, and children to continue in such a state.

Of the Varieties of Street-folk in general, and Costermongers in particular.

Among the street-folk there are many distinct characters of people—people differing as widely from each in tastes, habits, thoughts and creed, as one nation from another. Of these the costermongers form by far the largest and certainly the mostly broadly marked class. They appear to be a distinct race—perhaps, originally, of Irish extraction—seldom associating with any other of the street-folks, and being all known to each other. The "patterers," or the men who cry the last dying-speeches, &c. in the street, and those who help off their wares by long harrangues in the public thoroughfares, are again a separate class. These, to use their own term, are "the aristocracy of the street-sellers," despising the costers for

Original from HARVARD UNIVERSITY

their ignorance, and boasting that they live by their intellect. The public, they say, do not expect to receive from them an equivalent for their money — they pay to hear them talk. Compared with the costermongers, the patterers are generally an educated class, and among them are some classical scholars, one clergyman, and many sons of gentlemen. They appear to be the counterparts of the old mountebanks or street-doctors. As a body they seem far less improvable than the costers, being more "knowing" and less impulsive. The street-performers differ again from those; these appear to possess many of the characteristics of the lower class of actors, viz., a strong desire to excite admiration, an indisposition to pursue any settled occupation, a love of the tap-room, though more for the society and display than for the drink connected with it, a great fondness for finery and predilection for the performance of dexterous or dangerous feats. Then there are the street mechanics, or artizans—quiet, melancholy, struggling men, who, unable to find any regular employment at their own trade, have made up a few things, and taken to hawk them in the streets, as the last shift of independence. Another distinct class of street-folk are the blind people (mostly musicians in a rude way), who, after the loss of their eyesight, have sought to keep themselves from the workhouse by some little excuse for alms-seeking. These, so far as my experience goes, appear to be a far more deserving class than is usually supposed—their affliction, in most cases, seems to have chastened them and to have given a peculiar religious cast to their thoughts.

Such are the several varieties of street-folk, intellectually considered—looked at in a national point of view, they likewise include many distinct people. Among them are to be found the Irish fruit-sellers; the Jew clothesmen; the Italian organ boys, French singing women, the German brass bands, the Dutch buy-a-broom girls, the Highland bagpipe players, and the Indian crossing-sweepers—all of whom I here shall treat of in due order.

The costermongering class or order has also its many varieties. These appear to be in the following proportions:—One-half of the entire class are costermongers proper, that is to say, the calling with them is hereditary, and perhaps has been so for many generations; while the other half is composed of three-eighths Irish, and one-eighth mechanics, tradesmen, and Jews.

Under the term "costermonger" is here included only such "street-sellers" as deal in fish, fruit, and vegetables, purchasing their goods at the wholesale "green" and fish markets. Of these some carry on their business at the same stationary stall or "standing" in the street, while others go on "rounds." The itinerant costermongers, as contradistinguished from the stationary street-fishmongers and greengrocers, have in many instances regular rounds, which they go daily, and which extend from two to ten miles. The longest are those which embrace a suburban part; the shortest are through streets thickly peopled by the poor, where duly to "work" a single street consumes, in some instances, an hour. There are also "chance" rounds. Men "working" these carry their wares to any part in which they hope to find customers. The costermongers, moreover, diversify their labours by occasionally going on a country round, travelling on these excursions, in all directions, from thirty to ninety and even a hundred miles from the metropolis. Some, again, confine their callings chiefly to the neighbouring races and fairs.

Of all the characteristics attending these diversities of traders, I shall treat severally. I may here premise, that the regular or "thorough-bred costermongers," repudiate the numerous persons who sell only nuts or oranges in the streets, whether at a fixed stall, or any given locality, or who hawk them through the thoroughfares or parks. They repudiate also a number of Jews, who confine their street-trading to the sale of "coker-nuts" on Sundays, vended from large barrows. Nor do they rank with themselves the individuals who sell tea and coffee in the streets, or such condiments as peas-soup, sweetmeats, spice-cakes, and the like; those articles not being purchased at the markets. I often heard all such classes called "the illegitimates."

Of Costermongering Mechanics.

"From the numbers of mechanics," said one smart costermonger to me, "that I know of in my own district, I should say there's now more than 1,000 costers in London that were once mechanics or labourers. They are driven to it as a last resource, when they can't get work at their trade. They don't do well, at least four out of five, or three out of four don't. They're not up to the dodges of the business. They go to market with fear, and don't know how to venture a bargain if one offers. They're inferior salesmen too, and if they have fish left that won't keep, it's a dead loss to them, for they aren't up to the trick of selling it cheap at a distance where the coster ain't known; or of quitting it to another, for candle-light sale, cheap, to the Irish or to the 'lushingtons,' that haven't a proper taste for fish. Some of those poor fellows lose every penny. They're mostly middle-aged when they begin costering. They'll generally commence with oranges or herrings. We pity them. We say, 'Poor fellows! they'll find it out by-and-bye.' It's awful to see some poor women, too, trying to pick up a living in the streets by selling nuts or oranges. It's awful to see them, for they can't set about it right; besides that, there's too many before they start. They don't find a living, *it's only another way of starving*."

Ancient Calling of Costermongers.

The earliest record of London cries is, according to Mr. Charles Knight, in Lydgate's poem of "London Lyckpeny," which is as old as the days of Henry V., or about 430

years back. Among Lydgate's cries are enumerated "Strawberries ripe and cherries in the rise;" the *rise* being a twig to which the cherries were tied, as at present. Lydgate, however, only indicates costermongers, but does not mention them by name.

It is not my intention, as my inquiries are directed to the *present* condition of the costermongers, to dwell on this part of the question, but some historical notice of so numerous a body is indispensable. I shall confine myself therefore to show from the elder dramatists, how the costermongers flourished in the days of Elizabeth and James I.

"Virtue," says Shakespeare, "is of so little regard in these *coster-monger times*, that true valour is turned bear-herd." Costermonger times are as old as any trading times of which our history tells; indeed, the stationary costermonger of our own day is a legitimate descendant of the tradesmen of the olden time, who stood by their shops with their open casements, loudly inviting buyers by praises of their wares, and by direct questions of "What d'ye buy? What d'ye lack?"

Ben Jonson makes his *Morose*, who hated all noises, and sought for a silent wife, enter "upon divers treaties with the fish-wives and orange-women," to moderate their clamour; but *Morose*, above all other noisy people, "cannot endure a costard-monger; he swoons if he hear one."

In Ford's "Sun's Darling" I find the following: "Upon my life he means to turn costermonger, and is projecting how to forestall the market. I shall cry pippins rarely."

In Beaumont and Fletcher's "Scornful Lady" is the following:

"Pray, sister, do not laugh; you'll anger him,
And then he'll rail like a rude costermonger."

Dr. Johnson, gives the derivation of costardmonger (the orthography he uses), as derived from the sale of apples or costards, "round and bulky like the head;" and he cites Burton as an authority: "Many country vicars," writes Burton, "are driven to shifts, and if our great patrons hold us to such conditions, they will make us *costard-mongers*, graziers, or sell ale."

"The costard-monger," says Mr. Charles Knight, in his "London," "was originally an apple-seller, whence his name, and, from the mention of him in the old dramatists, he appears to have been frequently an Irishman."

In Ireland the word "costermonger" is almost unknown.

Of the Obsolete Cries of the Costermongers.

A brief account of the cries once prevalent among the street-sellers will show somewhat significantly the change in the diet or regalements of those who purchase their food in the street. Some of the articles are not vended in the public thoroughfares now, while others are still sold, but in different forms.

"Hot sheep's feet," for instance, were cried in the streets in the time of Henry V.; they are now sold *cold*, at the doors of the lower-priced theatres, and at the larger public-houses. Among the street cries, the following were common prior to the wars of the Roses: "Ribs of beef,"—"Hot peascod,"—and "Pepper and saffron." These certainly indicate a different street diet from that of the present time.

The following are more modern, running from Elizabeth's days down to our own. "Pippins," and, in the times of Charles II., and subsequently, oranges were sometimes cried as "Orange pips,"—"Fair lemons and oranges; oranges and citrons,"—"New Wall-fleet oysters," ["*fresh*" fish was formerly cried as "new,"]—"New-river water," [I may here mention that water-carriers still ply their trade in parts of Hampstead,]—"Rosemary and lavender,"—"Small coals," [a cry rendered almost poetical by the character, career, and pitiful end, through a practical joke, of Tom Britton, the "small-coal man,"]—"Pretty pins, pretty women,"—"Lilly-white vinegar,"—"Hot wardens" (pears)—"Hot codlings,"—and lastly the greasy-looking beverage which Charles Lamb's experience of London at early morning satisfied him was of all preparations the most grateful to the stomach of the then existing climbing-boys—viz., "Sa-loop." I may state, for the information of my younger readers, that saloop (spelt also "salep" and "salop") was prepared, as a powder, from the root of the *Orchis mascula*, or Red-handed Orchis, a plant which grows luxuriantly in our meadows and pastures, flowering in the spring, though never cultivated to any extent in this country; that required for the purposes of commerce was imported from India. The saloop-stalls were superseded by the modern coffee-stalls.

There were many other cries, now obsolete, but what I have cited were the most common.

Of the Costermongers "Economically" Considered.

Political economy teaches us that, between the two great classes of producers and consumers, stand the distributors—or dealers—saving time, trouble, and inconvenience to, the one in disposing of, and to the other in purchasing, their commodities.

But the distributor was not always a part and parcel of the economical arrangements of the State. In olden times, the producer and consumer were brought into immediate contact, at markets and fairs, holden at certain intervals. The inconvenience of this mode of operation, however, was soon felt; and the pedlar, or wandering distributor, sprang up as a means of carrying the commodities to those who were unable to attend the public markets at the appointed time. Still the pedlar or wandering distributor was not without *his* disadvantages. He only came at certain periods, and commodities were occasionally required in the interim. Hence the shopkeeper, or stationary distributor, was called into existence, so that the consumer might obtain any commodity of the producer at

any time he pleased. Hence we see that the pedlar is the primitive tradesman, and that the one is contradistinguished from the other by the fact, that the pedlar carries the goods to the consumer, whereas, in the case of the shopkeeper, the consumer goes after the goods. In country districts, remote from towns and villages, the pedlar is not yet wholly superseded; "but a dealer who has a fixed abode, and fixed customers, is so much more to be depended on," says Mr. Stewart Mill, "that consumers prefer resorting to him if he is conveniently accessible, and dealers, therefore, find their advantage in establishing themselves in every locality where there are sufficient customers near at hand to afford them a remuneration." Hence the pedlar is now chiefly confined to the poorer districts, and is consequently distinguished from the stationary tradesman by the character and means of his customers, as well as by the amount of capital and extent of his dealings. The shopkeeper supplies principally the noblemen and gentry with the necessaries and luxuries of life, but the pedlar or hawker is the purveyor in general to the poor. He brings the greengrocery, the fruit, the fish, the water-cresses, the shrimps, the pies and puddings, the sweetmeats, the pine-apples, the stationery, the linendrapery, and the jewellery, such as it is, to the very door of the working classes; indeed, the poor man's food and clothing are mainly supplied to him in this manner. Hence the class of travelling tradesmen are important, not only as forming a large portion of the poor themselves, but as being the persons through whom the working people obtain a considerable part of their provisions and raiment.

But the itinerant tradesman or street-seller is still further distinguished from the regular fixed dealer—the *stall*keeper from the *shop*keeper—the *street*-wareman from the ware*house*man, by the arts they respectively employ to attract custom. The street-seller cries his goods aloud at the head of his barrow; the enterprising tradesman distributes bills at the door of his shop. The one appeals to the ear, the other to the eye. The cutting costermonger has a drum and two boys to excite attention to his stock; the spirited shopkeeper has a column of advertisements in the morning newspapers. They are but different means of attaining the same end.

The London Street Markets on a Saturday Night.

The street sellers are to be seen in the greatest numbers at the London street markets on a Saturday night. Here, and in the shops immediately adjoining, the working-classes generally purchase their Sunday's dinner; and after pay-time on Saturday night, or early on Sunday morning, the crowd in the New-cut, and the Brill in particular, is almost impassable. Indeed, the scene in these parts has more of the character of a fair than a market. There are hundreds of stalls, and every stall has its one or two lights; either it is illuminated by the intense white light of the new self-generating gas-lamp, or else it is brightened up by the red smoky flame of the old-fashioned grease lamp. One man shows off his yellow haddock with a candle stuck in a bundle of firewood; his neighbour makes a candlestick of a huge turnip, and the tallow gutters over its sides; whilst the boy shouting "Eight a penny, stunning pears!" has rolled his dip in a thick coat of brown paper, that flares away with the candle. Some stalls are crimson with the fire shining through the holes beneath the baked chestnut stove; others have handsome octohedral lamps, while a few have a candle shining through a sieve: these, with the sparkling ground-glass globes of the tea-dealers' shops, and the butchers' gaslights streaming and fluttering in the wind, like flags of flame, pour forth such a flood of light, that at a distance the atmosphere immediately above the spot is as lurid as if the street were on fire.

The pavement and the road are crowded with purchasers and street-sellers. The housewife in her thick shawl, with the market-basket on her arm, walks slowly on, stopping now to look at the stall of caps, and now to cheapen a bunch of greens. Little boys, holding three or four onions in their hand, creep between the people, wriggling their way through every interstice, and asking for custom in whining tones, as if seeking charity. Then the tumult of the thousand different cries of the eager dealers, all shouting at the top of their voices, at one and the same time, is almost bewildering. "So-old again," roars one. "Chestnuts all 'ot, a penny a score," bawls another. "An 'aypenny a skin, blacking," squeaks a boy. "Buy, buy, buy, buy, buy—bu-u-uy!" cries the butcher. "Half-quire of paper for a penny," bellows the street stationer. "An 'aypenny a lot ing-uns." "Twopence a pound grapes." "Three a penny Yarmouth bloaters." "Who'll buy a bonnet for fourpence?" "Pick 'em out cheap here! three pair for a halfpenny, bootlaces." "Now's your time! beautiful whelks, a penny a lot." "Here's ha'p'orths," shouts the perambulating confectioner. "Come and look at 'em! here's toasters!" bellows one with a Yarmouth bloater stuck on a toasting-fork. "Penny a lot, fine russets," calls the apple woman: and so the Babel goes on.

One man stands with his red-edged mats hanging over his back and chest, like a herald's coat; and the girl with her basket of walnuts lifts her brown-stained fingers to her mouth, as she screams, "Fine warnuts! sixteen a penny, fine war-r-nuts." A bootmaker, to "ensure custom," has illuminated his shop-front with a line of gas, and in its full glare stands a blind beggar, his eyes turned up so as to show only "the whites," and mumbling some begging rhymes, that are drowned in the shrill notes of the bamboo-flute-player next to him. The boy's sharp cry, the woman's cracked voice, the gruff, hoarse shout of the man, are all mingled together. Sometimes an Irish-

Original from HARVARD UNIVERSITY

man is heard with his "fine ating apples;" or else the jingling music of an unseen organ breaks out, as the trio of street singers rest between the verses.

Then the sights, as you elbow your way through the crowd, are equally multifarious. Here is a stall glittering with new tin saucepans; there another, bright with its blue and yellow crockery, and sparkling with white glass. Now you come to a row of old shoes arranged along the pavement; now to a stand of gaudy tea-trays; then to a shop with red handkerchiefs and blue checked shirts, fluttering backwards and forwards, and a counter built up outside on the kerb, behind which are boys beseeching custom. At the door of a tea-shop, with its hundred white globes of light, stands a man delivering bills, thanking the public for past favours, and "defying competition." Here, alongside the road, are some half-dozen headless tailors' dummies, dressed in Chesterfields and fustian jackets, each labelled, "Look at the prices," or "Observe the quality." After this is a butcher's shop, crimson and white with meat piled up to the first-floor, in front of which the butcher himself, in his blue coat, walks up and down, sharpening his knife on the steel that hangs to his waist. A little further on stands the clean family, begging; the father with his head down as if in shame, and a box of lucifers held forth in his hand—the boys in newly-washed pinafores, and the tidily got-up mother with a child at her breast. This stall is green and white with bunches of turnips—that red with apples, the next yellow with onions, and another purple with pickling cabbages. One minute you pass a man with an umbrella turned inside up and full of prints; the next, you hear one with a peepshow of Mazeppa, and Paul Jones the pirate, describing the pictures to the boys looking in at the little round windows. Then is heard the sharp snap of the percussion-cap from the crowd of lads firing at the target for nuts; and the moment afterwards, you see either a black man half-clad in white, and shivering in the cold with tracts in his hand, or else you hear the sounds of music from "Frazier's Circus," on the other side of the road, and the man outside the door of the penny concert, beseeching you to "Be in time—be in time!" as Mr. Somebody is just about to sing his favourite song of the "Knife Grinder." Such, indeed, is the riot, the struggle, and the scramble for a living, that the confusion and uproar of the New-cut on Saturday night have a bewildering and saddening effect upon the thoughtful mind.

Each salesman tries his utmost to sell his wares, tempting the passers-by with his bargains. The boy with his stock of herbs offers "a double 'andful of fine parsley for a penny;" the man with the donkey-cart filled with turnips has three lads to shout for him to their utmost, with their "Ho! ho! hi-i-i! What do you think of this here? A penny a bunch—hurrah for free trade! *Here's* your turnips!" Until it is seen and heard, we have no sense of the scramble that is going on throughout London for a living. The same scene takes place at the Brill—the same in Leather-lane—the same in Tottenham-court-road—the same in Whitecross-street; go to whatever corner of the metropolis you please, either on a Saturday night or a Sunday morning, and there is the same shouting and the same struggling to get the penny profit out of the poor man's Sunday's dinner.

Since the above description was written, the New Cut has lost much of its noisy and brilliant glory. In consequence of a New Police regulation, "stands" or "pitches" have been forbidden, and each coster, on a market night, is now obliged, under pain of the lock-up house, to carry his tray, or keep moving with his barrow. The gay stalls have been replaced by deal boards, some sodden with wet fish, others stained purple with blackberries, or brown with walnut-peel; and the bright lamps are almost totally superseded by the dim, guttering candle. Even if the pole under the tray or "shallow" is seen resting on the ground, the policeman on duty is obliged to interfere.

The mob of purchasers has diminished one-half; and instead of the road being filled with customers and trucks, the pavement and kerb-stones are scarcely crowded.

THE SUNDAY MORNING MARKETS.

NEARLY every poor man's market does its Sunday trade. For a few hours on the Sabbath morning, the noise, bustle, and scramble of the Saturday night are repeated, and but for this opportunity many a poor family would pass a dinnerless Sunday. The system of paying the mechanic late on the Saturday night—and more particularly of paying a man his wages in a public-house—when he is tired with his day's work, lures him to the tavern, and there the hours fly quickly enough beside the warm tap-room fire, so that by the time the wife comes for her husband's wages, she finds a large portion of them gone in drink, and the streets half cleared, so that the Sunday market is the only chance of getting the Sunday's dinner.

Of all these Sunday-morning markets, the Brill, perhaps, furnishes the busiest scene; so that it may be taken as a type of the whole.

The streets in the neighbourhood are quiet and empty. The shops are closed with their different-coloured shutters, and the people round about are dressed in the shiney cloth of the holiday suit. There are no "cabs," and but few omnibuses to disturb the rest, and men walk in the road as safely as on the footpath.

As you enter the Brill the market sounds are scarcely heard. But at each step the low hum grows gradually into the noisy shouting, until at last the different cries become distinct, and the hubbub, din, and confusion of a thousand voices bellowing at once again fill the air. The road and footpath are crowded, as on the over-night; the men are standing in groups, smoking and talking; whilst the women run

Original from HARVARD UNIVERSITY

to and fro, some with the white round turnips showing out of their filled aprons, others with cabbages under their arms, and a piece of red meat dangling from their hands. Only a few of the shops are closed, but the butcher's and the coal-shed are filled with customers, and from the door of the shut-up baker's, the women come streaming forth with bags of flour in their hands, while men sally from the halfpenny barber's smoothing their clean-shaved chins. Walnuts, blacking, apples, onions, braces, combs, turnips, herrings, pens, and corn-plaster, are all bellowed out at the same time. Labourers and mechanics, still unshorn and undressed, hang about with their hands in their pockets, some with their pet terriers under their arms. The pavement is green with the refuse leaves of vegetables, and round a cabbage-barrow the women stand turning over the bunches, as the man shouts, "Where you like, only a penny." Boys are running home with the breakfast herring held in a piece of paper, and the side-pocket of the apple-man's stuff coat hangs down with the weight of the halfpence stored within it. Presently the tolling of the neighbouring church bells breaks forth. Then the bustle doubles itself, the cries grow louder, the confusion greater. Women run about and push their way through the throng, scolding the saunterers, for in half an hour the market will close. In a little time the butcher puts up his shutters, and leaves the door still open; the policemen in their clean gloves come round and drive the street-sellers before them, and as the clock strikes eleven the market finishes, and the Sunday's rest begins.

The following is a list of the street-markets, and the number of costers usually attending :—

MARKETS ON THE SURREY SIDE.

Market	No.	Market	No.
New-cut, Lambeth . .	300	Bermondsey	107
Lambeth-walk	104	Union-street, Borough	29
Walworth-road	22	Great Suffolk-street .	46
Camberwell	15	Blackfriars-road . . .	58
Newington	45		
Kent-street, Borough	38		664

MARKETS ON THE MIDDLESEX SIDE.

Market	No.	Market	No.
Brill and Chapel-st., Somers' Town . .	300	Leather-lane	150
		St. John's-street . . .	47
Camden Town	50	Old-street (St. Luke's)	46
Hampstead-rd. and Tottenham-ct.-rd.	333	Whitecross - street, Cripplegate	150
St. George's Market, Oxford-street . .	177	Islington	79
		City-road	49
Marylebone	37	Shoreditch	100
Edgeware-road	78	Bethnal-green	100
Crawford-street	145	Whitechapel	258
Knightsbridge	46	Mile End	105
Pimlico	32	Commercial-rd. (East)	114
Tothill-st. & Broad-way, Westminster	119	Limehouse	88
		Ratcliffe Highway . .	122
Drury-lane	22	Rosemary-lane	119
Clare-street	139		
Exmouth-street and Aylesbury-street, Clerkenwell . . .	142		3137

We find, from the foregoing list of markets, held in the various thoroughfares of the metropolis, that there are 10 on the Surrey side and 27 on the Middlesex side of the Thames. The total number of hucksters attending these markets is 3801, giving an average of 102 to each market.

Habits and Amusements of Costermongers.

I find it impossible to separate these two headings; for the habits of the costermonger are not domestic. His busy life is past in the markets or the streets, and as his leisure is devoted to the beer-shop, the dancing-room, or the theatre, we must look for his habits to his demeanour at those places. Home has few attractions to a man whose life is a street-life. Even those who are influenced by family ties and affections, prefer to "home"—indeed that word is rarely mentioned among them — the conversation, warmth, and merriment of the beer-shop, where they can take their ease among their "mates." Excitement or amusement are indispensable to uneducated men. Of beer-shops resorted to by costermongers, and principally supported by them, it is computed that there are 400 in London.

Those who meet first in the beer-shop talk over the state of trade and of the markets, while the later comers enter at once into what may be styled the serious business of the evening—amusement.

Business topics are discussed in a most peculiar style. One man takes the pipe from his mouth and says, "Bill made a doogheno hit this morning." "Jem," says another, to a man just entering, "you'll stand a top o' reeb?" "On," answers Jem, "I've had a trosseno tol, and have been doing dab." For an explanation of what may be obscure in this dialogue, I must refer my readers to my remarks concerning the language of the class. If any strangers are present, the conversation is still further clothed in slang, so as to be unintelligible even to the partially initiated. The evident puzzlement of any listener is of course gratifying to the costermonger's vanity, for he feels that he possesses a knowledge peculiarly his own.

Among the in-door amusements of the costermonger is card-playing, at which many of them are adepts. The usual games are all-fours, all-fives, cribbage, and put. Whist is known to a few, but is never played, being considered dull and slow. Of short whist they have not heard; "but," said one, whom I questioned on the subject, "if it's come into fashion, it'll soon be among us." The play is usually for beer, but the game is rendered exciting by bets both among the players and the lookers-on. "I'll back Jem for a yanepatine," says one. "Jack for a gen," cries another. A penny is the lowest sum laid, and five shillings generally the highest, but a shilling is not often exceeded. "We play fair among ourselves," said a costermonger to me—"aye, fairer than the aristocrats—but we'll take in anybody else." Where it is known that the landlord will not supply cards, "a sporting coster" carries a pack or two with him. The cards played with have rarely been stamped;

Original from HARVARD UNIVERSITY

they are generally dirty, and sometimes almost illegible, from long handling and spilled beer. Some men will sit patiently for hours at these games, and they watch the dealing round of the dingy cards intently, and without the attempt—common among politer gamesters—to appear indifferent, though they bear their losses well. In a full room of card-players, the groups are all shrouded in tobacco-smoke, and from them are heard constant sounds—according to the games they are engaged in—of "I'm low, and Ped's high." "Tip and me's game." "Fifteen four and a flush of five." I may remark it is curious that costermongers, who can neither read nor write, and who have no knowledge of the multiplication table, are skilful in all the intricacies and calculations of cribbage. There is not much quarrelling over the cards, unless strangers play with them, and then the costermongers all take part one with another, fairly or unfairly.

It has been said that there is a close resemblance between many of the characteristics of a very high class, socially, and a very low class. Those who remember the disclosures on a trial a few years back, as to how men of rank and wealth passed their leisure in card-playing—many of their lives being one continued leisure—can judge how far the analogy holds when the card-passion of the costermongers is described.

"Shove-halfpenny" is another game played by them; so is "Three up." Three halfpennies are thrown up, and when they fall all "heads" or all "tails," it is a mark; and the man who gets the greatest number of marks out of a given amount—three, or five, or more—wins. "Three-up" is played fairly among the costermongers; but is most frequently resorted to when strangers are present to "make a pitch,"—which is, in plain words, to cheat any stranger who is rash enough to bet upon them. "This is the way, sir," said an adept to me; "bless you, I can make them fall as I please. If I'm playing with Jo, and a stranger bets with Jo, why, of course, I make Jo win." This adept illustrated his skill to me by throwing up three halfpennies, and, five times out of six, they fell upon the floor, whether he threw them nearly to the ceiling or merely to his shoulder, all heads or all tails. The halfpence were the proper current coins—indeed, they were my own; and the result is gained by a peculiar position of the coins on the fingers, and a peculiar jerk in the throwing. There was an amusing manifestation of the pride of art in the way in which my obliging informant displayed his skill.

"Skittles" is another favourite amusement, and the costermongers class themselves among the best players in London. The game is always for beer, but betting goes on.

A fondness for "sparring" and "boxing" lingers among the rude members of some classes of the working men, such as the tanners. With the great majority of the costermongers this fondness is still as dominant as it was among the "higher classes," when boxers were the pets of princes and nobles. The sparring among the costers is not for money, but for beer and "a lark"—a convenient word covering much mischief. Two out of every ten landlords, whose houses are patronised by these lovers of "the art of self-defence," supply gloves. Some charge *2d.* a night for their use; others only *1d.* The sparring seldom continues long, sometimes not above a quarter of an hour; for the costermongers, though excited for a while, weary of sports in which they cannot personally participate, and in the beer-shops only two spar at a time, though fifty or sixty may be present. The shortness of the duration of this pastime may be one reason why it seldom leads to quarrelling. The stake is usually a "top of reeb," and the winner is the man who gives the first "noser;" a *bloody* nose however is required to show that the blow was veritably a noser. The costermongers boast of their skill in pugilism as well as at skittles. "We are all handy with our fists," said one man, "and are matches, aye, and more than matches, for anybody but reg'lar boxers. We've stuck to the ring, too, and gone reg'lar to the fights, more than any other men."

"Twopenny-hops" are much resorted to by the costermongers, men and women, boys and girls. At these dances decorum is sometimes, but not often, violated. "The women," I was told by one man, "doesn't show their necks as I've seen the ladies do in them there pictures of high life in the shop-winders, or on the stage. Their Sunday gowns, which is their dancing gowns, ain't made that way." At these "hops" the clog-hornpipe is often danced, and sometimes a collection is made to ensure the performance of a first-rate professor of that dance; sometimes, and more frequently, it is volunteered gratuitously. The other dances are jigs, "flash jigs"—hornpipes in fetters—a dance rendered popular by the success of the acted "Jack Sheppard"—polkas, and country-dances, the last-mentioned being generally demanded by the women. Waltzes are as yet unknown to them. Sometimes they do the "pipe-dance." For this a number of tobacco-pipes, about a dozen, are laid close together on the floor, and the dancer places the toe of his boot between the different pipes, keeping time with the music. Two of the pipes are arranged as a cross, and the toe has to be inserted between each of the angles, without breaking them. The numbers present at these "hops" vary from 30 to 100 of both sexes, their ages being from 14 to 45, and the female sex being slightly predominant as to the proportion of those in attendance. At these "hops" there is nothing of the leisurely style of dancing—half a glide and half a skip—but vigorous, laborious capering. The hours are from half-past eight to twelve, sometimes to one or two in the morning, and never later than two, as the costermongers are early risers. There is sometimes a good deal of drinking; some of the young girls being often pressed to drink, and frequently yielding to the temptation. From *1l.* to *7l.* is spent in drink at a hop; the youngest men or lads present spend the most, especially in that act of costermonger

politeness—"treating the gals." The music is always a fiddle, sometimes with the addition of a harp and a cornopean. The band is provided by the costermongers, to whom the assembly is confined; but during the present and the last year, when the costers' earnings have been less than the average, the landlord has provided the harp, whenever that instrument has added to the charms of the fiddle. Of one use to which these "hops" are put I have given an account, under the head of "Marriage."

The other amusements of this class of the community are the theatre and the penny concert, and their visits are almost entirely confined to the galleries of the theatres on the Surrey-side—the Surrey, the Victoria, the Bower Saloon, and (but less frequently) Astley's. Three times a week is an average attendance at theatres and dances by the more prosperous costermongers. The most intelligent man I met with among them gave me the following account. He classes himself with the many, but his tastes are really those of an educated man:—"Love and murder suits us best, sir; but within these few years I think there's a great deal more liking for deep tragedies among us. They set men a thinking; but then we all consider them too long. Of *Hamlet* we can make neither end nor side; and nine out of ten of us—ay, far more than that—would like it to be confined to the ghost scenes, and the funeral, and the killing off at the last. *Macbeth* would be better liked, if it was only the witches and the fighting. The high words in a tragedy we call jaw-breakers, and say we can't tumble to that barrikin. We always stay to the last, because we've paid for it all, or very few costers would see a tragedy out if any money was returned to those leaving after two or three acts. We are fond of music. Nigger music was very much liked among us, but it's stale now. Flash songs are liked, and sailors' songs, and patriotic songs. Most costers—indeed, I can't call to mind an exception—listen very quietly to songs that they don't in the least understand. We have among us translations of the patriotic French songs. 'Mourir pour la patrie' is very popular, and so is the 'Marseillaise.' A song to take hold of us must have a good chorus." "They like something, sir, that is worth hearing," said one of my informants, "such as the 'Soldier's Dream,' 'The Dream of Napoleon,' or 'I 'ad a dream—an 'appy dream.'"

The songs in ridicule of Marshal Haynau, and in laudation of Barclay and Perkin's draymen, were and are very popular among the costers; but none are more popular than Paul Jones—"A noble commander, Paul Jones was his name." Among them the chorus of "Britons never shall be slaves," is often rendered "Britons always shall be slaves." The most popular of all songs with the class, however, is "Duck-legged Dick," of which I give the first verse.

"Duck-legged Dick had a donkey,
And his lush loved much for to swill,
One day he got rather lumpy,
And got sent seven days to the mill.
His donkey was taken to the green-yard,
A fate which he never deserved.
Oh! it was such a regular mean yard,
That alas! the poor moke got starved.
Oh! bad luck can't be prevented,
Fortune she smiles or she frowns,
He's best off that's contented,
To mix, sirs, the ups and the downs."

Their sports, are enjoyed the more, if they are dangerous and require both courage and dexterity to succeed in them. They prefer, if crossing a bridge, to climb over the parapet, and walk along on the stone coping. When a house is building, rows of coster lads will climb up the long ladders, leaning against the unslated roof, and then slide down again, each one resting on the other's shoulders. A peep show with a battle scene is sure of its coster audience, and a favourite pastime is fighting with cheap theatrical swords. They are, however, true to each other, and should a coster, who is the hero of his court, fall ill and go to a hospital, the whole of the inhabitants of his quarter will visit him on the Sunday, and take him presents of various articles so that "he may live well."

Among the men, rat-killing is a favourite sport. They will enter an old stable, fasten the door and then turn out the rats. Or they will find out some unfrequented yard, and at night time build up a pit with apple-case boards, and lighting up their lamps, enjoy the sport. Nearly every coster is fond of dogs. Some fancy them greatly, and are proud of making them fight. If when out working, they see a handsome stray, whether he is a "toy" or "sporting" dog, they whip him up—many of the class not being *very* particular whether the animals are stray or not.

Their dog fights are both cruel and frequent. It is not uncommon to see a lad walking with the trembling legs of a dog shivering under a bloody handkerchief, that covers the bitten and wounded body of an animal that has been figuring at some "match." These fights take place on the sly—the tap-room or back-yard of a beer-shop, being generally chosen for the purpose. A few men are let into the secret, and they attend to bet upon the winner, the police being carefully kept from the spot.

Pigeons are "fancied" to a large extent, and are kept in lath cages on the roofs of the houses. The lads look upon a visit to the Red-house, Battersea, where the pigeon-shooting takes place, as a great treat. They stand without the hoarding that encloses the ground, and watch for the wounded pigeons to fall, when a violent scramble takes place among them, each bird being valued at 3*d*. or 4*d*. So popular has this sport become, that some boys take dogs with them trained to retrieve the birds, and two Lambeth costers attend regularly after their morning's work with their guns, to shoot those that escape the 'shots' within.

A good pugilist is looked up to with great admiration by the costers, and fighting is considered to be a necessary part of a boy's education. Among them cowardice in any shape is despised

as being degrading and loathsome, indeed the man who would avoid a fight, is scouted by the whole of the court he lives in. Hence it is important for a lad and even a girl to know how to "work their fists well"—as expert boxing is called among them. If a coster man or woman is struck they are obliged to fight. When a quarrel takes place between two boys, a ring is formed, and the men urge them on to have it out, for they hold that it is a wrong thing to stop a battle, as it causes bad blood for life; whereas, if the lads fight it out they shake hands and forget all about it. Everybody practises fighting, and the man who has the largest and hardest muscle is spoken of in terms of the highest commendation. It is often said in admiration of such a man that "he could muzzle half a dozen bobbies before breakfast."

To serve out a policeman is the bravest act by which a costermonger can distinguish himself. Some lads have been imprisoned upwards of a dozen times for this offence; and are consequently looked upon by their companions as martyrs. When they leave prison for such an act, a subscription is often got up for their benefit. In their continual warfare with the force, they resemble many savage nations, from the cunning and treachery they use. The lads endeavour to take the unsuspecting "crusher" by surprise, and often crouch at the entrance of a court until a policeman passes, when a stone or a brick is hurled at him, and the youngster immediately disappears. Their love of revenge too, is extreme — their hatred being in no way mitigated by time; they will wait for months, following a policeman who has offended or wronged them, anxiously looking out for an opportunity of paying back the injury. One boy, I was told, vowed vengeance against a member of the force, and for six months never allowed the man to escape his notice. At length, one night, he saw the policeman in a row outside a public-house, and running into the crowd kicked him savagely, shouting at the same time: "Now, you b——, I've got you at last." When the boy heard that his persecutor was injured for life, his joy was very great, and he declared the twelvemonth's imprisonment he was sentenced to for the offence to be "dirt cheap." The whole of the court where the lad resided sympathized with the boy, and vowed to a man, that had he escaped, they would have subscribed a pad or two of dry herrings, to send him into the country until the affair had blown over, for he had shown himself a "plucky one."

It is called "plucky" to bear pain without complaining. To flinch from expected suffering is scorned, and he who does so is sneered at and told to wear a gown, as being more fit to be a woman. To show a disregard for pain, a lad, when without money, will say to his pal, "Give us a penny, and you may have a punch at my nose." They also delight in tattooing their chests and arms with anchors, and figures of different kinds. During the whole of this painful operation, the boy will not flinch, but laugh and joke with his admiring companions, as if perfectly at ease.

Gambling of Costermongers.

It would be difficult to find in the whole of this numerous class, a youngster who is not—what may be safely called—a desperate gambler. At the age of fourteen this love of play first comes upon the lad, and from that time until he is thirty or so, not a Sunday passes but he is at his stand on the gambling ground. Even if he has no money to stake, he will loll away the morning looking on, and so borrow excitement from the successes of others. Every attempt made by the police, to check this ruinous system, has been unavailing, and has rather given a gloss of daring courage to the sport, that tends to render it doubly attractive.

If a costermonger has an hour to spare, his first thought is to gamble away the time. He does not care what he plays for, so long as he can have a chance of winning something. Whilst waiting for a market to open, his delight is to find out some pieman and toss him for his stock, though, by so doing, he risks his market-money and only chance of living, to win that which he will give away to the first friend he meets. For the whole week the boy will work untiringly, spurred on by the thought of the money to be won on the Sunday. Nothing will damp his ardour for gambling, the most continued ill-fortune making him even more reckless than if he were the luckiest man alive.

Many a lad who had gone down to the gambling ground, with a good warm coat upon his back and his pocket well filled from the Saturday night's market, will leave it at evening penniless and coatless, having lost all his earnings, stock-money, and the better part of his clothing. Some of the boys, when desperate with "bad luck," borrow to the utmost limit of their credit; then they mortgage their "king's-man" or neck-tie, and they will even change their cord trousers, if better than those of the winner, so as to have one more chance at the turn of fortune. The coldest winter's day will not stop the Sunday's gathering on the river-side, for the heat of play warms them in spite of the sharp wind blowing down the Thames. If the weather be wet, so that the half-pence stick to the ground, they find out some railway-arch or else a beer-shop, and having filled the tap-room with their numbers, they muffle the table with handkerchiefs, and play secretly. When the game is very exciting, they will even forget their hunger, and continue to gamble until it is too dark to see, before they think of eating. One man told me, that when he was working the races with lemonade, he had often seen in the centre of a group, composed of costers, thimble-riggers and showmen, as much as 100*l.* on the ground at one time, in gold and silver. A friend of his, who had gone down in company with him, with a pony-truck of toys,

lost in less than an hour his earnings, truck, stock of goods, and great-coat. Vowing to have his revenge next time, he took his boy on his back, and started off on the tramp to London, there to borrow sufficient money to bring down a fresh lot of goods on the morrow, and then gamble away his earnings as before.

It is perfectly immaterial to the coster with whom he plays, whether it be a lad from the Lambeth potteries, or a thief from the Westminster slums. Very often, too, the gamblers of one costermonger district, will visit those of another, and work what is called "a plant" in this way. One of the visitors will go before hand, and, joining a group of gamblers, commence tossing. When sufficient time has elapsed to remove all suspicion of companionship, his mate will come up and commence betting on each of his pals' throws with those standing round. By a curious quickness of hand, a coster can make the toss tell favourably for his wagering friend, who meets him after the play is over in the evening, and shares the spoil.

The spots generally chosen for the Sunday's sport are in secret places, half-hidden from the eye of the passers, where a scout can give quick notice of the approach of the police: in the fields about King's-cross, or near any unfinished railway buildings. The Mint, St. George's-fields, Blackfriars'-road, Bethnal-green, and Marylebone, are all favourite resorts. Between Lambeth and Chelsea, the shingle on the left side of the Thames, is spotted with small rings of lads, half-hidden behind the barges. One boy (of the party) is always on the look out, and even if a stranger should advance, the cry is given of "Namous" or "Kool Eslop." Instantly the money is whipped-up and pocketed, and the boys stand chattering and laughing together. It is never difficult for a coster to find out where the gambling parties are, for he has only to stop the first lad he meets, and ask him where the "erht pu" or "three up" is going on, to discover their whereabouts.

If during the game a cry of "Police!" should be given by the looker-out, instantly a rush at the money is made by any one in the group, the costers preferring that a stranger should have the money rather than the policeman. There is also a custom among them, that the ruined player should be started again by a gift of *2d.* in every shilling lost, or, if the loss is heavy, a present of four or five shillings is made; neither is it considered at all dishonourable for the party winning to leave with the full bloom of success upon him.

That the description of one of these Sunday scenes might be more truthful, a visit was paid to a gambling-ring close to ——. Although not twenty yards distant from the steam-boat pier, yet the little party was so concealed among the the coal-barges, that not a head could be seen. The spot chosen was close to a small narrow court, leading from the street to the water-side, and here the lad on the look-out was stationed. There were about thirty young fellows, some tall strapping youths, in the costers' cable-cord costume,—others, mere boys, in rags, from the potteries, with their clothes stained with clay. The party was hidden from the river by the black dredger-boats on the beach; and it was so arranged, that should the alarm be given, they might leap into the coal-barges, and hide until the intruder had retired. Seated on some oars stretched across two craft, was a mortar-stained bricklayer, keeping a look-out towards the river, and acting as a sort of umpire in all disputes. The two that were tossing had been playing together since early morning; and it was easy to tell which was the loser, by the anxious-looking eye and compressed lip. He was quarrelsome too; and if the crowd pressed upon him, he would jerk his elbow back savagely, saying, "I wish to C——t you'd stand backer." The winner, a short man, in a mud-stained canvas jacket, and a week's yellow beard on his chin, never spake a word beyond his "heads," or "tails;" but his cheeks were red, and the pipe in his mouth was unlit, though he puffed at it.

In their hands they each held a long row of halfpence, extending to the wrist, and topped by shillings and half-crowns. Nearly every one round had coppers in his hands, and bets were made and taken as rapidly as they could be spoken. "I lost a sov. last night in less than no time," said one man, who, with his hands in his pockets, was looking on; "never mind—I musn't have no wenson this week, and try again next Sunday."

The boy who was losing was adopting every means to "bring back his luck again." Before crying, he would toss up a halfpenny three times, to see what he should call. At last, with an oath, he pushed aside the boys round him, and shifted his place, to see what that would do; it had a good effect, for he won toss after toss in a curiously fortunate way, and then it was strange to watch his mouth gradually relax and his brows unknit. His opponent was a little startled, and passing his fingers through his dusty hair, said, with a stupid laugh, "Well, I never see the likes." The betting also began to shift. "Sixpence Ned wins!" cried three or four; "Sixpence he loses!" answered another; "Done!" and up went the halfpence. "Half-a-crown Joe loses!"—"Here you are," answered Joe, but he lost again. "I'll try you a 'gen'" (shilling) said a coster; "And a 'rouf yenap'" (fourpence), added the other. "Say a 'exes'" (sixpence).—"Done!" and the betting continued, till the ground was spotted with silver and halfpence.

"That's ten bob he's won in five minutes," said Joe (the loser), looking round with a forced smile; but Ned (the winner) never spake a word, even when he gave any change to his antagonist; and if he took a bet, he only nodded to the one that offered it, and threw down his money. Once, when he picked up more than a sovereign from the ground, that he had won in one throw, a washed sweep, with a black rim round his neck, said, "There's a hog!" but

Original from HARVARD UNIVERSITY

there wasn't even a smile at the joke. At last Joe began to feel angry, and stamping his foot till the water squirted up from the beach, cried, "It's no use; luck's set in him—he'd muck a thousand!" and so he shifted his ground, and betted all round on the chance of better fortune attending the movement. He lost again, and some one bantering said, "You'll win the shine-rag, Joe," meaning that he would be "cracked up," or ruined, if he continued.

When one o'clock struck, a lad left, saying, he was "going to get an inside lining" (dinner). The sweep asked him what he was going to have. "A two-and-half plate, and a ha'p'orth of smash" (a plate of soup and a ha'p'orth of mashed potatoes), replied the lad, bounding into the court. Nobody else seemed to care for his dinner, for all stayed to watch the gamblers.

Every now and then some one would go up the court to see if the lad watching for the police was keeping a good look-out; but the boy never deserted his post, for fear of losing his threepence. If he had, such is the wish to protect the players felt by every lad, that even whilst at dinner, one of them, if he saw a policeman pass, would spring up and rush to the gambling ring to give notice.

When the tall youth, "Ned," had won nearly all the silver of the group, he suddenly jerked his gains into his coat-pocket, and saying, "I've done," walked off, and was out of sight in an instant. The surprise of the loser and all around was extreme. They looked at the court where he had disappeared, then at one another, and at last burst out into one expression of disgust. "There's a scurf!" said one; "He's a regular scab," cried another; and a coster declared that he was "a trossено, and no mistake." For although it is held to be fair for the winner to go whenever he wishes, yet such conduct is never relished by the losers.

It was then determined that "they would have him to rights" the next time he came to gamble; for every one would set at him, and win his money, and then "turn up," as he had done.

The party was then broken up, the players separating to wait for the new-comers that would be sure to pour in after dinner.

"Vic. Gallery."

On a good attractive night, the rush of costers to the threepenny gallery of the Coburg (better known as "the Vic") is peculiar and almost awful.

The long zig-zag staircase that leads to the pay box is crowded to suffocation at least an hour before the theatre is opened; but, on the occasion of a piece with a good murder in it, the crowd will frequently collect as early as three o'clock in the afternoon. Lads stand upon the broad wooden bannisters about 50 feet from the ground, and jump on each others' backs, or adopt any expedient they can think of to obtain a good place.

The walls of the well-staircase having a remarkably fine echo, and the wooden floor of the steps serving as a sounding board, the shouting, whistling, and quarrelling of the impatient young costers is increased tenfold. If, as sometimes happens, a song with a chorus is started, the ears positively ache with the din, and when the chant has finished it seems as though a sudden silence had fallen on the people. To the centre of the road, and all round the door, the mob is in a ferment of excitement, and no sooner is the money-taker at his post than the most frightful rush takes place, every one heaving with his shoulder at the back of the person immediately in front of him. The girls shriek, men shout, and a nervous fear is felt lest the massive staircase should fall in with the weight of the throng, as it lately did with the most terrible results. If a hat tumbles from the top of the staircase, a hundred hands snatch at it as it descends. When it is caught a voice roars above the tumult, "All right, Bill, I've got it"—for they all seem to know one another—"Keep us a pitch and I'll bring it."

To any one unaccustomed to be pressed flat it would be impossible to enter with the mob. To see the sight in the gallery it is better to wait until the first piece is over. The ham-sandwich men and pig-trotter women will give you notice when the time is come, for with the first clatter of the descending footsteps they commence their cries.

There are few grown-up men that go to the "Vic" gallery. The generality of the visitors are lads from about twelve to three-and-twenty, and though a few black-faced sweeps or whitey-brown dustmen may be among the throng, the gallery audience consists mainly of costermongers. Young girls, too, are very plentiful, only one-third of whom now take their babies, owing to the new regulation of charging half-price for infants. At the foot of the staircase stands a group of boys begging for the return checks, which they sell again for 1½*d.* or 1*d.*, according to the lateness of the hour.

At each step up the well-staircase the warmth and stench increase, until by the time one reaches the gallery doorway, a furnace-heat rushes out through the entrance that seems to force you backwards, whilst the odour positively prevents respiration. The mob on the landing, standing on tiptoe and closely wedged together, resists any civil attempt at gaining a glimpse of the stage, and yet a coster lad will rush up, elbow his way into the crowd, then jump up on to the shoulders of those before him, and suddenly disappear into the body of the gallery.

The gallery at "the Vic" is one of the largest in London. It will hold from 1500 to 2000 people, and runs back to so great a distance, that the end of it is lost in shadow, excepting where the little gas-jets, against the wall, light up the two or three faces around them. When the gallery is well packed, it is usual to see piles of boys on each others shoulders at the back, while on the partition

boards, dividing off the slips, lads will pitch themselves, despite the spikes.

As you look up the vast slanting mass of heads from the upper boxes, each one appears on the move. The huge black heap, dotted with faces, and spotted with white shirt sleeves, almost pains the eye to look at, and should a clapping of hands commence, the twinkling nearly blinds you. It is the fashion with the mob to take off their coats; and the cross-braces on the backs of some, and the bare shoulders peeping out of the ragged shirts of others, are the only variety to be found. The bonnets of the "ladies" are hung over the iron railing in front, their numbers nearly hiding the panels, and one of the amusements of the lads in the back seats consists in pitching orange peel or nutshells into them, a good aim being rewarded with a shout of laughter.

When the orchestra begins playing, before "the gods" have settled into their seats, it is impossible to hear a note of music. The puffed-out cheeks of the trumpeters, and the raised drumsticks tell you that the overture has commenced, but no tune is to be heard. An occasional burst of the full band being caught by gushes, as if a high wind were raging. Recognitions take place every moment, and "Bill Smith" is called to in a loud voice from one side, and a shout in answer from the other asks "What's up?" Or family secrets are revealed, and "Bob Triller" is asked where "Sal" is, and replies amid a roar of laughter, that she is "a-larning the pynanney."

By-and-by a youngster, who has come in late, jumps up over the shoulders at the door, and doubling himself into a ball, rolls down over the heads in front, leaving a trail of commotion for each one as he passes aims a blow at the fellow. Presently a fight is sure to begin, and then every one rises from his seat whistling and shouting; three or four pairs of arms fall to, the audience waving their hands till the moving mass seems like microscopic eels in paste. But the commotion ceases suddenly on the rising of the curtain, and then the cries of "Silence!" "Ord-a-a-r!" "Ord-a-a-r!" make more noise than ever.

The "Vic" gallery is not to be moved by touching sentiment. They prefer vigorous exercise to any emotional speech. "The Child of the Storm's" declaration that she would share her father's "death or imprisonment as her duty," had no effect at all, compared with the split in the hornpipe. The shrill whistling and brayvos that followed the tar's performance showed how highly it was relished, and one "god" went so far as to ask "how it was done." The comic actor kicking a dozen Polish peasants was encored, but the grand banquet of the Czar of all the Russias only produced merriment, and a request that he would "give them a bit" was made directly the Emperor took the willow-patterned plate in his hand. All affecting situations were sure to be interrupted by cries of "orda-a-r;" and the lady begging for her father's life was told to "speak up old gal;" though when the heroine of the "dummestic dreamer" (as they call it) told the general of all the Cossack forces "not to be a fool," the uproar of approbation grew greater than ever,—and when the lady turned up her swan's-down cuffs, and seizing four Russian soldiers shook them successively by the collar, then the enthusiasm knew no bounds, and the cries of "Bray-vo Vincent! Go it my tulip!" resounded from every throat.

Altogether the gallery audience do not seem to be of a gentle nature. One poor little lad shouted out in a crying tone, "that he couldn't see," and instantly a dozen voices demanded "that he should be thrown over."

Whilst the pieces are going on, brown, flat bottles are frequently raised to the mouth, and between the acts a man with a tin can, glittering in the gas-light, goes round crying, "Port-a-a-a-r! who's for port-a-a-a-r." As the heat increased the faces grew bright red, every bonnet was taken off, and ladies could be seen wiping the perspiration from their cheeks with the play-bills.

No delay between the pieces will be allowed, and should the interval appear too long, some one will shout out—referring to the curtain—"Pull up that there winder blind!" or they will call to the orchestra, saying, "Now then you catgut-scrapers! Let's have a ha'purth of liveliness." Neither will they suffer a play to proceed until they have a good view of the stage, and "Higher the blue," is constantly shouted, when the sky is too low, or "Light up the moon," when the transparency is rather dim.

The dances and comic songs, between the pieces, are liked better than any thing else. A highland fling is certain to be repeated, and a stamping of feet will accompany the tune, and a shrill whistling, keep time through the entire performance.

But the grand hit of the evening is always when a song is sung to which the entire gallery can join in chorus. Then a deep silence prevails all through the stanzas. Should any burst in before his time, a shout of "orda-a-r" is raised, and the intruder put down by a thousand indignant cries. At the proper time, however, the throats of the mob burst forth in all their strength. The most deafening noise breaks out suddenly, while the cat-calls keep up the tune, and an imitation of a dozen Mr. Punches squeak out the words. Some actors at the minor theatres make a great point of this, and in the bill upon the night of my visit, under the title of "There's a good time coming, boys," there was printed, "assisted by the most numerous and effective chorus in the metropolis—" meaning the whole of the gallery. The singer himself started the mob, saying, "Now then, the Exeter Hall touch if you please gentlemen," and beat time with his hand, parodying M. Jullien with his *baton*. An "angcore" on such occasions is always

demanded. and, despite a few murmurs of "change it to 'Duck-legged Dick,'" invariably insisted on.

The Politics of Costermongers.—Policemen.

The notion of the police is so intimately blended with what may be called the politics of the costermongers that I give them together.

The politics of these people are detailed in a few words—they are nearly all Chartists. "You might say, sir," remarked one of my informants, "that they *all* were Chartists, but as its better you should rather be under than over the mark, say *nearly* all." Their ignorance, and their being impulsive, makes them a dangerous class. I am assured that in every district where the costermongers are congregated, one or two of the body, more intelligent than the others, have great influence over them; and these leading men are all Chartists, and being industrious and not unprosperous persons, their pecuniary and intellectual superiority cause them to be regarded as oracles. One of these men said to me: "The costers think that working-men know best, and so they have confidence in us. I like to make men discontented, and I will make them discontented while the present system continues, because it's all for the middle and the moneyed classes, and nothing, in the way of rights, for the poor. People fancy when all's quiet that all's stagnating. Propagandism is going on for all that. It's when all's quiet that the seed's a growing. Republicans and Socialists are pressing their doctrines."

The costermongers have very vague notions of an aristocracy; they call the more prosperous of their own body "aristocrats." Their notions of an aristocracy of birth or wealth seem to be formed on their opinion of the rich, or reputed rich salesmen with whom they deal; and the result is anything but favourable to the nobility.

Concerning free-trade, nothing, I am told, can check the costermongers' fervour for a cheap loaf. A Chartist costermonger told me that he knew numbers of costers who were keen Chartists without understanding anything about the six points.

The costermongers frequently attend political meetings, going there in bodies of from six to twelve. Some of them, I learned, could not understand why Chartist leaders exhorted them to peace and quietness, when they might as well fight it out with the police at once. The costers boast, moreover, that they stick more together in any "row" than any other class. It is considered by them a reflection on the character of the thieves that they are seldom true to one another.

It is a matter of marvel to many of this class that people can live without working. The ignorant costers have no knowledge of "property," or "income," and conclude that the non-workers all live out of the taxes. Of the taxes generally they judge from their knowledge that tobacco, which they account a necessary of life, pays 3*s.* per lb. duty.

As regards the police, the hatred of a costermonger to a "peeler" is intense, and with their opinion of the police, all the more ignorant unite that of the governing power. "Can you wonder at it, sir," said a costermonger to me, "that I hate the police? They drive us about, we must move on, we can't stand here, and we can't pitch there. But if we're cracked up, that is if we're forced to go into the Union (I've known it both at Clerkenwell and the City of London workhouses,) why the parish gives us money to buy a barrow, or a shallow, or to hire them, and leave the house and start for ourselves: and what's the use of that, if the police won't let us sell our goods?—Which is right, the parish or the police?"

To thwart the police in any measure the costermongers readily aid one another. One very common procedure, if the policeman has seized a barrow, is to whip off a wheel, while the officers have gone for assistance; for a large and loaded barrow requires two men to convey it to the green-yard. This is done with great dexterity; and the next step is to dispose of the stock to any passing costers, or to any "standing" in the neighbourhood, and it is honestly accounted for. The policemen, on their return, find an empty, and unwheelable barrow, which they must carry off by main strength, amid the jeers of the populace.

I am assured that in case of a political riot every "coster" would seize his policeman.

Marriage and Concubinage of Costermongers.

Only one-tenth—at the outside one-tenth—of the couples living together and carrying on the costermongering trade, are married. In Clerkenwell parish, however, where the number of married couples is about a fifth of the whole, this difference is easily accounted for, as in Advent and Easter the incumbent of that parish marries poor couples without a fee. Of the rights of "legitimate" or "illegitimate" children the costermongers understand nothing, and account it a mere waste of money and time to go through the ceremony of wedlock when a pair can live together, and be quite as well regarded by their fellows, without it. The married women associate with the unmarried mothers of families without the slightest scruple. There is no honour attached to the marriage state, and no shame to concubinage. Neither are the unmarried women less faithful to their "partners" than the married; but I understand that, of the two classes, the unmarried betray the most jealousy.

As regards the fidelity of these women I was assured that, "in anything like good times," they were rigidly faithful to their husbands or paramours; but that, in the worst pinch of poverty, a departure from this fidelity—if it provided a few meals or a fire—was not considered at all heinous. An old costermonger, who had been mixed up with other callings, and whose

prejudices were certainly not in favour of his present trade, said to me, "What I call the working girls, sir, are as industrious and as faithful a set as can well be. I'm satisfied that they're more faithful to their mates than other poor working women. I never knew one of these working girls do wrong that way. They're strong, hearty, healthy girls, and keep clean rooms. Why, there's numbers of men leave their stock-money with their women, just taking out two or three shillings to gamble with and get drunk upon. They sometimes take a little drop themselves, the women do, and get beaten by their husbands for it, and hardest beaten if the man's drunk himself. They're sometimes beaten for other things too, or for nothing at all. But they seem to like the men better for their beating them. I never could make that out." Notwithstanding this fidelity, it appears that the "larking and joking" of the young, and sometimes of the middle-aged people, among themselves, is anything but delicate. The unmarried separate as seldom as the married. The fidelity characterizing the women does not belong to the men.

The dancing-rooms are the places where matches are made up. There the boys go to look out for "mates," and sometimes a match is struck up the first night of meeting, and the couple live together forthwith. The girls at these dances are all the daughters of costermongers, or of persons pursuing some other course of street life. Unions take place when the lad is but 14. Two or three out of 100 have their female helpmates at that early age; but the female is generally a couple of years older than her partner. Nearly all the costermongers form such alliances as I have described, when both parties are under twenty. One reason why these alliances are contracted at early ages is, that when a boy has assisted his father, or any one engaging him, in the business of a costermonger, he knows that he can borrow money, and hire a shallow or a barrow—or he may have saved *5s.*—"and then if the father vexes him or snubs him," said one of my informants, "he'll tell his father to go to h—l, and he and his gal will start on their own account."

Most of the costermongers have numerous families, but not those who contract alliances very young. The women continue working down to the day of their confinement.

"Chance children," as they are called, or children unrecognised by any father, are rare among the young women of the costermongers.

Religion of Costermongers.

An intelligent and trustworthy man, until very recently actively engaged in costermongering, computed that not 3 in 100 costermongers had ever been in the interior of a church, or any place of worship, or knew what was meant by Christianity. The same person gave me the following account, which was confirmed by others:

"The costers have no religion at all, and very little notion, or none at all, of what religion or a future state is. Of all things they hate tracts. They hate them because the people leaving them never give them anything, and as they can't read the tract—not one in forty—they're vexed to be bothered with it. And really what is the use of giving people reading before you've taught them to read? Now, they respect the City Missionaries, because they read to them—and the costers will listen to reading when they don't understand it—and because they visit the sick, and sometimes give oranges and such like to them and the children. I've known a City Missionary buy a shilling's worth of oranges of a coster, and give them away to the sick and the children—most of them belonging to the costermongers—down the court, and that made him respected there. I think the City Missionaries have done good. But I'm satisfied that if the costers had to profess themselves of some religion to-morrow, they would all become Roman Catholics, every one of them. This is the reason:—London costers live very often in the same courts and streets as the poor Irish, and if the Irish are sick, be sure there comes to them the priest, the Sisters of Charity—they *are* good women—and some other ladies. Many a man that's not a Catholic, has rotted and died without any good person near him. Why, I lived a good while in Lambeth, and there wasn't one coster in 100, I'm satisfied, knew so much as the rector's name,—though Mr. Dalton's a very good man. But the reason I was telling you of, sir, is that the costers reckon *that* religion's the best that gives the most in charity, and they think the Catholics do this. I'm not a Catholic myself, but I believe every word of the Bible, and have the greater belief that it's the word of God because it teaches democracy. The Irish in the courts get sadly chaffed by the others about their priests,—but they'll die for the priest. Religion is a regular puzzle to the costers. They see people come out of church and chapel, and as they're mostly well dressed, and there's very few of their own sort among the church-goers, the costers somehow mix up being religious with being respectable, and so they have a queer sort of feeling about it. It's a mystery to them. It's shocking when you come to think of it. They'll listen to any preacher that goes among them; and then a few will say—I've heard it often—'A b—y fool, why don't he let people go to h-ll their own way?' There's another thing that makes the costers think so well of the Catholics. If a Catholic coster—there's only very few of them—is 'cracked up' (penniless), he's often started again, and the others have a notion that it's through some chapel-fund. I don't know whether it is so or not, but I know the cracked-up men are started again, if they're Catholics. It's still the stranger that the regular costermongers, who are nearly all Londoners, should have such respect for the Roman Catholics, when they have such a hatred of the Irish, whom they look upon as intruders and underminers."—"If a missionary came among

us with plenty of money," said another costermonger, "he might make us all Christians or Turks, or anything he liked." Neither the Latter-day Saints, nor any similar sect, have made converts among the costermongers.

OF THE UNEDUCATED STATE OF COSTERMONGERS.

I HAVE stated elsewhere, that only about one in ten of the regular costermongers is able to read. The want of education among both men and women is deplorable, and I tested it in several instances. The following statement, however, from one of the body, is no more to be taken as representing the ignorance of the class generally, than are the clear and discriminating accounts I received from intelligent costermongers to be taken as representing the intelligence of the body.

The man with whom I conversed, and from whom I received the following statement, seemed about thirty. He was certainly not ill-looking, but with a heavy cast of countenance, his light blue eyes having little expression. His statements, or opinions, I need hardly explain, were given both spontaneously in the course of conversation, and in answer to my questions. I give them almost verbatim, omitting oaths and slang:

"Well, times is bad, sir," he said, "but it's a deadish time. I don't do so well at present as in middlish times, I think. When I served the Prince of Naples, not far from here (I presume that he alluded to the Prince of Capua), I did better and times was better. That was five years ago, but I can't say to a year or two. He was a good customer, and was wery fond of peaches. I used to sell them to him, at 12*s.* the plasket when they was new. The plasket held a dozen, and cost me 6*s.* at Covent-garden—more sometimes; but I didn't charge him more when they did. His footman was a black man, and a ignorant man quite, and his housekeeper was a Englishwoman. He was the Prince o' Naples, was my customer; but I don't know what he was like, for I never saw him. I've heard that he was the brother of the king of Naples. I can't say where Naples is, but if you was to ask at Euston-square, they'll tell you the fare there and the time to go it in. It may be in France for anything I know may Naples, or in Ireland. Why don't you ask at the square? I went to Croydon once by rail, and slept all the way without stirring, and so you may to Naples for anything I know. I never heard of the Pope being a neighbour of the King of Naples. Do you mean living next door to him? But I don't know nothing of the King of Naples, only the prince. I don't know what the Pope is. Is he any trade? It's nothing to me, when he's no customer of mine. I have nothing to say about nobody that ain't no customers. My crabs is caught in the sea, in course. I gets them at Billingsgate. I never saw the sea, but it's salt-water, I know. I can't say whereabouts it lays. I believe it's in the hands of the Billingsgate salesmen—all of it? I've heard of shipwrecks at sea, caused by drownding, in course. I never heard that the Prince of Naples was ever at sea. I like to talk about him, he was such a customer when he lived near here." (Here he repeated his account of the supply of peaches to his Royal Highness.) "I never was in France, no, sir, never. I don't know the way. Do you think I could do better there? I never was in the Republic there. What's it like? Bonaparte? O, yes; I've heard of him. He was at Waterloo. I didn't know he'd been alive now and in France, as you ask me about him. I don't think you're larking, sir. Did I hear of the French taking possession of Naples, and Bonaparte making his brother-in-law king? Well, I didn't, but it may be true, because I served the Prince of Naples, what *was* the brother of the king. I never heard whether the Prince was the king's older brother or his younger. I wish he may turn out his older if there's property coming to him, as the oldest has the first turn; at least so I've heard—first come, first served. I've worked the streets and the courts at all times. I've worked them by moonlight, but you couldn't see the moonlight where it was busy. I can't say how far the moon's off us. It's nothing to me, but I've seen it a good bit higher than St. Paul's. I don't know nothing about the sun. Why do you ask? It must be nearer than the moon for it's warmer,—and if they're both fire, that shows it. It's like the tap-room grate and that bit of a gas-light; to compare the two is. What was St. Paul's that the moon was above? A church, sir; so I've heard. I never was in a church. O, yes, I've heard of God; he made heaven and earth; I never heard of his making the sea; that's another thing, and you can best learn about that at Billingsgate. (He seemed to think that the sea was an appurtenance of Billingsgate.) Jesus Christ? Yes. I've heard of him. Our Redeemer? Well, I only wish I could redeem my Sunday togs from my uncle's."

Another costermonger, in answer to inquiries, said: "I 'spose you think us 'riginal coves that you ask. We're not like Methusalem, or some such swell's name, (I presume that Malthus was meant) as wanted to murder children afore they was born, as I once heerd lectured about—we're nothing like that."

Another on being questioned, and on being told that the information was wanted for the press, replied: "The press? I'll have nothing to say to it. We are oppressed enough already."

That a class numbering 30,000 should be permitted to remain in a state of almost brutish ignorance is a national disgrace. If the London costers belong especially to the "dangerous classes," the danger of such a body is assuredly an evil of our own creation; for the gratitude of the poor creatures to any one who seeks to give them the least knowledge is almost pathetic.

Language of Costermongers.

The slang language of the costermongers is not very remarkable for originality of construction; it possesses no humour: but they boast that it is known only to themselves; it is far beyond the Irish, they say, and puzzles the Jews. The *root* of the costermonger tongue, so to speak, is to give the words spelt backward, or rather pronounced rudely backward,—for in my present chapter the language has, I believe, been reduced to orthography for the first time. With this backward pronunciation, which is very arbitrary, are mixed words reducible to no rule and seldom referrable to any origin, thus complicating the mystery of this unwritten tongue; while any syllable is added to a proper slang word, at the discretion of the speaker.

Slang is acquired very rapidly, and some costermongers will converse in it by the hour. The women use it sparingly; the girls more than the women; the men more than the girls; and the boys most of all. The most ignorant of all these classes deal most in slang and boast of their cleverness and proficiency in it. In their conversations among themselves, the following are invariably the terms used in money matters. A rude back-spelling may generally be traced:

Flatch	Halfpenny.
Yenep	Penny.
Owt-yenep	Twopence.
Erth-yenep	Threepence.
Rouf-yenep	Fourpence.
Ewif-yenep	Fivepence.
Exis-yenep	Sixpence.
Neves-yenep	Sevenpence.
Teaich-yenep	Eightpence.
Enine-yenep	Ninepence.
Net-yenep	Tenpence.
Leven	Elevenpence.
Gen	Twelvepence.
Yenep-flatch	Three half-pence.

and so on through the penny-halfpennies.

It was explained to me by a costermonger, who had introduced some new words into the slang, that "leven" was allowed so closely to resemble the proper word, because elevenpence was almost an unknown sum to costermongers, the transition—weights and measures notwithstanding—being immediate from 10*d.* to 1*s.*

"Gen" is a shilling and the numismatic sequence is pursued with the gens, as regards shillings, as with the "yeneps" as regards pence. The blending of the two is also according to the same system as "Owt-gen, teaich-yenep" two-and-eightpence. The exception to the uniformity of the "gen" enumeration is in the sum of 8*s.*, which instead of "teaich-gen" is "teaich-guy:" a deviation with ample precedents in all civilised tongues.

As regards the larger coins the translation into slang is not reducible into rule. The following are the costermonger coins of the higher value:

Couter	Sovereign.
Half-Couter, or *Net-gen*	Half-sovereign.
Ewif-gen	Crown.
Flatch-yneork	Half-crown.

The costermongers still further complicate their slang by a mode of multiplication. They thus say, "Erth Ewif-gens" or 3 times 5*s.*, which means of course 15*s.*

Speaking of this language, a costermonger said to me: "The Irish can't tumble to it anyhow; the Jews can tumble better, but we're *their* masters. Some of the young salesmen at Billingsgate understand us,—but only at Billingsgate; and they think they're uncommon clever, but they're not quite up to the mark. The police don't understand us at all. It would be a pity if they did."

I give a few more phrases:

A doogheno or dabheno?	Is it a good or bad market?
A regular trosseno	A regular bad one.
On	No.
Say	Yes.
Tumble to your barrikin	Understand you.
Top o' reeb	Pot of beer.
Doing dab	Doing badly.
Cool him	Look at him.

The latter phrase is used when one costermonger warns another of the approach of a policeman "who might order him to move on, or be otherwise unpleasant." "Cool" (look) is exclaimed, or "Cool him" (look at him). One costermonger told me as a great joke that a very stout policeman, who was then new to the duty, was when in a violent state of perspiration, much offended by a costermonger saying "Cool him."

Cool the esclop	Look at the police.
Cool the namesclop	Look at the policeman.
Cool ta the dillo nemo	Look at the old woman;

said of any woman, young or old, who, according to costermonger notions, is "giving herself airs."

This language seems confined, in its general use, to the immediate objects of the costermonger's care; but is, among the more acute members of the fraternity, greatly extended, and is capable of indefinite extension.

The costermongers oaths, I may conclude, are all in the vernacular; nor are any of the common salutes, such as "How d'you do?" or "Good-night" known to their slang.

Kennetseeno . . . . Stinking;
(applied principally to the quality of fish.)
Flatch kanurd . . Half-drunk.
Flash it . . . . . Show it;
(in cases of bargains offered.)
On doog . . . . . No good.

Cross chap	A thief.
Showfulls	Bad money;
(seldom in the hands of costermongers.)	
I'm on to the deb . .	I'm going to bed.
Do the tightner . .	Go to dinner.
Nommus	Be off.
Tol	Lot, Stock, or Share.

Many costermongers, "but principally—perhaps entirely,"—I was told, "those who had not been regular born and bred to the trade, but had taken to it when cracked up in their own," do not trouble themselves to acquire any knowledge of slang. It is not indispensable for the carrying on of their business; the grand object, however, seems to be, to shield their bargainings at market, or their conversation among themselves touching their day's work and profits, from the knowledge of any Irish or uninitiated fellow-traders.

The simple principle of costermonger slang—that of pronouncing backward, may cause its acquirement to be regarded by the educated as a matter of ease. But it is a curious fact that lads who become costermongers' boys, without previous association with the class, acquire a very ready command of the language, and this though they are not only unable to spell, but don't "know a letter in a book." I saw one lad, whose parents had, until five or six months back, resided in the country. The lad himself was fourteen; he told me he had not been "a costermongering" more than three months, and prided himself on his mastery over slang. To test his ability, I asked him the coster's word for "hippopotamus;" he answered, with tolerable readiness, "musatoppop." I then asked him for the like rendering of "equestrian" (one of Astley's bills having caught my eye). He replied, but not quite so readily, "nirtseque." The last test to which I subjected him was "good-naturedly;" and though I induced him to repeat the word twice, I could not, on any of the three renderings, distinguish any precise sound beyond an indistinct gabbling, concluded emphatically with "doog:"—"good" being a word with which all these traders are familiar. It must be remembered, that the words I demanded were remote from the young costermonger's vocabulary, if not from his understanding.

Before I left this boy, he poured forth a minute or more's gibberish, of which, from its rapid utterance, I could distinguish nothing; but I found from his after explanation, that it was a request to me to make a further purchase of his walnuts.

This slang is utterly devoid of any applicability to humour. It gives no new fact, or approach to a fact, for philologists. One superior genius among the costers, who has invented words for them, told me that he had no system for coining his term. He gave to the known words some terminating syllable, or, as he called it, "a new turn, just," to use his own words, "as if he chorussed them, with a tol-de-rol." The intelligence communicated in this slang is, in a great measure, communicated, as in other slang, as much by the inflection of the voice, the emphasis, the tone, the look, the shrug, the nod, the wink, as by the words spoken.

Of the Nicknames of Costermongers.

Like many rude, and almost all wandering communities, the costermongers, like the cabmen and pickpockets, are hardly ever known by their real names; even the honest men among them are distinguished by some strange appellation. Indeed, they are all known one to another by nicknames, which they acquire either by some mode of dress, some remark that has ensured costermonger applause, some peculiarity in trading, or some defect or singularly in personal appearance. Men are known as "Rotten Herrings," "Spuddy" (a seller of bad potatoes, until beaten by the Irish for his bad wares,) "Curly" (a man with a curly head), "Foreigner" (a man who had been in the Spanish-Legion), "Brassy" (a very saucy person), "Gaffy" (once a performer), "The One-eyed Buffer," "Jawbreaker," "Pine-apple Jack," "Cast-iron Poll" (her head having been struck with a pot without injury to her), "Whilky," "Blackwall Poll" (a woman generally having two black eyes), "Lushy Bet," "Dirty Sall" (the costermongers generally objecting to dirtywomen), and "Dancing Sue."

Of the Education of Costermongers' Children.

I have used the heading of "Education," but perhaps to say "non-education," would be more suitable. Very few indeed of the costermongers' children are sent even to the Ragged Schools; and if they are, from all I could learn, it is done more that the mother may be saved the trouble of tending them at home, than from any desire that the children shall acquire useful knowledge. Both boys and girls are sent out by their parents in the evening to sell nuts, oranges, &c., at the doors of the theatres, or in any public place, or "round the houses" (a stated circuit from their place of abode). This trade they pursue eagerly for the sake of "bunts," though some carry home the money they take, very honestly. The costermongers are kind to their children, "perhaps in a rough way, and the women make regular pets of them very often." One experienced man told me, that he had seen a poor costermonger's wife—one of the few who could read—instructing her children in reading; but such instances were very rare. The education of these children is such only as the streets afford; and the streets teach them, for the most part—and in greater or lesser degrees,—acuteness—a precocious acuteness—in all that concerns their immediate wants, business, or gratifications; a patient endurance of cold and hunger; a desire to obtain money without working for it; a craving for the excitement of gambling; an inordinate love of amusement; and an irrepressible repugnance to any settled in-door industry.

The Literature of Costermongers.

We have now had an inkling of the London costermonger's notions upon politics and religion. We have seen the brutified state in which he is allowed by society to remain, though possessing the same faculties and susceptibilities as ourselves—the same power to perceive and admire the forms of truth, beauty, and goodness, as even the very highest in the state. We have witnessed how, instinct with all the elements of manhood and beasthood, the qualities of the beast are principally developed in him, while those of the man are stunted in their growth. It now remains for us to look into some other matters concerning this curious class of people, and, first, of their literature:

It may appear anomalous to speak of the literature of an uneducated body, but even the costermongers have their tastes for books. They are very fond of hearing any one read aloud to them, and listen very attentively. One man often reads the Sunday paper of the beer-shop to them, and on a fine summer's evening a costermonger, or any neighbour who has the advantage of being "a schollard," reads aloud to them in the courts they inhabit. What they love best to listen to—and, indeed, what they are most eager for—are Reynolds's periodicals, especially the "Mysteries of the Court." "They've got tired of Lloyd's blood-stained stories," said one man, who was in the habit of reading to them, "and I'm satisfied that, of all London, Reynolds is the most popular man among them. They stuck to him in Trafalgar-square, and would again. They all say he's 'a trump,' and Feargus O'Connor's another trump with them.'"

One intelligent man considered that the spirit of curiosity manifested by costermongers, as regards the information or excitement derived from hearing stories read, augured well for the improvability of the class.

Another intelligent costermonger, who had recently read some of the cheap periodicals to ten or twelve men, women, and boys, all costermongers, gave me an account of the comments made by his auditors. They had assembled, after their day's work or their rounds, for the purpose of hearing my informant read the last number of some of the penny publications.

"The costermongers," said my informant, "are very fond of illustrations. I have known a man, what couldn't read, buy a periodical what had an illustration, a little out of the common way perhaps, just that he might learn from some one, who *could* read, what it was all about. They have all heard of Cruikshank, and they think everything funny is by him—funny scenes in a play and all. His 'Bottle' was very much admired. I heard one man say it was very prime, and showed what 'lush' did, but I saw the same man," added my informant, "drunk three hours afterwards. Look you here, sir," he continued, turning over a periodical, for he had the number with him, "here's a portrait of 'Catherine of Russia.' 'Tell us all about her,' said one man to me last night; read it; what was she?' When I had read it," my informant continued, "another man, to whom I showed it, said, 'Don't the cove as did that know a deal?' for they fancy—at least, a many do—that one man writes a whole periodical, or a whole newspaper. Now here," proceeded my friend, "you see's an engraving of a man hung up, burning over a fire, and some costers would go mad if they couldn't learn what he'd been doing, who he was, and all about him. 'But about the picture?' they would say, and this is a very common question put by them whenever they see an engraving.

"Here's one of the passages that took their fancy wonderfully," my informant observed:

'With glowing cheeks, flashing eyes, and palpitating bosom, Venetia Trelawney rushed back into the refreshment-room, where she threw herself into one of the arm-chairs already noticed. But scarcely had she thus sunk down upon the flocculent cushion, when a sharp click, as of some mechanism giving way, met her ears; and at the same instant her wrists were caught in manacles which sprang out of the arms of the treacherous chair, while two steel bands started from the richly-carved back and grasped her shoulders. A shriek burst from her lips—she struggled violently, but all to no purpose: for she was a captive—and powerless!

'We should observe that the manacles and the steel bands which had thus fastened upon her, were covered with velvet, so that they inflicted no positive injury upon her, nor even produced the slightest abrasion of her fair and polished skin.'

Here all my audience," said the man to me, "broke out with—'Aye! that's the way the harristocrats hooks it. There's nothing o' that sort among us; the rich has all that barrikin to themselves.' 'Yes, that's the b—— way the taxes goes in,' shouted a woman.

"Anything about the police sets them a talking at once. This did when I read it:

'The Ebenezers still continued their fierce struggle, and, from the noise they made, seemed as if they were tearing each other to pieces, to the wild roar of a chorus of profane swearing. The alarm, as Bloomfield had predicted, was soon raised, and some two or three policemen, with their bull's-eyes, and still more effective truncheons, speedily restored order.'

'The blessed crushers is everywhere,' shouted one. 'I wish I'd been there to have had a shy at the eslops,' said another. And then a man sung out: 'O, don't I like the Bobbys?'

"If there's any foreign language which can't be explained, I've seen the costers," my informant went on, "annoyed at it—quite annoyed. Another time I read part of one of Lloyd's numbers to them—but they like something spicier. One article in them—here it is—finishes in this way:

"The social habits and costumes of the Magyar *noblesse* have almost all the characteristics of the corresponding class in Ireland. This word *noblesse* is one of wide signification in Hungary; and one may with great truth say of this strange nation, that '*qui n'est point noble n'est rien*.'"

'I can't tumble to that barrikin,' said a young fellow; 'it's a jaw-breaker. But if this here—what d' ye call it, you talk about—was like the Irish, why they was a rum lot.' 'Noblesse,' said a man that's considered a clever fellow, from having once learned his letters, though he can't

read or write. 'Noblesse!' Blessed if I know what he's up to.' Here there was a regular laugh."

From other quarters I learned that some of the costermongers who were able to read, or loved to listen to reading, purchased their literature in a very commercial spirit, frequently buying the periodical which is the largest in size, because when "they've got the reading out of it," as they say, "it's worth a halfpenny for the barrow."

Tracts they will rarely listen to, but if any persevering man *will* read tracts, and state that he does it for their benefit and improvement, they listen without rudeness, though often with evident unwillingness. "Sermons or tracts," said one of their body to me, "gives them the 'orrors." Costermongers purchase, and not unfrequently, the first number of a penny periodical, "to see what it's like."

The tales of robbery and bloodshed, of heroic, eloquent, and gentlemanly highwaymen, or of gipsies turning out to be nobles, now interest the costermongers but little, although they found great delight in such stories a few years back. Works relating to Courts, potentates, or "harristocrats," are the most relished by these rude people.

Of the Honesty of Costermongers.

I heard on all hands that the costers never steal from one another, and never wink at any one stealing from a neighbouring stall. Any stall-keeper will leave his stall untended to get his dinner, his neighbour acting for him; sometimes he will leave it to enjoy a game at skittles. It was computed for me, that property worth 10,000*l.* belonging to costers is daily left exposed in the streets or at the markets, almost entirely unwatched, the policeman or market-keeper only passing at intervals. And yet thefts are rarely heard of, and when heard of are not attributable to costermongers, but to regular thieves. The way in which the sum of 10,000*l.* was arrived at, is this: "In Hooper-street, Lambeth," said my informant, "there are thirty barrows and carts exposed on an evening, left in the street, with nobody to see to them; left there all night. That is only one street. Each barrow and board would be worth, on the average, 2*l.* 5*s.*, and that would be 75*l.* In the other bye-streets and courts off the New-cut are six times as many, Hooper-street having the most. This would give 525*l.* in all, left unwatched of a night. There are, throughout London, twelve more districts besides the New-cut—at least twelve districts—and, calculating the same amount in these, we have, altogether, 6,300*l.* worth of barrows. Taking in other bye-streets, we may safely reckon it at 4,000 barrows; for the numbers I have given in the thirteen places are 2,520, and 1,480 added is moderate. At least half of those which are in use next day, are left unwatched; more, I have no doubt, but say half. The stock of these 2,000 will average 10*s.* each, or 1,000*l.*; and the barrows will be worth 4,500*l.*; in all 5,500*l.*, and the property exposed on the stalls and the markets will be double in amount, or 11,000*l.* in value, every day, but say 10,000*l.*

"Besides, sir," I was told, "the thieves won't rob the costers so often as they will the shopkeepers. It's easier to steal from a butcher's or bacon-seller's open window than from a costermonger's stall or barrow, because the shopkeeper's eye can't be always on his goods. But there's always some one to give an eye to a coster's property. At Billingsgate the thieves will rob the salesmen far readier than they will us. They know we'd take it out of them readier if they were caught. It's Lynch law with us. We never give them in charge."

The costermongers' boys will, I am informed, cheat their employers, but they do not steal from them. The costers' donkey stables have seldom either lock or latch, and sometimes oysters, and other things which the donkey will not molest, are left there, but are never stolen.

Of the Conveyances of the Costermongers and other Street-sellers.

We now come to consider the matters relating more particularly to the commercial life of the costermonger.

All who pass along the thoroughfares of the Metropolis, bestowing more than a cursory glance upon the many phases of its busy street life, must be struck with astonishment to observe the various modes of conveyance, used by those who resort to the public thoroughfares for a livelihood. From the more provident costermonger's pony and donkey cart, to the old rusty iron tray slung round the neck by the vendor of blacking, and down to the little grey-eyed Irish boy with his lucifer-matches, in the last remains of a willow hand-basket—the shape and variety of the means resorted to by the costermongers and other street-sellers, for carrying about their goods, are almost as manifold as the articles they vend.

The pony—or donkey—carts (and the latter is by far the more usual beast of draught), of the prosperous costermongers are of three kinds:—the first is of an oblong shape, with a rail behind, upon which is placed a tray filled with bunches of greens, turnips, celery, &c., whilst other commodities are laid in the bed of the cart. Another kind is the common square cart without springs, which is so constructed that the sides, as well as the front and back, will let down and form shelves whereon the stock may be arranged to advantage. The third sort of pony-cart is one of home manufacture, consisting of the framework of a body without sides, or front, or hind part. Sometimes a coster's barrow is formed into a donkey cart merely by fastening, with cord, two rough poles to the handles. All these several kinds of carts are used for the conveyance of either fruit, vegetables, or fish; but besides those, there is the salt and mustard vendor's cart, with and without the tilt or covering, and a square piece of tin (stuck into a block of salt), on which is

painted "salt 3 lbs. a penny," and "mustard a penny an ounce" Then there is the poultry cart, with the wild-ducks, and rabbits dangling at its sides, and with two uprights and a cross-stick, upon which are suspended birds, &c., slung across in couples.

The above conveyances are all of small dimensions, the barrows being generally about five feet long and three wide, while the carts are mostly about four feet square.

Every kind of harness is used; some is well blacked and greased and glittering with brass, others are almost as grey with dust as the donkey itself. Some of the jackasses are gaudily caparisoned in an old carriage-harness, which fits it like a man's coat on a boy's back, while the plated silver ornaments are pink, with the copper showing through; others have rope traces and belly-bands, and not a few indulge in old cotton handkerchiefs for pads.

The next conveyance (which, indeed, is the most general) is the costermonger's hand-barrow. These are very light in their make, with springs terminating at the axle. Some have rails behind for the arrangement of their goods; others have not. Some have side rails, whilst others have only the frame-work. The shape of these barrows is oblong, and sloped from the hind-part towards the front; the bottom of the bed is not boarded, but consists of narrow strips of wood nailed athwart and across. When the coster is hawking his fish, or vending his green stuff, he provides himself with a wooden tray, which is placed upon his barrow. Those who cannot afford a tray get some pieces of board and fasten them together, these answering their purpose as well. Pine-apple and pine-apple rock barrows are not unfrequently seen with small bright coloured flags at the four corners, fluttering in the wind.

The knife-cleaner's barrow, which has lately appeared in the streets, must not be passed over here. It consists of a huge sentry-box, with a door, and is fixed upon two small wheels, being propelled in the same way as a wheel-barrow. In the interior is one of Kent's Patent Knife-cleaning Machines, worked by turning a handle. Then there are the cat and dog's-meat barrows. These, however, are merely common wheelbarrows, with a board in front and a ledge or shelf, formed by a piece of board nailed across the top of the barrow, to answer the purpose of a cutting-board. Lastly, there is the hearth-stone barrow, piled up with hearth-stone, Bath-brick, and lumps of whiting.

Another mode of conveying the goods through the streets, is by baskets of various kinds; as the sieve or head basket; the square and oval "shallow," fastened in front of the fruit-woman with a strap round the waist; the hand-basket; and the "prickle." The sieve, or head-basket, is a round willow basket, containing about one-third of a bushel. The square and oval shallows are willow baskets, about four inches deep, and thirty inches long, by eighteen broad. The hand-basket is the common oval basket, with a handle across to hang upon the arm; the latter are generally used by the Irish for onions and apples. The prickle is a brown willow basket, in which walnuts are imported into this country from the Continent; they are about thirty inches deep, and in bulk rather larger than a gallon measure; they are used only by the vendors of walnuts.

Such are the principal forms of the costermongers' conveyances; but besides carts, barrows, and baskets, there are many other means adopted by the London street-sellers for carrying their goods from one part of the metropolis to another. The principal of these are cans, trays, boxes, and poles.

The baked potato-cans sometimes are square and sometimes oval; they are made with and without legs, a lid fastened on with hinges, and have a small charcoal fire fixed at the bottom of the can, so as to keep the potatoes hot, while there is a pipe at top to let off the steam. On one side of the can is a little compartment for the salt, and another on the other side for the butter. The hot pie-can is a square tin can, standing upon four legs, with a door in front, and three partitions inside; a fire is kept in the bottom, and the pies arranged in order upon the iron plates or shelves. When the pies at the bottom are sufficiently hot they are taken out, and placed on the upper shelf, whilst those above are removed to the lower compartments, by which means all the pies are kept "hot and hot."

The muffin and crumpet-boy carries his articles in a basket, covered outside with oil-cloth and inside with green-baize, either at his back, or slung over his arm, and rings his bell as he walks.

The blacking boy, congreve-match and water-cress girl, use a rusty tray, spread over with their "goods," and suspended to the neck by a piece of string.

The vendors of corn-salve, plating balls, soap for removing grease spots, paper, steel pens, envelopes, &c., carry their commodities in front of them in boxes, suspended round the neck by a narrow leather strap.

Rabbits and game are sometimes carried in baskets, and at other times tied together and slung over a pole upon the shoulder. Hat and bonnet-boxes are likewise conveyed upon a pole.

Door-mats, baskets and "duffer's" packs, wood pails, brushes, brooms, clothes-props, clothes-lines and string, and grid-irons, Dutch-ovens, skewers and fire-shovels, are carried across the shoulder.

Of the "Smithfield Races."

Having set forth the costermonger's usual mode of conveying his goods through the streets of London, I shall now give the reader a description of the place and scene where and when he purchases his donkeys.

When a costermonger wishes to sell or buy a donkey, he goes to Smithfield-market on a Friday afternoon. On this day, between the hours of one and five, there is a kind of fair held,

attended solely by costermongers, for whose convenience a long paved slip of ground, about eighty feet in length, has been set apart. The animals for sale are trotted up and down this—the "race-course," as it is called—and on each side of it stand the spectators and purchasers, crowding among the stalls of peas-soup, hot eels, and other street delicacies.

Every thing necessary for the starting of a costermonger's barrow can be had in Smithfield on a Friday,—from the barrow itself to the weights—from the donkey to the whip. The animals can be purchased at prices ranging from 5*s.* to 3*l.* On a brisk market-day as many as two hundred donkeys have been sold. The barrows for sale are kept apart from the steeds, but harness to any amount can be found everywhere, in all degrees of excellence, from the bright japanned cart saddle with its new red pads, to the old mouldy trace covered with buckle marks. Wheels of every size and colour, and springs in every stage of rust, are hawked about on all sides. To the usual noise and shouting of a Saturday night's market is added the shrill squealing of distant pigs, the lowing of the passing oxen, the bleating of sheep, and the braying of donkeys. The paved road all down the "race-course" is level and soft, with the mud trodden down between the stones. The policeman on duty there wears huge fishermen's or flushermen's boots, reaching to their thighs; and the trouser ends of the costers' corduroys are black and sodden with wet dirt. Every variety of odour fills the air; you pass from the stable smell that hangs about the donkeys, into an atmosphere of apples and fried fish, near the eating-stalls, while a few paces further on you are nearly choked with the stench of goats. The crowd of black hats, thickly dotted with red and yellow plush caps, reels about; and the "hi-hi-i-i" of the donkey-runners sounds on all sides. Sometimes a curly-headed bull, with a fierce red eye, on its way to or from the adjacent cattle-market, comes trotting down the road, making all the visitors rush suddenly to the railings, for fear—as a coster near me said—of "being taught the hornpipe."

The donkeys standing for sale are ranged in a long line on both sides of the "race-course," their white velvetty noses resting on the wooden rail they are tied to. Many of them wear their blinkers and head harness, and others are ornamented with ribbons, fastened in their halters. The lookers-on lean against this railing, and chat with the boys at the donkeys' heads, or with the men who stand behind them, and keep continually hitting and shouting at the poor still beasts to make them prance. Sometimes a party of two or three will be seen closely examining one of these "Jerusalem ponys," passing their hands down its legs, or looking quietly on, while the proprietor's ash stick descends on the patient brute's back, making a dull hollow sound. As you walk in front of the long line of donkeys, the lads seize the animals by their nostrils, and show their large teeth, asking if you "want a hass, sir," and all warranting the creature to be "five years old next buff-day." Dealers are quarrelling among themselves, downcrying each other's goods. "A hearty man," shouted one proprietor, pointing to his rival's stock, "could eat three sich donkeys as yourn at a meal."

One fellow, standing behind his steed, shouts as he strikes, "Here's the real Brittannia mettle;" whilst another asks, "Who's for the Pride of the Market?" and then proceeds to flip "the pride" with his whip, till she clears away the mob with her kickings. Here, standing by its mother, will be a shaggy little colt, with a group of ragged boys fondling it, and lifting it in their arms from the ground.

During all this the shouts of the drivers and runners fill the air, as they rush past each other n the race-course. Now a tall fellow, dragging a donkey after him, runs by crying, as he charges in amongst the mob, "Hulloa! Hulloa! hi! hi!" his mate, with his long coat-tails flying in the wind, hurrying after and roaring, between his blows, "Keem-up!"

On nearly every post are hung traces or bridles; and in one place, on the occasion of my visit, stood an old collar with a donkey nibbling at the straw that had burst out. Some of the lads, in smock-frocks, walk about with cart-saddles on their heads, and crowds gather round the trucks, piled up with a black heap of harness studded with brass. Those without trays have spread out old sacks on the ground, on which are laid axle-trees, bound-up springs, and battered carriage-lamps. There are plenty of rusty nails and iron bolts to be had, if a barrow should want mending; and if the handles are broken, an old cab-shaft can be bought cheap, to repair them.

In another "race-course," opposite to the donkeys,—the ponies are sold. These make a curious collection, each one showing what was his last master's whim. One has its legs and belly shorn of its hair, another has its mane and tail cut close, and some have switch tails, muddy at the end from their length. A big-hipped black nag, with red tinsel-like spots on its back, had its ears cut close, and another curly-haired brute that was wet and steaming with having been shown off, had two huge letters burnt into its hind-quarters. Here the clattering of the hoofs and the smacking of whips added to the din; and one poor brute, with red empty eye-holes, and carrying its head high up—as a blind man does—sent out showers of sparks from its hoofs as it spluttered over the stones, at each blow it received. Occasionally, in one part of the pony market, there may be seen a crowd gathered round a nag, that some one swears has been stolen from him.

Raised up over the heads of the mob are bundles of whips, and men push their way past, with their arms full of yellow-handled curry-combs; whilst, amongst other cries, is heard that of "Sticks ½*d.* each! sticks—real smarters." At one end of the market the barrows for sale

Original from HARVARD UNIVERSITY

are kept piled up one on another, or filled with old wheels, and some with white unpainted wood, showing where they have been repaired. Men are here seen thumping the wooden trays, and trying the strength of the springs by leaning on them; and here, too, stood, on the occasion of my visit, a ragged coster lad trying to sell his scales, now the cherry-season had past.

On all sides the refreshment-barrows are surrounded by customers. The whelk-man peppers his lots, and shouts, "A lumping penn'orth for a ha'penny;" and a lad in a smock-frock carries two full pails of milk, slopping it as he walks, and crying, "Ha'penny a mug-full, new milk from the ke-ow!" The only quiet people to be seen are round the peas-soup stall, with their cups in their hands; and there is a huge crowd covering in the hot-eel stand, with the steam rising up in the centre. Baskets of sliced cake, apples, nuts, and pine-apple rock, block up the pathway; and long wicker baskets of live fowls hem you in, round which are grouped the costers, handling and blowing apart the feathers on the breast.

Of the Donkeys of the Costermongers.

The costermongers almost universally treat their donkeys with kindness. Many a costermonger will resent the ill-treatment of a donkey, as he would a personal indignity. These animals are often not only favourites, but pets, having their share of the costermonger's dinner when bread forms a portion of it, or pudding, or anything suited to the palate of the brute. Those well-used, manifest fondness for their masters, and are easily manageable; it is, however, difficult to get an ass, whose master goes regular rounds, away from its stable for any second labour during the day, unless it has fed and slept in the interval. The usual fare of a donkey is a peck of chaff, which costs 1*d.*, a quart of oats and a quart of beans, each averaging 1½*d.*, and sometimes a pennyworth of hay, being an expenditure of 4*d.* or 5*d.* a day; but some give double this quantity in a prosperous time. Only one meal a day is given. Many costermongers told me, that their donkeys lived well when they themselves lived well.

"It's all nonsense to call donkeys stupid," said one costermonger to me; "them's stupid that calls them so: they're sensible. Not long since I worked Guildford with my donkey-cart and a boy. Jack (the donkey) was slow and heavy in coming back, until we got in sight of the lights at Vauxhall-gate, and then he trotted on like one o'clock, he did indeed! just as if he smelt it was London besides seeing it, and knew he was at home. He had a famous appetite in the country, and the fresh grass did him good. I gave a country lad 2*d.* to mind him in a green lane there. I wanted my own boy to do so, but he said, 'I'll see you further first.' A London boy hates being by himself in a lone country part. He's afraid of being burked; he is indeed. One can't quarrel with a lad when he's away with one in the country; he's very useful. I feed my donkey well. I sometimes give him a carrot for a luxury, but carrots are dear now. He's fond of mashed potatoes, and has many a good mash when I can buy them at 4lb. a penny."

"There was a friend of mine," said another man, "had great trouble about his donkey a few months back. I saw part of it, and knew all about it. He was doing a little work on a Sunday morning at Wandsworth, and the poor thing fell down dead. He was very fond of his donkey and kind to it, and the donkey was very fond of him. He thought he wouldn't leave the poor creature he'd had a good while, and had been out with in all weathers, by the road side; so he dropped all notion of doing business, and with help got the poor dead thing into his cart; its head lolloping over the end of the cart, and its poor eyes staring at nothing. He thought he'd drag it home and bury it somewheres. It wasn't for the value he dragged it, for what's a dead donkey worth? There was a few persons about him, and they was all quiet and seemed sorry for the poor fellow and for his donkey; but the church-bells struck up, and up came a 'crusher,' and took the man up, and next day he was fined 10*s.*, I can't exactly say for what. He never saw no more of the animal, and lost his stock as well as his donkey."

Of the Costermongers' Capital.

The costermongers, though living by buying and selling, are seldom or never capitalists. It is estimated that not more than one-fourth of the entire body trade upon their own property. Some borrow their stock money, others borrow the stock itself, others again borrow the donkey-carts, barrows, or baskets, in which their stock is carried round, whilst others borrow even the weights and measures by which it is meted out.

The reader, however uninformed he may be as to the price the poor usually have to pay for any loans they may require, doubtlessly need not be told that the remuneration exacted for the use of the above-named commodities is not merely confined to the legal 5*l.* per centum per annum; still many of even the most "knowing" will hardly be able to credit the fact that the ordinary rate of interest in the costermongers' money-market amounts to 20 per cent. per week, or no less than 1040*l.* a year, for every 100*l.* advanced.

But the iniquity of this usury in the present instance is felt, not so much by the costermongers themselves, as by the poor people whom they serve; for, of course, the enormous rate of interest must be paid out of the profits on the goods they sell, and consequently added to the price, so that coupling this overcharge with the customary short allowance—in either weight or measure, as the case may be—we can readily perceive how cruelly the poor are defrauded, and how they not only get often too little for what they do, but have as often to pay too much for what they buy.

Premising thus much, I shall now proceed to describe the terms upon which the barrow, the cart, the basket, the weights, the measures, the stock-money, or the stock, is usually advanced to the needy costermongers by their more thrifty brethren.

The hire of a barrow is 3*d.* a day, or 1*s.* a week, for the six winter months; and 4*d.* a day, or 1*s.* 6*d.* a week, for the six summer months. Some are to be had rather lower in the summer, but never for less than 4*d.*—sometimes for not less than 6*d.* on a Saturday, when not unfrequently every barrow in London is hired. No security and no deposit is required, but the lender satisfies himself that the borrower is really what he represents himself to be. I am informed that 5,000 hired barrows are now in the hands of the London costermongers, at an average rental of 3*l.* 5*s.* each, or 16,250*l.* a year. One man lets out 120 yearly, at a return (dropping the 5*s.*) of 360*l.*; while the cost of a good barrow, new, is 2*l.* 12*s.*, and in the autumn and winter they may be bought new, or "as good as new," at 30*s.* each; so that reckoning each to cost this barrow-letter 2*l.* each, he receives 360*l.* rent or interest —exactly 150 per cent. per annum for property which originally cost but 240*l.*, and property which is still as good for the ensuing year's business as for the past. One man has rented a barrow for eight years, during which period he has paid 26*l.* for what in the first instance did not cost more than twice as many shillings, and which he must return if he discontinues its use. "I know men well to do," said an intelligent costermonger, "who have paid 1*s.* and 1*s.* 6*d.* a week for a barrow for three, four, and five years; and they can't be made to understand that it's rather high rent for what might cost 40*s.* at first. They can't see they are losers. One barrow-lender sends his son out, mostly on a Sunday, collecting his rents (for barrows), but he's not a hard man." Some of the lenders complain that their customers pay them irregularly and cheat them often, and that in consequence they must charge high; while the "borrowers" declare that it is very seldom indeed that a man "shirks" the rent for his barrow, generally believing that he has made an advantageous bargain, and feeling the want of his vehicle, if he lose it temporarily. Let the lenders, however, be deceived by many, still, it is evident, that the rent charged for barrows is most exorbitant, by the fact, that all who take to the business become men of considerable property in a few years.

Donkey-carts are rarely hired. "If there's 2,000 donkey and pony-carts in London, more or less, not 200 of them's borrowed; but of barrows five to two is borrowed." A donkey-cart costs from 2*l.* to 10*l.*; 3*l.* 10*s.* being an average price. The hire is 2*s.* or 2*s.* 6*d.* a week. The harness costs 2*l.* 10*s.* new, but is bought, nineteen times out of twenty, second-hand, at from 2*s.* 6*d.* to 20*s.* The donkeys themselves are not let out on hire, though a costermonger may let out his donkey to another in the trade when he does not require its services; the usual sum paid for the hire of a donkey is 2*s.* 6*d.* or 3*s.* per week. The cost price of a pony varies from 5*l.* to 13*l.*; that of a donkey from 1*l.* to 3*l.* There may be six donkeys, or more, in costermonger use, to one pony. Some traffic almost weekly in these animals, liking the excitement of such business.

The repairs to barrows, carts, and harness are almost always effected by the costermongers themselves.

"Shallows" (baskets) which cost 1*s.* and 1*s.* 6*d.*, are let out at 1*d.* a day; but not five in 100 of those in use are borrowed, as their low price places them at the costermonger's command. A pewter quart-pot, for measuring onions, &c., is let out at 2*d.* a day, its cost being 2*s.* Scales are 2*d.*, and a set of weights 1*d.* a day.

Another common mode of usury is in the lending of stock-money. This is lent by the costermongers who have saved the means for such use of their funds, and by beer-shop keepers. The money-lending costermongers are the most methodical in their usury—1,040*l.* per cent. per annum, as was before stated, being the rate of interest usually charged. It is seldom that a lower sum than 10*s.* is borrowed, and never a higher sum than 2*l.* When a stranger applies for a loan, the money-lender satisfies himself as I have described of the barrow-lender. He charges 2*d.* a day for a loan of 2*s.* 6*d.*; 3*d.* a day for 5*s.*; 6*d.* a day for 10*s.*; and 1*s.* a day for 1*l.* If the daily payments are rendered regularly, at a month's end the terms are reduced to 6*d.* a week for 5*s.*; 1*s.* for 10*s.*; and 2*s.* for 1*l.* "That's reckoned an extraordinary small interest," was said to me, "only 4*d.* a day for a pound." The average may be 3*s.* a week for the loan of 20*s.*; it being only to a few that a larger sum than 20*s.* is lent. "I paid 2*s.* a week for 1*l.* for a whole year," said one man, "or 5*l.* 4*s.* for the use of a pound, and then I was liable to repay the 1*l.*" The principal, however, is seldom repaid; nor does the lender seem to expect it, though he will occasionally demand it. One money-lender is considered to have a floating capital of 150*l.* invested in loans to costermongers. If he receive 2*s.* per week per 1*l.* for but twenty-six weeks in the year (and he often receives it for the fifty-two weeks)—his 150*l.* brings him in 390*l.* a year.

Sometimes a loan is effected only for a day, generally a Saturday, as much as 2*s.* 6*d.* being sometimes given for the use of 5*s.*; the 5*s.* being of course repaid in the evening.

The money-lenders are subject to at least twice the extent of loss to which the barrow-lender is exposed, as it is far oftener that money is squandered (on which of course no interest can be paid) than that a barrow is disposed of.

The money-lenders, (from the following statement, made to me by one who was in the habit of borrowing,) pursue their business in a not very dissimilar manner to that imputed to those who advance larger sums:—"If I want to borrow in a hurry," said my informant, "as I may

hear of a good bargain, I run to my neighbour L——'s, and he first says he hasn't 20*s.* to lend, and his wife's by, and she says she hasn't 2*s.* in her pocket, and so I can't be accommodated. Then he says if I must have the money he'll have to pawn his watch,—or to borrow it of Mr. ——, (an innkeeper) who would charge a deal of interest, for he wasn't paid all he lent two months back, and 1*s.* would be expected to be spent in drink—though L—— don't drink—or he must try if his sister would trust him, but she was sick and wanted all her money—or perhaps his barrow-merchant would lend him 10*s.*, if he'd undertake to return 15*s.* at night; and it ends by my thinking I've done pretty well if I can get 1*l.* for 5*s.* interest, for a day's use of it."

The beer-shop keepers lend on far easier terms, perhaps at half the interest exacted by the others, and without any regular system of charges; but they look sharp after the repayment, and expect a considerable outlay in beer, and will only lend to good customers; they however have even lent money without interest.

"In the depth of last winter," said a man of good character to me, "I borrowed 5*s.* The beer-shop keeper wouldn't lend; he'll rather lend to men doing well and drinking. But I borrowed it at 6*d.* a day interest, and that 6*d.* a day I paid exactly four weeks, Sundays and all; and that was 15*s.* in thirty days for the use of 5*s.* I was half starving all the time, and then I had a slice of luck, and paid the 5*s.* back slap, and got out of it."

Many shopkeepers lend money to the stall-keepers, whom they know from standing near their premises, and that without interest. They generally lend, however, to the women, as they think the men want to get drunk with it. "Indeed, if it wasn't for the women," said a costermonger to me, "half of us might go to the Union."

Another mode of usurious lending or trading is, as I said before, to provide the costermonger—not with the stock-money—but with the stock itself. This mode also is highly profitable to the usurer, who is usually a costermonger, but sometimes a greengrocer. A stock of fruit, fish, or vegetables, with a barrow for its conveyance, is entrusted to a street-seller, the usual way being to "let him have a sovereign's worth." The value of this, however, at the market cost, rarely exceeds 14*s.*, still the man entrusted with it must carry 20*s.* to his creditor, or he will hardly be trusted a second time. The man who trades with the stock is not required to pay the 20*s.* on the first day of the transaction, as he may not have realised so much, but he must pay some of it, generally 10*s.*, and must pay the remainder the next day or the money-lender will decline any subsequent dealings.

It may be thought, as no security is given, and as the costermongering barrow, stock, or money-lender never goes to law for the recovery of any debt or goods, that the per centage is not so very exorbitant after all. But I ascertained that not once in twenty times was the money lender exposed to any loss by the non-payment of his usurious interest, while his profits are enormous. The borrower knows that if he fail in his payment, the lender will acquaint the other members of his fraternity, so that no future loan will be attainable, and the costermonger's business may be at an end. One borrower told me that the re-payment of his loan of 2*l.*, borrowed two years ago at 4*s.* a week, had this autumn been reduced to 2*s.* 6*d.* a week: "He's a decent man I pay now," he said; "he has twice forgiven me a month at a time when the weather was very bad and the times as bad as the weather. Before I borrowed of him I had dealings with ———. He *was* a scurf. If I missed a week, and told him I would make it up next week, 'That won't do,' he'd say, 'I'll turn you up. I'll take d——d good care to stop you. *I'll* have you to rights.' If I hadn't satisfied him, as I did at last, I could never have got credit again; never." I am informed that most of the money-lenders, if a man has paid for a year or so, will now "drop it for a month or so in a very hard-up time, and go on again." There is no I.O.U. or any memorandum given to the usurer. "There's never a slip of paper about it, sir," I was told.

I may add that a very intelligent man from whom I derived information, said to me concerning costermongers never going to law to recover money owing to them, nor indeed for any purpose: "If any one steals anything from me—and that, as far as I know, never happened but once in ten years—and I catch him, I take it out of him on the spot. I give him a jolly good hiding and there's an end of it. I know very well, sir, that costers are ignorant men, but in my opinion" (laughing) "our never going to law shows that in *that* point we are in advance of the aristocrats. I never heard of a coster in a law court, unless he was in trouble (charged with some offence)—for assaulting a crusher, or anybody he had quarrelled with, or something of that kind."

The barrow-lender, when not regularly paid, sends some one, or goes himself, and carries away the barrow.

My personal experience with this peculiar class justifies me in saying that they are far less dishonest than they are usually believed to be, and much more honest than their wandering habits, their want of education and "principle" would lead even the most charitable to suppose. Since I have exhibited an interest in the sufferings and privations of these neglected people, I have, as the reader may readily imagine, had many applications for assistance, and without vanity, I believe I may say, that as far as my limited resources would permit, I have striven to extricate the street-sellers from the grasp of the usurer. Some to whom I have *lent* small sums (for gifts only degrade struggling honest men into the apathy of beggars) have taken the money with many a protesta-

tion that they would repay it in certain weekly instalments, which they themselves proposed, but still have never made their appearance before me a second time—it may be from dishonesty and it may be from inability and shame—others, however, and they are not a few, have religiously kept faith with me, calling punctually to pay back a sixpence or a shilling as the precariousness of their calling would permit, and doing this, though they knew that I abjured all claims upon them but through their honour, and was, indeed, in most cases, ignorant where to find them, even if my inclination led me to seek or enforce a return of the loan. One case of this kind shows so high a sense of honour among a class, generally considered to rank among the most dishonourable, that, even at the risk of being thought egotistical, I will mention it here:—"Two young men, street-sellers, called upon me and begged hard for the loan of a little stock-money. They made needle-cases and hawked them from door to door at the east end of the town, and had not the means of buying the wood. I agreed to let them have ten shillings between them; this they promised to repay at a shilling a week. They were utter strangers to me; nevertheless, at the end of the first week one shilling of the sum was duly returned. The second week, however, brought no shilling, nor did the third, nor the fourth, by which time I got to look upon the money as lost; but at the end of the fifth week one of the men called with his sixpence, and told me how he should have been with me before but his mate had promised each week to meet him with his sixpence, and each week disappointed him; so he had come on alone. I thanked him, and the next week he came again; so he did the next, and the next after that. On the latter occasion he told me that in five more weeks he should have paid off his half of the amount advanced, and that then, as he had come with the other man, he would begin paying off *his* share as well!"

Those who are unacquainted with the character of the people may feel inclined to doubt the trustworthiness of the class, but it is an extraordinary fact that but few of the costermongers fail to repay the money advanced to them, even at the present ruinous rate of interest. The poor, it is my belief, have not yet been sufficiently tried in this respect;—pawnbrokers, loan-offices, tally-shops, dolly-shops, are the only parties who will trust them—but, as a startling proof of the good faith of the humbler classes generally, it may be stated that Mrs. Chisholm (the lady who has exerted herself so benevolently in the cause of emigration) has lent out, at different times, as much as 160,000*l.* that has been entrusted to her for the use of the "lower orders," and that the whole of this large amount has been returned—*with the exception of* 12*l.*!

I myself have often given a sovereign to professed thieves to get "changed," and never knew one to make off with the money. Depend upon it, if we would really improve, we must begin by elevating instead of degrading.

Of the "Slang" Weights and Measures.

All counterfeit weights and measures, the costermongers call by the appropriate name of "slang." "There are not half so many slangs as there was eighteen months ago," said a 'general dealer' to me. "You see, sir, the letters in the *Morning Chronicle* set people a talking, and some altered their way of business. Some was very angry at what was said in the articles on the street-sellers, and swore that costers was gentlemen, and that they'd smash the men's noses that had told you, sir, if they knew who they were. There's plenty of costers wouldn't use slangs at all, if people would give a fair price; but you see the boys *will* try it on for their bunts, and how is a man to sell fine cherries at 4*d.* a pound that cost him 3½*d.*, when there's a kid alongside of him a selling his 'tol' at 2*d.* a pound, and singing it out as bold as brass? So the men slangs it, and cries '2*d.* a pound,' and gives half-pound, as the boy does; which brings it to the same thing. We doesn't 'dulterate our goods like the tradesmen—that is, the regular hands doesn't. It wouldn't be easy, as you say, to 'dulterate cabbages or oysters; but we deals fair to all that's fair to us,—and that's more than many a tradesman does, for all their juries."

The slang quart is a pint and a half. It is made precisely like the proper quart; and the maker, I was told, "knows well enough what it's for, as it's charged, new, 6*d.* more than a true quart measure; but it's nothing to him, as he says, what it's for, so long as he gets his price." The slang quart is let out at 2*d.* a day—1*d.* extra being charged "for the risk." The slang pint holds in some cases three-fourths of the just quantity, having a very thick bottom; others hold only half a pint, having a false bottom half-way up. These are used chiefly in measuring nuts, of which the proper quantity is hardly ever given to the purchaser; "but, then," it was often said, or implied to me, the "price is all the lower, and people just brings it on themselves, by wanting things for next to nothing; so it's all right; it's people's own faults." The hire of the slang pint is 2*d.* per day.

The scales used are almost all true, but the weights are often beaten out flat to look large, and are 4, 5, 6, or even 7 oz. deficient in a pound, and in the same relative proportion with other weights. The charge is 2*d.*, 3*d.*, and 4*d.* a day for a pair of scales and a set of slang weights.

The wooden measures—such as pecks, half pecks, and quarter pecks—are not let out slang, but the bottoms are taken out by the costers, and put in again half an inch or so higher up. "I call this," said a humorous dealer to me, "slop-work, or the cutting-system."

One candid costermonger expressed his perfect contempt of slangs, as fit only for bunglers, as *he* could always "work slang" with a true

measure. "Why, I can cheat any man," he said. "I can manage to measure mussels so as you'd think you got a lot over, but there's a lot under measure, for I holds them up with my fingers and keep crying, 'Mussels! full measure, live mussels!' I can do the same with peas. I delight to do it with stingy aristocrats. We don't work slang in the City. People know what they're a buying on there. There's plenty of us would pay for an inspector of weights; I would. We might do fair without an inspector, and make as much if we only agreed one with another."

In conclusion, it is but just I should add that there seems to be a strong disposition on the part of the more enlightened of the class to adopt the use of fair weights and measures; and that even among the less scrupulous portion of the body, short allowance seems to be given chiefly from a desire to be *even* with a "scaly customer." The coster makes it a rule never to refuse an offer, and if people *will* give him less than what he considers his proper price, why—he gives them less than their proper quantity. As a proof of the growing honesty among this class, many of the better disposed have recently formed themselves into a society, the members of which are (one and all) pledged not only to deal fairly with their customers, but to compel all other street-sellers to do the same. With a view of distinguishing themselves to the public, they have come to the resolution of wearing a medal, on which shall be engraved a particular number, so that should any imposition be practised by any of their body, the public will have the opportunity of complaining to the Committee of the Association, and having the individual (if guilty) immediately expelled from the society.

Of Half Profits.

Besides the modes of trading on borrowed capital above described, there is still another means of obtaining stock prevalent among the London costermongers. It is a common practice with some of the more provident costermongers, who buy more largely—for the sake of buying cheaply—than is required for the supply of their own customers, to place goods in the hands of young men who are unable to buy goods on their own account, "on half profits," as it is called. The man adopting this means of doing a more extensive business, says to any poor fellow willing to work on those terms, "Here's a barrow of vegetables to carry round, and the profit on them will be 2*s.*; you sell them, and half is for yourself." The man sells them accordingly; if however he fail to realize the 2*s.* anticipated profit, his employer must still be paid 1*s.*, even if the "seller" prove that only 13*d.* was cleared; so that the costermonger capitalist, as he may be described, is always, to use the words of one of my informants, "on the profitable side of the hedge."

Boys are less frequently employed on half-profits than young men; and I am assured that instances of these young men wronging their employers are hardly ever known.

Of the Boys of the Costermongers, and their Bunts.

But there are still other "agents" among the costermongers, and these are the "boys" deputed to sell a man's goods for a certain sum, all over that amount being the boys' profit or "bunts." Almost every costermonger who trades through the streets with his barrow is accompanied by a boy. The ages of these lads vary from ten to sixteen, there are few above sixteen, for the lads think it is then high time for them to start on their own account. These boys are useful to the man in "calling," their shrill voices being often more audible than the loudest pitch of an adult's lungs. Many persons, moreover, I am assured, prefer buying of a boy, believing that if the lad did not succeed in selling his goods he would be knocked about when he got home; others think that they are safer in a boy's hands, and less likely to be cheated; these, however, are equally mistaken notions. The boys also are useful in pushing at the barrow, or in drawing it along by tugging at a rope in front. Some of them are the sons of the costermongers; some go round to the costermongers' abodes and say: "Will you want me to-morrow?" "Shall I come and give you a lift?" The parents of the lads thus at large are, when they *have* parents, either unable to support them, or, if able, prefer putting their money to other uses, (such as drinking); and so the lads have to look out for themselves, or, as they say, "pick up a few halfpence and a bit of grub as we can." Such lads, however, are the smallest class of costermongering youths; and are sometimes called "cas'alty boys," or "nippers."

The boys—and nearly the whole of them—soon become very quick, and grow masters of slang, in from six weeks to two or three months. "I suppose," said one man familiar with their character, "they'd learn French as soon, if they was thrown into the way of it. They must learn slang to live, and as they have to wait at markets every now and then, from one hour to six, they associate one with another and carry on conversations in slang about the "penny gaffs" (theatres), criticising the actors; or may be they toss the pieman, if they've got any ha'pence, or else they chaff the passers by. The older ones may talk about their sweethearts; but they always speak of them by the name of 'nammow' (girls).

"The boys are severe critics too (continued my informant) on dancing. I heard one say to another; 'What do you think of Johnny Millicent's new step?' for they always recognise a new step, or they discuss the female dancer's legs, and not very decently. At other times the boys discuss the merits or demerits of their masters, as to who feeds them best. I have heard one say, 'O, aint Bob stingy? We have bread and cheese!' Another added; '*We* have

Original from HARVARD UNIVERSITY

steak and beer, and I've the use of Bill's, (the master's) 'baccy box.'"

Some of these lads are paid by the day, generally from 2*d.* or 3*d.* and their food, and as much fruit as they think fit to eat, as by that they soon get sick of it. They generally carry home fruit in their pockets for their playmates, or brothers, or sisters; the costermongers allow this, if they are satisfied that the pocketing is not for sale. Some lads are engaged by the week, having from 1*s.* to 1*s.* 6*d.*, and their food when out with their employer. Their lodging is found only in a few cases, and then they sleep in the same room with their master and mistress. Of master or mistress, however, they never speak, but of Jack and Bet. They behave respectfully to the women, who are generally kind to them. They soon desert a very surly or stingy master; though such a fellow could get fifty boys next day if he wanted them, but not lads used to the trade, for to these he's well known by their talk one with another, and they soon tell a man his character very plainly—"*very* plainly indeed, sir, and to his face too," said one.

Some of these boys are well beaten by their employers; this they put up with readily enough, if they experience kindness at the hands of the man's wife; for, as I said before, parties that have never thought of marriage, if they live together, call one another husbands and wives.

In "working the country" these lads are put on the same footing as their masters, with whom they eat, drink, and sleep; but they do not gamble with them. A few, however, go out and tempt country boys to gamble, and—as an almost inevitable consequence—to lose. "Some of the boys," said one who had seen it often, "will keep a number of countrymen in a beer-shop in a roar for the hour, while the countrymen ply them with beer, and some of the street-lads can drink a good deal. I've known three bits of boys order a pot of beer each, one after the other, each paying his share, and a quartern of gin each after that—drunk neat; they don't understand water. Drink doesn't seem to affect them as it does men. I don't know why." "Some costermongers," said another informant, "have been known, when they've taken a fancy to a boy—I know of two—to dress him out like themselves, silk handkerchiefs and all; for if they didn't find them silk handkerchiefs, the boys would soon get them out of their '*bunts*.' They like silk handkerchiefs, for if they lose all their money gambling, they can then pledge their handkerchiefs."

I have mentioned the term "*bunts*." Bunts is the money made by the boys in this manner:—If a costermonger, after having sold a sufficiency, has 2*s.* or 3*s.* worth of goods left, and is anxious to get home, he says to the boy, "Work these streets, and bring me 2*s.* 6*d.* for the tol," (lot) which the costermonger knows by his eye—for he seldom measures or counts—is easily worth that money. The lad then proceeds to sell the things entrusted to him, and often shows great ingenuity in so doing. If, for instance, turnips be tied up in penny bunches, the lad will open some of them, so as to spread them out to nearly twice their previous size, and if any one ask if that be a penn'orth, he will say, "Here's a larger for 1½*d.*, marm," and so palm off a penny bunch at 1½*d.* Out of each bunch of onions he takes one or two, and makes an extra bunch. All that the lad can make in this way over the half-crown is his own, and called "bunts." Boys have made from 6*d.* to 1*s.* 6*d.* "bunts," and this day after day. Many of them will, in the course of their traffic, beg old boots or shoes, if they meet with better sort of people, and so "work it to rights," as they call it among themselves; servants often give them cast-off clothes. It is seldom that a boy carries home less than the stipulated sum.

The above is what is understood as "fair bunts."

"Unfair bunts" is what the lad may make unknown to his master; as, if a customer call from the area for goods cried at 2*d.*, the lad may get 2½*d.*, by pretending what he had carried was a superior sort to that called at 2*d.*,—or by any similar trick.

"I have known some civil and industrious boys," said a costermonger to me, "get to save a few shillings, and in six months start with a shallow, and so rise to a donkey-cart. The greatest drawback to struggling boys is their sleeping in low lodging-houses, where they are frequently robbed, or trepanned to part with their money, or else they get corrupted."

Some men employ from four to twelve boys, sending them out with shallows and barrows, the boys bringing home the proceeds. The men who send lads out in this way, count the things, and can tell to a penny what can be realised on them. They neither pay nor treat the boys well, I am told, and are looked upon by the other costermongers as extortioners, or unfair dealers, making money by trading on poor lads' necessities, who serve them to avoid starvation. These men are called "Scurfs." If the boys working for them make bunts, or are suspected of making bunts, there is generally "a row" about it.

The bunts is for the most part the gambling money, as well as the money for the "penny gaff," the "twopenny hop," the tobacco, and the pudding money of the boys. "More would save their wages and their bunts," was said to me on good authority, "but they have no place to keep their money in, and don't understand anything about savings banks. Many of these lads are looked on with suspicion by the police, and treated like suspected folks; but in my opinion they are not thieves, or they wouldn't work so hard; for a thief's is a much easier life than a costermonger's."

When a boy begins business on his own account, or "sets up," as they call it, he purchases a shallow, which costs at least 1*s.*, and a half hundred of herrings, 1*s.* 6*d.* By the sale of the herrings he will clear 1*s.*, going the round he has been accustomed to, and then trade on the 2*s.* 6*d.* Or, if it be fruit time, he will trade in

apples until master of 5*s*., and then "take to a barrow," at 3*d*. a day hire. By this system the ranks of the costermongers are not only recruited but increased. There is one grand characteristic of these lads; I heard on all hands they are, every one of them, what the costers call —"wide awake."

There are I am assured from 200 to 300 costers, who, in the busier times of the year, send out four youths or lads each on an average. The young men thus sent out generally live with the costermonger, paying 7*s*. a week for board, lodging and washing. These youths, I was told by one who knew them well, were people who "didn't care to work for themselves, because they couldn't keep their money together; it would soon all go; and they *must* keep it together for their masters. They are not fed badly, but then they make 'bunts' sometimes, and it goes for grub when they're out, so they eat less at home."

Of the Juvenile Trading of the Costermongers.

My inquiries among the costermongers induced one of their number to address me by letter. My correspondent—a well-informed and well-educated man—describes himself as "being one of those that have been unfortunately thrust into that precarious way of obtaining a living, not by choice but circumstances." The writer then proceeds to say: "No person but those actually connected with the streets can tell the exertion, anxiety, and difficulties we have to undergo; and I know for a fact it induces a great many to drink that would not do so, only to give them a stimulant to bear up against the troubles that they have to contend with; and so it ultimately becomes habitual. I could point out many instances of the kind. My chief object in addressing you is to give my humble suggestion as to the best means of alleviating our present position in society, and establishing us in the eyes of the public as a respectable body of men, honestly endeavouring to support our families, without becoming chargeable to the parish, and to show that we are not all the degraded class we are at present thought to be, subject to the derision of every passer by, and all looked upon as extortioners and the confederates of thieves. It is grievous to see children, as soon as they are able to speak, thrust into the streets to sell, and in many instances, I am sorry to state, to support their parents. Kind sir, picture to yourself a group of those children mixing together indiscriminately—the good with the bad—all uneducated—and without that parental care which is so essential for youth—and judge for yourself the result: the lads in some instances take to thieving, (this being easier for a living), and the girls to prostitution; and so they pass the greater part of their time in gaol, or get transported. Even those who are honestly disposed cannot have a chance of bettering their condition, in consequence of their being uneducated, so that they often turn out brutal husbands and bad fathers. Surely, sir, Government could abolish in a measure this juvenile trading, so conducive to crime and so injurious to the shopkeeper, who is highly rated. How is it possible, if children congregate around his door with the very articles he may deal in, that he can meet the demands for rates and taxes; whereas the educated man, brought by want to sell in the streets, would not do so, but keep himself apart from the shopkeeper, and not merit his enmity, and the interference of the police, which he necessarily claims. I have procured an existence (with a few years' exception) in the streets for the last twenty-five years as a general salesman of perishable and imperishable articles, and should be most happy to see anything done for the benefit of my class. This juvenile trading I consider the root of the evil; after the removal of this, the costermongers might, by classifying and co-operation, render themselves comparatively happy, in their position, and become acknowledged members of society."

Another costermonger, in conversing with me concerning these young traders, said, that many of them would ape the vices of men: mere urchins would simulate drunkenness, or boast, with many an exaggeration, of their drinking feats. They can get as much as they please at the public-houses; and this too, I may add, despite the 43rd clause in the Police Act, which enacts, that "every person, licensed to deal in exciseable liquors within the said (Metropolitan Police) District, who shall knowingly supply any sort of distilled exciseable liquor to be drunk upon the premises, to any boy or girl, apparently under the age of sixteen years, shall be liable to a penalty of not more than 20*s*.;" and upon a second conviction to 40*s*. penalty; and on a third to 5*l*.

Of the Education of the "Coster-Lads."

Among the costers the term education is (as I have already intimated) merely understood as meaning a complete knowledge of the art of "buying in the cheapest market and selling in the dearest." There are few lads whose training extends beyond this. The father is the tutor, who takes the boy to the different markets, instructs him in the art of buying, and when the youth is perfect on this point, the parent's duty is supposed to have been performed. Nearly all these boys are remarkable for their precocious sharpness. To use the words of one of the class, "these young ones are as sharp as terriers, and learns every dodge of business in less than half no time. There's one I knows about three feet high, that's up to the business as clever as a man of thirty. Though he's only twelve years old he'll chaff down a peeler so uncommon severe, that the only way to stop him is to take him in charge!"

It is idle to imagine that these lads, possessed of a mental acuteness almost wonderful, will not educate themselves in vice, if we neglect

to train them to virtue. At their youthful age, the power of acquiring knowledge is the strongest, and some kind of education is continually going on. If they are not taught by others, they will form their own characters—developing habits of dissipation, and educing all the grossest passions of their natures, and learning to indulge in the gratification of every appetite without the least restraint.

As soon as a boy is old enough to shout well and loudly, his father takes him into the streets. Some of these youths are not above seven years of age, and it is calculated that not more than one in a hundred has ever been to a school of any kind. The boy walks with the barrow, or guides the donkey, shouting by turns with the father, who, when the goods are sold, will as a reward, let him ride home on the tray. The lad attends all markets with his father, who teaches him his business and shows him his tricks of trade; "for," said a costen, "a governor in our line leaves the knowledge of all his dodges to his son, jist as the rich coves do their tin."

The life of a coster-boy is a very hard one. In summer he will have to be up by four o'clock in the morning, and in winter he is never in bed after six. When he has returned from market, it is generally his duty to wash the goods and help dress the barrow. About nine he begins his day's work, shouting whilst the father pushes; and as very often the man has lost his voice, this share of the labour is left entirely to him. When a coster has regular customers, the vegetables or fish are all sold by twelve o'clock, and in many coster families the ¹ ` is then packed off with fruit to hawk in the streets. When the work is over, the father will perhaps take the boy to a public-house with him, and give him part of his beer. Sometimes a child of four or five is taken to the tap-room, especially if he be pretty and the father proud of him. "I have seen," said a coster to me, "a baby of five year old reeling drunk in a tap-room. His governor did it for the lark of the thing, to see him chuck hisself about—sillyfied like."

The love of gambling soon seizes upon the coster boy. Youths of about twelve or so will as soon as they can get away from work go to a public-house and play cribbage for pints of beer, or for a pint a corner. They generally continue playing till about midnight, and rarely—except on a Sunday—keep it up all night.

It ordinarily happens that when a lad is about thirteen, he quarrels with his father, and gets turned away from home. Then he is forced to start for himself. He knows where he can borrow stock-money and get his barrow, for he is as well acquainted with the markets as the oldest hand at the business, and children may often be seen in the streets under-selling their parents. "How's it possible," said a woman, "for people to live when there's their own son at the end of the court a-calling his goods as cheap again as we can afford to sell ourn."

If the boy is lucky in trade, his next want is to get a girl to keep home for him. I was assured, that it is not at all uncommon for a lad of fifteen to be living with a girl of the same age, as man and wife. It creates no disgust among his class, but seems rather to give him a position among such people. Their courtship does not take long when once the mate has been fixed upon. The girl is invited to "raffles," and treated to "twopenny hops," and half-pints of beer. Perhaps a silk neck handkerchief—a "King's-man" is given as a present; though some of the lads will, when the arrangement has been made, take the gift back again and wear it themselves. The boys are very jealous, and if once made angry behave with great brutality to the offending girl. A young fellow of about sixteen told me, as he seemed to grow angry at the very thought, "If I seed my gal a talking to another chap I'd fetch her sich a punch of the nose as should plaguy quick stop the whole business." Another lad informed me, with a knowing look, "that the gals—it was a rum thing now he come to think on it—axully liked a feller for walloping them. As long as the bruises hurted, she was always thinking on the cove as gived 'em her." After a time, if the girl continues faithful, the young coster may marry her; but this is rarely the case, and many live with their girls until they have grown to be men, or perhaps they may quarrel the very first year, and have a fight and part.

These boys hate any continuous work. So strong is this objection to continuity that they cannot even remain selling the same article for more than a week together. Moreover none of them can be got to keep stalls. They must be perpetually on the move—or to use their own words "they like a roving life." They all of them delight in dressing "flash" as they call it. If a "governor" was to try and "palm off" his old cord jacket upon the lad that worked with him, the boy wouldn't take it. "Its too big and seedy for me," he'd say, "and I aint going to have your leavings." They try to dress like the men, with large pockets in their cord jackets and plenty of them. Their trowsers too must fit tight at the knee, and their boots they like as good as possible. A good "King's-man," a plush skull cap, and a seam down the trowsers are the great points of ambition with the coster boys.

A lad about fourteen informed me that "brass buttons, like a huntman's, with foxes' heads on em, looked stunning flash, and the gals liked em." As for the hair, they say it ought to be long in front, and done in "figure-six" curls, or twisted back to the ear "Newgate-knocker style." "But the worst of hair is," they add, "that it is always getting cut off in quod, all along of muzzling the bobbies."

The whole of the coster-boys are fond of the good living. I was told that when a lad started in

for himself, he would for the first week or so live almost entirely on cakes and nuts. When settled in business they always manage to have what they call "a relish" for breakfast and tea, "a couple of herrings, or a bit of bacon, or what not." Many of them never dine excepting on the Sunday—the pony and donkey proprietors being the only costers whose incomes will permit them to indulge in a "fourpenny plate of meat at a cook's shop." The whole of the boys too are extremely fond of pudding, and should the "plum duff" at an eating-house contain an unusual quantity of plums, the news soon spreads, and the boys then endeavour to work that way so as to obtain a slice. While waiting for a market, the lads will very often spend a shilling in the cakes and three cornered puffs sold by the Jews. The owners toss for them, and so enable the young coster to indulge his two favourite passions at the same time—his love of pastry, and his love of gambling. The Jews crisp butter biscuits also rank very high with the boys, who declare that they "slip down like soapsuds down a gully hole." In fact it is curious to notice how perfectly unrestrained are the passions and appetites of these youths. The only thoughts that trouble them are for their girls, their eating and their gambling—beyond the love of self they have no tie that binds them to existence.

The Life of a Coster-Lad.

One lad that I spoke to gave me as much of his history as he could remember. He was a tall stout boy, about sixteen years old, with a face utterly vacant. His two heavy lead-coloured eyes stared unmeaningly at me, and, beyond a constant anxiety to keep his front lock curled on his cheek, he did not exhibit the slightest trace of feeling. He sank into his seat heavily and of a heap, and when once settled down he remained motionless, with his mouth open and his hands on his knees—almost as if paralyzed. He was dressed in all the slang beauty of his class, with a bright red handkerchief and unexceptionable boots.

"My father" he told me in a thick unimpassioned voice, "was a waggoner, and worked the country roads. There was two on us at home with mother, and we used to play along with the boys of our court, in Golding-lane, at buttons and marbles. I recollects nothing more than this—only the big boys used to cheat like bricks and thump us if we grumbled—that's all I recollects of my infancy, as you calls it. Father I've heard tell died when I was three and brother only a year old. It was worse luck for us!—Mother was so easy with us. I once went to school for a couple of weeks, but the cove used to fetch me a wipe over the knuckles with his stick, and as I wasn't going to stand that there, why you see I aint no great schollard. We did as we liked with mother, she was so precious easy, and I never learned anything but playing buttons and making leaden 'bonces,' that's all," (here the youth laughed slightly.) "Mother used to be up and out very early washing in families — anything for a living. She was a good mother to us. We was left at home with the key of the room and some bread and butter for dinner. Afore she got into work—and it was a goodish long time—we was shocking hard up, and she pawned nigh everything. Sometimes, when we had'nt no grub at all, the other lads, perhaps, would give us some of their bread and butter, but often our stomachs used to ache with the hunger, and we would cry when we was werry far gone. She used to be at work from six in the morning till ten o'clock at night, which was a long time for a child's belly to hold out again, and when it was dark we would go and lie down on the bed and try and sleep until she came home with the food. I was eight year old then.

"A man as know'd mother, said to her, 'Your boy's got nothing to do, let him come along with me and yarn a few ha'pence,' and so I became a coster. He gave me 4*d.* a morning and my breakfast. I worked with him about three year, until I learnt the markets, and then I and brother got baskets of our own, and used to keep mother. One day with another, the two on us together could make 2*s.* 6*d.* by selling greens of a morning, and going round to the publics with nuts of a evening, till about ten o'clock at night. Mother used to have a bit of fried meat or a stew ready for us when we got home, and by using up the stock as we couldn't sell, we used to manage pretty tidy. When I was fourteen I took up with a girl. She lived in the same house as we did, and I used to walk out of a night with her and give her half-pints of beer at the publics. She were about thirteen, and used to dress werry nice, though she weren't above middling pretty. Now I'm working for another man as gives me a shilling a week, victuals, washing, and lodging, just as if I was one of the family.

"On a Sunday I goes out selling, and all I yarns I keeps. As for going to church, why, I can't afford it,—besides, to tell the truth, I don't like it well enough. Plays, too, ain't in my line much; I'd sooner go to a dance—its more livelier. The 'penny gaffs' is rather more in my style; the songs are out and out, and makes our gals laugh. The smuttier the better, I thinks; bless you! the gals likes it as much as we do. If we lads ever has a quarrel, why, we fights for it. If I was to let a cove off once, he'd do it again; but I never give a lad a chance, so long as I can get anigh him. I never heard about Christianity; but if a cove was to fetch me a lick of the head, I'd give it him again, whether he was a big 'un or a little 'un. I'd precious soon see a henemy of mine shot afore I'd forgive him,—where's the use? Do I understand what behaving to your neighbour is?—In coorse I do. If a feller as lives next me wanted a basket of mine as I wasn't using, why, he might have it; if I was working it though, I'd see him further! I can under-

stand that all as lives in a court is neighbours; but as for policemen, they're nothing to me, and I should like to pay 'em all off well. No; I never heerd about this here creation you speaks about. In coorse God Almighty made the world, and the poor bricklayers' labourers built the houses arterwards—that's *my* opinion; but I can't say, for I've never been in no schools, only always hard at work, and knows nothing about it. I have heerd a little about our Saviour,—they seem to say he were a goodish kind of a man; but if he says as how a cove's to forgive a feller as hits you, I should say he know'd nothing about it. In coorse the gals the lads goes and lives with thinks our walloping 'em wery cruel of us, but we don't. Why don't we?—why, because we don't. Before father died, I used sometimes to say my prayers, but after that mother was too busy getting a living to mind about my praying. Yes, I knows!—in the Lord's prayer they says, 'Forgive us our trespasses, as we forgives them as trespasses agin us.' It's a very good thing, in coorse, but no costers can't do it."

Of the "Penny Gaff."

In many of the thoroughfares of London there are shops which have been turned into a kind of temporary theatre (admission one penny), where dancing and singing take place every night. Rude pictures of the performers are arranged outside, to give the front a gaudy and attractive look, and at night-time coloured lamps and transparencies are displayed to draw an audience. These places are called by the costers "Penny Gaffs;" and on a Monday night as many as six performances will take place, each one having its two hundred visitors.

It is impossible to contemplate the ignorance and immorality of so numerous a class as that of the costermongers, without wishing to discover the cause of their degradation. Let any one curious on this point visit one of these penny shows, and he will wonder that *any* trace of virtue and honesty should remain among the people. Here the stage, instead of being the means for illustrating a moral precept, is turned into a platform to teach the cruelest debauchery. The audience is usually composed of children so young, that these dens become the school-rooms where the guiding morals of a life are picked up; and so precocious are the little things, that the girl of nine will, from constant attendance at such places, have learnt to understand the filthiest sayings, and laugh at them as loudly as the grown-up lads around her. What notions can the young female form of marriage and chastity, when the penny theatre rings with applause at the performance of a scene whose sole point turns upon the pantomimic imitation of the unrestrained indulgence of the most corrupt appetites of our nature? How can the lad learn to check his hot passions and think honesty and virtue admirable, when the shouts around him impart a glory to a descriptive song so painfully corrupt, that it can only have been made tolerable by the most habitual excess? The men who preside over these infamous places know too well the failings of their audiences. They know that these poor children require no nicely-turned joke to make the evening pass merrily, and that the filth they utter needs no double meaning to veil its obscenity. The show that will provide the most unrestrained debauchery will have the most crowded benches; and to gain this point, things are acted and spoken that it is criminal even to allude to.

Not wishing to believe in the description which some of the more intelligent of the costermongers had given of these places, it was thought better to visit one of them, so that all exaggeration might be avoided. One of the least offensive of the exhibitions was fixed upon.

The "penny gaff" chosen was situated in a broad street near Smithfield; and for a great distance off, the jingling sound of music was heard, and the gas-light streamed out into the thick night air as from a dark lantern, glittering on the windows of the houses opposite, and lighting up the faces of the mob in the road, as on an illumination night. The front of a large shop had been entirely removed, and the entrance was decorated with paintings of the "comic singers," in their most "humourous" attitudes. On a table against the wall was perched the band, playing what the costers call "dancing tunes" with great effect, for the hole at the money-taker's box was blocked up with hands tendering the penny. The crowd without was so numerous, that a policeman was in attendance to preserve order, and push the boys off the pavement—the music having the effect of drawing them insensibly towards the festooned green-baize curtain.

The shop itself had been turned into a waiting-room, and was crowded even to the top of the stairs leading to the gallery on the first floor. The ceiling of this "lobby" was painted blue, and spotted with whitewash clouds, to represent the heavens; the boards of the trap-door, and the laths that showed through the holes in the plaster, being all of the same colour. A notice was here posted, over the canvass door leading into the theatre, to the effect that "Ladies and Gentlemen to the front places must pay Twopence."

The visitors, with a few exceptions, were all boys and girls, whose ages seemed to vary from eight to twenty years. Some of the girls—though their figures showed them to be mere children—were dressed in showy cotton-velvet polkas, and wore dowdy feathers in their crushed bonnets. They stood laughing and joking with the lads, in an unconcerned, impudent manner, that was almost appalling. Some of them, when tired of waiting, chose their partners, and commenced dancing grotesquely, to the admiration of the lookers-on, who expressed their approbation in obscene terms, that, far from disgusting the poor little women, were received as compliments, and acknowledged with smiles and coarse repartees. The boys clustered together, smoking their

Original from HARVARD UNIVERSITY

pipes, and laughing at each other's anecdotes, or else jingling halfpence in time with the tune, while they whistled an accompaniment to it. Presently one of the performers, with a gilt crown on his well greased locks, descended from the staircase, his fleshings covered by a dingy dressing-gown, and mixed with the mob, shaking hands with old acquaintances. The "comic singer," too, made his appearance among the throng—the huge bow to his cravat, which nearly covered his waistcoat, and the red end to his nose, exciting neither merriment nor surprise.

To discover the kind of entertainment, a lad near me and my companion was asked "if there was any flash dancing." With a knowing wink the boy answered, "Lots! show their legs and all, prime!" and immediately the boy followed up his information by a request for a "yennep" to get a "tib of occabot." After waiting in the lobby some considerable time, the performance inside was concluded, and the audience came pouring out through the canvass door. As they had to pass singly, I noticed them particularly. Above three-fourths of them were women and girls, the rest consisting chiefly of mere boys—for out of about two hundred persons I counted only eighteen men. Forward they came, bringing an overpowering stench with them, laughing and yelling as they pushed their way through the waiting-room. One woman carrying a sickly child with a bulging forehead, was reeling drunk, the saliva running down her mouth as she stared about her with a heavy fixed eye. Two boys were pushing her from side to side, while the poor infant slept, breathing heavily, as if stupified, through the din. Lads jumping on girls' shoulders, and girls laughing hysterically from being tickled by the youths behind them, every one shouting and jumping, presented a mad scene of frightful enjoyment.

When these had left, a rush for places by those in waiting began, that set at defiance the blows and strugglings of a lady in spangles who endeavoured to preserve order and take the checks. As time was a great object with the proprietor, the entertainment within began directly the first seat was taken, so that the lads without, rendered furious by the rattling of the piano within, made the canvass partition bulge in and out, with the strugglings of those seeking admission, like a sail in a flagging wind.

To form the theatre, the first floor had been removed; the whitewashed beams however still stretched from wall to wall. The lower room had evidently been the warehouse, while the upper apartment had been the sitting-room, for the paper was still on the walls. A gallery, with a canvass front, had been hurriedly built up, and it was so fragile that the boards bent under the weight of those above. The bricks in the warehouse were smeared over with red paint, and had a few black curtains daubed upon them. The coster-youths require no very great scenic embellishment, and indeed the stage—which was about eight feet square—could admit of none. Two jets of gas, like those outside a butcher's shop, were placed on each side of the proscenium, and proved very handy for the gentlemen whose pipes required lighting. The band inside the "theatre" could not compare with the band without. An old grand piano, whose canvass-covered top extended the entire length of the stage, sent forth its wiry notes under the be-ringed fingers of a "professor Wilkinsini," while another professional, with his head resting on his violin, played vigorously, as he stared unconcernedly at the noisy audience.

Singing and dancing formed the whole of the hours' performance, and, of the two, the singing was preferred. A young girl, of about fourteen years of age, danced with more energy than grace, and seemed to be well-known to the spectators, who cheered her on by her Christian name. When the dance was concluded, the proprietor of the establishment threw down a penny from the gallery, in the hopes that others might be moved to similar acts of generosity; but no one followed up the offering, so the young lady hunted after the money and departed. The "comic singer," in a battered hat and the huge bow to his cravat, was received with deafening shouts. Several songs were named by the costers, but the "funny gentleman" merely requested them "to hold their jaws," and putting on a "knowing" look, sang a song, the whole point of which consisted in the mere utterance of some filthy word at the end of each stanza. Nothing, however, could have been more successful. The lads stamped their feet with delight; the girls screamed with enjoyment. Once or twice a young shrill laugh would anticipate the fun—as if the words were well known—or the boys would forestall the point by shouting it out before the proper time. When the song was ended the house was in a delirium of applause. The canvass front to the gallery was beaten with sticks, drum-like, and sent down showers of white powder on the heads in the pit. Another song followed, and the actor knowing on what his success depended, lost no opportunity of increasing his laurels. The most obscene thoughts, the most disgusting scenes were coolly described, making a poor child near me wipe away the tears that rolled down her eyes with the enjoyment of the poison. There were three or four of these songs sung in the course of the evening, each one being encored, and then changed. One written about "Pine-apple rock," was the grand treat of the night, and offered greater scope to the rhyming powers of the author than any of the others. In this, not a single chance had been missed; ingenuity had been exerted to its utmost lest an obscene thought should be passed by, and it was absolutely awful to behold the relish with which the young ones jumped to the hideous meaning of the verses.

There was one scene yet to come, that was perfect in its wickedness. A ballet began between a man dressed up as a woman, and a country clown. The most disgusting attitudes were struck, the most immoral acts represented, without one dissenting voice. If there had been any feat of agility, any grimacing, or, in fact, anything with which the laughter of the uneducated classes is usually associated, the applause might have been accounted for; but here were two ruffians degrading themselves each time they stirred a limb, and forcing into the brains of the childish audience before them thoughts that must embitter a lifetime, and descend from father to child like some bodily infirmity.

When I had left, I spoke to a better class costermonger on this saddening subject. "Well, sir, it is frightful," he said, "but the boys *will* have their amusements. If their amusements is bad they don't care; they only wants to laugh, and this here kind of work does it. Give 'em better singing and better dancing, and they'd go, if the price was as cheap as this is. I've seen, when a decent concert was given at a penny, as many as four thousand costers present, behaving themselves as quietly and decently as possible. Their wives and children was with 'em, and no audience was better conducted. It's all stuff talking about them preferring this sort of thing. Give 'em good things at the same price, and I *know* they will like the good, better than the bad."

My own experience with this neglected class goes to prove, that if we would really lift them out of the moral mire in which they are wallowing, the first step must be to provide them with *wholesome* amusements. The misfortune, however, is, that when we seek to elevate the character of the people, we give them such mere dry abstract truths and dogmas to digest, that the uneducated mind turns with abhorrence from them. We forget how we ourselves were originally won by our *emotions* to the consideration of such subjects. We do not remember how our own tastes have been formed, nor do we, in our zeal, stay to reflect how the tastes of a people generally are created; and, consequently, we cannot perceive that a habit of enjoying any matter whatsoever can only be induced in the mind by linking with it some æsthetic affection. The heart is the mainspring of the intellect, and the feelings the real educers and educators of the thoughts. As games with the young destroy the fatigue of muscular exercise, so do the sympathies stir the mind to action without any sense of effort. It is because "serious" people generally object to enlist the emotions in the education of the poor, and look upon the delight which arises in the mind from the mere perception of the beauty of sound, motion, form, and colour—or from the apt association of harmonious or incongruous ideas—or from the sympathetic operation of the affections; it is because, I say, the zealous portion of society look upon these matters as "*vanity*," that the amusements of the working-classes are left to venal traders to provide. Hence, in the low-priced entertainments which necessarily appeal to the poorer, and, therefore, to the least educated of the people, the proprietors, instead of trying to develop in them the purer sources of delight, seek only to gratify their audience in the coarsest manner, by appealing to their most brutal appetites. And thus the emotions, which the great Architect of the human mind gave us as the means of quickening our imaginations and refining our sentiments, are made the instruments of crushing every operation of the intellect and debasing our natures. It is idle and unfeeling to believe that the great majority of a people whose days are passed in excessive toil, and whose homes are mostly of an uninviting character, will forego *all* amusements, and consent to pass their evenings by their *no* firesides, reading tracts or singing hymns. It is folly to fancy that the mind, spent with the irksomeness of compelled labour, and depressed, perhaps, with the struggle to live by that labour after all, will not, when the work is over, seek out some place where at least it can forget its troubles or fatigues in the temporary pleasure begotten by some mental or physical stimulant. It is because we, as it were, strive to make true knowledge and true beauty as forbidding as possible to the uneducated and unrefined, that they fly to their penny gaffs, their twopenny-hops, their beer-shops, and their gambling-grounds for pleasures which we deny them, and which we, in our arrogance, believe it is possible for them to do without.

The experiment so successfully tried at Liverpool of furnishing music of an enlivening and yet elevating character at the same price as the concerts of the lowest grade, shows that the people may be won to delight in beauty instead of beastiality, and teaches us again that it is *our* fault to allow them to be as they are and not their's to remain so. All men are compound animals, with many inlets of pleasure to their brains, and if one avenue be closed against them, why it but forces them to seek delight through another. So far from the perception of beauty inducing habits of gross enjoyment as "serious" people generally imagine, a moment's reflection will tell us that these very habits are only the necessary consequences of the non-development of the æsthetic faculty; for the two assuredly cannot co-exist. To cultivate the sense of the beautiful is necessarily to inculcate a detestation of the sensual. Moreover, it is impossible for the mind to be accustomed to the contemplation of what is admirable without continually mounting to higher and higher forms of it—from the beauty of nature to that of thought—from thought to feeling, from feeling to action, and lastly to the fountain of all goodness—the great munificent Creator of the sea, the mountains, and the flowers—the stars, the sunshine, and the rainbow—the fancy, the reason, the love and the heroism of man and womankind—the instincts of the beasts—the glory of the angels—and the mercy of Christ.

OF THE COSTER-GIRLS.

THE costermongers, taken as a body, entertain the most imperfect idea of the sanctity of marriage. To their undeveloped minds it merely consists in the fact of a man and woman living together, and sharing the gains they may each earn by selling in the street. The father and mother of the girl look upon it as a convenient means of shifting the support of their child over to another's exertions; and so thoroughly do they believe this to be the end and aim of matrimony, that the expense of a church ceremony is considered as a useless waste of money, and the new pair are received by their companions as cordially as if every form of law and religion had been complied with.

The notions of morality among these people agree strangely, as I have said, with those of many savage tribes—indeed, it would be curious if it were otherwise. They are a part of the Nomades of England, neither knowing nor caring for the enjoyments of home. The hearth, which is so sacred a symbol to all civilized races as being the spot where the virtues of each succeeding generation are taught and encouraged, has no charms to them. The tap-room is the father's chief abiding place; whilst to the mother the house is only a better kind of *tent.* She is away at the stall, or hawking her goods from morning till night, while the children are left to play away the day in the court or alley, and pick their morals out of the gutter. So long as the limbs gain strength the parent cares for nothing else. As the young ones grow up, their only notions of wrong are formed by what the policeman will permit them to do. If we, who have known from babyhood the kindly influences of a home, require, before we are thrust out into the world to get a living for ourselves, that our perceptions of good and evil should be quickened and brightened (the same as our perceptions of truth and falsity) by the experience and counsel of those who are wiser and better than ourselves,—if, indeed, it needed a special creation and example to teach the best and strongest of us the law of right, how bitterly must the children of the street-folk require tuition, training, and advice, when from their very cradles (if, indeed, they ever knew such luxuries) they are doomed to witness in their parents, whom they naturally believe to be their superiors, habits of life in which passion is the sole rule of action, and where every appetite of our animal nature is indulged in without the least restraint.

I say thus much because I am anxious to make others feel, as I do myself, that *we* are the culpable parties in these matters. That they poor things should do as they do is but human nature—but that *we* should allow them to remain thus destitute of every blessing vouchsafed to ourselves—that we should willingly share what we enjoy with our brethren at the Antipodes, and yet leave those who are nearer and who, therefore, should be dearer to us, to want even the commonest moral necessaries is a paradox that gives to the zeal of our Christianity a strong savour of the chicanery of Cant.

The costermongers strongly resemble the North American Indians in their conduct to their wives. They can understand that it is the duty of the woman to contribute to the happiness of the man, but cannot feel that there is a reciprocal duty from the man to the woman. The wife is considered as an inexpensive servant, and the disobedience of a wish is punished with blows. She must work early and late, and to the husband must be given the proceeds of her labour. Often when the man is in one of his drunken fits—which sometimes last two or three days continuously—she must by her sole exertions find food for herself and him too. To live in peace with him, there must be no murmuring, no tiring under work, no fancied cause for jealousy—for if there be, she is either beaten into submission or cast adrift to begin life again—as another's leavings.

The story of one coster girl's life may be taken as a type of the many. When quite young she is placed out to nurse with some neighbour, the mother—if a fond one—visiting the child at certain periods of the day, for the purpose of feeding it, or sometimes, knowing the round she has to make, having the infant brought to her at certain places, to be "suckled." As soon as it is old enough to go alone, the court is its play-ground, the gutter its school-room, and under the care of an elder sister the little one passes the day, among children whose mothers like her own are too busy out in the streets helping to get the food, to be able to mind the family at home. When the girl is strong enough, she in her turn is made to assist the mother by keeping guard over the younger children, or, if there be none, she is lent out to carry about a baby, and so made to add to the family income by gaining her sixpence weekly. Her time is from the earliest years fully occupied; indeed, her parents cannot afford to keep her without doing and getting *something*. Very few of the children receive the least education. "The parents," I am told, "never give their minds to learning, for they say, 'What's the use of it? *that* won't yarn a gal a living.'" Everything is sacrificed—as, indeed, under the circumstances it must be—in the struggle to live—aye! and to live *merely*. Mind, heart, soul, are all absorbed in the belly. The rudest form of animal life, physiologists tell us, is simply a locomotive stomach. Verily, it would appear as if our social state had a tendency to make the highest animal sink into the lowest.

At about seven years of age the girls first go into the streets to sell. A shallow-basket is given to them, with about two shillings for stock-money, and they hawk, according to the time of year, either oranges, apples, or violets; some begin their street education with the sale of water-cresses. The money earned by this means is strictly given to the parents. Sometimes—

though rarely—a girl who has been unfortunate during the day will not dare to return home at night, and then she will sleep under some dry arch or about some market, until the morrow's gains shall ensure her a safe reception and shelter in her father's room.

The life of the coster-girls is as severe as that of the boys. Between four and five in the morning they have to leave home for the markets, and sell in the streets until about nine. Those that have more kindly parents, return then to breakfast, but many are obliged to earn the morning's meal for themselves. After breakfast, they generally remain in the streets until about ten o'clock at night; many having nothing during all that time but one meal of bread and butter and coffee, to enable them to support the fatigue of walking from street to street with the heavy basket on their heads. In the course of a day, some girls eat as much as a pound of bread, and very seldom get any meat, unless it be on a Sunday.

There are many poor families that, without the aid of these girls, would be forced into the workhouse. They are generally of an affectionate disposition, and some will perform acts of marvellous heroism to keep together the little home. It is not at all unusual for mere children of fifteen to walk their eight or ten miles a day, carrying a basket of nearly two hundred weight on their heads. A journey to Woolwich and back, or to the towns near London, is often undertaken to earn the 1*s*. 6*d*. their parents are anxiously waiting for at home.

Very few of these girls are married to the men they afterwards live with. Their courtship is usually a very short one; for, as one told me, "the life is such a hard one, that a girl is ready to get rid of a *little* of the labour at any price." The coster-lads see the girls at market, and if one of them be pretty, and a boy take a fancy to her, he will make her bargains for her, and carry her basket home. Sometimes a coster working his rounds will feel a liking for a wench selling her goods in the street, and will leave his barrow to go and talk with her. A girl seldom takes up with a lad before she is sixteen, though some of them, when barely fifteen or even fourteen, will pair off. They court for a time, going to raffles and "gaffs" together, and then the affair is arranged. The girl tells her parents "she's going to keep company with so-and-so," packs up what things she has, and goes at once, without a word of remonstrance from either father or mother. A furnished room, at about 4*s*. a week is taken, and the young couple begin life The lad goes out as usual with his barrow, and the girl goes out with her basket, often working harder for her lover than she had done for her parents. They go to market together, and at about nine o'clock her day's selling begins. Very often she will take out with her in the morning what food she requires during the day, and never return home until eleven o'clock at night.

The men generally behave very cruelly to the girls they live with. They are as faithful to them as if they were married, but they are jealous in the extreme. To see a man talking to their girl is sufficient to ensure the poor thing a beating. They sometimes ill-treat them horribly—most unmercifully indeed—nevertheless the girls say they cannot help loving them still, and continue working for them, as if they experienced only kindness at their hands. Some of the men are gentler and more considerate in their treatment of them, but by far the larger portion are harsh and merciless. Often when the Saturday night's earnings of the two have been large, the man will take the entire money, and as soon as the Sunday's dinner is over, commence drinking hard, and continue drunk for two or three days together, until the funds are entirely exhausted. The women never gamble; they say, "it gives them no excitement." They prefer, if they have a spare moment in the evening, sitting near the fire making up and patching their clothes. "Ah, sir," said a girl to me, "a neat gown does a deal with a man; he always likes a girl best when everybody else likes her too." On a Sunday they clean their room for the week and go for a treat, if they can persuade their young man to take them out in the afternoon, either to Chalk Farm or Battersea Fields —"where there's plenty of life."

After a girl has once grown accustomed to a street-life, it is almost impossible to wean her from it. The muscular irritability begotten by continued wandering makes her unable to rest for any time in one place, and she soon, if put to any *settled* occupation, gets to crave for the severe exercise she formerly enjoyed. The least restraint will make her sigh after the perfect liberty of the coster's "roving life." As an instance of this I may relate a fact that has occurred within the last six months. A gentleman of high literary repute, struck with the heroic strugglings of a coster Irish girl to maintain her mother, took her to his house, with a view of teaching her the duties of a servant. At first the transition was a painful one to the poor thing. Having travelled barefoot through the streets since a mere child, the pressure of shoes was intolerable to her, and in the evening or whenever a few minutes' rest could be obtained, the boots were taken off, for with them on she could enjoy no ease. The perfect change of life, and the novelty of being in a new place, reconciled her for some time to the loss of her liberty. But no sooner did she hear from her friends, that sprats were again in the market, than, as if there were some magical influence in the fish, she at once requested to be freed from the confinement, and permitted to return to her old calling.

Such is the history of the lower class of girls, though this lower class, I regret to say, constitutes by far the greater portion of the whole. Still I would not for a moment have it inferred that *all* are bad. There are many young girls getting their living, or rather helping to get

the living of others in the streets, whose goodness, considering the temptations and hardships besetting such an occupation, approximates to the marvellous. As a type of the more prudent class of coster girls, I would cite the following narrative received from the lips of a young woman in answer to a series of questions.

The Life of a Coster Girl.

I wished to have obtained a statement from the girl whose portrait is here given, but she was afraid to give the slightest information about the habits of her companions, lest they should recognize her by the engraving and persecute her for the revelations she might make. After disappointing me some dozen times, I was forced to seek out some other coster girl.

The one I fixed upon was a fine-grown young woman of eighteen. She had a habit of curtsying to every question that was put to her. Her plaid shawl was tied over the breast, and her cotton-velvet bonnet was crushed in with carrying her basket. She seemed dreadfully puzzled where to put her hands, at one time tucking them under her shawl, warming them at the fire, or measuring the length of her apron, and when she answered a question she invariably addressed the fireplace. Her voice was husky from shouting apples.

"My mother has been in the streets selling all her lifetime. Her uncle learnt her the markets and she learnt me. When business grew bad she said to me, 'Now you shall take care on the stall, and I'll go and work out charing.' The way she learnt me the markets was to judge of the weight of the baskets of apples, and then said she, 'Always bate 'em down, a'most a half.' I always liked the street-life very well, that was if I was selling. I have mostly kept a stall myself, but I've known gals as walk about with apples, as have told me that the weight of the baskets is sich that the neck cricks, and when the load is took off, its just as if you'd a stiff neck, and the head feels as light as a feather. The gals begins working very early at our work; the parents makes them go out when a'most babies. There's a little gal, I'm sure she an't more than half-past seven, that stands selling water-cresses next my stall, and mother was saying, 'Only look there, how that little one has to get her living afore she a'most knows what a penn'orth means.'

"There's six on us in family, and father and mother makes eight. Father used to do odd jobs with the gas-pipes in the streets, and when work was slack we had very hard times of it. Mother always liked being with us at home, and used to manage to keep us employed out of mischief—she'd give us an old gown to make into pinafores for the children and such like! She's been very good to us, has mother, and so's father. She always liked to hear us read to her whilst she was washing or such like! and then we big ones had to learn the little ones. But when father's work got slack, if she had no employment charing, she'd say, 'Now I'll go and buy a bushel of apples,' and then she'd turn out and get a penny that way. I suppose by sitting at the stall from nine in the morning till the shops shuts up—say ten o'clock at night, I can earn about 1*s.* 6*d.* a day. It's all according to the apples—whether they're good or not—what we makes. If I'm unlucky, mother will say, 'Well, I'll go out to-morrow and see what *I* can do;' and if I've done well, she'll say 'Come you're a good hand at it; you've done famous.' Yes, mother's very fair that way. Ah! there's many a gal I knows whose back has to suffer if she don't sell her stock well: but, thank God! I never get more than a blowing up. My parents is very fair to me.

"I dare say there ain't ten out of a hundred gals what's living with men, what's been married Church of England fashion. I know plenty myself, but I don't, indeed, think it right. It seems to me that the gals is fools to be 'ticed away, but, in coorse, they needn't go without they likes. This is why I don't think it's right. Perhaps a man will have a few words with his gal, and he'll say, 'Oh! I ain't obligated to keep her!' and he'll turn her out: and then where's that poor gal to go? Now, there's a gal I knows as came to me no later than this here week, and she had a dreadful swole face and a awful black eye; and I says, 'Who's done that?' and she says, says she, 'Why, Jack'—just in that way; and then she says, says she, 'I'm going to take a warrant out to-morrow.' Well, he gets the warrant that same night, but she never appears again him, for fear of getting more beating. That don't seem to me to be like married people ought to be. Besides, if parties is married, they ought to bend to each other; and they won't, for sartain, if they're only living together. A man as is married is obligated to keep his wife if they quarrels or not; and he says to himself, says he, 'Well, I may as well live happy, like.' But if he can turn a poor gal off, as soon as he tires of her, he begins to have noises with her, and then gets quit of her altogether. Again, the men takes the money of the gals, and in coorse ought to treat 'em well—which they don't. This is another reason: when the gal is in the family way, the lads mostly sends them to the workhouse to lay in, and only goes sometimes to take them a bit of tea and shuggar; but, in coorse, married men wouldn't behave in such likes to their poor wives. After a quarrel, too, a lad goes and takes up with another young gal, and that isn't pleasant for the first one. The first step to ruin is them places of 'penny gaffs,' for they hears things there as oughtn't to be said to young gals. Besides, the lads is very insinivating, and after leaving them places will give a gal a drop of beer, and make her half tipsy, and then they makes their arrangements. I've often heerd the boys boasting of having ruined gals, for all the world as if they was the first noblemen in the land.

"It would be a good thing if these sort of goings on could be stopped. It's half the pa-

rents' fault; for if a gal can't get a living, they turns her out into the streets, and then what's to become of her? I'm sure the gals, if they was married, would be happier, because they couldn't be beat worse. And if they was married, they'd get a nice home about 'em; whereas, if they's only living together, they takes a furnished room. I'm sure, too, that it's a bad plan; for I've heerd the gals themselves say, 'Ah! I wish I'd never seed Jack' (or Tom, or whatever it is); 'I'm sure I'd never be half so bad but for him.'

"Only last night father was talking about religion. We often talks about religion. Father has told me that God made the world, and I've heerd him talk about the first man and woman as was made and lived—it must be more than a hundred years ago—but I don't like to speak on what I don't know. Father, too, has told me about our Saviour what was nailed on a cross to suffer for such poor people as we is. Father has told us, too, about his giving a great many poor people a penny loaf and a bit of fish each, which proves him to have been a very kind gentleman. The Ten Commandments was made by him, I've heerd say, and he performed them too among other miracles. Yes! this is part of what our Saviour tells us. We are to forgive everybody, and do nobody no injury. I don't think I could forgive an enemy if she injured me very much; I'm sure I don't know why I couldn't, unless it is that I'm poor, and never learnt to do it. If a gal stole my shawl and didn't return it back or give me the value on it, I couldn't forgive her; but if she told me she lost it off her back, I shouldn't be so hard on her. We poor gals ain't very religious, but we are better than the men. We all of us thanks God for everything—even for a fine day; as for sprats, we always says they're God's blessing for the poor, and thinks it hard of the Lord Mayor not to let 'em come in afore the ninth of November, just because he wants to dine off them—which he always do. Yes, we knows for certain that they eats plenty of sprats at the Lord Mayor's 'blanket.' They say in the Bible that the world was made in six days: the beasts, the birds, the fish, and all—and sprats was among them in coorse. There was only one house at that time as was made, and that was the Ark for Adam and Eve and their family. It seems very wonderful indeed how all this world was done so quick. I should have thought that England alone would have took double the time; shouldn't you, sir? But then it says in the Bible, God Almighty's a just and true God, and in coorse time would be nothing to him. When a good person is dying, we says, 'The Lord has called upon him, and he must go,' but I can't think what it means, unless it is that an angel comes—like when we're a-dreaming—and tells the party he's wanted in heaven. I know where heaven is; it's above the clouds, and they're placed there to prevent us seeing into it. That's where all the good people go, but I'm afeerd,"—she continued solemnly—"there's very few costers among the angels—'specially those as deceives poor gals.

"No, I don't think this world could well go on for ever. There's a great deal of ground in it, certainly, and it seems very strong at present; but they say there's to be a flood on the earth, and earthquakes, and that will destroy it. The earthquake ought to have took place some time ago, as people tells me, but I never heerd any more about it. If we cheats in the streets, I know we shan't go to Heaven; but it's very hard upon us, for if we didn't cheat we couldn't live, profits is so bad. It's the same with the shops, and I suppose the young men there won't go to Heaven neither; but if people won't give the money, both costers and tradesmen must cheat, and that's very hard. Why, look at apples! customers want them for less than they cost us, and so we are forced to shove in bad ones as well as good ones; and if we're to suffer for that, it does seem to me dreadful cruel."

Curious and extravagant as this statement may perhaps appear to the uninitiated, nevertheless it is here given as it was spoken; and it was spoken with an earnestness that proved the poor girl looked upon it as a subject, the solemnity of which forced her to be truthful.

Of Costermongers and Thieves.

Concerning the connection of these two classes I had the following account from a costermonger: "I've known the coster trade for twelve years, and never knew thieves go out a costering as a cloak; they may have done so, but I very much doubt it. Thieves go for an idle life, and costermongering don't suit them. Our chaps don't care a d—n who they associate with,—if they're thieves they meet 'em all the same, or anything that way. But costers buy what they call 'a gift,'—may-be it's a watch or coat wot's been stolen—from any that has it to sell. A man will say: 'If you've a few shillings, you may make a good thing of it. Why this identical watch is only twenty shillings, and it's worth fifty;' so if the coster has money, he buys. Thieves will get *3d.* where a mechanic or a coster will earn *½d.*, and the most ignorant of our people has a queer sort of respect for thieves, because of the money they make. Poverty's as much despised among costers as among other people. People that's badly off among us are called 'cursed.' In bad weather it's common for costers to 'curse themselves,' as they call having no trade. 'Well, I'm cursed,' they say when they can make no money. It's a common thing among them to shout after any one they don't like, that's reduced, 'Well, ain't you cursed?'" The costers, I am credibly informed, gamble a great deal with the wealthier class of thieves, and win of them the greater part of the money they get.

Of the more provident Costermongers.

Concerning this head, I give the statement of a man whose information I found fully con-

firmed:—"We are not such a degraded set as some believe; sir, but a living doesn't tumble into a man's mouth, now a days. A good many of us costers rises into greengrocers and coal-sheds, and still carries on their rounds as costers, all the same. Why, in Lock's-fields, I could show you twenty such, and you'd find them very decent men, sir—very. There's one man I know, that's risen that way, who is worth hundreds of pounds, and keeps his horse and cart like a gentleman. They rises to be voters, and they all vote liberal. Some marry the better kind of servants, — such servant-maids as would'nt marry a rag and bottle shop, but doesn't object to a coal shed. It's mostly younger men that manages this. As far as I have observed, these costers, after they has settled and got to be housekeepers, don't turn their backs on their old mates. They'd have a nice life of it if they did—yes! a very nice life."

Of the Homes of the Costermongers.

The costermongers usually reside in the courts and alleys in the neighbourhood of the different street-markets. They themselves designate the locality where, so to speak, a colony of their people has been established, a "coster district," and the entire metropolis is thus parcelled out, almost as systematically as if for the purposes of registration. These costermonger districts are as follows, and are here placed in the order of the numerical importance of the residents:

The New Cut (Lambeth).	Ratcliffe Highway.
Whitecross-street.	Lisson-grove.
Leather-lane.	Petticoat and Rosemary-lane.
The Brill, Somers' Town.	Marylebone-lane.
Whitechapel.	Oxford-street.
Camberwell.	Rotherhithe.
Walworth.	Deptford.
Peckham.	Dockhead.
Bermondsey.	Greenwich.
The Broadway, Westminster.	Commercial-road (East).
Shoreditch.	Poplar.
Paddington and Edgeware Road.	Limehouse.
Tottenham-court Road.	Bethnal-green.
Drury-lane.	Hackney-road.
Old-street Road.	Kingsland.
Clare Market.	Camden Town.

The homes of the costermongers in these places, may be divided into three classes; firstly, those who, by having a regular trade or by prudent economy, are enabled to live in comparative ease and plenty; secondly, those who, from having a large family or by imprudent expenditure, are, as it were, struggling with the world; and thirdly, those who for want of stock-money, or ill success in trade are nearly destitute.

The first home I visited was that of an old wom n, who with the assistance of her son and girls ontrived to live in a most praiseworthy and fortable manner. She and all her fami e teetotallers, and may be taken as a fair he thriving costermonger.

A d a dark flight of stairs, a savory smel rew stronger at each step I mou oman lived in a large airy room loor ("the drawing-room") as she told me laughing at her own joke), well lighted by a clean window, and I found her laying out the savory smelling dinner looking most temptingly clean. The floor was as white as if it had been newly planed, the coke fire was bright and warm, making the lid of the tin saucepan on it rattle up and down as the steam rushed out. The wall over the fire-place was patched up to the ceiling with little square pictures of saints, and on the mantel-piece, between a row of bright tumblers and wine glasses filled with odds and ends, stood glazed crockeryware images of Prince Albert and M. Jullien. Against the walls, which were papered with "hangings" of four different patterns and colours, were hung several warm shawls, and in the band-box, which stood on the stained chest of drawers, you could tell that the Sunday bonnet was stowed safely away from the dust. A turn-up bedstead thrown back, and covered with a many-coloured patch-work quilt, stood opposite to a long dresser with its mugs and cups dangling from the hooks, and the clean blue plates and dishes ranged in order at the back. There were a few bushel baskets piled up in one corner, "but the apples smelt so," she said, "they left them in a stable at night."

By the fire sat the woman's daughter, a pretty meek-faced gray-eyed girl of sixteen, who "was home nursing" for a cold. "Steve" (her boy) I was informed, was out working. With his help, the woman assured me, she could live very comfortably—"God be praised!" and when he got the barrow he was promised, she gave me to understand, that their riches were to increase past reckoning. Her girl too was to be off at work as soon as sprats came in. "Its on Lord Mayor's-day they comes in," said a neighbour who had rushed up to see the strange gentleman, "they says he has 'em on his table, but I never seed 'em. They never gives us the pieces, no not even the heads," and every one laughed to their utmost. The good old dame was in high spirits, her dark eyes sparkling as she spoke about her "Steve." The daughter in a little time lost her bashfulness, and informed me "that one of the Polish refugees was a-courting Mrs. M ——, who had given him a pair of black eyes."

On taking my leave I was told by the mother that their silver gilt Dutch clock—with its glass face and blackleaded weights—"was the best one in London, and might be relied on with the greatest safety."

As a specimen of the dwellings of the struggling costers, the following may be cited:

The man, a tall, thick-built, almost good-looking fellow, with a large fur cap on his head, lived with his family in a front kitchen, and as there were, with his mother-in-law, five persons, and only one bed, I was somewhat puzzled to know where they could *all* sleep. The barrow standing on the railings over the window, half shut out the light, and when any one passed there was a momentary shadow thrown over the room, and a loud rattling of the

Original from HARVARD UNIVERSITY

iron gratings above that completely prevented all conversation. When I entered, the mother-in-law was reading aloud one of the threepenny papers to her son, who lolled on the bed, that with its curtains nearly filled the room. There was the usual attempt to make the fireside comfortable. The stone sides had been well whitened, and the mantel-piece decorated with its small tin trays, tumblers, and a piece of looking-glass. A cat with a kitten were seated on the hearth-rug in front. "They keeps the varmint away," said the woman, stroking the "puss," "and gives a look of home." By the drawers were piled up four bushel baskets, and in a dark corner near the bed stood a tall measure full of apples that scented the room. Over the head, on a string that stretched from wall to wall, dangled a couple of newly-washed shirts, and by the window were two stone barrels, for lemonade, when the coster visited the fairs and races.

Whilst we were talking, the man's little girl came home. For a poor man's child she was dressed to perfection; her pinafore was clean, her face shone with soap, and her tidy cotton print gown had clearly been newly put on that morning. She brought news that "Janey" was coming home from auntey's, and instantly a pink cotton dress was placed by the mother-in-law before the fire to air. (It appeared that Janey was out at service, and came home once a week to see her parents and take back a clean frock.) Although these people were living, so to speak, in a cellar, still every endeavour had been made to give the home a look of comfort. The window, with its paper-patched panes, had a clean calico blind. The side-table was dressed up with yellow jugs and cups and saucers, and the band-boxes had been stowed away on the flat top of the bedstead. All the chairs, which were old fashioned mahogany ones, had sound backs and bottoms.

Of the third class, or the very poor, I chose the following "type" out of the many others that presented themselves. The family here lived in a small slanting-roofed house, partly stripped of its tiles. More than one half of the small leaden squares of the first-floor window were covered with brown paper, puffing out and crackling in the wind, while through the greater part of the others were thrust out ball-shaped bundles of rags, to keep out the breeze. The panes that did remain were of all shapes and sizes, and at a distance had the appearance of yellow glass, they were so stained with dirt. I opened a door with a number chalked on it, and groped my way up a broken tottering staircase.

It took me some time after I had entered the apartment before I could get accustomed to the smoke, that came pouring into the room from the chimney. The place was filled with it, curling in the light, and making every thing so indistinct that I could with difficulty see the white mugs ranged in the corner-cupboard, not three yards from me. When the wind was in the north, or when it rained, it was always that way, I was told, "but otherwise," said an old dame about sixty, with long grisly hair spreading over her black shawl, "it is pretty good for that."

On a mattrass, on the floor, lay a pale-faced girl—"eighteen years old last twelfth-cake day"—her drawn-up form showing in the patch-work counterpane that covered her. She had just been confined, and the child had died! A little straw, stuffed into an old tick, was all she had to lie upon, and even that had been given up to her by the mother until she was well enough to work again. To shield her from the light of the window, a cloak had been fastened up slantingly across the panes; and on a string that ran along the wall was tied, amongst the bonnets, a clean nightcap—"against the doctor came," as the mother, curtsying, informed me. By the side of the bed, almost hidden in the dark shade, was a pile of sieve baskets, crowned by the flat shallow that the mother "worked" with.

The room was about nine feet square, and furnished a home for three women. The ceiling slanted like that of a garret, and was the colour of old leather, excepting a few rough white patches, where the tenants had rudely mended it. The white light was easily seen through the laths, and in one corner a large patch of the paper looped down from the wall. One night the family had been startled from their sleep by a large mass of mortar—just where the roof bulged in—falling into the room. "We never want rain water," the woman told me, "for we can catch plenty just over the chimney-place."

They had made a carpet out of three or four old mats. They were "obligated to it, for fear of dropping anything through the boards into the donkey stables in the parlour underneath. But we only pay ninepence a week rent," said the old woman, "and mustn't grumble."

The only ornament in the place was on the mantel-piece—an old earthenware sugar-basin, well silvered over, that had been given by the eldest girl when she died, as a remembrance to her mother. Two cracked tea-cups, on their inverted saucers, stood on each side, and dressed up the fire-side into something like tidiness. The chair I sat on was by far the best out of the three in the room, and that had no back, and only half its quantity of straw.

The parish, the old woman told me, allowed her 1*s.* a week and two loaves. But the doctor ordered her girl to take sago and milk, and she was many a time sorely puzzled to get it. The neighbours helped her a good deal, and often sent her part of their unsold greens;—even if it was only the outer leaves of the cabbages, she was thankful for them. Her other girl—a big-boned wench, with a red shawl crossed ove[illegible] you bosom, and her black hair parted on one [illegible]ormed, did all she could, and so they lived o[illegible] class of long as they kept out of the 'big h[illegible]art of the workhouse) she would not complain.

Of the Dress of the Costermongers.

From the homes of the costermongers we pass to a consideration of their dress.

The costermonger's ordinary costume partakes of the durability of the warehouseman's, with the quaintness of that of the stable-boy. A well-to-do "coster," when dressed for the day's work, usually wears a small cloth cap, a little on one side. A close-fitting worsted tie-up skull-cap, is very fashionable, just now, among the class, and ringlets at the temples are looked up to as the height of elegance. Hats they never wear—excepting on Sunday—on account of their baskets being frequently carried on their heads. Coats are seldom indulged in; their waistcoats, which are of a broad-ribbed corduroy, with fustian back and sleeves, being made as long as a groom's, and buttoned up nearly to the throat. If the corduroy be of a light sandy colour, then plain brass, or sporting buttons, with raised fox's or stag's heads upon them—or else black bone-buttons, with a flower-pattern—ornament the front; but if the cord be of a dark rat-skin hue, then mother-of-pearl buttons are preferred. Two large pockets—sometimes four—with huge flaps or lappels, like those in a shooting-coat, are commonly worn. If the costermonger be driving a good trade and have his set of regular customers, he will sport a blue cloth jacket, similar in cut to the cord ones above described; but this is looked upon as an extravagance of the highest order, for the slime and scales of the fish stick to the sleeves and shoulders of the garment, so as to spoil the appearance of it in a short time. The fashionable stuff for trousers, at the present, is a dark-coloured "cable cord," and they are made to fit tightly at the knee and swell gradually until they reach the boot, which they nearly cover. Velveteen is now seldom worn, and knee-breeches are quite out of date. Those who deal wholly in fish wear a blue serge apron, either hanging down or tucked up round their waist. The costermonger, however, prides himself most of all upon his neckerchief and boots. Men, women, boys and girls, all have a passion for these articles. The man who does not wear his silk neckerchief—his "King's-man" as it is called—is known to be in desperate circumstances; the inference being that it has gone to supply the morning's stock-money. A yellow flower on a green ground, or a red and blue pattern, is at present greatly in vogue. The women wear their kerchiefs tucked-in under their gowns, and the men have theirs wrapped loosely round the neck, with the ends hanging over their waistcoats. Even if a costermonger has two or three silk handkerchiefs by him already, he seldom hesitates to buy another, when tempted with a bright showy pattern hanging from a Field-lane door-post.

The costermonger's love of a good strong boot is a singular prejudice that runs throughout the whole class. From the father to the youngest child, all will be found well shod. So strong is their predilection in this respect, that a costermonger may be immediately known by a glance at his feet. He will part with everything rather than his boots, and to wear a pair of second-hand ones, or "translators" (as they are called), is felt as a bitter degradation by them all. Among the men, this pride has risen to such a pitch, that many will have their upper-leathers tastily ornamented, and it is not uncommon to see the younger men of this class with a heart or a thistle, surrounded by a wreath of roses, worked below the instep, on their boots. The general costume of the women or girls is a black velveteen or straw bonnet, with a few ribbons or flowers, and almost always a net cap fitting closely to the cheek. The silk "King's-man" covering their shoulders, is sometimes tucked into the neck of the printed cotton-gown, and sometimes the ends are brought down outside to the apron-strings. Silk dresses are never worn by them—they rather despise such articles. The petticoats are worn short, ending at the ankles, just high enough to show the whole of the much-admired boots. Coloured, or "illustrated shirts," as they are called, are especially objected to by the men.

On the Sunday no costermonger will, if he can possibly avoid it, wheel a barrow. If a shilling be an especial object to him, he may, perhaps, take his shallow and head-basket as far as Chalk-farm, or some neighbouring resort; but even then he objects strongly to the Sunday-trading. They leave this to the Jews and Irish, who are always willing to earn a penny—as they say.

The prosperous coster *will* have his holiday on the Sunday, and, if possible, his Sunday suit as well—which usually consists of a rough beaver hat, brown Petersham, with velvet facings of the same colour, and cloth trousers, with stripes down the side. The women, generally, manage to keep by them a cotton gown of a bright showy pattern, and a new shawl. As one of the craft said to me—"Costers likes to see their gals and wives look lady-like when they takes them out." Such of the costers as are not in a flourishing way of business, seldom make any alteration in their dress on the Sunday.

There are but five tailors in London who make the garb proper to costermongers; one of these is considered somewhat "slop," or as a coster called him, a "springer-up."

This springer-up is blamed by some of the costermongers, who condemn him for employing women at reduced wages. A whole court of costermongers, I was assured, would withdraw their custom from a tradesman, if one of their body, who had influence among them, showed that the tradesman was unjust to his workpeople. The tailor in question issues bills after the following fashion. I give one verbatim, merely withholding the address for obvious reasons:

"Once try you'll come again.

Slap-up Tog and out-and-out Kicksies Builder.

Mr. —— nabs the chance of putting his cus-

tomers awake, that he has just made his escape from Russia, not forgetting to clap his mawleys upon some of the right sort of Ducks, to make single and double backed Slops for gentlemen in black, when on his return home he was stunned to find one of the top manufacturers of Manchester had cut his lucky and stepped off to the Swan Stream, leaving behind him a valuable stock of Moleskins, Cords, Velveteens, Plushes, Swandowns, &c., and I having some ready in my kick, grabbed the chance, and stepped home with my swag, and am now safe landed at my crib. I can turn out toggery of every description very slap up, at the following low prices for

Ready Gilt—Tick being no go.

Upper Benjamins, built on a downey plan, a monarch to half a finnuff. Slap up Velveteen Togs, lined with the same, 1 pound 1 quarter and a peg. Moleskin ditto, any colour, lined with the same, 1 couter. A pair of Kerseymere Kicksies, any colour, built very slap up, with the artful dodge, a canary. Pair of stout Cord ditto, built in the 'Melton Mowbray' style, half a sov. Pair of very good broad Cord ditto, made very saucy, 9 bob and a kick. Pair of long sleeve Moleskin, all colours, built hanky-spanky, with a double fakement down the side and artful buttons at bottom, half a monarch. Pair of stout ditto, built very serious, 9 times. Pair of out-and-out fancy sleeve Kicksies, cut to drop down on the trotters, 2 bulls. Waist Togs, cut long, with moleskin back and sleeves, 10 peg. Blue Cloth ditto, cut slap, with pearl buttons, 14 peg. Mud Pipes, Knee Caps, and Trotter Cases, built very low.

"A decent allowance made to Seedy Swells, Tea Kettle Purgers, Head Robbers, and Flunkeys out of Collar.

"N.B. Gentlemen finding their own Broady can be accommodated."

Of the Diet and Drink of Costermongers.

It is less easy to describe the diet of costermongers than it is to describe that of many other of the labouring classes, for their diet, so to speak, is an "out-door diet." They breakfast at a coffee-stall, and (if all their means have been expended in purchasing their stock, and none of it be yet sold) they expend on the meal only 1*d.*, reserved for the purpose. For this sum they can procure a small cup of coffee, and two "thin" (that is to say two thin slices of bread and butter). For dinner—which on a week-day is hardly ever eaten at the costermonger's abode—they buy "block ornaments," as they call the small, dark-coloured pieces of meat exposed on the cheap butchers' blocks or counters. These they cook in a tap-room; half a pound costing 2*d.* If time be an object, the coster buys a hot pie or two; preferring fruit-pies when in season, and next to them meat-pies. "We never eat eel-pies," said one man to me, "because we know they're often made of large dead eels. *We*, of all people, are not to be had that way. But the haristocrats eats 'em and never knows the difference." I did not hear that these men had any repugnance to meat-pies; but the use of the dead eel happens to come within the immediate knowledge of the costermongers, who are, indeed, its purveyors. Saveloys, with a pint of beer, or a glass of "short" (neat gin) is with them another common week-day dinner. The costers make all possible purchases of street-dealers, and pride themselves in thus "sticking to their own." On Sunday, the costermonger, when not "cracked up," enjoys a good dinner at his own abode. This is always a joint—most frequently a shoulder or half-shoulder of mutton—and invariably with "lots of good taturs baked along with it." In the quality of their potatoes these people are generally particular.

The costermonger's usual beverage is beer, and many of them drink hard, having no other way of spending their leisure but in drinking and gambling. It is not unusual in "a good time," for a costermonger to spend 12*s.* out of every 20*s.* in beer and pleasure.

I ought to add, that the "single fellows," instead of living on "block ornaments" and the like, live, when doing well, on the best fare, at the "spiciest" cook-shops on their rounds, or in the neighbourhood of their residence.

There are some families of costermongers who have persevered in carrying out the principles of teetotalism. One man thought there might be 200 individuals, including men, women, and children, who practised total abstinence from intoxicating drinks. These parties are nearly all somewhat better off than their drinking companions. The number of teetotallers amongst the costers, however, was more numerous three or four years back.

Of the Cries, Rounds, and Days of Costermongers.

I shall now proceed to treat of the London costermongers' mode of doing business.

In the first place all the goods they sell are cried or "hawked," and the cries of the costermongers in the present day are as varied as the articles they sell. The principal ones, uttered in a sort of cadence, are now, "Ni-ew mackerel, 6 a shilling." ("I've got a good jacketing many a Sunday morning," said one dealer, "for waking people up with crying mackerel, but I've said, 'I must live while you sleep.'") "Buy a pair of live soles, 3 pair for 6*d.*"—or, with a barrow, "Soles, 1*d.* a pair, 1*d.* a pair;" "Plaice alive, alive, cheap;" "Buy a pound crab, cheap;" "Pine-apples, ½*d.* a slice;" "Mussels a penny a quart;" "Oysters, a penny a lot;" "Salmon alive, 6*d.* a pound;" "Cod alive, 2*d.* a pound;" "Real Yarmouth bloaters, 2 a penny;" "New herrings alive, 16 a groat" (this is the loudest cry of any); "Penny a bunch turnips" (the same with greens, cabbages, &c.); "All new nuts, 1*d.* half-pint;" "Oranges, 2 a penny;" "All large and alive-O, new sprats, O, 1*d.* a plate;"

"Wi-ild Hampshire rabbits, 2 a shilling;" "Cherry ripe, 2*d*. a pound;" "Fine ripe plums, 1*d*. a pint;" "Ing-uns, a penny a quart;" "Eels, 3lbs. a shilling—large live eels 3lbs. a shilling."

The continual calling in the streets is very distressing to the voice. One man told me that it had broken his, and that very often while out he lost his voice altogether. "They seem to have no breath," the men say, "after calling for a little while." The repeated shouting brings on a hoarseness, which is one of the peculiar characteristics of hawkers in general. The costers mostly go out with a boy to cry their goods for them. If they have two or three hallooing together, it makes more noise than one, and the boys can shout better and louder than the men. The more noise they can make in a place the better they find their trade. Street-selling has been so bad lately that many have been obliged to have a drum for their bloaters, "to drum the fish off," as they call it.

In the second place, the costermongers, as I said before, have mostly their little bit of a "round;" that is, they go only to certain places; and if they don't sell their goods they "work back" the same way again. If they visit a respectable quarter, they confine themselves to the mews near the gentlemen's houses. They generally prefer the poorer neighbourhoods. They go down or through almost all the courts and alleys—and avoid the better kind of streets, unless with lobsters, rabbits, or onions. If they have anything inferior, they visit the low Irish districts—for the Irish people, they say, want only quantity, and care nothing about quality—*that* they don't study. But if they have anything they wish to make a price of, they seek out the mews, and try to get it off among the gentlemen's coachmen, for *they* will have what is good; or else they go among the residences of mechanics,—for their wives, they say, like good-living as well as the coachmen. Some costers, on the other hand, go chance rounds.

Concerning the busiest days of the week for the coster's trade, they say Wednesdays and Fridays are the best, because they are regular fish days. These two days are considered to be those on which the poorer classes generally run short of money. Wednesday night is called "draw night" among some mechanics and labourers—that is, they then get a portion of their wages in advance, and on Friday they run short as well as on the Wednesday, and have to make shift for their dinners. With the few halfpence they have left, they are glad to pick up anything cheap, and the street-fishmonger never refuses an offer. Besides, he can supply them with a cheaper dinner than any other person. In the season the poor generally dine upon herrings. The poorer classes live mostly on fish, and the "dropped" and "rough" fish is bought chiefly for the poor. The fish-huckster has no respect for persons, however; one assured me that if Prince Halbert was to stop him in the street to buy a pair of soles of him, he'd as soon sell him a "rough pair as any other man—indeed, I'd take in my own father," he added, "if he wanted to deal with me." Saturday is the worst day of all for fish, for then the poor people have scarcely anything at all to spend; Saturday night, however, the street-seller takes more money than at any other time in the week.

Of the Costermongers on their Country Rounds.

Some costermongers go what they term "country rounds," and they speak of their country expeditions as if they were summer excursions of mere pleasure. They are generally variations from a life growing monotonous. It was computed for me that at present three out of every twenty costermongers "take a turn in the country" at least once a year. Before the prevalence of railways twice as many of these men carried their speculations in fish, fruit, or vegetables to a country mart. Some did so well that they never returned to London. Two for instance, after a country round, settled at Salisbury; they are now regular shopkeepers, "and very respectable, too," was said to me, "for I believe they are both pretty tidy off for money; and are growing rich." The railway communication supplies the local-dealer with fish, vegetables, or any perishable article, with such rapidity and cheapness that the London itinerant's occupation in the towns and villages about the metropolis is now half gone.

In the following statement by a costermonger, the mode of life on a country round, is detailed with something of an assumption of metropolitan superiority.

"It was fine times, sir, ten year back, aye, and five year back, in the country, and it ain't so bad now, if a man's known. It depends on that now far more than it did, and on a man's knowing how to work a village. Why, I can tell you if it wasn't for such as me, there's many a man working on a farm would never taste such a nice thing as a fresh herring—never, sir. It's a feast at a poor country labourer's place, when he springs six-penn'orth of fresh herrings, some for supper, and some in salt for next day. I've taken a shillings'-worth to a farmer's door of a darkish night in a cold autumn, and they'd a warm and good dish for supper, and looked on me as a sort of friend. We carry them relishes from London; and they like London relishes, for we know how to set them off. I've fresh herringed a whole village near Guildford, first thing in the morning. I've drummed round Guildford too, and done well. I've waked up Kingston with herrings. I've been as welcome as anything to the soldiers in the barracks at Brentwood, and Romford, and Maidstone with my fresh herrings; for they're good customers. In two days I've made 2*l*. out of 10*s*. worth of fresh herrings, bought at Billingsgate. I always lodge at a public-house in the country; so do all of us, for the publicans are customers. We are well received at the public-houses; some of us go there for the handiness of the 'lush.' I've done

pretty well with red herrings in the country. A barrel holds (say) 800. We sell the barrels at *6d.* a piece, and the old women fight after them. They pitch and tar them, to make water-barrels. More of us would settle in the country, only there's no life there."

The most frequented round is from Lambeth to Wandsworth, Kingston, Richmond, Guildford, and Farnham. The costermonger is then "sold out," as he calls it,—he has disposed of his stock, and returns by the way which is most lightly tolled, no matter if the saving of *1d.* or *2d.* entail some miles extra travelling. "It cost me *15d.* for tolls from Guildford for an empty cart and donkey," said a costermonger just up from the country.

Another round is to Croydon, Reigate, and the neighbourhoods; another to Edgeware, Kilburn, Watford, and Barnet; another to Maidstone; but the costermonger, if he starts trading at a distance, as he now does frequently, has his barrow and goods sent down by railway to such towns as Maidstone, so he saves the delay and cost of a donkey-cart. A "mate" sees to the transmission of the goods from London, the owner walking to Maidstone to be in readiness to "work" them immediately he receives them. "The railway's an ease and a saving," I was told; "I've got a stock sent for *2s.*, and a donkey's keep would cost that for the time it would be in travelling. There's 5,000 of us, I think, might get a living in the country, if we stuck to it entirely."

If the country enterprise be a failure, the men sometimes abandon it in "a pet," sell their goods at any loss, and walk home, generally getting drunk as the first step to their return. Some have been known to pawn their barrow on the road for drink. This they call "doing queer."

In summer the costermongers carry plums, peas, new potatoes, cucumbers, and quantities of pickling vegetables, especially green walnuts, to the country. In winter their commodities are onions, fresh and red herrings, and sprats. "I don't know how it is," said one man to me, "but we sell ing-uns and all sorts of fruits and vegetables, cheaper than they can buy them where they're grown; and green walnuts, too, when you'd think they had only to be knocked off a tree."

Another costermonger told me that, in the country, he and his mates attended every dance or other amusement, "if it wasn't too respectable." Another said: "If I'm idle in the country on a Sunday, I never go to church. I never was in a church; I don't know why, for my silk handkerchief's worth more than one of their smock-frocks, and is quite as respectable."

Some costermongers confine their exertions to the fairs and races, and many of them are connected with the gipsies, who are said to be the usual receivers of the stolen handkerchiefs at such places.

Of the Earnings of Costermongers.

The earnings of the costermonger—the next subject of inquiry that, in due order, presents itself—vary as much as in more fashionable callings, for he is greatly dependent on the season, though he may be little affected by London being full or empty.

Concurrent testimony supplied me with the following estimate of their earnings. I cite the average earnings (apart from any charges or drawbacks), of the most staple commodities:

In January and February the costers generally sell fish. In these months the wealthier of the street fishmongers, or those who can always command "money to go to market," enjoy a kind of monopoly. The wintry season renders the supply of fish dearer and less regular, so that the poorer dealers cannot buy "at first hand," and sometimes cannot be supplied at all; while the others monopolise the fish, more or less, and will not sell it to any of the other street-dealers until a profit has been realised out of their own regular customers, and the demand partially satisfied. "Why, I've known one man sell *10l.* worth of fish—most of it mackarel—at his stall in Whitecross-street," said a costermonger to me, "and all in one snowy day, in last January. It was very stormy at that time, and fish came in unregular, and he got a haul. I've known him sell *2l.* worth in an hour, and once *2l. 10s.* worth, for I then helped at his stall. If people has dinner parties they must have fish, and gentlemen's servants came to buy. The *average* earnings however of those that "go rounds" in these months are computed not to exceed *8s.* a week; Monday and Saturday being days of little trade in fish.

"March is dreadful," said an itinerant fish seller to me; "we don't average, I'm satisfied, more nor *4s.* a week. I've had my barrow idle for a week sometimes—at home every day, though it had to be paid for, all the same. At the latter end of March, if it's fine, it's *1s.* a week better, because there's flower roots in—'all a-growing,' you know, sir. And that lasts until April, and we then make above *6s.* a week. I've heard people say when I've cried 'all a-growing' on a fine-ish day, 'Aye, now summer's a-coming.' I wish you may get it, says I to myself; for I've studied the seasons."

In May the costermonger's profit is greater. He vends fresh fish—of which there is a greater supply and a greater demand, and the fine and often not very hot weather insures its freshness—and he sells dried herrings and "roots" (as they are called) such as wall-flowers and stocks. The average earnings then are from *10s.* to *12s.* a week.

In June, new potatoes, peas, and beans tempt the costermongers' customers, and then his earnings rise to *1l.* a week. In addition to this *1l.*, if the season allow, a costermonger at the end of the week, I was told by an experienced hand, "will earn an extra *10s.* if he has anything of a round," "Why, I've cleared thirty shillings myself," he added, "on a Saturday night."

In July cherries are the principal article of traffic, and then the profit varies from *4s.* to *8s.*

a day, weather permitting, or 80*s.* a week on a low average. On my inquiry if they did not sell fish in that month, the answer was, "No, sir; we pitch fish to the ——; we stick to cherries, strawberries, raspberries, and ripe currants and gooseberries. Potatoes is getting good and cheap then, and so is peas. Many a round's worth a crown every day of the week."

In August, the chief trading is in Orleans plums, green-gages, apples and pears, and in this month the earnings are from 5*s.* to 6*s.* a day. [I may here remark that the costermongers care little to deal in either vegetables or fish, "when the fruit's in," but they usually carry a certain supply of vegetables all the year round, for those customers who require them.]

In September apples are vended, and about 2*s.* 6*d.* a day made.

In October "the weather gets cold," I was told, "and the apples gets fewer, and the day's work's over at four; we then deals most in fish, such as soles; there's a good bit done in oysters, and we may make 1*s.* or 1*s.* 6*d.* a day, but it's uncertain."

In November fish and vegetables are the chief commodities, and then from 1*s.* to 1*s.* 6*d.* a day is made; but in the latter part of the month an extra 6*d.* or 1*s.* a day may be cleared, as sprats come in and sell well when newly introduced.

In December the trade is still principally in fish, and 12*d.* or 18*d.* a day is the costermonger's earnings. Towards the close of the month he makes rather more, as he deals in new oranges and lemons, holly, ivy, &c., and in Christmas week he makes 3*s.* or 4*s.* a day.

These calculations give an average of about 14*s.* 6*d.* a week, when a man pursues his trade regularly. One man calculated it for me at 15*s.* average the year through—that is supposing, of course, that the larger earnings of the summer are carefully put by to eke out the winter's income. This, I need hardly say, is never done. Prudence is a virtue, which is comparatively unknown to the London costermongers. They have no knowledge of savings'-banks; and to expect that they themselves should keep their money by them untouched for months (even if they had the means of so doing) is simply to expect impossibilities—to look for the continued withstanding of temptation among a class who are unused to the least moral or prudential restraint.

Some costers, I am told, make upwards of 30*s.* a week all the year round; but allowing for cessations in the street-trade, through bad weather, neglect, ill-health, or casualty of any kind, and taking the more prosperous costers with the less successful—the English with the Irish—the men with the women—perhaps 10*s.* a week may be a fair average of the earnings of the entire body the year through.

These earnings, I am assured, were five years ago at least 25 per cent higher; some said they made half as much again: "I can't make it out how it is," said one man, "but I remember that I could go out and sell twelve bushel of fruit in a day, when sugar was dear, and now, when sugar's cheap, I can't sell three bushel on the same round. Perhaps we want thinning."

Such is the state of the working-classes; say all the costers, they have little or no money to spend. "Why, I can assure you," declared one of the parties from whom I obtained much important information, "there's my missis—she sits at the corner of the street with fruit. Eight years ago she would have taken 8*s.* out of that street on a Saturday, and last Saturday week she had one bushel of apples, which cost 1*s.* 6*d.* She was out from ten in the morning till ten at night, and all she took that day was 1*s.* 7½*d.* Go to whoever you will, you will hear much upon the same thing." Another told me, "The costers are often obliged to sell the things for what they gave for them. The people haven't got money to lay out with them—they tell us so; and if they are poor we must be poor too. If we can't get a profit upon what goods we buy with our stock-money, let it be our own or anybody's else, we are compelled to live upon it, and when that's broken into, we must either go to the workhouse or starve. If we go to the workhouse, they'll give us a piece of dry bread, and abuse us worse than dogs." Indeed, the whole course of my narratives shows how the costers generally—though far from universally—complain of the depressed state of their trade. The following statement was given to me by a man who, for twelve years, had been a stall-keeper in a street-market. It shows to what causes he (and I found others express similar opinions) attributes the depression:—

"I never knew things so bad as at present—never! I had six prime cod-fish, weighing 15lbs. to 20lbs. each, yesterday and the day before, and had to take two home with me last night, and lost money on the others—besides all my time, and trouble, and expense. I had 100 herrings, too, that cost 3*s.*—prime quality, and I only sold ten out of them in a whole day. I had two pads of soles, sir, and lost 4*s.*—that is one pad—by them. I took only 4*s.* the first day I laid in this stock, and only 2*s.* 6*d.* the next; I then had to sell for anything I could get, and throw some away. Yet, people say mine's a lazy, easy life. I think the fall off is owing to meat being so cheap, 'cause people buy that rather than my goods, as they think there's more stay in it. I'm afeard things will get worse too." (He then added by way of *sequitur*, though it is difficult to follow the reasoning,) "If this here is free-trade, then to h— with it, I say!"

Of the Capital and Income of the Costermongers.

I shall now pass, from the consideration of the individual earnings, to the income and capital of the entire body. Great pains have been taken to ensure exactitude on these points, and the following calculations are certainly below the mark. In order to be within due bounds, I will take the costermongers, exclusive of their wives and families, at 10,000, whereas it

would appear that their numbers are upwards of 11,000.

1,000 carts, at 3*l.* 3*s.* each	£3,150
[Donkeys, and occasionally ponies, are harnessed to barrows.]	
5,000 barrows, at 2*l.* each	10,000
1,500 donkeys, at 1*l.* 5*s.* each	1,875
[One intelligent man thought there were 2,000 donkeys, but I account that in excess.]	
200 ponies, at 5*l.* each	1,000
[Some of these ponies, among the very first-class men, are worth 20*l.*: one was sold by a coster for 30*l.*]	
1,700 sets of harness, at 5*s.* each	425
[All calculated as worn and second-hand.]	
4,000 baskets (or shallows), at 1*s.* each	200
3,500 stalls or standings, at 5*s.* each	875
[The stall and barrow men have generally baskets to be used when required.]	
10,000 weights, scales, and measures, at 2*s.* 6*d.* each	1,250
[It is difficult to estimate this item with exactitude. Many averaged the value at 3*s.* 4*d.*]	
Stock-money for 10,000 costers, at 10*s.* each	5,000
Total capital	£24,135

Upwards of 24,000*l.*, then, at the most moderate computation, represents the value of the animals, vehicles, and stock, belonging to the costermongers in the streets of London.

The keep of the donkeys is not here mixed up with their value, and I have elsewhere spoken of it.

The whole course of my narrative shows that the bulk of the property in the street goods, and in the appliances for their sale, is in the hands of usurers as well as of the costers. The following account shows the sum paid yearly by the London costermongers for the hire, rent, or interest (I have heard each word applied) of their barrows, weights, baskets, and stock:

Hire of 3,000 barrows, at 1*s.* 3*d.* a week	£14,000
Hire of 600 weights, scales, &c., at 1*s.* 6*d.* a week for 2, and 6*d.* a week for 10 months	1,020
Hire of 100 baskets, &c., at 6*d.* a week	6,500
Interest on 2,500*l.* stock-money, at 125*l.* per week	6,500
[Calculating at 1*s.* interest weekly for 20*s.*]	
Total paid for hire and interest	£22,550

Concerning the income of the entire body of costermongers in the metropolis, I estimate the earnings of the 10,000 costermongers, taking the average of the year, at 10*s.* weekly. My own observation, the result of my inquiries, confirmed by the opinion of some of the most intelligent of the costermongers, induce me to adopt this amount. It must be remembered, that if some costermongers do make 30*s.* a week through the year, others will not earn a fourth of it, and hence many of the complaints and sufferings of the class. Then there is the draw-back in the sum paid for "hire," "interest," &c., by numbers of these people; so that it appears to me, that if we assume the income of the entire body—including Irish and English—to be 15*s.* a week per head in the summer, and 5*s.* a week each in the winter, as the two extremes, or a mean of 10*s.* a week all the year through, we shall not be far out either way. The aggregate earnings of the London costermongers, at this rate, are 5,000*l.* per week, or 260,000*l.* yearly. Reckoning that 30,000 individuals have to be supported out of this sum, it gives an average of 3*s.* 4*d.* a week per head.

But it is important to ascertain not only the earnings or aggregate amount of profit made by the London costermongers in the course of the year, but likewise their receipts, or aggregate amount of "takings," and thus to arrive at the gross sum of money annually laid out by the poorer classes of the metropolis in the matter of fish, fruit, and vegetables alone. Assuming that the average profits of the costermongers are at the rate of 25 per cent. (and this, I am satisfied, is a high estimate—for we should remember, that though cent. per cent. may be frequently obtained, still their "goods," being of a "perishable" nature, are as frequently lost or sold off at a "tremendous sacrifice"); assuming then, I say, that the *average* profits of the entire 10,000 individuals are 25 per cent on the cost-price of their stock, and that the aggregate amount of their profits or earnings is upwards of 260,000*l.*, it follows that the gross sum of money laid out with the London costers in the course of the twelvemonth is between 1,250,000*l.* and 1,500,000*l.* sterling—a sum so enormous as almost to make us believe that the tales of individual want are matters of pure fiction. Large, however, as the amount appears in the mass, still, if distributed among the families of the working men and the poorer class of Londoners, it will be found that it allows but the merest pittance per head per week for the consumption of those articles, which may be fairly said to constitute the staple commodities of the dinners and "desserts!" of the poor.

Of the Providence and Improvidence of Costermongers.

The costermongers, like all wandering tribes, have generally no foresight; only an exceptional few are provident—and these are mostly the more intelligent of the class—though some of the very ignorant do occasionally save. The providence of the more intelligent costermonger enables him in some few cases to become "a settled man," as I have before pointed out. He perhaps gets to be the proprietor of a coal-shed, with a greengrocery and potato business attached to it; and with the usual trade in oysters and ginger-beer. He may too, sometimes, have a sum of money in the savings'-bank, or he may invest it in the purchase of a lease of the premises he occupies, or expend it in furnishing the rooms of his house to let them out to single-men lodgers; or he may become an usurer, and lend out his

Original from HARVARD UNIVERSITY

money to his less provident brethren at 1040*l.* per cent. per annum; or he may purchase largely at the markets, and engage youths to sell his surplus stock at half profits.

The provident costermonger, who has thus "got on in the world," is rarely speculative. He can hardly be induced to become a member of a "building" or "freehold land" society, for instance. He has been accustomed to an almost *immediate* return for his outlays, and distrusts any remote or contingent profit. A regular costermonger—or any one who has been a regular costermonger, in whatever trade he may be afterwards engaged—generally dies intestate, let his property be what it may; but there is seldom any dispute as to the disposition of his effects: the widow takes possession of them, as a matter of course. If there be grown-up children, they may be estranged from home, and not trouble their heads about the matter; or, if not estranged, an amicable arrangement is usually come to. The costermongers' dread of all courts of law, or of anything connected with the law, is only second to their hatred of the police.

The more ignorant costermonger, on the other hand, if he be of a saving turn, and have no great passion for strong drink or gaming, is often afraid to resort to the simple modes of investment which I have mentioned. He will rather keep money in his pocket; for, though it does not fructify there, at least it is safe. But this is only when provided with a donkey or pony "what suits;" when not so provided, he will "suit himself" forthwith. If, however, he have saved a little money, and have a craving after gambling or amusements, he is sure at last to squander it that way. Such a man, without any craving for drink or gaming, will often continue to pay usuriously for the hire of his barrow, not suspecting that he is purchasing it over and over and over again, in his weekly payments. To suggest to him that he might place his money in a bank, is to satisfy him that he would be "had" in some way or other, as he believes all banks and public institutions to be connected with government, and the taxes, and the police. Were any one to advise a man of this class—and it must be remembered that I am speaking of the *ignorant* costers—to invest a spare 50*l.* (supposing he possessed it) in the "three per cents.," it would but provoke a snappish remark that he knew nothing about them, and would have nothing to do with them; for he would be satisfied that there was "some cheatery at the bottom." If he could be made to understand what is meant by 3*l.* per centum per annum, he would be sure to be indignant at the robbery of giving only 7½*d.* for the use of 1*l.* for a whole year!

I may state, in conclusion, that a costermonger of the class I have been describing, mostly objects to give change for a five-pound note; he will sooner give credit—when he knows "the party" —than change, even if he have it. If, however, he feels compelled, rather than offend a regular customer, to take the note, he will not rest until he has obtained sovereigns for it at a neighbouring innkeeper's, or from some tradesman to whom he is known. "Sovereigns," said one man, and not a very ignorant man, to me, "is something to lay hold on; a note ain't."

Moreover, should one of the more ignorant, having tastes for the beer-shop, &c., meet with "a great haul," or save 5*l.* by some continuous industry (which he will most likely set down as "luck"), he will spend it idly or recklessly in dissipation and amusement, regardless of the coming winter, whatever he may have suffered during the past. Nor, though they know, from the bitterest experience, that their earnings in the winter are not half those of the rest of the year, and that they are incapacitated from pursuing their trade in bad weather, do they endeavour to make the extra gains of their best time mitigate the want of the worst.

Of the Costermongers in Bad Weather and during the Cholera.

"Three wet days," I was told by a clergyman, who is now engaged in selling stenographic cards in the streets, "will bring the greater part of 30,000 street-people to the brink of starvation." This statement, terrible as it is, is not exaggerated. The average number of wet days every year in London is, according to the records of the Royal Society, 161—that is to say, rain falls in the metropolis more than three days in each week, and very nearly every other day throughout the year. How precarious a means of living then must street-selling be!

When a costermonger cannot pursue his out-door labour, he leaves it to the women and children to "work the public-houses," while he spends his time in the beer-shop. Here he gambles away his stock-money oft enough, "if the cards or the luck runs again him;" or else he has to dip into his stock-money to support himself and his family. He must then borrow fresh capital at any rate of interest to begin again, and he begins on a small scale. If it be in the cheap and busy seasons, he may buy a pad of soles for 2*s.* 6*d.*, and clear 5*s.* on them, and that "sets him a-going again, and then he gets his silk handkerchief out of pawn, and goes as usual to market."

The sufferings of the costermongers during the prevalence of the cholera in 1849, were intense. Their customers generally relinquished the consumption of potatoes, greens, fruit, and fish; indeed, of almost every article on the consumption of which the costermongers depend for his daily bread. Many were driven to apply to the parish; "many had relief and many hadn't," I was told. Two young men, within the knowledge of one of my informants, became professional thieves, after enduring much destitution. It does not appear that the costermongers manifested any personal dread of the visitation of the cholera, or thought that their lives were imperilled: "We weren't a bit afraid," said one of them, "and, perhaps, that

was the reason so few costers died of the cholera. I knew them all in Lambeth, I think, and I knew only one die of it, and he drank hard. Poor Waxy! he was a good fellow enough, and was well known in the Cut. But it was a terrible time for us, sir. It seems to me now like a shocking dream. Fish I could'nt sell a bit of; the people had a perfect dread of it—all but the poor Irish, and there was no making a crust out of them. *They* had no dread of fish, however; indeed, they reckon it a religious sort of living, living on fish,—but they *will* have it dirt cheap. We were in terrible distress all that time."

Of the Costermongers' Raffles.

In their relief of the sick, if relief it is to be called, the costermongers resort to an exciting means; something is raffled, and the proceeds given to the sufferer. This mode is common to other working-classes; it partakes of the excitement of gambling, and is encouraged by the landlords of the houses to which the people resort. The landlord displays the terms of the raffle in his bar a few days before the occurrence, which is always in the evening. The raffle is not confined to the sick, but when any one of the class is in distress—that is to say, without stock-money, and unable to borrow it, —a raffle for some article of his is called at a public-house in the neighbourhood. Cards are printed, and distributed among his mates. The article, let it be whatever it may—perhaps a handkerchief—is put up at 6*d.* a member, and from twenty to forty members are got, according as the man is liked by his "mates," or as he has assisted others similarly situated. The paper of every raffle is kept by the party calling it, and before he puts his name down to a raffle for another party, he refers to the list of subscribers to *his* raffle, in order to see if the person ever assisted him. Raffles are very "critical things, the pint pots fly about wonderful sometimes"—to use the words of one of my informants. The party calling the raffle is expected to take the chair, if he can write down the subscribers' names. One who had been chairman at one of these meetings assured me that on a particular occasion, having called a "general dealer" to order, the party very nearly split his head open with a quart measure. If the hucksters know that the person calling the raffle is "down," and that it is necessity that has made him call it, they will not allow the property put up to be thrown for. "If you was to go to the raffle to-night, sir," said one of them to me, many months ago, before I became known to the class, "they'd say to one another directly you come in, 'Who's this here swell? What's he want?' And they'd think you were a 'cad,' or else a spy, come from the police. But they'd treat you civilly, I'm sure. Some very likely would fancy you was a fast kind of a gentleman, come there for a lark. But you need have no fear, though the pint pots *does* fly about sometimes."

Of the Markets and Trade Rights of the Costermongers, and of the Laws Affecting Them.

The next point of consideration is what are the legal regulations under which the several descriptions of hawkers and pedlars are allowed to pursue their occupations.

The laws concerning hawkers and pedlars, (50 Geo. III., c. 41, and 6 Geo. IV., c. 80,) treat of them as identical callings. The "hawker," however, is, strictly speaking, one who sells wares by *crying* them in the streets of towns, while the *pedlar* travels *on foot* through the country with his wares, not publicly proclaiming them, but visiting the houses on his way to solicit private custom. Until the commencement of the present century—before the increased facilities for conveyance—the pedlars were a numerous body in the country. The majority of them were Scotchmen and some amassed considerable wealth. Railways, however, have now reduced the numbers to insignificance.

Hawkers and pedlars are required to pay 4*l.* yearly for a license, and an additional 4*l.* for every horse or ass employed in the conveyance of wares. The hawking or exposing for sale of fish, fruit, or victuals, does not require a license; and further, it is lawful for any one "being the maker of any home manufacture," to expose it for sale in any fair or market, without a warrant. Neither does anything in either of the two acts in question prohibit "any tinker, cooper, glazier, plumber, harness-mender, or other person, from going about and carrying the materials proper to their business."

The right of the costermongers, then, to "hawk" their wares through the streets is plainly inferred by the above acts; that is to say, nothing in them extends to prohibit persons "going about," unlicensed, and at their own discretion, and selling fish, vegetables, fruit, or provisions generally.

The law acknowledges none of the street "markets." These congregatings are, indeed, in antagonism to the municipal laws of London, which provide that no market, or public place where provisions are sold, shall be held within seven miles of the city. The law, though it permits butchers and other provisionmongers to hire stalls and standings in the flesh and other markets, recognised by custom or usage, gives no such permission as to street-trading.

The right to sell provisions from stands in the streets of the metropolis, it appears, is merely permissive. The regulation observed is this: where the costermongers or other street-dealers have been in the habit of standing to sell their goods, they are not to be disturbed by the police unless on complaint of an adjacent shopkeeper or other inhabitant. If such a person shows that the costermonger, whose stand is near his premises, is by his improper conduct a nuisance, or that, by his clamour or any peculiarity in his mode of business, he causes a crowd to gather

Original from HARVARD UNIVERSITY

and obstruct the thoroughfare, the policeman's duty is to remove him. If the complaint from the inhabitants against the street-sellers be at all general the policemen of the beat report it to the authorities, taking no steps until they receive instructions.

It is somewhat anomalous, however, that the law now recognises—inferentially it is true—the right of costermongers to carry about their goods for sale. Formerly the stands were sometimes tolerated, but not the itinerancy.

The enactments of the Common-council from the time of Elizabeth are stringent against itinerant traders of all descriptions, but stringent to no purpose of prevention. In 1607, a Common-council enactment sets forth, that "many People of badd and lewde Condicon daylie resorte from the most Parte of this Realme to the said Cyttie, Suburbes, and Places adjoininge, procuringe themselves small Habytacons, namely, one Chamber-Roome for a poore Forreynor and his Familye, in a small Cottage with some other as poore as himself in the Cyttie, Suburbes, or Places adjacente, to the great Increase and Pestringe of this Cyttie with poore People; many of them proovinge Shifters, lyvinge by Cozeninge, Stealinge, and Imbeazellinge of Mens Gooddes as Opportunitye may serve them, remoovinge from Place to Place accordinglye; many Tymes runninge away, forsakinge their Wives and Children, leavinge them to the Charge of the said Cyttie, and the Hospitalles of the same."

It was towards this class of men who, by their resort to the capital, recruited the numbers of the street-sellers and public porters and others that the jealousy of the Corporation was directed. The city shop-keepers, three centuries ago, complained vehemently and continuously of the injuries inflicted on their trade by itinerant dealers, complaints which led to bootless enactments. In Elizabeth's reign the Court of Common Council declared that the streets of the city should be used, as in ancient times, for the common highway, and not for the traffic of hucksters, pedlars, and hagglers. But this traffic increased, and in 1632 another enactment was accounted necessary. Oyster-wives, herb-wives, tripe-wives, and all such "unruly people," were threatened with the full pains and penalties of the outraged law if they persevered in the prosecution of their callings, which are stigmatised as "a way whereby to live a more easie life than by labour." In 1694 the street-sellers were menaced with the punishments then deemed suitable for arrant rogues and sturdy beggars—whipping; and that remedy to be applied alike to males and females!

The tenor of these Vagrant Laws not being generally known, I here transcribe them, as another proof of the "wisdom" and mercy of our "ancestors" in "the good old times!"

In the year 1530 the English Parliament enacted, that, while the impotent poor should receive licenses from the justices of the peace to beg within certain limits, all men and *women*, "being whole and mighty in body, and able to labour," if found vagrant and unable to give an account as to how they obtained their living, should be apprehended by the constables, tied to the tail of a cart *naked*, and beaten with whips through the nearest market-town, or hamlet, "till their bodies be bloody by reason of such whipping!" Five years afterwards it was added, that, if the individual had been once already whipped, he or she should not only be whipped again, but "also shall have the upper part of the gristle of his ear clean cut off, so as it may appear for a perpetual token hereafter that he hath been a contemner of the good order of the commonwealth." And finally, in 1562, it was directed that any beggar convicted of being a vagabond should, after being grievously whipped, be burnt through the gristle of the right ear "with a hot iron of the compass of an inch about," unless some person should agree to take him as a servant—of course without wages—for a year; then, that if he twice ran away from such master, he should be adjudged a felon; and that if he ran away a third time, he should "suffer pains of death and loss of land and goods as a felon, without benefit of clergy or sanctuary."

The only acts now in force which regulate the government of the streets, so to speak, are those best known as Michael Angelo Taylor's Act, and the 2 & 3 Vic., best known as the Police Act.

Of the Removals of Costermongers from the Streets.

Such are the laws concerning street trading: let us now see the effect of them.

Within these three months, or little more, there have been many removals of the costermongers from their customary standings in the streets. This, as I have stated, is never done, unless the shopkeepers represent to the police that the costermongers are an injury and a nuisance to them in the prosecution of their respective trades. The costermongers, for the most part, know nothing of the representation of the shopkeepers, so that perhaps the first intimation that they must "quit" comes from the policemen, who thus incur the full odium of the measure, the majority of the street people esteeming it a mere arbitrary act on the part of the members of the force.

The first removal, recently, took place in Leather-lane, Holborn, between three and four months back. It was effected in consequence of representations from the shopkeepers of the neighbourhood. But the removal was of a brief continuance. "Leather-lane," I was told, "looked like a desert compared to what it was. People that had lived there for years hardly knew their own street; and those that had complained, might twiddle their thumbs in their shops for want of something better to do."

The reason, or one reason, why the shopkeepers' trade is co-existent with that of the street-sellers was explained to me in this way

Original from HARVARD UNIVERSITY

by a tradesman perfectly familiar with the subject. "The poorer women, the wives of mechanics or small tradesmen, who have to prepare dinners for their husbands, like, as they call it, 'to make one errand do.' If the wife buys fish or vegetables in the street, as is generally done, she will, at the same time, buy her piece of bacon or cheese at the cheesemonger's, her small quantity of tea and sugar at the grocer's, her fire-wood at the oilman's, or her pound of beef or liver at the butcher's. In all the street-markets there are plenty of such tradesmen, supplying necessaries not vended in the streets, and so one errand is sufficient to provide for the wants of the family. Such customers—that is, such as have been used to buy in the streets—will *not* be driven to buy at the shops. They can't be persuaded that they can buy as cheap at the shops; and besides they are apt to think shopkeepers are rich and street-sellers poor, and that they may as well encourage the poor. So if one street-market is abolished, they'll go to another, or buy of the itinerant costermongers, and they'll get their bits of groceries and the like at the shops in the neighbourhood of the other street-market, even if they have a walk for it; and thus everybody's injured by removing markets, except a few, and they are those at the nearest markets that's not disturbed."

In Leather-lane the shopkeepers speedily retrieved what many soon came to consider the false step (as regards their interests) which they had taken, and in a fortnight or so, they managed, by further representations to the police authorities, and by agreement with the street-sellers, that the street-market people should return. In little more than a fortnight from that time, Leather-lane, Holborn, resumed its wonted busy aspect.

In Lambeth the case at present is different. The men, women, and children, between two and three months back, were all driven by the police from their standings. These removals were made, I am assured, in consequence of representations to the police from the parishioners, not of Lambeth, but of the adjoining parish of Christchurch, Blackfriars-road, who described the market as an injury and a hindrance to their business. The costermongers, etc., were consequently driven from the spot.

A highly respectable tradesman in "the Cut" told me, that he and all his brother shopkeepers had found their receipts diminished a quarter, or an eighth at least, by the removal; and as in all populous neighbourhoods profits were small, this falling off was a very serious matter to them.

In "the Cut" and its immediate neighbourhood, are tradesmen who supply street-dealers with the articles they trade in,—such as cheap stationery, laces, children's shoes, braces, and toys. They, of course, have been seriously affected by the removal; but the pinch has fallen sorest upon the street-sellers themselves. These people depend a good deal one upon another, as they make mutual purchases; now, as they have neither stalls nor means, such a source of profit is abolished.

"It is hard on such as me," said a fruit-seller to me, "to be driven away, for nothing that I've done wrong as I knows of, and not let me make a living, as I've been brought up to. I can't get no work at any of the markets. I've tried Billingsgate and the Borough hard, but there is so many poor men trying for a crust, they're fit to knock a new-comer's head off, though if they did, it wouldn't be much matter. I had 9*s.* 6*d.* stock-money, and I sold the apples and a few pears I had for 3*s.* 9*d.*, and that 13*s.* 3*d.* I've been spinning out since I lost my pitch. But it's done now, and I haven't had two meals a day for a week and more—and them not to call meals—only bread and coffee, or bread and a drink of beer. I tried to get a round of customers, but all the rounds was full, and I'm a very bad walker, and a weak man too. My wife's gone to try the country—I don't know where she is now. I suppose I shall lose my lodging this week, and then I must see what 'the great house' will say to me. Perhaps they'll give me nothing, but take me in, and that's hard on a man as don't want to be a pauper."

Another man told me that he now paid 3*s.* a week for privilege to stand with two stalls on a space opposite the entrance into the National Baths, New Cut; and that he and his wife, who had stood for eleven years in the neighbourhood, without a complaint against them, could hardly get a crust.

One man, with a fruit-stall, assured me that nine months ago he would not have taken 20*l.* for his pitch, and now he was a "regular bankrupt." I asked a girl, who stood beside the kerb with her load in front strapped round her loins, whether her tray was heavy to carry. "After eight hours at it," she answered, "it swaggers me, like drink." The person whom I was with brought to me two girls, who, he informed me, had been forced to go upon the streets to gain a living. Their stall on the Saturday night used to have 4*l.* worth of stock; but trade had grown so bad since the New Police order, that after living on their wares, they had taken to prostitution for a living, rather than go to the "house." The ground in front of the shops has been bought up by the costermongers at any price. Many now give the tradesmen six shillings a week for a stand, and one man pays as much as eight for the right of pitching in front.

The applications for parochial relief, in consequence of these removals, have been fewer than was anticipated. In Lambeth parish, however, about thirty families have been relieved, at a cost of 50*l.* Strange to say, a quarter, or rather more, of the very applicants for relief had been furnished by the parish with money to start the trade, their expulsion from which had driven them to pauperism.

It consequently becomes a question for serious consideration, whether any particular body of householders should, for their own interest, convenience, or pleasure, have it in their power to

deprive so many poor people of their only means of livelihood, and so either force the rate-payers to keep them as paupers, or else drive the women, who object to the imprisonment of the Union, to prostitution, and the men to theft—especially when the very occupation which they are not allowed to pursue, not only does no injury to the neighbourhood, but is, on the contrary, the means of attracting considerable custom to the shops in the locality, and has, moreover, been provided for them by the parish authorities as a means of enabling them to get a living for themselves.

Of the Tricks of Costermongers.

I shall now treat of the tricks of trade practised by the London costermongers. Of these the costers speak with as little reserve and as little shame as a fine gentleman of his peccadilloes. "I've boiled lots of oranges," chuckled one man, "and sold them to Irish hawkers, as wasn't wide awake, for stunning big uns. The boiling swells the oranges and so makes 'em look finer ones, but it spoils them, for it takes out the juice. People can't find that out though until it's too late. I boiled the oranges only a few minutes, and three or four dozen at a time." Oranges thus prepared will not keep, and any unfortunate Irishwoman, tricked as were my informant's customers, is astonished to find her stock of oranges turn dark-coloured and worthless in forty-eight hours. The fruit is "cooked" in this way for Saturday night and Sunday sale —times at which the demand is the briskest. Some prick the oranges and express the juice, which they sell to the British wine-makers.

Apples cannot be dealt with like oranges, but they are mixed. A cheap red-skinned fruit, known to costers as "gawfs," is rubbed hard, to look bright and feel soft, and is mixed with apples of a superior description. "Gawfs are sweet and sour at once," I was told, "and fit for nothing but mixing." Some foreign apples, from Holland and Belgium, were bought very cheap last March, at no more than 16*d.* a bushel, and on a fine morning as many as fifty boys might be seen rubbing these apples, in Hooper-street, Lambeth. "I've made a crown out of a bushel of 'em on a fine day," said one sharp youth. The larger apples are rubbed sometimes with a piece of woollen cloth, or on the coat skirt, if that appendage form part of the dress of the person applying the friction, but most frequently they are rolled in the palms of the hand. The smaller apples are thrown to and fro in a sack, a lad holding each end. "I wish I knew how the shopkeepers manages *their* fruit," said one youth to me; "I should like to be up to some of their moves; they do manage their things so plummy."

Cherries are capital for mixing, I was assured by practical men. They purchase three sieves of indifferent Dutch, and one sieve of good English cherries, spread the English fruit over the inferior quality, and sell them as the best. Strawberry pottles are often half cabbage leaves, a few tempting strawberries being displayed on the top of the pottle. "Topping up," said a fruit dealer to me, "is the principal thing, and we are perfectly justified in it. You ask any coster that knows the world, and he'll tell you that all the salesmen in the markets tops up. It's only making the best of it." Filberts they bake to make them look brown and ripe. Prunes they boil to give them a plumper and finer appearance. The latter trick, however, is not unusual in the shops.

The more honest costermongers will throw away fish when it is unfit for consumption, less scrupulous dealers, however, only throw away what is utterly unsaleable; but none of them fling away the dead eels, though their prejudice against such dead fish prevents their indulging in eel-pies. The dead eels are mixed with the living, often in the proportion of 20 lb. dead to 5 lb. alive, equal quantities of each being accounted very fair dealing. "And after all," said a street fish dealer to me, "I don't know why dead eels should be objected to; the aristocrats don't object to them. Nearly all fish is dead before it's cooked, and why not eels? Why not eat them when they're sweet, if they're ever so dead, just as you eat fresh herrings? I believe it's only among the poor and among our chaps, that there's this prejudice. Eels die quickly if they're exposed to the sun."

Herrings are made to look fresh and bright by candle-light, by the lights being so disposed "as to give them," I was told, "a good reflection. Why I can make them look splendid; quite a pictur. I can do the same with mackerel, but not so prime as herrings."

There are many other tricks of a similar kind detailed in the course of my narrative. We should remember, however, that *shopkeepers* are not immaculate in this respect.

OF THE STREET-SELLERS OF FISH.

Of the Kind and Quantities of Fish sold by the London Costermongers.

Having now given the reader a general view of the numbers, characters, habits, tastes, amusements, language, opinions, earnings, and vicissitudes of the London costermongers,—having described their usual style of dress, diet, homes, conveyances, and street-markets,—having explained where their donkeys are bought, or the terms on which they borrow them, their barrows, their stock-money, and occasionally their stock itself,—having shown their ordinary mode of dealing, either in person or by deputy,

either at half-profits or by means of boys,—where they go and how they manage on their rounds in town and in the country,—what are the laws affecting them, as well as the operation of those laws upon the rest of the community,—having done all this by way of giving the reader a general knowledge of the street-sellers of fish, fruit, and vegetables,—I now proceed to treat more particularly of each of these classes *seriatim*. Beginning with the street-fishmongers, I shall describe, in due order, the season when, the market where, and the classes of people by whom, the wet-fish, the dry-fish, and the shell-fish are severally sold and purchased in the London streets, together with all other concomitant circumstances.

The facilities of railway conveyance, by means of which fish can be sent from the coast to the capital with much greater rapidity, and therefore be received much fresher than was formerly the case, have brought large supplies to London from places that before contributed no quantity to the market, and so induced, as I heard in all quarters at Billingsgate, an extraordinary lowness of price in this species of diet. This cheap food, through the agency of the costermongers, is conveyed to every poor man's door, both in the thickly-crowded streets where the poor reside—a family at least in a room—in the vicinity of Drury-lane and of Whitechapel, in Westminster, Bethnal-green, and St. Giles's, and through the long miles of the suburbs. For all low-priced fish the poor are the costermongers' best customers, and a fish diet seems becoming almost as common among the ill-paid classes of London, as is a potato diet among the peasants of Ireland. Indeed, now, the fish season of the poor never, or rarely, knows an interruption. If fresh herrings are not in the market, there are sprats; and if not sprats, there are soles, or whitings, or mackarel, or plaice.

The rooms of the very neediest of our needy metropolitan population, always smell of fish; most frequently of herrings. So much so, indeed, that to those who, like myself, have been in the habit of visiting their dwellings, the smell of herrings, even in comfortable homes, savours from association, so strongly of squalor and wretchedness, as to be often most oppressive. The volatile oil of the fish seems to hang about the walls and beams of the rooms for ever. Those who have experienced the smell of fish only in a well-ordered kitchen, can form no adequate notion of this stench, in perhaps a dilapidated and ill-drained house, and in a rarely-cleaned room; and I have many a time heard both husband and wife—one couple especially, who were "sweating" for a gorgeous clothes' emporium—say that they had not time to be clean.

The costermonger supplies the poor with every kind of fish, for he deals, usually, in every kind when it is cheap. Some confine their dealings to such things as shrimps, or periwinkles, but the adhering to one particular article is the exception and not the rule; while shrimps, lobsters, &c., are rarely bought by the very poor. Of the entire quantity of fish sent to Billingsgate-market, the costermongers, stationary and itinerant, may be said to sell one-third, taking one kind with another.

The fish sent to London is known to Billingsgate salesmen as "red" and "white" fish. The red fish is, as regards the metropolitan mart, confined to the salmon. The other descriptions are known as "white." The costermongers classify the fish they vend as "wet" and "dry." All fresh fish is "wet;" all cured or salted fish, "dry." The fish which is sold "pickled," is known by that appellation, but its street sale is insignificant. The principal fish-staple, so to speak of the street-fishmonger, is soles, which are in supply all, or nearly all, the year. The next are herrings, mackarel, whitings, Dutch eels, and plaice. The trade in plaice and sprats is almost entirely in the hands of the costermongers; their sale of shrimps is nearer a half than a third of the entire quantity sent to Billingsgate; but their purchase of cod, or of the best lobsters, or crabs, is far below a third. The costermonger rarely buys turbot, or brill, or even salmon, unless he can retail it at 6*d.* the pound. When it is at that price, a street salmon-seller told me that the eagerness to buy it was extreme. He had known persons, who appeared to him to be very poor, buy a pound of salmon, "just for a treat once in a way." His best, or rather readiest customers — for at 6*d.* a pound all classes of the community may be said to be his purchasers—were the shopkeepers of the busier parts, and the occupants of the smaller private houses of the suburbs. During the past year salmon was scarce and dear, and the costermongers bought, comparatively, none of it. In a tolerably cheap season they do not sell more than from a fifteenth to a twentieth of the quantity received at Billingsgate.

In order to be able to arrive at the quantity or weight of the several kinds of fish sold by the costermongers in the streets of London, it is necessary that we should know the entire amount sent to Billingsgate-market, for it is only by estimating the proportion which the street-sale bears to the whole, that we can attain even an approximation to the truth. The following Table gives the results of certain information collected by myself for the first time, I believe, in this country. The facts, as well as the estimated proportions of each kind of fish sold by the costermongers, have been furnished me by the most eminent of the Billingsgate salesmen—gentlemen to whom I am under many obligations for their kindness, consideration, and assistance, at all times and seasons.

TABLE, SHOWING THE QUANTITY, WEIGHT, OR MEASURE OF THE FOLLOWING KINDS OF FISH SOLD IN BILLINGSGATE MARKET IN THE COURSE OF THE YEAR:

Description of Fish.	Number of Fish.	Weight or Measure of Fish.	Proportion sold by Costermongers.
Wet Fish.		lbs.	
Salmon and Salmon Trout (29,000 boxes, 14 fish per box)	406,000	3,480,000	One-twentieth.
Live Cod (averaging 10 lbs. each)	400,000	4,000,000	One-fourth.
Soles (averaging ¼ lb. each)	97,520,000	26,880,000	One-fifteenth.
Whiting (averaging 6 oz. each)	17,920,000	6,720,000	One-fourth.
Haddock (averaging 2 lbs. each)	2,470,000	5,040,000	One-tenth.
Plaice (averaging 1 lb. each)	33,600,000	33,600,000	Seven-eighths.
Mackarel (averaging 1 lb. each)	23,520,000	23,520,000	Two-thirds.
Fresh Herrings (250,000 bars., 700 fish per bar.)	175,000,000	42,000,000	One-half.
„ (in bulk)	1,050,000,000	252,000,000	Three-fourths.
Sprats	. . . . .	4,000,000	Three-fourths.
Eels from Holland (6 fish per 1 lb.)	9,797,760	1,505,280	One-fourth.
„ England and Ireland (6 fish per 1 lb.)		127,680	One-fourth.
Flounders (7,200 quarterns, 36 fish per quartern)	259,200	43,200	All.
Dabs (7,500 quarterns, 36 fish per quartern)	270,000	48,750	All.
Dry Fish.			
Barrelled Cod (15,000 barrels, 50 fish per barrel)	750,000	4,200,000	One-eighth.
Dried Salt Cod (5 lbs. each)	1,600,000	8,000,000	One-tenth.
Smoked Haddock (65,000 bars., 300 fish per bar.)	19,500,000	10,920,000	One-eighth.
Bloaters (265,000 baskets, 150 fish per basket)	147,000,000	10,600,000	One-fourth.
Red Herrings (100,000 bars., 500 fish per bar.)	50,000,000	14,000,000	One-half.
Dried Sprats (9,600 large bundles, 30 fish per bundle)*	288,000	96,000	None.
Shell Fish.			
Oysters (309,935 bars., 1,600 fish per bar.)	495,896,000	. . . . .	One-fourth.
Lobsters (averaging 1 lb. each fish)	1,200,000	1,200,000	One-twentieth.
Crabs (averaging 1 lb. each fish)	600,000	600,000	One-twelfth.
Shrimps (324 to the pint)	498,428,648	192,295 gals.	One-half.
Whelks (224 to the ½ bus.)	4,943,200	24,300 ½ bus.†	All.
Mussels (1000 to the ½ bus.)	50,400,000	50,400 „	Two-thirds.
Cockles (2,000 to the ½ bus.)	67,392,000	32,400 „	Three-fourths.
Periwinkles (4,000 to the ½ bus.)	304,000,000	76,000 „	Three-fourths.

* Costermongers dry their own sprats.
† The half-bushel measure at Billingsgate is double quantity—or, more correctly, a bushel.

Of the Costermongers' Fish Season.

The season for the street-fishmongers begins about October and ends in May.

In October, or a month or two earlier, may-be, they generally deal in fresh herrings, the supply of which lasts up to about the middle or end of November. This is about the best season. The herrings are sold to the poor, upon an average, at twelve a groat, or from 3*s.* to 4*s.* the hundred. After or during November, the sprat and plaice season begins. The regular street-fishmonger, however, seldom deals in sprats. He "works" these only when there is no other fish to be got. He generally considers this trade beneath him, and more fit for women than men. Those costers who do sell them dispose of them now by weight at the rate of 1*d.* to 2*d.* the pound—a bushel averaging from 40 to 50 pounds. The plaice season continues to the first or second week in May. During May the casualty season is on, and there is little fish certain from that time till salmon comes in, and this is about the end of the month. The salmon season lasts till about the middle of July. The selling of salmon is a bad trade in the poor districts, but a very good one in the better streets or the suburbs. At this work the street-fishmonger will sometimes earn on a fine day from 5*s.* to 12*s.* The losses, however, are very great in this article if the weather prove bad. If kept at all "over" it loses its colour, and turns to a pale red, which is seen immediately the knife goes into the fish. While I was obtaining this information some months back, a man went past the window of the house in which I was seated, with a barrow drawn by a donkey. He was crying, "Fresh cod, oh! 1½*d.* a pound, cod alive, oh!" My informant called me to the

window, saying, "Now, here is what we call rough cod." He told me it was three days old. He thought it was eatable *then*, he said. The eyes were dull and heavy and sunken, and the limp tails of the fish dangled over the ends of the barrow. He said it was a hanging market that day—that is to say, things had been dear, and the costers couldn't pay the price for them. He should fancy, he told me, the man had paid for the fish from 9*d.* to 1*s.* each, which was at the rate of 1*d.* per pound. He was calling them at 1½*d.* He would not take less than this until he had "got his own money in;" and then, probably, if he had one or two of the fish left, he would put up with 1*d.* per pound. The weight he was "working" was 12 oz. to the pound. My informant assured me he knew this, because he had borrowed *his* 12 oz. pound weight that morning. This, with the draught of 2 oz. in the weighing-machine, and the ounce gained by placing the fish at the end of the pan, would bring the actual weight given to 9 oz. per pound, and probably, he said the man had even a lighter pound weight in his barrow ready for a "scaly" customer.

After the street-fishmonger has done his morning's work, he sometimes goes out with his tub of pickled salmon on a barrow or stall, and sells it in saucers at 1*d.* each, or by the piece. This he calls as "fine Newcastle salmon." There is generally a great sale for this at the races; and if country-people begin with a pennyworth they end with a shillingsworth—a pennyworth, the costers say, makes a fool of the mouth. If they have any on hand, and a little stale, at the end of the week, they sell it at the public-houses to the "Lushingtons," and to them, with plenty of vinegar, it goes down sweet. It is generally bought for 7*s.* a kit, a little bit "pricked;" but, if good, the price is from 12*s.* to 18*s.* "We're in no ways particular to that," said one candid coster to me. "We don't have the eating on it ourselves, and people a'n't always got their taste, especially when they have been drinking, and we sell a great deal to parties in that way. We think it no sin to cheat 'em of 1*d.* while the publicans takes 1*s.*"

Towards the middle of June the street-fishmonger looks for mackerel, and he is generally employed in selling this fish up to the end of July. After July the Billingsgate season is said to be finished. From this time to the middle of October, when the herrings return, he is mostly engaged selling dried haddocks and red herrings, and other "cas'alty fish that may come across him." Many of the street-fishmongers object to deal in periwinkles, or stewed mussels, or boiled whelks, because, being accustomed to take their money in sixpences at a time, they do not like, they say, to traffic in halfpennyworths. The dealers in these articles are generally looked upon as an inferior class.

There are, during the day, two periods for the sale of street-fish—the one (the morning trade) beginning about ten, and lasting till one in the day—and the other (the night trade) lasting from six in the evening up to ten at night. What fish is left in the forenoon is generally disposed of cheap at night. That sold at the latter time is generally used by the working-class for supper, or kept by them with a little salt in a cool place for the next day's dinner, if it will last as long. Several articles are sold by the street-fishmonger chiefly by night. These are oysters, lobsters, pickled salmon, stewed mussels, and the like. The reason why the latter articles sell better by night is, my informant says, "Because people are lofty-minded, and don't like to be seen eating on 'em in the street in the day-time." Shrimps and winkles are the staple commodities of the afternoon trade, which lasts from three to half-past five in the evening. These articles are generally bought by the working-classes for their tea.

Billingsgate.

To see this market in its busiest costermonger time, the visitor should be there about seven o'clock on a Friday morning. The marke opens at four, but for the first two or three hours, it is attended solely by the regular fishmongers and "bummarees" who have the pick of the best there. As soon as these are gone, the costers' sale begins.

Many of the costers that usually deal in vegetables, buy a little fish on the Friday. It is the fast day of the Irish, and the mechanics' wives run short of money at the end of the week, and so make up their dinners with fish; for this reason the attendance of costers' barrows at Billingsgate on a Friday morning is always very great. As soon as you reach the Monument you see a line of them, with one or two tall fishmonger's carts breaking the uniformity, and the din of the cries and commotion of the distant market, begins to break on the ear like the buzzing of a hornet's nest. The whole neighbourhood is covered with the hand-barrows, some laden with baskets, others with sacks. Yet as you walk along, a fresh line of costers' barrows are creeping in or being backed into almost impossible openings; until at every turning nothing but donkeys and rails are to be seen. The morning air is filled with a kind of seaweedy odour, reminding one of the sea-shore; and on entering the market, the smell of fish, of whelks, red herrings, sprats, and a hundred others, is almost overpowering.

The wooden barn-looking square where the fish is sold, is soon after six o'clock crowded with shiny cord jackets and greasy caps. Everybody comes to Billingsgate in his worst clothes, and no one knows the length of time a coat can be worn until they have been to a fish sale. Through the bright opening at the end are seen the tangled rigging of the oyster-boats and the red worsted caps of the sailors. Over the hum of voices is heard the shouts of the salesmen, who, with their white aprons, peering above the heads of the mob, stand on their tables, roaring out their prices.

All are bawling together—salesmen and hucksters of provisions, capes, hardware, and newspa-

pers—till the place is a perfect Babel of competition. "Ha-a-ansome cod! best in the market! All alive! alive! alive O!" "Ye-o-o! Ye-o-o! here's your fine Yarmouth bloaters! Who's the buyer?" "Here you are, governor, splendid whiting! some of the right sort!" "Turbot! turbot! all alive! turbot!" "Glass of nice peppermint! this cold morning a ha'penny a glass!" "Here you are at your own price! Fine soles, O!" "Oy! oy! oy! Now's your time! fine grizzling sprats! all large and no small!" "Hullo! hullo here! beautiful lobsters! good and cheap! fine cock crabs all alive O!" "Five brill and one turbot—have that lot for a pound! Come and look at 'em, governor; you wont see a better sample in the market." "Here, this way! this way for splendid skate! skate O! skate O!" "Had—had—had—had—haddick! all fresh and good!" "Currant and meat puddings! a ha'penny each!" "Now, you mussel-buyers, come along! come along! come along! now's your time for fine fat mussels!" "Here's food for the belly, and clothes for the back, but I sell food for the mind" (shouts the newsvender). "Here's smelt O!" "Here ye are, fine Finney haddick!" "Hot soup! nice peas-soup! a-all hot! hot!" "Ahoy! ahoy here! live plaice! all alive O!" "Now or never! whelk! whelk! whelk!" "Who'll buy brill O! brill O!" "Capes! water-proof capes! sure to keep the wet out! a shilling a piece!" "Eels O! eels O! Alive! alive O!" "Fine flounders, a shilling a lot! Who'll have this prime lot of flounders?" "Shrimps! shrimps! fine shrimps!" "Wink! wink! wink!" "Hi! hi-i! here you are, just eight eels left, only eight!" "O ho! O ho! this way—this way—this way! Fish alive! alive! alive O!"

In the darkness of the shed, the white bellies of the turbots, strung up bow-fashion, shine like mother-of-pearl, while, the lobsters, lying upon them, look intensely scarlet, from the contrast. Brown baskets piled up on one another, and with the herring-scales glittering like spangles all over them, block up the narrow paths. Men in coarse canvas jackets, and bending under huge hampers, push past, shouting "Move on! move on, there!" and women, with the long limp tails of cod-fish dangling from their aprons, elbow their way through the crowd. Round the auction-tables stand groups of men turning over the piles of soles, and throwing them down till they slide about in their slime; some are smelling them, while others are counting the lots. "There, that lot of soles are worth your money," cries the salesman to one of the crowd as he moves on leisurely; "none better in the market. You shall have 'em for a pound and half-a-crown." "Oh!" shouts another salesman, "it's no use to bother him—he's no go." Presently a tall porter, with a black oyster-bag, staggers past, trembling under the weight of his load, his back and shoulders wet with the drippings from the sack. "Shove on one side!" he mutters from between his clenched teeth, as he forces his way through the mob. Here is a tray of reddish-brown shrimps piled up high, and the owner busy sifting his little fish into another stand, while a doubtful customer stands in front, tasting the flavour of the stock and consulting with his companion in speculation. Little girls carrying matting-bags, that they have brought from Spitalfields, come up, and ask you in a begging voice to buy their baskets; and women with bundles of twigs for stringing herrings, cry out, "Half-penny a bunch!" from all sides. Then there are blue-black piles of small live lobsters, moving about their bound-up claws and long "feelers," one of them occasionally being taken up by a looker-on, and dashed down again, like a stone.* Everywhere every one is asking, "What's the price, master?" while shouts of laughter from round the stalls of the salesmen, bantering each other, burst out, occasionally, over the murmuring noise of the crowd. The transparent smelts on the marble-slabs, and the bright herrings, with the lump of transparent ice magnifying their eyes like a lens, are seldom looked at until the market is over, though the hampers and piles of huge maids, dropping slime from the counter, are eagerly examined and bartered for.

One side of the market is set apart for whelks. There they stand in sackfulls, with the yellow shells piled up at the mouth, and one or two of the fish, curling out like corkscrews, placed as a sample. The coster slips one of these from its shell, examines it, pushes it back again, and then passes away, to look well round the market. In one part the stones are covered with herring-barrels, packed closely with dried fish, and yellow heaps of stiff haddock rise up on all sides. Here a man walks up with his knot on his shoulder, waiting for a job to carry fish to the trucks. Boys in ragged clothes, who have slept during the night under a railway-arch, clamour for employment; while the heads of those returning from the oyster-boats, rise slowly up the stone sides of the wharf.

The costermongers have nicknamed the long row of oyster boats moored close alongside the wharf "Oyster-street." On looking down the line of tangled ropes and masts, it seems as though the little boats would sink with the crowds of men and women thronged together on their decks. It is as busy a scene as one can well behold. Each boat has its black sign-board, and salesman in his white apron walking up and down "his shop," and on each deck is a bright pewter pot and tin-covered plate, the remains of the salesman's breakfast. "Who's for Baker's?" "Who's for Archer's?" "Who'll have Alston's?" shout the oyster-merchants, and the red cap of the man in the hold bobs up and down as he rattles the shells about with his spade. These holds are filled with oysters—a gray mass of sand and shell—on which is a bushel measure well piled up in the centre, while some of them have a blue muddy heap of mussels

divided off from the "natives." The sailors in their striped guernseys sit on the boat sides smoking their morning's pipe, allowing themselves to be tempted by the Jew boys with cloth caps, old shoes, and silk handkerchiefs. Lads with bundles of whips skip from one boat to another, and, seedy-looking mechanics, with handfuls of tin fancy goods, hover about the salesmen, who are the principal supporters of this trade. The place has somewhat the appearance of a little Holywell-street; for the old clothes' trade is entirely in the hands of the Jew boys, and coats, caps, hats, umbrellas, and old shoes, are shouted out in a rich nasal twang on all sides.

Passing by a man and his wife who were breakfasting on the stone coping, I went to the shore where the watermen ply for passengers to the eel boats. Here I found a crowd of punts, half filled with flounders, and small closely-packed baskets of them ranged along the seats. The lads, who act as jacks-in-the-water, were busy feeling in the mud for the fish that had fallen over board, little caring for the water that dashed over their red swollen feet. Presently a boat, piled up with baskets, shot in, grazing the bottom, and men and women, blue with the cold morning air, stepped out.

The Dutch built eel-boats, with their bulging polished oak sides, were half-hidden in the river mist. They were surrounded by skiffs, that ply from the Surrey and Middlesex shores, and wait whilst the fares buy their fish. The holds of these eel-boats are fitted up with long tanks of muddy water, and the heads of the eels are seen breathing on the surface—a thick brown bubble rising slowly, and floating to the sides. Wooden sabots and large porcelain pipes are ranged round the ledges, and men in tall fur caps with high cheek bones, and rings in their ears, walk the decks. At the stern of one boat was moored a coffin-shaped barge pierced with holes, and hanging in the water were baskets, shaped like olive jars—both to keep the stock of fish alive and fresh. In the centre of the boat stood the scales,—a tall heavy apparatus, one side fitted up with the conical net-bag to hold the eels, and the other with the weights, and pieces of stone to make up for the extra draught of the water hanging about the fish. When a skiff load of purchasers arrives, the master Dutchman takes his hands from his pockets, lays down his pipe, and seizing a sort of long-handled landing-net scoops from the tank a lot of eels. The purchasers examine them, and try to beat down the price. "You calls them eels do you?" said a man with his bag ready opened. "Yeas," answered the Dutchman without any show of indignation. "Certainly, there is a few among them," continued the customer; and after a little more of this kind of chaffering the bargain is struck.

The visitors to the eel-boats were of all grades; one was a neatly-dressed girl to whom the costers showed the utmost gallantry, calling her "my dear," and helping her up the shining sides of the boat; and many of the men had on their blue serge apron, but these were only where the prices were high. The greatest crowd of customers is in the heavy barge alongside of the Dutch craft. Here a stout sailor in his red woollen shirt, and canvass petticoat, is surrounded by the most miserable and poorest of fish purchasers—the men with their crushed hats, tattered coats, and unshorn chins, and the women with their pads on their bonnets, and brown ragged gowns blowing in the breeze. One, in an old table-cover shawl, was beating her palms together before the unmoved Dutchman, fighting for an abatement, and showing her stock of halfpence. Others were seated round the barge, sorting their lots in their shallows, and sanding the fish till they were quite yellow. Others, again, were crowding round the scales narrowly watching the balance, and then begging for a few dead eels to make up any doubtful weight.

As you walk back from the shore to the market, you see small groups of men and women dividing the lot of fish they have bought together. At one basket, a coster, as you pass, calls to you, and says, "Here, master, just put these three halfpence on these three cod, and obleege a party." The coins are placed, and each one takes the fish his coin is on; and so there is no dispute.

At length nearly all the busy marketing has finished, and the costers hurry to breakfast. At one house, known as "Rodway's Coffee-house," a man can have a meal for 1*d.*—a mug of hot coffee and two slices of bread and butter, while for two-pence what is elegantly termed "a tightner," that is to say, a most plentiful repast, may be obtained. Here was a large room, with tables all round, and so extremely silent, that the smacking of lips and sipping of coffee were alone heard. Upwards of 1,500 men breakfast here in the course of the morning, many of them taking as many as three such meals. On the counter was a pile of white mugs, and the bright tin cans stood beside the blazing fire, whilst Rodway himself sat at a kind of dresser, cutting up and buttering the bread, with marvellous rapidity. It was a clean, orderly, and excellent establishment, kept by a man, I was told, who had risen from a saloop stall.

Opposite to the Coal Exchange were ranged the stalls and barrows with the street eatables, and the crowds round each showed the effects of the sharp morning air. One—a Jew's—had hot-pies with lids that rose as the gravy was poured in from an oil can; another carried a stone jar of peppermint-water, at ½*d.* a glass; and the pea-soup stand was hemmed in by boys and men blowing the steam from their cups. Beside these were Jews with cloth caps and knives, and square yellow cakes; one old man, in a corner, stood examining a thread-bare scarf that a cravatless coster had handed to him. Coffee-stalls were in great plenty; and men left their barrows to run up and have "an oyster," or "an 'ot heel." One man here makes his living by selling sheets of old newspapers, at ½*d.* each,

for the costers to dress their trays with. Though seemingly rather out of place, there was a Mosaic jewellery stand; old umbrellas, too, were far from scarce; and one had brought a horse-hair stool for sale.

Everybody was soon busy laying out their stock. The wrinkled dull-eyed cod was freshened up, the red-headed gurnet placed in rows, the eels prevented from writhing over the basket sides by cabbage-leaves, and the soles paired off like gloves. Then the little trucks began to leave, crawling, as it were, between the legs of the horses in the vans crowding Thames-street, and plunging in between huge waggons, but still appearing safely on the other side; and the 4,000 costers who visit Billingsgate on the Friday morning were shortly scattered throughout the metropolis.

Of the Forestalling of Markets and the Billingsgate Bummarees.

"Forestalling," writes Adam Smith, "is the buying or contracting for any cattle, provisions, or merchandize, on its way to the market (or at market), or dissuading persons from buying their goods there, or persuading them to raise the price, or spreading any false rumour with intent to enhance the value of any article. In the remoter periods of our history several statutes were passed, prohibiting forestalling under severe penalties; but as more enlarged views upon such subjects began to prevail, their impolicy became obvious, and they were consequently repealed in 1772. But forestalling is still punishable by fine and imprisonment; though it be doubtful whether any jury would now convict an individual accused of such practices."

In Billingsgate the "forestallers" or middlemen are known as "bummarees," who, as regards means, are a far superior class to the "hagglers" (the forestallers of the "green" markets). The bummaree is the jobber or speculator on the fish-exchange. Perhaps on every busy morning 100 men buy a quantity of fish, which they account likely to be remunerative, and retail it, or dispose of it in lots to the fishmongers or costermongers. Few if any of these dealers, however, are merely bummarees. A salesman, if he have disposed of the fish consigned to himself, will turn bummaree if any bargain tempt him. Or a fishmonger may purchase twice the quantity he requires for his own trade, in order to procure a cheaper stock, and "bummaree" what he does not require. These speculations in fish are far more hazardous than those in fruit or vegetables, for later in the day a large consignment by railway may reach Billingsgate, and, being thrown upon the market, may reduce the price one half. In the vegetable and fruit markets there is but one arrival. The costermongers are among the best customers of the bummarees.

I asked several parties as to the origin of the word "bummaree," and how long it had been in use. "Why, bless your soul, sir," said one Billingsgate labourer, "there always was bummarees, and there always will be; just as Jack there is a 'rough,' and I'm a blessed 'bobber.'" One man assured me it was a French name; another that it was Dutch. A fishmonger, to whom I was indebted for information, told me he thought that the bummaree was originally a bum-boat man, who purchased of the wind-bound smacks at Gravesend or the Nore, and sent the fish up rapidly to the market by land.

I may add, as an instance of the probable gains of the forestallers, in the olden time, that a tradesman whose family had been long connected with Billingsgate, showed me by his predecessors' books and memoranda, that in the depth of winter, when the Thames was perhaps choked with ice, and no supply of fish "got up" to London, any, that might, by management, reach Billingsgate used to command exorbitant prices. To speak only of the present century: March 11th, 1802, a cod fish (8 lbs.) was bought by Messrs. Phillips and Robertson, fishmongers, Bond-street, for 1*l.* 8*s.* February, 1809, a salmon (19 lbs.) was bought by Mr. Phillips at a guinea a pound, 19*l.* 19*s.* for the fish! March 24th, 1824, three lobsters were sold for a guinea each.

The "haggler," I may here observe, is the bummaree or forestaller or middleman of the green markets; as far as the costermonger's trade is concerned, he deals in fruit and vegetables. Of these trafficers there are fully 200 in Covent-garden-market; from 60 to 70 in Farringdon; from 40 to 50 in the Borough; from 50 to 60 in Spitalfields; and none in Portman-market; such being the only wholesale green-markets for the purposes of the costermongers. The haggler is a middleman who makes his purchases of the growers when the day is somewhat advanced, and the whole produce conveyed to the market has not been disposed of. The grower will then, rather than be detained in town, sell the whole lot remaining in his cart or wagon to a haggler, who re-sells it to the costers, or to any other customer, from a stand which he hires by the day. The costermongers who are the most provident, and either have means or club their resources for a large purchase, often buy early in the morning, and so have the advantage of anticipating their fellows in the street-trade, with the day before them. Those who buy later are the customers of the hagglers, and are street-sellers, whose means do not command an extensive purchase, or who do not care to venture upon one unless it be very cheap. These men speak very bitterly of the hagglers, calling them "cracked-up shopkeepers" and "scurfs," and declaring that but for them the growers must remain, and sell off their produce cheap to the costermongers.

A species of forestalling is now not uncommon, and is on the increase among the costermongers themselves. There are four men, having the command of money, who attend the markets and buy either fish or vegetables largely. One man especially buys almost daily

as much fruit and vegetables as will supply thirty street-dealers. He adds 3d. a bushel to the wholesale market price of apples; 6d. to that of pears; 9d. to plums; and 1s. to cherries. A purchaser can thus get a smaller quantity than he can always buy at market, and avails himself of the opportunity.

Moreover, a good many of the more intelligent street-dealers now club together—six of them, for instance—contributing 15s. each, and a quantity of fish is thus bought by one of their body (a smaller contribution suffices to buy vegetables). Perhaps, on an equal partition, each man thus gets for his 15s. as much as might have cost him 20s., had he bought "single-handed." This mode of purchase is also on the increase.

OF "WET" FISH-SELLERS IN THE STREETS.

CONCERNING the sale of "wet" or fresh fish, I had the following account from a trustworthy man, of considerable experience and superior education:

"I have sold 'wet fish' in the streets for more than fourteen years," he said; "before that I was a gentleman, and was brought up a gentleman, if I'm a beggar now. I bought fish largely in the north of England once, and now I must sell it in the streets of London. Never mind talking about that, sir; there's some things won't bear talking about. There's a wonderful difference in the streets since I knew them first; I could make a pound then, where I can hardly make a crown now. People had more money, and less meanness then. I consider that the railways have injured me, and all wet fish-sellers, to a great extent. Fish now, you see, sir, comes in at all hours, so that nobody can calculate on the quantity that will be received—nobody. That's the mischief of it; we are afraid to buy, and miss many a chance of turning a penny. In my time, since railways were in, I've seen cod-fish sold at a guinea in the morning that were a shilling at noon; for either the wind and the tide had served, or else the railway fishing-places were more than commonly supplied, and there was a glut to London. There's no trade requires greater judgment than mine — none whatever. Before the railways—and I never could see the good of them—the fish came in by the tide, and we knew how to buy, for there would be no more till next tide. Now, we don't know. I go to Billingsgate to buy my fish, and am very well known to Mr. —— and Mr. —— (mentioning the names of some well-known salesmen). The Jews are my ruin there now. When I go to Billingsgate, Mr. —— will say, or rather, I will say to him, 'How much for this pad of soles?' He will answer, 'Fourteen shillings.' 'Fourteen shillings!' I say, 'I'll give you seven shillings, — that's the proper amount;' then the Jew boys—none of them twenty that are there—ranged about will begin; and one says, when I bid 7s., 'I'll give 8s;' 'nine,' says another, close on my left; 'ten,' shouts another, on my right, and so they go offering on; at last Mr. —— says to one of them, as grave as a judge, 'Yours, sir, at 13s,' but it's all gammon. The 13s. buyer isn't a buyer at all, and isn't required to pay a farthing, and never touches the goods. It's all done to keep up the price to poor fishmen, and so to poor buyers that are our customers in the streets. Money makes money, and it don't matter how. Those Jew boys—I dare say they're the same sort as once sold oranges about the streets—are paid, I know 1s. for spending three or four hours that way in the cold and wet. My trade has been injured, too, by the great increase of Irish costermongers; for an Irishman will starve out an Englishman any day; besides if a tailor can't live by his trade, he'll take to fish, or fruit and cabbages. The month of May is a fine season for plaice, which is bought very largely by my customers. Plaice are sold at ½d. and 1d. a piece. It is a difficult fish to manage, and in poor neighbourhoods an important one to manage well. The old hands make a profit out of it; new hands a loss. There's not much cod or other wet fish sold to the poor, while plaice is in. "My customers are poor men's wives, —mechanics, I fancy. They want fish at most unreasonable prices. If I could go and pull them off a line flung off Waterloo-bridge, and no other expense, I couldn't supply them as cheap as they expect them. Very cheap fish-sellers lose their customers, through the Billingsgate bummarees, for they have pipes, and blow up the cod-fish, most of all, and puff up their bellies till they are twice the size, but when it comes to table, there's hardly to say any fish at all. The Billingsgate authorities would soon stop it, if they knew all I know. They won't allow any roguery, or any trick, if they only come to hear of it. These bummarees have caused many respectable people to avoid street-buying, and so fair traders like me are injured. I've nothing to complain of about the police. Oft enough, if I could be allowed ten minutes longer on a Saturday night, I could get through all my stock without loss. About a quarter to twelve I begin to halloo away as hard as I can, and there's plenty of customers that lay out never a farthing till that time, and then they can't be served fast enough, so they get their fish cheaper than I do. If any halloos out that way sooner, we must all do the same. Anything rather than keep fish over a warm Sunday. I have kept mine in ice; I haven't opportunity now, but it'll keep in a cool place this time of year. I think there's as many sellers as buyers in the streets, and there's scores of them don't give just weight or measure. I wish there was good moral rules in force, and everybody gave proper weight. I often talk to street-dealers about it. I've given them many a lecture; but they say they only do what plenty of shopkeepers do, and just get fined and go on again, without being a pin the worse thought of. They are abusive sometimes, too; I mean the street-sellers are, because they are ignorant. I have no children, thank God, and my wife helps me in my business. Take the year through, I clear from 10s. to 12s. every week. That's not

much to support two people. Some weeks I earn only 4*s.*,—such as in wet March weather. In others I earn 18*s.* or 1*l.* November, December, and January are good months for me. I wouldn't mind if they lasted all the year round. I'm often very badly off indeed—very badly; and the misery of being hard up, sir, is not when you're making a struggle to get out of your trouble; no, nor to raise a meal off herrings that you've given away once, but when your wife and you's sitting by a grate without a fire, and putting the candle out to save it, a planning how to raise money. 'Can we borrow there?' 'Can we manage to sell if we can borrow?' 'Shall we get from very bad to the parish?' Then, perhaps, there's a day lost, and without a bite in our mouths trying to borrow. Let alone a little drop to give a body courage, which perhaps is the only good use of spirit after all. That's the pinch, sir. When the rain you hear outside puts you in mind of drownding!"

Subjoined is the amount (in round numbers) of wet fish annually disposed of in the metropolis by the street-sellers:

	No. of Fish.	lbs. weight.
Salmon	20,000	175,000
Live-cod	100,000	1,000,000
Soles	6,500,000	1,650,000
Whiting	4,440,000	1,680,000
Haddock	250,000	500,000
Plaice	29,400,000	29,400,000
Mackarel	15,700,000	15,700,000
Herrings	875,000,000	210,000,000
Sprats	"	3,000,000
Eels, from Holland	400,000	65,000
Flounders	260,000	43,000
Dabs	270,000	48,000
Total quantity of wet fish sold in the streets of London	932,340,000	263,281,000

From the above Table we perceive that the fish, of which the greatest quantity is eaten by the poor, is herrings; of this, compared with plaice there is upwards of thirty times the number consumed. After plaice rank mackerel, and of these the consumption is about one-half less in number than plaice, while the number of soles vended in the streets, is again half of that of mackerel. Then come whiting, which are about two-thirds the number of the soles, while the consumption to the poor of haddock, cod, eels, and salmon, is comparatively insignificant. Of sprats, which are estimated by weight, only one-fifth of the number of pounds are consumed compared with the weight of mackerel. The pounds' weight of herrings sold in the streets, in the course of a year, is upwards of seven times that of plaice, and fourteen times that of mackerel. Altogether more than 260,000,000 pounds, or 116,000 tons weight of wet fish are yearly purchased in the streets of London, for the consumption of the humbler classes. Of this aggregate amount, no less than five-sixths consists of herrings; which, indeed, constitute the great slop diet of the metropolis.

Of Sprat-selling in the Streets.

Sprats—one of the cheapest and most grateful luxuries of the poor—are generally introduced about the 9th of November. Indeed "Lord Mayor's day" is sometimes called "sprat day." They continue in about ten weeks. They are sold at Billingsgate by the "toss," or "chuck," which is about half a bushel, and weighs from 40lbs. to 50lbs. The price varies from 1*s.* to 5*s.* Sprats are, this season, pronounced remarkably fine. "Look at my lot sir," said a street-seller to me; "they're a heap of new silver," and the bright shiny appearance of the glittering little fish made the comparison not inappropriate. In very few, if in any, instances does a costermonger confine himself to the sale of sprats, unless his means limit him to that one branch of the business. A more prosperous street-fishmonger will sometimes detach the sprats from his stall, and his wife, or one of his children will take charge of them. Only a few sprat-sellers are itinerant, the fish being usually sold by stationary street-sellers at "pitches." One who worked his sprats through the streets, or sold them from a stall as he thought best, gave me the following account. He was dressed in a newish fustian-jacket, buttoned close up his chest, but showing a portion of a clean cotton shirt at the neck, with a bright-coloured coarse handkerchief round it; the rest of his dress was covered by a white apron. His hair, as far as I could see it under his cloth cap, was carefully brushed, and (it appeared) as carefully oiled. At the first glance I set him down as having been a gentleman's servant. He had a somewhat deferential, though far from cringing manner with him, and seemed to be about twenty-five or twenty-six—he thought he was older, he said, but did not know his age exactly.

"Ah! sir," he began, in a tone according with his look, "sprats *is* a blessing to the poor. Fresh herrings is a blessing too, and sprats is young herrings, and is a blessing in 'portion" [for so he pronounced what seemed to be a favourite word with him "proportion"]. "It's only four years—yes, four, I'm sure of that—since I walked the streets starving, in the depth of winter, and looked at the sprats, and said, I wish I could fill my belly off you. Sir, I hope it was no great sin, but I could hardly keep my hands from stealing some and eating them raw. If they make me sick, thought I, the police 'll take care of me, and that 'll be something. While these thoughts was a passing through my mind, I met a man who was a gentleman's coachman; I knew him a little formerly, and so I stopped him and told him who I was, and that I hadn't had a meal for two days. 'Well, by G—,' said the coachman, 'you look like it, why I shouldn't have known you. Here 's a shilling.' And then he went on a little way, and then stopped, and turned back and thrust 3½*d.* more into my hand, and bolted off. I've never seen him since. But I'm grateful to him in the

Original from HARVARD UNIVERSITY

same 'portion (proportion) as if I had. After I'd had a penn'orth of bread and a penn'orth of cheese, and half-a-pint of beer, I felt a new man, and I went to the party as I'd longed to steal the sprats from, and told him what I'd thought of. I can't say what made me tell him, but it turned out for good. I don't know much about religion, though I can read a little, but may be that had something to do with it." The rest of the man's narrative was—briefly told—as follows. He was the only child of a gentleman's coachman His father had deserted his mother and him, and gone abroad, he believed, with some family. His mother, however, took care of him until her death, which happened "when he was a little turned thirteen, he had heard, but could not remember the year." After that he was "a helper and a jobber in different stables," and "anybody's boy," for a few years, until he got a footman's, or rather footboy's place, which he kept above a year. After that he was in service, in and out of different situations, until the time he specified, when he had been out of place for nearly five weeks, and was starving. His master had got in difficulties, and had gone abroad; so he was left without a character. "Well, sir," he continued, "the man as I wanted to steal the sprats from, says to me, says he, 'Poor fellow; I know what a hempty belly is myself—come and have a pint.' And over that there pint, he told me, if I could rise 10*s.* there might be a chance for me in the streets, and he'd show me how to do. He died not very long after that, poor man. Well, after a little bit, I managed to borrow 10*s.* of Mr. —— (I thought of him all of a sudden). He was butler in a family that I had lived in, and had a charitable character, though he was reckoned very proud. But I plucked up a spirit, and told him how I was off, and he said, 'Well, I'll try you,' and he lent me 10*s.*, which I paid him back, little by little, in six or eight weeks; and so I started in the costermonger line, with the advice of my friend, and I've made from 5*s.* to 10*s.*, sometimes more, a week, at it ever since. The police don't trouble me much. They is civil to me in 'portion (proportion) as I am civil to them. I never mixed with the costers but when I've met them at market. I stay at a lodging-house, but it's very decent and clean, and I have a bed to myself, at 1*s.* a week, for I'm a regular man. I'm on sprats now, you see, sir, and you'd wonder, sometimes, to see how keen people looks to them when they're new. They're a blessing to the poor, in 'portion (proportion) of course. Not twenty minutes before you spoke to me, there was two poor women came up—they was sickly-looking, but I don't know what they was—perhaps shirt-makers—and they says to me, says they, 'Show us what a penny plateful is.' 'Sart'nly, ladies,' says I. Then they whispered together, and at last one says, says she, 'We'll have two platefuls.' I told you they was a blessing to the poor, sir—'specially to such as them, as lives all the year round on bread and tea. But it's not only the poor as buys; others in 'portion (proportion). When they're new they're a treat to everybody. I've sold them to poor working-men, who've said, 'I'll take a treat home to the old 'oman and the kids; they dotes on sprats.' Gentlemen's servants is very fond of them, and mechanics comes down—such as shoemakers in their leather aprons, and sings out, 'Here, old sprats, give us two penn'orth.' They're *such* a relish. I sell more to men than to women, perhaps, but there's little difference. They're best stewed, sir, I think—if you're fond of sprats—with vinegar and a pick of allspice; that's my opinion, and, only yesterday, an old cook said I was right. I makes 1*s.* 6*d.* to 2*s.* 6*d.* a day, and sometimes rather more, on my sprats, and sticks to them as much as I can. I sell about my 'toss' a day, seldom less. Of course I can make as many penn'orths of it as I please, but there's no custom without one gives middling penn'orths. If a toss costs me 3*s.*, I may make sixty penn'orths of it sometimes—sometimes seventy or more—and sometimes less than sixty. There's many turns over as much as me and more than that. I'm thinking that I'll work the country with a lot; they'll keep to a second day, when they're fresh to start, 'specially if its frosty weather, too, and then they're better than ever—yes, and a greater treat—scalding hot from the fire, they're the cheapest and best of all suppers in the winter time. I hardly know which way I'll go. If I can get anythink to do among horses in the country, I'll never come back. I've no tie to London."

To show how small a sum of money will enable the struggling striving poor to obtain a living, I may here mention that, in the course of my inquiries among the mudlarks, I casually gave a poor shoeless urchin, who was spoken of by one of the City Missionaries as being a well-disposed youth, 1*s.* out of the funds that had been entrusted to me to dispense. Trifling as the amount appears, it was the means of keeping his mother, sister, and himself through the winter. It was invested in sprats, and turned over and over again.

I am informed, by the best authorities, that near upon 1000 "tosses" of sprats are sold daily in London streets, while the season lasts. These, sold retail in pennyworths, at very nearly 5*s.* the toss, give about 150*l.* a day, or say 1,000*l.* a week spent on sprats by the poorer classes of the metropolis; so that, calculating the sprat season to last ten weeks, about 10,000*l.* would be taken by the costermongers during that time from the sale of this fish alone.

Another return, furnished me by an eminent salesman at Billingsgate, estimates the gross quantity of sprats sold by the London costers in the course of the season at three millions of pounds weight, and this disposed of at the rate of 1*d.* per pound, gives upwards of 12,000*l.* for the sum of money spent upon this one kind of fish.

Of Shell-Fish Sellers in the Streets.

I had the following account from an experienced man. He lived with his mother, his wife, and four children, in one of the streets near Gray's-inn-lane. The street was inhabited altogether by people of his class, the women looking sharply out when a stranger visited the place. On my first visit to this man's room, his wife, who is near her confinement, was at dinner with her children. The time was ¾ to 12. The meal was tea, and bread with butter very thinly spread over it. On the wife's bread was a small piece of pickled pork, covering about one-eighth of the slice of a quartern loaf cut through. In one corner of the room, which is on the ground-floor, was a scantily-covered bed. A few dingy-looking rags were hanging up to dry in the middle of the room, which was littered with baskets and boxes, mixed up with old furniture, so that it was a difficulty to stir. The room (although the paper, covering the broken panes in the window, was torn and full of holes) was most oppressively close and hot, and there was a fetid smell, difficult to sustain, though it was less noticeable on a subsequent call. I have often had occasion to remark that the poor, especially those who are much subjected to cold in the open air, will sacrifice much for heat. The adjoining room, which had no door, seemed littered like the one where the family were. The walls of the room I was in were discoloured and weather-stained. The only attempt at ornament was over the mantel-shelf, the wall here being papered with red and other gay-coloured papers, that once had been upholsterer's patterns.

On my second visit, the husband was at dinner with the family, on good boiled beef and potatoes. He was a small-featured man, with a head of very curly and long black hair, and both in mien, manners, and dress, resembled the mechanic far more than the costermonger. He said:—

"I've been twenty years and more, perhaps twenty-four, selling shell-fish in the streets. I was a boot-closer when I was young, and have made my 20*s.* and 30*s.*, and sometimes 40*s.*, and then sometimes not 10*s.* a week; but I had an attack of rheumatic-fever, and lost the use of my hands for my trade. The streets hadn't any great name, as far as I knew, then, but as I couldn't work, it was just a choice between street-selling and starving, so I didn't prefer the last. It was reckoned degrading to go into the streets—but I couldn't help that. I was astonished at my success when I first began, and got into the business—that is into the understanding of it—after a week, or two, or three. Why, I made 3*l.* the first week I knew my trade, properly; yes, I cleared 3*l.*! I made, not long after, 5*l.* a week—but not often. I was giddy and extravagant. Indeed, I was a fool, and spent my money like a fool I could have brought up a family then like a gentleman—I send them to school as it is—but I hadn't a wife and family then, or it might have been better; it's a great check on a man, is a family. I began with shell-fish, and sell it still; very seldom anything else. There's more demand for shells, no doubt, because its far cheaper, but then there's so many more sellers. I don't know why exactly. I suppose it's because poor people go into the streets when they can't live other ways, and some do it because they think it's an idle life; but it ain't. Where I took 35*s.* in a day at my stall—and well on to half of it profit—I now take 5*s.* or 6*s.*, or perhaps 7*s.*, in the day and less profit on that less money. I don't clear 3*s.* a day now, take the year through. I don't keep acccounts, but I'm certain enough that I average about 15*s.* a week the year through, and my wife has to help me to make that. She'll mind the stall, while I take a round sometimes. I sell all kinds of shell-fish, but my great dependence is on winkles. I don't do much in lobsters. Very few speculate in them. The price varies very greatly. What's 10*s.* a score one day may be 25*s.* the next. I sometimes get a score for 5*s.* or 6*s.*, but it's a poor trade, for 6*d.* is the top of the tree, with me, for a price to a seller. I never get more. I sell them to mechanics and tradesmen. I do more in pound crabs. There's a great call for haporths and pennorths of lobster or crab, by children; that's their claws. I bile them all myself, and buy them alive. I can bile twenty in half an hour, and do it over a grate in a back-yard. Lobsters don't fight or struggle much in the hot water, if they're properly packed. It's very few that knows how to bile a lobster as he should be biled. I wish I knew any way of killing lobsters before biling them. I can't kill them without smashing them to bits, and that won't do at all. I kill my crabs before I bile them. I stick them in the throat with a knife and they're dead in an instant. Some sticks them with a skewer, but they kick a good while with the skewer in them. It's a shame to torture anything when it can be helped. If I didn't kill the crabs they'd shed every leg in the hot water; they'd come out as bare of claws as this plate. I've known it oft enough, as it is; though I kill them uncommon quick, a crab will be quicker and shed every leg—throw them off in the moment I kill them, but that doesn't happen once in fifty times. Oysters are capital this season, I mean as to quality, but they're not a good sale. I made 3*l.* a week in oysters, not reckoning anything else, eighteen or twenty years back. It was easy to make money then; like putting down one sovereign and taking two up. I sold oysters then oft enough at 1*d.* a piece. Now I sell far finer at three a penny and five for 2*d.* People can't spend money in shell-fish when they haven't got any. They say that fortune knocks once at every man's door. I wish I'd opened my door when he knocked at it."

This man's wife told me afterwards, that last

winter, after an attack of rheumatism, all their stock-money was exhausted, and her husband sat day by day at home almost out of his mind; for nothing could tempt him to apply to the parish, and "he would never have mentioned his sufferings to me," she said; "he had too much pride." The loan of a few shillings from a poor costermonger enabled the man to go to market again, or he and his family would now have been in the Union.

As to the quantity of shell-fish sold in the streets of London, the returns before-cited give the following results:

Oysters	124,000,000
Lobsters	60,000
Crabs	50,000
Shrimps	770,000 pts.
Whelks	4,950,000
Mussels	1,000,000 qts.
Cockles	750,000 qts.
Periwinkles	3,640,000 pts.

Of Shrimp Selling in the Streets.

Shrimp selling, as I have stated, is one of the trades to which the street-dealer often confines himself throughout the year. The sale is about equally divided between the two sexes, but the men do the most business, walking some of them fifteen to twenty miles a day in a "round" of "ten miles there and ten back."

The shrimps vended in the streets are the Yarmouth prawn shrimps, sold at Billingsgate at from 6*d.* to 10*d.* a gallon, while the best shrimps (chiefly from Lee, in Essex,) vary in price from 10*d.* to 2*s.* 6*d.* a gallon; 2*s.* being a common price. The shrimps are usually mixed by the street-dealers, and they are cried, from stalls or on rounds, "a penny half-pint, fine fresh s'rimps." (I heard them called nothing but "s'rimps" by the street-dealers.) The half-pint, however, is in reality but half that quantity. "It's the same measure as it was thirty years back," I was told, in a tone as if its antiquity removed all imputation of unfair dealing. Some young men "do well on s'rimps," sometimes taking 5*s.* in an hour on a Saturday evening, "when people get their money, and wants a relish." The females in the shrimp line are the wives, widows, or daughters of costermongers. They are computed to average 1*s.* 6*d.* a day profit in fine, and from 9*d.* to 1*s.* in bad weather; and, in snowy, or very severe weather, sometimes nothing at all.

One shrimp-seller, a middle-aged woman, wrapped up in a hybrid sort of cloak, that was half a man's and half a woman's garment, gave me the following account. There was little vulgarity in either her language or manner.

"I was in the s'rimp trade since I was a girl. I don't know how long. I don't know how old I am. I never knew; but I've two children, one's six and t'other's near eight, both girls; I've kept count of that as well as I can. My husband sells fish in the street; so did father, but he's dead. We buried him without the help of the parish, as many gets—that's something to say. I've known the trade every way. It never was any good in public-houses. They want such great ha'p'orths there. They'll put up with what isn't very fresh, to be sure, sometimes; and good enough for them too, I say, as spoils their taste with drink." [This was said very bitterly.] "If it wasn't for my husband's drinking for a day together now and then we'd do better. He's neither to have nor to hold when he's the worse for liquor; and it's the worse with him, for he's a quiet man when he's his own man. Perhaps I make 9*d.* a day, perhaps 1*s.* or more. Sometimes my husband takes my stand, and I go a round. Sometimes, if he gets through his fish, he goes my round. I give good measure, and my pint's the regular s'rimp pint." [It was the *half*-pint I have described.] "The trade's not so good as it was. People hasn't the money, they tells me so. It's bread before s'rimps, says they. I've heard them say it very cross, if I've wanted hard to sell. Some days I can sell nothing. My children stays with my sister, when me and my old man's out. They don't go to school, but Jane (the sister) learns them to sew. She makes drawers for the slop-sellers, but has very little work, and gets very little for the little she does; she would learn them to read if she knew how. She's married to a pavior, that's away all day. It's a hard life mine, sir. The winter's a coming, and I'm now sometimes 'numbed with sitting at my stall in the cold. My feet feels like lumps of ice in the winter; and they're beginning now, as if they weren't my own. Standing's far harder work than going a round. I sell the best s'rimps. My customers is judges. If I've any s'rimps over on a night, as I often have one or two nights a week, I sells them for half-price to an Irishwoman, and she takes them to the beer-shops, and the coffee-shops. She washes them. to look fresh. I don't mind telling that, because people should buy of regular people. It's very few people know how to pick a s'rimp properly. You should take it by the head and the tail and jam them up, and then the shell separates, and the s'rimp comes out beautifully. That's the proper way."

Sometimes the sale on the rounds may be the same as that at the stalls, or 10 or 20 per cent. more or less, according to the weather, as shrimps can be sold by the itinerant dealers better than by the stall-keepers in wet weather, when people prefer buying at their doors. But in hot weather the stall trade is the best, "for people often fancy that the s'rimps is sent out to sell 'cause they'll not keep no longer. It's only among customers as knows you, you can do any good on a round then."

The costermongers sell annually, it appears, about 770,000 pints of shrimps. At 2*d.* a pint (a very low calculation) the street sale of shrimps amount to upwards of 6,400*l.* yearly.

Of Oyster Selling in the Streets.

The trade in oysters is unquestionably one of the oldest with which the London—or rather the English—markets are connected; for oysters from Britain were a luxury in ancient Rome.

Oysters are now sold out of the smacks at Billingsgate, and a few at Hungerford. The more expensive kind such as the real Milton, are never bought by the costermongers, but they buy oysters of a "good middling quality." At the commencement of the season these oysters are 14*s.* a "bushel," but the measure contains from a bushel and a half to two bushels, as it is more or less heaped up. The general price, however, is 9*s.* or 10*s.*, but they *have* been 16*s.* and 18*s.* The "big trade" was unknown until 1848, when the very large shelly oysters, the fish inside being very small, were introduced from the Sussex coast. They were sold in Thames-street and by the Borough-market. Their sale was at first enormous. The costermongers distinguished them by the name of "scuttle-mouths." One coster informant told me that on the Saturdays he not unfrequently, with the help of a boy and a girl, cleared 10*s.* by selling these oysters in the streets, disposing of four bags. He thus sold, reckoning twenty-one dozen to the bag, 2,016 oysters; and as the price was two for a penny, he took just 4*l.* 4*s.* by the sale of oysters in the streets in one night. With the scuttle-mouths the costermonger takes no trouble: he throws them into a yard, and dashes a few pails of water over them, and then places them on his barrow, or conveys them to his stall. Some of the better class of costermongers, however, lay down their oysters carefully, giving them oatmeal "to fatten on."

In April last, some of the street-sellers of this article established, for the first time, "oyster-rounds." These were carried on by costermongers whose business was over at twelve in the day, or a little later; they bought a bushel of scuttle-mouths (never the others), and, in the afternoon, went a round with them to poor neighbourhoods, until about six, when they took a stand in some frequented street. Going these oyster-rounds is hard work, I am told, and a boy is generally taken to assist. Monday afternoon is the best time for this trade, when 10*s.* is sometimes taken, and 4*s.* or 5*s.* profit made. On other evenings only from 1*s.* to 5*s.* is taken—very rarely the larger sum—as the later the day in the week the smaller is the receipt, owing to the wages of the working classes getting gradually exhausted.

The women who sell oysters in the street, and whose dealings are limited, buy either of the costermongers or at the coal-sheds. But nearly all the men buy at Billingsgate, where as small a quantity as a peck can be had.

An old woman, who had "seen better days," but had been reduced to keep an oyster-stall, gave me the following account of her customers. She showed much shrewdness in her conversation, but having known better days, she declined to enter upon any conversation concerning her former life:—

"As to my customers, sir," she said, "why, indeed, they're all sorts. It's not a very few times that gentlemen (I call them so because they're mostly so civil) will stop—just as it's getting darkish, perhaps,—and look about them, and then come to me and say very quick: 'Two penn'orth for a whet.' Ah! some of 'em will look, may be, like poor parsons down upon their luck, and swallow their oysters as if they was taking poison in a hurry. They'll not touch the bread or butter once in twenty times, but they'll be free with the pepper and vinegar, or, mayhap, they'll say quick and short, 'A crust off that.' I many a time think *that* two penn'orth is a poor gentleman's dinner. It's the same often—but only half as often, or not half—with a poor lady, with a veil that once was black, over a bonnet to match, and shivering through her shawl. She'll have the same. About two penn'orth is the mark still; it's mostly two penn'orth. My son says, it's because that's the price of a glass of gin, and some persons buy oysters instead—but that's only his joke, sir. It's not the vulgar poor that's our chief customers. There's many of them won't touch oysters, and I've heard some of them say: 'The sight on 'em makes me sick; it's like eating snails.' The poor girls that walk the streets often buy; some are brazen and vulgar, and often the finest dressed are the vulgarest; at least, I think so; and of those that come to oyster stalls, I'm sure it's the case. Some are shy to such as me, who may, perhaps, call their own mothers to their minds, though it aint many of them that is so. One of them always says that she must keep at least a penny for gin after her oysters. One young woman ran away from my stall once after swallowing one oyster out of six that she'd paid for. I don't know why. Ah! there's many things a person like me sees that one may say, 'I don't know why' to; that there is. My heartiest customers, that I serve with the most pleasure, are working people, on a Saturday night. One couple—I think the wife always goes to meet her husband on a Saturday night—has two, or three, or four penn'orth, as happens, and it's pleasant to hear them say, 'Won't you have another, John?' or, 'Do have one or two more, Mary Anne.' I've served them that way two or three years. They've no children, I'm pretty sure, for if I say, 'Take a few home to the little ones,' the wife tosses her head, and says, half vexed and half laughing, '*Such* nonsense.' I send out a good many oysters, opened, for people's suppers, and sometimes for supper parties—at least, I suppose so, for there's five or six dozen often ordered. The maid-servants come for them then, and I give them two or three for themselves, and say, jokingly-like, 'It's no use offering you any, perhaps, because you'll have plenty that's left.' They've mostly one answer: 'Don't we wish we may get 'em?' The *very* poor never buy of me, as I told you. A penny

buys a loaf, you see, or a ha'porth of bread and a ha'porth of cheese, or a half-pint of beer, with a farthing out. My customers are mostly working people and tradespeople. Ah! sir, I wish the parson of the parish, or any parson, sat with me a fortnight; he'd see what life is then. 'It's different,' a learned man used to say to me—that's long ago—'from what's noticed from the pew or the pulpit.' I've missed the gentleman as used to say that, now many years—I don't know how many. I never knew his name. He was drunk now and then, and used to tell me he was an author. I felt for him. A dozen oysters wasn't much for him. We see a deal of the world, sir—yes, a deal. Some, mostly working people, take quantities of pepper with their oysters in cold weather, and say it's to warm them, and no doubt it does; but frosty weather is very bad oyster weather. The oysters gape and die, and then they are not so much as manure. They are very fine this year. I clear 1*s.* a day, I think, during the season—at least 1*s.*, taking the fine with the wet days, and the week days with the Sundays, though I'm not out then; but, you see, I'm known about here."

The number of oysters sold by the costermongers amounts to 124,000,000 a year. These, at four a penny, would realise the large sum of 129,650*l.* We may therefore safely assume that 125,000*l.* is spent yearly in oysters in the streets of London.

OF PERIWINKLE SELLING IN THE STREETS.

THERE are some street people who, nearly all the year through, sell nothing but periwinkles, and go regular rounds, where they are well known. The "wink" men, as these periwinkle sellers are called, generally live in the lowest parts, and many in lodging-houses. They are forced to live in low localities, they say, because of the smell of the fish, which is objected to. The city district is ordinarily the best for winkle-sellers, for there are not so many cheap shops there as in other parts. The summer is the best season, and the sellers then make, upon the average, 12*s.* a week clear profit; in the winter, they get upon the average, 5*s.* a week clear, by selling mussels and whelks—for, as winkles last only from March till October, they are then obliged to do what they can in the whelk and mussel way. "I buy my winks," said one, "at Billingsgate, at 3*s.* and 4*s.* the wash. A wash is about a bushel. There's some at 2*s.*, and some sometimes as low as 1*s.* the wash, but they wouldn't do for me, as I serve very respectable people. If we choose we can boil our winkles at Billingsgate by paying 4*d.* a week for boiling, and ½*d.* for salt, to salt them after they are boiled. Tradesmen's families buy them for a relish to their tea. It's reckoned a nice present from a young man to his sweetheart, is winks. Servant girls are pretty good customers, and want them cheaper when they say it's for themselves; but I have only one price."

One man told me he could make as much as 12*s.* a week—sometimes more and sometimes less. He made no speeches, but sung—"Winketty-winketty-wink-wink-wink—wink-wink—wicketty-wicketty-wink—fine fresh winketty-winks wink wink." He was often so sore in the stomach and hoarse with hallooing that he could hardly speak. He had no child, only himself and wife to keep out of his earnings. His room was 2*s.* a week rent. He managed to get a bit of meat every day, he said, "somehow or 'nother."

Another, more communicative and far more intelligent man, said to me concerning the character of his customers: "They're people I think that like to daddle" (dawdle, I presume) "over their teas or such like; or when a young woman's young man takes tea with her mother and her, then they've winks; and then there's joking, and helping to pick winks, between Thomas and Betsy, while the mother's busy with her tea, or is wiping her specs, 'cause she *can't* see. Why, sir, I've known it! I was a Thomas that way myself when I was a tradesman. I was a patten-maker once, but pattens is no go now, and hasn't been for fifteen year or more. Old people, I think, that lives by themselves, and has perhaps an annuity or the like of that, and nothing to do pertickler, loves winks, for they likes a pleasant way of making time long over a meal. They're the people as reads a newspaper, when it's a week old, all through. The other buyers, I think, are tradespeople or working-people what wants a relish. But winks is a bad trade now, and so is many that depends on relishes."

One man who "works" the New Cut, has the "best wink business of all." He sells only a little dry fish with his winks, never wet fish, and has "got his name up," for the superiority of that shell-fish—a superiority which he is careful to ensure. He pays 8*s.* a week for a stand by a grocer's window. On an ordinary afternoon he sells from 7*s.* to 10*s.* worth of periwinkles. On a Monday afternoon he often takes 20*s.*; and on the Sunday afternoon 3*l.* and 4*l.* He has two coster lads to help him, and sometimes on a Sunday from twenty to thirty customers about him. He wraps each parcel sold in a neat brown paper bag, which, I am assured, is of itself, an inducement to buy of him. The "unfortunate" women who live in the streets contiguous to the Waterloo, Blackfriars, and Borough-roads, are among his best customers, on Sundays especially. He is rather a public character, getting up dances and the like. "*He* aint bothered—not he—with ha'p'orths or penn'orths of a Sunday," said a person who had assisted him. "It's the top of the tree with his customers; 3*d.* or 6*d.* at a go." The receipts are one-half profit. I heard from several that he was "the best man for winks a-going."

The quantity of periwinkles disposed of by the London street-sellers is 3,600,000 pints, which, at 1*d.* per pint, gives the large sum of 15,000*l.* expended annually in this street luxury. It should be remembered, that a very large con-

sumption of periwinkles takes place in public-houses and suburban tea-gardens.

Of "Dry" Fish Selling in the Streets.

The dealing in "dry" or salt fish is never carried on as a totally distinct trade in the streets, but some make it a principal part of their business; and many wet fish-dealers whose "wet fish" is disposed of by noon, sell dry fish in the afternoon. The dry fish, proper, consists of dried mackerel, salt cod—dried or barrelled—smoked or dried haddocks (often called "finnie haddies"), dried or pickled salmon (but salmon is only salted or pickled for the streets when it can be sold cheap), and salt herrings.

A keen-looking, tidily-dressed man, who was at one time a dry fish-seller principally, gave me the following account. For the last two months he has confined himself to another branch of the business, and seemed to feel a sort of pleasure in telling of the "dodges" he once resorted to:

"There's Scotch haddies that never knew anything about Scotland," he said, "for I've made lots of them myself by Tower-street, just a jump or two from the Lambeth station-house. I used to make them on Sundays. I was a wet fish-seller then, and when I couldn't get through my haddocks or my whitings of a Saturday night, I wasn't a-going to give them away to folks that wouldn't take the trouble to lift me out of a gutter if I fell there, so I presarved them. I've made haddies of whitings, and good ones too, and Joe made them of codlings besides. I had a bit of a back-yard to two rooms, one over the other, that I had then, and on a Sunday I set some wet wood a fire, and put it under a great tub. My children used to gut and wash the fish, and I hung them on hooks all round the sides of the tub, and made a bit of a chimney in a corner of the top of the tub, and that way I gave them a jolly good smoking. My wife had a dry fish-stall and sold them, and used to sing out 'Real Scotch haddies,' and tell people how they was from Aberdeen; I've often been fit to laugh, she did it so clever. I had a way of giving them a yellow colour like the real Scotch, but that's a secret. After they was well smoked they was hung up to dry all round the rooms we lived in, and we often had stunning fires that answered as well to boil crabs and lobsters when they was cheap enough for the streets. I've boiled a mate's crabs and lobsters for 2½*d.*; it was two boilings and more, and 2½*d.* was reckoned the price of half a quarter of a hundred of coals and the use of the pan. There's more ways than one of making 6*d.*, if a man has eyes in his head and keeps them open. Haddocks that wouldn't fetch 1*d.* a piece, nor any money at all of a Saturday night, I've sold—at least she has" (indicating his wife by a motion of his thumb)—"at 2*d.*, and 3*d.*, and 4*d.* I've bought fish of costers that was over on a Saturday night, to make Scotch haddies of them. I've tried experience" (experiments) "too. Ivy, burnt under them, gave them, I thought, a nice sort of flavour, rather peppery, for I used always to taste them; but I hate living on fish. Ivy with brown berries on it, as it has about this time o' year, I liked best. Holly wasn't no good. A black-currant bush was, but it's too dear; and indeed it couldn't be had. I mostly spread wetted fire-wood, as green as could be got, or damp sticks of any kind, over shavings, and kept feeding the fire. Sometimes I burnt sawdust. Somehow, the dry fish trade fell off. People does get so prying and so knowing, there's no doing nothing now for no time, so I dropped the dry fish trade. There's few up to smoking them proper; they smoke 'em black, as if they was hung up in a chimbley."

Another costermonger gave me the following account:

"I've salted herrings, but the commonest way of salting is by the Jews about Whitechapel. They make real Yarmouth bloaters and all sorts of fish. When I salted herrings, I bought them out of the boats at Billingsgate by the hundred, which is 120 fish. We give them a bit of a clean—hardly anything—then chuck them into a tub of salt, and keep scattering salt over them, and let them lie a few minutes, or sometimes half an hour, and then hang them up to dry. They eat well enough, if they're eaten in time, for they won't keep. I've known three day's old herrings salted, just because there was no sale for them. One Jew sends out six boys crying 'real Yarmouth bloaters.' People buy them in preference, they look so nice and clean and fresh-coloured. It's quite a new trade among the Jews. They didn't do much that way until two years back. I sometimes wish I was a Jew, because they help one another, and start one another with money, and so they thrive where Christians are ruined. I smoked mackerel, too, by thousands; that's a new trade, and is done the same way as haddocks. Mackerel that won't bring 1*d.* a piece fresh, bring 2*d.* smoked; they are very nice indeed. I make about 10*s.* or 11*s.* a week by dry fish in the winter months, and about as much by wet,—but I have a tidy connection. Perhaps I make 17*s.* or 18*s.* a week all the year round."

The aggregate quantity of dry fish sold by the London costermongers throughout the year is as follows—the results being deduced from the table before given:

Wet salt cod	93,750
Dry do.	1,000,000
Smoked Haddocks	4,875,000
Bloaters	36,750,000
Red-herrings	25,000,000

Gross Value of the several Kinds of Fish annually Sold in the Streets of London.

It now but remains for me, in order to complete this account of the "street-sellers of fish," to form an estimate of the amount of money annually expended by the labourers and the poorer

classes of London upon the different kinds of wet, dry, and shell-fish. This, according to the best authorities, is as follows:

Wet Fish.	£
175,000 lbs. of salmon, at 6*d.* per lb.	4,000
1,000,000lbs. of live cod, at 1½*d.* per lb.	5,000
3,250,000 pairs of soles, at 1½*d.* per pair	20,000
4,400,000 whiting, at ½*d.* each . . .	9,000
29,400,000 plaice, at ¾*d.*	90,000
15,700,000 mackarel, at 6 for 1*s.* .	130,000
875,000,000 herrings, at 16 a groat .	900,000
3,000,000 lbs. of sprats. at 1*d.* per lb.	12,000
400,000 lbs. of eels, at 3 lb. for 1*s.* .	6,000
260,000 flounders, at 1*d.* per dozen.	100
270,000 dabs, at 1*d.* per dozen . .	100
Sum total expended yearly in wet fish	1,177,000

Dry Fish.	
525,000 lbs. barrelled cod, at 1½*d.* .	3,000
500,000 lbs. dried salt cod, at 2*d.* .	4,000
4,875,000 smoked haddock, at 1*d.*	20,000
36,750,000 bloaters, at 2 for 1*d.*. .	75,000
25,000,000 red herrings, at 4 for 1*d.*	25,000
Sum total expended yearly in dry fish	127,000

Shell Fish.	
124,000,000 oysters, at 4 a penny .	125,000
60,000 lobsters, at 3*d.*	750
50,000 crabs, at 2*d.*	400
770,000 pints of shrimps, at 2*d.* .	6,000
1,000,000 quarts of mussels, at 1*d.* .	4,000
750,000 quarts of cockles, at 1*d.* .	3,000
4,950,000 whelks, at 8 for 1*d.* . . .	2,500
3,600,000 pints of periwinkles, at 1*d.*	15,000
Sum total expended yearly in shell-fish	156,650

Adding together the above totals, we have the following result as to the gross money value of the fish purchased yearly in the London streets:

	£
Wet fish . .	1,177,200
Dry fish . .	127,000
Shell fish . .	156,650
Total .	£1,460,850

Hence we find that there is nearly a million and a half of money annually spent by the poorer classes of the metropolis in fish; a sum so prodigious as almost to discredit every statement of want, even if the amount said to be so expended be believed. The returns from which the above account is made out have been obtained, however, from such unquestionable sources —not from one salesman alone, but checked and corrected by many gentlemen who can have no conceivable motive for exaggeration either one way or the other—that, sceptical as our utter ignorance of the subject must necessarily make us, still if we will but examine for ourselves, we shall find there is no gainsaying the facts.

Moreover as to the enormity of the amount dispelling all ideas of privation among the industrious portion of the community, we shall also find on examination that assuming the working-men of the metropolis to be 500,000 in number (the Occupation Abstract of 1841, gives 773,560 individuals following *some* employment in London, but these include merchants, employers, shopkeepers, Government-officers and others), and that they, with their wives and children, make up one million individuals, it follows that the sum per head, expended in fish by the poorer classes every week, is a fraction more than 6¾*d.*, or, in other words, not quite one penny a day.

If the diet of a people be a criterion, as has been asserted, of their character, it may be feared that the present extensive fish-diet of the working-people of London, is as indicative of degeneracy of character, as Cobbett insisted must result from the consumption of tea, and "the cursed root," the potato. "The flesh of fish," says Pereira on Diet, "is less satisfying than the flesh of either quadrupeds or birds. As it contains a larger proportion of water (about 80 per cent.), it is obviously less nourishing." Haller tells us he found himself weakened by a fish-diet: and he states that Roman Catholics are generally debilitated during Lent. Pechlin also affirms that a mechanic, nourished merely by fish, has less muscular power than one who lives on the flesh of warm-blooded animals. Jockeys, who *waste themselves* in order to reduce their weight, live principally on fish.

The classes of fish above given, are, when considered in a "dietetical point of view," of two distinct kinds; viz., those which form the staple commodity of the dinners and suppers of the poor, and those which are mere relishes or stimuli to failing, rather than stays to, eager appetites. Under the former head, I include red-herrings, bloaters, and smoked haddocks; such things are not merely provocatives to eat, among the poor, as they are at the breakfast-table of many an over-fed or intemperate man. With the less affluent these salted fish are not a "relish," but a meal.

The shell-fish, however, can only be considered as luxuries. The 150,000*l.* thus annually expended in the streets, represents the sum laid out in mere relishes or stimuli to sluggish appetites. A very large proportion of this amount, I am inclined to believe, is spent by persons whose stomachs have been disordered by drink. A considerable part of the trade in the minor articles, as winks, shrimps, &c., is carried on in public-houses, while a favourite pitch for an oyster-stall is outside a tavern-door. If, then, so large an amount is laid out in an endeavour to restore the appetite after drinking, how much money must be squandered in destroying it by the same means?

OF THE STREET-SELLERS OF FRUIT AND VEGETABLES.

OF THE KINDS AND QUANTITY OF FRUIT AND VEGETABLES SOLD IN THE STREETS.

THERE are two kinds of fruit sold in the streets —"green fruit" and "dry fruit."

In commerce, all fruit which is edible as it is taken from the tree or the ground, is known as "green." A subdivision of this green fruit is into "fresh" or "tender" fruit, which includes currants, gooseberries, strawberries, and, indeed, all fruits that demand immediate consumption, in contradistinction to such productions as nuts which may be kept without injury for a season. All fruit which is "cured" is known as "dry" fruit. In summer the costers vend "green fruit," and in the winter months, or in the early spring, when the dearness or insufficiency of the supply of green fruit renders it unsuited for their traffic, they resort, but not extensively, to "dry fruit." It is principally, however, when an abundant season, or the impossibility of keeping the dry fruit much longer, has tended to reduce the price of it, that the costlier articles are to be found on the costermonger's barrow.

Fruit is, for the most part, displayed on barrows, by the street-dealers in it. Some who supply the better sort of houses—more especially those in the suburbs—carry such things as apples and plums, in clean round wicker-baskets, holding pecks or half-pecks.

The commoner "green" fruits of home produce are bought by the costermonger in the markets. The foreign green fruit, as pine-apples, melons, grapes, chestnuts, coker-nuts, Brazil-nuts, hazel-nuts, and oranges, are purchased by them at the public sales of the brokers, and of the Jews in Duke's-place. The more intelligent and thrifty of the costers buy at the public sales on the principle of association, as I have elsewhere described. Some costermongers expend as much as 20*l.* at a time in such green fruit, or dry fruit, as is not immediately perishable, at a public sale, or at a fruit-warehouse, and supply the other costers.

The regular costermongers seldom deal in oranges and chestnuts. If they sell walnuts, they reserve these, they say, for their Sunday afternoon's pastime. The people who carry oranges, chestnuts, or walnuts, or Spanish nuts about the town, are not considered as costermongers, but are generally, though not always, classed, by the regular men, with the watercress-women, the sprat-women, the winkle-dealers, and such others, whom they consider beneath them. The orange season is called by the costermonger the "Irishman's harvest." Indeed, the street trade in oranges and nuts is almost entirely in the hands of the Irish and their children; and of the children of costermongers. The costers themselves would rather starve—and do starve now and then—than condescend to it. The trade in coker-nuts is carried on greatly by the Jews on Sundays, and by young men and boys who are not on other days employed as street-sellers.

The usual kinds of fruit the regular costers deal in are strawberries, raspberries (plain and stalked), cherries, apricots, plums, green-gages, currants, apples, pears, damsons, green and ripe gooseberries, and pine-apples. They also deal in vegetables, such as turnips, greens, brocoli, carrots, onions, celery, rhubarb, new potatoes, peas, beans (French and scarlet, broad and Windsor), asparagus, vegetable marrow, seakale, spinach, lettuces, small salads, radishes, etc. Their fruit and vegetables they usually buy at Covent-garden, Spitalfields, or the Borough markets. Occasionally they buy some at Farringdon, but this they reckon to be very little better than a "haggler's market,"—a "haggler" being, as I before explained, the middle-man who attends in the fruit and vegetable-markets, and buys of the salesman to sell again to the retail dealer or costermonger.

Concerning the quantity of fruit and vegetables sold in the streets, by the London costermongers. This, as I said, when treating of the street-trade in fish, can only be arrived at by ascertaining the entire quantity sold wholesale at the London markets, and then learning from the best authorities the proportion retailed in the public thoroughfares. Fully to elucidate this matter, both as to the extent of the metropolitan supply of vegetables and fruit, ("foreign" as well as "home-grown," and "green" as well as "dry") and the relative quantity of each, vended through the agency of the costermongers, I caused inquiries to be instituted at all the principal markets and brokers (for not even the vaguest return on the subject had, till then, been prepared), and received from all the gentlemen connected therewith, every assistance and information, as I have here great pleasure in acknowledging.

To carry out my present inquiry, I need not give returns of the articles *not* sold by the costermongers, nor is it necessary for me to cite any but those dealt in by them generally. Their exceptional sales, such as of mushrooms, cucumbers, &c., are not included here.

The following Table shows the ordinary annual supply of *home grown fruit* (nearly all produced within a radius of twelve miles from the Bank) to each of the London "green" markets.

A TABLE SHOWING THE QUANTITY OR MEASURE OF THE UNDERMENTIONED HOME-GROWN FRUITS AND VEGETABLES SOLD THROUGHOUT THE YEAR, WHOLESALE, IN THE METROPOLITAN "GREEN" MARKETS, WITH THE PROPORTION SOLD RETAIL IN THE STREETS.

Description of Fruits and Vegetables.	Covent Garden.	Borough.	Spitalfields.	Farringdon.	Portman.	Total.	Proportion sold by Costermongers.
GREEN FRUIT.							
Apples	360,000 bushels	25,000	250,000	35,000	16,000	686,000	One-half.
Pears	280,000 ,,	10,000	88,000	20,000	10,000	353,000	One-half.
Cherries	90,000 doz. lbs.	45,000	15,000	12,000	11,200	173,200	One-half.
Plums*	93,000 bushels	15,500	45,000	3,000	20,000	176,500	One-fifteenth.
Green Gages*	2,000 ,,	333	1,500	1,000	500	5,333	One-fiftieth.
Damsons*	19,800 ,,	3,150	4,500	9,000	1,200	16,450	One-thirtieth.
Bullace	1,800 ,,	1,620	400	540	540	4,900	One-half.
Gooseberries	140,000 ,,	26,200	91,500	12,000	7,000	276,700	Three-fourths.
Currants (Red)*	70,000 sieves	15,000	75,000	6,000	9,000	171,000	One-half.
Ditto (Black)	45,000 ,,	12,000	45,000	6,000	4,000	108,000	One-eighth.
Ditto (White)	3,800 ,,	3,000	15,000	3,000	2,000	24,000	One-eighth.
Strawberries†	638,000 pottles	330,000	396,000	15,000	148,500	1,527,500	One-half.
Raspberries	22,500 ,,	3,750	2,500	3,500	3,000	35,250	One-twentieth.
Mulberries	17,496 ,,	57,600	7,064	17,281	22,500	121,940	One-fourth.
Hazel Nuts	2,700 bushels	1,000	648	5,400	270	9,018	Two-thirds.
Filberts	221,400 lbs.	72,000	43,200	144,000	37,800	518,400	One-thirtieth.
VEGETABLES.							
Potatoes	161,280,000 lbs.	48,384,000	64,512,000	24,192,000	12,096,000	310,464,000	One-fifteenth.
Cabbages‡	33,600,000 plants	19,200,000	12,000,000	8,400,000	16,472,000	89,672,000	One-third.
Brocoli and Cauliflowers	1,800,000 heads	3,780,000	2,880,000	5,320,000	546,000	14,326,000	One-twentieth.
Turnips	18,800,000 roots	4,800,000	4,800,000	3,500,000	748,000	32,648,000	One-tenth.
Turnip Tops	300,000 junks,	500,000	600,000	250,000	200,000	1,850,000	One-third.
Carrots	12,000,000 roots	1,571,000	2,400,000	1,500,000	546,000	16,817,000	One-thirtieth.
Peas	270,000 bushels	50,000	100,000	14,000	4,000	438,000	One-half.
Beans	100,000 ,,	20,000	10,000	2,400	1,000	133,400	One-fifteenth.
French Beans	140,000 ,,	9,600	12,000	50,000	9,600	221,100	One-tenth.
Vegetab. Marrows	10,800 dozen	3,240	3,600	432	1,800	19,872	One-third.
Asparagus	12,000 dz. bun.	3,600	1,080	1,440	1,440	19,560	One-fortieth.
Celery	15,000 ,,	4,800	6,000	3,000	6,000	34,800	One-eighth.
Rhubarb	7,200 ,,	48,000	28,800	2,400	4,800	91,200	One-tenth.
Lettuces	734,400 plants	1,080,000	2,073,600	129,600	475,200	4,492,800	One-eighth.
Radishes	6,912 dz. hands	43,200	36,000	18,000	28,800	132,912	One-tenth.
Onions	500,000 bushels	398,000	400,000	9,600	182,000	1,489,600	One-third.
Ditto (Spring)	36,000 dz. bun.	10,800	21,600	21,600	14,400	94,000	One-fourth.
Cucumbers	2,160 bushels	10,800	24,000	12,000	38,400	87,360	One-eighth.
Herbs	7,200 dz. bun.	9,600	9,400	7,800	3,900	32,900	One-tenth.

* The above fruits are not all home grown. The currants, I am informed, are one-fifteenth foreign. The foreign "tender" fruit being sent to the markets, it is impossible to obtain separate returns.

† A common sale of strawberries in the markets is "rounds." I have, however, given the quantity thus sold less technically, and in the measures most familiar to the general public.

‡ The cabbages, turnips, &c. are brought in loads to the great wholesale markets, a load varying from 150 to 200 dozen, but being more frequently nearer 200, and not unfrequently to fully that amount. Not to perplex my reader with too great a multiciplicity of figures in a tabular arrangement, I have given the quantity of individual articles in a load, without specifying it. In the smaller market (for vegetables) of Portman, the cabbages, &c., are not conveyed in waggons, as to the other markets, but in carts containing generally sixty dozens.

The various proportions of the several kinds of fruit and vegetables sold by the costermongers are here calculated for *all* the markets, from returns which have been obtained from each market separately. To avoid unnecessary detail, however, these several items are lumped together, and the aggregate proportion above given.

The foregoing Table, however, relates chiefly to "home grown" supplies. Concerning the quantity of foreign fruit and vegetables imported into this country, the proportion consumed in London, and the relative amount sold by the costers, I have obtained the following returns:—

TABLE, SHOWING THE QUANTITY OR MEASURE OF THE UNDERMENTIONED FOREIGN GREEN FRUITS AND VEGETABLES SOLD WHOLESALE THROUGHOUT THE YEAR IN LONDON, WITH THE PROPORTION SOLD RETAIL IN THE STREETS.

Description.	Quantity sold wholesale in London.	Proportion sold retail in the the streets.
FRUIT.		
Apples . . .	39,561 bush.	seven-eighths.
Pears . . .	19,742 ,,	seven-eighths.
Cherries . .	264,240 lbs.	two-thirds.
Grapes . . .	1,328,190 ,,	one-fiftieth.
Pine-apples .	200,000 fruit	one-tenth.
Oranges . . .	61,635,146 ,,	one-fourth.
Lemons . . .	15,408,789 ,,	one-hundredth.
NUTS.		
Spanish Nuts } Barcelona ,, }	72,509 bush.	one-third.
Brazil ,, . .	11,700 ,,	one-fourth.
Chestnuts . .	26,250 ,,	one-fourth.
Walnuts . . .	36,088 ,,	two-thirds.
"Coker"-nuts .	1,255,000 nuts	one-third.
VEGETABLES.		
Potatoes . . .	79,654,400lbs.	one-half.

Here, then, we have the entire metropolitan supply of the principal vegetables and green fruit (both home grown and foreign), as well as the relative quantity "distributed" throughout London by the costermongers; it now but remains for me, in order to complete the account, to do the same for "the dry fruit."

TABLE, SHOWING THE QUANTITY OF "DRY" FRUIT SOLD WHOLESALE IN LONDON THROUGHOUT THE YEAR, WITH THE PROPORTION SOLD RETAIL IN THE STREETS.

Description.	Quantity sold wholesale in London.	Proportion sold retail in the streets.
Shell Almonds .	12,500 cwt.	half per cent.
Raisins . .	135,000 ,,	quarter per cent.
Currants .	250,000 ,,	none.
Figs . . .	21,700 ,,	one per cent.
Prunes . .	15,000 ,,	quarter per cent.

OF THE FRUIT AND VEGETABLE SEASON OF THE COSTERMONGERS.

The strawberry season begins about June, and continues till about the middle of July. From the middle to the end of July the costers "work" raspberries. During July cherries are "in" as well as raspberries; but many costers prefer working raspberries, because "they're a quicker sixpence." After the cherries, they go to work upon plums, which they have about the end of August. Apples and pears come in after the plums in the month of September, and the apples last them all through the winter till the month of May. The pears last only till Christmas. Currants they work about the latter end of July, or beginning of August.

Concerning the costermonger's vegetable season, it may be said that he "works" greens during the winter months, up to about March; from that time they are getting "leathery," the leaves become foxy, I was told, and they eat tough when boiled. The costers generally do not like dealing either in greens or turnips, "they are such heavy luggage," they say. They would sooner "work" green peas and new potatoes.

The costermonger, however, does the best at fruit; but this he cannot work—with the exception of apples—for more than four months in the year. They lose but little from the fruit spoiling. "If it doesn't fetch a good price, it must fetch a bad one," they say; but they are never at a great loss by it. They find the "ladies" their hardest or "scaliest" customers. Whatever price they ask, they declare the "ladies" will try to save the market or "gin" penny out of it, so that they may have "a glass of something short" before they go home.

OF COVENT GARDEN MARKET.

ON a Saturday—the coster's business day—it is computed that as many as 2,000 donkey-barrows, and upwards of 3,000 women with shallows and head-baskets visit this market during the forenoon. About six o'clock in the morning is the best time for viewing the wonderful restlessness of the place, for then not only is the "Garden" itself all bustle and activity, but the buyers and sellers stream to and from it in all directions, filling every street in the vicinity. From Long Acre to the Strand on the one side, and from Bow-street to Bedford-street on the other, the ground has been seized upon by the market-goers. As you glance down any one of the neighbouring streets, the long rows of carts and donkey-barrows seem interminable in the distance. They are of all kinds, from the greengrocer's taxed cart to the coster's barrow—from the showy excursion-van to the rude square donkey-cart and bricklayer's truck. In every street they are ranged down the middle and by the kerb-stones. Along each approach to the market, too, nothing is to be seen, on all sides, but vegetables; the pavement is covered with heaps of them waiting to be carted; the flag-stones are stained green with the leaves trodden under foot; sieves and sacks full of apples and potatoes, and bundles of brocoli and rhubarb, are left unwatched upon almost every door-step; the steps of Covent Garden Theatre are covered with fruit and vegetables; the road is blocked up with mountains of cabbages and turnips; and men and women push past with their arms bowed out by the cauliflowers under them, or the red tips of carrots pointing from their crammed aprons, or else their faces are red with the weight of the loaded head-basket.

The donkey-barrows, from their number and singularity, force you to stop and notice them. Every kind of ingenuity has been exercised to

construct harness for the costers' steeds; where a buckle is wanting, tape or string make the fastening secure; traces are made of rope and old chain, and an old sack or cotton handkerchief is folded up as a saddle-pad. Some few of the barrows make a magnificent exception, and are gay with bright brass; while one of the donkeys may be seen dressed in a suit of old plated carriage-harness, decorated with coronets in all directions. At some one of the coster conveyances stands the proprietor, arranging his goods, the dozing animal starting up from its sleep each time a heavy basket is hoisted on the tray. Others, with their green and white and red load neatly arranged, are ready for starting, but the coster is finishing his breakfast at the coffee-stall. On one barrow there may occasionally be seen a solitary sieve of apples, with the horse of some neighbouring cart helping himself to the pippins while the owner is away. The men that take charge of the trucks, whilst the costers visit the market, walk about, with their arms full of whips and sticks. At one corner a donkey has slipped down, and lies on the stones covered with the cabbages and apples that have fallen from the cart.

The market itself presents a beautiful scene. In the clear morning air of an autumn day the whole of the vast square is distinctly seen from one end to the other. The sky is red and golden with the newly-risen sun, and the rays falling on the fresh and vivid colours of the fruit and vegetables, brightens up the picture as with a coat of varnish. There is no shouting, as at other markets, but a low murmuring hum is heard, like the sound of the sea at a distance, and through each entrance to the market the crowd sweeps by. Under the dark Piazza little bright dots of gas-lights are seen burning in the shops; and in the paved square the people pass and cross each other in all directions, hampers clash together, and excepting the carters from the country, every one is on the move. Sometimes a huge column of baskets is seen in the air, and walks away in a marvellously steady manner, or a monster railway van, laden with sieves of fruit, and with the driver perched up on his high seat, jolts heavily over the stones. Cabbages are piled up into stacks as it were. Carts are heaped high with turnips, and bunches of carrots like huge red fingers, are seen in all directions. Flower-girls, with large bundles of violets under their arms, run past, leaving a trail of perfume behind them. Wagons, with their shafts sticking up in the air, are ranged before the salesmen's shops, the high green load railed in with hurdles, and every here and there bunches of turnips are seen flying in the air over the heads of the people. Groups of apple-women, with straw pads on their crushed bonnets, and coarse shawls crossing their bosoms, sit on their porter's knots, chatting in Irish, and smoking short pipes; every passer-by is hailed with the cry of, "Want a baskit, yer honor?" The porter, trembling under the piled-up hamper, trots along the street, with his teeth clenched and shirt wet with the weight, and staggering at every step he takes.

Inside, the market all is bustle and confusion. The people walk along with their eyes fixed on the goods, and frowning with thought. Men in all costumes, from the coster in his corduroy suit to the greengrocer in his blue apron, sweep past. A countryman, in an old straw hat and dusty boots, occasionally draws down the anger of a woman for walking about with his hands in the pockets of his smock-frock, and is asked, "if that is the way to behave on a market-day?" Even the granite pillars cannot stop the crowd, for it separates and rushes past them, like the tide by a bridge pier. At every turn there is a fresh odour to sniff at; either the bitter aromatic perfume of the herbalists' shops breaks upon you, or the scent of oranges, then of apples, and then of onions is caught for an instant as you move along. The brocoli tied up in square packets, the white heads tinged slightly red, as it were, with the sunshine, —the sieves of crimson love-apples, polished like china,—the bundles of white glossy leeks, their roots dangling like fringe, — the celery, with its pinky stalks and bright green tops,— the dark purple pickling-cabbages,—the scarlet carrots,—the white knobs of turnips,—the bright yellow balls of oranges, and the rich brown coats of the chesnuts—attract the eye on every side. Then there are the apple-merchants, with their fruit of all colours, from the pale yellow green to the bright crimson, and the baskets ranged in rows on the pavement before the little shops. Round these the customers stand examining the stock, then whispering together over their bargain, and counting their money. "Give you four shillings for this here lot, master," says a coster, speaking for his three companions. "Four and six is my price," answers the salesman. "Say four, and it's a bargain," continues the man. "I said my price," returns the dealer; "go and look round, and see if you can get 'em cheaper; if not, come back. I only wants what's fair." The men, taking the salesman's advice, move on. The walnut merchant, with the group of women before his shop, peeling the fruit, their fingers stained deep brown, is busy with the Irish purchasers. The onion stores, too, are surrounded by Hibernians, feeling and pressing the gold-coloured roots, whose dry skins crackle as they are handled. Cases of lemons in their white paper jackets, and blue grapes, just seen above the sawdust are ranged about, and in some places the ground is slippery as ice from the refuse leaves and walnut husks scattered over the pavement.

Against the railings of St. Paul's Church are hung baskets and slippers for sale, and near the public-house is a party of countrymen preparing their bunches of pretty coloured grass— brown and glittering, as if it had been bronzed. Between the spikes of the railing are piled up square cakes of green turf for larks; and at the pump, boys, who probably have passed the previous night in the baskets about the market, are

Original from HARVARD UNIVERSITY

washing, and the water dripping from their hair that hangs in points over the face. The kerbstone is blocked up by a crowd of admiring lads, gathered round the bird-catcher's green stand, and gazing at the larks beating their breasts against their cages. The owner, whose boots are red with the soil of the brick-field, shouts, as he looks carelessly around, "A cock linnet for tuppence," and then hits at the youths who are poking through the bars at the fluttering birds.

Under the Piazza the costers purchase their flowers (in pots) which they exchange in the streets for old clothes. Here is ranged a small garden of flower-pots, the musk and mignonette smelling sweetly, and the scarlet geraniums, with a perfect glow of coloured air about the flowers, standing out in rich contrast with the dark green leaves of the evergreens behind them. "There's myrtles, and larels, and boxes," says one of the men selling them, "and there's a barbora witus, and lauristiners, and that bushy shrub with pink spots is heath." Men and women, selling different articles, walk about under the cover of the colonnade. One has seed-cake, another small-tooth and other combs, others old caps, or pig's feet, and one hawker of knives, razors, and short hatchets, may occasionally be seen driving a bargain with a countryman, who stands passing his thumb over the blade to test its keenness. Between the pillars are the coffee-stalls, with their large tin cans and piles of bread and butter, and protected from the wind by paper screens and sheets thrown over clothes-horses; inside these little parlours, as it were, sit the coffee-drinkers on chairs and benches, some with a bunch of cabbages on their laps, blowing the steam from their saucers, others, with their mouths full, munching away at their slices, as if not a moment could be lost. One or two porters are there besides, seated on their baskets, breakfasting with their knots on their heads.

As you walk away from this busy scene, you meet in every street barrows and costers hurrying home. The pump in the market is now surrounded by a cluster of chattering wenches quarrelling over whose turn it is to water their drooping violets, and on the steps of Covent Garden Theatre are seated the shoeless girls, tying up the halfpenny and penny bundles.

Of "Green" Fruit Selling in the Streets.

The fruit selling of the streets of London is of a distinct character from that of vegetable or fish selling, inasmuch as fruit is for the most part a luxury, and the others are principally necessaries.

There is no doubt that the consumption of fruit supplies a fair criterion of the condition of the working classes, but the costermongers, as a body of traders, are little observant, so that it is not easy to derive from them much information respecting the classes who are their customers, or as to how their custom is influenced by the circumstances of the times. One man, however, told me that during the last panic he sold hardly anything beyond mere necessaries. Other street-sellers to whom I spoke could not comprehend what a panic meant.

The most intelligent costers whom I conversed with agreed that they now sold less fruit than ever to working people, but perhaps more than ever to the dwellers in the smaller houses in the suburbs, and to shopkeepers who were not in a large way of business. One man sold baking apples, but not above a peck on an average weekly, to women whom he knew to be the wives of working men, for he had heard them say, "Dear me, I didn't think it had been so late, there's hardly time to get the dumplings baked before my husband leaves work for his dinner." The course of my inquiries has shown me—and many employers whom I have conversed with are of a similar opinion—that the well-conducted and skilful artisan, who, in spite of slop competition, continues to enjoy a fair rate of wages, usually makes a prudent choice of a wife, who perhaps has been a servant in a respectable family. Such a wife is probably "used to cooking," and will oft enough make a pie or pudding to eke out the cold meat of the Monday's dinner, or "for a treat for the children." With the mass of the working people, however, it is otherwise. The wife perhaps has been reared to incessant toil with her needle, and does not know how to make even a dumpling. Even if she possess as much knowledge, she may have to labour as well as her husband, and if their joint earnings enable them to have "the added pudding," there is still the trouble of making it; and, after a weary week's work, rest is often a greater enjoyment than a gratification of the palate. Thus something easily prepared, and carried off to the oven, is preferred. The slop-workers of all trades never, I believe, taste either fruit pie or pudding, unless a penny one be bought at a shop or in the street; and even among mechanics who are used to better diet, the pies and puddings, when wages are reduced, or work grows slack, are the first things that are dispensed with. "When the money doesn't come in, sir," one working-man said to me, "we mustn't think of puddings, but of *bread*."

A costermonger, more observant than the rest, told me that there were some classes to whom he had rarely sold fruit, and whom he had seldom seen buy any. Among these he mentioned sweeps, scavengers, dustmen, nightmen, gas-pipe-layers, and sewer-men, who preferred to any fruit, "something to bite in the mouth, such as a penn'orth of gin." My informant believed that this abstinence from fruit was common to all persons engaged in such offensive trades as fiddle-string making, gut-dressing for whip-makers or sausage-makers, knackers, &c. He was confident of it, as far as his own experience extended. It is, moreover, less common for the women of the town, of the poorer sort, to expend pence in fruit than in such things

Original from HARVARD UNIVERSITY

as whelks, shrimps, or winks, to say nothing of gin. Persons, whose stomachs may be one week jaded to excess, and the next be deprived of a sufficiency of proper food, seek for stimulants, or, as they term it, "relishes."

The fruit-sellers, meaning thereby those who deal principally in fruit in the season, are the more intelligent costermongers. The calculation as to what a bushel of apples, for instance, will make in half or quarter pecks, puzzles the more ignorant, and they buy "second-hand," or of a middle-man, and consequently dearer. The Irish street-sellers do not meddle much with fruit, excepting a few of the very best class of them, and they "do well in it," I was told, "they have such tongue."

The improvement in the quality of the fruit and vegetables now in our markets, and consequently in the necessaries and luxuries of the poorer classes, is very great. Prizes and medals have been deservedly awarded to the skilled and persevering gardeners who have increased the size and heightened the flavour of the pine-apple or the strawberry—who have given a thinner rind to the peach, or a fuller gush of juice to the apricot,—or who have enhanced alike the bloom, the weight, and the size of the fruit of the vine, whether as regards the classic "bunch," or the individual grape. Still these are benefits confined mainly to the rich. But there is another class of growers who have rendered greater services and whose services have been comparatively unnoticed. I allude to those gardeners who have improved or introduced our *every day* vegetables or fruit, such as now form the cheapest and most grateful and healthy enjoyments of the humbler portion of the community. I may instance the introduction of rhubarb, which was comparatively unknown until Mr. Myatt, now of Deptford, cultivated it thirty years ago. He then, for the first time, carried seven bundles of rhubarb into the Borough market. Of these he could sell only three, and he took four back with him. Mr. Myatt could not recollect the price he received for the first rhubarb he ever sold in public, but he told me that the stalks were only about half the substance of those he now produces. People laughed at him for offering "physic pies," but he persevered, and I have shown what the sale of rhubarb now is.

Moreover, the importation of foreign "pines" may be cited as another instance of the increased luxuries of the poor. The trade in this commodity was unknown until the year 1842. At that period Mr. James Wood and Messrs. Claypole and Son, of Liverpool, imported them from the Bahamas, a portion being conveyed to Messrs. Keeling and Hunt, of London. Since that period the trade has gradually increased until, instead of 1000 pines being sent to Liverpool, and a portion of them conveyed to London, as at first, 200,000 pines are now imported to London alone. The fruit is brought over in "trees," stowed in numbers from ten to thirty thousand, in galleries constructed fore and aft in the vessel, which is so extravagantly fragrant, that it has to be ventilated to abate the odour. But for this importation, and but for the trade having become a part of the costermonger's avocation, hundreds and thousands in London would never have tasted a pine-apple. The quality of the fruit has, I am informed, been greatly improved since its first introduction; the best description of "pines" which Covent-garden can supply having been sent out to graft, to increase the size and flavour of the Bahaman products, and this chiefly for the regalement of the palates of the humbler classes of London. The supply from the Bahamas is considered inexhaustible.

Pine-apples, when they were first introduced, were a rich harvest to the costermonger. They made more money "working" these than any other article. The pines cost them about 4*d.* each, one with the other, good and bad together, and were sold by the costermonger at from 1*s.* to 1*s.* 6*d.* The public were not aware then that the pines they sold were "salt-water touched," and the people bought them as fast as they could be sold, not only by the whole one, but at 1*d.* a slice,—for those who could not afford to give 1*s.* for the novelty, had a slice as a taste for 1*d.* The costermongers used then to have flags flying at the head of their barrows, and gentlefolk would stop them in the streets; indeed, the sale for pines was chiefly among "the gentry." The poorer people—sweeps, dustmen, cabmen—occasionally had pennyworths, "just for the fun of the thing;" but gentlepeople, I was told, used to buy a whole one to take home, so that all the family might have a taste. One costermonger assured me that he had taken 22*s.* a day during the rage for pines, when they first came up.

I have before stated that when the season is in its height the costermonger prefers the vending of fruit to the traffic in either fish or vegetables; those, however, who have regular rounds and "a connection," must supply their customers with vegetables, if not fish, as well as fruit, but the costers prefer to devote themselves principally to fruit. I am unable, therefore, to draw a comparison between what a coster realises in fruit, and what in fish, as the two seasons are not contemporary. The fruit sale is, however, as I have shown in p. 54, the costermonger's harvest.

All the costermongers with whom I conversed represented that the greater cheapness and abundance of fruit had been anything but a benefit to them, nor did the majority seem to know whether fruit was scarcer or more plentiful one year than another, unless in remarkable instances. Of the way in which the introduction of foreign fruit had influenced their trade, they knew nothing. If questioned on the subject, the usual reply was, that things got worse, and people didn't buy so much fruit as they did half-a-dozen years back, and so less was sold. That these men hold such opinions must be accounted for mainly by the increase in their

Original from HARVARD UNIVERSITY

numbers, of which I have before spoken, and from their general ignorance.

The fruit of which there is the readiest sale in the streets is one usually considered among the least useful—cherries. Probably, the greater eagerness on the part of the poorer classes to purchase this fruit arises from its being the first of the fresh "green" kind which our gardens supply for street-sale after the winter and the early spring. An intelligent costermonger suggested other reasons. "Poor people," he said, "like a *quantity* of any fruit, and no fruit is cheaper than cherries at 1*d.* a pound, at which I have sold some hundreds of pounds' weight. I'm satisfied, sir, that if a cherry could be grown that weighed a pound, and was of a finer flavour than ever was known before, poor people would rather have a number of little ones, even if they was less weight and inferior quality. Then boys buy, I think, more cherries than other fruit; because, after they have eaten 'em, they can play at cherry-stones.'"

From all I can learn, the halfpenny-worth of fruit purchased most eagerly by a poor man, or by a child to whom the possession of a halfpenny is a rarity, is cherries. I asked a man "with a good connection," according to his own account, as to who were his customers for cherries. He enumerated ladies and gentlemen; working-people; wagoners and carters (who "slipped them quietly into their pockets," he said); parlour-livers (so he called the occupants of parlours); maid-servants; and soldiers. "Soldiers," I was told, "are very fond of something for a change from their feed, which is about as regular as a prison's."

The currant, and the fruit of the same useful genus, the gooseberry, are sold largely by the costermongers. The price of the currants is 1*d.* or 2*d.* the half-pint, 1*d.* being the more usual charge. Of red currants there is the greatest supply, but the black "go off better." The humbler classes buy a half-pint of the latter for a dumpling, and "they're reckoned," said my informant, "capital for a sore throat, either in jam or a pudding." Gooseberries are also retailed by the half-pint, and are cheaper than currants —perhaps ½*d.* the half-pint is the average street-price. The working-classes do not use ripe gooseberries, as they do ripe currants, for dumplings, but they are sold in greater quantities and may be said to constitute, when first introduced, as other productions do afterwards, the working-people's Sunday dessert. "Only you go on board a cheap steamer to Greenwich, on a fine summer Sunday," observed a street-seller to me, "and you'll see lots of young women with gooseberries in their handkerchiefs in their laps. Servant-maids is very good customers for such things as gooseberries, for they always has a penny to spare." The costers sell green gooseberries for dumplings, and sometimes to the extent of a fourth of the ripe fruit. The price of green gooseberries is generally ½*d.* a pint dearer than the ripe.

When strawberries descend to such a price as places them at the costermonger's command, the whole fraternity is busily at work, and as the sale can easily be carried on by women and children, the coster's family take part in the sale, offering at the corners of streets the fragrant pottle, with the crimson fruit just showing beneath the green leaves at the top. Of all cries, too, perhaps that of "hoboys" is the most agreeable. Strawberries, however, according to all accounts, are consumed least of all fruits by the poor. "They like something more solid," I was told, "something to bite at, and a penny pottle of strawberries is only like a taste; what's more, too, the really good fruit never finds its way into penny pottles." The coster's best customers are dwellers in the suburbs, who purchase strawberries on a Sunday especially, for dessert, for they think that they get them fresher in that way than by reserving them from the Saturday night, and many are tempted by seeing or hearing them cried in the streets. There is also a good Sunday sale about the steam-wharfs, to people going "on the river," especially when young women and children are members of a party, and likewise in the "clerk districts," as Camden-town and Camberwell. Very few pottles, comparatively, are sold in public-houses; "they don't go well down with the beer at all," I was told. The city people are good customers for street strawberries, conveying them home. Good strawberries are 2*d.* a pottle in the streets when the season is at its height. Inferior are 1*d.* These are the most frequent prices. In raspberries the coster does little, selling them only to such customers as use them for the sake of jam or for pastry. The price is from 6*d.* to 1*s.* 6*d.* the pottle, 9*d.* being the average.

The great staple of the street trade in green fruit is apples. These are first sold by the travelling costers, by the measure, for pies, &c., and to the classes I have described as the makers of pies. The apples, however, are soon vended in penny or halfpenny-worths, and then they are bought by the poor who have a spare penny for the regalement of their children or themselves, and they are eaten without any preparation. Pears are sold to the same classes as are apples. The average price of apples, as sold by the costermonger, is 4*s.* a bushel, and six a penny. The sale in halfpenny and pennyworths is very great. Indeed the costermongers sell about half the apples brought to the markets, and I was told that for one pennyworth of apples bought in a shop forty were bought in the street. Pears are 9*d.* a bushel, generally, dearer than apples, but, numerically, they run more to the bushel.

The costers purchase the French apples at the wharf, close to London-bridge, on the Southwark side. They give 10*s.*, 12*s.*, 18*s.*, or 20*s.* for a case containing four bushels. They generally get from 9*d.* to 1*s.* profit on a bushel of English, but on the French apples they make a clear profit of from 1*s.* 3*d.* to 2*s.* a bushel, and would make more, but the fruit some-

Digitized by Google
Original from HARVARD UNIVERSITY

times "turns out damaged." This extra profit is owing to the French giving better measure, their four bushels being about five market bushels, as there is much straw packed up with the English apples, and none with the French.

Plums and damsons are less purchased by the humbler classes than apples, or than any other larger sized fruit which is supplied abundantly. "If I've worked plums or damsons," said an experienced costermonger, "and have told any woman pricing them: 'They don't look so ripe, but they're all the better for a pie,' she's answered, 'O, a plum pie's too fine for us, and what's more, it takes too much sugar.'" They are sold principally for desserts, and in pennyworths, at 1*d.* the half-pint for good, and ½*d.* for inferior. Green-gages are 50 per cent higher. Some costers sell a cheap lot of plums to the eating-house keepers, and sell them more readily than they sell apples to the same parties.

West Indian pine-apples are, as regards the street sale, disposed of more in the city than elsewhere. They are bought by clerks and warehousemen, who carry them to their suburban homes. The slices at ½*d.* and 1*d.* are bought principally by boys. The average price of a "good street pine" is 9*d.*

Peaches are an occasional sale with the costermongers', and are disposed of to the same classes as purchase strawberries and pines. The street sale of peaches is not practicable if the price exceed 1*d.* a piece.

Of other fruits, vended largely in the streets, I have spoken under their respective heads.

The returns before cited as to the quantity of home-grown and foreign green fruit sold in London, and the *proportion* disposed of by the costermongers give the following results (in round numbers), as to the absolute quantity of the several kinds of green fruit (oranges and nuts excepted) "distributed" throughout the metropolis by the street-sellers.

343,000	bushels of apples, (home-grown)
34,560	,, apples, (foreign)
176,500	,, pears, (home-grown)
17,235	,, pears, (foreign)
1,039,200	lbs. of cherries, (home-grown)
176,160	,, cherries, (foreign)
11,766	bushels of plums,
100	,, greengages,
548	,, damsons,
2,450	,, bullaces,
207,525	,, gooseberries,
85,500	sieves of red currants,
13,500	,, black currants,
3,000	,, white currants,
763,750	pottles of strawberries,
1,762	,, raspberries,
30,485	,, mulberries,
6,012	bushels of hazel nuts,
17,280	lbs. of filberts,
26,563	,, grapes,
20,000	pines.

Of the Orange and Nut Market.

In Houndsditch there is a market supported principally by costermongers, who there purchase their oranges, lemons, and nuts. This market is entirely in the hands of the Jews; and although a few tradesmen may attend it to buy grapes, still it derives its chief custom from the street-dealers who say they can make far better bargains with the Israelites, (as they never refuse an offer,) than they can with the Covent-garden salesmen, who generally cling to their prices. This market is known by the name of "Duke's-place," although its proper title is St. James's-place. The nearest road to it is through Duke's-street, and the two titles have been so confounded that at length the mistake has grown into a custom.

Duke's-place—as the costers call it—is a large square yard, with the iron gates of a synagogue in one corner, a dead wall forming one entire side of the court, and a gas-lamp on a circular pavement in the centre. The place looks as if it were devoted to money-making—for it is quiet and dirty. Not a gilt letter is to be seen over a doorway; there is no display of gaudy colour, or sheets of plate-glass, such as we see in a crowded thoroughfare when a customer is to be caught by show. As if the merchants knew their trade was certain, they are content to let the London smoke do their painter's work. On looking at the shops in this quarter, the idea forces itself upon one that they are in the last stage of dilapidation. Never did property in Chancery look more ruinous. Each dwelling seems as though a fire had raged in it, for not a shop in the market has a window to it; and, beyond the few sacks of nuts exposed for sale, they are empty, the walls within being blackened with dirt, and the paint without blistered in the sun, while the door-posts are worn round with the shoulders of the customers, and black as if charred. A few sickly hens wander about, turning over the heaps of dried leaves that the oranges have been sent over in, or roost the time away on the shafts and wheels of the nearest truck. Excepting on certain days, there is little or no business stirring, so that many of the shops have one or two shutters up, as if a death had taken place, and the yard is quiet as an inn of court. At a little distance the warehouses, with their low ceilings, open fronts, and black sides, seem like dark holes or coal-stores; and, but for the mahogany backs of chairs showing at the first floors, you would scarcely believe the houses to be inhabited, much more to be elegantly furnished as they are. One of the drawing-rooms that I entered here was warm and red with morocco leather, Spanish mahogany, and curtains and Turkey carpets; while the ormolu chandelier and the gilt frames of the looking-glass and pictures twinkled at every point in the fire-light.

The householders in Duke's-place are all of the Jewish persuasion, and among the costers a

saying has sprung up about it. When a man has been out of work for some time, he is said to be "Cursed, like a pig in Duke's-place."

Almost every shop has a Scripture name over it, and even the public-houses are of the Hebrew faith, their signs appealing to the followers of those trades which most abound with Jews. There is the "Jeweller's Arms," patronised greatly of a Sunday morning, when the Israelite jewellers attend to exchange their trinkets and barter amongst themselves. Very often the counter before "the bar" here may be seen covered with golden ornaments, and sparkling with precious stones, amounting in value to thousands of pounds. The landlord of this house of call is licensed to *manufacture* tobacco and cigars. There is also the "Fishmongers' Arms," the resort of the vendors of fried soles; here, in the evening, a concert takes place, the performers and audience being Jews. The landlord of this house too is licensed to manufacture tobacco and cigars. Entering one of these houses I found a bill announcing a "Bible to be raffled for, the property of ——." And, lastly, there is "Benjamin's Coffee-house," open to old clothesmen; and here, again, the proprietor is a licensed tobacco-manufacturer. These facts are mentioned to show the untiring energy of the Jew when anything is to be gained, and to give an instance of the curious manner in which this people support each other.

Some of the nut and orange shops in Duke's-place it would be impossible to describe. At one sat an old woman, with jet-black hair and a wrinkled face, nursing an infant, and watching over a few matted baskets of nuts ranged on a kind of carpenter's bench placed upon the pavement. The interior of the house was as empty as if it had been to let, excepting a few bits of harness hanging against the wall, and an old salt-box nailed near the gas-lamp, in which sat a hen, "hatching," as I was told. At another was an excessively stout Israelite mother, with crisp negro's hair and long gold earrings, rolling her child on the table used for sorting the nuts. Here the black walls had been chalked over with scores, and every corner was filled up with sacks and orange-cases. Before one warehouse a family of six, from the father to the infant, were busy washing walnuts in a huge tub with a trap in the side, and around them were ranged measures of the wet fruit. The Jewish women are known to make the fondest parents; and in Duke's-place there certainly was no lack of fondlings. Inside almost every parlour a child was either being nursed or romped with, and some little things were being tossed nearly to the ceiling, and caught, screaming with enjoyment, in the jewelled hands of the delighted mother. At other shops might be seen a circle of three or four women—some old as if grandmothers, grouped admiringly round a hook-nosed infant, tickling it and poking their fingers at it in a frenzy of affection.

The counters of these shops are generally placed in the open streets like stalls, and the shop itself is used as a store to keep the stock in. On these counters are ranged the large matting baskets, some piled up with dark-brown polished chestnuts—shining like a racer's neck—others filled with wedge-shaped Brazil-nuts, and rough hairy cocoa-nuts. There are heaps, too, of newly-washed walnuts, a few showing their white crumpled kernels as a sample of their excellence. Before every doorway are long pot-bellied boxes of oranges, with the yellow fruit just peeping between the laths on top, and lemons—yet green—are ranged about in their paper jackets to ripen in the air.

In front of one store the paving-stones were soft with the sawdust emptied from the grape-cases, and the floor of the shop itself was whitened with the dry powder. Here stood a man in a long tasselled smoking-cap, puffing with his bellows at the blue bunches on a tray, and about him were the boxes with the paper lids thrown back, and the round sea-green berries just rising above the sawdust as if floating in it. Close by, was a group of dark-eyed women bending over an orange-case, picking out the rotten from the good fruit, while a sallow-complexioned girl was busy with her knife scooping out the damaged parts, until, what with sawdust and orange-peel, the air smelt like the pit of a circus.

Nothing could be seen in this strange place that did not, in some way or another, appertain to Jewish customs. A woman, with a heavy gold chain round her neck, went past, carrying an old green velvet bonnet covered with feathers, and a fur tippet, that she had either recently purchased or was about to sell. Another woman, whose features showed her to be a Gentile, was hurrying toward the slop-shop in the Minories with a richly quilted satin-lined coat done up in her shawl, and the market-basket by her side, as if the money due for the work were to be spent directly for housekeeping.

At the corner of Duke's-street was a stall kept by a Jew, who sold things that are eaten only by the Hebrews. Here in a yellow pie-dish were pieces of stewed apples floating in a thick puce-coloured sauce.

One man that I spoke to told me that he considered his Sunday morning's work a very bad one if he did not sell his five or six hundred bushels of nuts of different kinds. He had taken 150*l.* that day of the street-sellers, and usually sold his 100*l.* worth of goods in a morning. Many others did the same as himself. Here I met with every attention, and was furnished with some valuable statistical information concerning the street-trade.

Of Orange and Lemon Selling in the Streets.

Of foreign fruits, the oranges and nuts supply by far the greater staple for the street trade, and, therefore, demand a brief, but still a fuller, notice than other articles.

Oranges were first sold in the streets at the

close of Elizabeth's reign. So rapidly had the trade increased, that four years after her death, or in 1607, Ben Jonson classes "orange-wives," for noisiness, with "fish-wives." These women at first carried the oranges in baskets on their heads; barrows were afterwards used; and now trays are usually slung to the shoulders.

Oranges are brought to this country in cases or boxes, containing from 500 to 900 oranges. From official tables, it appears that between 250,000,000 and 300,000,000 of oranges and lemons are now yearly shipped to England. They are sold wholesale, principally at public sales, in lots of eight boxes, the price at such sales varying greatly, according to the supply and the quality. The supply continues to arrive from October to August.

Oranges are bought by the retailers in Duke's-place and in Covent-Garden; but the costermongers nearly all resort to Duke's-place, and the shopkeepers to Covent-Garden. They are sold in baskets of 200 or 300; they are also disposed of by the hundred, a half-hundred being the smallest quantity sold in Duke's-place. These hundreds, however, number 110, containing 10 double "hands," a single hand being 5 oranges. The price in December was 2*s.* 6*d.*, 3*s.* 6*d.*, and 4*s.* the hundred. They are rarely lower than 4*s.* about Christmas, as there is then a better demand for them. The damaged oranges are known as "specks," and the purchaser runs the risk of specks forming a portion of the contents of a basket, as he is not allowed to empty it for the examination of the fruit: but some salesmen agree to change the specks. A month after Christmas, oranges are generally cheaper, and become dearer again about May, when there is a great demand for the supply of the fairs and races.

Oranges are sold by all classes connected with the fruit, flower, or vegetable trade of the streets. The majority of the street-sellers are, however, women and children, and the great part of these are Irish. It has been computed that, when oranges are "at their best" (generally about Easter), there are 4,000 persons, including stall-keepers, selling oranges in the metropolis and its suburbs; while there are generally 3,000 out of this number "working" oranges—that is, hawking them from street to street: of these, 300 attend at the doors of the theatres, saloons, &c. Many of those "working" the theatres confine their trade to oranges, while the other dealers rarely do so, but unite with them the sale of nuts of some kind. Those who sell only oranges, or only nuts, are mostly children, and of the poorest class. The smallness of the sum required to provide a stock of oranges (a half-hundred being 15*d.* or 18*d.*), enables the poor, who cannot raise "stock-money" sufficient to purchase anything else, to trade upon a few oranges.

The regular costers rarely buy oranges until the spring, except, perhaps, for Sunday afternoon sale—though this, as I said before, they mostly object to. In the spring, however, they stock their barrows with oranges. One man told me that, four or five years back, he had sold in a day 2,000 oranges that he picked up as a bargain. They did not cost him half a farthing each; he said he "cleared 2*l.* by the spec." At the same period he could earn 5*s.* or 6*s.* on a Sunday afternoon by the sale of oranges in the street; but now he could not earn 2*s.*

A poor Irishwoman, neither squalid in appearance nor ragged in dress, though looking pinched and wretched, gave me the subjoined account; when I saw her, resting with her basket of oranges near Coldbath-fields prison, she told me she almost wished she was inside of it, but for the "childer." Her history was one common to her class—

"I was brought over here, sir, when I was a girl, but my father and mother died two or three years after. I was in service then, and very good service I continued in as a maid-of-all-work, and very kind people I met; yes, indeed, though I was Irish and a Catholic, and they was English Protistants. I saved a little money there, and got married. My husband's a labourer; and when he's in full worruk he can earn 12*s.* or 14*s.* a week, for he's a good hand and a harrud-worruking man, and we do middlin' thin. He's out of worruk now, and I'm forced to thry and sill a few oranges to keep a bit of life in us, and my husband minds the childer. Bad as I do, I can do 1*d.* or 2*d.* a day profit betther than him, poor man! for he's tall and big, and people thinks, if he goes round with a few oranges, it's just from idleniss; and the Lorrud above knows he'll always worruk whin he can. He goes sometimes whin I'm harrud tired. One of us must stay with the childer, for the youngist is not three and the ildest not five. We don't live, we starruve. We git a few 'taties, and sometimes a plaice. To-day I've not taken 3*d.* as yit, sir, and it's past three. Oh, no, indeed and indeed, thin, I dont make 9*d.* a day. We live accordingly, for there's 1*s.* 3*d.* a week for rint. I have very little harrut to go into the public-houses to sill oranges, for they begins flying out about the Pope and Cardinal Wiseman, as if I had anything to do with it. And that's another reason why I like my husband to stay at home, and me to go out, because he's a hasty man, and might get into throuble. I don't know what will become of us, if times don't turn."

On calling upon this poor woman on the following day, I found her and her children absent. The husband had got employment at some distance, and she had gone to see if she could not obtain a room 3*d.* a week cheaper, and lodge near the place of work.

According to the Board of Trade returns, there are nearly two hundred millions of oranges annually imported into this country. About one-third of these are sold wholesale in London, and one-fourth of the latter quantity disposed of retail in the streets. The returns I have procured, touching the London sale, prove that no less than 15,500,000 are sold yearly by the street-sellers. The retail price of these may be

said to be, upon an average, 5*s.* per 110, and this would give us about 35,000*l.* for the gross sum of money laid out every year, in the streets, in the matter of oranges alone.

The street lemon-trade is now insignificant, lemons having become a more important article of commerce since the law required foreign-bound ships to be provided with lemon-juice. The street-sale is chiefly in the hands of the Jews and the Irish. It does not, however, call for special notice here.

Of Nut Selling in the Streets.

The sellers of foreign hazel nuts are principally women and children, but the stall-keepers, and oftentimes the costermongers, sell them with other "goods." The consumption of them is immense, the annual export from Tarragona being little short of 8,000 tons. They are to be found in every poor shop in London, as well as in the large towns; they are generally to be seen on every street-stall, in every country village, at every fair, and on every race-ground. The supply is from Gijon and Tarragona. The Gijon nuts are the "Spanish," or "fresh" nuts. They are sold at public sales, in barrels of three bushels each, the price being from 35*s.* to 40*s.* The nuts from Tarragona, whence comes the great supply, are known as "Barcelonas," and they are kiln-dried before they are shipped. Hence the Barcelonas will "keep," and the Spanish will not. The Spanish are coloured with the fumes of sulphur, by the Jews in Duke's-place.

It is somewhat remarkable that nuts supply employment to a number of girls in Spain, and then yield the means of a scanty subsistence to a number of girls (with or without parents) in England.

The prattle and the laughter (according to Inglis) of the Spanish girls who sort, find no parallel however among the London girls who sell the nuts. The appearance of the latter is often wretched. In the winter months they may be seen as if stupified with cold, and with the listlessness, not to say apathy, of those whose diet is poor in quantity and insufficient in amount.

Very few costermongers buy nuts (as hazel nuts are always called) at the public sales—only those whose dealings are of a wholesale character, and they are anything but regular attendants at the sales. The street-sellers derive nearly the whole of their supply from Duke's-place. The principal times of business are Friday afternoons and Sunday mornings. Those who have "capital" buy on the Friday, when they say they can make 10*s.* go as far as 12*s.* on the Sunday. The "Barcelonas" are from 4½*d.* to 6*d.* a quart to the street-sellers. The cob-nuts, which are the large size, used by the pastry-cooks for mottos, &c., are 2*d.* and 2½*d.* the quart, but they are generally destitute of a kernel. A quart contains from 100 to 180 nuts, according to the size. The costermongers buy somewhat largely when nuts are 3*d.* the quart; they then, and not unfrequently, stock their barrows with nuts entirely, but 2*s.* a day is reckoned excellent earnings at this trade. "It's the worst living of all, sir," I was told, "on nuts." The sale in the streets is at the fruit-stalls, in the public-houses, on board the steamers, and at the theatre doors. They are sold by the same class as the oranges, and a stock may be procured for a smaller sum even than is required for oranges. By the outlay of 1*s.* many an Irishwoman can send out her two or three children with nuts, reserving some for herself. Seven-eighths of the nuts imported are sold, I am assured, in the open air.

Some of the costermongers who are to be found in Battersea-fields, and who attend the fairs and races, get through 5*s.* worth of nuts in a day, but only exceptionally. These men have a sort of portable shooting-gallery. The customer fires a kind of rifle, loaded with a dart, and according to the number marked on the centre, or on the encircling rings of a board which forms the head of the stall, and which may be struck by the dart, is the number of nuts payable by the stall-keeper for the halfpenny "fire."

The Brazil nuts, which are now sold largely in the streets at twelve to sixteen a penny, were not known in this country as an article of commerce before 1824. They are sold by the peck —2*s.* being the ordinary price—in Duke's-place.

Coker-nuts—as they are now generally called, and indeed "entered" as such at the Custom-house, and so written by Mr. Mc Culloch, to distinguish them from cocoa, or the berries of the cacâo, used for chocolate, etc.—are brought from the West Indies, both British and Spanish, and Brazil. They are used as dunnage in the sugar ships, being interposed between the hogsheads, to steady them and prevent their being flung about. The coker-nut was introduced into England in 1690. They are sold at public sales and otherwise, and bring from 10*s.* to 14*s.* per 100. Coker-nuts are now used at fairs to "top" the sticks.

The costermongers rarely speculate in coker-nuts now, as the boys will not buy them unless cut, and it is almost impossible to tell how the coker-nut will "open." The interior is sold in halfpenny-worths and penny-worths. These nuts are often "worked with a drum." There may be now forty coker-nut men in the street trade, but not one in ten confines himself to the article.

A large proportion of the dry or ripe walnuts sold in the streets is from Bordeaux. They are sold at public sales, in barrels of three bushels each, realising 21*s.* to 25*s.* a barrel. They are retailed at from eight to twenty a penny, and are sold by all classes of street-traders.

A little girl, who looked stunted and wretched, and who did not know her age (which might be eleven), told me she was sent out by her mother with six halfpenny-worth of nuts, and she must carry back 6*d.* or she would be beat. She had no father, and could neither read nor write.

Her mother was an Englishwoman, *she believed*, and sold oranges. She had heard of God; he was "Our Father who art in heaven." She'd heard that said. She did not know the Lord's Prayer; had never heard of it; did not know who the Lord was; perhaps the Lord Mayor, but she had never been before him. She went into public-houses with her nuts, but did not know whether she was ever insulted or not; she did not know what insulted was, but she was never badly used. She often went into tap-rooms with her nuts, just to warm herself. A man once gave her some hot beer, which made her ill. Her mother was kind enough to her, and never beat her but for not taking home 6*d*. She had a younger brother that did as she did. She had bread and potatoes to eat, and sometimes tea, and sometimes herrings. Her mother didn't get tipsy (at first she did not know what was meant by tipsy) *above* once a week.

Of Roasted Chestnuts and Apples.

How long the street-trade in roasted chestnuts has been carried on I find no means of ascertaining precisely, but it is unquestionably one of the oldest of the public traffics. Before potato-cans were introduced, the sale of roasted chestnuts was far greater than it is now.

It is difficult to compute the number of roasted chestnut-sellers at present in the streets. It is probable that they outnumber 1,000, for I noticed that on a cold day almost every street fruit-seller, man or woman, had roasted chestnuts for sale.

Sometimes the chestnuts are roasted in the streets, in a huge iron apparatus, made expressly for the purpose, and capable of cooking perhaps a bushel at a time—but these are to be found solely at the street-markets.

The ordinary street apparatus for roasting chestnuts is simple. A round pan, with a few holes punched in it, costing 3*d*. or 4*d*. in a marine-store shop, has burning charcoal within it, and is surmounted by a second pan, or kind of lid, containing chestnuts, which are thus kept hot. During my inquiry, chestnuts were dear. "People don't care," I was told, "whether chestnuts is three and six, as they are now, or one and six a peck, as I hope they will be afore long; they wants the same pennyworths."

Chestnuts are generally bought wholesale in Duke's-place, on the Sunday mornings, for street sale; but some street-dealers buy them of those costermongers, whose means enable them "to lay in" a quantity. The retail customers are, for the most part, boys and girls, or a few labourers or street people. The usual price is sixteen a penny.

Roasted apples used to be vended in the streets, and often along with roasted chestnuts, but it is a trade which has now almost entirely disappeared, and its disappearance is attributed to the prevalence of potato cans.

I had the following account from a woman, apparently between sixty and seventy, though she said she was only about fifty. What she was in her youth, she said, she neither knew nor cared. At any rate she was unwilling to converse about it. I found her statement as to chestnuts corroborated:—

"The trade's nothing to what it was, sir," she said. "Why when the hackney coaches was in the streets, I've often sold 2*s*. worth of a night at a time, for a relish, to the hackneymen that was waiting their turn over their beer. Six and eight a penny was enough then; now people must have sixteen; though I pays 3*s*. a peck, and to get them at that's a favour. I could make my good 12*s*. a week on roasted chestnuts and apples, and as much on other things in them days, but I'm half-starved now. There'll never be such times again. People didn't want to cut one another's throats in the street business then. O, I don't know anything about how long ago, or what year—years is nothing to me—but I only know that it was so. I got a penny a piece then for my roasted apples, and a halfpenny for sugar to them. I *could* live then. Roasted apples was reckoned good for the tooth-ache in them days, but, people change so, they aren't now. I don't know what I make now in chestnuts and apples, which is all I sells—perhaps 5*s*. a week. My rent's 1*s*. 3*d*. a week. I lives on a bit of fish, or whatever I can get, and that's all about it."

The absolute quantity of oranges, lemons, and nuts sold annually in the London streets is as follows:

Oranges	15,400,000
Lemons	154,000
Spanish and Barcelona nuts	24,000 bushels
Brazil do.	3,000 ,,
Chestnuts	6,500 ,,
Walnuts	24,000 ,,
Coker-nuts	400,000 nuts

Of "Dry" Fruit Selling in the Streets.

The sellers of "dry fruit" cannot be described as a class, for, with the exception of one old couple, none that I know of confine themselves to its sale, but resort to it merely when the season prevents their dealing in "green fruit" or vegetables. I have already specified what in commerce is distinguished as "dry fruit," but its classification among the costers is somewhat narrowed.

The dry-fruit sellers derive their supplies partly from Duke's-place, partly from Pudding-lane, but perhaps principally from the costers concerning whom I have spoken, who buy wholesale at the markets and elsewhere, and who will "clear out a grocer," or buy such figs, &c. as a leading tradesman will not allow to be sent, or offered, to his regular customers, although, perhaps, some of the articles are tolerably good. Or else the dry-fruit men buy a damaged lot of a broker or grocer, and pick out all that is eatable, or rather saleable.

The sale of dry fruit is unpopular among the costermongers. Despite their utmost pains, they cannot give to figs, or raisins, or currants, which may be old and stale, anything of the bloom and

Original from HARVARD UNIVERSITY

plumpness of good fruit, and the price of good fruit is too high for them. Moreover, if the fruit be a "damaged lot," it is almost always discoloured, and the blemish cannot be removed.

It is impossible to give the average price of dry fruit to the costermonger. The quality and the "harvest" affect the price materially in the regular trade.

The rule which I am informed the costermonger, who sometimes "works" a barrow of dried fruit, observes, is this: he will aim at cent. per cent., and, to accomplish it, "slang" weights are not unfrequently used. The stale fruit is sold by the grocers, and the damaged fruit by the warehouses to the costers, at from a half, but much more frequently a fourth to a twentieth of its prime cost. The principal street-purchasers are boys.

A dry-fruit seller gave me the following account:—By "half profits" he meant cent. per cent., or, in other words, that the money he received for his stock was half of it cost price and half profit.

"I sell dry fruit, sir, in February and March, because I must be doing something, and green fruit's not my money then. It's a poor trade. I've sold figs at 1*d.* a pound,—no, sir, not slang the time I mean—and I could hardly make 1*s.* a day at it, though it was half profits. Our customers look at them quite particler. 'Let's see the other side of them figs,' the boys'll say, and then they'll out with—'I say, master, d' you see any green about me?' Dates I can hardly get off at all, no!—not if they was as cheap as potatoes, or cheaper. I've been asked by women if dates was good in dumplings? I've sometimes said 'yes,' though I knew nothing at all about them. They're foreign. I can't say where they're grown. Almonds and raisins goes off best with us. I don't sell them by weight, but makes them up in ha'penny or penny lots. There's two things, you see, and one helps off the other. Raisins is dry grapes, I've heard. I've sold grapes before they was dried, at 1*d.* and 2*d.* the pound. I didn't do no good in any of 'em; 1*s.* a day on 'em was the topper, for all the half profits. I'll not touch 'em again if I aint forced."

There are a few costers who sell tolerable dry fruit, but not to any extent.

The old couple I have alluded to stand all the year round at the corner of a street running into a great city thoroughfare. They are supplied with their fruit, I am told, through the friendliness of a grocer who charges no profit, and sometimes makes a sacrifice for their benefit. As I was told that this old couple would not like inquiries to be made of them, I at once desisted.

There are sometimes twenty costermongers selling nothing but dry fruit, but more frequently only ten, and sometimes only five; while, perhaps, from 300 to 400 sell a few figs, &c., with other things, such as late apples, the dry fruit being then used "just as a fill up."

According to the returns before given, the gross quantity of dry fruit disposed of yearly in the streets of London may be stated as follows:

7,000 lbs. of shell almonds,
37,800 „ raisins,
24,300 „ figs,
4,200 „ prunes.

Of the Street-sale of Vegetables.

The seller of fruit in the streets confines his traffic far more closely to fruit, than does the vegetable-dealer to vegetables. Within these three or four years many street-traders sell only fruit the year through; but the purveyor of vegetables now usually sells fish with his cabbages, turnips, cauliflowers, or other garden stuff. The fish that he carries out on his round generally consists of soles, mackerel, or fresh or salt herrings. This combination of the street-green-grocer and street-fishmonger is called a general dealer."

The general dealers are usually accompanied by boys (as I have elsewhere shown), and sometimes by their wives. If a woman be a general dealer, she is mostly to be found at a stall or standing, and not "going a round."

The general dealer "works" everything through the season. He generally begins the year with sprats or plaice: then he deals in soles until the month of May. After this he takes to mackerel, haddocks, or red herrings. Next he trades in strawberries or raspberries. From these he will turn to green and ripe gooseberries; thence he will go to cherries; from cherries he will change to red or white currants; from them to plums or green-gages, and from them again to apples and pears, and damsons. After these he mostly "works" a few vegetables, and continues with them until the fish season begins again. Some general dealers occasionally trade in sweetmeats, but this is not usual, and is looked down upon by the "trade."

"I am a general dealer," said one of the better class; "my missis is in the same line as myself, and sells everything that I do (barring green stuff.) She follows me always in what I sell. She has a stall, and sits at the corner of the street. I have got three children. The eldest is ten, and goes out with me to call my goods for me. I have had inflammation in the lungs, and when I call my goods for a little while my voice leaves me. My missis is lame. She fell down a cellar, when a child, and injured her hip. Last October twelvemonth I was laid up with cold, which settled on my lungs, and laid me in my bed for a month. My missis kept me all that time. She was 'working' fresh herrings; and if it hadn't been for her we must all have gone into the workhouse. We are doing very badly now. I have no work to do. I have no stock-money to work with, and I object to pay 1*s.* 6*d.* a week for the loan of 10*s.* Once I gave a man 1*s.* 6*d.* a week for ten months for the loan of 10*s.*, and that nearly did me up. I

have had 8*s*. of the same party since, and paid 1*s*. a week for eight weeks for the loan of it. I consider it most extortionate to have to pay 2*d*. a day for the loan of 8*s*., and won't do it. When the season gets a bit better I shall borrow a shilling of one friend and a shilling of another, and then muddle on with as much stock-money as I can scrape together. My missis is at home now doing nothing. Last week it's impossible to say what she took, for we're obliged to buy victuals and firing with it as we take it. She can't go out charing on account of her hip. When she is out, and I am out, the children play about in the streets. Only last Saturday week she was obligated to take the shoes off her feet to get the children some victuals. We owe two weeks' rent, and the landlord, though I've lived in the house five years, is as sharp as if I was a stranger."

"Why, sir," said another vegetable-dealer, who was a robust-looking young man, very clean in his person, and dressed in costermonger corduroy, "I can hardly say what my business is worth to me, for I'm no scholard. I was brought up to the business by my mother. I've a middling connection, and perhaps clear 3*s*. a day, every fine day, or 15*s*. or 16*s*. a week; but out of that there's my donkey to keep, which I suppose costs 6*d*. a day, that's seven sixpences off. Wet or fine, she must be fed, in coorse. So must I; but I've only myself to keep at present, and I hire a lad when I want one. I work my own trap. Then things is so uncertain. Why, now, look here, sir. Last Friday, I think it was—but that don't matter, for it often happens—fresh herrings was 4*s*. the 500 in the morning, and 1*s*. 6*d*. at night, so many had come in. I buy at Billingsgate-market, and sometimes of a large shopkeeper, and at Covent-garden and the Borough. If I lay out 7*s*. in a nice lot of cabbages, I may sell them for 10*s*. 6*d*., or if it isn't a lucky day with me for 8*s*., or less. Sometimes people won't buy, as if the cholera was in the cabbages. Then turnips isn't such good sale yet, but they may be soon, for winter's best for them. There's more bilings then than there's roastings, I think. People like broth in cold weather. I buy turnips by the 'tally.' A tally's five dozen bunches. There's no confinement of the number to a bunch; it's by their size; I've known twelve, and I've known twice that. I sell three parts of the turnips at 1*d*. a bunch, and the other part at 1½*d*. If I get them at 3*s*. 6*d*. the tally I do well on turnips. I go the same rounds pretty regularly every day, or almost every day. I don't object to wet weather so much, because women don't like to stir out then, and so they'll buy of me as I pass. Carrots I do little in; they're dear, but they'll be cheaper in a month or two. They always are. I don't work on Sundays. If I did, I'd get a jacketing. Our chaps would say: 'Well, you *are* a scurf. *You* have a round; give another man a Sunday chance.' A gentleman once said to me, when I was obligated to work on a Sunday: 'Why don't you leave it off, when you know it ain't right?' 'Well, sir,' said I, and he spoke very kind to me, 'well, sir, I'm working for my dinner, and if you'll give me 4*s*. or 3*s*. 6*d*., I'll tumble to your notion and drop it, and I'll give you these here cowcumbers,' (I was working cowcumbers at that time) 'to do what you like with, and they cost me half-a-crown.' In potatoes I don't do a great deal, and it's no great trade. If I did, I should buy at the warehouses in Tooley-street, where they are sold in sacks of 1 cwt.; 150 lbs. and 200 lbs., at 2*s*. 9*d*. and 3*s*. the cwt. I sell mine, tidy good, at 3 pound 2*d*., and a halfpenny a pound, but as I don't do much, not a bushel a day, I buy at market by the bushel at from 1*s*. 6*d*. to 2*s*. I never uses slangs. I sold three times as many potatoes as I do now four years back. I don't know why, 'cept it be that the rot set people again them, and their taste's gone another way. I sell a few more greens than I did, but not many. Spinach I don't do only a little in it. Celery I'm seldom able to get rid on. It's more women's work. Ing-uns the same."

I may add that I found the class, who confined their business principally to the sale of vegetables, the dullest of all the costermongers. Any man may labour to make 1*s*. 6*d*. of cabbages or turnips, which cost him 1*s*., when the calculation as to the relative proportion of measures, &c. is beyond his comprehension.

Pursuing the same mode of calculation as has been heretofore adopted, we find that the absolute quantity of vegetables sold in the London streets by the costers is as follows:

20,700,000	lbs. of potatoes (home grown)
39,800,000	„ (foreign)
23,760,133	cabbages,
3,264,800	turnips,
616,666	junks of turnip tops,
601,000	carrots,
567,300	brocoli and cauliflowers,
219,000	bushels of peas,
8,893	„ beans,
22,110	„ french beans,
25,608	dozens of vegetable marrows,
489	dozen bundles of asparagus,
9,120	„ rhubarb,
4,350	„ celery,
561,600	lettuces,
13,291	dozen hands of radishes,
499,533	bushels of onions,
23,600	dozen bunches of spring onions,
10,920	bushels of cucumbers,
3,290	dozen bunches of herbs.

Of the "Aristocratic" Vegetable-Sale.

In designating these dealers I use a word not uncommon among the costermongers. These aristocratic sellers, who are not one in twenty, or perhaps in twenty-five, of the whole body of costermongers, are generally men of superior manners and better dressed than their brethren. The following narrative, given to me by one of the body, shows the nature of the trade:—

"It depends a good deal upon the season and the price, as to what I begin with in the 'haristocratic' way. My rounds are always in the

suburbs. I sell neither in the streets, nor squares in town. I like it best where there are detached villas, and best of all where there are kept mistresses. They are the best of all customers to men like me. We talk our customers over among ourselves, and generally know who's who. One way by which we know the kept ladies is, they never sell cast-off clothes, as some ladies do, for new potatoes or early peas. Now, my worst customers, as to price, are the ladies—or gentlemen—they're both of a kidney—what keeps fashionable schools. *They* are the people to drive a bargain, but then they buy largely. Some buy entirely of costermongers. There's one gent. of a school-keeper buys so much and knows so well what o'clock it is, that I'm satisfied he saves many a pound a year by buying of us 'stead of the greengrocers.

"Perhaps I begin the season in the haristocratic way, with early lettuces for salads. I carry my goods in handsome baskets, and sometimes with a boy, or a boy and a girl, to help me. I buy my lettuces by the score (of heads) when first in, at 1*s.* 6*d.*, and sell them at 1½*d.* each, which is 1*s.* profit on a score. I have sold twenty, and I once sold thirty score, that way in a day. The profit on the thirty was 2*l.* 5*s.*, but out of that I had to pay three boys, for I took three with me, and our expenses was 7*s.* But you must consider, sir, that this is a precarious trade. Such goods are delicate, and spoil if they don't go off. I give credit sometimes, if anybody I know says he has no change. I never lost nothing

"Then there's grass (asparagus), and that's often good money. I buy all mine at Covent-garden, where it's sold in bundles, according to the earliness of the season, at from 5*s.* to 1*s.*, containing from six to ten dozen squibs (heads). These you have to take home, untie, cut off the scraggy ends, trim, and scrape, and make them level. Children help me to do this in the court where I live. I give them a few ha'pence, though they're eager enough to do it for nothing but the fun. I've had 10*s.* worth made ready in half an hour.

"Well, now, sir, about grass, there's not a coster in London, I'm sure, ever tasted it; and how it's eaten puzzles us." [I explained the manner in which asparagus was brought to table.] "That's the ticket, is it, sir? Well, I was once at the Surrey, and there was some macaroni eaten on the stage, and I thought grass was eaten in the same way, perhaps; swallowed like one o'clock," [rather a favourite comparison among the costers.]

"I have the grass—it's always called, when cried in the streets, 'Spar-row gra-ass'—tied up in bundles of a dozen, twelve to a dozen, or one over, and for these I never expect less than 6*d.* For a three or four dozen lot, in a neat sieve, I ask 2*s.* 6*d.*, and never take less than 1*s.* 3*d.* I once walked thirty-five miles with grass, and have oft enough been thirty miles. I made 7*s.* or 8*s.* a day by it, and next day or two perhaps nothing, or may-be had but one customer. I've sold half-crown lots, on a Saturday night, for a sixpence; and it *was* sold some time back at 2*d.* a bundle, in the New Cut, to poor people. I dare say some as bought it had been maid-servants and understood it. I've raffled 5*s.* worth of grass in the parlour of a respectable country inn of an evening.

"The costers generally buy new potatoes at 4*s.* to 5*s.* the bushel, and cry them at 'three-pound-tuppence;' but I've given 7*s.* a bushel, for choice and early, and sold them at 2*d.* a pound. It's no great trade, for the bushel may weigh only 50 lb., and at 2*d.* a pound that's only 8*s.* 4*d.* The schools don't buy at all until they're 1*d.* the pound, and don't buy in any quantity until they're 1*s.* 6*d.* the 25 lb. One day a school 'stonished me by giving me 2*s.* 6*d.* for 25 lb., which is the general weight of the half bushel. Perhaps the master had taken a drop of something short that morning. The schools are dreadful screws, to be sure.

"Green peas, early ones, I don't buy when they first come in, for then they're very dear, but when they're 4*s.* or 3*s.* 6*d.* a bushel, and that's pretty soon. I can make five pecks of a bushel. Schools don't touch peas 'till they're 2*s.* a bushel.

"Cowcumbers were an aristocratic sale. Four or five years ago they were looked upon, when first in, and with a beautiful bloom upon them, as the finest possible relish. But the cholera came in 1849, and everybody—'specially the women—thought the cholera was in cowcumbers, and I've known cases, foreign and English, sent from the Borough Market for manure.

"I sell a good many mushrooms. I sometimes can pick up a cheap lot at Covent Garden. I make them up in neat sieves of three dozen to eight dozen according to size, and I have sold them at 4*s.* the sieve, and made half that on each sieve I sold. They are down to 1*s.* or 1*s.* 6*d.* a sieve very soon.

"Green walnuts for pickling I sell a quantity of. One day I sold 20*s.* worth—half profit—I got them so cheap, but that was an exception. I sold them cheap too. One lady has bought a bushel and a half at a time. For walnut catsup the refuse of the walnut is used; it's picked up in the court, where I've got children or poor fellows for a few ha'pence or a pint of beer to help me to peel the walnuts."

Of Onion Selling in the Streets.

The sale of onions in the streets is immense. They are now sold at the markets at an average of 2*s.* a bushel. Two years ago they were 1*s.*, and they have been 4*s.* and up to 7*s.* the bushel. They are now twisted into "ropes" for street sale. The ropes are of straw, into which the roots are platted, and secured firmly enough, so that the ropes can be hung up; these have superseded the netted onions, formerly sold by the Jew boys. The plaiting, or twisting, is done rapidly by the women, and a straw-bonnet-maker described it to me as somewhat after the mode of her trade, only that the top, or projecting portion of the stem of the onion, was twisted within the straw,

instead of its being plaited close and flat together. The trade in rope onions is almost entirely in the hands of the Irish women and girls. There are now, it is said, from 800 to 1000 persons engaged in it. Onion selling can be started on a small amount of capital, from *6d.* to *1s.*, which is no doubt one inducement for those poor persons to resort to it. The sixpenny ropes, bunches, or strings (I heard each word applied), contain from three to four dozen; the penny bunches, from six to twenty roots, according to size; and the intermediate and higher priced bunches in proportion. Before Christmas, a good many shilling lots are sold. Among the costermongers I heard this useful root — which the learned in such matters have pronounced to be, along with the mushroom, the foundation of every sauce, ancient or modern—called ing-guns, ingans, injens, injyens, inions, innons, almost everything but onions.

An Irishwoman, apparently of thirty-five, but in all probability younger—she did not know her age—gave me the following account. Her face, with its strongly-marked Irish features, was almost purpled from constant exposure to the weather. She was a teetotaller. She was communicative and garrulous, even beyond the average of her countrywomen. She was decently clad, had been in London fifteen years (she thought) having been brought from Ireland, *viâ* Bristol, by her parents (both dead). She herself was a widow, her husband, "a bricklayer" she called him (probably a bricklayer's labourer), having died of the cholera in 1849. I take up her statement from that period:

"Yes, indeed, sir, he died—the heavins be his bed!—and he was prepared by Father M——. We had our thrials togither, but sore's been the cross and heavy the burthin since it plased God to call him. Thin, there's the two childer, Biddy and Ned. They'll be tin and they'll be eight come their next burreth-days, 'plase the Lorrud. They can hilp me now, they can. They sells ing-uns as well. I ropes 'em for 'em. How is ing-uns roped? Shure, thin—but it's not mocking me your 'onnur is—shure, thin, a gintleman like you, that can write like a horrus a-galloping, and perhaps is as larned as a praste, glory be to God! *must* know how to rope ing-uns! Poor people can do it. Some say it's a sacrit, but that's all a say, or there couldn't be so many ropes a-silling. I buy the sthraw at a sthraw-daler's; twopinn'orth at a time; that'll make six or twilve ropes, according to what they are, sixpinny or what. It's as sthraight as it can be grown, the sthraw, that it is indeed. Och, sir, we've had many's the black day, me and the childer, poor things; it's thim I care about, but —God's name be praised!—we've got on somehow. Another poor woman—she's a widdur too, hilp her!—and me has a *2s.* room for the two of us. We've our siprate furnithur. She has only hersilf, but is fond of the childer, as you or your lady—bliss her! if you've got one—might be, if you was with them. I can read a little mysilf, at laste I could onste, and I gits them a bit o' schoolin' now and thin, whin I can, of an evenin' mostly. I can't write a letther; I wish I could. Shure, thin, Sir, I'll tell you the thruth—we does best on ing-uns. Oranges is nixt, and nuts isn't near so good. The three of us now makes *1s.* and sometimes *1s. 6d.* a day, and that's grand doin's. We may sill bechuxt us from two to three dozin ropes a day. I'm quick at roping the ing-uns. I never noted how many ropes an hour. I buy them of a thradesman, an honist gintleman, I know, and I see him at mass ivery Sunday, and he gives me as many as he can for *1s.* or what it is. We has *1d.*, plase God, on ivery *6d.*; yis, sir, perhaps more sometimes. I'll not tell your 'onnur a bit of a lie. And so we now get a nice bit o' fish, with a bit of liver on a Sunday. I sell to the thradesmen, and the lodgers of them, about here (Tottenham-court-road), and in many other parruts, for we thravels a dale. The childer always goes the same round. We follows one another. I've sould in the sthreets ever since I've been in this counthry."

The greatest sum of money expended by the poor upon any vegetable (after potatoes) is spent upon onions—99,900*l.* being annually devoted to the purchase of that article. To those who know the habits of the poor, this will appear in no way singular—a piece of bread and an onion being to the English labourer what bread and an apple or a bunch of grapes is to the French peasant—often his dinner.

Of Pot-Herbs and Celery.

I use the old phrase, *pot-herbs*, for such productions as sage, thyme, mint, parsley, sweet marjoram, fennel, (though the last is rarely sold by the street-people), &c.; but "herbs" is the usual term. More herbs, such as agrimony, balm (balsam), wormwood, tansy, &c., used to be sold in the streets. These were often used for "teas," medicinally perhaps, except tansy, which, being a strong aromatic, was used to flavour puddings. Wormwood, too, was often bought to throw amongst woollen fabrics, as a protective against the attack of moths.

The street herb-trade is now almost entirely in the hands of Irishwomen, and is generally carried on during the autumn and winter at stalls. With it, is most commonly united the sale of celery. The herbs are sold at the several markets, usually in shilling lots, but a quarter of a shilling lot may be purchased. The Irishwoman pursues a simple method of business. What has cost her *1s.* she divides into 24 lots, each of *1d.*, or she will sell half of a lot for a halfpenny. An Irishwoman said to me:

"Thrade isn't good, sir; it falls and it falls. I don't sell so many herrubs or so much ciliry as I did whin mate was higher. Poor people thin, I've often been said it, used to buy bones and bile them for broth with ciliry and the beautiful herrubs. Now they buys a bit of mate and ates it without brothing. It's good one way and it's bad another. Only last Sathurday night my husband—and a good husband he's to me, though he is a London man, for he knows how to make

a bargain—he bought a bit of mutton, afore the stroke of twilve, in Newgit-markit, at 2½d. the pound. I don't know what parrut it was. I don't understand that, but he does, and tills me how to cook it. He has worruk at the docks, but not very rigular. I think I sill most parrusley. Whin frish herrings is chape, some biles them with parrusley, and some fries them with ing-uns. No, sir; I don't make sixpence a day; not half-a-crown a week, I'm shure. Whin herrubs isn't in—and they're autumn and winther things, and so is cilery—I sills anything; gooseberries and currints, or anything. If I'd had a family, I couldn't have had a shoe to my futt."

Gross Value of the Fruit and Vegetables Sold Annually in the London Streets.

To complete the present account of the costermonger's trade, we must now estimate the money value of the fruit and vegetables disposed of by them throughout the year. The money annually spent in fish by the humbler portion of the metropolitan population comes to, as we have seen, very nearly one million five hundred thousand pounds sterling—the sum laid out in fruit and vegetables we shall find is but little more than a third of this amount.

Green Fruit.

377,500	bushels of apples, at six a penny or 4s. per bush. (288 to the bushel) . .	£75,500
193,700	bushels of pears, at 5s. per bushel	48,400
1,215,860	lbs. of cherries, at 2d. per lb.	10,000
11,700	bushels of plums, at 1d. per half pint	6,270
100	bushels of greengages, at 1½d. per half pint . .	80
548	bushels of damsons, at 1½d. per half pint	430
2,450	bushels of bullace, at 1½d. per half pint	1,960
207,500	bushels of gooseberries, at 3d. per quart	83,000
85,500	sieves of red currants, at 1d. per pint (three half-sieves to the bushel) .	15,300
13,500	sieves of black currants, at 1d. per pint (three half-sieves to the bushel) .	2,400
3,000	sieves of white currants, at 1d. per pint (three half-sieves to the bushel) .	530
763,750	pottles of strawberries, at 2d. per pottle	6,360
1,760	pottles of raspberries, at 6d. per pottle	40
30,485	pottles of mulberries, at 6d. per pottle	760
6,000	bushels of hazel nuts, at ¾d. per half pint . . .	2,400
17,280	lbs. of filberts, at 3d. per lb.	200
26,563	lbs. of grapes, at 4d. per lb.	440
20,000	pine apples, at 6d. each .	600
15,400,000	oranges, at two for 1d. . .	32,000
154,000	lemons, at two for 1d. . .	320
24,000	bushels of Spanish and Barcelona nuts, at 6d. per quart	19,200
3,000	bushels of Brazil nuts (1500 to the bushel), at fifteen for 1d.	£1,250
6,500	bushels of chestnuts (1500 to the bushel), at fifteen for 1d.	2,700
24,000	bushels of walnuts (1750 to the bushel), at ten for 1d.	17,500
400,000	coker-nuts, at 3d. each .	5,000
	Total expended yearly in green fruit	£333,420

Dry Fruit.

7,000	lbs. of shell almonds, at 20 a penny (320 to the lb.)	£460
37,800	lbs. of raisins, at 2d. per lb.	300
24,300	lbs. of figs, at 2d. per lb. .	200
4,800	lbs. of prunes, at 2d. per lb.	40
	Total expended yearly on dry fruit	£1,000

Vegetables.

60,500,000	lbs. of potatoes, at 5lbs. for 2d.	£100,800
23,760,000	cabbages, at ½d. each . .	49,500
3,264,800	turnips, at 1½d. per doz. .	1,700
601,000	carrots, at 2½d. per doz. .	520
567,300	brocoli and cauliflowers, at 1d. per head	2,360
616,666	junks of turnip tops, at 4d. per junk	10,270
219,000	bushels of peas, at 1s. 6d. per bushel	16,420
8,890	bushels of beans, at 1s. 6d. per bushel	660
22,110	bushels of French beans, at 6d. per peck, or 2s. per bushel	2,210
25,608	vegetable marrows, at ½d. each	50
489	dozen bundles of asparagus, at 2s. 6d. per bundle (4d. or 6d. a doz. heads)	730
9,120	dozen bundles of rhubarb, at 2s. 6d. per doz. . .	1,140
4,350	dozen bundles of celery, at 3d. per bundle . . .	650
561,602	lettuces, at 3 a penny . .	780
13,291	dozen hands of radishes, at 3 bunches for 1d., and 6 bunches to the hand .	1,330
499,530	bushels of onions, at 4s. per bushel	99,900
10,920	bushels of cucumbers, at 1d. each (60 to the bush.)	2,730
3,290	dozen bundles of herbs, at 3d. a bundle	490
	Total expended yearly in vegetables	£292,240

Putting the above sums together we have the following aggregate result:—

Expended yearly in green fruit . .	£333,420
Expended yearly in dry fruit . . .	1,000
Expended yearly in vegetables . . .	292,000
Gross sum taken annually by the London costermongers for fruit and vegetables	£626,420

Then adding the above to the gross amount received by the street-sellers of fish, which we have before seen comes to as much as £1,460,850, we have for the annual income of the London costermongers no less a sum than £2,087,270.

OF THE STATIONARY STREET-SELLERS OF FISH, FRUIT, AND VEGETABLES.

OF THE NUMBER OF STREET STALLS.

THUS far we have dealt only with the itinerant dealers in fish, fruit, or vegetables; but there are still a large class of street-sellers, who obtain a living by the sale of the same articles at some fixed locality in the public thoroughfares; and as these differ from the others in certain points, they demand a short special notice here. First, as to the number of stalls in the streets of London, I caused personal observations to be made; and in a walk of 46 miles, 632 stalls were counted, which is at the rate of very nearly 14 to the mile. This, too, was in bad weather,—was not on a Saturday night,—and at a season when the fruit-sellers all declare that "things is dull." The routes taken in this inquiry were:—No. 1, from Vauxhall to Hatton-garden; No. 2, from Baker-street to Bermondsey; No. 3, from Blackwall to Brompton; No. 4, from the Hackney-road to the Edgeware-road. I give the results.

	F.	FR.	V.	M.	T.
No. 1 . .	9	28	5	7	49
„ 2 . .	37	50	4	14	105
„ 3 . .	90	153	30	40	313
„ 4 . .	75	52	23	15	165
	211	283	62	76	632

F. denotes fish-stalls; Fr. fruit-stalls; V. vegetable-stalls; M. miscellaneous; and T. presents the total:

The miscellaneous stalls include peas-soup, pickled whelks, sweetmeats, toys, tin-ware, elder-wine, and jewellery stands. Of these, the toy-stalls were found to be the most numerous; sweetmeats the next; tin-ware the next; while the elder-wine stalls were least numerous.

Some of the results indicate, curiously enough, the character of the locality. Thus, in Fleet-street there were 3, in the Haymarket 5, in Regent-street 6, and in Piccadilly 14 fruit-stalls, and no fish-stalls—these streets not being resorted to by the poor, to whom fruit is a luxury, but fish a necessity. In the Strand were 17 fruit and 2 fish-stalls; and in Drury-lane were 8 stalls of fish to 6 of fruit. On the other hand, there were in Ratcliffe-highway, 38 fish and 23 fruit-stalls; in Rosemary-lane, 13 fish and 8 fruit-stalls; in Shoreditch, 28 fish and 13 fruit-stalls; and in Bethnal-green Road (the poorest district of all), 14 of the fish, and but 3 of the fruit stalls. In some places, the numbers were equal, or nearly so; as in the Minories, for instance, the City-road, the New-road, Goodge-street, Tottenham-court Road, and the Camberwell-road; while in Smithfield were 5, and in Cow-cross 2 fish-stalls, and no fruit-stalls at all. In this enumeration the street-markets of Leather-lane, the New Cut, the Brill, &c., are not included.

The result of this survey of the principal London thoroughfares is that in the *mid-route* (viz., from Brompton, along Piccadilly, the Strand, Fleet-street, and so *viâ* the Commercial-road to Blackwall), there are twice as many stalls as in the great *northern thoroughfare* (that is to say, from the Edgeware-road, along the New-road, to the Hackney-road); the latter route, however, has more than one-third as many stalls as route No. 2, and that again more than double the number of route No. 1. Hence it appears that the more frequented the thoroughfare, the greater the quantity of street-stalls.

The number of miles of streets contained within the inner police district of the metropolis, are estimated by the authorities at 2,000 (including the city), and assuming that there are on an average only four stalls to the mile throughout London, we have thus a grand total of 8,000 fish, fruit, vegetable, and other stalls dispersed throughout the capital.

Concerning the character of the stalls at the street-markets, the following observations have been made:—At the New-cut there were, before the removals, between the hours of eight and ten on a Saturday evening, ranged along the kerb-stone on the north side of the road, beginning at Broad-wall to Marsh-gate (a distance of nearly half-a-mile), a dense line of "pitches"—at 77 of which were vegetables for sale, at 40 fruit, 25 fish, 22 boots and shoes, 14 eatables, consisting of cakes and pies, hot eels, baked potatoes, and boiled whelks; 10 dealt in nightcaps, lace, ladies' collars, artificial flowers, silk and straw bonnets; 10 in tinware—such as saucepans, tea-kettles, and Dutch-ovens; 9 in crockery and glass, 7 in brooms and brushes, 5 in poultry and rabbits, 6 in paper, books, songs, and almanacs; and about 60 in sundries.

Of the Character of the Street-Stalls.

The stalls occupied by costermongers for the sale of fish, fruit, vegetables, &c., are chiefly constructed of a double cross-trestle or moveable frame, or else of two trestles, each with three legs, upon which is laid a long deal board, or tray. Some of the stalls consist merely of a few boards resting upon two baskets, or upon two herring-barrels. The fish-stalls are mostly covered with paper—generally old newspapers or periodicals—but some of the street-fishmongers, instead of using paper to display their fish upon, have introduced a thin marble slab, which gives the stall a cleaner, and, what they consider a high attribute, a "respectable" appearance.

Most of the fruit-stalls are, in the winter time, fitted up with an apparatus for roasting apples and chestnuts; this generally consists of an old saucepan with a fire inside; and the woman who vends them, huddled up in her old faded shawl or cloak, often presents a picturesque appearance, in the early evening, or in a fog, with the gleam of the fire lighting up her half somnolent figure. Within the last two or three years, however, there has been so large a business carried on in roasted chestnuts, that it has become a distinct street-trade, and the vendors have provided themselves with an iron apparatus, large enough to roast nearly half a bushel at a time. At the present time, however, the larger apparatus is less common in the streets, and more frequent in the shops, than in the previous winter.

There are, moreover, peculiar kinds of stalls—such as the hot eels and hot peas-soup stalls, having tin oval pots, with a small chafing-dish containing a charcoal fire underneath each, to keep the eels or soup hot. The early breakfast stall has two capacious tin cans filled with tea or coffee, kept hot by the means before described, and some are lighted up by two or three large oil-lamps; the majority of these stalls, in the winter time, are sheltered from the wind by a screen made out of an old clothes horse covered with tarpaulin. The cough-drop stand, with its distilling apparatus, the tin worm curling nearly the whole length of the tray, has but lately been introduced. The nut-stall is fitted up with a target at the back of it. The ginger-beer stand may be seen in almost every street, with its French-polished mahogany frame and bright polished taps, and its foot-bath-shaped reservoir of water, to cleanse the glasses. The hot elder wine stand, with its bright brass urns, is equally popular.

The sellers of plum-pudding, "cake, a penny a slice," sweetmeats, cough-drops, pin-cushions, jewellery, chimney ornaments, tea and table-spoons, make use of a table covered over, some with old newspapers, or a piece of oil-cloth, upon which are exposed their articles for sale.

Such is the usual character of the street-stalls. There are, however, "stands" or "cans" peculiar to certain branches of the street-trade. The most important of these, such as the baked-potatoe can, and the meat-pie stand, I have before described, p. 27.

The other means adopted by the street-sellers for the exhibition of their various goods at certain "pitches" or fixed localities are as follows. Straw bonnets, boys' caps, women's caps, and prints, are generally arranged for sale in large umbrellas, placed "upside down." Haberdashery, with rolls of ribbons, edgings, and lace, some street-sellers display on a stall; whilst others have a board at the edge of the pavement, and expose their wares upon it as tastefully as they can. Old shoes, patched up and well blacked, ready for the purchaser's feet, and tin ware, are often ranged upon the ground, or, where the stock is small, a stall or table is used.

Many stationary street-sellers use merely baskets, or trays, either supported in their hand, or on their arm, or else they are strapped round their loins, or suspended round their necks. These are mostly fruit-women, watercress, blacking, congreves, sheep's-trotters, and ham-sandwich sellers.

Many stationary street-sellers stand on or near the bridges; others near the steam-packet wharfs or the railway terminuses; a great number of them take their pitch at the entrance to a court, or at the corners of streets; and stall-keepers with oysters stand opposite the doors of public-houses.

It is customary for a street-seller who wants to "pitch" in a new locality to solicit the leave of the housekeeper, opposite whose premises he desires to place his stall. Such leave obtained, no other course is necessary.

Of Fruit-stall Keepers.

I had the following statement from a woman who has "kept a stall" in Marylebone, at the corner of a street, which she calls "my corner," for 38 years. I was referred to her as a curious type of the class of stall-keepers, and on my visit, found her daughter at the "pitch." This daughter had all the eloquence which is attractive in a street-seller, and so, I found, had her mother when she joined us. They are profuse in blessings; and on a bystander observing, when he heard the name of these street-sellers, that a jockey of that name had won the Derby lately, the daughter exclaimed, "To be sure he did; he's my own uncle's relation, and what a lot of money came into the family! Bless God for all things, and bless every body! Walnuts, sir, walnuts, a penny a dozen! Wouldn't give you a bad one for the world, which is a great thing for a poor 'oman for to offer to do." The daughter was dressed in a drab great-coat, which covered her whole person. When I saw the mother, she carried a similar great-coat, as she was on her way to the stall; and she used it as ladies do their muffs, burying her hands in it. The mother's dark-coloured old clothes seemed, to borrow a description from Sir Walter Scott, flung on with a pitchfork. These two women were at first very suspicious, and could not be made to understand my object in questioning

them; but after a little while, the mother became not only communicative, but garrulous, conversing—with no small impatience at any interruption—of the doings of the people in her neighbourhood. I was accompanied by an intelligent costermonger, who assured me of his certitude that the old woman's statement was perfectly correct, and I found moreover from other inquiries that it was so.

"Well, sir," she began, "what is it that you want of me? Do I owe you anything? There's half-pay officers about here for no good; what is it you want? Hold your tongue, you young fool," (to her daughter, who was beginning to speak;) "what do you know about it?" [On my satisfying her that I had no desire to injure her, she continued, to say after spitting, a common practice with her class, on a piece of money, "for luck,"] "Certainly, sir, that's very proper and good. Aye, I've seen the world—the town world and the country. I don't know where I was born; never mind about that—it's nothing to nobody. I don't know nothing about my father and mother; but I know that afore I was eleven I went through the country with my missis. She was a smuggler. I didn't know then what smuggling was—bless you, sir, I didn't; I knew no more nor I know who made that lamp-post. I didn't know the taste of the stuff we smuggled for two years—didn't know it from small beer; I've known it well enough since, God knows. My missis made a deal of money that time at Deptford Dockyard. The men wasn't paid and let out till twelve of a night—I hardly mind what night it was, days was so alike then—and they was our customers till one, two, or three in the morning—Sunday morning, for anything I know. I don't know what my missis gained; something jolly, there's not a fear of it. She was kind enough to me. I don't know how long I was with missis. After that I was a hopping, and made my 15*s.* regular at it, and a haymaking; but I've had a pitch at my corner for thirty-eight year—aye! turned thirty-eight. It's no use asking me what I made at first—I can't tell; but I'm sure I made more than twice as much as my daughter and me makes now, the two of us. I wish people that thinks we're idle now were with me for a day. I'd teach them. I don't—that's the two of us don't—make 15*s.* a week now, nor the half of it, when all's paid. D—d if I do. The d—d boys take care of that." [Here I had a statement of the boys' tradings, similar to what I have given.] "There's 'Canterbury' has lots of boys, and they bother me. I can tell, and always could, how it is with working men. When mechanics is in good work, their children has halfpennies to spend with me. If they're hard up, there's no halfpennies. The pennies go to a loaf or to buy a candle. I might have saved money once, but had a misfortunate family. My husband? O, never mind about him. D—n him. I've been a widow many years. My son—it's nothing how many children I have—is married; he had the care of an ingine. But he lost it from ill health. It was in a feather-house, and the flue got down his throat, and coughed him; and so he went into the country, 108 miles off, to his wife's mother. But his wife's mother got her living by wooding, and other ways, and couldn't help him or his wife; so he left, and he's with me now. He has a job sometimes with a greengrocer, at 6*d.* a day and a bit of grub; a little bit—very. I must shelter him. I couldn't turn him out. If a Turk I knew was in distress, and I had only half a loaf, I'd give him half of that, if he was ever such a Turk—I would, sir! Out of 6*d.* a day, my son—poor fellow, he's only twenty-seven!—wants a bit of 'baccy and a pint of beer. It 'ud be unnatural to oppose that, wouldn't it, sir? He frets about his wife, that's staying with her mother, 108 miles off; and about his little girl; but I tell him to wait, and he may have more little girls. God knows, they come when they're not wanted a bit. I joke and say all my old sweethearts is dying away. Old Jemmy went off sudden. He lent me money sometimes, but I always paid him. He had a public once, and had some money when he died. I saw him the day afore he died. He was in bed, but wasn't his own man quite; though he spoke sensible enough to me. He said, said he, 'Won't you have half a quartern of rum, as we've often had it?' 'Certainly, Jemmy,' says I, 'I came for that very thing.' Poor fellow! his friends are quarrelling now about what he left. It's 56*l.* they say, and they'll go to law very likely, and lose every thing. There'll be no such quarrelling when I die, unless it is for the pawn-tickets. I get a meal now, and got a meal afore; but it was a better meal then, sir. Then look at my expenses. I was a customer once. I used to buy, and plenty such did, blue cloth aprons, opposite Drury-lane theatre: the very shop's there still, but I don't know what it is now; I can't call to mind. I gave 2*s.* 6*d.* a yard, from twenty to thirty years ago, for an apron, and it took two yards, and I paid 4*d.* for making it, and so an apron cost 5*s.* 4*d.*—that wasn't much thought of in those times. I used to be different off then. I never go to church; I used to go when I was a little child at Sevenoaks. I suppose I was born somewhere thereabouts. I've forgot what the inside of a church is like. There's no costermongers ever go to church, except the rogues of them, that wants to appear good. I buy my fruit at Covent-garden. Apples is now 4*s.* 6*d.* a bushel there. I may make twice that in selling them; but a bushel may last me two, three, or four days."

As I have already, under the street-sale of fish, given an account of the oyster stall-keeper, as well as the stationary dealers in sprats, and the principal varieties of wet fish, there is no necessity for me to continue this part of my subject.

We have now, in a measure, finished with the metropolitan costermongers. We have seen that the street-sellers of fish, fruit, and vegetables

constitute a large proportion of the London population; the men, women, and children numbering at the least 30,000, and taking as much as 2,000,000*l.* per annum. We have seen, moreover, that these are the principal purveyors of food to the poor, and that consequently they are as important a body of people as they are numerous. Of all classes they *should* be the most honest, since the poor, least of all, can afford to be cheated; and yet it has been shown that the consciences of the London costermongers, generally speaking, are as little developed as their intellects; indeed, the moral and religious state of these men is a foul disgrace to us, laughing to scorn our zeal for the "propagation of the gospel in *foreign* parts," and making our many societies for the civilization of savages on the other side of the globe appear like a "delusion, a mockery, and a snare," when we have so many people sunk in the lowest depths of barbarism round about our very homes. It is well to have Bishops of New Zealand when we have Christianized all *our own* heathen; but with 30,000 individuals, in merely *one* of our cities, utterly creedless, mindless, and principleless, surely it would look more like earnestness on our parts if we created Bishops of the New-Cut, and sent "right reverend fathers" to watch over the "cure of souls" in the Broadway and the Brill. If our sense of duty will not rouse us to do this, at least our regard for our own interests should teach us, that it is not safe to allow this vast dungheap of ignorance and vice to seethe and fester, breeding a social pestilence in the very heart of our land. That the costermongers belong essentially to the dangerous classes none can doubt; and those who know a coster's hatred of a "crusher," will not hesitate to believe that they are, as they themselves confess, one and all ready, upon the least disturbance, to seize and disable their policeman.

It would be a marvel indeed if it were otherwise. Denied the right of getting a living by the street authorities, after having, perhaps, been supplied with the means of so doing by the parish authorities—the stock which the one had provided seized and confiscated by the other—law seems to them a mere farce, or at best, but the exercise of an arbitrary and despotic power, against which they consider themselves justified, whenever an opportunity presents itself, of using the same physical force as it brings to bear against them. That they are ignorant and vicious as they are, surely is not their fault. If we were all born with learning and virtue, then might we, with some show of justice, blame the costermongers for their want of both; but seeing that even the most moral and intelligent of us owe the greater part, if not the whole, of our wisdom and goodness to the tuition of others, we must not in the arrogance of our self-conceit condemn these men because they are not like ourselves, when it is evident that we should have been as they are, had not some one done for us what we refuse to do for them. We leave them destitute of all perception of beauty, and therefore without any means of pleasure but through their appetites, and then we are surprized to find their evenings are passed either in brutalizing themselves with beer, or in gloating over the mimic sensuality of the "penny gaff." Without the least intellectual culture is it likely, moreover, that they should have that perception of antecedents and consequents which enables us to see in the shadows of the past the types of the future—or that power of projecting the mind into the space, as it were, of time, which we in Saxon-English call fore-sight, and in Anglo-Latin pro-vidence—a power so godlike that the latter term is often used by us to express the Godhead itself? Is it possible, then, that men who are as much creatures of the present as the beasts of the field—instinctless animals—should have the least faculty of prevision? or rather is it not natural that, following the most precarious of all occupations—one in which the subsistence depends upon the weather of this the most variable climate of any—they should fail to make the affluence of the fine days mitigate the starvation of the rainy ones? or that their appetites, made doubly eager by the privations suffered in their adversity, should be indulged in all kinds of excess in their prosperity—their lives being thus, as it were, a series of alternations between starvation and surfeit?

The fate of children brought up amid the influence of such scenes—with parents starving one week and drunk all the next—turned loose into the streets as soon as they are old enough to run alone—sent out to sell in public-houses almost before they know how to put two halfpence together—their tastes trained to libidinism long before puberty at the penny concert, and their passions inflamed with the unrestrained intercourse of the twopenny hops—the fate of the young, I say, abandoned to the blight of such associations as these, cannot well be otherwise than it is. If the child be father to the man, assuredly it does not require a great effort of imagination to conceive the manhood that such a childhood must necessarily engender.

Some months back Mr. Mayhew, with a view to mitigate what appeared to him to be the chief evils of a street-seller's life, founded "The Friendly Association of London Costermongers," the objects of which were as follows:

1. To establish a Benefit and Provident Fund for insuring to each Member a small weekly allowance in Sickness or Old Age, as well as a certain sum to his family at his death, so that the Costermongers, when incapacitated from labour, may not be forced to seek parochial relief, nor, at their decease, be left to be buried by the parish.

2. To institute a Penny Savings' Bank and Winter Fund, where the smallest deposits will be received and bear interest, so that the Costermongers may be encouraged to lay by even the most trivial sums, not only as a provision for future comfort, but as the means of assisting their poorer brethren with future loans.

3. To form a Small Loan Fund for supplying the more needy Costermongers with Stock-Money, &c., at a fair and legitimate interest, instead of the exorbitant rates that are now charged.

4. To promote the use of full weights and measures by every Member of the Association, as well as a rigid inspection of the scales, &c., of all other Costermongers, so that the honestly disposed Street-sellers may be protected, and the public secured against imposition.

5. To protect the Costermongers from interference when lawfully pursuing their calling, by placing it in their power to employ counsel to defend them, if unjustly prosecuted.

6. To provide harmless, if not rational, amusements at the same cheap rate as the pernicious entertainments now resorted to by the Street-sellers.

7. To adopt means for the gratuitous education of the children of the Costermongers, in the day time, and the men and women themselves in the evening.

This institution remains at present comparatively in abeyance, from the want of funds to complete the preliminary arrangements. Those, however, who may feel inclined to contribute towards its establishment, will please to pay their subscriptions into Messrs. Twinings' Bank, Strand, to the account of Thomas Hughes, Esq. (of 63, Upper Berkeley-street, Portman-square), who has kindly consented to act as Treasurer to the Association.

Of a Public Meeting of Street-sellers.

The Association above described arose out of a meeting of costermongers and other street-folk, which was held, at my instance, on the evening of the 12th of June last, in the National Hall, Holborn. The meeting was announced as one of "street-sellers, street-performers, and street-labourers," but the costermongers were the great majority present. The admission was by ticket, and the tickets, which were of course gratuitous, were distributed by men familiar with all the classes invited to attend. These men found the tickets received by some of the street-people with great distrust; others could not be made to understand why any one should trouble himself on their behoof; others again, cheerfully promised their attendance. Some accused the ticket distributors with having been bribed by the Government or the police, though for what purpose was not stated. Some abused them heartily, and some offered to treat them. At least 1,000 persons were present at the meeting, of whom 731 presented their tickets; the others were admitted, because they were known to the door-keepers, and had either lost their tickets or had not the opportunity to obtain them. The persons to whom cards of admission were given were invited to write their names and callings on the backs, and the cards so received gave the following result. Costermongers, 256; fish-sellers, 28; hucksters, 23; lot-sellers, 18; street-labourers, 16; paper-sellers and workers, 13; toy-sellers, 11; ginger-beer-sellers, 9; hardware-sellers, 9; general-dealers, 7; street-musicians, 5; street-performers, 5; cakes and pastry-sellers, fried-fish-vendors, and tinkers, each, 4; turf-vendors, street-exhibitors, strolling-players, cat's-meat-men, water-cress-sellers, stay-lace, and cotton-sellers, each, 3; board-carriers, fruit-sellers, street-tradesmen, hawkers, street-green-grocers, shell-fish-vendors, poulterers, mud-larks, wire-workers, ballad-singers, crock-men, and booksellers, each, 2; the cards also gave one each of the following avocations:—fly-cage-makers, fly-paper-sellers, grinders, tripe-sellers, pattern-printers, blind-paper-cutters, lace-collar-sellers, bird-sellers, bird-trainers, pen-sellers, lucifer-merchants, watch-sellers, decorators, and play-bill-sellers. 260 cards were given in without being indorsed with any name or calling.

My object in calling this meeting was to ascertain from the men themselves what were the grievances to which they considered themselves subjected; what were the peculiarities and what the privations of a street-life. Cat-calls, and every description of discordant sound, prevailed, before the commencement of the proceedings, but there was also perfect good-humour. Although it had been announced that all the speakers were to address the meeting from the platform, yet throughout the evening some man or other would occasionally essay to speak from the body of the hall. Some of those present expressed misgivings that the meeting was got up by the Government, or by Sir R. Peel, and that policemen, in disguise, were in attendance. The majority showed an ignorance of the usual forms observed at public meetings, though some manifested a thorough understanding of them. Nor was there much delicacy observed—but, perhaps, about as much as in some assemblages of a different character—in clamouring down any prosy speaker. Many present were without coats (for it was a warm evening), some were without waistcoats, many were in tatters, hats and caps were in infinite varieties of shape and shade, while a few were well and even genteelly dressed. The well dressed street-sellers were nearly all young men, and one of these wore moustachios. After I had explained, amidst frequent questions and interruptions, the purpose for which I had summoned the meeting, and had assured the assembly that, to the best of my knowledge, no policemen were present, I invited free discussion.

It was arranged that some one person should address the meeting as the representative of each particular occupation. An elderly man of small stature and lively intelligent features, stood up to speak on behalf of the "paper-workers," "flying-stationers," and "standing-patterers." He said, that "for twenty-four years he had been a penny-showman, a street-seller, and a patterer." He dwelt upon the difference of a street-life when he was young and at the present time, the difference being between meals and no meals; and complained that though

he had been well educated, had friends in a respectable way of life, and had never been accused of any dishonesty, such was the moral brand," of having been connected with a "street life, that it was never got rid of. He more than once alluded to this "moral brand." The question was, he concluded, in what way were they to obtain an honest livelihood, so as to keep their wives and children decently, without being buffeted about like wild beasts in the open streets? This address was characterised by propriety in the delivery, and by the absence of any grammatical inaccuracy, or vulgarity of tone or expression.

A costermonger, a quiet-looking man, tidily clad, said he was the son of a country auctioneer, now dead; and not having been brought up to any trade, he came to London to try his luck. His means were done before he could obtain employment; and he was in a state of starvation. At last he was obliged to apply to the parish. The guardians took him into the workhouse, and offered to pass him home: but as he could do no good there, he refused to go. Whereupon, giving him a pound of bread, he was turned into the streets, and had nowhere to lay his head. In wandering down the New-cut a costermonger questioned him, and then took him into his house and fed him This man kept him for a year and a half; he showed him how to get a living in the street trade; and when he left, gave him 20*s*. to start with. With this sum he got a good living directly; and he could do so now, were it not for the police, whose conduct, he stated, was sometimes very tyrannical. He had been dragged to the station-house, for standing to serve customers, though he obstructed nobody; the policeman, however, called it an obstruction, and he (the speaker) was fined 2*s*. 6*d*.; whereupon, because he had not the half-crown, his barrow and all it contained were taken from him, and he had heard nothing of them since. This almost broke him down. There was no redress for these things, and he thought they ought to be looked into.

This man spoke with considerable energy; and when he had concluded, many costermongers shouted, at the top of their voices, that they could substantiate every word of what he had said.

A young man, of superior appearance, said he was the son of a gentleman who had held a commission as Lieutenant in the 20th Foot, and as Captain in the 34th Infantry, and afterwards became Sub-director of the Bute Docks; in which situation he died, leaving no property. He (the speaker) was a classical scholar; but having no trade, he was compelled, after his father's death, to come to London in search of employment, thinking that his pen and his school acquirements would secure it. But in this expectation he was disappointed,—though for a short period he was earning two guineas a week in copying documents for the House of Commons. That time was past; and he was a street-patterer now through sheer necessity. He could say from experience that the earnings of that class were no more than from 8*s*. to 10*s*. a week. He then declaimed at some length against the interference of the police with the patterers, considering it harsh and unnecessary.

After some noisy and not very relevant discussion concerning the true amount of a street-patterer's earnings, a clergyman of the Established Church, now selling stenographic cards in the street, addressed the meeting. He observed, that in every promiscuous assembly there would always be somebody who might be called unfortunate. Of this number he was one; for when, upon the 5th September, 1831, he preached a funeral sermon before a fashionable congregation, upon Mr. Huskisson's death by a railway accident, he little thought he should ever be bound over in his own recognizances in 10*l*. for obstructing the metropolitan thoroughfares. He was a native of Hackney, but in early life he went to Scotland, and upon the 24th June, 1832, he obtained the presentation to a small extra-parochial chapel in that country, upon the presentation of the Rev. Dr. Bell. His people embraced Irvingism, and he was obliged to leave; and in January, 1837, he came to the metropolis. His history since that period he need not state. His occupation was well known, and he could confirm what had been stated with regard to the police. The Police Act provided, that all persons selling goods in the streets were to keep five feet off the pavement, the street not being a market. He had always kept with his wares and his cards beyond the prohibited distance of five feet; and for six years and a half he had sold his cards without molesting or being molested. After some severe observations upon the police, he narrated several events in his personal history to account for his present condition, which he attributed to misfortune and the injustice of society. In the course of these explanations he gave an illustration of his classical acquirements, in having detected a grammatical error in a Latin inscription upon the plate of a foundation-stone for a new church in Westminster. He wrote to the incumbent, pointing out the error, and the incumbent asked the beadle who he was. "Oh," said the beadle, "he is a fellow who gets his living in the streets." This was enough. He got no answer to his letter, though he knew the incumbent and his four curates, and had attended his church for seven years. After dwelling on the sufferings of those whose living was gained in the streets, he said, that if persons wished really to know anything of the character or habits of life of the very poor, of whom he was one, the knowledge could only be had from a personal survey of their condition in their own homes. He ended, by expressing his hope that by better treatment, and an earnest attention—moral, social, and religious—to their condition, the poor of the streets might be gathered to the church, and to God.

A "wandering musician" in a Highland garb, worn and dirty, complained at some

length of the way in which he was treated by the police.

A hale-looking man, a costermonger, of middle age—who said he had a wife and four children dependent upon him—then spoke. It was a positive fact, he said, notwithstanding their poverty, their hardships, and even their degradation in the eyes of some, that the first markets in London were mainly supported by costermongers. What would the Duke of Bedford's market in Covent-garden be without them? This question elicited loud applause.

Several other persons followed with statements of a similar character, which were listened to with interest; but from their general sameness it is not necessary to repeat them here. After occupying nearly four hours, the proceedings were brought to a close by a vote of thanks, and the "street-sellers, performers, and labourers," separated in a most orderly manner.

OF THE STREET-IRISH.

The Irish street-sellers are both a numerous and peculiar class of people. It therefore behoves me, for the due completeness of this work, to say a few words upon their numbers, earnings, condition, and mode of life.

The number of Irish street-sellers in the metropolis has increased greatly of late years. One gentleman, who had every means of being well-informed, considered that it was not too much to conclude, that, within these five years, the numbers of the poor Irish people who gain a scanty maintenance, or what is rather a substitute for a maintenance, by trading, or begging, or by carrying on the two avocations simultaneously in the streets of London, had been doubled in number.

I found among the English costermongers a general dislike of the Irish. In fact, next to a policeman, a genuine London costermonger hates an Irishman, considering him an intruder. Whether there be any traditional or hereditary ill-feeling between them, originating from a clannish feeling, I cannot ascertain. The costermongers whom I questioned had no knowledge of the feelings or prejudices of their predecessors, but I am inclined to believe that the prejudice is modern, and has originated in the great influx of Irishmen and women, intermixing, more especially during the last five years, with the costermonger's business. An Irish costermonger, however, is no novelty in the streets of London. "From the mention of the costardmonger," says Mr. Charles Knight, "in the old dramatists, he appears to have been frequently an Irishman."

Of the Irish street-sellers, at present, it is computed that there are, including men, women, and children, upwards of 10,000. Assuming the street-sellers attending the London fish and green markets to be, with their families, 30,000 in number, and 7 in every 20 of these to be Irish, we shall have rather more than the total above given. Of this large body three-fourths sell only fruit, and more especially nuts and oranges; indeed, the orange-season is called the "Irishman's harvest." The others deal in fish, fruit, and vegetables, but these are principally men. Some of the most wretched of the street-Irish deal in such trifles as lucifer-matches, water-cresses, &c.

I am informed that the great mass of these people have been connected, in some capacity or other, with the culture of the land in Ireland. The mechanics who have sought the metropolis from the sister kingdom have become mixed with their respective handicrafts in England, some of the Irish—though only a few—taking rank with the English skilled labourers. The greater part of the Irish artizans who have arrived within the last five years are to be found among the most degraded of the tailors and shoemakers who work at the East-end for the slop-masters.

A large class of the Irish who were agricultural labourers in their country are to be found among the men working for bricklayers, as well as among the dock-labourers and excavators, &c. Wood chopping is an occupation greatly resorted to by the Irish in London. Many of the Irish, however, who are not regularly employed in their respective callings, resort to the streets when they cannot obtain work otherwise.

The Irish women and girls who sell fruit, &c., in the streets, depend almost entirely on that mode of traffic for their subsistence. They are a class not sufficiently taught to avail themselves of the ordinary resources of women in the humbler walk of life. Unskilled at their needles, working for slop employers, even at the commonest shirt-making, is impossible to them. Their ignorance of household work, moreover (for such description of work is unknown in their wretched cabins in many parts of Ireland), incapacitates them in a great measure for such employments as "charing," washing, and ironing, as well as from regular domestic employment. Thus there seems to remain to them but one thing to do—as, indeed, was said to me by one of themselves—viz., "to sell for a ha'pinny the three apples which cost a farruthing."

Very few of these women (nor, indeed, of the men, though rather more of them than the women) can read, and they are mostly all wretchedly poor; but the women present two characteristics which distinguish them from the London coster-women generally—they are chaste, and, unlike the "coster girls," very seldom form any con-

nection without the sanction of the marriage ceremony. They are, moreover, attentive to religious observances.

The majority of the Irish street-sellers of both sexes beg, and often very eloquently, as they carry on their trade; and I was further assured, that, but for this begging, some of them might starve outright.

The greater proportion of the Irish street-sellers are from Leinster and Munster, and a considerable number come from Connaught.

Of the Causes which have made the Irish turn Costermongers.

Notwithstanding the prejudices of the English costers, I am of opinion that the Irishmen and women who have become costermongers, belong to a better class than the Irish labourers. The Irishman may readily adapt himself, in a strange place, to labour, though not to trade; but these costers are—or the majority at least are—poor persevering traders enough.

The most intelligent and prosperous of the street-Irish are those who have "risen"—for so I heard it expressed—"into regular costers." The untaught Irishmen's capabilities, as I have before remarked, with all his powers of speech and quickness of apprehension, are far less fitted for "buying in the cheapest market and selling in the dearest" than for mere physical employment. Hence those who take to street-trading for a living seldom prosper in it, and three-fourths of the street-Irish confine their dealings to such articles as are easy of sale, like apples, nuts, or oranges, for they are rarely masters of purchasing to advantage, and seem to know little about tale or measure, beyond the most familiar quantities. Compared with an acute costermonger, the mere apple-seller is but as the labourer to the artizan.

One of the principal causes why the Irish costermongers have increased so extensively of late years, is to be found in the fact that the labouring classes, (and of them chiefly the class employed in the culture of land,) have been driven over from "the sister Isle" more thickly for the last four or five years than formerly. Several circumstances have conspired to effect this.—First, they were driven over by the famine, when they could not procure, or began to fear that soon they could not procure, food to eat. Secondly, they were forced to take refuge in this country by the evictions, when their landlords had left them no roof to shelter them in their own. (The shifts, the devices, the plans, to which numbers of these poor creatures had recourse, to raise the means of quitting Ireland for England—or for anywhere—will present a very remarkable chapter at some future period.) Thirdly, though the better class of small farmers who have emigrated from Ireland, in hopes of "bettering themselves," have mostly sought the shores of North America, still some who have reached this country have at last settled into street-sellers. And, fourthly, many who have come over here only for the harvest have been either induced or compelled to stay.

Another main cause is, that the Irish, as labourers, can seldom obtain work all the year through, and thus the ranks of the Irish street-sellers are recruited every winter by the slackness of certain periodic trades in which they are largely employed—such as hodmen, dock-work, excavating, and the like. They are, therefore, driven by want of employment to the winter sale of oranges and nuts. These circumstances have a doubly malefic effect, as the increase of costers accrues in the winter months, and there are consequently the most sellers when there are the fewest buyers.

Moreover, the cessation of work in the construction of railways, compared with the abundance of employment which attracted so many to this country during the railway mania, has been another fertile cause of there being so many Irish in the London streets.

The prevalence of Irish women and children among street-sellers is easily accounted for—they are, as I said before, unable to do anything else to eke out the means of their husbands or parents. A needle is as useless in their fingers as a pen.

Bitterly as many of these people suffer in this country, grievous and often eloquent as are their statements, I met with *none* who did not manifest repugnance at the suggestion of a return to Ireland. If asked why they objected to return, the response was usually in the form of a question: "Shure thin, sir, and what good could I do there?" Neither can I say that I heard any of these people express any love for their country, though they often spoke with great affection of their friends.

From an Irish costermonger, a middle-aged man, with a physiognomy best known as "Irish," and dressed in corduroy trousers, with a loose great-coat, far too big for him, buttoned about him, I had the following statement:

"I had a bit o' land, yer honor, in County Limerick. Well, it wasn't just a farrum, nor what ye would call a garden here, but my father lived and died on it—glory be to God!—and brought up me and my sister on it. It was about an acre, and the taties was well known to be good. But the sore times came, and the taties was afflicted, and the wife and me—I have no childer—hadn't a bite nor a sup, but wather to live on, and an igg or two. I filt the famine a-comin'. I saw people a-feedin' on the wild green things, and as I had not such a bad take, I got Mr. —— (he was the head master's agent) to give me 28*s.* for possission in quietness, and I sould some poulthry I had—their iggs was a blessin' to keep the life in us—I sould them in Limerick for 3*s.* 3*d.*—the poor things—four of them. The furnithur' I sould to the nabors, for somehow about 6*s.* Its the thruth I'm ay-tellin' of you, sir, and there's 2*s.* owin' of it still, and will be a perpitual loss. The wife and me walked to Dublin, though we had betther have gone by the 'long say,' but I didn't under-

stand it thin, and we got to Liverpool. Then sorrow's the taste of worruk could I git, beyant oncte 3s. for two days harrud porthering, that broke my back half in two. I was tould I'd do betther in London, and so, glory be to God! I have—perhaps I have. I knew Mr. ——, he porthers at Covent-garden, and I made him out, and hilped him in any long distance of a job. As I'd been used to farrumin' I thought it good raison I should be a costermonger, as they call it here. I can read and write too. And some good Christian—the heavens light him to glory when he's gone!—I don't know who he was—advanced me 10s.—or he gave it me, so to spake, through Father ———," (a Roman Catholic priest.)" We carrun what keeps the life in us. I don't go to markit, but buy of a fair dealin' man —so I count him—though he's harrud sometimes. I can't till how many Irishmen is in the thrade. There's many has been brought down to it by the famin' and the changes. I don't go much among the English street-dalers. They talk like haythens. I never miss mass on a Sunday, and they don't know what the blissed mass manes. I'm almost glad I have no childer, to see how they're raired here. Indeed, sir, they're not raired at all—they run wild. They haven't the fear of God or the saints. They'd hang a praste —glory be to God! they would."

How the Street-Irish displanted the Street-Jews in the Orange Trade.

The Jews, in the streets, while acting as costermongers, never "worked a barrow," nor dealt in the more ponderous and least profitable articles of the trade, such as turnips and cabbages. They however, had, at one period, the chief possession of a portion of the trade which the "regular hands" do not consider proper costermongering, and which is now chiefly confined to the Irish—viz.: orange selling.

The trade was, not many years ago, confined almost entirely to the Jew boys, who kept aloof from the vagrant lads of the streets, or mixed with them only in the cheap theatres and concert-rooms. A person who had had great experience at what was, till recently, one of the greatest "coaching inns," told me that, speaking within his own recollection and from his own observation, he thought the sale of oranges was not so much in the hands of the Jew lads until about forty years back. The orange monopoly, so to speak, was established by the street-Jews, about 1810, or three or four years previous to that date, when recruiting and local soldiering were at their height, and when a great number of the vagabond or "roving" population, who in one capacity or other now throng the streets, were induced to enlist. The young Jews never entered the ranks of the army. The streets were thus in a measure cleared for them, and the itinerant orange-trade fell almost entirely into their hands. Some of the young Jews gained, I am assured, at least 100*l*. a year in this traffic. The numbers of country people who hastened to London on the occasion of the Allied Sovereigns' visit in 1814—many wealthy persons then seeing the capital for the first time—afforded an excellent market to these dealers.

Moreover, the perseverance of the Jew orange boys was not to be overcome; they would follow a man who even looked encouragingly at their wares for a mile or two. The great resort of these Jew dealers—who eschewed night-work generally, and left the theatre-doors to old men and women of all ages—was at the coaching inns; for year by year, after the peace of 1815, the improvement of the roads and the consequent increase of travellers to London, progressed.

About 1825, as nearly as my informant could recollect, these keen young traders began to add the sale of other goods to their oranges, pressing them upon the notice of those who were leaving or visiting London by the different coaches. So much was this the case, that it was a common remark at that time, that no one could reach or leave the metropolis, even for the shortest journey, without being expected to be in urgent want of oranges and lemons, black-lead pencils, sticks of sealing-wax, many-bladed pen-knives, pocket-combs, razors, strops, braces, and sponges. To pursue the sale of the last-mentioned articles—they being found, I presume, to be more profitable—some of the street-Jews began to abandon the sale of oranges and lemons; and it was upon this, that the trade was "taken up" by the wives and children of the Irish bricklayers' labourers, and of other Irish work-people then resident in London. The numbers of Irish in the metropolis at that time began to increase rapidly; for twenty years ago, they resorted numerously to England to gather in the harvest, and those who had been employed in contiguous counties during the autumn, made for London in the winter. "I can't say they were well off, sir," said one man to me, "but they liked bread and herrings, or bread and tea—better than potatoes without bread at home." From 1836 to 1840, I was informed, the Irish gradually superseded the Jews in the fruit traffic about the coaching-houses. One reason for this was, that they were far more eloquent, begging pathetically, and with many benedictions on their listeners. The Jews never begged, I was told; "they were merely traders." Another reason was, that the Irish, men or lads, who had entered into the fruit trade in the coach-yards, would not only sell and beg, but were ready to "lend a hand" to any over-burthened coach-porter. This the Jews never did, and in that way the people of the yard came to encourage the Irish to the prejudice of the Jews. At present, I understand that, with the exception of one or two in the city, no Jews vend oranges in the streets, and that the trade is almost entirely in the hands of the Irish.

Another reason why the Irish could supersede and even undersell the Jews and regular costermongers was this, as I am informed on ex-

cellent authority:—Father Mathew, a dozen years back, made temperance societies popular in Ireland. Many of the itinerant Irish, especially the younger classes, were "temperance men." Thus the Irish could live as sparely as the Jew, but they did not, like him, squander any money for the evening's amusement, at the concert or the theatre.

I inquired what might be the number of the Jews plying, so to speak, at the coaching inns, and was assured that it was less numerous than was generally imagined. One man computed it at 300 individuals, all under 21; another at only 200; perhaps the mean, or 250, might be about the mark. The number was naturally considered greater, I was told, because the same set of street traders were seen over and over again. The Jews knew when the coaches were to arrive and when they started, and they would hurry, after availing themselves of a departure, from one inn—the Belle Sauvage, Ludgate-hill, for instance—to take advantage of an arrival at another—say the Saracen's Head, Snow-hill. Thus they appeared everywhere, but were the same individuals.

I inquired to what calling the youthful Jews, thus driven from their partially monopolized street commerce, had devoted themselves, and was told that even when the orange and hawking trade was at the best, the Jews rarely carried it on after they were twenty-two or twenty-three, but that they then resorted to some more wholesale calling, such as the purchase of nuts or foreign grapes, at public sales. At present, I am informed, they are more thickly than ever engaged in these trades, as well as in two new avocations, that have been established within these few years,—the sale of the Bahama pine-apples and of the Spanish and Portuguese onions.

About the Royal Exchange, Jew boys still hawk pencils, etc., but the number engaged in this pursuit throughout London is not, as far as I can ascertain, above one-eighth—if an eighth—of what it was even twelve years ago.

Of the Religion of the Street-Irish.

Having now given a brief sketch as to how the Irish people have come to form so large a proportion of the London street-sellers, I shall proceed, as I did with the English costermongers, to furnish the reader with a short account of their religious, moral, intellectual, and physical condition, so that he may be able to contrast the habits and circumstances of the one class with those of the other. First, of the religion of the Irish street-folk.

Almost all the street-Irish are Roman Catholics. Of course I can but speak generally; but during my inquiry I met with only two who said they were Protestants, and when I came to converse with them, I found out that they were partly ignorant of, and partly indifferent to, any religion whatever. An Irish Protestant gentleman said to me: "You may depend upon it, if ever you meet any of my poor countrymen who will not talk to you about religion, they either know or care nothing about it; for the religious spirit runs high in Ireland, and Protestants and Catholics are easily led to converse about their faith."

I found that *some* of the Irish Roman Catholics—but they had been for many years resident in England, and that among the poorest or vagrant class of the English—had become indifferent to their creed, and did not attend their chapels, unless at the great fasts or festivals, and this they did only occasionally. One old stall-keeper, who had been in London nearly thirty years, said to me: "Ah! God knows, sir, I ought to attend mass every Sunday, but I haven't for a many years, barrin' Christmas-day and such times. But I'll thry and go more rigular, plase God." This man seemed to resent, as a sort of indignity, my question if he ever attended any other place of worship. "Av coorse not!" was the reply.

One Irishman, also a fruit-seller, with a well-stocked barrow, and without the complaint of poverty common among his class, entered keenly into the subject of his religious faith when I introduced it. He was born in Ireland, but had been in England since he was five or six. He was a good-looking, fresh-coloured man, of thirty or upwards, and could read and write well. He spoke without bitterness, though zealously enough. "Perhaps, sir, you are a gintleman connected with the Protistant clargy," he asked, "or a missionary?" On my stating that I had no claim to either character, he resumed: "Will, sir, it don't matther. All the worruld may know my riligion, and I wish all the worruld was of my riligion, and betther min in it than I am; I do, indeed. I'm a Roman Catholic, sir;" [here he made the sign of the cross]; "God be praised for it! O yis, I know all about Cardinal Wiseman. It's the will of God, I feel sure, that he's to be 'stablished here, and it's no use ribillin' against that. I've nothing to say against Protistints. I've heard it said, 'It's best to pray for them.' The street-people that call thimselves Protestants are no riligion at all at all. I serruve Protistant gintlemen and ladies too, and sometimes they talk to me kindly about religion. They're good custhomers, and I have no doubt good people. I can't say what their lot may be in another worruld for not being of the true faith. No, sir, I'll give no opinions—none."

This man gave me a clear account of his belief that the Blessed Virgin (he crossed himself repeatedly as he spoke) was the mother of our Lord Jesus Christ, and was a mediator with our Lord, who was God of heaven and earth—of the duty of praying to the holy saints—of attending mass—("but the priest," he said, "won't exact too much of a poor man, either about that or about fasting")—of going to confession at Easter and Christmas times, at the least—of receiving the body of Christ, "the rale prisince," in the holy sacrament—of keeping all God's commandments—of purgatory being a purgation of sins—and of heaven and hell.

I found the majority of those I spoke with, at least as earnest in their faith, if they were not as well instructed in it as my informant, who may be cited as an example of the better class of street-sellers.

Another Irishman,—who may be taken as a type of the less informed, and who had been between two and three years in England, having been disappointed in emigrating to America with his wife and two children,—gave me the following account, but not without considering and hesitating. He was a very melancholy looking man, tall and spare, and decently clad. He and his family were living upon 8*d*. a day, which he earned by sweeping a crossing. He had been prevented by ill health from earning 2*l*., which he could have made, he told me, in harvest time, as a store against winter. He had been a street-seller, and so had his wife; and she would be so again as soon as he could raise 2*s*. to buy her a stock of apples. He said, touching his hat at each holy name,—

"Sure, yis, sir, I'm a Roman Catholic, and go to mass every Sunday. Jesus Christ? O yis," (hesitating, but proceeding readily after a word of prompting), "he is the Lord our Saviour, and the Son of the Holy Virgin. The blessed saints? Yis, sir, yis. The praste prays for them. I—I mane prays to them. O, yis. I pray to them mysilf ivery night for a blissin', and to rise me out of my misery. No, sir, I can't say I know what the mass is about. I don't know what I'm prayin' for thin, only that it's right. A poor man, that can neither read nor write—I wish I could and I might do betther—can't understand it; it's all in Latin. Iv'e heard about Cardinal Wiseman. It'll do us no good sir; it'll only set people more against us. But it ain't poor min's fault."

As I was anxious to witness the religious zeal that characterizes these people, I obtained permission to follow one of the priests as he made his rounds among his flock. Everywhere the people ran out to meet him. He had just returned to them I found, and the news spread round, and women crowded to their door-steps, and came creeping up from the cellars through the trap-doors, merely to curtsey to him. One old crone, as he passed, cried, "You're a good father, Heaven comfort you," and the boys playing about stood still to watch him. A lad, in a man's tail coat and a shirt-collar that nearly covered in his head—like the paper round a bouquet—was fortunate enough to be noticed, and his eyes sparkled, as he touched his hair at each word he spoke in answer. At a conversation that took place between the priest and a woman who kept a dry fish-stall, the dame excused herself for not having been up to take tea "with his rivirince's mother lately, for thrade had been so bisy, and night was the fullest time." Even as the priest walked along the street, boys running at full speed would pull up to touch their hair, and the stall-women would rise from their baskets; while all noise—even a quarrel—ceased until he had passed by. Still there was no look of fear in the people. He called them all by their names, and asked after their families, and once or twice the "father" was taken aside and held by the button while some point that required his advice was whispered in his ear.

The religious fervour of the people whom I saw was intense. At one house that I entered, the woman set me marvelling at the strength of her zeal, by showing me how she contrived to have in her sitting-room a sanctuary to pray before every night and morning, and even in the day, "when she felt weary and lonesome." The room was rudely enough furnished, and the only decent table was covered with a new piece of varnished cloth; still before a rude print of our Saviour there were placed two old plated candlesticks, pink, with the copper shining through; and here it was that she told her beads. In her bed-room, too, was a coloured engraving of the "Blessed Lady," which she never passed without curtseying to.

Of course I detail these matters as mere facts, without desiring to offer any opinion here, either as to the benefit or otherwise of the creed in question. As I had shown how the English costermonger neither had nor knew any religion whatever, it became my duty to give the reader a view of the religion of the Irish street-sellers. In order to be able to do so as truthfully as possible, I placed myself in communication with those parties who were in a position to give me the best information on the subject. The result is given above, in all the simplicity and impartiality of history.

Of the Education, Literature, Amusements, and Politics of the Street-Irish.

These several heads have often required from me lengthened notices, but as regards the class I am now describing they may be dismissed briefly enough. The majority of the street-Irish whom I saw were unable to read, but I found those who had no knowledge of reading—(and the same remark applies to the English street-sellers as well)—regret their inability, and say, "I wish I could read, sir; I'd be better off now." On the other hand, those who had a knowledge of reading and writing, said frequently enough, "Why, yes, sir, I *can* read and write, but it's been no good to me," as if they had been disappointed in their expectations as to the benefits attendant upon scholarship. I am inclined to think, however, that a greater anxiety exists among the poor generally, to have some schooling provided for their children, than was the case a few years back. One Irishman attributed this to the increased number of Roman Catholic schools, "for the more schools there are," he said, "the more people think about schooling their children."

The literature, or reading, of she street-Irish is, I believe, confined to Roman Catholic books, such as the "Lives of the Saints," published in a cheap form; one, and only one, I found with

the "Nation" newspaper. The very poor have no leisure to read. During three days spent in visiting the slop-workers at the East end of the town, not so much as the fragment of a leaf of a book was seen.

The amusements of the street-Irish are not those of the English costermongers—though there are exceptions, of course, to the remark. The Irish fathers and mothers do not allow their daughters, even when they possess the means, to resort to the "penny gaffs" or the "twopenny hops," unaccompanied by them. Some of the men frequent the beer-shops, and are inveterate drinkers and smokers too. I did not hear of any amusements popular among, or much resorted to, by the Irishmen, except dancing parties at one another's houses, where they jig and reel furiously. They frequent raffles also, but the article is often never thrown for, and the evening is spent in dancing.

I may here observe—in reference to the statement that Irish parents will not expose their daughters to the risk of what they consider corrupt influences—that when a young Irishwoman *does* break through the pale of chastity, she often becomes, as I was assured, one of the most violent and depraved of, perhaps, *the* most depraved class.

Of politics, I think, the street-Irish understand nothing, and my own observations in this respect were confirmed by a remark made to me by an Irish gentleman: "Their politics are either a dead letter, or the politics of their priests."

The Homes of the Street-Irish.

In almost all of the poorer districts of London are to be found "nests of Irish"—as they are called—or courts inhabited solely by the Irish costermongers. These people form separate colonies, rarely visiting or mingling with the English costers. It is curious, on walking through one of these settlements, to notice the manner in which the Irish deal among themselves—street-seller buying of street-seller. Even in some of the smallest courts there may be seen stalls of vegetables, dried herrings, or salt cod, thriving, on the associative principle, by mutual support.

The parts of London that are the most thickly populated with Irish lie about Brook-street, Ratcliff-cross, down both sides of the Commercial-road, and in Rosemary-lane, though nearly all the "coster-districts" cited at p. 47, have their Irish settlements—Cromer-street, Saffron-hill and King-street, Drury-lane, for instance, being thickly peopled with the Irish; but the places I have mentioned above are peculiarly distinguished, by being almost entirely peopled by visitors from the sister isle.

The same system of immigration is pursued in London as in America. As soon as the first settler is thriving in his newly chosen country, a certain portion of his or her earnings are carefully hoarded up, until they are sufficient to pay for the removal of another member of the family to England; then one of the friends left "at home" is sent for; and thus by degrees the entire family is got over, and once more united.

Perhaps there is no quarter of London where the habits and habitations of the Irish can be better seen and studied than in Rosemary-lane, and the little courts and alleys that spring from it on each side. Some of these courts have other courts branching off from them, so that the locality is a perfect labyrinth of "blind alleys;" and when once in the heart of the maze it is difficult to find the path that leads to the main-road. As you walk down "the lane," and peep through the narrow openings between the houses, the place seems like a huge peep-show, with dark holes of gateways to look through, while the court within appears bright with the daylight; and down it are seen rough-headed urchins running with their feet bare through the puddles, and bonnetless girls, huddled in shawls, lolling against the door-posts. Sometimes you see a long narrow alley, with the houses so close together that opposite neighbours are talking from their windows; while the ropes, stretched zig-zag from wall to wall, afford just room enough to dry a blanket or a couple of shirts, that swell out dropsically in the wind.

I visited one of the paved yards round which the Irish live, and found that it had been turned into a complete drying-ground, with shirts, gowns, and petticoats of every description and colour. The buildings at the end were completely hidden by "the things," and the air felt damp and chilly, and smelt of soap-suds. The gutter was filled with dirty gray water emptied from the wash-tubs, and on the top were the thick bubbles floating about under the breath of the boys "playing at boats" with them.

It is the custom with the inhabitants of these courts and alleys to assemble at the entrance with their baskets, and chat and smoke away the morning. Every court entrance has its little group of girls and women, lolling listlessly against the sides, with their heads uncovered, and their luxuriant hair fuzzy as oakum. It is peculiar with the Irish women that—after having been accustomed to their hoods—they seldom wear bonnets, unless on a long journey. Nearly all of them, too, have a thick plaid shawl, which they keep on all the day through, with their hands covered under it. At the mouth of the only thoroughfare deserving of the name of street—for a cart could just go through it—were congregated about thirty men and women, who rented rooms in the houses on each side of the road. Six women, with baskets of dried herrings, were crouching in a line on the kerb-stone with the fish before them; their legs were drawn up so closely to their bodies that the shawl covered the entire figure, and they looked very like the podgy "tombolers" sold by the Italian boys. As all their wares were alike, it was puzzling work to imagine how, without the strongest opposition, they could each obtain a living. The

men were dressed in long-tail coats, with one or two brass buttons. One old dame, with a face wrinkled like a dried plum, had her cloak placed over her head like a hood, and the grisly hair hung down in matted hanks about her face, her black eyes shining between the locks like those of a Skye terrier; beside her was another old woman smoking a pipe so short that her nose reached over the bowl.

After looking at the low foreheads and long bulging upper lips of some of the group, it was pleasant to gaze upon the pretty faces of the one or two girls that lolled against the wall. Their black hair, smoothed with grease, and shining almost as if "japanned," and their large gray eyes with the thick dark fringe of lash, seemed out of place among the hard features of their companions. It was only by looking at the short petticoats and large feet you could assure yourself that they belonged to the same class.

In all the houses that I entered were traces of household care and neatness that I had little expected to have seen. The cupboard fastened in the corner of the room, and stocked with mugs and cups, the mantelpiece with its images, and the walls covered with showy-coloured prints of saints and martyrs, gave an air of comfort that strangely disagreed with the reports of the cabins in "ould Ireland." As the doors to the houses were nearly all of them kept open, I could, even whilst walking along, gain some notion of the furniture of the homes. In one house that I visited there was a family of five persons, living on the ground floor and occupying two rooms. The boards were strewn with red sand, and the front apartment had three beds in it, with the printed curtains drawn closely round. In a dark room, at the back, lived the family itself. It was fitted up as a parlour, and crowded to excess with chairs and tables, the very staircase having pictures fastened against the wooden partition. The fire, although it was midday, and a warm autumn morning, served as much for light as for heat, and round it crouched the mother, children, and visitors, bending over the flame as if in the severest winter time. In a room above this were a man and woman lately arrived in England. The woman sat huddled up in a corner smoking, with the husband standing over her in, what appeared at first, a menacing attitude; I was informed, however, that they were only planning for the future. This room was perfectly empty of furniture, and the once white-washed walls were black, excepting the little square patches which showed where the pictures of the former tenants had hung. In another room, I found a home so small and full of furniture, that it was almost a curiosity for domestic management. The bed, with its chintz curtains looped up, filled one end of the apartment, but the mattress of it served as a long bench for the visitors to sit on. The table was so large that it divided the room in two, and if there was one picture there must have been thirty—all of "holy men," with yellow glories round their heads. The window-ledge was dressed out with crockery, and in a tumbler were placed the beads. The old dame herself was as curious as her room. Her shawl was fastened over her large frilled cap. She had a little "button" of a nose, with the nostrils entering her face like bullet holes. She wore over her gown an old pilot coat, well-stained with fish slime, and her petticoats being short, she had very much the appearance of a Dutch fisherman or stage smuggler.

Her story was affecting — made more so, perhaps, by the emotional manner in which she related it. Nine years ago "the father" of the district—"the Blissed Lady guard him!"—had found her late at night, rolling in the gutter, and the boys pelting her with orange-peel and mud. She was drunk—"the Lorrud pass by her"—and when she came to, she found herself in the chapel, lying before the sanctuary, "under the shadow of the holy cross." Watching over her was the "good father," trying to bring back her consciousness. He spoke to her of her wickedness, and before she left she took the pledge of temperance. From that time she prospered, and the 1*s.* 6*d.* the "father" gave her "had God's blissin' in it," for she became the best dressed woman in the court, and in less than three years had 15*l.* in the savings' bank, "the father—Heaven chirish him"—keeping her book for her, as he did for other poor people. She also joined "the Association of the Blissed Lady," (and bought herself the dress of the order "a beautiful grane vilvit, which she had now, and which same cost her 30*s.*"), and then she was secure against want in old age and sickness. But after nine years prudence and comfort, a brother of hers returned home from the army, with a pension of 1*s.* a day. He was wild, and persuaded her to break her pledge, and in a short time he got all her savings from her and spent every penny. She could'nt shake him off, "for he was the only kin she had on airth," and "she must love her own flish and bones." Then began her misery. "It plased God to visit her ould limbs with aches and throubles, and her hips swole with the cowld," so that she was at last forced into a hospital, and all that was left of her store was "aten up by sufferin's." This, she assured me, all came about by the "good father's" leaving that parish for another one, but now he had returned to them again, and, with his help and God's blessing, she would yet prosper once more.

Whilst I was in the room, the father entered, and "old Norah," half-divided between joy at seeing him and shame at "being again a beggar," laughed and wept at the same time. She stood wiping her eyes with the shawl, and groaning out blessings on "his rivirince's hid," begging of him not "to scould her for she was a wake woman." The renegade brother was had in to receive a lecture from "his rivirince." A more sottish idiotic face it would be difficult to imagine. He stood with his hands hanging

down like the paws of a dog begging, and his two small eyes stared in the face of the priest, as he censured him, without the least expression even of consciousness. Old Norah stood by, groaning like a bagpipe, and writhing while the father spoke to her "own brother," as though every reproach were meant for her.

The one thing that struck me during my visit to this neighbourhood, was the apparent listlessness and lazy appearance of the people. The boys at play were the only beings who seemed to have any life in their actions. The women in their plaid shawls strolled along the pavements, stopping each friend for a chat, or joining some circle, and leaning against the wall as though utterly deficient in energy. The men smoked, with their hands in their pockets, listening to the old crones talking, and only now and then grunting out a reply when a question was directly put to them. And yet it is curious that these people, who here seemed as inactive as negroes, will perform the severest bodily labour, undertaking tasks that the English are almost unfitted for.

To complete this account, I subjoin a brief description of the lodging-houses resorted to by the Irish immigrants on their arrival in this country.

Irish Lodging-houses for Immigrants.

Often an Irish immigrant, whose object is to settle in London, arrives by the Cork steamer without knowing a single friend to whom he can apply for house-room or assistance of any kind. Sometimes a whole family is landed late at night, worn out by sickness and the terrible fatigues of a three days' deck passage, almost paralysed by exhaustion, and scarcely able to speak English enough to inquire for shelter till morning.

If the immigrants, however, are bound for America, their lot is very different. Then they are consigned to some agent in London, who is always on the wharf at the time the steamer arrives, and takes the strangers to the homes he has prepared for them until the New York packet starts. During the two or three days' necessary stay in London, they are provided for at the agent's expense, and no trouble is experienced by the travellers. A large provision-merchant in the city told me that he often, during the season, had as many as 500 Irish consigned to him by one vessel, so that to lead them to their lodgings was like walking at the head of a regiment of recruits.

The necessities of the immigrants in London have caused several of their countrymen to open lodging-houses in the courts about Rosemary-lane; these men attend the coming in of the Cork steamer, and seek for customers among the poorest of the poor, after the manner of touters to a sea-side hotel.

The immigrants'-houses are of two kinds—clean and dirty. The better class of Irish lodging-houses almost startle one by the comfort and cleanliness of the rooms; for after the descriptions you hear of the state in which the deck passengers are landed from the Irish boats, their clothes stained with the manure of the pigs, and drenched with the spray, you somehow expect to find all the accommodations disgusting and unwholesome. But one in particular, that I visited, had the floor clean, and sprinkled with red sand, while the windows were sound, bright, and transparent. The hobs of the large fire-place were piled up with bright tin pots, and the chimney piece was white and red with the china images ranged upon it. In one corner of the principal apartment there stood two or three boxes still corded up, and with bundles strung to the sides, and against the wall was hung a bunch of blue cloaks, such as the Irishwomen wear. The proprietor of the house, who was dressed in a gray tail-coat and knee-breeches, that had somewhat the effect of a footman's livery, told me that he had received seven lodgers the day before, but six were men, and they were all out seeking for work. In front of the fire sat a woman, bending over it so close that the bright cotton gown she had on smelt of scorching. Her feet were bare, and she held the soles of them near to the bars, curling her toes about with the heat. She was a short, thick-set woman, with a pair of wonderfully muscular arms crossed over her bosom, and her loose rusty hair streaming over her neck. It was in vain that I spoke to her about her journey, for she wouldn't answer me, but kept her round, open eyes fixed on my face with a wild, nervous look, following me about with them everywhere.

Across the room hung a line, with the newly-washed and well-patched clothes of the immigrants hanging to it, and on a side-table were the six yellow basins that had been used for the men's breakfasts. During my visit, the neighbours, having observed a strange gentleman enter, came pouring in, each proferring some fresh bit of news about their newly-arrived countrymen. I was nearly stunned by half-a-dozen voices speaking together, and telling me how the poor people had been four days "at say," so that they were glad to get near the pigs for "warrumth," and instructing me as to the best manner of laying out the sum of money that it was supposed I was about to shower down upon the immigrants.

In one of the worst class of lodging-houses I found ten human beings living together in a small room. The apartment was entirely devoid of all furniture, excepting an old mattrass rolled up against the wall, and a dirty piece of cloth hung across one corner, to screen the women whilst dressing. An old man, the father of five out of the ten, was seated on a tea-chest, mending shoes, and the other men were looking on with their hands in their pockets. Two girls and a woman were huddled together on the floor in front of the fire, talking in Irish. All these people seemed to be utterly devoid of energy, and the men moved about so lazily

Original from HARVARD UNIVERSITY

that I couldn't help asking some of them if they had tried to obtain work. Every one turned to a good-looking young fellow lolling against the wall, as if they expected him to answer for them. "Ah, sure, and that they have," was the reply; "it's the docks they have tried, worrus luck." The others appeared struck with the truthfulness of the answer, for they all shook their heads, and said, "Sure an' that's thruth, anyhow." Here my Irish guide ventured an observation, by remarking solemnly, "It's no use tilling a lie;" to which the whole room assented, by exclaiming altogether, "Thrue for you, Norah." The chosen spokesman then told me, "They paid half-a-crown a week for the room, and that was as much as they could earrun, and it was starruve they should if the neighbours didn't hilp them a bit." I asked them if they were better off over here than when in Ireland, but could get no direct answer, for my question only gave rise to a political discussion. "There's plenty of food over here," said the spokesman, addressing his companions as much as myself, "plenty of 'taties—plenty of mate—plenty of porruk." "But where the use," observed my guide, "if there's no money to buy 'em wid?" to which the audience muttered, "Thrue for you again, Norah;" and so it went on, each one pleading poverty in the most eloquent style.

After I had left, the young fellow who had acted as spokesman followed me into the street, and taking me into a corner, told me that he was a "sailor by thrade, but had lost his 'rigisthration-ticket,' or he'd have got a berruth long since, and that it was all for 3*s.* 6*d.* he wasn't at say."

Concerning the number of Irish immigrants, I have obtained the following information:

The great influx of the Irish into London was in the year of the famine, 1847-8. This cannot be better shown than by citing the returns of the number of persons admitted into the Asylum for the Houseless Poor, in Playhouse-yard, Cripplegate. These returns I obtained for fourteen years, and the average number of admissions of the applicants from all parts during that time was 8,794 yearly. Of these, the Irish averaged 2,455 yearly, or considerably more than a fourth of the whole number received. The total number of applicants thus sheltered in the fourteen years was 130,625, of which the Irish numbered 34,378. The smallest number of Irish (men, women, and children) admitted, was in 1834-5, about 300; in 1846-7, it was as many as 7,576, while in 1847-8, it was 10,756, and in 1848-9, 5,068.

But it was into Liverpool that the tide of immigration flowed the strongest, in the calamitous year of the famine. "Between the 13th Jan, and the 13th Dec., both inclusive," writes Mr. Rushton, the Liverpool magistrate, to Sir G. Grey, on the 21st April last, "296,231 persons landed in this port (Liverpool) from Ireland. Of this vast number, about 130,000 emigrated to the United States; some 50,000 were passengers on business; and the remainder (161,231), mere paupers, half-naked and starving, landed, for the most part, during the winter, and became, immediately on landing, applicants for parochial relief. You already know the immediate results of this accumulation of misery in the crowded town of Liverpool; of the cost of relief at once rendered necessary to prevent the thousands of hungry and naked Irish perishing in our streets; and also of the cost of the pestilence which generally follows in the train of famine and misery such as we then had to encounter. . . . . Hundreds of patients perished, notwithstanding all efforts made to save them; and ten Roman Catholic and one Protestant clergyman, many parochial officers, and many medical men, who devoted themselves to the task of alleviating the sufferings of the wretched, died in the discharge of these high duties."

Great numbers of these people were, at the same time, also conveyed from Ireland to Wales, especially to Newport. They were brought over by coal-vessels as a return cargo—a living ballast —2*s.* 6*d.* being the highest fare, and were huddled together like pigs. The manager of the Newport tramp-house has stated concerning these people, "They don't live long, diseased as they are. They are very remarkable; they will eat salt by basons-full, and drink a great quantity of water after. I have frequently known those who could not have been hungry eat cabbage-leaves and other refuse from the ash-heap."

It is necessary that I should thus briefly allude to this matter, as there is no doubt that some of these people, making their way to London, soon became street-sellers there, and many of them took to the business subsequently, when there was no employment in harvesting, hop-picking, &c. Of the poor wretches landed at Liverpool, many (Mr. Rushton states) became beggars, and many thieves. Many, there is no doubt, tramped their way to London, sleeping at the "casual wards" of the Unions on their way; but I believe that of those who had become habituated to the practice of beggary or theft, few or none would follow the occupation of street-selling, as even the half-passive industry of such a calling would be irksome to the apathetic and dishonest.

Of the immigration, direct by the vessels trading from Ireland to London, there are no returns such has have been collected by Mr. Rushton for Liverpool, but the influx is comparatively small, on account of the greater length and cost of the voyage. During the last year I am informed that 15,000 or 16,000 passengers were brought from Ireland to London direct, and, in addition to these, 500 more were brought over from Cork in connection with the arrangements for emigration to the United States, and consigned to the emigration agent here. Of the 15,500 (taking the mean between the two numbers above given) 1,000 emigrated to the United States. It appears,

Original from HARVARD UNIVERSITY

on the authority of Mr. Rushton, that even in the great year of the immigration, more than one-sixth of the passengers from Ireland to Dublin came on business. It may, then, be reasonable to calculate that during last year one-fourth at least of the passengers to London had the same object in view, leaving about 10,000 persons who have either emigrated to British North America, Australia, &c., or have resorted to some mode of subsistence in the metropolis or the adjacent parts. Besides these there are the numbers who make their way up to London, tramping it from the several provincial ports—namely, Liverpool, Bristol, Newport, and Glasgow. Of these I have no means of forming any estimate, or of the proportion who adopt street-selling on their arrival here—all that can be said is, that the influx of Irish into the street-trade every year must be very considerable. I believe, however, that only those who "have friends in the line" resort to street-selling on their arrival in London, though all may make it a resource when other endeavours fail. The great immigration into London is from Cork, the average cost of a deck passage being *5s.* The immigrants direct to London from Cork are rarely of the poorest class.

Of the Diet, Drink, and Expense of Living of the Street-Irish.

The diet of the Irish men, women, and children, who obtain a livelihood (or what is so designated) by street-sale in London, has, I am told, on good authority, experienced a change. In the lodging-houses that they resorted to, their breakfast, two or three years ago, was a dish of potatoes—two, three, or four lbs., or more, in weight—for a family. Now half an ounce of coffee (half chicory) costs ½*d.*, and that, with the half or quarter of a loaf, according to the number in family, is almost always their breakfast at the present time. When their constant diet was potatoes, there were frequent squabbles at the lodging-houses —to which many of the poor Irish on their first arrival resort—as to whether the potato-pot or the tea-kettle should have the preference on the fire. A man of superior intelligence, who had been driven to sleep and eat occasionally in lodging-houses, told me of some dialogues he had heard on these occasions:—"It's about three years ago," he said, "since I heard a bitter old Englishwoman say, 'To —— with your 'taty-pot; they're only meat for pigs.' 'Sure, thin,' said a young Irishman—he was a nice 'cute fellow—'sure, thin, ma'am, I should be afther offering you a taste.' I heard that myself, sir. You may have noticed, that when an Irishman doesn't get out of temper, he never loses his politeness, or rather his blarney."

The dinner, or second meal of the day—assuming that there has been a breakfast—ordinarily consists of cheap fish and potatoes. Of the diet of the poor street-Irish I had an account from a little Irishman, then keeping an oyster-stall, though he generally sold fruit. In all such details I have found the Irish far more communicative than the English. Many a poor untaught Englishman will shrink from speaking of his spare diet, and his trouble to procure that; a reserve, too, much more noticeable among the men than the women. My Irish informant told me he usually had his breakfast at a lodging-house—he preferred a lodging-house, he said, on account of the warmth and the society. Here he boiled half an ounce of coffee, costing a ½*d.* He purchased of his landlady the fourth of a quartern loaf (1¼*d.* or 1½*d.*), for she generally cut a quartern loaf into four for her single men lodgers, such as himself, clearing sometimes a farthing or two thereby. For dinner, my informant boiled at the lodging-house two or three lbs. of potatoes, costing usually 1*d.* or 1½*d.*, and fried three, or four herrings, or as many as cost a penny. He sometimes mashed his potatoes, and spread over them the herrings, the fatty portion of which flavoured the potatoes, which were further flavoured by the roes of the herrings being crushed into them. He drank water to this meal, and the cost of the whole was 2*d.* or 2½*d.* A neighbouring stall-keeper attended to this man's stock in his absence at dinner, and my informant did the same for him in his turn. For "tea" he expended 1*d.* on coffee, or 1½*d.* on tea, being a "cup" of tea, or "half-pint of coffee," at a coffee-shop. Sometimes he had a halfpenny-worth of butter, and with his tea he ate the bread he had saved from his breakfast, and which he had carried in his pocket. He had no butter to his breakfast, he said, for he could not buy less than a pennyworth about where he lodged, and this was too dear for one meal. On a Sunday morning however he generally had butter, sometimes joining with a fellow-lodger for a pennyworth; for his Sunday dinner he had a piece of meat, which cost him 2*d.* on the Saturday night. Supper he dispensed with, but if he felt much tired he had a half-pint of beer, which was three farthings "in his own jug," before he went to bed, about nine or ten, as he did little or nothing late at night, except on Saturday. He thus spent 4½*d.* a day for food, and reckoning 2½*d.* extra for somewhat better fare on a Sunday, his board was 2*s.* 10*d.* a week. His earnings he computed at 5*s.*, and thus he had 2*s.* 2*d.* weekly for other expenses. Of these there was 1*s.* for lodging; 2*d.* or 3*d.* for washing (but this not every week); ½*d.* for a Sunday morning's shave; 1*d.* "for his religion" (as he worded it); and 6*d.* for "odds and ends," such as thread to mend his clothes, a piece of leather to patch his shoes, worsted to darn his stockings, &c. He was subject to rheumatism, or "he might have saved a trifle of money." Judging by his methodical habits, it was probable he had done so. He had nothing of the eloquence of his countrymen, and seemed indeed of rather a morose turn.

A family boarding together live even cheaper than this man, for more potatoes and less fish fall to the share of the children. A meal too is

Original from HARVARD UNIVERSITY

not unfrequently saved in this manner:—If a man, his wife, and two children, all go out in the streets selling, they breakfast before starting, and perhaps agree to re-assemble at four o'clock. Then the wife prepares the dinner of fish and potatoes, and so tea is dispensed with. In that case the husband's and wife's board would be *4d.* or *4½d.* a day each, the children's *3d.* or *3½d.* each, and giving *1½d.* extra to each for Sunday, the weekly cost is *10s. 3d.* Supposing the husband and wife cleared *5s.* a week each, and the children each *3s.*, their earnings would be *16s.* The balance is the surplus left to pay rent, washing, firing, and clothing.

From what I can ascertain, the Irish street-seller can always live at about half the cost of the English costermonger; the Englishman must have butter for his bread, and meat at no long intervals, for he "hates fish more than once a week." It is by this spareness of living, as well as by frequently importunate and mendacious begging, that the street-Irish manage to save money.

The diet I have spoken of is *generally*, but not universally, that of the poor street-Irish; those who live differently, do not, as a rule, incur greater expense.

It is difficult to ascertain in what proportion the Irish street-sellers consume strong drink, when compared with the consumption of the English costers; as a poor Irishman, if questioned on that or any subject, will far more frequently shape his reply to what he thinks will please his querist and induce a trifle for himself, than answer according to the truth. The landlord of a large public-house, after inquiring of his assistants, that his opinions might be checked by theirs, told me that in one respect there was a marked difference between the beer-drinking of the two people. He considered that in the poor streets near his house there were residing quite as many Irish street-sellers and labourers as English, but the instances in which the Irish conveyed beer to their own rooms, as a portion of their meals, was not as 1 in 20 compared with the English: "I have read your work, sir," he said, "and I know that you are quite right in saying that the costermongers go for a good Sunday dinner. I don't know what my customers are except by their appearance, but I do know that many are costermongers, and by the best of all proofs, for I have bought fish, fruit, and vegetables of them. Well, now, we'll take a fine Sunday in spring or summer, when times are pretty good with them; and, perhaps, in the ten minutes after my doors are opened at one on the Sunday, there are 100 customers for their dinner-beer. Nearly three-quarters of these are working men and their wives, working either in the streets, or at their indoor trades, such as tailoring. But among the number, I'm satisfied, there are not more than two Irishmen. There may be three or four Irishwomen, but one of my barmen tells me he knows that two of them — very well-behaved and good-looking women—are married to Englishmen. In my opinion the proportion, as to Sunday dinner-beer, between English and Irish, may be two or three in 70."

An Irish gentleman and his wife, who are both well acquainted with the habits and condition of the people in their own country, informed me, that among the classes who, though earning only scant incomes, could not well be called "impoverished," the use of beer, or even of small ale — known, now or recently—as "Thunder's thruppeny," was very unfrequent. Even in many "independent" families, only water is drunk at dinner, with punch to follow. This shows the accuracy of the information I derived from Mr. —— (the innkeeper), for persons unused to the drinking of malt liquor in their own country are not likely to resort to it afterwards, when their means are limited. I was further informed, that reckoning the teetotallers among the English street-sellers at 300, there are 600 among the Irish,—teetotallers too, who, having taken the pledge, under the sanction of their priests, and looking upon it as a religious obligation, keep it rigidly.

The Irish street-sellers who frequent the gin-palaces or public-houses, drink a pot of beer, in a company of three or four, but far more frequently, a quartern of gin (very seldom whisky) oftener than do the English. Indeed, from all I could ascertain, the Irish street-sellers, whether from inferior earnings, their early training, or the restraints of their priests, drink less beer, by one-fourth, than their English brethren, but a larger proportion of gin. "And you must bear this in mind, sir," I was told by an innkeeper, "I had rather have twenty poor Englishmen drunk in my tap-room than a couple of poor Irishmen. They'll quarrel with anybody—the Irish will—and sometimes clear the room by swearing they'll 'use their knives, by Jasus;' and if there's a scuffle they'll kick like devils, and scratch, and bite, like women or cats, instead of using their fists. I wish all the drunkards were teetotallers, if it were only to be rid of them."

Whiskey, I was told, would be drunk by the Irish, in preference to gin, were it not that gin was about half the price. One old Irish fruit-seller—who admitted that he was fond of a glass of gin—told me that he had not tasted whiskey for fourteen years, "becase of the price." The Irish, moreover, as I have shown, live on stronger and coarser food than the English, buying all the rough (bad) fish, for, to use the words of one of my informants, they look to quantity more than quality; this may account for their preferring a stronger and fiercer stimulant by way of drink.

Of the Resources of the Street-Irish as regards "Stock-Money," Sickness, Burials, &c.

It is not easy to ascertain from the poor Irish themselves how they raise their stock-money, for their command of money is a subject on

which they are not communicative, or, if communicative, not truthful. "My opinion is," said an Irish gentleman to me, "that some of these poor fellows would declare to God that they hadn't the value of a halfpenny, even if you heard the silver chink in their pockets." It is certain that they never, or very rarely, borrow of the usurers like their English brethren.

The more usual custom is, that if a poor Irish street-seller be in want of 5*s*., it is lent to him by the more prosperous people of his court—bricklayers' labourers, or other working-men—who club 1*s*. a piece. This is always repaid. An Irish bricklayer, when in full work, will trust a needy countryman with some article to pledge, on the understanding that it is to be redeemed and returned when the borrower is able. Sometimes, if a poor Irishwoman need 1*s*. to buy oranges, four others—only less poor than herself, because not utterly penniless — will readily advance 3*d*. each. Money is also advanced to the deserving Irish through the agency of the Roman Catholic priests, who are the medium through whom charitable persons of their own faith exercise good offices. Money, too, there is no doubt, is often advanced out of the priest's own pocket.

On all the kinds of loans with which the poor Irish are aided by their countrymen no interest is ever charged. "I don't like the Irish," said an English costermonger to me; "but they *do* stick to one another far more than we do."

The Irish costers hire barrows and shallows like the English, but, if they "get on" at all, they will possess themselves of their own vehicles much sooner than an English costermonger. A quick-witted Irishman will begin to ponder on his paying 1*s*. 6*d*. a week for the hire of a barrow worth 20*s*., and he will save and hoard until a pound is at his command to purchase one for himself; while an obtuse English coster (who will yet buy cheaper than an Irishman) will probably pride himself on his cleverness in having got the charge for his barrow reduced, in the third year of its hire, to 1*s*. a week the twelvemonth round!

In cases of sickness the mode of relief adopted is similar to that of the English. A raffle is got up for the benefit of the Irish sufferer, and, if it be a bad case, the subscribers pay their money without caring what trifle they throw for, or whether they throw at all. If sickness continue and such means as raffles cannot be persevered in, there is one resource from which a poor Irishman never shrinks—the parish. He will apply for and accept parochial relief without the least sense of shame, a sense which rarely deserts an Englishman who has been reared apart from paupers. The English costers appear to have a horror of the Union. If the Irishman be taken into the workhouse, his friends do not lose sight of him. In case of his death, they apply for, and generally receive his body, from the parochial authorities, undertaking the expence of the funeral, when the body is duly "waked." "I think there's a family contract among the Irish," said a costermonger to me; "that's where it is."

The Irish street-folk are, generally speaking, a far more provident body of people than the English street-sellers. To save, the Irish will often sacrifice what many Englishmen consider a necessary, and undergo many a hardship.

From all I could ascertain, the saving of an Irish street-seller does not arise from any wish to establish himself more prosperously in his business, but for the attainment of some cherished project, such as emigration. Some of the objects, however, for which these struggling men hoard money, are of the most praiseworthy character. They will treasure up halfpenny after halfpenny, and continue to do so for years, in order to send money to enable their wives and children, and even their brothers and sisters, when in the depth of distress in Ireland, to take shipping for England. They will save to be able to remit money for the relief of their aged parents in Ireland. They will save to defray the expense of their marriage, an expense the English costermonger so frequently dispenses with—but they will *not* save to preserve either themselves or their children from the degradation of a workhouse; indeed they often, with the means of independence secreted on their persons, apply for parish relief, and that principally to save the expenditure of their own money. Even when detected in such an attempt at extortion an Irishman betrays no passion, and hardly manifests any emotion—he has speculated and failed. Not one of them but has a positive genius for begging—both the taste and the faculty for alms-seeking developed to an extraordinary extent.

Of the amount "saved" by the patience of the poor Irishmen, I can form no conjecture.

Of the History of some Irish Street-Sellers.

In order that the following statements might be as truthful as possible, I obtained permission to use the name of a Roman Catholic clergyman, to whom I am indebted for much valuable information touching this part of my subject.

A young woman, of whose age it was not easy to form a conjecture, her features were so embrowned by exposure to the weather, and perhaps when I saw her a little swollen from cold, gave me the following account as to her living. Her tone and manner betrayed indifference to the future, caused perhaps by ignorance,—for uneducated persons I find are apt to look on the future as if it must needs be but a repetition of the present, while the past in many instances is little more than a blank to them. This young woman said, her brogue being little perceptible, though she spoke thickly:

"I live by keepin' this fruit stall. It's a poor livin' when I see how others live. Yes, in thruth, sir, but it's thankful I am for to be able

to live at all, at all; troth is it, in these sore times. My father and mother are both did. God be gracious to their sowls! They was evicted. The family of us was. The thatch of the bit o' home was tuk off above our hids, and we were lift to the wide worruld—yis, indeed, sir, and in the open air too. The rint wasn't paid and it couldn't be paid, and so we had to face the wither. It was a sorrowful time. But God was good, and so was the neighbours. And when we saw the praste, he was a frind to us. And we came to this counthry, though I'd always heard it called a black counthry. Sure, an' there's much in it to indhure. There's goin's on it, sir, that the praste, God rewarrud him! wouldn't like to see. There's bad ways. I won't talk about thim, and I'm sure you are too much of a gintlemin to ask me; for if you know Father ——, that shows you are the best of gintlemin, sure. It was the eviction that brought us here. I don't know about where we was just; not in what county; nor parish. I was so young whin we lift the land. I belave I'm now 19, perhaps only 18" (she certainly looked much older, but I have often noticed that of her class). "I can't be more, I think, for sure an' its only 5 or 6 years since we left Watherford and come to Bristol. I'm sure it was Watherford, and a beautiful place it is, and I know it was Bristol we come to. We walked all the long way to London. My parints died of the cholera, and I live with mysilf, but my aunt lodges me and sees to me. She sills in the sthreets too. I don't make 7*d.* a day. I may make 6*d.* There's a good many young payple I know is now sillin' in the streets becase they was evicted in their own counthry. I suppose they had no where ilse to come to. I'm nivir out of a night. I sleep with my aunt, and we keep to oursilves sure. I very sildom taste mate, but perhaps I do oftener than before we was evicted—glory be to God."

One Irish street-seller I saw informed me that she was a "widdy wid three childer." Her husband died about four years since. She had then five children, and was near her confinement with another. Since the death of her husband she had lost three of her children; a boy about twelve years died of stoppage on his lungs, brought on, she said, through being in the streets, and shouting so loud "to get sale of the fruit." She has been in Clare-street, Clare-market, seven years with a fruit stall. In the summer she sells green fruit, which she purchases at Covent-garden. When the nuts, oranges, &c., come in season, she furnishes her stall with that kind of fruit, and continues to sell them until the spring salad comes in. During the spring and summer her weekly average income is about 5*s.*, but the remaining portion of the year her income is not more than 3*s.* 6*d.* weekly, so that taking the year through, her average weekly income is about 4*s.* 3*d.*; out of this she pays 1*s.* 6*d.* a week rent, leaving only 2*s.* 9*d.* a week to find necessary comforts for herself and family. For fuel the children go to the market and gather up the waste walnuts, bring them home and dry them, and these, with a pennyworth of coal and coke, serve to warm their chilled feet and hands. They have no bedstead, but in one corner of a room is a flock bed upon the floor, with an old sheet, blanket, and quilt to cover them at this inclement season. There is neither chair nor table; a stool serves for the chair, and two pieces of board upon some baskets do duty for a table, and an old penny tea-canister for a candlestick. She had parted with every article of furniture to get food for her family. She received nothing from the parish, but depended upon the sale of her fruit for her living.

The Irishmen who are in this trade are also very poor; and I learned that both Irishmen and Irishwomen left the occupation now and then, and took to begging, as a more profitable calling, often going begging this month and fruit-selling the next. This is one of the causes which prompt the London costermongers' dislike of the Irish. "They'll beg themselves into a meal, and work us out of one," said an English coster to me. Some of them are, however, less "poverty-struck" (a word in common use among the costermongers): but these for the most part are men who have been in the trade for some years, and have got regular "pitches."

The woman who gave me the following statement seemed about twenty-two or twenty-three. She was large-boned, and of heavy figure and deportment. Her complexion and features were both coarse, but her voice had a softness, even in its broadest brogue, which is not very frequent among poor Irishwomen. The first sentence she uttered seems to me tersely to embody a deplorable history of the poverty of a day. It was between six and seven in the evening when I saw the poor creature:—

"Sure, thin, sir, it's thrippince I've taken today, and tuppince is to pay for my night's lodgin'. I shall do no more good to-night, and shall only stay in the cowld, if I stay in it, for nothing. I'm an orphand, sir," (she three or four times alluded to this circumstance,) "and there's nobody to care for me but God, glory be to his name! I came to London to join my brother, that had come over and did will, and he sint for me, but whin I got here I couldn't find him in it anyhow. I don't know how long that's ago. It may be five years; it may be tin; but" (she added, with the true eloquence of beggary,) "sure, thin, sir, I had no harrut to keep count, if I knew how. My father and mother wasn't able to keep me, nor to keep thimsilves in Ireland, and so I was sint over here. They was counthry payple. I don't know about their landlorrud. They died not long afther I came here. I don't know what they died of, but sure it was of the will of God, and they hadn't much to make them love this worruld; no more have I. Would I like to go back to my own counthry? Will, thin, what would be the use? I sleep at a lodging-house, and it's a dacint place.

It's mostly my own counthrywomen that's in it; that is, in the women's part. I pay 1*s.* a week, that's 2*d.* a night, for I'm not charged for Sundays. I live on brid, and 'taties and salt, and a herrin' sometimes. I niver taste beer, and not often tay, but I sit here all day, and I feel the hunger this day and that day. It goes off though, if I have nothin' to ate. I don't know why, but I won't deny the goodness of God to bring such a thing about. I have lived for a day on a pinny, sir: a ha'pinny for brid, and a ha'pinny for a herrin', or two herrin's for a ha'pinny, and 'taties for the place of brid. I've changed apples for a herrin' with a poor man, God rewarrud him. Sometimes I make on to 6*d.* a day, and sometimes I *have* made 1*s.* 6*d.*, but I think that I don't make 5*d.* a day—arrah, no, thin, sir! one day with the other, and I don't worruk on Sunday, not often. If I've no mate to ate, I'd rather rist. I never miss mass on a Sunday. A lady gives me a rag sometimes, but the bitther time's comin'. If I was sick I don't know what I'd do, but I would sind for the praste, and he'd counsil me. I could read a little oncte, but I can't now."

Of the Irish "Refuse"-Sellers.

There still remains to be described one branch of the Irish street-trade which is peculiar to the class—viz., the sale of "refuse," or such fruit and vegetables as are damaged, and suited only to the very poorest purchasers.

In assorting his goods, a fruit-salesman in the markets generally throws to one side the shrivelled, dwarfish, or damaged fruit—called by the street-traders the "specks." If the supply to the markets be large, as in the pride of the season, he will put his several kinds of specks in separate baskets. At other times all kinds are tossed together, and sometimes with an admixture of nuts and walnuts. The Irish women purchase these at a quarter, or within a quarter, of the regular price, paying from 6*d.* to 1*s.* a bushel for apples; 9*d.* to 1*s.* 6*d.* for pears; 1*s.* 6*d.* to 2*s.* 6*d.* for plums. They are then sorted into halfpenny-worths for sale on the stalls. Among the refuse is always a portion of what is called "tidy" fruit, and this occupies the prominent place in the "halfpenny lots"—for they are usually sold at a halfpenny. Sometimes, too, a salesman will throw in among the refuse a little good fruit, if he happen to have it over, either gratuitously or at the refuse price; and this, of course, is always made the most conspicuous on the stalls. Of other fruits, perhaps, only a small portion is damaged, from over-ripeness, or by the aggression of wasps and insects, the remainder being very fine, so that the retail "lots" are generally cheap. The sellers aim at "half profits," or cent. per cent.

The "refuse" trade in fruit—and the refuse-trade is mainly confined to fruit—is principally in the hands of the Irish. The persons carrying it on are nearly all middle-aged and elderly women. I once or twice saw a delicate and pretty-looking girl sitting with the old "refuse" women; but I found that she was not a "regular hand," and only now and then "minded the stall" in her mother's absence. She worked with her needle, I was told.

Of the women who confine themselves to this trade there are never less than twenty, and frequently thirty. Sometimes, when the refuse is very cheap and very abundant, as many as 100 fruit-sellers, women and girls, will sell it in halfpenny-worths, along with better articles. These women also sell refuse dry-fruit, purchased in Duke's-place, but only when they cannot obtain green-fruit, or cannot obtain it sufficiently. All is sold at stalls; as these dealers seem to think that if it were hawked, the police might look too inquisitively at a barrow stocked with refuse. The "refuse-sellers" buy at all the markets. The poorer street-sellers, whose more staple trade is in oranges or nuts, are *occasional* dealers in it.

Perhaps the regular refuse-buyers are not among the *very* poorest class, as their sale is tolerably quick and certain, but with the usual drawbacks of wet weather. They make, I was told, from 4*d.* to 1*s.* a day the year round, or perhaps 7*d.* or 8*d.* a day, Sunday included. They are all Roman Catholics, and resort to the street-sale after mass. They are mostly widows, or women who have reached middle-age, unmarried: Some are the wives of street-sellers. Two of their best pitches are on Saffron-hill and in Petticoat-lane. It is somewhat curious to witness these women sitting in a line of five or six, and notwithstanding their natural garrulity, hardly exchanging a word one with another. Some of them derive an evident solace from deliberate puffs at a short black pipe.

A stout, healthy-looking woman of this class said.—"Sure thin, sir, I've sat and sould my bit of fruit in this place, or near it, for twinty year and more, as is very well known indeed, is it. I could make twice the money twinty year ago that I can now, for the boys had the ha'pinnies more thin than they has now, more's the pity. The childer is my custhomers, very few beyant—such as has only a ha'pinny now and thin, God hilp them. They'll come a mile from any parrut, to spind it with such as me, for they know it's chape we sill! Yis, indeed, or they'll come with a fardin either, for it's a ha'pinny lot we'll split for them any time. The boys buys most, but they're dridful tazes. It's the patience of the divil must be had to dale wid the likes of thim. They was dridful about the Pope, but they've tired of it now. O, no, it wasn't the boys of my counthry that demaned themselves that way. Well, I make 4*d.* some days, and 6*d.* some, and 1*s.* 6*d.* some, and I have made 3*s.* 6*d.*, and I have made nothing. Perhaps I make 5*s.* or 6*s.* a week rigular, but I'm established and well-known you see."

The quantity of refuse at the metropolitan "green" markets varies with the different descriptions of fruit. Of apples it averages one-

Original from HARVARD UNIVERSITY

twentieth, and of plums and greengages one-fifteenth, of the entire supply. With pears, cherries, gooseberries, and currants, however, the damaged amounts to one-twelfth, while of strawberries and mulberries it reaches as high as one-tenth of the aggregate quantity sent to market.

The Irish street-sellers, I am informed, buy full two-thirds of all the refuse, the other third being purchased by the lower class of English costermongers—"the illegitimates,"—as they are called. We must not consider the sale of the damaged fruit so great an evil as it would, at the first blush, appear, for it constitutes perhaps the sole luxury of poor children, as well as of the poor themselves, who, were it not for the halfpenny and farthing lots of the refuse-sellers, would doubtlessly never know the taste of such things.

Before leaving this part of the subject, it may be as well to say a few words concerning the curious revelations made by the returns from Billingsgate, Covent-garden, and the other London markets, as to the diet of the poor. In the first place, then, it appears that in the matter of fish, herrings constitute the chief article of consumption—no less than 210,000,000 lbs. weight of this fish in a "fresh" state, and 60,000,000 lbs. in a "dried" state, being annually eaten by the humbler classes of the metropolis and the suburbs. Of sprats there are 3,000,000 lbs. weight consumed—and these, with the addition of plaice, are the staple comestibles at the dinners and suppers of the ichthyophagous part of the labouring population of London. One of the reasons for this is doubtless the extraordinary cheapness of these kinds of fish. The sprats are sold at a penny per pound; the herrings at the same rate; and the plaice at a fraction less, perhaps; whereas a pound of butcher's meat, even "pieces," or the "block ornaments," as they are sometimes called, cannot be got for less than twopence-halfpenny or threepence. But the relative cheapness of these two kinds of food can only be tested by the proportionate quantity of nutrition in each. According to Liebig, butcher's meat contains 26 per cent. of solid matter, and 74 per cent. of water; whereas, according to Brande, fish consists of 20 parts of solid matter, and 80 parts water in every 100. Hence it would appear that butcher's meat is five per cent more nutritive than fish—or, in other words, that if the two were equally cheap, the prices, according to the quantity of nutrition in each, should be for fish one penny per pound, and butcher's meat not five farthings: so that even at twopence-halfpenny the pound, meat is more than twice as dear an article of diet as fish.

But it is not only on account of their cheapness that herrings and sprats are consumed in such vast quantities by the labouring people of London. Salmon, eels, herrings, pilchards, and sprats, Dr. Pereira tells us, abound in oil; and oleaginous food, according to Leibig, is an "element of respiration," consisting of nearly 80 per cent. charcoal, which burns away in the lungs, and so contributes to the warmth of the system. Fat, indeed, may be said to act as fuel to the vital fire; and we now know, from observations made upon the average daily consumption of food by 28 soldiers of the Grand Duke of Hesse Darmstadt, in barracks, for a month—which is the same as 840 men for one day—that an adult taking moderate exercise consumes, in the act of respiration, very nearly a pound of charcoal every day, which of course must be supplied in his food. "But persons who take much exercise, or labour hard," says Dr. Pereira, "require more frequent and copious meals than the indolent or sedentary. In the active man the number of respirations is greater than in the inactive, and therefore a more frequent supply of food is required to furnish the increased quantity of carbon and hydrogen to be consumed in the lungs." "A bird deprived of food," says Liebig, "dies on the third day; while a serpent, with its sluggish respiration, can live without food three months, or longer."

Captain Parry, in his account of one of the Polar expeditions (1827), states, that both himself and Mr. Beverley, the surgeon, were of opinion, that, in order to maintain the strength of the men during their harassing journey across the ice, living constantly in the open air, and exposed to the wet and cold for twelve hours a day, an addition was requisite of at least one-third to the quantity of provisions daily issued. So, in the gaol dietaries, the allowance to prisoners sentenced to hard labour for three months is one-third more than the scale for those sentenced to hard labour for three days—the former having 254 ounces, and the latter only 168 ounces of solid food served out to them every week.

But the hard-working poor not only require more food than the non-working rich, but it is mainly because the rich are better fed that they are more lethargic than the poor; for the greater the supply of nutriment to the body, the more inactive does the system become. From experiments made a few years ago at the Zoological Gardens, it was found, that, by feeding the animals twice, instead of once, in the twenty-four hours, their habits, as regards exercise, were altered—a fact which readily explains how the fat and overfed are always the least energetic; fat being at once the cause and consequence of inaction. It is well to hear an obese citizen tell a hollow-cheeked man, who begs a penny of him, "to go and work—a lazy scoundrel;" but physiology assures us that the fat tradesman is naturally the laziest of the two. In a word, he is fat because he is lazy, and lazy because he is fat.

The industrious poor, however, not only require more food than the indolent rich, but, getting less, they become more susceptible of cold, and, therefore, more eager for all that tends to

Original from HARVARD UNIVERSITY

promote warmth. I have often had occasion to remark the sacrifices that the ill-fed will make to have "a bit of fire." "He who is well fed," observes Sir John Ross, "resists cold better than the man who is stinted, while starvation from cold follows but too soon a starvation in food. This doubtlessly explains in a great measure the resisting powers of the natives of frozen climates, their consumption of food being enormous, and often incredible." Captain Cochrane, in his "Journey through Russia and Siberian Tartary," tells us that he has repeatedly seen a Yakut or Tongouse devour forty pounds of meat in a day; and one of the Yakuti he speaks of as having consumed, in twenty-four hours, "the hind-quarter of a large ox, twenty pounds of fat, and a proportionate quantity of melted butter for his drink." (Vol. i. p. 255). Much less heat is evolved, physiologists tell us, where there is a deficiency of food. "During the whole of our march," says Sir John Franklin, "we experienced that no quantity of clothing could keep us warm while we fasted; but, on those occasions on which we were enabled to go to bed with full stomachs, we passed the night in a warm and comfortable manner." Hence, it is evident, that in summer a smaller quantity of food suffices to keep up the temperature of the body. I know of no experiments to show the different proportions of aliment required at different seasons of the year. In winter, however, when a greater supply is certainly needed, the labouring man, unfortunately, has less means of obtaining it—nearly all trades slacken as the cold weather comes on, and some, as brick-making, market-gardening, building, &c., then almost entirely cease—so that, were it not for the cheapness of fish, and, moreover, the oleaginous quality of those kinds which are most plentiful in the winter time, the metropolitan poor would be very likely to suffer that "starvation from cold which," in the words of Sir John Ross, "follows but too soon a starvation in food." Hence we can readily understand the remark of the enthusiastic street-seller—"Sprats *is* a blessing to the poor."

The returns as to the other articles of food sold in the streets are equally curious. The 1,500,000*l.* spent yearly in fish, and the comparatively small amount expended on vegetables, viz., 290,000*l.*, is a circumstance which seems to show that the labouring population of London have a greater relish for animal than vegetable diet. "It is quite certain," says Dr. Carpenter, "that the most perfect physical development and the greatest intellectual vigour are to be found among those races in which a mixed diet of animal and vegetable food is the prevalent habit." And yet, in apparent contradiction to the proposition asserted with so much confidence by Dr. Carpenter, we have the following curious fact cited by Mr. Jacob Bentley:—

"It is, indeed, a fact worthy of remark, and one that seems never to have been noticed, that throughout the whole animal creation, in every country and clime of the earth the most useful animals cost nature the least waste to sustain them with food. For instance, all animals that work, live on vegetable or fruit food; and no animal that eats flesh, works. The all-powerful elephant, and the patient, untiring camel in the torrid zone; the horse, the ox, or the donkey in the temperate, and the rein-deer in the frigid zone; obtain all their muscular power for enduring labour, from Nature's simplest productions,—the vegetable kingdom.

"But all the flesh-eating animals, keep the rest of the animated creation in constant dread of them. They seldom eat vegetable food till some other animal has eaten it first, and made it into flesh. Their only use seems to be, to destroy life: their own flesh is unfit for other animals to eat, having been itself made out of flesh, and is most foul and offensive. Great strength, fleetness of foot, usefulness, cleanliness and docility, are then always characteristic of vegetable-eating animals, while all the world dreads flesh-eaters."

Of vegetables we have seen that the greatest quantity consumed by the poor consists of potatoes, of which 60,500,000 lbs. are annually sold in the streets; but ten pounds of potatoes are only equal in nutritive power to one pound of butcher's meat, which contains one-fifth more solid food than fish,—so that a pound of fish may be said to equal eight pounds of potatoes, and thus the 60,000,000 lbs. of vegetable is dietetically equivalent to nearly 7,000,000 lbs. of fish diet. The cost of the potatoes, at five pounds for 2*d.*, is, as we have seen, 100,000*l.*; whereas the cost of the same amount of nutritive matter in the form of fish, at 1*d.* per pound, would have been only 30,000*l.*, or upwards of two-thirds less. The vegetable of which there is the next greatest street sale is onions, upon which 90,000*l.* are annually expended. This has been before accounted for, by saying, that a piece of bread and an onion are to the English labourer what bread and grapes are to the Frenchman—oftentimes a meal. The relish for onions by the poorer classes is not difficult to explain. Onions are strongly stimulating substances, and they owe their peculiar odour and flavour, as well as their pungent and stimulating qualities, to an acrid volatile oil which contains sulphur. This oil becomes absorbed, quickens the circulation, and occasions thirst. The same result takes place with the oil of fish. It not only proves a stimulant to the general system, but we are told that the thirst and uneasy feeling at the stomach, frequently experienced after the use of the richer species of fish, have led to the employment of spirit to this kind of food. Hence, says Dr. Pereira, the vulgar proverb, "Brandy is Latin for Fish." Moreover, the two classes of food are similar in their comparative indigestibility, for the uneducated palates of the poor not only require a more pungent kind of diet, but their stronger stomachs need something that will resist the action of the gastric juice for a considerable time. Hence their love of shell-fish.

The small quantity of fruit, too, sold to the poor is a further proof of what is here stated. The amount of the street sale of this luxury is no criterion as to the quantity purchased by the London labourers; for according to all accounts the fruit-buyers in the streets consist mostly of clerks, shopmen, small tradesmen, and the chil-

Original from HARVARD UNIVERSITY

dren of mechanics or the lower grade of middle class people. Those who may be said strictly to belong to the poor,—viz. those whose incomes are barely sufficient for their support—seldom purchase fruit. In the first place they have no money to spend on such a mere toothsome extravagance; and, secondly, they require a stronger and more stimulating, and "*staying*" kind of food. The delights of the palate, we should remember, are studied only when the cravings of the stomach are satisfied, so that those who have strong stomachs have necessarily dull palates, and, therefore, prefer something that "bites in the mouth,"—to use the words of one of my informants—like gin, onions, sprats, or pickled whelks. What the poor term "relishes" are very different things from what the rich style the "delicacies of the season."

I have no means of ascertaining the average number of ounces of solid food consumed by the poorer class of the metropolis. The *whole* of the fish, fruit, and vegetables, sold to the London costermongers, is not disposed of in the London streets—many of the street-sellers going, as we have seen, country excursions with their goods. According to the result of the Government Commissioners of Inquiry, the labourers in the country are unable to procure for themselves and families an average allowance of more than 122 ounces of solid food—principally bread—every week; hence it has been justly said we may infer that the man consumes, as his share, 140 ounces (134 bread and 6 meat). The gaol dietaries allow 254 ounces, or nearly twice as much to all prisoners, who undergo continuous hard labour. In the construction of these dietaries Sir James Graham—the then Secretary of State—says, in his "Letter to the Chairman of Quarter Sessions" (January 27th, 1843), "I have consulted not only the Prison Inspectors, but medical men of the greatest eminence possessing the advantage of long experience." They are proposed, he adds, "as the *minimum* amount which can be safely afforded to prisoners without the risk of inflicting a punishment not contemplated by law and which it is unjust and cruel to inflict; namely, loss of health and strength through the inadequacy of the food supplied." Hence it appears not that the thief gets too much, but the honest working man too little—or, in other words, that the labourer of this country is able to procure, by his industry, only half the quantity of food that is considered by "medical men of the greatest eminence" to be "the *minimum* amount" that can be *safely* afforded for the support of the criminals—a fact which it would be out of place to comment upon here.

One word concerning the incomes of the London costermongers, and I have done. It has been before shown that the gross sum of money *taken* yearly, in the streets, by the sale of fish, fruit, and vegetables, amounts, in round numbers, to two million pounds—a million and a half being expended in fish, and a quarter of a million upon fruit and vegetables respectively. In estimating the yearly receipts of the costermongers, from their average gains, the gross "takings" of the entire body were concluded to be between a million and a quarter and a million and a half sterling—that is to say, each one of the 10,000 street-sellers of fish, fruit, and vegetables, was supposed to clear ten shillings a week all the year through, and to *take* fifty shillings. But, according to the returns furnished me by the salesmen, at the several metropolitan markets, the weekly "*takings*" of the ten thousand men and their families—for often both wife and children sell—cannot be less than four pounds per week all the year round, out of which it would seem that the clear weekly *gains* are about fifteen shillings. (Some costers we have seen take pounds in a day, others—as the nut and orange-women and children—only a few shillings a week; some, again, make cent. per cent. profit, whilst others are obliged to sell at a loss.) This, from all I can gather, as well as from a comparison of the coster's style of living with other classes whose weekly income is nearly the same, appears to be very close upon the truth.

We may then, I think, safely assert, that the gross yearly receipts of the London costermongers are two millions of money; that their clear annual gain, or income, is 425,000*l.*; and that the capital invested in their business, in the form of donkey-carts, barrows, baskets, weights, and stock-money, is 25,000*l.*;—half of this being borrowed, for which they pay upwards of 20,000*l.* interest per annum.

OF THE STREET-SELLERS OF GAME, POULTRY (LIVE AND DEAD), RABBITS, BUTTER, CHEESE, AND EGGS.

THE class who sell game and poultry in the public thoroughfares of the metropolis are styled hawkers, both in Leadenhall and Newgate-market. The number of these dealers in London is computed at between 200 and 300. Of course, legally to sell game, a license, which costs 2*l.* 2*s.* yearly, is required; but the street-seller laughs at the notion of being subjected to a direct tax; which, indeed, it might be impossible to levy on so "slippery" a class.

The sale of game, even with a license, was not legalised until 1831; and, prior to that year, the mere killing of game by an "unqualified" person was an offence entailing heavy penalties. The "qualification" consisted of the possession of a freehold estate of 100*l.* a year, or a leasehold for ninety-nine years of 150*l.* a year! By an Act, passed in the 25th year of George III., it was provided that a certificate (costing 3*l.* 13*s.* 6*d.*) must be taken out by all qualified persons

killing game. Since 1831 (1 & 2 William IV., c. 32,) a certificate, without any qualification, is all that is required from the game-killer.

Both sexes carry on the trade in game-hawking, but there are more than thrice as many men as women engaged in the business, the weight occasionally carried being beyond a woman's strength. The most customary dress of the game or poultry-hawker is a clean smock-frock covering the whole of his other attire, except the ends of his trousers and his thick boots or shoes. Indeed he often, but less frequently than was the case five years ago, assumes the dress of a country labourer, although he may have been for years a resident in London. About forty years ago, I am informed, it was the custom for countrymen, residing at no great distance, to purchase a stock of chickens or ducks; and, taking their places in a wagon, to bring their birds to London, and hawk them from door to door. Some of these men's smock-frocks were a convenient garb, for they covered the ample pockets of the coat beneath, in which were often a store of partridges, or an occasional pheasant or hare. This game, illegally killed—for it was all poached—was illegally sold by the hawker, and illegally bought by the hotel-keepers and the richer tradesmen. One informant (an old man) was of opinion that the game was rarely offered for sale by these countrymen at the West-end mansions of the aristocracy. "In fact," he said, "I knew one country fellow—though he was sharp enough in his trade of game and poultry-selling—who seemed to think that every fine house, without a shop, and where there were livery servants, must needs be inhabited by a magistrate! But, as the great props of poaching were the rich—for, of course, the poor couldn't buy game—there was, no doubt, a West-end as well as a City trade in it. I have bought game of a country poultry-hawker," continued my informant, "when I lived in the City at the beginning of this century, and generally gave 3*s.* 6*d.* a brace for partridges. I have bid it, and the man has left, refusing to take it; and has told me afterwards, and, I dare say, he spoke the truth, that he had sold his partridges at 5*s.* or 6*s.* or more. I believe 5*s.* a brace was no uncommon price in the City. I have given as much as 10*s.* for a pheasant for a Christmas supper. The hawker, before offering the birds for sale, used to peer about him, though we were alone in my counting-house, and then pull his partridges out of his pockets, and say, 'Sir, do you want any very young chickens?'—for so he called them. Hares he called 'lions;' and they cost often, enough, 5*s.* each of the hawker. The trade had all the charms and recommendations of a mystery and a risk about it, just like smuggling."

The sale of game in London, however, was not confined to the street-hawkers, who generally derived their stock-in-trade immediately from the poacher. Before the legalisation of the sale, the trade was carried on, under the rose, by the salesmen in Leadenhall-market, and that to an extent of not less than a fifteenth of the sale now accomplished there. The purveyors for the London game-market—I learned from leading salesmen in Leadenhall—were not then, as now, noble lords and honourable gentlemen, but peasant or farmer poachers, who carried on the business systematically. The guards and coachmen of the stage-coaches were the media of communication, and had charge of the supply to the London market. The purchasers of the game thus supplied to a market, which is mostly the property of the municipality of the City of London, were not only hotel-keepers, who required it for public dinners presided over by princes, peers, and legislators, but the purveyors for the civic banquets—such as the Lord Mayor's ninth of November dinner, at which the Ministers of State always attended.

This street-hawking of *poached* game, as far as I could ascertain from the best-informed quarters, hardly survived the first year of the legalised sale.

The female hawkers of game are almost all the wives of the men so engaged, or are women living with them as their wives. The trade is better, as regards profit, than the costermonger's ordinary pursuits, but only when the season is favourable; it is, however, more uncertain.

There is very rarely a distinction between the hawkers of game and of poultry. A man will carry both, or have game one day and poultry the next, as suits his means, or as the market avails. The street-sellers of cheese are generally costers, while the vendors of butter and eggs are almost extinct.

Game, I may mention, consists of grouse (including black-cocks, and all the varieties of heath or moor-game), partridges, pheasants, bustards, and hares. Snipe, woodcocks, plovers, teal, widgeons, wild ducks, and rabbits are not game, but can only be taken or killed by certificated persons, who are owners or occupiers of the property on which they are found, or who have the necessary permission from such persons as are duly authorised to accord it. Poultry consists of chickens, geese, ducks, and turkeys, while some persons class pigeons as poultry.

Birds are dietetically divided into three classes: (1) the white-fleshed, as the common fowl and the turkey; (2) the dark-fleshed game, as the grouse and the black-cock; and (3) the aquatic (including swimmers and waders), as the goose and the duck; the flesh of the latter is penetrated with fat, and difficult of digestion.

Of the Quantity of Game, Rabbits, and Poultry, sold in the Streets.

It appears from inquiries that I instituted, and from authentic returns which I procured on the subject, that the following is the quantity of game and poultry sold yearly, as an average, in the markets of the metropolis. I give it exclusive of such birds as wild-ducks, woodcocks, &c., the supply of which depends upon the severity of the winter. I include all wild birds or animals, whether considered game or not, and I use round numbers, but as closely as possible.

During the past Christmas, however, I may observe, that the supply of poultry to the markets has been greater than on any previous occasion. The immensity of the supply was favourable to the hawker's profit, as the glut enabled him to purchase both cheaply and largely. One young poultry-hawker told me that he had cleared 3*l.* in the Christmas week, and had spent it all in four days—except 5*s.* reserved for stock-money. It was not spent *entirely* in drunkenness, a large portion of it being expended in treats and amusements. So great, indeed, has been the supply of game and poultry this year, that a stranger, unused to the grand scale on which provisions are displayed in ihe great metropolitan marts, on visiting Leadenhall, a week before or after Christmas, might have imagined that the staple food of the London population consisted of turkeys, geese, and chickens. I give, however, an *average* yearly supply:

Description.	Leadenhall.	Newgate.	Total.	Proportion sold in the Streets.
GAME, &c.				
Grouse	45,000	12,000	57,000	One-eleventh.
Partridges	85,000	60,000	145,000	One-seventh.
Pheasants	44,000	20,000	64,000	One-fifth.
Snipes	60,000	47,000	107,000	One-twentieth.
Wild Birds	40,000	20,000	60,000	None.
Plovers	28,000	18,000	46,000	None.
Larks	213,000	100,000	313,000	None.
Teals	10,000	5,000	15,000	None.
Widgeons	30,000	8,000	38,000	None.
Hares	48,000	55,000	102,000	One-fifth.
Rabbits	680,000	180,000	860,000	Three-fourths.
	1,283,000	524,000	1,807,000	
POULTRY.				
Domestic Fowls	1,266,000	490,000	1,756,000	One-third.
——— (alive)	45,000	15,000	60,000	One-tenth.
Geese	888,000	114,000	1,002,000	One-fifth.
Ducks	235,000	148,000	383,000	One-fourth.
—— (alive)	20,000	20,000	40,000	One-tenth.
Turkeys	69,000	55,000	124,000	One-fourth.
Pigeons	285,000	98,000	383,000	None.
	2,808,000	940,000	3,748,000	
Game, &c.	1,283,000	524,000	1,807,000	
	4,091,000	1,464,000	5,555,000	

In the above return wild ducks and woodcocks are not included, because the quantity sent to London is dependent entirely upon the severity of the winter. With the costers wild ducks are a favourite article of trade, and in what those street tradesmen would pronounce a favourable season for wild ducks, which means a very hard winter, the number sold in Londen will, I am told, equal that of pheasants (64,000). The great stock of wild ducks for the London tables is from Holland, where the duck decoys are objects of great care. Less than a fifth of the importation from Holland is from Lincolnshire. These birds, and even the finest and largest, have been sold during a glut at 1s. each. Woodcocks, under similar circumstances, number with plovers (45,000), nearly all of which are "golden plovers;" but of woodcocks the costermongers buy very few: "They're only a mouthful and a half," said one of them, "and don't suit our customers." In severe weather a few ptarmigan are sent to London from Scotland, and in 1841-2 great numbers were sent to the London markets from Norway. One salesman received nearly 10,000 ptarmigan in one day. A portion of these were disposed of to the costers, but the sale was not such as to encourage further importations.

The returns I give show, that, at the two great game and poultry-markets, 5,500,000 birds and animals, wild and tame, are yearly sent to London. To this must be added all that may be consigned direct to metropolitan game-dealers and poulterers, besides what may be sent as presents from the country, &c., so that the London supply may be safely estimated, I am assured, at 6,000,000.

It is difficult to arrive at any very precise computation of the quantity of game and poultry sold by the costers, or rather at the money

value (or price) of what they sell. The most experienced salesmen agree, that, as to *quantity*, including everything popularly considered game (and I have so given it in the return), they sell one-third. As regards *value*, however, their purchases fall very short of a third. Of the best qualities of game, and even more especially of poultry, a third of the hawkers may buy a fifteenth, compared with their purchases in the lower-priced kinds. The others buy none of the best qualities. The more "aristocratic" of the poultry-hawkers will, as a rule, only buy, "when they have an order" or a sure sale, the best quality of English turkey-cocks; which cannot be wondered at, seeing that the average price of the English turkey-cock is 12*s*. One salesman this year sold (at Leadenhall) several turkey-cocks at 30*s*. each, and one at 3*l*. The average price of an English turkey-hen is 4*s*. 6*d*., and of these the costers buy a few: but their chief trade is in foreign turkey-hens; of which the average price (when of good quality and in good condition) is 3*s*. The foreign turkey-cocks average half the price of the English (or 6*s*.). Of Dorking fat chickens, which average 6*s*. the couple, the hawkers buy none (save as in the case of the turkey-cocks); but of the Irish fowls, which, this season, have averaged 2*s*. 6*d*. the couple, they buy largely. On the other hand they buy nearly all the rabbits sent from Scotland, and half of those sent from Ostend, while they "clear the market"—no matter of what the glut may consist—when there *is* a glut. There is another distinction of which the hawker avails himself. The average price of young plump partridges is 2*s*. 6*d*. the brace, of old partridges, 2*s*.; accordingly, the coster buys the old. It is the same with pheasants, the young averaging 7*s*. the brace, the old 6*s*.: "And I can sell them best," said one man; "for my customers say they're more tastier-like. I've sold game for twelve years, or more, but I never tasted any of any kind, so I can't say who's right and who's wrong."

The hawkers buy, also, game and poultry which will not "keep" another day. Sometimes they puff out the breast of a chicken with fresh pork fat, which melts as the bird roasts. "It freshens the fowl, I've been told, and improves it," said one man; "and the shopkeepers now and then, does the same. It's a improvement, sir."

In the present season the costers have bought of wild ducks, comparatively, none, and of teal, widgeons, wild birds, and larks, none at all; or so sparely, as to require no notice.

Of the Street-Purchasers of Game and Poultry.

As the purchasers of game and poultry are of a different class to the costermongers' ordinary customers, I may devote a few words to them. From all the information that I could acquire, they appear to consist, principally, of those who reside at a distance from any cheap market, and buy a cheap luxury when it is brought to their doors, as well as of those who are "always on the look-out for something toothy, such as the shabby genteels, as they're called, who never gives nothing but a scaly price. They've bargained with me till I was hard held from pitching into them, and over and over again I should, only it would have been fourteen days anyhow. They'll tell me my birds stinks, when they're as sweet as flowers. They'd go to the devil to save three farthings on a partridge." Other buyers are old gourmands, living perhaps on small incomes, or if possessed of ample incomes, but confining themselves to a small expenditure; others, again, are men who like a cheap dinner, and seldom enjoy it, at their own cost, unless it be cheap, and who best of all like "such a thing as a moor-bird (grouse)," said one hawker, "which can be eat up to a man's own cheek." This was also the opinion of a poulterer and game-dealer, who sometimes sold "goods" to the hawkers. Of this class of "patrons" many shopkeepers, in all branches of business, have a perfect horror, as they will care nothing for having occupied the tradesmen's time to no purpose.

The game and poultry street-sellers, I am told, soon find out when a customer is bent upon a bargain, and shape their prices accordingly. Although these street-sellers may generally take as their motto the announcement so often seen in the shops of competitive tradesmen, "no reasonable offer refused," they are sometimes so worried in bargaining that they *do* refuse.

In a conversation I had with a "retired" game salesman, he said it might be curious to trace the history of a brace of birds—of grouse, for instance—sold in the streets; and he did it after this manner. They were shot in the Highlands of Scotland by a member of parliament who had gladly left the senate for the moors. They were transferred to a tradesman who lived in or near some Scotch town having railway communication, and with whom "the honourable gentleman," or "the noble lord," had perhaps endeavoured to drive a hard bargain. He (the senator) *must* have a good price for his birds, as he had given a large sum for the moor: and the season was a bad one: the birds were scarce and wild: they would soon be "packed" (be in flocks of twenty or thirty instead of in broods), and then there would be no touching a feather of them. The canny Scot would quietly say that it was early in the season, and the birds never packed so early; that as to price, he could only give what he could get from a London salesman, and he was "nae just free to enter into any agreement for a fixed price at a'." The honourable gentleman, after much demurring, gives way, feeling perhaps that he cannot well do anything else. In due course the grouse are received in Leadenhall, and unpacked and flung about with as little ceremony as if they had been "slaughtered" by a Whitechapel

journeyman butcher, at so much a head. It is a thin market, perhaps, when they come to hand. A dealer, fashionable in the parish of St. George, Hanover-square, has declined to give the price demanded; they were not his money; "he had to give such long credit." A dealer, popular in the ward of Cheap, has also declined to buy, and for the same alleged reason. The salesman, knowing that some of these dealers *must* buy, quietly says that he will take no less, and as he is known to be a man of his word, little is said upon the subject. As the hour arrives at which fashionable game-dealers are compelled to buy, or disappoint customers who will not brook such disappointment, the market, perhaps, is glutted, owing to a very great consignment by a later railway train. The *Inverness Courier*, or the *North of Scotland Gazette*, are in due course quoted by the London papers, touching the "extraordinary sport" of a party of lords and gentlemen in the Highlands; and the "heads" of game are particularized with a care that would do honour to a *Price Current*. The salesman then disposes rapidly of divers "brace" to the "hawkers," at 1*s*. or 2*s*. the brace, and the hawker offers them to hotel-keepers, and shopkeepers, and housekeepers, selling some at 3*s*. 6*d*. the brace, some at 3*s*., at 2*s*. 6*d*., at 2*s*., and at less. "At last," said my informant, "he may sell the finest brace of his basket, which he has held back to get a better price for, at 6*d*. a-piece, rather than keep them over-night, and that to a woman of the town, whom he may have met reeling home with money in her purse. Thus the products of an honourable gentleman's skilful industry, on which he greatly prided himself, are eaten by the woman and her 'fancy man,' grumblingly enough, for they pronounce the birds inferior to tripe."

The best quarters for the street-sale of game and poultry are, I am informed from several sources, either the business parts of the metropolis, or else the houses in the several suburbs which are the furthest from a market or from a business part. The squares, crescents, places, and streets, that do not partake of one or the other of these characteristics, are pronounced "no good."

Of the Experience of a Game Hawker.

The man who gave me the following information was strong and robust, and had a weather-beaten look. He seemed about fifty. He wore when I saw him a large velveteen jacket, a cloth waistcoat which had been once green, and brown corduroy trousers. No part of his attire, though it seemed old, was patched, his shirt being clean and white. He evidently aimed at the game-keeper style of dress. He affected some humour, and was dogged in his opinions:

"I was a gentleman's footman when I was a young man," he said, "and saw life both in town and country; so I knows what things belongs." [A common phrase among persons of his class to denote their being men of the world.] "I never liked the confinement of service, and besides the upper servants takes on so. The others puts up with it more than they would, I suppose, because they hopes to be butlers themselves in time. The only decent people in the house I lived in last was master and missus. I won 20*l*., and got it too, on the Colonel, when he won the Leger. Master was a bit of a turf gentleman, and so we all dabbled—like master like man, you know, sir. I think that was in 1828, but I'm not certain. We came to London not long after Doncaster" [he meant Doncaster races], "something about a lawsuit, and that winter I left service and bought the goodwill of a coffee-shop for 25*l*. It didn't answer. I wasn't up to the coffee-making, I think; there's a deal of things belongs to all things; so I got out of it, and after that I was in service again, and then I was a boots at an inn. But I couldn't settle to nothing long; I'm of a free spirit, you see. I was hard up at last, and I popped my watch for a sovereign, because a friend of mine—we sometimes drank together of a night—said he could put me in the pigeon and chicken line; that was what he called it, but it meant game. This just suited me, for I'd been out with the poachers when I was a lad, and indeed when I was in service, out of a night on the sly; so I knew they got stiffish prices. My friend got me the pigeons. I believe he cheated me, but he's gone to glory. The next season game was made legal eating. Before that I cleared from 25*s*. to 40*s*. a week by selling my 'pigeons.' I carried real pigeons as well, which I said was my own rearing at Gravesend. I sold my game pigeons—there was all sorts of names for them—in the City, and sometimes in the Strand, or Charing-cross, or Covent-garden. I sold to shopkeepers. Oft enough I've been offered so much tea for a hare. I sometimes had a hare in each pocket, but they was very awkward carriage; if one was sold, the other sagged so. I very seldom sold them, at that time, at less than 3*s*. 6*d*., often 4*s*. 6*d*., and sometimes 5*s*. or more. I once sold a thumping old jack-hare to a draper for 6*s*.; it was Christmas time, and he thought it was a beauty. I went into the country after that, among my friends, and had a deal of ups and downs in different parts. I was a navvy part of the time, till five or six year back I came to London again, and got into my old trade; but it's quite a different thing now. I hawks grouse, and every thing, quite open. Leadenhall and Newgate is my markets. Six of one and half-a-dozen of t'other. When there's a great arrival of game, after a game battle" (he would so call a *battue*) "and it's-warm weather, that's my time of day, for then I can buy cheap. A muggy day, when it's close and warm, is best of all. I have a tidy bit of connection now in game, and don't touch poultry when I can get game. Grouse is the first thing I get to sell. They are legal eating on the 12th of August, but as there's hundreds of braces sold in London that day, and as they're shot in Scotland and Yorkshire, and other places where there's moors, in course

they're killed before it's legal. It's not often I can get them early in the season; not the first week, but I have had three brace two days before they were legal, and sold them at 5s. a brace; they cost me 3s. 3d., but I was told I was favoured. I got them of a dealer, but that's a secret. I sold a few young partridges with grouse this year at 1s. 6d. and 1s. 9d. a piece, allowing 2d. or 3d. if a brace was taken. They weren't legal eating till the 1st of September, but they was shot by grouse shooters, and when I hawked them I called them quails. Lord, sir, gentlefolks—and I serve a good many, leastways their cooks, and now and then themselves—*they* don't make a fuss about Game Laws; they've too much sense. I've bought grouse quite fresh and fine when there's been a lot, and bad keeping weather, at 1s. and 15d. each. I've sold them sometimes at 1s. 6d. and 2s. each, and 2s. 6d. the big ones, but only twice or thrice. If you ask very low at first, people won't buy, only a few good judges, 'cause they think something must be amiss. I once bought a dozen good hares, on a Saturday afternoon, for 10s. 6d. It was jolly hot, and I could hardly sell them. I got 1s. 6d. a piece for three of them; 2s. for the finest one; 1s. 3d. for five, no, for four; 1s. 10d. for two; and I had a deal of trouble to get a landlord to take the last two for 1s. 6d., to wipe off a bit of a drink score. I didn't do so bad as it was, but if it hadn't been Saturday, I should have made a good thing of 'em. It's very hard work carrying a dozen hares; and every one of that lot—except two, and *they* was fine leverets—was as cheap as butcher's meat at half-a-crown a piece. I've done middling in partridges this year. I've bought them, but mixed things they was, as low as from 10d. to 16d. a brace, and have made a profit, big or little as happened, on every one. People that's regular customers I always charge 6d. profit in 2s. 6d. to, and that's far cheaper than they can get served other ways. It's chiefly the game battles that does so much to cheapen partridges or peasants" (so he always called pheasants); "and it's only then I meddles with peasants. They're sold handier than the other birds at the shops, I think. They're legal eating on the 1st of October. Such nonsense! why isn't mutton made legal eating, only just at times, as well? In very hard weather I've done well on wild ducks. They come over here when the weather's a clipper, for you see cold weather suits some birds and kills others. It aint hard weather that's driven them here; the frost has drawed them here, because it's only then they're cheap. I've bought beauties at 1s. a piece, and one day I cleared 10s. 6d. out of twelve brace of them. I've often cleared 6s. and 7s.—at least as often as there's been a chance. I knew a man that did uncommon well on them; and he once told a parson, or a journeyman parson, I don't know what he was, that if ever *he* prayed it was for a hard winter and lots of wild ducks. I've done a little sometimes in plover, and woodcock, and snipe, but not so much. I never plays no tricks with *my* birds. I trims them up to look well, certainly. If they won't keep, and won't sell, I sticks them into a landlord I knows, as likes them high, for a quartern or a pot, or anything. It's often impossible to keep them. If they're hard hit it's soon up with them. A sportsman, if he has a good dog—but you'll know that if you've ever been a shooting, sir—may get close upon a covey of young partridges before he springs them, and then give them his one, two, with both barrels, and they're riddled to bits. I may make 18s. a week all the year round, because I have a connection. I'm very much respected, I thinks, on my round, for I deal fair; that there, sir, breeds respect, you know. When I can't get game (birds) I can sometimes, indeed often, get hares, and mostly rabbits. I've hawked venson, but did no good—though I cried it at 4d. the lb. My best weeks is worth 30s. to 35s., my worst is 6s. to 10s. I'm a good deal in the country, working it. I'm forced to sell fish sometimes. Geese I sometimes join a mate in selling. I don't mix much with the costermongers; in coorse I knows some. I live middling. Do I ever eat my own game if it's high? No, sir, never. I couldn't stand such cag-mag—my stomach couldn't—though I've been a gentleman's servant. Such stuff don't suit nobody but rich people, whose stomach's diseased by over-feeding, and that's been brought up to it, like. I've only myself to keep now. I've had a wife or two, but we parted" (this was said gravely enough); "there was nothing to hinder us. I see them sometimes and treat them."

The quantity of game annually sold in the London streets is as follows:—

Grouse	5,000
Partridges	20,000
Pheasants	12,000
Snipes	5,000
Hares	20,000

Statement of Two Poultry Hawkers.

Two brothers, both good-looking and well-spoken young men—one I might characterise as handsome—gave me the following account. I found them unwilling to speak of their youth, and did not press them. I was afterwards informed that their parents died within the same month, and that the family was taken into the workhouse; but the two boys left it in a little time, and before they could benefit by any schooling. Neither of them could read or write. They left, I believe, with some little sum in hand, to "start theirselves." An intelligent costermonger, who was with me when I saw the two brothers, told me that "a costermonger would rather be thought to have come out of prison than out of a workhouse," for his "mates" would say, if they heard he had been locked up, "O, he's only been quodded for pitching into a crusher." The two brothers wore clean smock country frocks over their dress, and made a liberal display of their clean,

but coarse, shirts. It was on a Monday that I saw them. What one brother said, the other confirmed: so I use the plural "we."

"We sell poultry and game, but stick most to poultry, which suits our connection best. We buy at Leadenhall. We're never cheated in the things we buy; indeed, perhaps, we could'nt be. A salesman will say—Mr. H—— will—'Buy, if you like, I can't recommend them. Use your own judgment. They're cheap.' He has only one price, and that's often a low one. We give from 1*s.* to 1*s.* 9*d.* for good chickens, and from 2*s.* 6*d.* mostly for geese and turkeys. Pigeons is 1*s.* 9*d.* to 3*s.* a dozen. We aim at 6*d.* profit on chickens; and 1*s.*, if we can get it, or 6*d.* if we can do no better, on geese and turkeys. Ducks are the same as chickens. All the year through, we may make 12*s.* a week a piece. We work together, one on one side of the street and the other on the other. It answers best that way. People find we can't undersell one another. We buy the poultry, whenever we can, undressed, and dress them ourselves; pull the feathers off and make them ready for cooking. We sell cheaper than the shops, or we couldn't sell at all. But you must be known, to do any trade, or people will think your poultry's bad. We work game as well, but mostly poultry. We've been on hares to-day, mostly, and have made about 2*s.* 6*d.* a piece, but that's an extra day. Our best customers are tradesmen in a big way, and people in the houses a little way out of town. Working people don't buy of us now. We're going to a penny gaff to-night" (it was then between four and five): "we've no better way of spending our time when our day's work is done."

From the returns before given, the street-sale of poultry amounts yearly to

590,000 fowls.
80,000 ducks.
20,000 geese.
80,000 turkeys.

Of the Street Sale of Live Poultry.

The street trade in live poultry is not considerable, and has become less considerable every year, since the facilities of railway conveyance have induced persons in the suburbs to make their purchases in London rather than of the hawkers. Geese used to be bought very largely by the hawkers in Leadenhall, and were driven in flocks to the country, 500 being a frequent number of a flock. Their sale commenced about six miles from town in all directions, the purchasers being those who, having the necessary convenience, liked to fatten their own Christmas geese, and the birds when bought were small and lean. A few flocks, with 120 or 150 in each, are still disposed of in this way; but the trade is not a fifth of what it was. As this branch of the business is not in the hands of the hawkers, but generally of country poulterers resident in the towns not far from the metropolis, I need but allude to it. A few flocks of ducks are driven in the same way.

The street trade in live poultry continues only for three months—from the latter part of June to the latter part of September. At this period, the hawkers say, as they can't get "dead" they must get "live." During these three months the hawkers sell 500 chickens and 300 ducks weekly, by hawking, or 10,400 in the season of 13 weeks. Occasionally, as many as 50 men and women—the same who hawk dead game and poultry—are concerned in the traffic I am treating of. At other times there are hardly 30, and in some not 20 so employed, for if the weather be temperate, dead poultry is preferred to live by the hawkers. Taking the average of "live" sellers at 25 every week, it gives only a trade of 32 birds each weekly. Some, however, will sell 18 in a day; but others, who occasionally resort to the trade, only a dozen in a week. The birds are sometimes carried in baskets on the hawker's arm, their heads being let through network at the top; but more frequently they are hawked in open wicker-work coops carried on the head. The best live poultry are from Surrey and Sussex; the inferior from Ireland, and perhaps more than three-fourths of that sold by the hawkers is Irish.

The further nature of the trade, and the class of customers, is shown in the following statement, given to me by a middle-aged man, who had been familiar with the trade from his youth.

"Yes, sir," he said, "I've had a turn at live poultry for — let me see — someways between twenty and twenty-five years. The business is a sweater, sir; it's heavy work, but 'live' aint so heavy as 'dead.' There's fewer of them to carry in a round, that's it. Ah! twenty years ago, or better, live poultry was worth following. I did a good bit in it. I've sold 160 fowls and ducks, and more, in a week, and cleared about 4*l.* But out of that I had to give a man 1*s.* a day, and his peck, to help me. At that time I sold my ducks and chickens—I worked nothing else—at from 2*s.* to 3*s.* 6*d.* a piece, according to size and quality. Now, if I get from 14*d.* to 2*s.* it's not so bad. I sell more, I think, however, over 1*s.* 6*d.* than under it, but I'm perticler in my 'live.' I never sold to any but people out of town that had convenience to keep them, and Lord knows, I've seen ponds I could jump over reckoned prime for ducks. Them that keeps their gardens nice won't buy live poultry. I've seldom sold to the big houses anything like to what I've done to the smaller. The big houses, you see, goes for fancy bantems, such as Sir John Seabright's, or Spanish hens, or a bit of a game cross, or real game—just for ornament, and not for fighting—or for anything that's got its name up. I've known young couples buy fowls to have their breakfast eggs from them. One young lady told me to bring her—that's fifteen year ago, it is so—six couples, that I knew would lay. I told her she'd better have five hens to a cock, and she didn't seem pleased, but I'm sure I don't know why, for I hope I'm always civil. I told her there would be murder if there was a cock to every hen. I supplied her, and made 6*s.* by the job. I *have* sold

live fowls to the Jews about Whitechapel, on my way to Stratford and Bow, but only when I've bought a bargain and sold one. I don't know nothing how the Jews kills their fowls. Last summer I didn't make 1*s.* 6*d.* a day; no, nor more than three half-crowns a week in 'live.' But that's only part of my trade. I don't complain, so it's nothing to nobody what I makes. From Beever (De Beauvoir) Town to Stamford Hill, and on to Tottenham and Edmonton, and turning off Walthamstow way is as good a round as any for live; it is so; but nothing to what it was. Highgate and Hampstead is middling. The t'other side the water isn't good at all."

Fancy chickens, I may add, are never hawked, nor are live pigeons, nor geese, nor turkeys.

The hawkers' sale of live poultry may be taken, at a moderate computation, as 6,500 chickens, and 3,900 ducks.

Of Rabbit Selling in the Streets.

Rabbit-selling cannot be said to be a distinct branch of costermongering, but some street-sellers devote themselves to it more exclusively than to other "goods," and, for five or six months of the year, sell little else. It is not often, though it is sometimes, united with the game or poultry trade, as a stock of rabbits, of a dozen or a dozen and a half, is a sufficient load for one man. The best sale for rabbits is in the suburbs. They are generally carried slung two and two on a long pole, which is supported on the man's shoulders, or on a short one which is carried in the hand. Lately, they have been hawked about hung up on a barrow. The trade is the briskest in the autumn and winter months; but some men carry them, though they do not confine themselves to the traffic in them, all the year round. The following statement shows the nature of the trade.

"I was born and bred a costermonger," he said, "and I've been concerned with everything in the line. I've been mostly 'on rabbits' these five or six years, but I always sold a few, and now sometimes I sell a hare or two, and, if rabbits is too dear, I tumble on to fish. I buy at Leadenhall mainly. I've given from 6*s.* to 14*s.* a dozen for my rabbits. The usual price is from 5*s.* to 8*s.* a dozen. [I may remark that the costers buy nearly all the Scotch rabbits, at an average of 6*s.* the dozen; and the Ostend rabbits, which are a shilling or two dearer.] They're Hampshire rabbits; but I don't know where Hampshire is. I know they're from Hampshire, for they're called 'Wild Hampshire rabbits, 1*s.* a pair.' But still, as you say, that's only a call. I never sell a rabbit at 6*d.*, in course—it costs more. My way in business is to get 2*d.* profit, and the skin, on every rabbit. If they cost me 8*d.*, I try to get 10*d.* It's the skins is the profit. The skins now brings me from 1*s.* to 1*s.* 9*d.* a dozen. They're best in frosty weather. The fur's thickest then. It grows best in frost, I suppose. If I sell a dozen, it's a tidy day's work. If I get 2*d.* a-piece on them, and the skins at 1*s.* 3*d.*, it's 3*s.* 3*d.*, but I dont sell above 5 dozen in a week—that's 16*s.* 3*d.* a week, sir, is it? Wet and dark weather is against me. People won't often buy rabbits by candlelight, if they're ever so sweet. Some weeks in spring and summer I can't sell above two dozen rabbits. I have sold two dozen and ten on a Saturday in the country, but then I had a young man to help me. I sell the skins to a warehouse for hatters. My old 'oman works a little fish at a stall sometimes, but she only can in fine weather, for we've a kid that can hardly walk, and it don't do to let it stand out in the cold. Perhaps I may make 10*s.* to 14*s.* a week all the year round. I'm paying 1*s.* a week for 1*l.* borrowed, and paid 2*s.* all last year; but I'll pay no more after Christmas. I did better on rabbits four or five year back, because I sold more to working-people and small shopkeepers than I do now. I suppose it's because they're not so well off now as they was then, and, as you say, butchers'-meat may be cheaper now, and tempts them. I do best short ways in the country. Wandsworth way ain't bad. No more is parts of Stoke-Newington and Stamford-hill. St. John's Wood and Hampstead is middling. Hackney's bad. I goes all ways. I dont know what sort of people's my best customers. Two of 'em, I've been told, is banker's clerks, so in course they is rich."

There are 600,000 rabbits sold every year in the streets of London; these, at 7*d.* a-piece, give 17,500*l.* thus expended annually in the metropolis.

Of the Street Sale of Butter, Cheese, and Eggs.

All these commodities used to be hawked in the streets, and to a considerable extent. Until, as nearly as I can ascertain, between twenty and thirty years back, butter was brought from Epping, and other neighbouring parts, where good pasture existed, and hawked in the streets of London, usually along with poultry and eggs. This trade is among the more ancient of the street-trades. Steam-vessels and railways, however, have so stocked the markets, that no hawking of butter or eggs, from any agricultural part, even the nearest to London, would be remunerative now. Eggs are brought in immense quantities from France and Belgium, though thirty, or even twenty years ago the notion having of a good French egg, at a London breakfast-table, would have been laughed at as an absurd attempt at an impossible achievement. The number of eggs now annually imported into this kingdom, is 98,000,000, half of which may be said to be the yearly consumption of London. No butter is now hawked, but sometimes a few "new laid" eggs are carried from a rural part to the nearest metropolitan suburb, and are sold readily enough, if the purveyor be known. Mr. M'Culloch estimates the average consumption of butter, in London, at 6,250,000 lbs. per annum, or 5 oz., weekly, each individual.

The hawking of cheese was never a prominent part of the street-trade. Of late, its sale in the streets, may be described as accidental. A considerable quantity of American cheese was hawked, or more commonly sold at a standing, five or six years ago; unto December last, and for three months preceding, cheese was sold in the streets which had been rejected from Government stores, as it would not "keep" for the period required; but it was good for immediate consumption, for which all street-goods are required. This, and the American cheese, were both sold in the streets at 3*d.* the pound; usually, at fair weights, I am told, for it might not be easy to deceive the poor in a thing of such frequent purchase as "half a quarter or a quarter" (of a pound) of cheese.

The total quantity of foreign cheese consumed, yearly, in the metropolis may be estimated at 25,000,000 lbs. weight, or half of the gross quantity annually imported.

The following statement shows the quantity and sum paid for the game and poultry sold in London streets:

	£
5,000 grouse, at 1*s.* 9*d.* each . . .	437
20,000 partridges, at 1*s.* 6*d.*	1,500
12,000 pheasants, at 3*s.* 6*d.*	2,100
5,000 snipes, at 8*d.*	160
20,000 hares, at 2*s.* 3*d.*	2,250
600,000 rabbits, at 7*d.*	17,500
500,000 fowls, at 1*s.* 6*d.*	37,500
20,000 geese, at 2*s.* 6*d.*	2,500
80,000 ducks, at 1*s.* 6*d.*	6,000
30,000 turkeys, at 3*s.* 6*d.*	5,250
10,000 live fowls and ducks, at 1*s.* 6*d.* . .	750
	£75,953

In this table I do not give the *refuse* game and poultry, bought sometimes for the mere feathers, when "undressed;" neither are the wild ducks nor woodcocks, nor those things of which the costers buy only exceptionally, included. Adding these, it may be said, that with the street sale of butter, cheese, and eggs, 80,000*l.* are annually expended in the streets on this class of articles.

OF THE SELLERS OF TREES, SHRUBS, FLOWERS (CUT AND IN POTS), ROOTS, SEEDS, AND BRANCHES.

The street-sellers of whom I have now to treat comprise those who deal in trees and shrubs, in flowers (whether in pots, or merely with soil attached to the roots, or cut from the plant as it grows in the garden), and in seeds and branches (as of holly, mistletoe, ivy, yew, laurel, palm, lilac, and may). The "root-sellers" (as the dealers in flowers in pots are mostly called) rank, when in a prosperous business, with the highest "aristocracy" of the street-greengrocers. The condition of a portion of them, may be characterised by a term which is readily understood as "comfortable," that is to say, comparatively comfortable, when the circumstances of other street-sellers are considered. I may here remark, that though there are a great number of Scotchmen connected with horticultural labour in England, but more in the provincial than the metropolitan districts, there is not one Scotchman concerned in the metropolitan street-sale of flowers; nor, indeed, as I have good reason to believe, is there a single Scotchman earning his bread as a costermonger in London. A non-commissioned officer in an infantry regiment, a Scotchman, whom I met with a few months back, in the course of my inquiries concerning street musicians, told me that he thought any of his young countrymen, if hard pushed "to get a crust," would enlist, rather than resort, even under favourable circumstances, to any kind of street-sale in London.

The dealers in trees and shrubs are the same as the root-sellers.

The same may be said, but with some few exceptions, of the seed-sellers.

The street-trade in holly, mistletoe, and all kinds of evergreens known as "Christmas," is in the hands of the coster boys more than the men, while the trade in may, &c., is almost altogether confined to these lads.

The root-sellers do not reside in any particular localities, but there are more of them living in the outskirts than in the thickly populated streets.

The street-sellers of cut flowers present characteristics peculiarly their own. This trade is mostly in the hands of girls, who are of two classes. This traffic ranks with the street sale of water-cresses and congreves, that is to say, among the lowest grades of the street-trade, being pursued only by the very poor, or the very young.

OF THE QUANTITY OF SHRUBS, "ROOTS," FLOWERS, ETC., SOLD IN THE STREETS, AND OF THE BUYERS.

The returns which I caused to be procured, to show the extent of the business carried on in the metropolitan markets, give the following results as to the quantity of trees, shrubs, flowers, roots, and branches, sold wholesale in London, as well as the proportion retailed in the streets.

TABLE SHOWING THE QUANTITY OF TREES, SHRUBS, FLOWERS, ROOTS, AND BRANCHES SOLD ANNUALLY, WHOLESALE, AT THE METROPOLITAN MARKETS, AND THE PROPORTION RETAILED IN THE STREETS.*

	Covent Garden.	Farringdon.	Total.	Proportion sold to Costers.
TREES AND SHRUBS.				
Firs	400 doz. roots	400	800	One-third.
Laurels	480 „	480	960	One-third.
Myrtles	1,440 „	1,120	2,560	One-fourth.
Rhododendrons	288 „	256	544	One-ninth.
Lilac	192 „	192	384	One-sixth.
Box	288 „	192	480	One-sixth.
Heaths (of all kinds)	1,600 „	1,440	3,040	One-fifth.
Broom and Furze	544 „	480	1,024	One-fourth.
Laurustinus	400 „	320	720	One-fourth.
Southernwood (Old Man)	960 „	480	1,440	One-half.
FLOWERS (IN POTS).				
Roses (Moss)	1,200 doz. pots	960	2,160	One-half.
Ditto (China)	1,200 „	960	2,160	One-half.
Fuchsias	1,200 „	960	2,160	One-half.
FLOWER ROOTS.				
Primroses	600 doz. roots	400	1,000	One-half.
Polyanthus	720 „	720	1,440	One-half.
Cowslips	720 „	480	1,200	One-half.
Daisies	800 „	600	1,400	One-half.
Wallflowers	960 „	960	1,920	One-half.
Candytufts	720 „	480	1,200	One-half.
Daffodils	720 „	480	1,200	One-half.
Violets	1,200 „	1,200	2,400	One-third.
Mignonette	2,000 „	1,800	3,800	One-sixth.
Stocks	1,600 „	1,280	2,880	One-sixth.
Pinks and Carnations	480 „	320	800	One-half.
Lilies of the Valley	144 „	144	288	One-fourth.
Pansies	600 „	480	1,080	One-fourth.
Lilies and Tulips	152 „	128	280	One-ninth.
Balsam	320 „	320	640	One sixth.
Calceolarii	360 „	240	600	One-ninth.
Musk-plants	5,760 „	4,800	10,560	One-half.
London Pride	400 „	320	720	One-third.
Lupins	960 „	640	1,600	One-third.
China-asters	450 „	400	850	One-sixth.
Marigolds	5,760 „	4,800	10,560	One-eighth.
Dahlias	80 „	80	160	One-ninth.
Heliotrope	800 „	480	1,280	One-sixth.
Michaelmas Daisies	216 „	216	432	One-third.
FLOWERS (CUT).				
Violets	1,440 doz. bunches	1,280	2,720	One-half.
Wallflowers	3,200 „	1,600	4,800	One-half.
Lavender (green and dry)	1,600 „	1,200	4,120†	One-half.
Pinks	720 „	600	1,320	One-third.
Mignonette	2,000 „	1,600	3,600	One-half.
Lilies of the Valley	180 „	160	340	One-tenth.
Moss Roses	2,000 „	1,600	3,600	One-third.
China ditto	2,000 „	1,600	3,600	One-third.
Stocks	800 „	480	1,280	One-third.
BRANCHES.				
Holly	840 doz. bundles	720	1,640†	One-half.
Mistletoe	800 „	640	1,560†	One-half.
Ivy and Laurel	360 „	280	740†	One-half.
Lilac	96 „	64	150	One-half.
Palm	12 „	8	28†	One-half.
May	30 „	20	70†	One-half.

* The numbers here given do not include the shrubs, roots, &c., bought by the hawkers at the nursery gardens
† These totals include the supplies sent to the other markets.

Perhaps the pleasantest of all cries in early spring is that of "All a-growing—all a-blowing" heard for the first time in the season. It is that of the "root-seller" who has stocked his barrow with primroses, violets, and daisies. Their beauty and fragrance gladden the senses; and the first and, perhaps, unexpected sight of them may prompt hopes of the coming year, such as seem proper to the spring.

Cobbett has insisted, and with unquestioned truth, that a fondness for bees and flowers is among the very best characteristics of the English peasant. I consider it equally unquestionable that a fondness for in-door flowers, is indicative of the good character and healthful tastes, as well as of the domestic and industrious habits, of the city artizan. Among some of the most intelligent and best-conducted of these artizans, I may occasionally have found, on my visits to their homes, neither flowers nor birds, but then I have found books.

United with the fondness for the violet, the wallflower, the rose—is the presence of the quality which has been pronounced the handmaiden of all the virtues — cleanliness. I believe that the bunch of violets, on which a poor woman or her husband has expended 1*d.*, rarely ornaments an unswept hearth. In my investigations, I could not but notice how the presence or absence of flowers, together with other indications of the better tastes, marked the difference between the well-paid and the ill-paid workman. Concerning the tailors, for instance, I had occasion to remark, of the dwellings of these classes:—"In the one, you occasionally find small statues of Shakspere beneath glass shades; in the other, all is dirt and fœtor. The working-tailor's comfortable first-floor at the West-end is redolent with the perfume of the small bunch of violets that stands in a tumbler over the mantel-piece; the sweater's wretched garret is rank with the stench of filth and herrings." The presence of the bunch of flowers of itself tells us of "a better state of things" elevating the workman; for, amidst the squalid poverty and fustiness of a slopworker's garret, the nostril loses its daintiness of sense, so that even a freshly fragrant wallflower is only so many yellow petals and green leaves.

A love of flowers is also observable among men whose avocations are out of doors, and those whose habits are necessarily those of order and punctuality.

Among this class are such persons as gentlemen's coachmen, who delight in the display of a flower or two in the button-holes of their coats when out of doors, and in small vases in their rooms in their masters' mews. I have even seen the trellis work opposite the windows of cabmen's rooms, which were over stables, with a projecting roof covering the whole, thickly yellow and green with the flowers and leaves of the easily-trained nasturtium and herb "twopence." The omnibus driver occasionally "sports a nosegay"—as he himself might word it—in his button-hole; and the stage-coachman of old felt he was improperly dressed if a big bunch of flowers were not attached to his coat. Sailors ashore are likewise generally fond of flowers.

A delight in flowers is observable, also, among the workers whose handicraft requires the exercise of taste, and whose eyes are sensible, from the nature of their employment, to the beauty of colour. To this class belong especially the Spitalfields' silk-weavers. At one time the Spitalfields weavers were almost the only botanists in London, and their love of flowers is still strong. I have seen fuchsias gladdening the weaver's eyes by being placed near his loom, their crimson pendants swinging backwarks and forwards to the motion of the treadles, while his small back garden has been many-coloured with dahlias. These weavers, too, were at one time highly-successful as growers of tulips.

Those out-door workmen, whose calling is of coarse character, are never known to purchase flowers, which to them are mere trumpery. Perhaps no one of my readers ever saw a flower in the possession of a flusherman, nightman, slaughterer, sweep, gaslayer, gut and tripe-preparer, or such like labourer. *Their* eyes convey to the mind no appreciation of beauty, and the sense of smell is actually dead in them, except the odour be rank exceedingly.

The fondness for flowers in London is strongest in the women, and, perhaps, strongest in those whose callings are in-door and sedentary. Flowers are to them a companionship.

It remains only for me to state that, in the poorest districts, and among people where there is no sense of refinement or but a small love for natural objects, flowers are little known. Flowers are not bought by the slop-workers, the garret and chamber-masters of Bethnal-green, nor in the poor Irish districts, nor by the City people. Indeed, as I have observed, there is not a flower-stand in the city.

It should be remembered that, in poor districts, the first appearance of flowers conveys to the slop-workman only one pleasurable association—that the season of warmth has arrived, and that he will not only escape being chilled with cold, but that he will be delivered from the heavy burden of providing fire and candle.

A pleasant-looking man, with an appearance which the vulgar characterise as "jolly," and with hearty manners, gave me the following account as to the character of his customers. He had known the business since he was a boy, his friends having been in it previously. He said:

"There's one old gentleman a little way out of town, he always gives 1*s.* for the first violet root that any such as me carries there. I'm often there before any others: 'Ah!' he says, 'here you are; you've come, like Buonaparte, with your violet.' I don't know exactly what he means. I don't like to ask him you see; for, though he's civil, he's not what you

may call a free sort of man—that's it." [I explained to him that the allusion was to Buonaparte's emblem of the violet, with the interpretation he or his admirers gave to it—"I come in the spring."] "That's it, sir, is it?" he resumed; "well, I'm glad I know, because I don't like to be puzzled. Mine's a puzzling trade, though. Violets have a good sale. I've sold six dozen roots in a day, and only half as many primroses and double-daisies, if half. Everybody likes violets. I've sold some to poor people in town, but they like their roots in pots. They haven't a bit of a garden for 'em. More shame too I say, when they pays such rents. People that sits working all day is very fond of a sweet flower. A gentleman that's always a-writing or a-reading in his office—he's in the timber-trade—buys something of me every time I see him; twice or thrice a week, sometimes. I can't say what he does with them all. Barmaids, though you mightn't think it, sir, is wery tidy customers. So, sometimes, is young women that's in an improper way of life, about Lisson-grove, and in some parts near Oxford-street. They buys all sorts. Perhaps more stocks than anything, for they're beautiful roots, and not dear. I've sold real beauties for *2d.*—real beauties, but small; *6d.* is a fair price; one stock will perfume a house. I tell my customers not to sleep with them in the room; it isn't good for the health. A doctor told me that, and said, 'You ought to give me a fuchsia for my opinion.' That was his joke. Primroses I sell most of—they're not in pots—two or three or four miles out of town, and most if a family's come into a new house, or changed their house, if there's children. The young ones teases the old ones to buy them to set in the garden, and when children gets fairly to work that way, it's a sure sale. If they can't get over father, they'll get over mother. Busy men never buy flowers, as far as I've seen." ['In no thoroughfare in the city, I am assured, is there a flower-stand—a circumstance speaking volumes as to the habits and tastes of the people. Of fruit-stalls and chop-houses there are in the neighbourhood of the Exchange, more than in any other part of London perhaps—the faculty of perceiving the beauty of colour, form, and perfume, as combined in flowers is not common to the man of business. The pleasures of the palate, however, they can all understand.'] "Parsons and doctors are often tidy customers," resumed my informant. "They have a good deal of sitting and reading, I believe. I've heard a parson say to his wife, 'Do, my dear, go and buy a couple of those wallflowers for my study.' I don't do much for working-men; the women's my best customers. There's a shoemaker to be sure comes down sometimes with his old woman to lay out *2d.* or *3d.* on me; 'Let's have something that smells strong,' he'll say, 'stronger than cobbler's wax; for, though I can't smell that, others can.' I've sold him musks (musk-plants) as often as anything.

"The poor people buy rather largely at times; that is, many of them buy. One day last summer, my old woman and me sold 600 penny pots of mignonette; and all about you saw them—and it was a pleasure to see them—in the poor women's windows. The women are far the best customers. There was the mignonette behind the bits of bars they have, in the shape of gates and such like, in the front of their windows, in the way of preventing the pots falling into the street. Mignonette's the best of all for a sure sale; where can you possibly have a sweeter or a nicer penn'orth, pot and all."

Of the Street Sale of Trees and Shrubs.

The street-trade in trees and shrubs is an appendage of "root-selling," and not an independent avocation. The season of supply at the markets extends over July, August, September, and October, with a smaller trade in the winter and spring months. At the nursery gardens, from the best data I can arrive at, there are about twice as many trees and shrubs purchased as in the markets by the costermongers. Nor is this the only difference. It is the more costly descriptions that are bought at the nursery grounds.

The trees and shrubs are bought at the gardens under precisely the same circumstances as the roots, but the trade is by no means popular with the root-sellers. They regard these heavy, cumbrous goods, as the smarter costers do such things as turnips and potatoes, requiring more room, and yielding less profit. "It breaks a man's heart," said one dealer, "and half kills his beast, going round with a lot of heavy things, that perhaps you can't sell." The street-dealers say they must keep them, "or people will go, where they can get roots, and trees, and everything, all together." In winter, or in early spring, the street-seller goes a round now and then, with evergreens and shrubs alone, and the trade is then less distasteful to him. The trees and shrubs are displayed, when the market-space allows, on a sort of stand near the flower-stand; sometimes they are placed on the ground, along-side the flower-stand, but only when no better display can be made.

The trees and shrubs sold by the costers are mezereons, rhododendrons, savine, laurustinus, acacias (of the smaller genera, some being highly aromatic when in flower), myrtles, guelder-roses (when small), privet, genistas, broom, furze (when small), the cheaper heaths, syringas (small), lilacs (almost always young and for transplanting), southernwood (when large), box (large) dwarf laurels, variegated laurels (called a *cuber* by the street-people), and young fir-trees, &c.

The prices of trees vary far more than flower-roots, because they are dependent upon *size* for value. "Why," said one man, "I've bought roddies, as I calls them (rhododendrons), at *4s.* a dozen, but they was scrubby things, and I've bought them at *14s. 6d.* I once gave *5s.* for two trees of them, which I had ordered, and there was a rare grumbling about the price,

Original from HARVARD UNIVERSITY

though I only charged 7*s.* 6*d.* for the two, which was 1*s.* 3*d.* a piece for carriage, and hard earned too, to carry them near five miles in my cart, almost on purpose, but I thought I was pleasing a good customer. Then there's myrtles, why I can get them at 5*d.* a piece, and at 5*s.*, and a deal more if wanted. You can have myrtles that a hat might be very big for them to grow in, and myrtles that will fill a great window in a fine house. I've bought common heaths at 1*s.* 3*d.* a dozen."

The coster ordinarily confines himself to the cheaper sorts of plants, and rarely meddles with such things as acacias, mezereons, savines, syringas, lilacs, or even myrtles, and with none of these things unless cheap. "Trees, real trees," I was told, "are often as cheap as anything. Them young firs there was 4*s.* 6*d.* a dozen, and a man at market can buy four or six of them if he don't want a dozen."

The customers for trees and shrubs are generally those who inhabit the larger sort of houses, where there is room in the hall or the windows for display; or where there is a garden capacious enough for the implantation of the shrubs. Three-fourths of the trees are sold on a round, and when purchased at a stall the costermonger generally undertakes to deliver them at the purchaser's residence, if not too much out of his way, in his regular rounds. Or he may diverge, and make a round on speculation, purposely. There is as much bartering trees for old clothes, as for roots, and as many, or more, complaints of the hard bargainings of ladies: "I'd rather sell polyanthuses at a farthing a piece profit to poor women, if I could get no more," said one man, "than I'd work among them screws that's so fine in grand caps and so civil. They'd skin a flea for his hide and tallow."

The number of trees and shrubs sold annually, in the streets, are, as near as I can ascertain, as follows—I have added to the quantity purchased by the street-sellers, at the metropolitan markets, the amount bought by them at the principal nursery-gardens in the environs of London:

Firs	9,576	roots
Laurels	1,152	"
Myrtles	23,040	"
Rhododendrons	2,160	"
Lilacs	2,304	"
Box	2,880	"
Heaths	21,888	"
Broom	2,880	"
Furze	6,912	"
Laurustinus	6,480	"
Southernwood	25,920	"

The London Flower Girls.

It is not easy to arrive at any accurate estimate of the number of flower-sellers in the streets of London. The cause of the difficulty lies in the fact that none can be said to devote themselves entirely to the sale of flowers in the street, for the flower-sellers, when oranges are cheap and good, find their sale of the fruit more certain and profitable than that of flowers, and resort to it accordingly. Another reason is, that a poor costermonger will on a fine summer's day send out his children to sell flowers, while on other days they may be selling watercresses or, perhaps, onions. Sunday is the best day for flower-selling, and one experienced man computed, that in the height and pride of the summer 400 children were selling flowers, on the Sundays, in the streets. Another man thought that number too low an estimate, and contended that it was nearer 800. I found more of the opinion of my last mentioned informant than of the other, but I myself am disposed to think the smaller number nearer the truth. On week days it is computed there are about half the number of flower-sellers that there are on the Sundays. The trade is almost entirely in the hands of children, the girls outnumbering the boys by more than eight to one. The ages of the girls vary from six to twenty; few of the boys are older than twelve, and most of them are under ten.

Of flower-girls there are two classes. Some girls, and they are certainly the smaller class of the two, avail themselves of the sale of flowers in the streets for immoral purposes, or rather, they seek to eke out the small gains of their trade by such practises. They frequent the great thoroughfares, and offer their bouquets to gentlemen, whom on an evening they pursue for a hundred yards or two in such places as the Strand, mixing up a leer with their whine for custom or for charity. Their ages are from fourteen to nineteen or twenty, and sometimes they remain out offering their flowers—or dried lavender when no fresh flowers are to be had—until late at night. They do not care, to make their appearance in the streets until towards evening, and though they solicit the custom of ladies, they rarely follow or importune them. Of this class I shall treat more fully under another head.

The other class of flower-girls is composed of the girls who, wholly or partially, depend upon the sale of flowers for their own support or as an assistance to their parents. Some of them are the children of street-sellers, some are orphans, and some are the daughters of mechanics who are out of employment, and who prefer any course rather than an application to the parish. These girls offer their flowers in the principal streets at the West End, and resort greatly to the suburbs; there are a few, also, in the business thoroughfares. They walk up and down in front of the houses, offering their flowers to any one looking out of the windows, or they stand at any likely place. They are generally very persevering, more especially the younger children, who will run along, barefooted, with their "Please, gentleman, do buy my flowers. Poor little girl!"—"Please, kind lady, buy my violets. O, do! please! Poor little girl! Do buy a bunch, please, kind lady!"

The statement I give, "of two orphan flower-

Original from HARVARD UNIVERSITY

sellers" furnishes another proof, in addition to the many I have already given, of the heroic struggles of the poor, and of the truth of the saying, "What would the poor do without the poor?"

The better class of flower-girls reside in Lisson-grove, in the streets off Drury-lane, in St. Giles's, and in other parts inhabited by the very poor. Some of them live in lodging-houses, the stench and squalor of which are in remarkable contrast to the beauty and fragrance of the flowers they sometimes have to carry thither with them unsold.

Of Two Orphan Flower Girls.

Of these girls the elder was fifteen and the younger eleven. Both were clad in old, but not torn, dark print frocks, hanging so closely, and yet so loosely, about them as to show the deficiency of under-clothing; they wore old broken black chip bonnets. The older sister (or rather half-sister) had a pair of old worn-out shoes on her feet, the younger was barefoot, but trotted along, in a gait at once quick and feeble—as if the soles of her little feet were impervious, like horn, to the roughness of the road. The elder girl has a modest expression of countenance, with no pretensions to prettiness except in having tolerably good eyes. Her complexion was somewhat muddy, and her features somewhat pinched. The younger child had a round, chubby, and even rosy face, and quite a healthful look. Her portrait is here given.

They lived in one of the streets near Drury-lane. They were inmates of a house, not let out as a lodging-house, in separate beds, but in rooms, and inhabited by street-sellers and street-labourers. The room they occupied was large, and one dim candle lighted it so insufficiently that it seemed to exaggerate the dimensions. The walls were bare and discoloured with damp. The furniture consisted of a crazy table and a few chairs, and in the centre of the room was an old four-post bedstead of the larger size. This bed was occupied nightly by the two sisters and their brother, a lad just turned thirteen. In a sort of recess in a corner of the room was the decency of an old curtain—or something equivalent, for I could hardly see in the dimness—and behind this was, I presume, the bed of the married couple. The three children paid 2*s.* a week for the room, the tenant an Irishman out of work paying 2*s.* 9*d.*, but the furniture was his, and his wife aided the children in their trifle of washing, mended their clothes, where such a thing was possible, and such like. The husband was absent at the time of my visit, but the wife seemed of a better stamp, judging by her appearance, and by her refraining from any direct, or even indirect, way of begging, as well as from the "Glory be to Gods!" "the heavens be your honour's bed!" or "it's the thruth I'm telling of you sir," that I so frequently meet with on similar visits.

The elder girl said, in an English accent, not at all garrulously, but merely in answer to my questions: "I sell flowers, sir; we live almost on flowers when they are to be got. I sell, and so does my sister, all kinds, but it's very little use offering any that's not sweet. I think it's the sweetness as sells them. I sell primroses, when they're in, and violets, and wall-flowers, and stocks, and roses of different sorts, and pinks, and carnations, and mixed flowers, and lilies of the valley, and green lavender, and mignonette (but that I do very seldom), and violets again at this time of the year, for we get them both in spring and winter." [They are forced in hot-houses for winter sale, I may remark.] "The best sale of all is, I think, moss-roses, young moss-roses. We do best of all on them. Primroses are good, for people say: 'Well, here's spring again to a certainty.' Gentlemen are our best customers. I've heard that they buy flowers to give to the ladies. Ladies have sometimes said: 'A penny, my poor girl, here's three-halfpence for the bunch.' Or they've given me the price of two bunches for one; so have gentlemen. I never had a rude word said to me by a gentleman in [illegible] life. No, sir, neither lady nor gentlem[illegible] their [illegible]ave me 6*d.* for a bunch of flowers. [illegible] a sixpence given to me in my li[illegible] are bought I never go among boys, I know gardens; but my brother. My father was a t[illegible]red [illegible]man in Mitchelstown, in the County Cork. I don't know what sort of a tradesman he was. I never saw him. He was a tradesman I've been told. I was born in London. Mother was a chairwoman, and lived very well. None of us ever saw a father." [It was evident that they were illegitimate children, but the landlady had never seen the mother, and could give me no information.] "We don't know anything about our fathers. We were all 'mother's children.' Mother died seven years ago last Guy Faux day. I've got myself, and my brother and sister a bit of bread ever since, and never had any help but from the neighbours. I never troubled the parish. O, yes, sir, the neighbours is all poor people, very poor, some of them. We've lived with her" (indicating her landlady by a gesture) "the[illegible] two years, and off and on before that. I can't say how long." "Well, I don't know exactly," said the landlady, "but I've had them with me almost all the time, for four years, as near as I can recollect; perhaps more. I've moved three times, and they always followed me." In answer to my inquiries the landlady assured me that these two poor girls, were never out of doors all the time she had known them after six at night. "We've always good health. We can all read." [Here the three somewhat insisted upon proving to me their proficiency in reading, and having produced a Roman Catholic book, the "Garden of Heaven," they read very well.] "I put myself," continued the girl, "and I put my brother and sister to

Original from HARVARD UNIVERSITY

a Roman Catholic school—and to Ragged schools—but *I* could read before mother died. My brother can write, and I pray to God that he'll do well with it. I buy my flowers at Covent Garden; sometimes, but very seldom, at Farringdon. I pay 1*s.* for a dozen bunches, whatever flowers are in. Out of every two bunches I can make three, at 1*d.* a piece. Sometimes one or two over in the dozen, but not so often as I would like. We make the bunches up ourselves. We get the rush to tie them with for nothing. We put their own leaves round these violets (she produced a bunch). The paper for a dozen costs a penny; sometimes only a halfpenny. The two of us doesn't make less than 6*d.* a day, unless it's very ill luck. But religion teaches us that God will support us, and if we make less we say nothing. We do better on oranges in March or April, I think it is, than on flowers. Oranges keep better than flowers you see, sir. We make 1*s.* a day, and 9*d.* a day, on oranges, the two of us. I wish they was in all the year. I generally go St. John's-wood way, and Hampstead and Highgate way with my flowers. I can get them nearly all the year, but oranges is better liked than flew-rs, I think. I always keep 1*s.* stock-morrally uncan. If it's bad weather, so bad thrchaser's resill flowers at all, and so if we've ha way, in hiur stock-money for a bit of bread, *she* ve, and ady) lends us 1*s.*, if she has one, or shely. Jows one of a neighbour, if she hasn't, or if the neighbours hasn't it, she borrows it at a dolly-shop" (the illegal pawnshop). "There's 2*d.* a week to pay for 1*s.* at a dolly, and perhaps an old rug left for it; if it's very hard weather, the rug must be taken at night time, or we are starved with the cold. It sometimes has to be put into the dolly again next morning, and then there's 2*d.* to pay for it for the day. We've had a frock in for 6*d.*, and that's a penny a week, and the same for a day. We never pawned anything; we have nothing they would take in at the pawnshop. We live on bread and tea, and sometimes a fresh herring of a night. Sometimes we don't eat a bit all day when we're out; sometimes we take a bit of bread with us, or buy a bit. My sister can't eat taturs; they sicken her. I don't know what emigrating means." [I informed her and she continued]: "No, sir, I wouldn't like to emigrate and leave brother and sister. If they went with me I don't think I should like it, not among strangers. I think our living costs us 2*s.* a week for the two of us; the rest goes in rent. That's all we make."

The brother earned from 1*s.* 6*d.* to 2*s.* a week, with an occasional meal, as a costermonger's boy. Neither of them ever missed mass on a Sunday.

OF THE LIFE OF A FLOWER GIRL.

SOME of these girls are, as I have stated, of an immoral character, and some of them are sent out by their parents to make out a livelihood by prostitution. One of this class, whom I saw, had come out of prison a short time previously. She was not nineteen, and had been sentenced about a twelvemonth before to three months' imprisonment with hard labour, "for heaving her shoe," as she said, "at the Lord Mayor, to get a comfortable lodging, for she was tired of being about the streets." After this she was locked up for breaking the lamps in the street. She alleged that her motive for this was a belief that by committing some such act she might be able to get into an asylum for females. She was sent out into the streets by her father and mother, at the age of nine, to sell flowers. Her father used to supply her with the money to buy the flowers, and she used to take the proceeds of the day's work home to her parents. She used to be out frequently till past midnight, and seldom or never got home before nine. She associated only with flower-girls of loose character. The result may be imagined. She could not state positively that her parents were aware of the manner in which she got the money she took home to them. She supposes that they must have imagined what her practices were. He used to give her no supper if she "didn't bring home a good bit of money." Her father and mother did little or no work all this while. They lived on what she brought home. At thirteen years old she was sent to prison (she stated) "for selling combs in the street" (it was winter, and there were no flowers to be had). She was incarcerated fourteen days, and when liberated she returned to her former practices. The very night that she came home from gaol her father sent her out into the streets again. She continued in this state, her father and mother living upon her, until about twelve months before I received this account from her, when her father turned her out of his house, because she didn't bring home money enough. She then went into Kent, hop-picking, and there fell in with a beggar, who accosted her while she was sitting under a tree. He said, "You have got a very bad pair of shoes on; come with me, and you shall have some better ones." She consented, and walked with him into the village close by, where they stood out in the middle of the streets, and the man began addressing the people, "My kind good Christians, me and my poor wife here is ashamed to appear before you in the state we are in." She remained with this person all the winter, and travelled with him through the country, begging. He was a beggar by trade. In the spring she returned to the flower-selling, but scarcely got any money either by that or other means. At last she grew desperate, and wanted to get back to prison. She broke the lamps outside the Mansion-house, and was sentenced to fourteen days' imprisonment. She had been out of prison nearly three weeks when I saw her, and was in training to go into an asylum. She was sick and tired, she said, of her life.

Of the Street Sale of Lavender.

The sale of green lavender in the streets is carried on by the same class as the sale of flowers, and is, as often as flowers, used for immoral purposes, when an evening or night sale is carried on.

The lavender is sold at the markets in bundles, each containing a dozen branches. It is sold principally to ladies in the suburbs, who purchase it to deposit in drawers and wardrobes; the odour communicated to linen from lavender being, perhaps, more agreeable and more communicable than that from any other flower. Nearly a tenth of the market sale may be disposed of in this way. Some costers sell it cheap to recommend themselves to ladies who are customers, that they may have the better chance for a continuance of those ladies' custom.

The number of lavender-sellers can hardly be given as distinct from that of flower-sellers, because any flower-girl will sell lavender, "when it is in season." The season continues from the beginning of July to the end of September. In the winter months, generally after day-fall, dried lavender is offered for sale; it is bought at the herb-shops. There is, however, an addition to the number of the flower-girls of a few old women, perhaps from twenty to thirty, who vary their street-selling avocations by going from door to door in the suburbs with lavender for sale, but do not stand to offer it in the street.

The street-seller's profit on lavender is now somewhat more than cent. per cent., as the bundle, costing 2½*d.*, brings when tied up in sprigs, at least, 6*d.* The profit, I am told, was, six or seven years ago, 200 per cent; "but people will have better penn'orths now." I was informed, by a person long familiar with the trade in flowers, that, from twenty to twenty-five years ago, the sale was the best. It was a fashionable amusement for ladies to tie the sprigs of lavender together, compressing the stems very tightly with narrow ribbon of any favourite colour, the heads being less tightly bound, or remaining unbound; the largest stems were in demand for this work. The lavender bundle, when its manufacture was complete, was placed in drawers, or behind books in the shelves of a glazed book-case, so that a most pleasant atmosphere was diffused when the book-case was opened.

Cut Flowers.

I now give the quantity of cut flowers sold in the streets. The returns have been derived from nursery-men and market-salesmen. It will be seen how fully these returns corroborate the statement of the poor flower-girl—(p. 135)—"it's very little use offering anything that's not sweet."

I may remark, too, that at the present period, from "the mildness of the season," wallflowers, primroses, violets, and polyanthuses are almost as abundant as in spring sunshine.

Violets	65,280	bunches.

Cut flowers sold yearly in the streets	994,560	"

Of the Street Sale of Flowers in Pots, Roots, etc.

The "flower-root sellers"—for I heard them so called to distinguish them from the sellers of "cut flowers"—are among the best-mannered and the best-dressed of all the street-sellers I have met with, but that only as regards a portion of them. Their superiority in this respect may perhaps be in some measure attributable to their dealing with a better class of customers—with persons who, whether poor or rich, exercise healthful tastes.

I may mention, that I found the street-sellers of "roots"—always meaning thereby flower-roots in bloom—more attached to their trade than others of their class.

The roots, sold in the streets, are bought in the markets and at the nursery-gardens; but about three-fourths of those required by the better class of street-dealers are bought at the gardens, as are "cut flowers" occasionally. Hackney is the suburb most resorted to by the root-sellers. The best "pitches" for the sale of roots in the street are situated in the New-road, the City-road, the Hampstead-road, the Edgeware-road, and places of similar character, where there is a constant stream of passers along, who are not too much immersed in business. Above three-fourths of the sale is effected by itinerant costermongers. For this there is one manifest reason: a flower-pot, with the delicate petals of its full-blown moss-rose, perhaps, suffers even from the trifling concussion in the journey of an omnibus, for instance. To carry a heavy flower-pot, even any short distance, cannot be expected, and to take a cab for its conveyance adds greatly to the expense. Hence, flower-roots are generally purchased at the door of the buyer.

For the flowers of commoner or easier culture, the root-seller receives from 1*d.* to 3*d.* These are primroses, polyanthuses, cowslips (but in small quantities comparatively), daisies (single and double,—and single or wild, daisies were coming to be more asked for, each 1*d.*), small early wallflowers, candy-tufts, southernwood (called "lad's love" or "old man" by some), and daffodils, (but daffodils were sometimes dearer than 3*d.*). The plants that may be said to struggle against frost and snow in a hard season, such as the snowdrop, the crocus, and the mezereon, are rarely sold by the costers; "They come too soon," I was told. The prim-

Original from HARVARD UNIVERSITY

roses, and the other plants I have enumerated, are sold, for the most part, not in pots, but with soil attached to the roots, so that they may be planted in a garden (as they most frequently are) or in a pot.

Towards the close of May, in an early season, and in the two following months, the root-trade is at its height. Many of the stalls and barrows are then exceedingly beautiful, the barrow often resembling a moving garden. The stall-keepers have sometimes their flowers placed on a series of shelves, one above another, so as to present a small amphitheatre of beautiful and diversified hues; the purest white, as in the lily of the valley, to the deepest crimson, as in the fuschia; the bright or rust-blotted yellow of the wall-flower, to the many hues of the stock. Then there are the pinks and carnations, double and single, with the rich-coloured and heavily scented "clove-pinks;" roses, mignonette, the velvetty pansies (or heart's-ease), the white and orange lilies, calceolarias, balsams (a flower going out of fashion), geraniums (flowers coming again into fashion), musk-plants, London pride (and other saxifrages; the species known, oddly enough, as London pride being a native of wild and mountainous districts, such as botanists call "Alpine habitats,") and the many coloured lupins. Later again come the China-asters, the African marigolds, the dahlias, the poppies, and the common and very aromatic marigold. Later still there are the Michaelmas daisies—the growth of the "All-Hallow'n summer," to which Falstaff was compared.

There is a class of "roots" in which the street-sellers, on account of their general dearness, deal so sparingly, that I cannot class them as a part of the business. Among these are anemones, hyacinths, tulips, ranunculuses, and the orchidaceous tribe. Neither do the street people meddle, unless very exceptionally, with the taller and statelier plants, such as foxgloves, hollyoaks, and sunflowers; these are too difficult of carriage for their purpose. Nor do they sell, unless again as an exception, such flowers as require support—the convolvolus and the sweet-pea, for instance.

The plants I have specified vary in price. Geraniums are sold at from *3d.* to *5s.*; pinks at from *3d.* for the common pink, to *2s.* for the best single clove, and *4s.* for the best double; stocks, as they are small and single, to their being large and double, from *3d.* (and sometimes less) to *2s.*; dahlias from *6d.* to *5s.*; fuschias, from *6d.* to *4s.*; rose-bushes from *3d.* to *1s. 6d.*, and sometimes, but not often, much higher; musk-plants, London pride, lupins, &c., are *1d.* and *2d.*, pots generally included.

To carry on his business efficiently, the root-seller mostly keeps a pony and a cart, to convey his purchases from the garden to his stall or his barrow, and he must have a sheltered and cool shed in which to deposit the flowers which are to be kept over-night for the morrow's business. "It's a great bother, sir," said a root-seller, "a man having to provide a shed for his roots. It wouldn't do at all to have them in the same room as we sleep in—they'd droop. I have a beautiful big shed, and a snug stall for a donkey in a corner of it; but he won't bear tying up—he'll fight against tying all night, and if he was loose, why in course he'd eat the flowers I put in the shed. The price is nothing to him; he'd eat the Queen's camellias, if he could get at them, if they cost a pound a-piece. So I have a deal of trouble, for I must block him up somehow; but he's a first-rate ass." To carry on a considerable business, the services of a man and his wife are generally required, as well as those of a boy.

The purchases wholesale are generally by the dozen roots, all ready for sale in pots. Mignonette, however, is grown in boxes, and sold by the box at from *5s.* to *20s.*, according to the size, &c. The costermonger buys, for the large sale to the poor, at a rate which brings the mignonette roots into his possession at something less, perhaps, than a halfpenny each. He then purchases a gross of small common pots, costing him *1½d.* a dozen, and has to transfer the roots and soil to the pots, and then offer them for sale. The profit thus is about *4s.* per hundred, but with the drawback of considerable labour and some cost in the conveyance of the boxes. The same method is sometimes pursued with young stocks.

The cheapness of pots, I may mention incidentally, and the more frequent sale of roots in them, has almost entirely swept away the fragment of a pitcher and "the spoutless teapot," which Cowper mentions as containing the poor man's flowers, that testified an inextinguishable love of rural objects, even in the heart of a city. There are a few such things, however, to be seen still.

Of root-sellers there are, for six months of the year, about 500 in London. Of these, one-fifth devote themselves principally, but none entirely, to the sale of roots; two-fifths sell roots regularly, but only as a portion, and not a larger portion of their business; and the remaining two-fifths are casual dealers in roots, buying them — almost always in the markets — whenever a bargain offers. Seven-eighths of the root-sellers are, I am informed, regular costers, occasionally a gardener's assistant has taken to the street trade in flowers, "but I fancy, sir," said an experienced man to me, "they've very seldom done any good at it. They're always *gardening* at their roots, trimming them, and such like, and they overdo it. They're too careful of their plants; people like to trim them theirselves."

"I did well on fuschias last season," said one of my informants; "I sold them from *6d.* to *1s. 6d.* The 'Globes' went off well. Geraniums was very fair. The 'Fairy Queens' of them sold faster than any, I think. It's the ladies out of town a little way, and a few in town, that buy them, and buy the fuschias too. They require a good window. The 'Jenny Linds'—they was geraniums and

Original from HARVARD UNIVERSITY

other plants—didn't sell so well as the Fairy Queens, though they was cheaper. Good cloves (pinks) sell to the better sort of houses; so do carnations. Mignonette's everybody's money. Dahlias didn't go off so well. I had very tidy dahlias at 6*d.* and 1*s.*, and some 1*s.* 6*d.* I do a goodish bit in giving flowers for old clothes. I very seldom do it, but to ladies. I deal mostly with them for their husbands' old hats, or boots, or shoes; yes, sir, and their trowsers and waistcoats sometimes—very seldom their coats—and ladies boots and shoes too. There's one pleasant old lady, and her two daughters, they'll talk me over any day. I very seldom indeed trade for ladies' clothes. I have, though. Mostly for something in the shawl way, or wraps of some kind. Why, that lady I was telling you of and her daughters, got me to take togs that didn't bring the prime cost of my roots and expenses. They called them by such fine names, that I was had. Then they was so polite; 'O, my good man,' says one of the young daughters, 'I must have this geranium in 'change.' It was a most big and beautiful Fairy Queen, well worth 4*s.* The tog—I didn't know what they called it—a sort of cloak, fetched short of half-a-crown, and that just with cheaper togs. Some days, if it's very hot, and the stall business isn't good in *very* hot weather, my wife goes a round with me, and does considerable in swopping with ladies. They can't do her as they can me. The same on wet days, if it's not very wet, when I has my roots covered in the cart. Ladies is mostly at home such times, and perhaps they're dull, and likes to go to work at a bargaining. My wife manages them. In good weeks, I can clear 3*l.* in my trade; the two of us can, anyhow. But then there's bad weather, and there's sometimes roots spoiled if they're not cheap, and don't go off—but I'll sell one that cost me 1*s.* for 2*d.* to get rid of it; and there's always the expenses to meet, and the pony to keep, and everything that way. No, sir, I don't make 2*l.* a week for the five months—its nearer five than six—the season lasts; perhaps something near it. The rest of the year I sell fruit, or anything, and may clear 10*s.* or 15*s.* a week, but, some weeks, next to nothing, and the expenses all going on.

"Why, no, sir; I can't say that times is what they was. Where I made 4*l.* on my roots five or six years back, I make only 3*l.* now. But it's no use complaining; there's lots worse off than I am—lots. I've given pennies and twopences to plenty that's seen better days in the streets; it might be their own fault. It is so mostly, but perhaps only partly. I keep a connection together as well as I can. I have a stall; my wife's there generally, and I go a round as well."

One of the principal root-sellers in the streets told me that he not unfrequently sold ten dozen a day, over and above those sold not in pots. As my informant had a superior trade, his business is not to be taken as an average; but, reckoning that he averages six dozen a day for 20 weeks—he said 26—it shows that one man alone sells 8,640 flowers in pots in the season. The principal sellers carry on about the same extent of business.

According to similar returns, the number of the several kinds of flowers in pots and flower roots sold annually in the London streets, are as follows:

FLOWERS IN POTS.

Moss-roses	38,880
China-roses	38,880
Fuschias	38,800
Geraniums	12,800
Total number of flowers in pots sold in the streets	128,360

FLOWER-ROOTS.

Primroses	24,000
Polyanthuses	34,560
Cowslips	28,800
Daisies	33,600
Wallflowers	46,080
Candytufts	28,800
Daffodils	28,800
Violets	38,400
Mignonette	30,384
Stocks	23,040
Pinks and Carnations	19,200
Lilies of the Valley	3,456
Pansies	12,960
Lilies	660
Tulips	852
Balsams	7,704
Calceolarias	3,180
Musk Plants	253,440
London Pride	11,520
Lupins	25,596
China-asters	9,156
Marigolds	63,360
Dahlias	852
Heliotrope	13,356
Poppies	1,920
Michaelmas Daisies	6,912
Total number of flower-roots sold in the streets	750,588

Of the Street Sale of Seeds.

The street sale of seeds, I am informed, is smaller than it was thirty, or even twenty years back. One reason assigned for this falling off is the superior cheapness of "flowers in pots." At one time, I was informed, the poorer classes who were fond of flowers liked to "grow their own mignonette." I told one of my informants that I had been assured by a trustworthy man, that in one day he had sold 600 penny pots of mignonette: "Not a bit of doubt of it, sir," was the answer, "not a doubt about it; I've heard of more than that sold in a day by a man who set on three hands to help him; and that's just where it is. When a poor woman, or poor man either—but its mostly the women—can buy a mignonette pot, all blooming and smelling for 1*d.*, why she won't bother to buy seeds and set them in a box or a pot and wait for them to come into full blow. Selling seeds in the streets can't be done so well now, sir. Any-

Original from HARVARD UNIVERSITY

how it ain't done as it was, as I've often heard old folk say." The reason assigned for this is that cottages in many parts—such places as Lisson-grove, Islington, Hoxton, Hackney, or Stepney—where the inhabitants formerly cultivated flowers in their little gardens, are now let out in single apartments, and the gardens—or yards as they mostly are now—were used merely to hang clothes in. The only green thing which remained in some of these gardens, I was told, was horse-radish, a root which it is difficult to extirpate: "And it's just the sort of thing," said one man, "that poor people hasn't no great call for, because they, you see, a'n't not overdone with joints of roast beef, nor rump steaks." In the suburbs where the small gardens are planted with flowers, the cultivators rarely buy seeds of the street-sellers, whose stands are mostly at a distance.

None of the street seed-vendors confine themselves to the sale. One man, whom I saw, told me that last spring he was penniless, after sickness, and a nurseryman, whom he knew, trusted him 5*s.* worth of seeds, which he continued to sell, trading in nothing else, for three or four weeks, until he was able to buy some flowers in pots. Though the profit is cent. per cent. on most kinds, 1*s.* 6*d.* a day is accounted "good earnings, on seeds." On wet days there is no sale, and, indeed, the seeds cannot be exposed in the streets. My informant computed that he cleared 5*s.* a week. His customers were principally poor women, who liked to sow mignonette in boxes, or in a garden-border, "if it had ever such a little bit of sun," and who resided, he believed, in small, quiet streets, branching off from the thoroughfares. Of flower-seeds, the street-sellers dispose most largely of mignonette, nasturtium, and the various stocks; and of herbs, the most is done in parsley. One of my informants, however, "did best in grass-seeds," which people bought, he said, "to mend their grass-plots with," sowing them in any bare place, and throwing soil loosely over them. Lupin, larkspur, convolvulus, and Venus's looking-glass had a fair sale.

The street-trade, in seeds, would be less than it is, were it not that the dealers sell it in smaller quantities than the better class of shopkeepers. The street-traders buy their seeds by the quarter of a pound—or any quantity not considered retail—of the nurserymen, who often write the names for the costers on the paper in which the seed has to be inclosed. Seed that costs 4*d.*, the street-seller makes into eight penny lots. "Why, yes, sir," said one man, in answer to my inquiry, "people is often afraid that our seeds ain't honest. If they're not, they're mixed, or they're bad, before they come into our hands. I don't think any of our chaps does anything with them."

Fourteen or fifteen years ago, although seeds, generally, were fifteen to twenty per cent. dearer than they are now, there was twice the demand for them. An average price of good mignonette seed, he said, was now 1*s.* the quarter of a pound, and it was then 1*s.* 2*d.* to 1*s.* 6*d.* The shilling's worth, is made, by the street-seller, into twenty or twenty-four pennyworths. An average price of parsley, and of the cheaper seeds, is less than half that of mignonette. Other seeds, again, are not sold to the street-people by the weight, but are made up in sixpenny and shilling packages. Their extreme lightness prevents their being weighed to a customer. Of this class are, the African marigold, the senecios (groundsel), and the china-aster; but of these compound flowers, the street-traders sell very few. Poppy-seed used to be in great demand among the street-buyers, but it has ceased to be so. "It's a fine hardy plant, too, sir," I was told, "but somehow, for all its variety in colours, it's gone out of fashion, for fashion runs strong in flowers."

One long-established street-seller, who is well known to supply the best seeds, makes for the five weeks or so of the season more than twice the weekly average of 5*s.*; perhaps 12*s.*; but as he is a shop as well as a stall-keeper, he could not speak very precisely as to the proportionate sale in the street or the shop. This man laughed at the fondness some of his customers manifested for "fine Latin names." "There are some people," he said, "who will buy antirrhinum, and artemisia, and digitalis, and wouldn't hear of snapdragon, or wormwood, or foxglove, though they're the identical plants." The same informant told me that the railways in their approaches to the metropolis had destroyed many small gardens, and had, he thought, injured his trade. It was, also, a common thing now for the greengrocers and corn-chandlers to sell garden-seeds, which until these six or eight years they did much less extensively.

Last spring, I was told, there were not more than four persons, in London, selling only seeds. The "root-sellers," of whom I have treated, generally deal in seeds also, but the demand does not extend beyond four or five weeks in the spring, though there was "a straggling trade that way" two or three weeks longer. It was computed for me, that there were fully one hundred persons selling seeds (with other things) in the streets, and that each might average a profit of 5*s.* weekly, for a month; giving 200*l.* expended in seeds, with 100*l.* profit to the costers. Seeds are rarely hawked as flowers are.

It is impossible to give as minutely detailed an account of the street-sale of seeds as of flowers, as from their diversity in size, weight, quantity in a pennyworth, &c., no calculation can be prepared by weight or measure, only by *value*. Thus, I find it necessary to depart somewhat from the order hitherto observed. One seedsman, acquainted with the street-trade from his dealings with the vendors, was of opinion that the following list and proportions were as nice an approximation as could be arrived at. It was found necessary to give it in proportions of twenty-fifths; but it must be borne in mind that the *quantity* in $\frac{1}{25}$ths of parsley, for exam-

ple, is more than double that of $\frac{1}{25}$ths of mignonette. I give, in unison, seeds of about equal sale, whether of the same botanical family or not. Many of the most popular flowers, such as polyanthuses, daisies, violets, and primroses, are not raised from seed, except in the nursery gardens:—

Seeds.	Twenty-fifths.	Value.
Mignonette	Three	£24
Stocks (of all kinds)	Two	16
Marigolds (do.)	One	8
Convolvulus (do.)	"	8
Wallflower	"	8
Scarlet-beans and Sweet-peas	"	8
China-asters and Venus' looking-glass	"	8
Lupin and Larkspur	"	8
Nasturtium	"	8
Parsley	Two	16
Other Pot-herbs	One	8
Mustard and Cress, Lettuce, and the other vegetables	Two	16
Grass	One	8
Other seeds	Seven	56
Total expended annually on street-seeds		£200

Of Christmasing—Laurel, Ivy, Holly, and Mistletoe.

In London a large trade is carried on in "Christmasing," or in the sale of holly and mistletoe, for Christmas sports and decorations. I have appended a table of the quantity of these "branches" sold, nearly 250,000, and of the money expended upon them in the streets. It must be borne in mind, to account for this expenditure for a brief season, that almost every housekeeper will expend something in "Christmasing;" from 2*d.* to 1*s.* 6*d.*, and the poor buy a pennyworth, or a halfpennyworth each, and they are the coster's customers. In some houses, which are let off in rooms, floors, or suites of apartments, and not to the poorest class, every room will have the cheery decoration of holly, its bright, and as if *glazed* leaves and red berries, reflecting the light from fire or candle. "Then, look," said a gardener to me, "what's spent on a Christmasing the churches! Why, now, properly to Christmas St. Paul's, I say *properly*, mind, would take 50*l.* worth at least; aye, more, when I think of it, nearer 100*l.* I hope there'll be no 'No Popery' nonsense against Christmasing this year. I'm always sorry when anything of that kind's afloat, because it's frequently a hindrance to business." This was said three weeks before Christmas. In London there are upwards of 300,000 inhabited houses. The whole of the evergreen branches sold number 375,000.

Even the ordinary-sized inns, I was informed, displayed holly decorations, costing from 2*s.* to 10*s.*; while in the larger inns, where, perhaps, an assembly-room, a concert-room, or a club-room, had to be adorned, along with other apartments, 20*s.* worth of holly, &c., was a not uncommon outlay. "Well, then, consider," said another informant, "the plum-puddings! Why, at least there's a hundred thousand of 'em eaten, in London, through the Christmas and the month following. That's nearly one pudding to every twenty of the population, is it, sir? Well, perhaps, that's too much. But, then, there's the great numbers eaten at public dinners and suppers; and there's more plum-pudding clubs at the small grocers and public-houses than there used to be, so, say full a hundred thousand, flinging in any mince-pies that may be decorated with evergreens. Well, sir, every plum-pudding will have a sprig of holly in him. If it's bought just for the occasion, it may cost 1*d.*, to be really prime and nicely berried. If it's part of a lot, why it won't cost a halfpenny, so reckon it all at a halfpenny. What does that come to? Above 200*l.* Think of that, then, just for sprigging puddings!"

Mistletoe, I am informed, is in somewhat less demand than it was, though there might be no very perceptible difference. In many houses holly is now used instead of the true plant, for the ancient ceremonies and privileges observed "under the mistletoe bough." The holly is not half the price of the mistletoe, which is one reason; for, though there is not any great disparity of price, wholesale, the holly, which costs 6*d.* retail, is more than the quantity of mistletoe retailed for 1*s.* The holly-tree may be grown in any hedge, and ivy may be reared against any wall; while the mistletoe is parasitical of the apple-tree, and, but not to half the extent, of the oak and other trees. It does not grow in the northern counties of England. The purchasers of the mistletoe are, for the most part, the wealthier classes, or, at any rate, I was told, "those who give parties." It is bought, too, by the male servants in large establishments, and more would be so bought, "only so few of the great people, of the most fashionable squares and places, keep their Christmas in town." Half-a-crown is a not uncommon price for a handsome mistletoe bough.

The costermongers buy about a half of the holly, &c., brought to the markets; it is also sold either direct to those requiring evergreens, or to green-grocers and fruiterers who have received orders for it from their customers, or who know it will be wanted. A shilling's worth may be bought in the market, the bundles being divided. Mistletoe, the costers—those having regular customers in the suburbs—receive orders for. "Last December," said a coster to me, "I remember a servant-girl, and she weren't such a girl either, running after me in a regular flutter, to tell me the family had forgot to order 2*s.* worth of mistletoe of me, to be brought next day. Oh, yes, sir, if it's ordered by, or delivered to, the servant-girls, they generally have a little giggling about it. If I've said: 'What are you laughing at?' they'll mostly say: 'Me! I'm not laughing.'"

The costermongers go into the neighbour-

Original from HARVARD UNIVERSITY

hood of London to procure the holly for street-sale. This is chiefly done, I was told, by those who were "cracked up," and some of them laboured at it "days and days." It is, however, a very uncertain trade, as they must generally trespass, and if they are caught trespassing, by the occupier of the land, or any of his servants, they are seldom "given in charge," but their stock of evergreens is not unfrequently taken from them, "and that, sir, that's the cuttingest of all." They do not so freely venture upon the gathering of mistletoe, for to procure it they must trespass in orchards, which is somewhat dangerous work, and they are in constant apprehension of traps, spring-guns, and bull-dogs. Six or seven hundred men or lads, the lads being the most numerous, are thus employed for a week or two before Christmas, and, perhaps, half that number, irregularly at intervals, for a week or two after it. Some of the lads are not known as regular coster-lads, but they are *habitués* of the streets in some capacity. To procure as much holly one day, as will sell for 2*s.* 6*d.* the next, is accounted pretty good work, and 7*s.* 6*d.* would be thus realised in six days. But 5*s.* is more frequently the return of six days' labour and sale, though a very few have cleared 10*s.*, and one man, "with uncommon luck," once cleared 20*s.* in six days. The distance travelled in a short winter's day, is sometimes twenty miles, and, perhaps, the lad or man has not broken his fast, on some days, until the evening, or even the next morning, for had he possessed a few pence he would probably have invested it in oranges or nuts, for street-sale, rather than "go a-gathering Christmas."

One strong-looking lad, of 16 or 17, gave me the following account:—

"It's hard work, is Christmasing; but, when you have neither money nor work, you must do something, and so the holly may come in handy. I live with a elder brother; he helps the masons, and as we had neither of us either work or money, he cut off Tottenham and Edmonton way, and me the t'other side of the water, Mortlake way, as well as I know. We'd both been used to costering, off and on. I was out, I think, ten days altogether, and didn't make 6*s.* in it. I'd been out two Christmases before. O, yes, I'd forgot. I made 6*d.* over the 6*s.*, for I had half a pork-pie and a pint of beer, and the landlord took it out in holly. I meant to have made a quarter of pork do, but I was so hungry—and so would you, sir, if you'd been out a-Christmasing—that I had the t'other quarter. It's 2*d.* a quarter. I did better when I was out afore, but I forget what I made. It's often slow work, for you must wait sometimes 'till no one's looking, and then you must work away like anything. I'd nothing but a sharp knife, I borrowed, and some bits of cord to tie the holly up. You *must* look out sharp, because, you see, sir, a man very likely won't like his holly-tree to be stripped. Wherever there is a berry, we goes for the berries. They're poison berries, I've heard. Moonlight nights is the thing, sir, when you knows where you are. I never goes for mizzletoe. I hardly knows it when I sees it. The first time I was out, a man got me to go for some in a orchard, and told me how to manage; but I cut my lucky in a minute. Something came over me like. I felt sickish. But what can a poor fellow do? I never lost my Christmas, but a little bit of it once. Two men took it from me, and said I ought to thank them for letting me off without a jolly good jacketing, as they was gardeners. I believes they was men out a-Christmasing, as I were. It was a dreadful cold time that; and I was wet, and hungry,—and thirsty, too, for all I was so wet,—and I'd to wait a-watching in the wet. I've got something better to do now, and I'll never go a-Christmasing again, if I can help it."

This lad contrived to get back to his lodging, in town, every night, but some of those out Christmasing, stay two or three days and nights in the country, sleeping in barns, out-houses, carts, or under hay-stacks, inclement as the weather may be, when their funds are insufficient to defray the charge of a bed, or a part of one, at a country "dossing-crib" (low lodging-house). They resorted, in considerable numbers, to the casual wards of the workhouses, in Croydon, Greenwich, Reigate, Dartford, &c., when that accommodation was afforded them, concealing their holly for the night.

As in other matters, it may be a surprise to some of my readers to learn in what way the evergreens, used on festive occasions in their homes, may have been procured.

The costermongers who procure their own Christmasing, generally hawk it. A few sell it by the lot to their more prosperous brethren. What the costers purchase in the market, they aim to sell at cent. per cent.

Supposing that 700 men and lads gathered their own holly, &c., and each worked for three weeks (not regarding interruptions), and calculating that, in the time they cleared even 15*s.* each, it amounts to 575*l.*

Some of the costermongers deck their carts and barrows, in the general line, with holly at Christmas. Some go out with their carts full of holly, for sale, and may be accompanied by a fiddler, or by a person beating a drum. The cry is, "Holly! Green Holly!"

One of my informants alluded incidentally to the decoration of the churches, and I may observe that they used to be far more profusely decked with Christmas evergreens than at present; so much so, that a lady correspondent in January, 1712, complained to "Mr. *Spectator*" that her church-going was bootless. She was constant at church, to hear divine service and make conquests; but the clerk had so overdone the greens in the church that, for three weeks, Miss Jenny Simper had not even seen the young baronet, whom she dressed at for divine worship, although he pursued his devotions only three pews from hers. The aisle was a pretty

Original from HARVARD UNIVERSITY

shady walk, and each pew was an arbour. The pulpit was so clustered with holly and ivy that the congregation, like Moses, heard the word out of a bush. "Sir Anthony Love's pew in particular," concludes the indignant Miss Simper, "is so well hedged, that all my batteries have no effect. I am obliged to shoot at random among the boughs without taking any manner of aim. Mr. Spectator, unless you'll give orders for removing these greens, I shall grow a very awkward creature at church, and soon have little else to do there but to say my prayers." In a subsequent number, the clerk glorifies himself that he had checked the ogling of Miss Simper. He had heard how the Kentish men evaded the Conqueror by displaying green boughs before them, and so he bethought him of a like device against the love-warfare of this coquettish lady.

Of all the "branches" in the markets, the costers buy one-half. This season, holly has been cheaper than was ever known previously. In some years, its price was double that cited, in some treble, when the December was very frosty.

Of the Sale of May, Palm, etc.

The sale of the May, the fragrant flower of the hawthorn, a tree indigenous to this country—Wordsworth mentions one which must have been 800 years old—is carried on by the coster boys (principally), but only in a desultory way. The chief supply is brought to London in the carts or barrows of the costers returning from a country expedition. If the costermonger be accompanied by a lad—as he always is if the expedition be of any length—the lad will say to his master, "Bill, let's have some May to take back." The man will almost always consent, and often assist in procuring the thickly green branches with their white or rose-tinted, and *freshly*-smelling flowers. The odour of the hawthorn blossom is peculiar, and some eminent botanist—Dr. Withering if I remember rightly — says it may be best described as "fresh." No flower, perhaps, is blended with more poetical, antiquarian, and beautiful associations than the ever-welcome blossom of the may-tree. One gardener told me that as the hawthorn was in perfection in June instead of May, the name was not proper. But it must be remembered that the name of the flower was given during the old style, which carried our present month of May twelve days into June, and the name would then be more appropriate.

The May is obtained by the costermongers in the same way as the holly, by cutting it from the trees in the hedges. It has sometimes to be cut or broken off stealthily, for persons may no more like their hawthorns to be stripped than their hollies, and an ingenuous lad—as will have been observed—told me of "people's" objections to the unauthorized stripping of their holly-bushes. But there is not a quarter of the difficulty in procuring May that there is in procuring holly at Christmas.

The costermonger, if he has "done tidy" in the country will very probably leave the May at the disposal of his boy; but a few men, though perhaps little more than twenty, I was told, bring it on their own account. The lads then carry the branches about for sale; or if a considerable quantity has been brought, dispose of it to other boys or girls, or entrust them with the sale of it, at "half-profits," or any terms agreed upon. Costermongers have been known to bring home "a load of May," and this not unfrequently, at the request, and for the benefit of a "cracked-up" brother-trader, to whom it has been at once delivered gratuitously.

A lad, whom I met with as he was selling holly, told me that he had brought may from the country when he had been there with a coster. He had also gone out of town a few miles to gather it on his own account. "But it ain't no good;" he said; "you must often go a good way—I never knows anything about how many miles—and if it's very ripe (the word he used) it's soon shaken. There's no sure price. You may get 4*d.* for a big branch or you must take 1*d.* I may have made 1*s.* on a round but hardly ever more. It can't be got near hand. There 's some stunning fine trees at the top of the park there (the Regent's Park) the t'other side of the 'logical Gardens, but there's always a cove looking after them, they say, and both night and day."

Palm, the flower of any of the numerous species of the willow, is sold only on Palm Sunday, and the Saturday preceding. The trade is about equally in the hands of the English and Irish lads, but the English lads have a commercial advantage on the morning of Palm Sunday, when so many of the Irish lads are at chapel. The palm is all gathered by the street-vendors. One costermonger told me that when he was a lad, he had sold palm to a man who had managed to get half-drunk on a Sunday morning, and who told him that he wanted it to show his wife, who very seldom stirred out, that he'd been taking a healthful walk into the country!

Lilac in flower is sold (and procured) in the same way as May, but in small quantities. Very rarely indeed, laburnum; which is too fragile; or syringa, which, I am told, is hardly saleable in the streets. One informant remembered that forty years ago, when he was a boy, branches of elder-berry flowers were sold in the streets, but the trade has disappeared.

It is very difficult to form a calculation as to the extent of this trade. The best informed give me reason to believe that the sale of all these branches (apart from Christmas) ranges, according to circumstances, from 30*l.* to 50*l.*, the cost being the labour of gathering, and the subsistence of the labourer while at the work. This is independent of what the costers buy in the markets.

I now show the quantity of branches forming the street trade:—

Holly	59,040	bunches
Mistletoe	56,160	,,
Ivy and Laurel	26,640	,,
Lilac	5,400	,,
Palm	1,008	,,
May	2,520	,,
Total number of bunches sold in the streets from market-sale	150,000	
Add to quantity from other sources	75,000	
	225,768	

The quantity of branches "from other sources" is that gathered by the costers in the way I have described; but it is impossible to obtain a return of it with proper precision: to state it as half of that purchased in the markets is a low average.

I now give the amount paid by street-buyers who indulge in the healthful and innocent tastes of which I have been treating—the fondness for the beautiful and the natural.

CUT FLOWERS.

Bunches of		per bunch	
65,280	Violets	at ½d.	£136
115,200	Wallflowers	,, ½d.	240
86,400	Mignonette	,, 1d.	360
1,632	Lilies of the Valley	,, ½d.	3
20,448	Stocks	,, ½d.	42
316,800	Pinks and Carnations	,, ½d. each	660
864,000	Moss Roses	,, ½d. ,,	1,800
864,000	China ditto	,, ½d. ,,	1,800
296,640	Lavender	,, 1d.	1,236
	Total annually		£6,277

FLOWER ROOTS.

		per root	
24,000	Primroses	at ½d.	£50
34,560	Polyanthuses	,, 1d.	144
28,800	Cowslips	,, ½d.	50
33,600	Daisies	,, 1d.	140
46,080	Wallflowers	,, 1d.	192
28,800	Candy-tufts	,, 1d.	120
28,800	Daffodils	,, ½d.	60
38,400	Violets	,, ½d.	80
30,380	Mignonette	,, ½d.	63
23,040	Stocks	,, 1d.	96
19,200	Pinks and Carnations	,, 2d.	160
3,456	Lilies of the Valley	,, 1d.	14
12,960	Pansies	,, 1d.	54
660	Lilies	,, 2d.	5
850	Tulips	,, 2d.	7
7,704	Balsams	,, 2d.	64
3,180	Calceolarias	,, 2d.	26
253,440	Musk Plants	,, 1d.	1,056
11,520	London Pride	,, 1d.	48
25,595	Lupins	,, 1d.	106
9,156	China-asters	,, 1d.	38
63,360	Marigolds	,, ½d.	132
852	Dahlias	,, 6d.	21
13,356	Heliotropes	,, 2d.	111
1,920	Poppies	,, 2d.	16
6,912	Michaelmas Daisies	,, ½d.	14
	Total annually		£2,867

BRANCHES.

Bunches of		per bunch	
59,040	Holly	at 3d.	£738
56,160	Mistletoe	,, 3d.	702
26,640	Ivy and Laurel	,, 3d.	333
5,400	Lilac	,, 3d.	67
1,008	Palm	,, 3d.	12
2,520	May	,, 3d.	31
	Total annually from Markets		£1,183
	Add one-half as shown		591
			£2,774

TREES AND SHRUBS.

		each root	
9,576	Firs (roots)	at 3d.	£119
1,152	Laurels	,, 3d.	14
23,040	Myrtles	,, 4d.	384
2,160	Rhododendrons	9d.	81
2,304	Lilacs	,, 4d	38
2,880	Box	,, 2d.	24
21,888	Heaths	,, 4d.	364
2,880	Broom	,, 1d.	12
6,912	Furze	,, 1d.	28
6,480	Laurustinus	,, 8d.	216
25,920	Southernwood	,, 1d.	108
	Total annually spent		£1,388

FLOWERS IN POTS.

		per pot	
38,880	Moss Roses	at 4d.	£648
38,880	China ditto	,, 2d.	324
38,800	Fuschias	,, 3d.	485
12,850	Geraniums and Pelargoniums (of all kinds)	3d.	210
	Total annually		£1,667

The returns give the following aggregate amount of street expenditure:—

	£
Trees and shrubs	1,388
Cut Fowers	6,277
Flowers in pots	1,667
Flower roots	2,867
Branches	2,774
Seeds	200
	£15,173

From the returns we find that of "cut flowers" the roses retain their old English favouritism, no fewer than 1,628,000 being annually sold in the streets; but locality affects the sale, as some dealers dispose of more violets than roses, because violets are accounted less fragile. The cheapness and hardihood of the musk-plant and marigold, to say nothing of their peculiar odour, has made them the most popular of the "roots," while the myrtle is the favourite among the "trees and shrubs." The heaths, moreover, command an extensive sale, —a sale, I am told, which was unknown, until eight or ten years ago, another instance of the "fashion in flowers," of which an informant has spoken.

STREET-SELLERS OF GREEN STUFF.

UNDER this head I class the street-purveyors of water-cresses, and of the chickweed, groundsel, plantain, and turf required for cage-birds. These purveyors seem to be on the outskirts, as it were, of the costermonger class, and, indeed, the regular costers look down upon them as an inferior caste. The green-stuff trade is carried on by very poor persons, and, generally, by children or old people, some of the old people being lame, or suffering from some infirmity, which, however, does not prevent their walking about with their commodities. To the children and infirm class, however, the turf-cutters supply an exception. The costermongers, as I have intimated, do not resort, and do not let their children resort, to this traffic. If reduced to the last shift, they will sell nuts or oranges in preference. The "old hands" have been "reduced," as a general rule, from other avocations. Their homes are in the localities I have specified as inhabited by the poor.

I was informed by a seller of birds, that he thought fewer birds were kept by poor working-people, and even by working-people who had regular, though, perhaps, diminished earnings, than was the case six or eight years ago. At one time, it was not uncommon for a young man to present his betrothed with a pair of singing-birds in a neat cage; now such a present, as far as my informant's knowledge extended—and he was a sharp intelligent man—was but rarely made. One reason this man had often heard advanced for poor persons not renewing their birds, when lost or dead, is pitiful in its plainness—"they eat too much." I do not know, that, in such a gift as I have mentioned, there was any intention on the part of the lover to typify the beauty of cheerfulness, even in a very close confinement to home. "I can't tell, sir," was said to me, "how it may have been originally, but I never heard such a thing said much about, though there's been joking about the matter, as when would the birds have young ones, and such like. No, sir; I think it was just a fashion." Contrary to the custom in more prosperous establishments, I am satisfied, that, among the labouring classes, birds are more frequently the pets of the men than of the women. My bird-dealing informant cited merely his own experience, but there is no doubt that cage-birds are more extensively kept than ever in London; consequently there is a greater demand for the "green stuff" the birds require.

OF WATERCRESS-SELLING, IN FARRINGDON-MARKET.

THE first coster-cry heard of a morning in the London streets is that of "Fresh wo-orter-creases." Those that sell them have to be on their rounds in time for the mechanics' breakfast, or the day's gains are lost. As the stock-money for this calling need only consist of a few halfpence, it is followed by the very poorest of the poor; such as young children, who have been deserted by their parents, and whose strength is not equal to any very great labour, or by old men and women, crippled by disease or accident, who in their dread of a workhouse life, linger on with the few pence they earn by street-selling.

As winter draws near, the Farringdon cress-market begins long before daylight. On your way to the City to see this strange sight, the streets are deserted; in the squares the blinds are drawn down before the windows, and the shutters closed, so that the very houses seem asleep. All is so silent that you can hear the rattle of the milkmaids' cans in the neighbouring streets, or the noisy song of three or four drunken voices breaks suddenly upon you, as if the singers had turned a corner, and then dies away in the distance. On the cab-stands, but one or two crazy cabs are left, the horses dozing with their heads down to their knees, and the drawn-up windows covered with the breath of the driver sleeping inside. At the corners of the streets, the bright fires of the coffee-stalls sparkle in the darkness, and as you walk along, the policeman, leaning against some gas-lamp, turns his lantern full upon you, as if in suspicion that one who walks abroad so early could mean no good to householders. At one house there stands a man, with dirty boots and loose hair, as if he had just left some saloon, giving sharp single knocks, and then going into the road and looking up at the bed-rooms, to see if a light appeared in them. As you near the City, you meet, if it be a Monday or Friday morning, droves of sheep and bullocks, tramping quietly along to Smithfield, and carrying a fog of steam with them, while behind, with his hands in his pockets, and his dog panting at his heels, walks the sheep-drover.

At the principal entrance to Farringdon-market there is an open space, running the entire length of the railings in front, and extending from the iron gates at the entrance to the sheds down the centre of the large paved court before the shops. In this open space the cresses are sold, by the salesmen or saleswomen to whom they are consigned, in the hampers they are brought in from the country.

The shops in the market are shut, the gas-lights over the iron gates burn brightly, and every now and then you hear the half-smothered crowing of a cock, shut up in some shed or bird-fancier's shop. Presently a man comes hurrying along, with a can of hot coffee in each hand, and his stall on his head, and when he has arranged his stand by the gates, and placed his white mugs between the railings on the stone wall, he blows at his charcoal fire, making the bright sparks fly about at every puff he gives. By degrees the customers are creeping up, dressed

in every style of rags; they shuffle up and down before the gates, stamping to warm their feet, and rubbing their hands together till they grate like sandpaper. Some of the boys have brought large hand-baskets, and carry them with the handles round their necks, covering the head entirely with the wicker-work as with a hood; others have their shallows fastened to their backs with a strap, and one little girl, with the bottom of her gown tattered into a fringe like a blacksmith's apron, stands shivering in a large pair of worn-out Vestris boots, holding in her blue hands a bent and rusty tea-tray. A few poor creatures have made friends with the coffee-man, and are allowed to warm their fingers at the fire under the cans, and as the heat strikes into them, they grow sleepy and yawn.

The market—by the time we reach it—has just begun; one dealer has taken his seat, and sits motionless with cold—for it wants but a month to Christmas—with his hands thrust deep into the pockets of his gray driving coat. Before him is an opened hamper, with a candle fixed in the centre of the bright green cresses, and as it shines through the wicker sides of the basket, it casts curious patterns on the ground—as a night shade does. Two or three customers, with their "shallows" slung over their backs, and their hands poked into the bosoms of their gowns, are bending over the hamper, the light from which tinges their swarthy features, and they rattle their halfpence and speak coaxingly to the dealer, to hurry him in their bargains.

Just as the church clocks are striking five, a stout saleswoman enters the gates, and instantly a country-looking fellow, in a wagoner's cap and smock-frock, arranges the baskets he has brought up to London. The other ladies are soon at their posts, well wrapped up in warm cloaks, over their thick shawls, and sit with their hands under their aprons, talking to the loungers, whom they call by their names. Now the business commences; the customers come in by twos and threes, and walk about, looking at the cresses, and listening to the prices asked. Every hamper is surrounded by a black crowd, bending over till their heads nearly meet, their foreheads and cheeks lighted up by the candle in the centre. The saleswomen's voices are heard above the noise of the mob, sharply answering all objections that may be made to the quality of their goods. "They're rather spotty, mum," says an Irishman, as he examines one of the leaves. "No more spots than a new-born babe, Dennis," answers the lady tartly, and then turns to a new comer. At one basket, a street-seller in an old green cloak, has spread out a rusty shawl to receive her bunches, and by her stands her daughter, in a thin cotton dress, patched like a quilt. "Ah! Mrs. Dolland," cried the saleswoman in a gracious tone, "can you keep yourself warm? it bites the fingers like biling water, it do." At another basket, an old man, with long gray hair streaming over a kind of policeman's cape, is bitterly complaining of the way he has been treated by another saleswoman. "He bought a lot of her, the other morning, and by daylight they were quite white; for he only made threepence on his best day." "Well, Joe," returns the lady, "you should come to them as knows you, and allers treats you well."

These saleswomen often call to each other from one end of the market to the other. If any quarrel take place at one of the hampers, as frequently it does, the next neighbour is sure to say something. "Pinch him well, Sally," cried one saleswoman to another; "pinch him well; *I* do when I've a chance." "It's no use," was the answer; "I might as well try to pinch a elephant."

One old wrinkled woman, carrying a basket with an oilcloth bottom, was asked by a buxom rosy dealer, "Now, Nancy, what's for you?" But the old dame was surly with the cold, and sneering at the beauty of the saleswoman, answered, "Why don't you go and get a sweetheart; sich as you aint fit for sich as we." This caused angry words, and Nancy was solemnly requested "to draw it mild, like a good soul."

As the morning twilight came on, the paved court was crowded with purchasers. The sheds and shops at the end of the market grew every moment more distinct, and a railway-van, laden with carrots, came rumbling into the yard. The pigeons, too, began to fly on to the sheds, or walk about the paving-stones, and the gas-man came round with his ladder to turn out the lamps. Then every one was pushing about; the children crying, as their naked feet were trodden upon, and the women hurrying off, with their baskets or shawls filled with cresses, and the bunch of rushes in their hands. In one corner of the market, busily tying up their bunches, were three or four girls seated on the stones, with their legs curled up under them, and the ground near them was green with the leaves they had thrown away. A saleswoman, seeing me looking at the group, said to me, "Ah! you should come here of a summer's morning, and then you'd see 'em, sitting tying up, young and old, upwards of a hundred poor things as thick as crows in a ploughed field."

As it grew late, and the crowd had thinned; none but the very poorest of the cress-sellers were left. Many of these had come without money, others had their halfpence tied up carefully in their shawl-ends, as though they dreaded the loss. A sickly-looking boy, of about five, whose head just reached above the hampers, now crept forward, treading with his blue naked feet over the cold stones as a cat does over wet ground. At his elbows and knees, his skin showed in gashes through the rents in his clothes, and he looked so frozen, that the buxom saleswoman called to him, asking if his mother had gone home. The boy knew her well, for without answering her question, he went up to her, and, as he stood shivering on one foot, said, "Give us a few old cresses, Jinney," and in a few minutes was running off with a green bundle under his arm. All of the saleswomen

seemed to be of kindly natures, for at another stall an old dame, whose rags seemed to be beyond credit, was paying for some cresses she had long since been trusted with, and excusing herself for the time that had passed since the transaction. As I felt curious on the point of the honesty of the poor, I asked the saleswoman when she was alone, whether they lost much by giving credit. "It couldn't be much," she answered, "if they all of them decamped." But they were generally honest, and paid back, often reminding her of credit given that she herself had forgotten. Whenever she lost anything, it was by the very very poor ones; "though it aint their fault, poor things," she added in a kindly tone, "for when they keeps away from here, it's either the workhouse or the churchyard as stops them."

As you walk home—although the apprentice is knocking at the master's door—the little water-cress girls are crying their goods in every street. Some of them are gathered round the pumps, washing the leaves and piling up the bunches in their baskets, that are tattered and worn as their own clothing; in some of the shallows the holes at the bottom have been laced up or darned together with rope and string, or twigs and split laths have been fastened across; whilst others are lined with oilcloth, or old pieces of sheet-tin. Even by the time the cress-market is over, it is yet so early that the maids are beating the mats in the road, and mechanics, with their tool-baskets swung over their shoulders, are still hurrying to their work. To visit Farringdon-market early on a Monday morning, is the only proper way to judge of the fortitude and courage and perseverance of the poor. As Douglas Jerrold has beautifully said, "there is goodness, like wild honey, hived in strange nooks and corners of the earth." These poor cress-sellers belong to a class so poor that their extreme want alone would almost be an excuse for theft, and they can be trusted paying the few pence they owe even though they hunger for it. It must require no little energy of conscience on the part of the lads to make them resist the temptations around them, and refuse the luring advice of the young thieves they meet at the low lodging-house. And yet they prefer the early rising—the walk to market with naked feet along the cold stones—the pinched meal—and the day's hard labour to earn the few halfpence — to the thief's comparatively easy life. The heroism of the unknown poor is a thing to set even the dullest marvelling, and in no place in all London is the virtue of the humblest—both young and old—so conspicuous as among the watercress-buyers at Farringdon-market.

Of the Street-sellers of Water-cress.

The dealers in water-cresses are generally very old or very young people, and it is a trade greatly in the hands of women. The cause of this is, that the children are sent out by their parents "to get a loaf of bread somehow" (to use the words of an old man in the trade), and the very old take to it because they are unable to do hard labour, and they strive to keep away from the workhouse—("I'd do anything before I'd go there—sweep the crossings, or anything: but I should have had to have gone to the house before, if it hadn't been for my wife. I'm sixty-two," said one who had been sixteen years at the trade). The old people are both men and women. The men have been sometimes one thing, and sometimes another. "I've been a porter myself," said one, "jobbing about in the markets, or wherever I could get a job to do. Then there's one old man goes about selling water-cresses who's been a seafaring man; he's very old, he is—older than what I am, sir. Many a one has been a good mechanic in his younger days, only he's got too old for labour. The old women have, many of them, been laundresses, only they can't now do the work, you see, and so they're glad to pick up a crust anyhow. Nelly, I know, has lost her husband, and she hasn't nothing else but her few creases to keep her. She's as good, honest, hard-working a creature as ever were, for what she can do—poor old soul! The young people are, most of them, girls. There are some boys, but girls are generally put to it by the poor people. There's Mary Macdonald, she's about fourteen. Her father is a bricklayer's labourer. He's an Englishman, and he sends little Mary out to get a halfpenny or two. He gets sometimes a couple of days' work in the week. He don't get more now, I'm sure, and he's got three children to keep out of that; so all on 'em that can work are obligated to do something. The other two children are so small they can't do nothing yet. Then there's Louisa; she's about twelve, and she goes about with creases like I do. I don't think she's got ne'er a father. I know she's a mother alive, and *she* sells creases like her daughter. The mother's about fifty odd, I dare say. The sellers generally go about with an arm-basket, like a greengrocer's at their side, or a 'shallow' in front of them; and plenty of them carry a small tin tray before them, slung round their neck. Ah! it would make your heart ache if you was to go to Farringdon-market early, this cold weather, and see the poor little things there without shoes and stockings, and their feet quite blue with the cold—oh, that they are, and many on 'em don't know how to set one foot before the t'other, poor things! You would say they wanted something give to 'em."

The small tin tray is generally carried by the young children. The cresses are mostly bought in Farringdon-market: "The usual time to go to the market is between five and six in the morning, and from that to seven," said one informant; "myself, I am generally down in the market by five. I was there this morning at five, and bitter cold it was, I give you my word. We poor old people feel it dreadful. Years ago I didn't mind cold, but I feel it now cruel bad, to be sure. Sometimes, when I'm turning up my

things, I don't hardly know whether I've got 'em in my hands or not; can't even pick off a dead leaf. But that's nothing to the poor little things without shoes. Why, bless you, I've seen 'em stand and cry two and three together, with the cold. Ah! my heart has ached for 'em over and over again. I've said to 'em, I wonder why your mother sends you out, that I have; and they said they was obligated to try and get a penny for breakfast. We buy the water-cresses by the 'hand.' One hand will make about five halfpenny bundles. There's more call for 'em in the spring of the year than what there is in the winter. Why, they're reckoned good for sweetening the blood in the spring; but, for my own eating, I'd sooner have the crease in the winter than I would have it in the spring of the year. There's an old woman sits in Farringdon-market, of the name of Burrows, that's sot there twenty-four years, and she's been selling out creases to us all that time.

"The sellers goes to market with a few pence. I myself goes down there and lays out sometimes my 4*d.*; that's what I laid out this morning. Sometimes I lay out only 2*d.* and 3*d.*, according as how I has the halfpence in my pocket. Many a one goes down to the market with only three halfpence, and glad to have that to get a halfpenny, or anything, so as to earn a mouthful of bread—a bellyful that they can't get no how. Ah, many a time I walked through the streets, and picked a piece of bread that the servants chucked out of the door—may be to the birds. I've gone and picked it up when I've been right hungry. Thinks I, I can eat that as well as the birds. None of the sellers ever goes down to the market with less than a penny. They won't make less than a pennorth, that's one 'hand,' and if the little thing sells that, she won't earn more than three halfpence out of it. After they have bought the creases they generally take them to the pump to wet them. I generally pump upon mine in Hatton-garden. It's done to make them look nice and fresh all the morning, so that the wind shouldn't make them flag. You see they've been packed all night in the hamper, and they get dry. Some ties them up in ha'porths as they walks along. Many of them sit down on the steps of St. Andrew's Church and make them up into bunches. You'll see plenty of them there of a morning between five and six. Plenty, poor little dear souls, sitting there," said the old man to me. There the hand is parcelled out into five halfpenny bunches. In the summer the dealers often go to market and lay out as much as 1*s.* "On Saturday morning, this time of year, I buys as many as nine hands—there's more call for 'em on Saturday and Sunday morning than on any other days; and we always has to buy on Saturdays what we want for Sundays—there an't no market on that day, sir. At the market sufficient creases are bought by the sellers for the morning and afternoon as well. In the morning some begin crying their creases through the streets at half-past six, and others about seven. They go to different parts, but there is scarcely a place but what some goes to—there are so many of us now—there's twenty to one to what there used to be. Why, they're so thick down at the market in the summer time, that you might bowl balls along their heads, and all a fighting for the creases. There's a regular scramble, I can assure you, to get at 'em, so as to make a halfpenny out of them. I should think in the spring mornings there's 400 or 500 on 'em down at Farringdon-market all at one time—between four and five in the morning—if not more than that, and as fast as they keep going out, others keep coming in. I think there is more than a thousand, young and old, about the streets in the trade. The working classes are the principal of the customers. The bricklayers, and carpenters, and smiths, and plumbers, leaving work and going home to breakfast at eight o'clock, purchase the chief part of them. A great many are sold down the courts and mews, and bye streets, and very few are got rid of in the squares and the neighbourhood of the more respectable houses. Many are sold in the principal thoroughfares—a large number in the City. There is a man who stands close to the Post-office, at the top of Newgate-street, winter and summer, who sells a great quantity of bunches every morning. This man frequently takes between 4*s.* and 5*s.* of a winter's morning, and about 10*s.* a day in the summer." "Sixteen years ago," said the old man who gave me the principal part of this information, "I could come out and take my 18*s.* of a Saturday morning, and 5*s.* on a Sunday morning as well; but now I think myself very lucky if I can take my 1*s.* 3*d.*, and it's only on two mornings in the week that I can get that." The hucksters of watercresses are generally an honest, industrious, striving class of persons. The young girls are said to be well-behaved, and to be the daughters of poor struggling people. The old men and women are persons striving to save themselves from the workhouse. The old and young people generally travel nine and ten miles in the course of the day. They start off to market at four and five, and are out on their morning rounds from seven till nine, and on their afternoon rounds from half-past two to five in the evening. They travel at the rate of two miles an hour. "If it wasn't for my wife, I must go to the workhouse outright," said the old watercress man. "Ah, I do'nt know what I should do without her, I can assure you. She earns about 1*s.* 3*d.* a day. She takes in a little washing, and keeps a mangle. When I'm at home I turn the mangle for her. The mangle is my own. When my wife's mother was alive she lent us the money to buy it, and as we earnt the money we paid her back so much a week. It is *that* what has kept us together, or else we shouldn't have been as we are. The mangle we give 50*s.* for, and it brings us in now 1*s.* 3*d.* a day with the washing. My wife is

younger than I am. She is about thirty-five years old. We have got two children. One is thirteen and the other fifteen. They've both got learning, and are both in situations. I always sent 'em to school. Though I can't neither read nor write myself, I wished to make them some little scholards. I paid a penny a week for 'em at the school. Lady M—— has always given me my Christmas dinner for the last five years, and God bless her for it—that I *do* say indeed."

Watercress Girl.

The little watercress girl who gave me the following statement, although only eight years of age, had entirely lost all childish ways, and was, indeed, in thoughts and manner, a woman. There was something cruelly pathetic in hearing this infant, so young that her features had scarcely formed themselves, talking of the bitterest struggles of life, with the calm earnestness of one who had endured them all. I did not know how to talk with her. At first I treated her as a child, speaking on childish subjects; so that I might, by being familiar with her, remove all shyness, and get her to narrate her life freely. I asked her about her toys and her games with her companions; but the look of amazement that answered me soon put an end to any attempt at fun on my part. I then talked to her about the parks, and whether she ever went to them. "The parks!" she replied in wonder, "where are they?" I explained to her, telling her that they were large open places with green grass and tall trees, where beautiful carriages drove about, and people walked for pleasure, and children played. Her eyes brightened up a little as I spoke; and she asked, half doubtingly, "Would they let such as me go there—just to look?" All her knowledge seemed to begin and end with water-cresses, and what they fetched. She knew no more of London than that part she had seen on her rounds, and believed that no quarter of the town was handsomer or pleasanter than it was at Farringdon-market or at Clerkenwell, where she lived. Her little face, pale and thin with privation, was wrinkled where the dimples ought to have been, and she would sigh frequently. When some hot dinner was offered to her, she would not touch it, because, if she eat too much, "it made her sick," she said; "and she wasn't used to meat, only on a Sunday."

The poor child, although the weather was severe, was dressed in a thin cotton gown, with a threadbare shawl wrapped round her shoulders. She wore no covering to her head, and the long rusty hair stood out in all directions. When she walked she shuffled along, for fear that the large carpet slippers that served her for shoes should slip off her feet.

"I go about the streets with water-creases, crying, 'Four bunches a penny, water-creases.' I am just eight years old—that's all, and I've a big sister, and a brother and a sister younger than I am. On and off, I've been very near a twelvemonth in the streets. Before that, I had to take care of a baby for my aunt. No, it wasn't heavy—it was only two months old; but I minded it for ever such a time—till it could walk. It was a very nice little baby, not a very pretty one; but, if I touched it under the chin, it would laugh. Before I had the baby, I used to help mother, who was in the fur trade; and, if there was any slits in the fur, I'd sew them up. My mother learned me to needle-work and to knit when I was about five. I used to go to school, too; but I wasn't there long. I've forgot all about it now, it's such a time ago; and mother took me away because the master whacked me, though the missus use'n't to never touch me. I didn't like him at all. What do you think? he hit me three times, ever so hard, across the face with his cane, and made me go dancing down stairs; and when mother saw the marks on my cheek, she went to blow him up, but she couldn't see him—he was afraid. That's why I left school.

"The creases is so bad now, that I haven't been out with 'em for three days. They're so cold, people won't buy 'em; for when I goes up to them, they say, 'They'll freeze our bellies.' Besides, in the market, they won't sell a ha'penny handful now—they're ris to a penny and tuppence. In summer there's lots, and 'most as cheap as dirt; but I have to be down at Farringdon-market between four and five, or else I can't get any creases, because everyone almost—especially the Irish—is selling them, and they're picked up so quick. Some of the saleswomen—we never calls 'em ladies—is very kind to us children, and some of them altogether spiteful. The good one will give you a bunch for nothing, when they're cheap; but the others, cruel ones, if you try to bate them a farden less than they ask you, will say, 'Go along with you, you're no good.' I used to go down to market along with another girl, as must be about fourteen, 'cos she does her back hair up. When we've bought a lot, we sits down on a door-step, and ties up the bunches. We never goes home to breakfast till we've sold out; but, if it's very late, then I buys a penn'orth of pudden, which is very nice with gravy. I don't know hardly one of the people, as goes to Farringdon, to talk to; they never speaks to me, so I don't speak to them. We children never play down there, 'cos we're thinking of our living. No; people never pities me in the street—excepting one gentleman, and he says, says he, 'What do you do out so soon in the morning?' but he gave me nothink—he only walked away.

"It's very cold before winter comes on reg'lar—specially getting up of a morning. I gets up in the dark by the light of the lamp in the court. When the snow is on the ground, there's no creases. I bears the cold—you must; so I puts my hands under my shawl, though it hurts 'em to take hold of the creases, especially when we takes 'em to the pump to wash 'em. No; I never see any children crying—it's no use.

"Sometimes I make a great deal of money.

One day I took 1*s*. 6*d*., and the creases cost 6*d*.; but it isn't often I get such luck as that. I oftener makes 3*d*. or 4*d*. than 1*s*.; and then I'm at work, crying, 'Creases, four bunches a penny, creases!' from six in the morning to about ten. What do you mean by mechanics?—I don't know what they are. The shops buys most of me. Some of 'em says, 'Oh! I ain't a-goin' to give a penny for these;' and they want 'em at the same price as I buys 'em at.

"I always give mother my money, she's so very good to me. She don't often beat me; but, when she do, she don't play with me. She's very poor, and goes out cleaning rooms sometimes, now she don't work at the fur. I ain't got no father, he's a father-in-law. No; mother ain't married again—he's a father-in-law. He grinds scissors, and he's very good to me. No; I dont mean by that that he says kind things to me, for he never hardly speaks. When I gets home, after selling creases, I stops at home. I puts the room to rights: mother don't make me do it, I does it myself. I cleans the chairs, though there's only two to clean. I takes a tub and scrubbing-brush and flannel, and scrubs the floor—that's what I do three or four times a week.

"I don't have no dinner. Mother gives me two slices of bread-and-butter and a cup of tea for breakfast, and then I go till tea, and has the same. We has meat of a Sunday, and, of course, I should like to have it every day. Mother has just the same to eat as we has, but she takes more tea—three cups, sometimes. No; I never has no sweet-stuff; I never buy none—I don't like it. Sometimes we has a game of 'honey-pots' with the girls in the court, but not often. Me and Carry H—— carries the little 'uns. We plays, too, at 'kiss-in-the-ring.' I knows a good many games, but I don't play at 'em, 'cos going out with creases tires me. On a Friday night, too, I goes to a Jew's house till eleven o'clock on Saturday night. All I has to do is to snuff the candles and poke the fire. You see they keep their Sabbath then, and they won't touch anything; so they gives me my wittals and 1½*d*., and I does it for 'em. I have a reg'lar good lot to eat. Supper of Friday night, and tea after that, and fried fish of a Saturday morning, and meat for dinner, and tea, and supper, and I like it very well.

"Oh, yes; I've got some toys at home. I've a fire-place, and a box of toys, and a knife and fork, and two little chairs. The Jews gave 'em to me where I go to on a Friday, and that's why I said they was very kind to me. I never had no doll; but I misses little sister—she's only two years old. We don't sleep in the same room; for father and mother sleeps with little sister in the one pair, and me and brother and other sister sleeps in the top room. I always goes to bed at seven, 'cos I has to be up so early.

"I am a capital hand at bargaining—but only at buying watercreases. They can't take me in. If the woman tries to give me a small handful of creases, I says, 'I ain't a goin' to have that for a ha'porth,' and I go to the next basket, and so on, all round. I know the quantities very well. For a penny I ought to have a full market hand, or as much as I could carry in my arms at one time, without spilling. For 3*d*. I has a lap full, enough to earn about a shilling; and for 6*d*. I gets as many as crams my basket. I can't read or write, but I knows how many pennies goes to a shilling, why, twelve, of course, but I don't know how many ha'pence there is, though there's two to a penny. When I've bought 3*d*. of creases, I ties 'em up into as many little bundles as I can. They must look biggish, or the people won't buy them, some puffs them out as much as they'll go. All my money I earns I puts in a club and draws it out to buy clothes with. It's better than spending it in sweet-stuff, for them as has a living to earn. Besides it's like a child to care for sugar-sticks, and not like one who's got a living and vittals to earn. I aint a child, and I shan't be a woman till I'm twenty, but I'm past eight, I am. I don't know nothing about what I earns during the year, I only know how many pennies goes to a shilling, and two ha'pence goes to a penny, and four fardens goes to a penny. I knows, too, how many fardens goes to tuppence—eight. That's as much as I wants to know for the markets."

The market returns I have obtained show the following result of the quantity vended in the streets, and of the receipts by the cress-sellers:—

A TABLE SHOWING THE QUANTITY OF WATER-CRESSES SOLD WHOLESALE THROUGHOUT THE YEAR IN LONDON, WITH THE PROPORTION RETAILED IN THE STREETS.

Market.	Quantity sold wholesale.	Proportion retailed in the Streets.
Covent Garden	1,578,000 bunches	one-eighth.
Farringdon .	12,960,000 „	one-half.
Borough . .	180,000 „	one-half.
Spitalfields .	180,000 „	one-half.
Portman . .	60,000 „	one-third.
Total . .	14,958,000 „	

From this sale the street cress-sellers receive:—

	Bunches.		Receipts
Farringdon .	6,480,000	½*d*. per bunch	£13,500
Covent Garden	16,450	„	34
Borough . .	90,000	„	187
Spitalfields .	90,000	„	187
Portman . .	20,000	„	41
			£13,949

The discrepancy in the quantity sold in the respective markets is to be accounted for by the fact, that Farringdon is the water-cress market to which are conveyed the qualities, large-

Original from HARVARD UNIVERSITY

leaved and big-stalked, that suit the street-folk. Of this description of cress they purchase one-half of all that is sold in Farringdon; of the finer, and smaller, and brown-leaved cress sold there, they purchase hardly any. At Covent Garden only the finer sorts of cress are in demand, and, consequently, the itinerants buy only an eighth in that market, and they are not encouraged there. They purchase half the quantity in the Borough, and the same in Spitalfields, and a third at Portman. I have before mentioned that 500 might be taken as the number supported by the sale of "creases;" that is, 500 families, or at least 1,000 individuals. The total amount received is nearly 14,000*l.*, and this apportioned among 1,000 street-sellers, gives a weekly receipt of *5s. 5d.*, with a profit of *3s. 3d.* per individual.

The discrepancy is further accounted for because the other market salesmen buy cresses at Farringdon; but I have given under the head of Farringdon *all* that is sold to those other markets to be disposed to the street-sellers, and the returns from the other markets are of the cresses carried *direct* there, apart from any purchases at Farringdon.

Of Groundsel and Chickweed Sellers.

On a former occasion (in the *Morning Chronicle*) I mentioned that I received a letter informing me that a woman, residing in one of the courts about Saffron-hill, was making braces, and receiving only 1*s.* for four dozen of them. I was assured she was a most deserving character, strictly sober, and not receiving parochial relief. "Her husband," my informant added, "was paralysed, and endeavoured to assist his family by gathering green food for birds. They are in deep distress, but their character is irreproachable." I found the couple located up a court, the entrance to which was about as narrow as the opening to a sentry-box, and on each side lolled groups of labourers and costermongers, with short black pipes in their mouths. As I dived into the court, a crowd followed me to see whither I was going. The brace-maker lived on the first floor of a crazy, fœtid house. I ascended the stairs, and the banisters, from which the rails had all been purloined, gave way in my hands. I found the woman, man, and their family busy at their tea-dinner. In a large broken chair, beside the fire-place, was the old paralysed man, dressed in a ragged greasy fustian coat, his beard unshorn, and his hair in the wildest disorder. On the edge of the bed sat a cleanly looking woman, his wife, with a black apron on. Standing by the table was a blue-eyed laughing and shoeless boy, with an old camlet cape pinned over his shoulders. Next him was a girl in a long grey pinafore, with her hair cut close to her head, with the exception of a few locks in front, which hung down over her forehead like a dirty fringe. On a chair near the window stood a basket half full of chickweed and groundsel, and two large cabbages. There was a stuffed linnet on the mantel-piece and an empty cage hanging outside the window. In front of the window-sill was the small imitation of a gate and palings, so popular among the workpeople. On the table were a loaf, a few mugs of milkless tea and a small piece of butter in a saucer. I had scarcely entered when the mother began to remove the camlet cape from the boy's shoulders, and to slip a coarse clean pinafore over his head instead. At present I have only to deal with the trade of the husband, who made the following statement:

"I sell chickweed and grunsell, and turfs for larks. That's all I sell, unless it's a few nettles that's ordered. I believe they're for tea, sir. I gets the chickweed at Chalk Farm. I pay nothing for it. I gets it out of the public fields. Every morning about seven I goes for it. The grunsell a gentleman gives me leave to get out of his garden: that's down Battlebridge way, in the Chalk-road, leading to Holloway. I gets there every morning about nine. I goes there straight. After I have got my chickweed, I generally gathers enough of each to make up a dozen halfpenny bunches. The turfs I buys. A young man calls here with them. I pay 2*d.* a dozen for 'em to him. He gets them himself. Sometimes he cuts 'em at Kilburn Wells; and Notting-hill he goes to sometimes, I believe. He hires a spring barrow, weekly, to take them about. He pays 4*d.* a day, I believe, for the barrow. He sells the turfs to the bird-shops, and to such as me. He sells a few to some private places. I gets the nettles at Highgate. I don't do much in the nettle line—there ain't much call for it. After I've gathered my things I puts them in my basket, and slings 'em at my back, and starts round London. Low Marrabun I goes to always of a Saturday and Wednesday. I goes to St. Pancras on a Tuesday. I visit Clerkenwell, and Russell-square, and round about there, on a Monday. I goes down about Covent-garden and the Strand on a Thursday. I does High Marrabun on a Friday, because I aint able to do so much on that day, for I gathers my stuff on the Friday for Saturday. I find Low Marrabun the best of my beats. I cry 'chickweed and grunsell' as I goes along. I don't say 'for young singing birds.' It is usual, I know, but *I* never did. I've been at the business about eighteen year. I'm out in usual till about five in the evening. I never stop to eat. I'm walking all the time. I has my breakfast afore I starts, and my tea when I comes home." Here the woman shivered. I turned round and found the fire was quite out. I asked them whether they usually sat without one. The answer was, "We most generally raise a pennyworth, some how, just to boil the kettle with." I inquired whether she was cold, and she assured me she wasn't. "It was the blood," she said, "that ran through her like ice sometimes." "I am a walking ten hours every day—wet or dry," the man continued. "I don't stand nice much about that. I can't go much above one mile

and a half an hour, owing to my right side being paralysed. My leg and foot and all is quite dead. I goes with a stick." [The wife brought the stick out from a corner of the room to show me. It was an old peculiarly carved one, with a bird rudely cut out of wood for the handle, and a snake twisting itself up the stick.] "I walk fifteen miles every day of my life, that I do—quite that—excepting Sunday, in course. I generally sell the chickweed and grunsell and turfs, all to the houses, not to the shops. The young man as cut the turf gathers grunsell as well for the shops. They're tradespeople and gentlefolks' houses together that I sells to—such as keeps canaries, or goldfinches, or linnets. I charge ½d. a bunch for chickweed and grunsell together. It's the regular charge. The nettles is ordered in certain quantities; I don't get them unless they're ordered: I sells these in three-penn'orths at a time. Why, Saturday is my best day, and that's the reason why I can't spare time to gather on that day. On Saturday I dare say I gets rid on two dozen bunches of chickweed and grunsell. On the other days, sometimes, I goes out and don't sell above five or six bunches; at other times I get rid on a dozen; that I call a tidy day's work for any other day but a Saturday, and some days I don't sell as much as a couple of bunches in the whole day. Wednesday is my next best day after Saturday. On a Wednesday, sometimes, I sell a dozen and a half. In the summer I does much better than in winter. They gives it more to the birds then, and changes it oftener. I've seed a matter of eight or nine people that sell chickweed and grunsell like myself in the fields where I goes to gather it. They mostly all goes to where I do to get mine. They are a great many that sells grunsell about the streets in London, like I do. I dare say there is a hundred, and far more nor that, taking one place with another. I takes my nettles to ladies' houses. They considers the nettles good for the blood, and drinks 'em at tea, mostly in the spring and autumn. In the spring I generally sells three threepenn' orths of 'em a week, and in the autumn about two threepenn'orths. The ladies I sell the nettles to are mostly sickly, but sometimes they aint, and has only a breaking out in the skin, or in their face. The nettles are mostly taken in Low Marrabun. I gathers more than all for Great Titchfield-street. The turfs I sell mostly in London-street, in Marrabun and John-street, and Carburton-street, and Portland-street, and Berners, and all about there. I sells about three dozen of turfs a week. I sells them at three and four a penny. I charges them at three a penny to gentlefolks and four a penny to tradespeople. I pays 2d. a dozen for 'em and so makes from 1d. to 2d. a dozen out of 'em. I does trifling with these in the winter—about two dozen a week, but always three dozen in the summer. Of the chickweed and grunsell I sells from six to seven dozen bunches a week in the summer, and about four or five dozen bunches in the winter. I sells mostly to regular customers, and a very few to chance ones that meet me in the street. The chance customers come mostly in the summer times. Altogether I should say with my regular and chance customers I make from 4s. to 5s. a week in the summer, and from 3s. to 4s. in the winter. That's as near as I can tell. Last Monday I was out all day, and took 1½d.; Tuesday I took about 5½d.; Wednesday I got 9½d.; Thursday I can't hardly recollect, not to tell the truth about it. But oh, dear me, yes I wasn't allowed to go out on that day. We was given to understand nothing was allowed to be sold on that day. They told us it were the Thanksgiving-day. I was obliged to fast on that day. We did have a little in the morning, a trifle, but not near enough. Friday I came home with nigh upon 6d., and Saturday I got 1s., and 3d. after when I went out at night. I goes into Leather-lane every Saturday night, and stands with my basket there, so that altogether, last week I made 3s. 1½d. But that was a slack week with me, owing to my having lost Thursday. If it hadn't been for that I should have made near upon 4s. We felt the loss very severely. Prices have come down dreadful with us. The same bunches as I sell now for ½d. I used to get 1d. for nine or ten years ago. I dare say I could earn then, take one day with another, such a thing as 7s. a week, summer and winter through. There's so many at it now to what there was afore, that it's difficult to get a living, and the ladies are very hard with a body. They tries to beat me down, and particular in the matter of turfs. They tell me they can buy half-a-dozen for 1d., so I'm obligated to let 'em have three or four. There's a many women at the business. I hardly know which is the most, men or women. There's pretty nigh as much of one as the other, I think. I am a bed-sacking weaver by trade. When I worked at it I used to get 15s. a week regularly. But I was struck with paralysis nearly nineteen years ago, and lost the use of all one side, so I was obleeged to turn to summut else. Another grunseller told me on the business, and what he got, and I thought I couldn't do no better. That's a favourite linnet. We had that one stuffed there. A young man that I knew stuffed it for me. I was very sorry when the poor thing died. I've got another little linnet up there." "I'm particular fond of little birds," said the wife. "I never was worse off than I am now. I pays 2s. a week rent, and we has, take one time with another, about 3s. for the four of us to subsist upon for the whole seven days; yes, that, take one time with another, is generally what I do have. We very seldom has any meat. This day week we got a pound of pieces. I gave 4d. for 'em. Everything that will pledge I've got in pawn. I've been obliged to let them go. I can't exactly say how much I've got in pledge, but you can see the tickets." [The wife brought out a tin box full of duplicates. They were for the usual articles—coats, shawls, shirts, sheets,

handkerchiefs, indeed almost every article of wearing-apparel and bedding. The sums lent were mostly 6*d*. and 9*d*., while some ran as high as 2*s*. The dates of many were last year, and these had been backed for three months.] "I've been paying interest for many of the things there for seven years. I pay for the backing 2½*d*., that is 1*d*. for the backing, and 1½*d*. for the three months' interest. I pay 6*d*. a year interest on every one of the tickets. If its only 3*d*., I have to pay ½*d*. a month interest just the same, but nothing for the ticket when we put it in." The number of duplicates was 26, and the gross sum amounted to 1*l*. 4*s*. 8*d*. One of the duplicates was for 4*d*.; nine were for 6*d*., two for 9*d*., nine were for 1*s*., two for 1*s*. 6*d*., one for 1*s*. 3*d*., one for 1*s*. 7*d*. and two for 2*s*. "The greatest comfort I should like to have would be something more on our beds. We lay dreadful cold of a night, on account of being thin clad. I have no petticoats at all. We have no blankets—of late years I haven't had any. The warm clothing would be the greatest blessing I could ask. I'm not at all discontented at my lot. That wouldn't mend it. We strive and do the best we can, and may as well be contented over it. I think its God's will we should be as we are. Providence is kind to me, even badly off as we are. I know it's all for the best."

There are no "pitches," or stands, for the sale of groundsel in the streets; but, from the best information I could acquire, there are now 1,000 itinerants selling groundsel, each person selling, as an average, 18 bunches a day. We thus have 5,616,000 bunches a year, which, at ½*d*. each, realise 11,700*l*.—about 4*s*. 2*d*. per week per head of sellers of groundsel. The "oldest hand" in the trade is the man whose statement and likeness I give. The sale continues through the year, but "the groundsel" season extends from April to September; in those months 24 bunches, per individual seller, is the extent of the traffic, in the other months half that quantity, giving the average of 18 bunches.

The capital required for groundsel-selling is 4*d*. for a brown wicker-basket; leather strap to sling it from the shoulder, 6*d*.; in all, 10*d*. No knife is necessary; they pluck the groundsel.

Chickweed is only sold in the summer, and is most generally mixed with groundsel and plantain. The chickweed and plantain, together, are but half the sale of groundsel, and that only for five months, adding, to the total amount, 2,335*l*. But this adds little to the profits of the regular itinerants; for, when there is the best demand, there are the greatest number of sellers, who in winter seek some other business. The total amount of "green stuff" expended upon birds, as supplied by the street-sellers, I give at the close of my account of the trade of those purveyors.

Many of the groundsel and chickweed-sellers —for the callings are carried on together—who are aged men, were formerly brimstone-match sellers, who "didn't like to take to the lucifers."

On the publication of this account in the *Morning Chronicle*, several sums were forwarded to the office of that journal for the benefit of this family. These were the means of removing them to a more comfortable home, of redeeming their clothing, and in a measure realizing the wishes of the poor woman.

Of Turf Cutting and Selling.

A man long familiar with this trade, and who knew almost every member of it individually, counted for me 36 turf-cutters, to his own knowledge, and was confident that there were 40 turf-cutters and 60 sellers in London; the addition of the sellers, however, is but that of 10 women, who assist their husbands or fathers in the street sales,—but no women cut turf,—and of 10 men who sell, but buy of the cutters.

The turf is simply a sod, but it is considered indispensable that it should contain the leaves of the "small Dutch clover," (the shamrock of the Irish), the most common of all the trefoils. The turf is used almost entirely for the food and roosting-place of the caged sky-larks. Indeed one turf-cutter said to me: "It's only people that don't understand it that gives turf to other birds, but of course if we're asked about it, we say it's good for every bird, pigeons and chickens and all; and very likely it is if they choose to have it." The principal places for the cutting of turf are at present Shepherd's Bush, Notting Hill, the Caledonian Road, Hampstead, Highgate, Hornsey, Peckham, and Battersea. Chalk Farm was an excellent place, but it is now exhausted, "fairly flayed" of the shamrocks. Parts of Camden Town were also fertile in turf, but they have been built over. Hackney was a district to which the turf-cutters resorted, but they are now forbidden to cut sods there. Hampstead Heath used to be another harvest-field for these turf-purveyors, but they are now prohibited from "so much as sticking a knife into the Heath;" but turf-cutting is carried on surreptitiously on all the outskirts of the Heath, for there used to be a sort of feeling, I was told, among some real Londoners that Hampstead Heath yielded the best turf of any place. All the "commons" and "greens," Paddington, Camberwell, Kennington, Clapham, Putney, &c. are also forbidden ground to the turf-cutter. "O, as to the parks and Primrose Hill itself—round about it's another thing—nobody," it was answered to my inquiry, "ever thought of cutting their turf there. The people about, if they was only visitors, wouldn't stand it, and right too. I wouldn't, if I wasn't in the turf-cutting myself."

The places where the turf is principally cut are the fields, or plots, in the suburbs, in which may be seen a half-illegible board, inviting the attention of the class of speculating builders to an "eligible site" for villas. Some of these places are open, and have long been open, to the road; others are protected by a few crazy rails, and the turf-cutters consider that outside the rails, or between them and the road, they

have a *right* to cut turf, unless forbidden by the police. The fact is, that they cut it on sufferance; but the policeman never interferes, unless required to do so by the proprietor of the land or his agent. One gentleman, who has the control over a considerable quantity of land "eligible" for building, is very inimical to the pursuits of the turf-cutters, who, of course, return his hostility. One man told me that he was required, late on a Saturday night, some weeks ago, to supply six dozen of turfs to a very respectable shopkeeper, by ten or eleven on the Sunday morning. The shopkeeper had an aristocratic connection, and durst not disappoint his customers in their demands for fresh turf on the Sunday, so that the cutter must supply it. In doing so, he encountered Mr. —— (the gentleman in question), who was exceedingly angry with him: "You d—d poaching thief!" said the gentleman, "if this is the way you pass your Sunday, I'll give you in charge." One turf-cutter, I was informed, had, within these eight years, paid *3l. 15s.* fines for trespassing, besides losing his barrow, &c., on every conviction: "But he's a most outdacious fellor," I was told by one of his mates, "and won't mind spoiling anybody's ground to save hisself a bit of trouble. There's too many that way, which gives us a bad name." Some of the managers of the land to be built upon give the turf-cutters free leave to labour in their vocation; others sell the sods for garden-plots, or use them to set out the gardens to any small houses they may be connected with, and with them the turf-cutters have no chance of turning a sod or a penny.

I accompanied a turf-cutter, to observe the manner of his work. We went to the neighbourhood of Highgate, which we reached a little before nine in the morning. There was nothing very remarkable to be observed, but the scene was not without its interest. Although it was nearly the middle of January, the grass was very green and the weather very mild. There happened to be no one on the ground but my companion and myself, and in some parts of our progress nothing was visible but green fields with their fringe of dark-coloured leafless trees; while in other parts, which were somewhat more elevated, glimpses of the crowded roof of an omnibus, or of a line of fleecy white smoke, showing the existence of a railway, testified to the neighbourhood of a city; but no sound was heard except, now and then, a distant railway whistle. The turf-cutter, after looking carefully about him—the result of habit, for I was told afterwards, by the policeman, that there was no trespass—set rapidly to work. His apparatus was a sharp-pointed table-knife of the ordinary size, which he inserted in the ground, and made it rapidly describe a half-circle; he then as rapidly ran his implement in the opposite half-circle, flung up the sod, and, after slapping it with his knife, cut off the lower part so as to leave it flat—working precisely as does a butcher cutting out a joint or a chop, and reducing the fat. Small holes are thus left in the ground—of such shape and size as if deep saucers were to be fitted into them—and in the event of a thunder-shower in droughty weather, they become filled with water, and have caused a puzzlement, I am told, to persons taking their quiet walk when the storm had ceased, to comprehend why the rain should be found to gather in little circular pools in some parts, and not in others.

The man I accompanied cut and shaped six of these turfs in about a minute, but he worked without intermission, and rather to show me with what rapidity and precision he could cut, than troubling himself to select what was saleable. After that we diverged in the direction of Hampstead; and in a spot not far from a temporary church, found three turf-cutters at work,—but they worked asunder, and without communication one with another. The turfs, as soon as they are cut and shaped, are thrown into a circular basket, and when the basket is full it is emptied on to the barrow (a costermonger's barrow), which is generally left untended at the nearest point: "We can trust one another, as far as I know," said one turf-man to me, "and nobody else would find it worth while to steal turfs." The largest number of men that my most intelligent informant had ever seen at work in one locality was fourteen, and that was in a field just about to be built over, and "where they had leave." Among the turf-purveyors there is no understanding as to where they are to "cut." Wet weather does not interfere with turf procuring; it merely adds to the weight, and consequently to the toil of drawing the barrow. Snow is rather an advantage to the street-seller, as purchasers are apt to fancy that if the storm continues, turfs will not be obtainable, and so they buy more freely. The turf-man clears the snow from the ground in any known locality—the cold pinching his ungloved hands—and cuts out the turf, "as green," I was told, "as an April sod." The weather most dreaded is that when hoar frost lies long and heavy on the ground, for the turf cut with the rime upon it soon turns black, and is unsaleable. Foggy dark weather is also prejudicial, "for then," one man said, "the days clips it uncommon short, and people won't buy by candlelight, no more will the shops. Birds has gone to sleep then, and them that's fondest on them says, 'We can get fresher turf to-morrow.'" The gatherers cannot work by moonlight; "for the clover leaves then shuts up," I was told by one who said he was a bit of a botanist, "like the lid of a box, and you can't tell them."

One of my informants told me that he cut 25 dozen turfs every Friday (the great working turf-day) of the year on an average (he sometimes cut on that day upwards of 30 dozen); 17 dozen on a Tuesday; and 6 dozen on the other days of the week, more or less, as the demand justified—but 6 dozen was an average. He had also cut a few turfs on a Sunday morning, but only at long intervals, sometimes only thrice a year. Thus one man will cut 2,496 dozen, or 29,952 turfs in a year, not reckoning

the product of any Sunday. From the best information I could acquire, there seems no doubt but that one-half of the turf-cutters (20) exert a similar degree of industry to that detailed; and the other 20 procure a moiety of the quantity cut and disposed of by their stronger and more fortunate brethren. This gives an aggregate, for an average year, of 598,560 turfs, or including Sunday turf-cutting, of 600,000. Each turf is about 6 inches diameter at the least; so that the whole extent of turf cut for London birds yearly, if placed side by side, would extend fifty-six miles, or from London to Canterbury.

In wet weather, 6 dozen turfs weigh, on an average, 1 cwt.; in dry weather, 8 dozen weigh no more; if, therefore, we take 7 dozen as the usual hundred-weight, a turf-cutter of the best class carries, in basket-loads, to his barrow, and when his stock is completed, drags into town from the localities I have specified, upwards of 3½ cwt. every Friday, nearly 2½ every Tuesday, and about 7 cwt. in the course of a week; the smaller traders drag half the quantity,—and the total weight of turf disposed of for the cage-birds of London, every year, is 546 tons.

Of the supply of turf, obtained as I have described, at least three-fourths is sold to the bird-shops, who retail it to their customers. The price paid by these shopkeepers to the labourers for their turf trade is 2*d.* and 2½*d.* a dozen, but rarely 2½*d.* They retail it at from 3*d.* to 6*d.* a dozen, according to connection and locality. The remainder is sold by the cutters on their rounds from house to house, at two and three a penny.

None of the turf-cutters confine themselves to it. They sell in addition groundsel, chickweed, plaintain, very generally; and a few supply nettles, dandelion, ground-ivy, snails, worms, frogs, and toads. The sellers of groundsel and chickweed are far more numerous, as I have shown, than the turf-cutters—indeed many of them are incapable of cutting turf or of dragging the weight of the turfs.

Of the Experience and Customers of a Turf-Cutter.

A short but strongly-built man, of about thirty, with a very English face, and dressed in a smock-frock, wearing also very strong unblacked boots, gave me the following account:—

"My father," he said, "was in the Earl of ——'s service, and I was brought up to stable-work. I was employed in a large coaching inn, in Lancashire, when I was last employed in that way, but about ten years ago a railway line was opened, and the coaching was no go any longer; it hadn't a chance to pay, so the horses and all was sold, and I was discharged with a lot of others. I walked from Manchester to London—for I think most men when they don't know what in the world to do, come to London—and I lived a few months on what little money I had, and what I could pick up in an odd job about horses. I had some expectations when I came up that I might get something to do through my lord, or some of his people—they all knew me: but my lord was abroad, and his establishment wasn't in town, and I had to depend entirely on myself. I was beat out three or four times, and didn't know what to do, but somehow or other I got over it. At last—it's between eight and nine years ago—I was fairly beat out. I was taking a walk—I can't say just now in what way I went, for it was all one which way—but I remember I saw a man cutting turf, and I remembered then that a man that lived near me lived pretty middling by turf-cutting. So I watched how it was done, and then I inquired how I could get into it, and as I'd paid my way I could give reference to show I might be trusted; so I got a barrow on hire, and a basket, and bought a knife for 3*d.* at a marine-shop, and set to work. At first I only supplied shops, but in a little time I fell into a private round, and that pays better. I've been at it almost every day, I may say, ever since. My best customers are working people that's fond of birds; they're far the best. It's the ready penny with them, and no grumbling. I've lost money by trusting noblemen; of course I blame their servants. You'd be surprised, sir, to hear how often at rich folks' houses, when they've taken their turf or what they want, they'll take credit and say, 'O, I've got no change,' or 'I can't be bothered with ha'pence,' or 'you must call again.' There's one great house in Cavendish-square always takes a month's credit, and pays one month within another (pays the first month as the second is falling due), and not always that very regular. They can't know how poor men has to fight for a bit of bread. Some people are very particular about their turfs, and look very sharp for the small clover leaves. We never have turfs left on hand: in summer we water them to keep them fresh; in wet weather they don't require it; they'll keep without. I think I make on turf 9*s.* a week all the year round; the summer's half as good again as the winter. Supposing I make 3*s.* a week on groundsel, and chickweed, and snails, and other things, that's 12*s.*—but look you here, sir. I pay 3*s.* 6*d.* a week for my rent—it's a furnished room—and 1*s.* 6*d.* a week for my barrow; that's 5*s.* off the 12*s.*; and I've a wife and one little boy. My wife may get a day at least every week at charring; she has 1*s.* for it and her board. She helps me when she's not out, and if she is out, I sometimes have to hire a lad, so it's no great advantage the shilling a day. I've paid 1*s.* 6*d.* a week for my barrow—it's a very good and big one—for four years. Before that I paid 2*s.* a week. O yes, sir, I know very well, that at 1*s.* 6*d.* a week I've paid nearly 14*l.* for a barrow worth only 2*l.* 2*s.*; but I can't help it; I really can't. I've tried my hardest to get money to have one of my own, and to get a few sticks (furniture) of my own too. It's no use trying any more. If I have ever got a few shillings a-head, there's a pair of shoes wanted, or there's

something else, or my wife has a fit of sickness, or my little boy has, or something's sure to happen that way, and it all goes. Last winter was a very hard time for people in my way, from hoar frost and fogs. I ran near *3l.* into debt; greater part of it for house-rent and my barrow; the rest was small sums borrowed of shopkeepers that I served. I paid all up in the summer, but I'm now 14*s.* in debt for my barrow; it always keeps me back; the man that owns it calls every Sunday morning, but he don't press me, if I haven't money. I would get out of the life if I could, but will anybody take a groom out of the streets? and I'm not master of anything but grooming. I can read and write. I was brought up a Roman Catholic, and was christened one. I never go to mass now. One gets out of the way of such things, having to fight for a living as I have. It seems like mocking going to chapel, when you're grumbling in your soul."

Of Plantain-Sellers.

Plantain is sold extensively, and is given to canaries, but water-cress is given to those birds more than any other green thing. It is the ripe seed, in a spike, of the "great" and the "ribbed" plantain. The green leaves of the last-mentioned plant used to be in demand as a styptick. Shenstone speaks of "plantain ribbed, that heals the reaper's wound." I believe that it was never sold in the streets of London. The most of the plantain is gathered in the brick-fields, wherever they are found, as the greater plantain, which gives three-fourths of the supply, loves an arid situation. It is sold in hands to the shops, about 60 "heads" going to a "hand," at a price, according to size, &c., from 1*d.* to 4*d.* On a private round, five or six are given for a halfpenny. It is, however, generally gathered and sold with chickweed, and along with chickweed I have shown the quantity used.

The money-value of the several kinds and quantities of "green-stuff" annually purchased in the streets of London is as follows:—

6,696,450 bunches of water-cresses, at ½*d.* per bunch	£13,949
5,616,000 „ groundsel, at ½*d.*	11,700
1,120,800 „ chickweed and plantain	2,335
660,000 turfs, at 2½*d.* per doz.	520
	28,504

Of the above amount, it may be said that upwards of 14,000*l.* are spent yearly on what may be called the bird-food of London.

OF THE STREET-SELLERS OF EATABLES AND DRINKABLES.

These dealers were, more numerous, even when the metropolitan population was but half its present extent. I heard several causes assigned for this,—such as the higher rate of earnings of the labouring people at that time, as well as the smaller number of shopkeepers who deal in such cheap luxuries as penny pies, and the fewer places of cheap amusement, such as the "penny gaffs." These places, I was told, "run away with the young people's pennies," which were, at one period, expended in the streets.

The class engaged in the manufacture, or in the sale, of these articles, are a more intelligent people than the generality of street-sellers. They have nearly all been mechanics who, from inability to procure employment at their several crafts—from dislike to an irksome and, perhaps, sedentary confinement—or from an overpowering desire "to be their own masters," have sought a livelihood in the streets. The purchase and sale of fish, fruit, or vegetables require no great training or deftness; but to make the dainties, in which street-people are critical, and to sell them at the lowest possible price, certainly requires some previous discipline to produce the skill to combine and the taste to please.

I may here observe, that I found it common enough among these street-sellers to describe themselves and their fraternity not by their names or callings, but by the article in which they deal. This is sometimes ludicrous enough: "Is the man you're asking about a pickled whelk, sir?" was said to me. In answer to another inquiry, I was told, "Oh, yes, I know him—he's a sweet-stuff." Such ellipses, or abbreviations, are common in all mechanical or commercial callings.

Men and women, and most especially boys, purchase their meals day after day in the streets. The coffee-stall supplies a warm breakfast; shell-fish of many kinds tempt to a luncheon; hot-eels or pea-soup, flanked by a potato "all hot," serve for a dinner; and cakes and tarts, or nuts and oranges, with many varieties of pastry, confectionary, and fruit, woo to indulgence in a dessert; while for supper there is a sandwich, a meat pudding, or a "trotter."

The street provisions consist of cooked or prepared victuals, which may be divided into solids, pastry, confectionary, and drinkables.

The "solids" however, of these three divisions, are such as only regular street-buyers consider to be sufficing for a substantial meal, for it will be seen that the comestibles accounted "good for dinner," are all of a *dainty*, rather than a solid character. Men whose lives, as I have before stated, are alternations of starvation

and surfeit, love some easily-swallowed and comfortable food, better than the most approved substantiality of a dinner-table. I was told by a man, who was once foodless for thirty-eight hours, that in looking into the window of a cook-shop—he longed far more for a basin of soup than for a cut from the boiled round, or the roasted ribs, of beef. He felt a gnawing rather than a ravenous desire, and some tasty semi-liquid was the incessant object of his desires.

The solids then, according to street estimation, consist of hot-eels, pickled whelks, oysters, sheep's-trotters, pea-soup, fried fish, ham-sandwiches, hot green peas, kidney puddings, boiled meat puddings, beef, mutton, kidney, and eel pies, and baked potatos. In each of these provisions the street poor find a mid-day or midnight meal.

The pastry and confectionary which tempt the street eaters are tarts of rhubarb, currant, gooseberry, cherry, apple, damson, cranberry, and (so called) mince pies; plum dough and plum-cake; lard, currant, almond and many other varieties of cakes, as well as of tarts; gingerbread-nuts and heart-cakes; Chelsea buns; muffins and crumpets; "sweet stuff" includes the several kinds of rocks, sticks, lozenges, candies, and hard-bakes; the medicinal confectionary of cough-drops and horehound; and, lastly, the more novel and aristocratic luxury of street-ices; and strawberry cream, at 1*d*. a glass, (in Greenwich Park).

The drinkables are tea, coffee, and cocoa; ginger-beer, lemonade, Persian sherbet, and some highly-coloured beverages which have no specific name, but are introduced to the public as "cooling" drinks; hot elder cordial or wine; peppermint water; curds and whey; water (as at Hampstead); rice milk; and milk in the parks.

At different periods there have been attempts to introduce more substantial viands into the street provision trade, but all within these twenty years have been exceptional and unsuccessful. One man a few years back established a portable cook-shop in Leather-lane, cutting out portions of the joints to be carried away or eaten on the spot, at the buyer's option. But the speculation was a failure. Black puddings used to be sold, until a few years back, smoking from cans, not unlike potato cans, in such places as the New Cut; but the trade in these rather suspicious articles gradually disappeared.

Mr. Albert Smith, who is an acute observer in all such matters, says, in a lively article on the Street Boys of London:

"The kerb is his club, offering all the advantages of one of those institutions without any subscription or ballot. Had he a few pence, he might dine equally well as at Blackwall, and with the same variety of delicacies without going twenty yards from the pillars of St. Clement's churchyard. He might begin with a water *souchée* of eels, varying his first course with pickled whelks, cold fried flounders, or periwinkles. Whitebait, to be sure, he would find a difficulty in procuring, but as the more cunning gourmands do not believe these delicacies to be fish at all, but merely little bits of light pie-crust fried in grease;—and as moreover, the brown bread and butter is after all the grand attraction,—the boy might soon find a substitute. Then would come the potatos, apparently giving out so much steam that the can which contains them seems in momentary danger of blowing up; large, hot, mealy fellows, that prove how unfounded were the alarms of the bad-crop-ites; and he might next have a course of boiled feet of some animal or other, which he would be certain to find in front of the gin-shop. Cyder-cups perhaps he would not get; but there would be 'ginger-beer from the fountain, at 1*d*. per glass;' and instead of mulled claret, he could indulge in hot elder cordial; whilst for dessert he could calculate upon all the delicacies of the season, from the salads at the corner of Wych-street to the baked apples at Temple Bar. None of these things would cost more than a penny a piece; some of them would be under that sum; and since as at Verey's, and some other foreign restaurateurs, there is no objection to your dividing the "portions," the boy might, if he felt inclined to give a dinner to a friend, get off under 6*d*. There would be the digestive advantage too of moving leisurely about from one course to another; and, above all, there would be no fee to waiters." After alluding to the former glories of some of the street-stands, more especially of the kidney pudding establishments which displayed rude transparencies, one representing the courier of St. Petersburg riding six horses at once for a kidney pudding, Mr. Smith continues.—"But of all these eating-stands the chief favourite with the boy is the potato-can. They collect around it as they would do on 'Change, and there talk over local matters, or discuss the affairs of the adjacent cab-stand, in which they are at times joined by the waterman whom they respect, more so perhaps than the policeman; certainly more than they do the street-keeper, for him they especially delight to annoy, and they watch any of their fellows eating a potato, with a curiosity and an attention most remarkable, as if no two persons fed in the same manner, and they expected something strange or diverting to happen at every mouthful."

A gentleman, who has taken an artist's interest in all connected with the streets, and has been familiar with their daily and nightly aspect from the commencement of the present century, considers that the great change is not so much in what has ceased to be sold, but in the introduction of fresh articles into street-traffic—such as pine-apples and Brazil-nuts, rhubarb and cucumbers, ham-sandwiches, ginger-beer, &c. The coffee-stall, he represents, has but superseded the saloop-stall (of which I have previously spoken); while the class of street-customers who supported the saloop-dealer now support the purveyor of coffee. The *appearance* of the

two stalls, however, seen before daybreak, with their respective customers, on a bleak winter's morning, was very different. Round the saloop-stall was a group—hardly discernible at a little distance in the dimly-lighted streets—the prominent figures being of two callings now extinct—the climbing-boy and the old hackney-coachman.

The little sweep *would* have his saloop smoking hot—and there was the common appliance of a charcoal grate—regaling himself with the savoury steam until the mess was cool enough for him to swallow; whilst he sought to relieve his naked feet from the numbing effects of the cold by standing now on the right foot and now on the left, and swinging the other to and fro, until a change of posture was necessitated; his white teeth the while gleamed from his sooty visage as he gleefully licked his lips at the warm and oily breakfast.

The old hackney-coachman was wrapped up in a many-caped great coat, drab—when it left the tailor's hands some years before—but then worn and discoloured, and, perhaps, patched or tattered; its weight alone, however, communicated a sort of warmth to the wearer; his legs were closely and artistically "wisped" with hay-bands; and as he kept smiting his chest with his arms, "to keep the cold out," while his saloop was cooling, he would, in no very gentle terms, express his desire to add to its comforting influence the stimulant of a "flash of lightning," a "go of rum," or a "glass of max,"—for so a dram of neat spirit was then called.

The old watchman of that day, too, almost as heavily coated as the hackneyman, would sometimes partake of the street "Saloop-loop-loop! *Sa*-loop!" The woman of the town, in "looped and windowed raggedness," the outcast of the very lowest class, was at the saloop, as she is now and then at the coffee-stall, waiting until daylight drove her to her filthy lodging-house. But the climbing-boy has, happily, left no successor; the hackneyman has been succeeded by the jauntier cabman; and the taciturn old watchman by the lounging and trim policeman.

Another class of street-sellers, no longer to be seen, were the "barrow-women." They sold fruit of all kinds, little else, in very clean white barrows, and their fruit was excellent, and purchased by the wealthier classes. They were, for the most part, Irish women, and some were remarkable for beauty. Their dress was usually a good chintz gown, the skirt being tidily tucked or pinned up behind, "in a way," said one informant, "now sometimes seen on the stage when correctness of costume is cared for." These women were prosperous in their calling, nor was there any imputation on their chastity, as the mothers were almost always wives.

Concerning the bygone street-cries, I had also the following account from the personal observation of an able correspondent:—

"First among the old 'musical cries,' may be cited the 'Tiddy Doll!'—immortalised by Hogarth—then comes the last person, who, with a fine bass voice, coaxed his customers to buy *sweets* with, 'Quack, quack, quack, quack! Browns, browns, browns! have you got any mouldy browns?' There was a man, too, who sold tripe, &c., in this way, and to some purpose; he was as fine a man as ever stepped, and his deep rich voice would ring through a whole street, 'Dog's-meat! cat's-meat! nice tripe! neat's feet! Come buy my trotters!' The last part would not have disgraced Lablache. He discovered a new way of pickling tripe—got on—made contracts for supplying the Navy during the war, and acquired a large property. One of our most successful artists is his grandson. Then there was that delight of our childhood—the eight o'clock 'Hot spiced gingerbread! hot spiced gingerbread! buy my spiced gingerbread! sm-o-o-king hot!'" Another informant remembered a very popular character (among the boys), whose daily cry was: "Hot spiced gingerbread nuts, nuts, nuts! If *one*'ll warm you, *wha-at*'ll a pound do?—*Wha-a-a-at*'ll a pound do?" Gingerbread was formerly in much greater demand than it is now.

Of the Street-sellers of Pea-Soup and Hot Eels.

Two of the condiments greatly relished by the chilled labourers and others who regale themselves on street luxuries, are "pea-soup" and "hot eels." Of these tradesmen there may be 500 now in the streets on a Saturday. As the two trades are frequently carried on by the same party, I shall treat of them together. The greatest number of these stands is in Old-street, St. Luke's, about twenty. In warm weather these street-cooks deal only in "hot eels" and whelks; as the whelk trade is sometimes an accompaniment of the others, for then the soup will not sell. These dealers are stationary, having stalls or stands in the street, and the savoury odour from them attracts more hungry-looking gazers and longers than does a cook-shop window. They seldom move about, but generally frequent the same place. A celebrated dealer of this class has a stand in Clare-street, Clare-market, opposite a cat's-meat shop; he has been heard to boast, that he wouldn't soil his hands at the business if he didn't get his 30*s*. a day, and his 2*l*. 10*s*. on a Saturday. Half this amount is considered to be about the truth. This person has mostly all the trade for hot eels in the Clare-market district. There is another "hot eel purveyor" at the end of Windmill-street, Tottenham-court-road, that does a very good trade. It is thought that he makes about 5*s*. a day at the business, and about 10*s*. on Saturday. There was, before the removals, a man who came out about five every afternoon, standing in the New-cut, nearly opposite the Victoria Theatre, his "girl" always attending to the stall. He had two or three lamps with "hot eels" painted upon them, and a handsome stall. He was considered to make about 7*s*. a day by the sale of eels alone, but he dealt in fried fish and pickled whelks as well, and often had a pile of fried fish a foot high. Near the

Original from HARVARD UNIVERSITY

Bricklayers' Arms, at the junction of the Old and New Kent-roads, a hot-eel man dispenses what a juvenile customer assured me was "as spicy as any in London, as if there was gin in it." But the dealer in Clare-market does the largest trade of all in the hot-eel line. He is "the head man." On one Saturday he was known to sell 100lbs. of eels, and on most Saturdays he will get rid of his four "draughts" of eels (a draught being 20lbs.) He and his son are dressed in Jenny Lind hats, bound with blue velvet, and both dispense the provisions, while the daughter attends to wash the cups. "On a Sunday, anybody," said my informant, "would think him the first nobleman or squire in the land, to see him dressed in his white hat, with black crape round it, and his drab paletot and mother-o'-pearl buttons, and black kid gloves, with the fingers too long for him."

I may add, that even the very poorest, who have only a halfpenny to spend, as well as those with better means, resort to the stylish stalls in preference to the others. The eels are all purchased at Billingsgate early in the morning. The parties themselves, or their sons or daughters, go to Billingsgate, and the watermen row them to the Dutch eel vessels moored off the market. The fare paid to the watermen is 1*d.* for every 10lbs. purchased and brought back in the boat, the passenger being gratis. These dealers generally trade on their own capital; but when some have been having "a flare up," and have "broke down for stock," to use the words of my informant, they borrow 1*l.*, and pay it back in a week or a fortnight at the outside, and give 2*s.* for the loan of it. The money is usually borrowed of the barrow, truck, and basket-lenders. The amount of capital required for carrying on the business of course depends on the trade done; but even in a small way, the utensils cost 1*l.* They consist of one fish-kettle and one soup-kettle, holding upon an average three gallons each; besides these, five basins and five cups and ten spoons are required, also a washhand basin to wash the cups, basins, and spoons in, and a board and tressel on which the whole stand. In a large way, it requires from 3*l.* to 4*l.* to fit up a handsome stall. For this the party would have "two fine kettles," holding about four gallons each, and two patent cast-iron fireplaces (the 1*l.* outfit only admits of the bottoms of two tin saucepans being used as fireplaces, in which charcoal is always burning to keep the eels and soup hot; the whelks are always eaten cold). The crockery and spoons would be in no way superior. A small dealer requires, over and above this sum, 10*s.* to go to market with and purchase stock, and the large dealer about 30*s.* The class of persons belonging to the business have either been bred to it, or taken to it through being out of work. Some have been disabled during their work, and have resorted to it to save themselves from the workhouse. The price of the hot eels is a halfpenny for five or seven pieces of fish, and three-parts of a cupfull of liquor. The charge for a half-pint of pea-soup is a halfpenny, and the whelks are sold, according to the size, from a halfpenny each to three or four for the same sum. These are put out in saucers.

The eels are Dutch, and are cleaned and washed, and cut in small pieces of from a half to an inch each. [The daughter of one of my informants was busily engaged, as I derived this information, in the cutting of the fish. She worked at a blood-stained board, with a pile of pieces on one side and a heap of entrails on the other.] The portions so cut are then boiled, and the liquor is thickened with flour and flavoured with chopped parsley and mixed spices. It is kept hot in the streets, and served out, as I have stated, in halfpenny cupfulls, with a small quantity of vinegar and pepper. The best purveyors add a little butter. The street-boys are extravagant in their use of vinegar.

To dress a draught of eels takes three hours—to clean, cut them up, and cook them sufficiently; and the cost is now 5*s.* 2*d.* (much lower in the summer) for the draught (the 2*d.* being the expense of "shoring"), 8*d.* for 4 lb. of flour to thicken the liquor, 2*d.* for the parsley to flavour it, and 1*s.* 6*d.* for the vinegar, spices, and pepper (about three quarts of vinegar and two ounces of pepper). This quantity, when dressed and seasoned, will fetch in halfpennyworths from 15*s.* to 18*s.* The profit upon this would be from 7*s.* to 9*s.* 6*d.*; but the cost of the charcoal has to be deducted, as well as the salt used while cooking. These two items amount to about 5*d.*

The pea-soup consists of split peas, celery, and beef bones. Five pints, at 3½*d.* a quart, are used to every three gallons; the bones cost 2*d.*, carrots 1*d.*, and celery ½*d.*—these cost 1*s.* 0½*d.*; and the pepper, salt, and mint, to season it, about 2*d.* This, when served in halfpenny basinfulls, will fetch from 2*s.* 3*d.* to 2*s.* 4*d.*, leaving 1*s.* 1*d.* profit. But from this the expenses of cooking must be taken; so that the clear gain upon three gallons comes to about 11*d.* In a large trade, three kettles, or twelve gallons, of pea-soup will be disposed of in the day, and about four draughts, or 80 lbs., of hot eels on every day but Saturday,—when the quantity of eels disposed of would be about five draughts, or 100 lbs. weight, and about 15 gallons of pea-soup. Hence the profits of a good business in the hot-eel and pea-soup line united will be from 7*l.* to 7*l.* 10*s.* per week, or more. But there is only one man in London does this amount of business, or rather makes this amount of money. A small business will do about 15 lbs. of eels in the week, including Saturday, and about 12 gallons of soup. Sometimes credit is given for a halfpennyworth, or a pennyworth, at the outside; but very little is lost from bad debts. Boys who are partaking of the articles will occasionally say to the proprietor of the stall, "Well, master, they *are* nice; trust us another ha'-p'orth, and I'll pay you when I comes again;" but they are seldom credited, for the stall-keepers know well they would never see them again. Very often the stock cooked is not disposed of,

and then it is brought home and eaten by the family. The pea-soup will seldom keep a night, but what is left the family generally use for supper.

The dealers go out about half-past ten in the morning, and remain out till about ten at night. Monday is the next best day to Saturday. The generality of the customers are boys from 12 to 16 years of age. Newsboys are very partial to hot eels—women prefer the pea-soup. Some of the boys will have as many as six halfpenny cupfulls consecutively on a Saturday night; and some women will have three halfpenny basins-full of soup. Many persons in the cold weather prefer the hot soup to beer. On wet, raw, chilly days, the soup goes off better than usual, and in fine weather there is a greater demand for the hot eels. One dealer assured me that he once *did* serve two gentlemen's servants with twenty-eight halfpenny cupfulls of hot eels one after another. One servant had sixteen, and the other twelve cupfulls, which they ate all at one standing; and one of these customers was so partial to hot eels, that he used to come twice a day every day for six months after that, and have eight cupfulls each day, four at noon and four in the evening. These two persons were the best customers my informant ever had. Servants, however, are not generally partial to the commodity. Hot eels are not usually taken for dinner, nor is pea-soup, but throughout the whole day, and just at the fancy of the passers-by. There are no shops for the sale of these articles. The dealers keep no accounts of what their receipts and expenditure are.

The best time of the year for the hot eels is from the middle of June to the end of August. On some days during that time a person in a small way of business will clear upon an average 1*s.* 6*d.* a day, on other days 1*s.*; on some days, during the month of August, as much as 2*s.* 6*d.* a day. Some cry out "Nice hot eels—nice hot eels!" or "Warm your hands and fill your bellies for a halfpenny." One man used to give his surplus eels, when he considered his sale completed on a night, to the poor creatures refused admission into a workhouse, lending them his charcoal fire for warmth, which was always returned to him. The poor creatures begged cinders, and carried the fire under a railway arch. The general rule, however, is for the dealer to be silent, and merely expose the articles for sale. "I likes better," said one man to me, "to touch up people's noses than their heyes or their hears." There are now in the trade almost more than can get a living at it, and their earnings are less than they were formerly. One party attributed this to the opening of a couple of penny-pie shops in his neighbourhood. Before then he could get 2*s.* 6*d.* a day clear, take one day with another; but since the establishment of the business in the penny-pie line he cannot take above 1*s.* 6*d.* a day clear. On the day the first of these pie-shops opened, it made as much as 10 lbs., or half a draught of eels, difference to him. There was a band of music and an illumination at the pie-shop, and it was impossible to stand against *that*. The fashionable dress of the trade is the "Jenny Lind" or "wide-awake" hat, with a broad black ribbon tied round it, and a white apron and sleeves. The dealers usually go to Hampton-court or Greenwich on a fine Sunday. They are partial to the pit of Astley's. One of them told his waterman at Billingsgate the other morning that "he and his good lady had been werry amused with the osses at Hashley's last night."

Of the Experience of a Hot-Eel and Pea-soup Man.

"I was a coalheaver," said one of the class to me, as I sat in his attic up a close court, watching his wife "thicken the liquor;" "I was a-going along the plank, from one barge to another, when the swell of some steamers throwed the plank off the 'horse,' and chucked me down, and broke my knee agin the side of the barge. Before that I was yarning upon an average my 20*s.* to 30*s.* a week. I was seven months and four days in King's College Hospital after this. I found they was a-doing me no good there, so I come out and went over to Bartholemy's Hospital. I was in there nineteen months altogether, and after that I was a month in Middlesex Hospital, and all on 'em turned me out oncurable. You see, the bone's decayed—four bits of bone have been taken from it. The doctor turned me out three times 'cause I wouldn't have it off. He asked my wife if she would give consent, but neither she nor my daughter would listen to it, so I was turned out on 'em all. How my family lived all this time it's hard to tell. My eldest boy did a little—got 3*s.* 6*d.* a week as an errand-boy, and my daughter was in service, and did a little for me; but that was all we had to live upon. There was six children on my hands, and however they *did* manage I can't say. After I came out of the hospital I applied to the parish, and was allowed 2*s.* 6*d.* a week and four loaves. But I was anxious to do something, so a master butcher, as I knowed, said he would get me 'a pitch' (the right to fix a stall), if I thought I could sit at a stall and sell a few things. I told him I thought I could, and would be very thankful for it. Well, I had heard how the man up in the market was making a fortune at the hot-eel and pea-soup line. [A paviour as left his barrow and two shovels with me told me to-day, said the man, by way of parenthesis — 'that he knowed for a fact he was clearing 6*l.* a week regular.'] So I thought I'd have a touch at the same thing. But you see, I never could rise money enough to get sufficient stock to make a do of it, and never shall, I expect—it don't seem like it, however. I ought to have 5*s.* to go to market with to-morrow, and I ain't got above 1*s.* 6*d.*; and what's that for stock-money, I'd like to know? Well, as I was saying, the master butcher lent me 10*s.* to

Original from HARVARD UNIVERSITY

start in the line. He was the best friend I ever had. But I've never been able to do anything at it—not to say to get a living." "He can't carry anything now, sir," said his wife, as the old man strove to get the bellows to warm up the large kettle of pea-soup that was on the fire. "Aye, I can't go without my crutch. My daughter goes to Billingsgate for me. I've got nobody else; and she cuts up the eels. If it warn't for her I must give it up altogether, and go into the workhouse outright. I couldn't fetch 'em. I ought to have been out to-night by rights till ten, if I'd had anything to have sold. My wife can't do much; she's troubled with the rheumatics in her head and limbs." "Yes," said the old body, with a sigh, "I'm never well, and never shall be again, I know." "Would you accept on a drop of soup, sir?" asked the man; "you're very welcome, I can assure you. You'll find it very good, sir." I told him I had just dined, and the poor old fellow proceeded with his tale. "Last week I earned clear about 8*s.*, and that's to keep six on us. I didn't pay no rent last week nor yet this, and I don't know when I shall again, if things goes on in this way. The week before there was a fast-day, and I didn't earn above 6*s.* that week, if I did that. My boy can't go to school. He's got no shoes nor nothing to go in. The girls go to the ragged-school, but we can't send them of a Sunday nowhere." "Other people can go," said one of the young girls nestling round the fire, and with a piece of sacking over her shoulders for a shawl—"them as has got things to go in; but mother don't like to let us go as we are." "She slips her mother's shoes on when she goes out. It would take 1*l.* to start me well. With that I could go to market, and buy my draught of eels a shilling cheaper, and I could afford to cut my pieces a little bigger; and people where they gets used well comes again—don't you see? I could have sold more eels if I'd had 'em to-day, and soup too. Why, there's four hours of about the best time to-night that I'm losing now 'cause I've nothing to sell. The man in the market can give more than we can. He gives what is called the lumping ha'p'orth—that is, seven or eight pieces; ah, that I daresay he does; indeed, some of the boys has told me he gives as many as eight pieces. And then the more eels you biles up, you see, the richer the liquor is, and in our little tin-pot way it's like biling up a great jint of meat in a hocean of water. In course we can't compete agin the man in the market, and so we're being ruined entirely. The boys very often comes and asks me if I've got a farden's-worth of heads. The woman at Broadway, they tells me, sells 'em at four a farden and a drop of liquor, but we chucks 'em away, there's nothing to eat on them; the boys though will eat anything."

In the hot-eel trade are now 140 vendors, each selling 6 lb. of eels daily at their stands; 60 sell 40 lb. daily; and 100 are itinerant, selling 5 lb. nightly at the public-houses. The first mentioned take 2*s.* daily; the second 16*s.*; and the third 1*s.* 8*d.* This gives a street expenditure in the trade in hot eels of 19,448*l.* for the year.

To start in this business a capital is required after this rate:—stall 6*s.*; basket 1*s.*; eel-kettle 3*s.* 6*d.*; jar 6*d.*; ladle 4*d.*; 12 cups 1*s.*; 12 spoons 1*s.*; stew-pan 2*s.*; chafing-dish 6*d.*; strainer 1*s.*; 8 cloths 2*s.* 8*d.*; a pair sleeves 4*d.*; apron 4*d.*; charcoal 2*s.* (4*d.* being an average daily consumption); ¼ cwt. coal 3½*d.*; ½ lb. butter (the weekly average) 4*d.*; 1 quartern flour 5*d.*; 4 oz. pepper 4*d.*; 1 quart vinegar 10*d.*; 1 lb. salt ½*d.*; 1 lb. candles for stall 6*d.*; parsley 3*d.*; stock-money 10*s.* In all 1*l.* 15*s.* In the course of a year the property which may be described as fixed, as in the stall, &c., and the expenditure daily occurring as for stock, butter, coal, according to the foregoing statement, amounts to 15,750*l.* The eels purchased for this trade at Billingsgate are 1,166,880 lb., costing, at 3*d.* per lb., 12,102*l.*

In the pea-soup trade there are now one half of the whole number of the hot-eel vendors; of whom 100 will sell, each 4 gallons daily; and of the remaining 50 vendors, each will sell upon an average 10 gallons daily. The first mentioned take 3*s.* daily; and the last 7*s.* 6*d.* This gives a street expenditure of 4,050*l.* during the winter season of five months.

To commence business in the street sale of pea-soup a capital is required after this rate: soup-kettle 4*s.*; peas 2*s.*; soup-ladle 6*d.*; pepper-box 1*d.*; mint-box 3*d.*; chafing-dish 6*d.*; 12 basons 1*s.*; 12 spoons 1*s.*; bones, celery, mint, carrots, and onions, 1*s.* 6*d.* In all 10*s.* 10*d.* The hot-eel trade being in conjunction with the pea-soup, the same stall, candles, towels, sleeves, and aprons, does for both, and the quantity of extra coal and charcoal; pepper and salt given in the summary of hot-eels serves in cooking, &c., both eels and pea-soup.

Of the Street-sellers of Pickled Whelks.

The trade in whelks is one of which the costermongers have the undisputed monopoly. The wholesale business is all transacted in Billingsgate, where this shell-fish is bought by the measure (a double peck or gallon), half-measure, or wash. A wash is four measures, and is the most advantageous mode of purchase; "It's so much cheaper by taking that quantity," I was told, "it's as good as having a half-measure in." An average price for the year may be 4*s.* the wash; "But I've given 21*s.* for three wash," said one costermonger, and he waxed indignant as he spoke, "one Saturday, when there was a great stock in too, just because there was a fair coming on on Monday, and the whelkmen, who are the biggest rogues in Billingsgate, always have the price up then, and hinder a poor man

doing good—they've a great knack of that." A wash weighs about 60 lbs. On rare occasions it has been as low as 2*s.* 6*d.*, and even 1*s.* 6*d.*

About one-half of the whelks are sold alive (wholesale), and the other half "cooked" (boiled), some of the salesmen having "convenience for cooking" near the market; but they are all brought to London alive, "or what should be alive." When bought alive, which ensures a better quality, I was told—for "whelks'll boil after they're dead and gone, you see, sir, as if they was alive and hungry"—the costermonger boils them in the largest saucepan at his command for about ten minutes, and then leaves them until they cool. "They never kicks as they boils, like lobsters or crabs," said one whelk dealer, "they takes it quiet. A missionary cove said to me, 'Why don't you kill them first? it's murder.' *They* doesn't suffer; *I've* suffered more with a toothach than the whole of a measure of whelks has in a boiling, that I'm clear upon." The boiling is generally the work of the women. The next process is to place them in a tub, throw boiling water over them, and stir them up for ten or fifteen minutes with a broom-handle. If the quantity be a wash, two broom-handles, usually wielded by the man and his wife, are employed. This is both to clean them and "to make them come out easier to be wormed." The "worming" is equivalent to the removing of the beard of an oyster or mussel. The whelks are wormed one by one. The operator cuts into the fish, rapidly draws out the "worm," and pushes the severed parts together, which closes. The small whelks are not wormed, "because it's not reckoned necessary, and they're sold to poor lads and such like, that's not particular; but nearly all the women, and a good many of the boys, are very particular. They think the worm's poison." The whelks are next shaken in a tub, in cold water, and are then ready for sale. The same process, after the mere boiling, is observed, when the whelks are bought "cooked."

Some whelk-sellers, who wish to display a superior article, engage children for a few halfpence to rub the shell of every whelk, so that it looks clean and even bright.

I find a difficulty, common in the course of this inquiry, of ascertaining precisely the number of whelk-sellers, because the sale is often carried on simultaneously with that of other things, (stewed eels, for instance,) and because it is common for costermongers to sell whelks on a Saturday night only, both at stalls and "round to the public-houses," but only when they are cheap at Billingsgate. On a Saturday night there may be 300 whelk-sellers in the streets, nearly half at stalls, and half, or more, "working the public-houses." But of this number it must be understood that perhaps the wife is at the stall while the husband is on a round, and some whelks are sent out by a man having an extra stock. This, therefore, reduces the number of independent dealers, but not the actual number of sellers. On all other nights there may be half the number engaged in this traffic, in the streets regularly all the year; and more than half on a Monday, as regards the public-house business, in which little is done between Monday and Saturday nights. But a man will, in some instances, work the public-houses every night (the wife tending the stall), and the more assiduously if the weather be bad or foggy, when a public-house custom is the best. A fair week's earnings in whelks, "when a man's known," is 1*l.*; a bad week is from 5*s.* to 8*s.* I am assured that bad weeks are "as plenty as good, at least, the year round;" and thus the average to the street whelk-sellers, in whelks alone, is about 13*s.* when the trade is carried on daily and regularly, and 5*s.* a week by those who occasionally resort to it; and as the occasional hands are the more numerous, the average may be struck at 7*s.*

The whelks are sold at the stalls at two, three, four, six, and eight a penny, according to size. Four is an average pennyworth for good whelks; the six a penny are small, and the eight a penny very small. The principal place for their sale is in Old-street, City-road. The other principal places are the street-markets, which I have before particularised. The whelks are sold in saucers, generally small and white, and of common ware, and are contained in jars, ready to be "shelled" into any saucer that may have been emptied. Sometimes a small pyramid of shells, surmounted by a candle protected by a shade, attracts the regard of the passer-by. The man doing the best business in London was to be found, before the removals of which I have spoken, in Lambeth-walk, but he has now no fixed locality. His profits, I am informed, were regularly 3*l.* a week; but out of this he had to pay for the assistance of two or sometimes three persons, in washing his whelks, boiling them, &c.; besides that, his wife was as busy as himself. To the quality and cleanliness of his whelks he was very attentive, and would sell no mediocre article if better could be bought. "He deserved all he earned, sir," said another street-dealer to me; "why, in Old-street now they'll have the old original saucers, miserable things, such as they had fifty years back; but the man we're talking of, about two years ago, brought in very pretty plates, quite enterprising things, and they answered well. His example's spreading, but it's slowly." The whelks are eaten with vinegar and pepper.

For sale in the public-houses, the whelks are most frequently carried in jars, and transferred in a saucer to the consumer. "There's often a good sale," said a man familiar with the business, "when a public room's filled. People drinking there always want to eat. They buy whelks, not to fill themselves, but for a relish. A man that's used to the trade will often get off inferior sorts to the lushingtons; he'll have them to rights. Whelks is all the same, good, bad, or middling, when a man's drinking, if they're well seasoned with pepper and vinegar.

Oh yes; any whelk-man will take in a drunken fellow, and he will do it all the same, if he's made up his mind to, get drunk hisself that very night."

The trade is carried on by the regular costers, but of the present number of whelk-sellers, about twenty have been mechanics or servants. The whelk-trade is an evening trade, commencing generally about six, summer and winter, or an hour earlier in winter.

The capital required to start in the whelk-business is: stall, 2*s.* 6*d.*; saucers, vinegar-bottle, jar, pepper-castor, and small watering-pan (used only in dusty weather), 2*s.* 6*d.*; a pair of stilts (supports for the stall), 1*s.* 6*d.*; stock-money, 5*s.*; pepper and vinegar, 6*d.*, or 12*s.* in all. If the trade be commenced in a round basket, for public-house sale, 7*s.* or 8*s.* only is required, but it is a hazardous experiment for a person unpractised in street business.

Of the Customers, etc., of Pickled Whelk-sellers.

An intelligent man gave me the following account. He had been connected with street-trading from his youth up, and is now about thirty:

"The chief customers for whelks, sir, are working people and poor people, and they prefer them to oysters; I do myself, and I think they're not so much eaten because they're not fashionable like oysters. But I've sold them to first-rate public-houses, and to doctors' shops—more than other shops, I don't know why—and to private houses. Masters have sent out their servant-maids to me for three or four penn'orths for supper. I've offered the maids a whelk, but they won't eat them in the street; I dare say they're afraid their young men may be about, and might think they wasn't ladies if they eat whelks in the street. Boys are the best customers for 'small,' but if you don't look sharp, you'll be done out of three-ha'porth of vinegar to a ha'porth of whelks. I can't make out why they like it so. They're particular enough in their way. If the whelks are thin, as they will be sometimes, the lads will say, 'What a lot of snails you've gathered to-night!' If they're plump and fine, then they'll say, 'Fat 'uns to-night—stunners!' Some people eat whelks for an appetite; they give me one, and more in summer than winter. The women of the town are good customers, at least they are in the Cut and Shoreditch, for I know both. If they have five-penn'orth, when they're treated perhaps, there's always sixpence. They come on the sly sometimes, by themselves, and make what's a meal, I'm satisfied, on whelks, and they'll want credit sometimes. I've given trust to a woman of that sort as far as 2*s.* 6*d.* I've lost very little by them; I don't know how much altogether. I keep no account, but carry any credit in my head. Those women's good pay, take it altogether, for they know how hard it is to get a crust, and have a feeling for a poor man, if they haven't for a rich one—that's my opinion, sir. Costermongers in a good time are capital customers; they'll buy five or six penn'orths at a time. The dust's a great injury to the trade in summer time; it dries the whelks up, and they look old. I wish whelks were cheaper at Billingsgate, and I could do more business; and I could do more if I could sell a few minutes after twelve on a Saturday night, when people must leave the public-house. I have sold three wash of a Saturday night, and cleared 15*s.* on them. I one week made 3*l.*, but I had a few stewed eels to help,—that is, I cleared 2*l.*, and had a pound's worth over on the Saturday night, and sent them to be sold—and they were sold—at Battersea on the Sunday; I never went there myself. I've had twenty people round my stall at one time on a Saturday. Perhaps my earnings on that (and other odd things) may come to 1*l.* a week, or hardly so much, the year round. I can't say exactly. The shells are no use. Boys have asked me for them 'to make sea-shells of,' they say — to hold them to their ears when they're big, and there's a sound like the sea rolling. Gentlemen have sometimes told me to keep a dozen dozen or twenty dozen, for borders to a garden. I make no charge for them—just what a gentleman may please to give.

The information given shows an outlay of 5,250*l.* yearly for street whelks, and as the return I have cited shows the money spent in whelks at Billingsgate to be 2,500*l.*, the number of whelks being 4,950,000, the account is correct, as the coster's usual "half-profits" make up the sum expended.

Of the Street Sellers, and of the Preparation of Fried Fish.

Among the cooked food which has for many years formed a portion of the street trade is fried fish. The sellers are about 350, as a maximum and 250 as a minimum, 300 being an average number. The reason of the variation in number is, that on a Saturday night, and occasionally on other nights, especially on Mondays, stall-keepers sell fried fish, and not as an ordinary article of their trade. Some men, too, resort to the trade for a time, when they cannot be employed in any way more profitable or suitable to them. The dealers in this article are, for the most part, old men and boys, though there may be 30 or 40 women who sell it, but only 3 or 4 girls, and they are the daughters of the men in the business as the women are the wives. Among the fried-fish sellers there are not half a dozen Irish people, although fish is so especial a part of the diet of the poor Irish. The men in the calling have been, as regards the great majority, mechanics or servants; none, I was told, had been fishmongers, or their assistants.

The fish fried by street dealers is known as "plaice dabs" and "sole dabs," which are merely plaice and soles, "dab" being a com-

mon word for any flat fish. The fish which supplies upwards of one half the quantity fried for the streets is plaice; the other fishes used are soles, haddocks, whitings, flounders, and herrings, but very sparingly indeed as regards herrings. Soles are used in as large a quantity as the other kinds mentioned altogether. On my inquiry as to the precise quantity of each description fried, the answer from the traders was uniform: "I can't say, sir. I buy whatever's cheapest." The fish is bought at Billingsgate, but some of the street dealers obtain another and even a cheaper commodity than at that great mart. This supply is known in the trade as "friers," and consists of the overplus of a fishmonger's stock, of what he has not sold overnight, and does not care to offer for sale on the following morning, and therefore vends it to the costermongers, whose customers are chiefly among the poor. The friers are sometimes half, and sometimes more than half, of the wholesale price in Billingsgate. Many of the friers are good, but some, I was told, "in any thing like muggy or close weather were very queer fish, very queer indeed," and they are consequently fried with a most liberal allowance of oil, "which will conceal anything."

The fish to be fried is first washed and gutted; the fins, head, and tail are then cut off, and the trunk is dipped in flour and water, so that in frying, oil being always used, the skin will not be scorched by the, perhaps, too violent action of the fire, but merely browned. Pale rape oil is generally used. The sellers, however, are often twitted with using lamp oil, even when it is dearer than that devoted to the purpose. The fish is cooked in ordinary frying-pans. One tradesman in Cripplegate, formerly a costermonger, has on his premises a commodious oven which he had built for the frying, or rather baking, of fish. He supplies the small shopkeepers who deal in the article (although some prepare it themselves), and sells his fish retail also, but the street-sellers buy little of him, as they are nearly all "their own cooks." Some of the "illegitimates," however, lay in their stock by purchase of the tradesman in question. The fish is cut into portions before it is fried, and the frying occupies about ten minutes. The quantity prepared together is from six to twenty portions, according to the size of the pans; four dozen portions, or "pieces," as the street people call them, require a quart of oil.

The fried fish-sellers live in some out of the way alley, and not unfrequently in garrets; for among even the poorest class there are great objections to their being fellow-lodgers, on account of the odour from the frying. Even when the fish is fresh (as it most frequently is), and the oil pure, the odour is rank. In one place I visited, which was, moreover, admirable for cleanliness, it was very rank. The cooks, however, whether husbands or wives—for the women often attend to the pan—when they hear of this disagreeable rankness, answer that it may be so, many people say so; but for their parts they cannot smell it at all. The garments of the fried-fish sellers are more strongly impregnated with the smell of fish than were those of any "wet" or other fish-sellers whom I met with. Their residences are in some of the labyrinths of courts and alleys that run from Gray's-inn-lane to Leather-lane, and similar places between Fetter and Chancery-lanes. They are to be found, too, in the courts running from Cow-cross, Smithfield; and from Turnmill-street and Ray-street, Clerkenwell; also, in the alleys about Bishopsgate-street and the Kingsland-road, and some in the half-ruinous buildings near the Southwark and Borough-roads. None, or very few, of those who are their own cooks, reside at a greater distance than three miles from Billingsgate. A gin-drinking neighbourhood, one coster said, suits best, "for people hasn't their smell so correct there."

The sale is both on rounds and at stalls, the itinerants being twice as numerous as the stationary. The round is usually from public-house to public-house, in populous neighbourhoods. The itinerants generally confine themselves to the trade in fried fish, but the stall-keepers always sell other articles, generally fish of some kind, along with it. The sale in the public-houses is the greatest.

At the neighbouring races and fairs there is a great sale of fried fish. At last Epsom races, I was told, there were at least fifty purveyors of that dainty from London, half of them perhaps being costermongers, who speculated in it merely for the occasion, preparing it themselves. Three men joined in one speculation, expending 8*l.* in fish, and did well, selling at the usual profit of cent. per cent., but with the drawback of considerable expenses. Their customers at the races and fairs are the boys who hold horses or brush clothes, or who sell oranges or nuts, or push at roundabouts, and the costers who are there on business. At Epsom races there was plenty of bread, I was informed, to be picked up on the ground; it had been flung from the carriages after luncheon, and this, with a piece of fish, supplied a meal or "a relish" to hundreds.

In the public-houses, a slice of bread, 16 or 32 being cut from a quartern loaf—as they are whole or half slices—is sold or offered with the fish for a penny. The cry of the seller is, "fish and bread, a penny." Sometimes for an extra-sized piece, with bread, 2*d.* is obtained, but very seldom, and sometimes two pieces are given for 1½*d.* At the stalls bread is rarely sold with the edible in question.

For the itinerant trade, a neatly painted wooden tray, slung by a leathern strap from the neck, is used: the tray is papered over generally with clean newspapers, and on the paper is spread the shapeless brown lumps of fish. Parsley is often strewn over them, and a salt-box is placed at the discretion of the customer. The trays contain from two to five dozen pieces.

I understand that no one has a trade greatly in advance of his fellows. The whole body complain of their earnings being far less than was the case four or five years back.

The itinerant fried fish-sellers, when pursuing their avocation, wear generally a jacket of cloth or fustian buttoned round them, but the rest of their attire is hidden by the white sleeves and apron some wear, or by the black calico sleeves and dark woollen aprons worn by others.

The capital required to start properly in the business is:—frying-pan 2*s.* (second-hand 9*d.*); tray 2*s.* 6*d.* (second-hand 8*d.*); salt-box 6*d.* (second-hand 1*d.*); and stock-money 5*s.*—in all 10*s.* A man has gone into the trade, however, with 1*s.*, which he expended in fish and oil, borrowed a frying-pan, borrowed an old tea-board, and so started on his venture.

Of the Experience of a Fried Fish-seller, and of the Class of Customers.

The man who gave me the following information was well-looking, and might be about 45 or 50. He was poorly dressed, but his old brown surtout fitted him close and well, was jauntily buttoned up to his black satin stock, worn, but of good quality; and, altogether, he had what is understood among a class as "a *betterly* appearance about him." His statement, as well as those of the other vendors of provisions, is curious in its details of public-house vagaries:—

"I've been in the trade," he said, "seventeen years. Before that, I was a gentleman's servant, and I married a servant-maid, and we had a family, and, on that account, couldn't, either of us, get a situation, though we'd good characters. I was out of employ for seven or eight months, and things was beginning to go to the pawn for a living; but at last, when I gave up any hope of getting into a gentleman's service, I raised 10*s.*, and determined to try something else. I was persuaded, by a friend who kept a beer-shop, to sell oysters at his door. I took his advice, and went to Billingsgate for the first time in my life, and bought a peck of oysters for 2*s.* 6*d.* I was dressed respectable then—nothing like the mess and dirt I'm in now" [I may observe, that there was no dirt about him]; "and so the salesman laid it on, but I gave him all he asked. I know a deal better now. I'd never been used to open oysters, and I couldn't do it. I cut my fingers with the knife slipping all over them, and had to hire a man to open for me, or the blood from my cut fingers would have run upon the oysters. For all that, I cleared 2*s.* 6*d.* on that peck, and I soon got up to the trade, and did well; till, in two or three months, the season got over, and I was advised, by the same friend, to try fried fish. That suited me. I've lived in good families, where there was first-rate men-cooks, and I know what good cooking means. I bought a dozen plaice; I forget what I gave for them, but they were dearer then than now. For all that, I took between 11*s.* and 12*s.* the first night—it was Saturday—that I started; and I stuck to it, and took from 7*s.* to 10*s.* every night, with more, of course, on Saturday, and it was half of it profit then. I cleared a good mechanic's earnings at that time —30*s.* a week and more. Soon after, I was told that, if agreeable, my wife could have a stall with fried fish, opposite a wine-vaults just opened, and she made nearly half as much as I did on my rounds. I served the public-houses, and soon got known. With some landlords I had the privilege of the parlour, and tap-room, and bar, when other tradesmen have been kept out. The landlords will say to me still: '*You* can go in, Fishy.' Somehow, I got the name of 'Fishy' then, and I've kept it ever since. There was hospitality in those days. I've gone into a room in a public-house, used by mechanics, and one of them has said: 'I'll stand fish round, gentlemen;' and I've supplied fifteen penn'orths. Perhaps he was a stranger, such a sort of customer, that wanted to be agreeable. Now, it's more likely I hear: 'Jack, lend us a penny to buy a bit of fried;' and then Jack says: 'You be d—d! here, lass, let's have another pint.' The insults and difficulties I've had in the public-house trade is dreadful. I once sold 16*d.* worth to three rough-looking fellows I'd never seen before, and they seemed hearty, and asked me to drink with them, so I took a pull; but they wouldn't pay me when I asked, and I waited a goodish bit before I did ask. I thought, at first, it was their fun, but I waited from four to seven, and I found it was no fun. I felt upset, and ran out and told the policeman, but he said it was only a debt, and he couldn't interfere. So I ran to the station, but the head man there said the same, and told me I should hand over the fish with one hand, and hold out the other hand for my money. So I went back to the public-house, and asked for my money—and there was some mechanics that knew me there then—but I got nothing but '—— you's!' and one of 'em used most dreadful language. At last, one of the mechanics said: 'Muzzle him, Fishy, if he won't pay.' He was far bigger than me, him that was one in debt; but my spirit was up, and I let go at him and gave him a bloody nose, and the next hit I knocked him backwards, I'm sure I don't know how, on to a table; but I fell on him, and he clutched me by the coat-collar—I was respectable dressed then—and half smothered me. He tore the back of my coat, too, and I went home like Jim Crow. The potman and the others parted us, and they made the man give me 1*s.*, and the waiter paid me the other 4*d.*, and said he'd take his chance to get it—but he never got it. Another time I went into a bar, and there was a ball in the house, and one of the ball gents came down and gave my basket a kick without ever a word, and started the fish; and in a scuffle—he was a little fellow, but my master—I had this finger put out of joint—you can see that, sir, still—and was in the hospital a week from an injury to my leg; the tiblin bone was hurt, the doctors said" [the tibia.] "I've had my tray kicked over for a lark in a public-house, and a scramble for my

fish, and all gone, and no help and no money for me. The landlords always prevent such things, when they can, and interfere for a poor man; but then it's done sudden, and over in an instant. That sort of thing wasn't the worst. I once had some powdery stuff flung sudden over me at a parlour door. My fish fell off, for I jumped, because I felt blinded, and what became of them I don't know; but I aimed at once for home—it was very late—and had to feel my way almost like a blind man. I can't tell what I suffered. I found it was something black, for I kept rubbing my face with my apron, and could just tell it came away black. I let myself in with my latch, and my wife was in bed, and I told her to get up and look at my face and get some water, and she thought I was joking, as she was half asleep; but when she got up and got a light, and a glass, she screamed, and said I looked such a shiny image; and so I did, as well as I could see, for it was black lead—such as they use for grates—that was flung on me. I washed it off, but it wasn't easy, and my face was sore days after. I had a respectable coat on then, too, which was greatly spoiled, and no remedy at all. I don't know who did it to me. I heard some one say: 'You're served out beautiful' Its men that calls themselves gentlemen that does such things. I know the style of them then—it was eight or ten years ago; they'd heard of Lord ——, and his goings on. That way it's better now, but worse, far, in the way of getting a living. I dare say, if I had dressed in rough corderoys, I shouldn't have been larked at so much, because they might have thought I was a regular coster, and a fighter; but I don't like that sort of thing—I like to be decent and respectable, if I can.

"I've been in the 'fried' trade ever since, except about three months that I tried the sandwiches. I didn't do so well in them, but it was a far easier trade; no carrying heavy weights all the way from Billingsgate: but I went back to the fried. Why now, sir, a good week with me—and I've only myself in the trade now" [he was a widower]—"is to earn 12*s.*, a poor week is 9*s.*; and there's as many of one as of the other. I'm known to sell the best of fish, and to cook it in the best style. I think half of us, take it round and round for a year, may earn as much as I do, and the other half about half as much. I think so. I might have saved money, but for a family. I've only one at home with me now, and he really *is* a good lad. My customers are public-house people that want a relish or a sort of supper with their beer, not so much to drinkers. I sell to tradesmen, too; 4*d.* worth for tea or supper. Some of them send to my place, for I'm known. The Great Exhibition can't be any difference to me. I've a regular round. I used to sell a good deal to women of the town, but I don't now. They haven't the money, I believe. Where I took 10*s.* of them, eight or ten years ago, I now take only 6*d.* They may go for other sorts of relishes now; I can't say. The worst of my trade is, that people must have as big penn'orths when fish is dear as when its cheap. I never sold a piece of fish to an Italian boy in my life, though they're Catholics. Indeed, I never saw an Italian boy spend a halfpenny in the streets on anything."

A working-man told me that he often bought fried fish, and accounted it a good to men like himself. He was fond of fried fish to his supper; he couldn't buy half so cheap as the street-sellers, perhaps not a quarter; and, if he could, it would cost him 1*d.* for dripping to fry the fish in, and he got it ready, and well fried, and generally good, for 1*d.*

Subsequent inquiries satisfied me that my informant was correct as to his calculations of his fellows' earnings, judging from his own. The price of plaice at Billingsgate is from ½*d.* to 2*d.* each, according to size (the fried fish purveyors never calculate by the weight), ¾*d.* being a fair average. A plaice costing 1*d.* will now be fried into four pieces, each 1*d.*; but the addition of bread, cost of oil, &c., reduces the "fried" peoples' profits to rather less than cent. per cent. Soles and the other fish are, moreover, 30 per cent. dearer than plaice. As 150 sellers make as much weekly as my informant, and the other 150 half that amount, we have an average yearly earning of 27*l.* 6*s.* in one case, and of 13*l.* 13*s.* in the other. Taking only 20*l.* a year as a medium earning, and adding 90 per cent for profit, the outlay on the fried fish supplied by London street-sellers is 11,400*l.*

Of the Preparation and Quantity of Sheep's Trotters, and of the Street-Sellers.

The sale of sheep's trotters, as a regular street-trade, is confined to London, Liverpool, Newcastle-on-Tyne, and a few more of our greater towns. The "trotter," as it is commonly called, is the boiled foot of the sheep. None of my readers can have formed any commensurate notion of the extent of the sale in London, and to some readers the very existence of such a comestible may be unknown. The great supply now required is readily attained. The wholesale trade is now in the hands of one fellmongering firm, though until within these twenty months or so there were two, and the feet are cut off the sheep-skins by the salesmen in the skin-market, in Bermondsey, and conveyed to the fellmonger's premises in carts and in trucks.

Sheep's trotters, one of my informants could remember, were sold in the streets fifty years ago, but in such small quantities that it could hardly be called a trade. Instead of being prepared wholesale as at present, and then sold out to the retailers, the trotters were then prepared by the individual retailers, or by small traders in tripe and cow-heel. Twenty-five years ago nearly all the sheep's trotters were "lined and prepared," when the skin came into the hands of the fellmonger, for the glue and size makers. Twenty years ago only about one-

twentieth of the trotters now prepared for eating were devoted to the same purpose; and it was not until about fifteen years back that the trade began to reach its present magnitude; and for the last twelve years it has been about stationary, but there were never more sold than last year.

From fifteen to twenty years ago glue and size, owing principally to improved modes of manufacture, became cheaper, so that it paid the fellmonger better to dispose of the trotters as an article "cooked" for the poor, than to the glue-boiler.

The process of cookery is carried on rapidly at the fellmonger's in question. The feet are first scalded for about half an hour. After that from ten to fifteen boys are employed in scooping out the hoofs, which are sold for manure or to manufacturers of Prussian blue, which is extensively used by painters. Women are then employed, forty being an average number, "to scrape the hair off,"—for hair it is called—quickly, but softly, so that the skin should not be injured, and after that the trotters are boiled for about four hours, and they are then ready for market.

The proprietor of this establishment, after he had obligingly given me the information I required, invited me to walk round his premises unaccompanied, and observe how the business was conducted. The premises are extensive, and are situated, as are nearly all branches of the great trade connected with hides and skins, in Bermondsey. The trotter business is kept distinct from the general fellmongering. Within a long shed are five coppers, each containing, on an average, 250 "sets," a set being the complement of the sheep's feet, four. Two of these coppers, on my visit, were devoted to the scalding, and three to the boiling of the trotters. They looked like what one might imagine to be witches' big caldrons; seething, hissing, boiling, and throwing forth a steam not peculiarly grateful to the nostrils of the uninitiated. Thus there are, weekly, "cooking" in one form or other, the feet of 20,000 sheep for the consumption of the poorer classes, or as a relish for those whose stomachs crave after edibles of this description. At one extremity of this shed are the boys, who work in a place open at the side, but the flues and fires make all parts sufficiently warm. The women have a place to themselves on the opposite side of the yard. The room where they work has forms running along its sides, and each woman has a sort of bench in front of her seat, on which she scrapes the trotters. One of the best of these workwomen can scrape 150 sets, or 600 feet in a day, but the average of the work is 500 sets a week, including women and girls. I saw no girls but what seemed above seventeen or eighteen, and none of the women were old. They were exceedingly merry, laughing and chatting, and appearing to consider that a listener was not of primary consequence, as they talked pretty much altogether. I saw none but what were decently dressed, some were good-looking, and none seemed sickly.

In this establishment are prepared, weekly, 20,000 sets, or 80,000 feet; a yearly average of 4,160,000 trotters, or the feet of 1,040,000 sheep. Of this quantity the street-folk buy seven-eighths; 3,640,000 trotters yearly, or 70,000 weekly. The number of sheep trotter-sellers may be taken at 300, which gives an average of nearly sixty sets a week per individual.

The wholesale price, at the "trotter yard," is five a penny, which gives an outlay by the street-sellers of 3,031*l.* 11*s.* yearly.

But this is not the whole of the trade. Lamb's trotters are also prepared, but only to one-twentieth of the quantity of sheep's trotters, and that for only three months of the year. These are all sold to the street-sellers. The lamb's foot is usually left appended to the leg and shoulder of lamb. It is weighed with the joint, but the butcher's man or boy will say to the purchaser: "Do you want the foot?" As the answer is usually in the negative, it is at once cut off and forms a "perquisite." There are some half dozen men, journeymen butchers not fully employed, who collect these feet, prepare and sell them to the street-people, but as the lamb's feet are very seldom as fresh as those of the sheep carried direct from the skin market to—so to speak—the great trotter kitchen, the demand for "lamb's" falls off yearly. Last year the sale may be taken at about 14,000 sets, selling, wholesale, at about 46*l.*, the same price as the sheep.

The sellers of trotters, who are stationary at publichouse and theatre doors, and at street corners, and itinerant, but itinerant chiefly from one public house to another are a wretchedly poor class. Three fourths of them are elderly women and children, the great majority being Irish people, and there are more boys than girls in the trade. The capital required to start in the business is very small. A hand basket of the larger size costs 1*s.* 9*d.*, but smaller or second-hand only 1*s.*, and the white cotton cloth on which the trotters are displayed costs 4*d.* or 6*d.*; stock-money need not exceed 1*s.*, so that 3*s.* is all that is required. This is one reason, I heard from several trotter-sellers, why the business is over-peopled.

Statements of Sheep's Trotter Women.

From one woman, who, I am assured, may be taken as a fair type of the better class of trotter-sellers—some of the women being sottish and addicted to penn'orths of gin beyond their means—I had the following statement. I found her in the top room of a lofty house in Clerkenwell. She was washing when I called, and her son, a crippled boy of 16, with his crutch by his side, was cleaning knives, which he had done for many months for a family in the neighbourhood, who paid for his labour in what the mother pronounced better than money—broken victuals, because they were of such good, wholesome quality. The room, which

is of a good size, had its red-brown plaster walls, stained in parts with damp, but a great portion was covered with the cheap engravings "given away with No. 6" (or any other number) of some periodical "of thrilling interest;" while the narrow mantel-shelf was almost covered with pot figures of dumpy men, red-breeched and blue-coated, and similar ornaments. I have often noted such attempts to subdue, as it were, the grimness of poverty, by the poor who had "seen better days." The mother was tall and spare, and the boy had that look of premature sedateness, his face being of a sickly hue, common to those of quiet dispositions, who have been afflicted from their childhood:—

"I'm the widow of a sawyer, sir," said Mrs. ——, with a very slight brogue, for she was an Irishwoman, "and I've been a widow 18 long years. I'm 54, I believe, but that 18 years seems longer than all the rest of my life together. My husband earned hardly ever less than 30*s.* a week, sometimes 3*l.*, and I didn't know what pinching was. But I was left destitute with four young children, and had to bring them up as well as I could, by what I could make by washing and charing, and a hard fight it was. One of my children went for a soldier, one's dead, another's married, and that's the youngest there. Ah! poor fellow, what he's gone through! He's had 18 abscesses, one after another, and he has been four times in Bartholomew's. There's only God above to help him when I'm gone. My health broke six years ago, and I couldn't do hard work in washing, and I took to trotter selling, because one of my neighbours was in that way, and told me how to go about it. My son sells trotters too; he always sits at the corner of this street. I go from one public-house to another, and sometimes stand at the door, or sit inside, because I'm known and have leave. But I can't either sit, or stand, or walk long at a time, I'm so rheumatic. No, sir, I can't say I was ever badly insulted in a public-house; but I only go to those I know. Others may be different. We depend mostly on trotters, but I have a shilling and my meat, for charing, a day in every week. I've tried 'winks and whelks too, 'cause I thought they might be more in my pocket than trotters, but they don't suit a poor woman that's begun a street-trade when she's not very young. And the trotters can be carried on with so little money. It's not so long ago that I've sold three-penn'orth of trotters—that is, him and me has—pretty early in the evening; I'd bought them at Mr. ——'s, in Bermondsey, in the afternoon, for we can buy three penn'orth, and I walked there again—perhaps it's four miles there and back—and bought another 3*d.* worth. The first three-pence was all I could rise. It's a long weary way for me to walk, but some walk from Poplar and Limehouse. If I lay out 2*s.* on the Saturday—there's 15 sets for 1*s.*, that's 60 trotters—they'll carry us on to Monday night, and sometimes, if they'll keep, to Tuesday night. Sometimes I could sell half-a-crown's worth in less time. I have to go to Bermondsey three or four times a week. The trade was far better six years ago, though trotters were dearer then, only 13 sets 1*s.*, then 14, now 15. For some very few, that's very fine and very big, I get a penny a piece; for some I get 1½*d.* for two; the most's ½*d.* each; some's four for 1½*d.*; and some I have to throw into the dust-hole. The two of us earns 5*s.* a week on trotters, not more, I'm sure. I sell to people in the public-houses; some of them may be rather the worse for drink, but not so many; regular drunkards buys nothing but drink. I've sold them too to steady, respectable gentlemen, that's been passing in the street, who put them in their pockets for supper. My rent's 1*s.* a week."

I then had some conversation with the poor lad. He'd had many a bitter night, he told me, from half-past five to twelve, for he knew there was no breakfast for his mother and him if he couldn't sell some trotters. He had a cry sometimes. He didn't know any good it did him, but he couldn't help it. The boys gathered round him sometimes, and teased him, and snatched at his crutch; and the policeman said that he must make him "move on," as he encouraged the boys about him. He didn't like the boys any more than they were fond of the policemen. He had often sad thoughts as he sat with his trotters before him, when he didn't cry; he wondered if ever he would be better off; but what could he do? He could read, but not write; he liked to read very well when he had anything to read. His mother and he never missed mass.

Another old woman, very poorly, but rather tidily dressed, gave me the following account, which shows a little of public-house custom:—

"I've seen better days, sir, I have indeed; I don't like to talk about that, but now I'm only a poor sheep's trotter seller, and I've been one a good many years. I don't know how long, and I don't like to think about it. It's a shocking bad trade, and such insults as we have to put up with. I serve some public-houses, and I stand sometimes at a playhouse-door. I make 3*s.* or 3*s.* 6*d.* a week, and in a very good week 4*s.*, but, then, I sometimes make only 2*s.* I'm infirm now, God help me! and I can do nothing else. Another old woman and me has a room between us, at 1*s.* 4*d.* a week. Mother 's the best name I'm called in a public-house, and it ain't a respectable name. 'Here, mother, give us one of your b— trotters,' is often said to me. One customer sometimes says: 'The stuff'll choke me, but that's as good as the Union.' *He* ain't a bad man, though. He sometimes treats me. He'll bait my trotters, but that's his larking way, and then he'll say:

'A pennorth o' gin,
'll make your old body spin.'

It's his own poetry, he says. I don't know what he is, but he's often drunk, poor fellow. Women's far worse to please than men. I've known a woman buy a trotter, put her teeth into it, and then say it wasn't good, and return it. It wasn't paid for when she did so, and be-

cause I grumbled, I was abused by her, as if I'd been a Turk. The landlord interfered, and he said, said he, 'I'll not have this poor woman insulted; she's here for the convenience of them as requires trotters, and she's a well-conducted woman, and I'll not have her insulted,' he says, says he, lofty and like a gentleman, sir. 'Why, who's insulting the old b—h?' says the woman, says she. 'Why, you are,' says the landlord, says he, 'and you ought to pay her for her trotter, or how is she to live?' 'What the b— h—ll do I care how she lives,' says the woman, 'its nothing to me, and I won't pay her.' 'Then I will,' says the landlord, says he, 'here's 6*d*.,' and he wouldn't take the change. After that I soon sold all my trotters, and some gave me double price, when the landlord showed himself such a gentleman, and I went out and bought nine trotters more, another woman's stock, that she was dreading she couldn't sell, and I got through them in no time. It was the best trotter night I ever had. She wasn't a woman of the town as used me so. I have had worse sauce from modest women, as they called themselves, than from the women of the town, for plenty of *them* knows what poverty is, and is civiler, poor things—yes, I'm sure of that, though it's a shocking life—O, shocking! I never go to the playhouse-door but on a fine night. Young men treats their sweethearts to a trotter, for a relish, with a drop of beer between the acts. Wet nights is the best for public-houses. 'They're not salt enough,' has been said to me, oft enough, 'they don't make a man thirsty.' It'll come to the workhouse with me before long, and, perhaps, all the better. It's warm in the public-house, and that draws me to sell my trotters there sometimes. I live on fish and bread a good deal."

The returns I collected show that there is expended yearly in London streets on trotters, calculating their sale, retail, at ½*d*. each, 6,500*l*., but though the regular price is ½*d*., some trotters are sold at four for 1½*d*., very few higher than ½*d*., and some are kept until they are unsaleable, so that the amount may be estimated at 6,000*l*., a receipt of 7*s*. 6*d*. weekly, per individual seller, rather more than one-half of which sum is profit.

Of the Street Trade in Baked Potatoes.

The *baked potato trade*, in the way it is at present carried on, has not been known more than fifteen years in the streets. Before that, potatoes were sometimes roasted as chestnuts are now, but only on a small scale. The trade is more profitable than that in fruit, but continues for but six months of the year.

The potatoes, for street-consumption, are bought of the greengrocers, at the rate of 5*s*. 6*d*. the cwt. They are usually a large-sized "fruit," running about two or three to the pound. The kind generally bought is what are called the "French Regent's." French potatoes are greatly used now, as they are cheaper than the English. The potatoes are picked, and those of a large size, and with a rough skin, selected from the others, because they are the mealiest. A waxy potato shrivels in the baking. There are usually from 280 to 300 potatoes in the cwt.; these are cleaned by the huckster, and, when dried, taken in baskets, about a quarter cwt. at a time, to the baker's, to be cooked. They are baked in large tins, and require an hour and a half to do them well. The charge for baking is 9*d*. the cwt., the baker usually finding the tins. They are taken home from the bakehouse in a basket, with a yard and a half of green baize in which they are covered up, and so protected from the cold. The huckster then places them in his can, which consists of a tin with a half-lid; it stands on four legs, and has a large handle to it, while an iron fire-pot is suspended immediately beneath the vessel which is used for holding the potatoes. Directly over the fire-pot is a boiler for hot water. This is concealed within the vessel, and serves to keep the potatoes always hot. Outside the vessel where the potatoes are kept is, at one end, a small compartment for butter and salt, and at the other end another compartment for fresh charcoal. Above the boiler, and beside the lid, is a small pipe for carrying off the steam. These potato-cans are sometimes brightly polished, sometimes painted red, and occasionally brass-mounted. Some of the handsomest are all brass, and some are highly ornamented with brass-mountings. Great pride is taken in the cans. The baked-potato man usually devotes half an hour to polishing them up, and they are mostly kept as bright as silver. The handsomest potato-can is now in Shoreditch. It cost ten guineas, and is of brass mounted with German silver. There are three lamps attached to it, with coloured glass, and of a style to accord with that of the machine; each lamp cost 5*s*. The expense of an ordinary can, tin and brass-mounted, is about 50*s*. They are mostly made by a tinman in the Ratcliffe-highway. The usual places for these cans to stand are the principal thoroughfares and street-markets. It is considered by one who has been many years at the business, that there are, taking those who have regular stands and those who are travelling with their cans on their arm, at least two hundred individuals engaged in the trade in London. There are three at the bottom of Farringdon-street, two in Smithfield, and three in Tottenham-court-road (the two places last named are said to be the best 'pitches' in all London), two in Leather-lane, one on Holborn-hill, one at King's-cross, three at the Brill, Somers-town, three in the New-cut, three in Covent-garden (this is considered to be on market-days the second-best pitch), two at the Elephant and Castle, one at Westminster-bridge, two at the top of Edgeware-road, one in St. Martin's-lane, one in Newport-market, two at the upper end of Oxford-street, one in Clare-market, two in Regent-street, one

in Newgate-market, two at the Angel, Islington, three at Shoreditch church, four about Rosemary-lane, two at Whitechapel, two near Spitalfields-market, and more than double the above number wandering about London. Some of the cans have names—as the "Royal Union Jack" (engraved in a brass plate), the "Royal George," the "Prince of Wales," the "Original Baked Potatoes," and the "*Old* Original Baked Potatoes."

The business begins about the middle of August and continues to the latter end of April, or as soon as the potatoes get to any size,—until they are pronounced 'bad.' The season, upon an average, lasts about half the year, and depends much upon the weather. If it is cold and frosty, the trade is brisker than in wet weather; indeed then little is doing. The best hours for business are from half-past ten in the morning till two in the afternoon, and from five in the evening till eleven or twelve at night. The night trade is considered the best. In cold weather the potatoes are frequently bought to warm the hands. Indeed, an eminent divine classed them, in a public speech, among the best of modern improvements, it being a cheap luxury to the poor wayfarer, who was benumbed in the night by cold, and an excellent medium for diffusing warmth into the system, by being held in the gloved hand. Some buy them in the morning for lunch and some for dinner. A newsvender, who had to take a hasty meal in his shop, told me he was "always glad to hear the baked-potato cry, as it made a dinner of what was only a snack without it." The best time at night, is about nine, when the potatoes are purchased for supper.

The customers consist of all classes. Many gentlefolks buy them in the street, and take them home for supper in their pockets; but the working classes are the greatest purchasers. Many boys and girls lay out a halfpenny in a baked potato. Irishmen are particularly fond of them, but they are the worst customers, I am told, as they want the largest potatoes in the can. Women buy a great number of those sold. Some take them home, and some eat them in the street. Three baked potatoes are as much as will satisfy the stoutest appetite. One potato dealer in Smithfield is said to sell about 2½ cwt. of potatoes on a market-day; or, in other words, from 900 to 1,000 potatoes, and to take upwards of 2*l*. One informant told me that he himself had often sold 1½ cwt. of a day, and taken 1*l*. in halfpence. I am informed, that upon an average, taking the good stands with the bad ones throughout London, there are about 1 cwt. of potatoes sold by each baked-potato man—and there are 200 of these throughout the metropolis—making the total quantity of baked potatoes consumed every day 10 tons. The money spent upon these comes to within a few shillings of 125*l*. (calculating 300 potatoes to the cwt., and each of those potatoes to be sold at a halfpenny). Hence, there are 60 tons of baked potatoes eaten in London streets, and 750*l*. spent upon them every week during the season. Saturdays and Mondays are the best days for the sale of baked potatoes in those parts of London that are not near the markets; but in those in the vicinity of Clare, Newport, Covent-garden, Newgate, Smithfield, and other markets, the trade is briskest on the market-days. The baked-potato men are many of them broken-down tradesmen. Many are labourers who find a difficulty of obtaining employment in the winter time; some are costermongers; some have been artisans; indeed, there are some of all classes among them.

After the baked potato season is over, the generality of the hucksters take to selling strawberries, raspberries, or anything in season. Some go to labouring work. One of my informants, who had been a bricklayer's labourer, said that after the season he always looked out for work among the bricklayers, and this kept him employed until the baked potato season came round again.

"When I first took to it," he said, "I was very badly off. My master had no employment for me; and my brother was ill, and so was my wife's sister, and I had no way of keeping 'em, or myself either. The labouring men are mostly out of work in the winter time, so I spoke to a friend of mine, and he told me how he managed every winter, and advised me to do the same. I took to it, and have stuck to it ever since. The trade was much better then. I could buy a hundred-weight of potatoes for 1*s*. 9*d*. to 2*s*. 3*d*., and there were fewer to sell them. We generally use to a cwt. of potatoes three-quarters of a pound of butter—tenpenny salt butter is what we buy—a pennyworth of salt, a pennyworth of pepper, and five pennyworth of charcoal. This, with the baking, 9*d*., brings the expenses to just upon 7*s*. 6*d*. per cwt., and for this our receipts will be 12*s*. 6*d*., thus leaving about 5*s*. per cwt. profit." Hence the average profits of the trade are about 30*s*. a week—"and more to some," said my informant. A man in Smithfield-market, I am credibly informed, clears at the least 3*l*. a week. On the Friday he has a fresh basket of hot potatoes brought to him from the baker's every quarter of an hour. Such is his custom that he has not even time to take money, and his wife stands by his side to do so.

Another potato-vender who shifted his can, he said, "from a public-house where the tap dined at twelve," to another half-a-mile off, where it "dined at one, and so did the parlour," and afterwards to any place he deemed best, gave me the following account of his customers:—

"Such a day as this, sir [Jan. 24], when the fog's like a cloud come down, people looks very shy at my taties, very; they've been more suspicious ever since the taty rot. I thought I should never have rekivered it; never, not the rot. I sell most to mechanics—I was a grocer's porter myself before I was a baked taty—for their dinners, and they're on for good shops

where I serves the taps and parlours, and pays me without grumbling, like gentlemen. Gentlemen does grumble though, for I've sold to them at private houses when they've held the door half open as they've called me—aye, and ladies too—and they've said, 'Is *that* all for 2*d.*?' If it 'd been a peck they'd have said the same, I know. Some customers is very pleasant with me, and says I'm a blessing. One always says he'll give me a ton of taties when his ship comes home, 'cause he can always have a hot murphy to his cold saveloy, when tin's short. He's a harness-maker, and the railways has injured him. There's Union-street and there's Pearl-row, and there's Market-street, now,—they're all off the Borough-road—if I go there at ten at night or so, I can sell 3*s.* worth, perhaps, 'cause they know me, and I have another baked taty to help there sometimes. They're women that's not reckoned the best in the world that buys there, but they pay me. I know why I got my name up. I had luck to have good fruit when the rot was about, and they got to know me. I only go twice or thrice a week, for it's two miles from my regular places. I've trusted them sometimes. They've said to me, as modest as could be, 'Do give me credit, and 'pon my word you shall be paid; there's a dear!' I am paid mostly. Little shopkeepers is fair customers, but I do best for the taps and the parlours. Perhaps I make 12*s.* or 15*s.* a week—I hardly know, for I've only myself and keep no 'count —for the season; money goes one can't tell how, and 'specially if you drinks a drop, as I do sometimes. Foggy weather drives me to it, I'm so worritted; that is, now and then, you'll mind, sir."

There are, at present, 300 vendors of hot baked potatoes getting their living in the streets of London, each of whom sell, upon an average, ¾ cwt. of potatoes daily. The average takings of each vendor is 6*s.* a day; and the receipts of the whole number throughout the season (which lasts from the latter end of September till March inclusive), a period of 6 months, is 14,000*l.*

A capital is required to start in this trade as follows:—can, 2*l.*; knife, 3*d.*; stock-money, 8*s.*; charge for baking 100 potatoes, 1*s.*; charcoal, 4*d.*; butter, 2*d.*; salt, 1*d.*, and pepper, 1*d.*; altogether, 2*l.* 9*s.* 11*d.* The can and knife is the only property described as fixed, stock-money, &c., being daily occurring, amounts to 75*l.* during the season.

Of "Trotting," or "Hawking" Butchers.

These two appellations are, or have been, used somewhat confusedly in the meat trade. Thirty, or forty, or fifty years ago—for each term was mentioned to me—the butcher in question was a man who went "trotting" on his small horse to the mere distant suburbs to sell meat. This was when the suburbs, in any direction, were "not built up to" as they are now, and the appearance of the trotting butcher might be hailed as saving a walk of a mile, or a mile and a half, to a butcher's shop, for only tradesmen of a smaller capital then opened butcher's shops in the remoter suburbs. For a suburban butcher to send round "for orders" at that period would have occupied too much time, for a distance must be traversed; and to have gone, or sent, on horseback, would have entailed the keeping or hiring of a horse, which was in those days an expensive matter. One butcher who told me that he had known the trade, man and boy, for nearly fifty years, said: "As to 'trotting,' a small man couldn't so well do it, for if 20*l.* was offered for a tidy horse in the war time it would most likely be said, 'I'll get more for it in the cavaldry—for it was often called cavaldry then—there's better plunder there.' (*Plunder*, I may explain, is a common word in the horse trade to express *profit*.) So it wasn't so easy to get a horse." The trotting butchers were then men sent or going out from the more frequented parts to supply the suburbs, but in many cases only when a tradesman was "hung up" with meat. They carried from 20 to 100 lb. of meat generally in one basket, resting on the pommel of the saddle, and attached by a long leathern strap to the person of the "trotter." The trade, however, was irregular and, considering the expenses, little remunerative; neither was it extensive, but what might be the extent I could not ascertain. There then sprung up the class of butchers—or rather the class became greatly multiplied—who sent their boys or men on fast trotting horses to take orders from the dwellers in the suburbs, and even in the streets, not suburbs, which were away from the shop thoroughfares, and afterwards to deliver the orders—still travelling on horseback—at the customer's door. This system still continues, but to nothing like its former extent, and as it does not pertain especially to the street-trade I need not dwell upon it at present, nor on the competition that sprung up as to "trotting butcher's ponies,"—in the "matching" of which "against time" sporting men have taken great interest.

Of "trotting" butchers, keeping their own horses, there are now none, but there are still, I am told, about six of the class who contrive, by hiring, or more frequently borrowing, horses of some friendly butcher, to live by trotting. These men are all known, and all call upon known customers—often those whom they have served in their prosperity, for the trotting butcher is a "reduced" man—and are not likely to be succeeded by any in the same line, or—as I heard it called—"ride" of business. These traders not subsisting exactly upon street traffic, or on any adventure depending upon door by door, or street by street, commerce, but upon a *connection* remaining from their having been in business on their own accounts, need no further mention.

The present class of street-traders in raw meat are known to the trade as "hawking"

butchers, and they are as thoroughly street-sellers as are the game and poultry "hawkers." Their number, I am assured, is never less than 150, and sometimes 200 or even 250. They have all been butchers, or journeymen butchers, and are broken down in the one case, or unable to obtain work in the other. They then "watch the turn of the markets," as small meat "jobbers," and—as on the Stock Exchange—"invest," when they account the market at the lowest. The meat so purchased is hawked in a large basket carried on the shoulders, if of a weight too great to be sustained in a basket on the arm. The sale is confined almost entirely to public-houses, and those at no great distance from the great meat marts of Newgate, Leadenhall, and Whitechapel. The hawkers do not go to the suburbs. Their principal trade is in pork and veal,—for those joints weigh lighter, and present a larger surface in comparison with the weight, than do beef or mutton. The same may be said of lamb; but of that they do not buy one quarter so much as of pork or veal.

The hawking butcher bought his meat last year at from 2½*d.* to 5½*d.* the pound, according to kind and quality. He seldom gave 6*d.*, even years ago, when meat was dearer; for it is difficult—I was told by one of these hawkers—to get more than 6*d.* per lb. from chance customers, no matter what the market price. "If I ask 7½*d.* or 7*d.*," he said, "I'm sure of one answer—'Nonsense!' I never goes no higher nor 6*d.*'" Sometimes—and especially if he can command credit for two or three days—the hawking butcher will buy the whole carcass of a sheep. If he reside near the market, he may "cut it up" in his own room; but he can generally find the necessary accommodation at some friendly butcher's block. If the weather be "bad for keeping," he will dispose of a portion of the carcass to his brother-hawkers; if cold, he will persevere in hawking the whole himself. He usually, however, buys only a hind or forequarter of mutton, or other meat, except beef, which he buys by the joint, and more sparingly than he buys any other animal food. The hawker generally has his joints weighed before he starts, and can remember the exact pounds and ounces of each, but the purchasers generally weigh them before payment; or, as one hawker expressed it, "They goes to the scales before they come to the tin."

Many of these hawkers drink hard, and, being often men of robust constitution, until the approach of age, can live "hard,"—as regards lodging, especially. One hawker I heard of slept in a slaughter-house, on the bare but clean floor, for nearly two years: "But that was seven years ago, and no butcher would allow it now."

Of the Experience of a Hawking Butcher.

A middle-aged man, the front of his head being nearly bald, and the few hairs there were to be seen shining strongly and lying flat, as if rubbed with suet or dripping, gave me the following account. He was dressed in the usual blue garb of the butcher:—

"I've hawked, sir—well, perhaps for fifteen years. My father was a journeyman butcher, and I helped him, and so grew up to it. I never had to call regular work, and made it out with hawking. Perhaps I've hawked, take it altogether, nearly three quarters of every year. The other times I've had a turn at slaughtering. But I haven't slaughtered for these three or four years; I've had turns as a butcher's porter, and wish I had more, as it's sure browns, if it's only 1*s.* 6*d.* a day: but there's often a bit of cuttings. I sell most pork of anything in autumn and winter, and most mutton in summer; but the summer isn't much more than half as good as the winter for my trade. When I slaughtered I had 3*s.* for an ox, 4*d.* for a sheep, and 1*s.* for a pig. Calves is slaughtered by the master's people generally. Well, I dare say it *is* cruel the way they slaughter calves; you would think it so, no doubt. I believe they slaughter cheaper now. If I buy cheap—and on a very hot day and a slow market, I have bought a fore, aye, and a hind, quarter of mutton, about two and a half stone each (8 lbs. to the stone), at 2*d.* a pound; but that's only very, very seldom—when I buy cheap sir, I aim at 2*d.* a pound over what I give, if not so cheap at 1*d.*, and then its low to my customers. But I cut up the meat, you see, myself, and I carry it. I sell eight times as much to public-houses and eating-houses as anywhere else; most to the publics if they've ordinaries, and a deal for the publics' families' eating, 'cause a landlord knows I wouldn't deceive *him*,—and there's a part of it taken out in drink, of course, and landlords is good judges. Trade was far better years back. I've heard my father and his pals talk about a hawking butcher that twenty years ago was imprisoned falsely, and got a honest lawyer to bring his haction, and had 150*l.* damages for false imprisonment. It was in the Lord Mayor's Court of Equity, I've heard. It was a wrong arrest. I don't understand the particulars of it, but it's true; and the damages was for loss of time and trade. I'm no lawyer myself; not a bit. I have sold the like of a loin of mutton, when it was small, in a tap-room, to make chops for the people there. They'll cook chops and steaks for a pint of beer, at a public; that is, you must order a pint—but I've sold it very seldom. When mutton was dearer it was easier to sell it that way, for I sold cheap; and at one public the mechanics—I hardly know just what they was, something about building—used to gather there at one o'clock and wait for Giblets'; so they called me there. I live a good bit on the cuttings of the meat I hawk, or I chop a meal off if I can manage or afford it, or my wife—(I've only a wife and she earns never less than 2*s.* a week in washing for a master butcher—I wish I was a master butcher,—and that covers the rent)—

my wife makes it into broth. Take it all the year round, I s'pose I sell three stun a day (24 lb.), and at 1*d.* a pound profit. Not a farthing more go round and round. I don't think the others, altogether, do as much, for I'm known to a many landlords. But some make 3*s.* and 4*s.* a day oft enough. I've made as much myself sometimes. We all aim at 1*d.* a pound profit, but have to take less in hot weather sometimes. Last year 4*d.* the pound has been a haverage price to me for all sorts."

"Dead salesmen," as they are called—that is, the market salesmen of the meat sent so largely from Scotland and elsewhere, ready slaughtered —expressed to me their conviction that my informant's calculation was correct, and might be taken as an average; so did butchers. Thus, then, we find that the hawking butchers, taking their number at 150, sell 747,000 lbs. of meat, producing 12,450*l.* annually, one-fourth being profit; this gives an annual receipt of 83*l.* each, and an annual earning of 20*l.* 15*s.* The capital required to start in this trade is about 20*s.*, which is usually laid out as follows:—A basket for the shoulders, which costs 4*s.* 6*d.*; a leathern strap, 1*s.*; a basket for the arm, 2*s.* 6*d.*; a butcher's knife, 1*s.*; a steel, 1*s.* 6*d.*; a leather belt for the waist to which the knife is slung, 6*d.*; a chopper, 1*s.* 6*d.*; and a saw, 2*s.*; 6*s.* stock-money, though credit is sometimes given.

Of the Street-sellers of Ham-Sandwiches.

The ham-sandwich-seller carries his sandwiches on a tray or flat basket, covered with a clean white cloth; he also wears a white apron, and white sleeves. His usual stand is at the doors of the theatres.

The trade was unknown until eleven years ago, when a man who had been unsuccessful in keeping a coffee-shop in Westminster, found it necessary to look out for some mode of living, and he hit upon the plan of vending sandwiches, precisely in the present style, at the theatre doors. The attempt was successful; the man soon took 10*s.* a night, half of which was profit. He "attended" both the great theatres, and was "doing well;" but at five or six weeks' end, competitors appeared in the field, and increased rapidly, and so his sale was affected, people being regardless of his urging that he "was the original ham-sandwich." The capital required to start in the trade was small; a few pounds of ham, a proportion of loaves, and a little mustard was all that was required, and for this 10*s.* was ample. That sum, however, could not be commanded by many who were anxious to deal in sandwiches; and the man who commenced the trade supplied them at 6*d.* a dozen, the charge to the public being 1*d.* a-piece. Some of the men, however, murmured, because they thought that what they thus bought were not equal to those the wholesale sandwich-man offered for sale himself; and his wholesale trade fell off, until now, I am told, he has only two customers among street-sellers.

Ham sandwiches are made from any part of the bacon which may be sufficiently lean, such as "the gammon," which now costs 4*d.* and 5*d.* the pound. It is sometimes, but very rarely, picked up at 3½*d.* When the trade was first started, 7*d.* a pound was paid for the ham, but the sandwiches are now much larger. To make three dozen a pound of meat is required, and four quartern loaves. The "ham" may cost 5*d.*, the bread 1*s.* 8*d.* or 1*s.* 10*d.*, and the mustard 1*d.* The proceeds for this would be 3*s.*, but the trade is very precarious: little can be done in wet weather. If unsold, the sandwiches spoil, for the bread gets dry, and the ham loses its fresh colour; so that those who depend upon this trade are wretchedly poor. A first-rate week is to clear 10*s.*; a good week is put at 7*s.*; and a bad week at 3*s.* 6*d.* On some nights they do not sell a dozen sandwiches. There are halfpenny sandwiches, but these are only half the size of those at a penny.

The persons carrying on this trade have been, for the most part, in some kind of service—errand-boys, pot-boys, foot-boys (or pages), or lads engaged about inns. Some few have been mechanics. Their average weekly earnings hardly exceed 5*s.*, but some "get odd jobs" at other things.

"There are now, sir, at the theatres this (the Strand) side the water, and at Ashley's, the Surrey, and the Vic., two dozen and nine sandwiches." So said one of the trade, who counted up his brethren for me. This man calculated also that at the Standard, the saloons, the concert-rooms, and at Limehouse, Mile-end, Bethnal-green-road, and elsewhere, there might be more than as many again as those "working" the theatres—or 70 in all. They are nearly all men, and no boys or girls are now in the trade. The number of these people, when the large theatres were open with the others, was about double what it is now.

The information collected shows that the expenditure in ham-sandwiches, supplied by street-sellers, is 1,820*l.* yearly, and a consumption of 436,800 sandwiches.

To start in the ham-sandwich street-trade requires 2*s.* for a basket, 2*s.* for kettle to boil ham in, 6*d.* for knife and fork, 2*d.* for mustard-pot and spoon, 7*d.* for ¼ cwt. of coals, 5*s.* for ham, 1*s.* 3*d.* for bread, 4*d.* for mustard, 9*d.* for basket, cloth, and apron, 4*d.* for over-sleeves—or a capital of 12*s.* 11*d.*

Of the Experience of a Ham Sandwich-seller.

A young man gave me the following account. His look and manners were subdued; and, though his dress was old and worn, it was clean and unpatched:—

"I hardly remember my father, sir," he said; "but I believe, if he'd lived, I should have been better off. My mother couldn't keep my brother and me—he's older than me—when we grew to be twelve or thirteen, and we had to shift for ourselves. She works at the stays, and now

makes only 3*s*. a week, and we can't help her. I was first in place as a sort of errand-boy, then I was a stationer's boy, and then a news agent's boy. I wasn't wanted any longer, but left with a good character. My brother had gone into the sandwich trade—I hardly know what made him—and he advised me to be a ham sandwich-man, and so I started as one. At first, I made 10*s*., and 7*s*., and 8*s*. a week—that's seven years, or so—but things are worse now, and I make 3*s*. 6*d*. some weeks, and 5*s*. others, and 6*s*. is an out-and-outer. My rent's 2*s*. a week, but I haven't my own things. I am so sick of this life, I'd do anything to get out of it; but I don't see a way. Perhaps I might have been more careful when I was first in it; but, really, if you do make 10*s*. a week, you want shoes, or a shirt—so what is 10*s*. after all? I wish I had it now, though. I used to buy my sandwiches at 6*d*. a dozen, but I found that wouldn't do; and now I buy and boil the stuff, and make them myself. What *did* cost 6*d*., now only costs me 4*d*. or 4½*d*. I work the theatres this side of the water, chiefly the 'Lympic and the 'Delphi. The best theatre I ever had was the Garding, when it had two galleries, and was dramatic—the operas there wasn't the least good to me. The Lyceum was good, when it was Mr. Keeley's. I hardly know what sort my customers are, but they're those that go to theaytres: shopkeepers and clerks, I think. Gentlemen don't often buy of me. They *have* bought, though. Oh, no, they never give a farthing over; they're more likely to want seven for 6*d*. The women of the town buy of me, when it gets late, for themselves and their fancy men. They're liberal enough when they've money. They sometimes treat a poor fellow in a public-house. In summer I'm often out 'till four in the morning, and then must lie in bed half next day. The 'Delphi was better than it is. I've taken 3*s*. at the first "turn out" (the leaving the theatre for a short time after the first piece), "but the turn-outs at the Garding was better than that. A penny pie-shop has spoiled us at the 'Delphi and at Ashley's. I go out between eight and nine in the evening. People often want more in my sandwiches, though I'm starving on them. 'Oh,' they'll say, 'you've been 'prenticed to Vauxhall, you have.' 'They're 1*s*. there,' says I, 'and no bigger. I haven't Vauxhall prices.' I stand by the night-houses when it's late—not the fashionables. Their customers would'nt look at me; but I've known women, that carried their heads very high, glad to get a sandwich afterwards. Six times I've been upset by drunken fellows, on purpose, I've no doubt, and lost all my stock. Once, a gent. kicked my basket into the dirt, and he was going off—for it was late—but some people by began to make remarks about using a poor fellow that way, so he paid for all, after he had them counted. I am *so* sick of this life, sir. I *do* dread the winter so. I've stood up to the ankles in snow till after midnight, and till I've wished I was snow myself, and could melt like it and have an end. I'd do anything to get away from this, but I can't. Passion Week's another dreadful time. It drives us to starve, just when we want to get up a little stock-money for Easter. I've been bilked by cabmen, who've taken a sandwich; but, instead of paying for it, have offered to fight me. There's no help. We're knocked about sadly by the police. Time's very heavy on my hands, sometimes, and that's where you feel it. I read a bit, if I can get anything to read, for I was at St. Clement's school; or I walk out to look for a job. On summer-days I sell a trotter or two. But mine's a wretched life, and so is most ham sandwich-men. I've no enjoyment of my youth, and no comfort

"Ah, sir! I live very poorly. A ha'porth or a penn'orth of cheap fish, which I cook myself, is one of my treats—either herrings or plaice—with a 'tatur, perhaps. Then there's a sort of meal, now and then, off the odds and ends of the ham, such as isn't quite viewy enough for the public, along with the odds and ends of the loaves. I can't boil a bit of greens with my ham, 'cause I'm afraid it might rather spoil the colour. I don't slice the ham till it's cold—it cuts easier, and is a better colour then, I think. I wash my aprons, and sleeves, and cloths myself, and iron them too. A man that sometimes makes only 3*s*. 6*d*. a week, and sometimes less, and must pay 2*s*. rent out of that, must look after every farthing. I've often walked eight miles to see if I could find ham a halfpenny a pound cheaper anywhere. If it was tainted, I know it would be flung in my face. If I was sick there's only the parish for me."

Of the Street-sellers of Bread.

The street-trade in bread is not so extensive as might be expected, from the universality of the consumption. It is confined to Petticoat-lane and the poorer districts in that neighbourhood. A person who has known the East-end of town for nearly fifty years, told me that as long as he could recollect, bread was sold in the streets, but not to the present extent. In 1812 and 1813, when bread was the dearest, there was very little sold in the streets. At that time, and until 1815, the Assize Acts, regulating the bread-trade, were in force, and had been in force in London since 1266. Previously to 1815 bakers were restricted, by these Acts, to the baking of three kinds of bread—wheaten, standard wheaten, and household. The wheaten was made of the best flour, the standard wheaten of the different kinds of flour mixed together, and the household of the coarser and commoner flour. In 1823, however, it was enacted that within the City of London and ten miles round, "it shall be lawful for the bakers to make and sell bread made of wheat, barley, rye, oats, buck-wheat, Indian-corn, peas, beans, rice, or potatoes, or any of them, along with common salt, pure-water, eggs, milk, barm-leaven, potato, or other yeast, and mixed in such proportions as they shall think fit." I mention this because my informant, as well as an old master baker with whom I conversed on the

subject, remembered that every now and then, after 1823, but only for two or three years, some speculative trader, both in shops and in the streets, would endeavour to introduce an inferior, but still a wholesome, bread, to his customers, such as an admixture of barley with wheat-flour, but no one—as far as I could learn—persevered in the speculation for more than a week or so. Their attempts were not only unsuccessful but they met with abuse, from street-buyers especially, for endeavouring to palm off "brown" bread as "good enough for poor people." One of my elder informants remembered his father telling him that in 1800 and 1801, George III. had set the example of eating brown bread at his one o'clock dinner, but he was sometimes assailed as he passed in his carriage, with the reproachful epithet of "*Brown* George." This feeling continues, for the poor people, and even the more intelligent working-men, if cockneys, have still a notion that only "white" bread is fit for consumption. Into the question of the relative nutrition of breads, I shall enter when I treat of the bakers.

During a period of about four months in the summer, there are from twenty to thirty men daily selling stale bread. Of these only twelve sell it regularly every day of the year, and they trade chiefly on their own account. Of the others, some are sent out by their masters, receiving from 1*s.* to 2*s.* for their labour. Those who sell on their own account, go round to the bakers' shops about Stepney, Mile-end, and Whitechapel, and purchase the stale-bread on hand. It is sold to them at ½*d.*, 1*d.* and 1½*d.* per quartern less than the retail shop price; but when the weather is very hot, and the bakers have a large quantity of stale-bread on hand, the street-sellers sometimes get the bread at 2*d.* a quartern less than the retail price. All the street-sellers of bread have been brought up as bakers. Some have resorted to the street-trade, I am told, when unable to procure work: others because it is a less toilsome, and sometimes a more profitable means of subsistence, than the labour of an operative baker. It is very rarely that any of the street-traders leave their calling to resume working as journeymen. Some of these traders have baskets containing the bread offered for street-sale; others have barrows, and one has a barrow resembling a costermonger's, with a long basket made to fit upon it. The dress of these vendors is a light coat of cloth or fustian; corduroy, fustian, or cloth trousers, and a cloth cap or a hat, the whole attire being, what is best understood as "dusty," ingrained as it is with flour.

From one bread-seller, a middle-aged man, with the pale look and habitual stoop of a journeyman baker, I had the following account:

"I've known the street-trade a few years; I can't say exactly how many. I was a journeyman baker before that, and can't say but what I had pretty regular employment; but then, sir, what an employment it is! So much night-work, and the heat of the oven, with the close air, and sleeping on sacks at nights (for you can't leave the place), so that altogether it's a slave's life. A journeyman baker hasn't what can be called a home, for he's so much away at the oven; he'd better not be a married man, for if his wife isn't very careful there's talk, and there's unhappiness about nothing perhaps. I can't be thought to speak feelingly that way though, for I've been fortunate in a wife. But a journeyman baker's life drives him to drink, almost whether he will or not. A street life's not quite so bad. I was out of work two or three weeks, and I certainly lushed too much, and can't say as I tried very hard to get work, but I had a pound or two in hand, and then I began to think I'd try and sell stale bread in the streets, for it's a healthfuller trade than the other; so I started, and have been at it ever since, excepting when I work a few days, or weeks, for a master baker; but he's a relation, and I assist him when he's ill. My customers are all poor persons,—some in rags, and some as decent as their bad earnings 'll let them. No doubt about it, sir, there's poor women buy of me that's wives of mechanics working slop, and that's forced to live on stale bread. Where there's a family of children, stale bread goes so very much further. I think I sell to few but what has families, for a quartern's too much at a time for a single woman. I often hear my customers talk about their children, and say they must make haste, as the poor things are hungry, and they couldn't get them any bread sooner. O, it's a hard fight to live, all Spitalfields and Bethnal-green way, for I know it all. There are first the journeyman bakers over-worked and fretted into drinking, a-making the bread, and there are the poor fellows in all sorts of trade over-worked to get money to buy it. I've had women that looked as if they was 'reduced,' come to me of an evening as soon as it was dusk, and buy stale bread, as if they was ashamed to be seen. Yes, I give credit. Some has a week's credit regular, and pays every Saturday night. I lose very little in trusting. I sometimes have bread over and sell it—rather than hold it over to next day—for half what it cost me. I have given it away to begging people, sooner than keep it to be too stale, and they would get something for it at a lodging-house. The lodging-house keepers never buy of me that I know of. They can buy far cheaper than I can—you understand, sir. Perhaps, altogether, I make about a guinea every week; wet weather and short days are against me. I don't sell more, I think, on a Saturday than on other nights. The nights are much of a muchness that way."

The average quantity sold by each vendor during the summer months is 150 quarterns daily, usually at 4*d.*, but occasionally at 3*d.* the quartern. One man informed me that he had sold in one day 350 quarterns, receiving 5*l.* 16*s.* 8*d.* for them.

The number of men (for if there be women they are the men's wives) engaged daily throughout the year in the street-sale of bread is 12.

Digitized by Google Original from HARVARD UNIVERSITY

These sell upon an average 100 quarterns each per day: taking every day in the year 1*l.* 12*s.* each (a few being sold at 3*d.*)

Calculating then the four months' trade in summer at 150 quarterns per day per man, and reckoning 15 men so selling, and each receiving 45*s.* (thus allowing for the threepenny sale); and taking the receipts of the 12 regular traders at 1*l.* 12*s.* per day, we find nearly 9,000*l.* annually expended in the street purchase of 700,000 quartern loaves of bread. The profits of the sellers vary from 1*l.* to 2*l.* a week, according to the extent of their business.

To start in this branch of the street-trade a capital is required according to the following rate:—Stock-money for bread, average 1*l.*; (largest amount required, 5*l.*; smallest, 10*s.*); a basket, 4*s.* 6*d.* Of those who are employed in the summer, one-half have baskets, and the other half bakers' barrows; while of those who attend the year through, 8 have baskets at 4*s.* 6*d.* each, 3 have barrows at 40*s.* each, and one a barrow and the long basket, before mentioned. The barrow costs 30*s.*, and the basket 2*l.*

Of the Street-Sellers of Hot Green Peas.

The sale of hot green peas in the streets is of great antiquity, that is to say, if the cry of "hot peas-cod," recorded by Lydgate (and formerly alluded to), may be taken as having intimated the sale of the same article. In many parts of the country it is, or was, customary to have "*scaldings* of peas," often held as a sort of rustic feast. The peas were not shelled, but boiled in the pod, and eaten by the pod being dipped in melted butter, with a little pepper, salt, and vinegar, and then drawn through the teeth to extract the peas, the pod being thrown away. The mention of *peas-cod* (or pea-shell) by Lydgate renders it probable that the "scalding" method was that then in use in the streets. None of the street-sellers, however, whom I saw, remembered the peas being vended in any other form than shelled and boiled as at present.

The sellers of green peas have no stands, but carry a round or oval tin pot or pan, with a swing handle; the pan being wrapped round with a thick cloth, to retain the heat. The peas are served out with a ladle, and eaten by the customers, if eaten in the street, out of basins, provided with spoons, by the pea-man. Salt, vinegar, and pepper, are applied from the vendor's store, at the customer's discretion.

There are now four men carrying on this trade. They wear no particular dress, "just what clothes we can get," said one of them. One, who has been in the trade twenty-five years, was formerly an inn-porter; the other three are ladies' shoemakers in the day-time, and pea-sellers in the evening, or at early morning, in any market. Their average sale is three gallons daily, with a receipt of 7*s.* per man. Seven gallons a day is accounted a large sale; but the largest of all is at Greenwich fair, when each pea-man will take 35*s.* in a day. Each vendor has his district. One takes Billingsgate, Rosemary-lane, and its vicinity; another, the Old Clothes Exchange, Bishopsgate, Shoreditch, and Bethnal-green; a third, Mile-end and Stepney; and a fourth, Ratcliffe-highway, Limehouse, and Poplar. Each man resides in his "round," for the convenience of boiling his peas, and introducing them to his customers "hot and hot."

The peas used in this traffic are all the dried field pea, but dried green and whole, and not split, or prepared, as are the yellow peas for soup or puddings. They are purchased at the corn-chandlers' or the seed-shops, the price being 2*s.* the peck (or two gallons.) The peas are soaked before they are boiled, and swell considerably, so that one gallon of the dried peas makes rather more than two gallons of the boiled. The hot green peas are sold in halfpennyworths; a halfpennyworth being about a quarter of a pint. The cry of the sellers is, "Hot green peas! all hot, all hot! Here's your peas hot, hot, hot!"

Of the Experience of a Hot Green Pea Seller.

The most experienced man in the trade gave me the following account:—

"Come the 25th of March, sir, and I shall have been 26 years in the business, for I started it on the 25th of March—it's a day easy for to remember, 'cause everybody knows it's quarter-day—in 1825. I was a porter in coaching-inns before; but there was a mishap, and I had to drop it. I didn't leave 'cause I thought the pea line might be better, but because I must do something, and knew a man in the trade, and all about it. It was a capital trade then, and for a good many years after I was in it. Many a day I've taken a guinea, and, sometimes, 35*s.*; and I have taken two guineas at Greenwich Fair, but then I worked till one or two in the morning from eleven the day before. Money wasn't so scarce then. Oh, sir, as to what my profit was or is, I never tell. I wouldn't to my own wife; neither her that's living nor her that's dead." [A person present intimated that the secret might be safely confided to the dead wife, but the pea-seller shook his head.] "Now, one day with another, except Sundays, when I don't work, I may take 7*s.* I always use the dried peas. They pay better than fresh garden-peas would at a groat a peck. People has asked for young green peas, but I've said that I didn't have them. Billingsgate's my best ground. I sell to the costers, and the roughs, and all the parties that has their dinners in the tap-rooms—they has a bit of steak, or a bit of cold meat they've brought with them. There's very little fish eat in Billingsgate, except, perhaps, at the ord'n'ries (ordinaries). I'm looked for as regular as dinner-time. The landlords tell me to give my customers plenty of pepper and salt, to make them thirsty. I go on board the Billingsgate ships, too, and sometimes sell 6*d.* worth to captain and crew. It's a treat, after a rough voyage. Oh, no, sir, I never go on

board the Dutch eel-vessels. There's nothing to be got out of scaly fur'ners (foreigners.) I sell to the herring, and mackarel, and oyster-boats when they're up. My great sale is in public-houses, but I sometimes sell *2d.* or *3d.* worth to private houses. I go out morning, noon, and night; and at night I go my round when people's having a bite of supper, perhaps, in the public-houses. I sell to the women of the town then. Yes, I give them credit. To-night, now (Saturday), I expect to receive *2s. 3d.*, or near on to it, that I've trusted them this week. They mostly pay me on a Saturday night. I lose very little by them. I'm knocked about in public-houses by the Billingsgate roughs, and I've been bilked by the prigs. I've known at least six people try my trade, and fail in it, and I was glad to see them broke. I sell twice as much in cold weather as in warm."

I ascertained that my informant sold three times as much as the other dealers, who confine their trade principally to an evening round. Reckoning that the chief man of business sells 3 gallons a day (which, at *1d.* the quarter-pint, would be *8s.*, my informant said *7s.*), and that the other three together sell the same quantity, we find a street-expenditure on hot green peas of *250l.* and a street consumption of 1870 gallons. The peas, costing *2s.* the two gallons, are vended for *4s.* or *5s.*, at the least, as they boil into more than double the quantity, and a gallon, retail, is *2s. 8d.*; but the addition of vinegar, pepper, &c., may reduce the profit to cent. per cent., while there is the heaping up of every measure retail to reduce the profit. Thus, independent of any consideration as to the labour in boiling, &c. (generally done by the women), the principal man's profit is *21s.* a week; that of the others *7s.* each weekly.

The capital required to start in the business is—can, *2s. 6d.*; vinegar-bottle and pepper-box, *4d.*; saucers and spoons, *6d.*; stock-money, about *2s.*; cloth to wrap over the peas, *4d.* (a vendor wearing out a cloth in three months); or an average of *9s.* or *10s.*

Of Cats' and Dogs'-meat Dealers.

The supply of food for cats and dogs is far greater than may be generally thought. "Vy, sir," said one of the dealers to me, "can you tell me 'ow many people's in London?" On my replying, upwards of two millions; "I don't know nothing vatever," said my informant, "about millions, but I think there's a cat to every ten people, aye, and more than that; and so, sir, you can reckon." [I told him this gave a total of 200,000 cats in London; but the number of inhabited houses in the metropolis was 100,000 more than this, and though there was not a cat to every house, still, as many lodgers as well as householders kept cats, I added that I thought the total number of cats in London might be taken at the same number as the inhabited houses, or 300,000 in all.] "There's not near half so many dogs as cats. I must know, for they all knows me, and I sarves about 200 cats and 70 dogs. Mine's a middling trade, but some does far better. Some cats has a hap'orth a day, some every other day; werry few can afford a penn'orth, but times is inferior. Dogs is better pay when you've a connection among 'em."

The cat and dogs'-meat dealers, or "carriers," as they call themselves, generally purchase the meat at the knackers' (horse-slaughterers') yards. There are upwards of twenty of such yards in London; three or four are in Whitechapel, one in Wandsworth, two in Cow-cross—one of the two last mentioned is the largest establishment in London—and there are two about Bermondsey. The proprietors of these yards purchase live and dead horses. They contract for them with large firms, such as brewers, coal-merchants, and large cab and 'bus yards, giving so much per head for their old live and dead horses through the year. The price varies from *2l.* to *50s.* the carcass. The knackers also have contractors in the country (harness-makers and others), who bring or send up to town for them the live and dead stock of those parts. The dead horses are brought to the yard—two or three upon one cart, and sometimes five. The live ones are tied to the tail of these carts, and behind the tail of each other. Occasionally a string of fourteen or fifteen are brought up, head to tail, at one time. The live horses are purchased merely for slaughtering. If among the lot bought there should chance to be one that is young, but in bad condition, it is placed in the stable, fed up, and then put into the knacker's carts, or sold by them, or let on hire. Occasionally a fine horse has been rescued from death in this manner. One person is known to have bought an animal for *15s.*, for which he afterwards got *150l.* Frequently young horses that will not work in cabs—such as "jibs"—are sold to the horse-slaughterers as useless. They are kept in the yard, and after being well fed, often turn out good horses. The live horses are slaughtered by the persons called "knackers." These men get upon an average *4s.* a day. They begin work at twelve at night, because some of the flesh is required to be boiled before six in the morning; indeed, a great part of the meat is delivered to the carriers before that hour. The horse to be slaughtered has his mane clipped as short as possible (on account of the hair, which is valuable). It is then blinded with a piece of old apron smothered in blood, so that it may not see the slaughterman when about to strike. A pole-axe is used, and a cane, to put an immediate end to the animal's sufferings. After the animal is slaughtered, the hide is taken off, and the flesh cut from the bones in large pieces. These pieces are termed, according to the part from which they are cut, hind-quarters, fore-quarters, cram-bones, throats, necks, briskets, backs, ribs, kidney pieces, hearts, tongues, liver and lights. The bones (called "racks" by the knackers) are chopped up and boiled, in order to extract the fat, which is used for greasing common harness, and the wheels of carts and drags, &c. The bones themselves are sold for

manure. The pieces of flesh are thrown into large coppers or pans, about nine feet in diameter and four feet deep. Each of these pans will hold about three good-sized horses. Sometimes two large brewers' horses will fill them, and sometimes as many as four "poor" cab-horses may be put into them. The flesh is boiled about an hour and 20 minutes for a "killed" horse, and from two hours to two hours and 20 minutes for a dead horse (a horse dying from age or disease). The flesh, when boiled, is taken from the coppers, laid on the stones, and sprinkled with water to cool it. It is then weighed out in pieces of 112, 56, 28, 21, 14, 7, and 3½ lbs. weight. These are either taken round in a cart to the "carriers," or, at about five, the carriers call at the yard to purchase, and continue doing so till twelve in the day. The price is 14*s.* per cwt. in winter, and 16*s.* in summer. The tripe is served out at 12 lb. for 6*d.* All this is for cats and dogs. The carriers then take the meat round town, wherever their "walk" may lie. They sell it to the public at the rate of 2½*d.* per lb., and in small pieces, on skewers, at a farthing, a halfpenny, and a penny each. Some carriers will sell as much as a hundred-weight in a day, and about half a hundred-weight is the average quantity disposed of by the carriers in London. Some sell much cheaper than others. These dealers will frequently knock at the doors of persons whom they have seen served by another on the previous day, and show them that they can let them have a larger quantity of meat for the same money. The class of persons belonging to the business are mostly those who have been unable to obtain employment at their trade. Occasionally a person is bred to it, having been engaged as a lad by some carrier to go round with the barrow and assist him in his business. These boys will, after a time, find a "walk" for themselves, beginning first with a basket, and ultimately rising to a barrow. Many of the carriers give light weight to the extent of 2 oz. and 4 oz. in the pound. At one yard alone near upon 100 carriers purchase meat, and there are, upon an average, 150 horses slaughtered there every week. Each slaughter-house may be said to do, one with another, 60 horses per week throughout the year, which, reckoning the London slaughter-houses at 12, gives a total of 720 horses killed every week in the metropolis, or, in round numbers, 37,500 in the course of the year.

The London cat and dogs'-meat carriers or sellers—nearly all men—number at the least 1,000.

The slaughtermen are said to reap large fortunes very rapidly—indeed, the carriers say they coin the money. Many of them retire after a few years, and take large farms. One, after 12 years' business, retired with several thousand pounds, and has now three large farms. The carriers are men, women, and boys. Very few women do as well as the men at it. The carriers "are generally sad drunkards." Out of five hundred, it is said three hundred at least spend 1*l.* a head a week in drink. One party in the trade told me that he knew a carrier who would often spend 10*s.* in liquor at one sitting. The profit the carriers make upon the meat is at present only a penny per pound. In the summer time the profit per pound is reduced to a halfpenny, owing to the meat being dearer on account of its scarcity. The carriers give a great deal of credit—indeed, they take but little ready money. On some days they do not come home with more than 2*s.* One with a middling walk pays for his meat 7*s.* 6*d.* per day. For this he has half a hundred-weight. This produces him as much as 11*s.* 6*d.*, so that his profit is 4*s.*; which, I am assured, is about a fair average of the earnings of the trade. One carrier is said to have amassed 1,000*l.* at the business. He usually sold from 1½ to 2 cwt. every morning, so that his profits were generally from 16*s.* to 1*l.* per day. But the trade is much worse now. There are so many at it, they say, that there is barely a living for any. A carrier assured me that he seldom went less than 30, and frequently 40 miles, through the streets every day. The best districts are among the houses of tradesmen, mechanics, and labourers. The coachmen in the mews at the back of the squares are very good customers. "The work lays thicker there," said my informant. Old maids are bad, though very plentiful, customers. They cheapen the carriers down so, that they can scarcely live at the business. "They will pay one halfpenny and owe another, and forget that after a day or two." The cats' meat dealers generally complain of their losses from bad debts. Their customers require credit frequently to the extent of 1*l.* "One party owes me 15*s.* now," said a carrier to me, "and many 10*s.*; in fact, very few people pay ready money for the meat."

The carriers frequently serve as much as ten pennyworths to one person in a day. One gentleman has as much as 4 lbs. of meat each morning for two Newfoundland dogs; and there was one woman—a black—who used to have as much as 16 pennyworth every day. This person used to get out on the roof of the house and throw it to the cats on the tiles. By this she brought so many stray cats round about the neighbourhood, that the parties in the vicinity complained; it was quite a nuisance. She *would* have the meat always brought to her before ten in the morning, or else she would send to a shop for it, and between ten and eleven in the morning the noise and cries of the hundreds of stray cats attracted to the spot was "terrible to hear." When the meat was thrown to the cats on the roof, the riot, and confusion, and fighting, was beyond description. "A beer-shop man," I was told, "was obliged to keep five or six dogs to drive the cats from his walls." There was also a mad woman in Islington, who used to have 14 lbs. of meat a day. The party who supplied her had his money often at 2*l.* and 3*l.* at a time. She had as many as thirty cats at times in her house. Every stray one that came she would take in and support. The stench was so great

that she was obliged to be ejected. The best days for the cats' meat business are Mondays, Tuesdays, and Saturdays. A double quantity of meat is sold on the Saturday; and on that day and Monday and Tuesday the weekly customers generally pay.

"My father was a baker by trade," said a carrier to me, "but through an enlargement of the heart he was obliged to give up working at his trade; leaning over the trough increased his complaint so severely, that he used to fail down, and be obliged to be brought home. This made him take to the cats' and dogs' meat trade, and he brought me up to it. I do pretty comfortably. I have a very good business, having been all my life at it. If it wasn't for the bad debts I should do much better; but some of the people I trust leave the houses, and actually take in a double quantity of meat the day before. I suppose there is at the present moment as much as 20*l.* owing to me that I never expect to see a farthing of."

The generality of the dealers wear a shiny hat, black plush waistcoat and sleeves, a blue apron, corduroy trousers, and a blue and white spotted handkerchief round their necks. Some, indeed, will wear two and three handkerchiefs round their necks, this being fashionable among them. A great many meet every Friday afternoon in the donkey-market, Smithfield, and retire to a public-house adjoining, to spend the evening.

A "cats' meat carrier" who supplied me with information was more comfortably situated than any of the poorer classes that I have yet seen. He lived in the front room of a second floor, in an open and respectable quarter of the town, and his lodgings were the perfection of comfort and cleanliness in an humble sphere. It was late in the evening when I reached the house. I found the "carrier" and his family preparing for supper. In a large morocco leather easy chair sat the cats' meat carrier himself; his "blue apron and black shiny hat" had disappeared, and he wore a "dress" coat and a black satin waistcoat instead. His wife, who was a remarkably pretty woman, and of very attractive manners, wore a "Dolly Varden" cap, placed jauntily at the back of her head, and a drab merino dress. The room was cosily carpeted, and in one corner stood a mahogany "crib" with cane-work sides, in which one of the children was asleep. On the table was a clean white table-cloth, and the room was savoury with the steaks, and mashed potatoes that were cooking on the fire. Indeed, I have never yet seen greater comfort in the abodes of the poor. The cleanliness and wholesomeness of the apartment were the more striking from the unpleasant associations connected with the calling.

It is believed by one who has been engaged at the business for 25 years, that there are from 900 to 1,000 horses, averaging 2 cwt. of meat each—little and big—boiled down every week; so that the quantity of cats' and dogs' meat used throughout London is about 200,000 lbs. per week, and this, sold at the rate of 2½*d.* per lb., gives 2,000*l.* a week for the money spent in cats' and dogs' meat, or upwards of 100,000*l.* a year, which is at the rate of 100*l.*-worth sold annually by each carrier. The profits of the carriers may be estimated at about 50*l.* each per annum.

The capital required to start in this business varies from 1*l.* to 2*l.* The stock-money needed is between 5*s.* and 10*s.* The barrow and basket, weights and scales, knife and steel, or black-stone, cost about 2*l.* when new, and from 15*s.* to 4*s.* second-hand.

OF THE STREET-SALE OF DRINKABLES.

THE street-sellers of the drinkables, who have now to be considered, belong to the same class as I have described in treating of the sale of street-provisions generally. The buyers are not precisely of the same class, for the street-eatables often supply a meal, but with the exception of the coffee-stalls, and occasionally of the rice-milk, the drinkables are more of a luxury than a meal. Thus the buyers are chiefly those who have "a penny to spare," rather than those who have "a penny to dine upon." I have described the different classes of purchasers of each potable, and perhaps the accounts—as a picture of street-life—are even more curious than those I have given of the purchasers of the eatables—of (literally) the diners *out*.

OF COFFEE-STALL KEEPERS.

THE vending of tea and coffee, in the streets, was little if at all known twenty years ago, saloop being then the beverage supplied from stalls to the late and early wayfarers. Nor was it until after 1842 that the stalls approached to anything like their present number, which is said to be upwards of 300—the majority of the proprietors being women. Prior to 1824, coffee was in little demand, even among the smaller tradesmen or farmers, but in that year the duty having been reduced from 1*s* to 6*d.* per lb., the consumption throughout the kingdom in the next seven years was nearly trebled, the increase being from 7,933,041 lbs., in 1824, to 22,745,627 lbs., in 1831. In 1842, the duty on coffee, was fixed at 4*d.*, from British possessions, and from foreign countries at 6*d.*

But it was not owing solely to the reduced price of coffee, that the street-vendors of it increased in the year or two subsequent to 1842, at least 100 per cent. The great facilities then offered for a cheap adulteration, by mixing ground chicory with the ground coffee, was an enhancement of the profits, and a greater temptation to embark in the business, as a smaller amount of capital would suffice. Within these two or three years, this cheapness has been still further promoted, by the medium of adulteration, the chicory itself being, in its turn, adulterated by the admixture of baked carrots, and the like saccharine roots, which, of course, are not subjected to any duty, while

Original from HARVARD UNIVERSITY

foreign chicory is charged 6*d.* per lb. English chicory is not chargeable with duty, and is now cultivated, I am assured, to the yield of between 4,000 and 5,000 tons yearly, and this nearly all used in the adulteration of coffee. Nor is there greater culpability in this trade among street-venders, than among "respectable" shopkeepers; for I was assured, by a leading grocer, that he could not mention twenty shops in the city, of which he could say: "You can go and buy a pound of ground coffee there, and it will not be adulterated." The revelations recently made on this subject by the *Lancet* are a still more convincing proof of the *general* dishonesty of grocers.

The coffee-stall keepers generally stand at the corner of a street. In the fruit and meat markets there are usually two or three coffee-stalls, and one or two in the streets leading to them; in Covent-garden there are no less than four coffee-stalls. Indeed, the stalls abound in all the great thoroughfares, and the most in those not accounted "fashionable" and great "business" routes, but such as are frequented by working people, on their way to their day's labour. The best "pitch" in London is supposed to be at the corner of Duke-street, Oxford-street. The proprietor of that stall is said to take full 30*s.* of a morning, in halfpence. One stall-keeper, I was informed, when "upon the drink" thinks nothing of spending his 10*l.* or 15*l.* in a week. A party assured me that once, when the stall-keeper above mentioned was away "on the spree," he took up his stand there, and got from 4*s.* to 5*s.* in the course of ten minutes, at the busy time of the morning.

The coffee-stall usually consists of a spring-barrow, with two, and occasionally four, wheels. Some are made up of tables, and some have a tressel and board. On the top of this are placed two or three, and sometimes four, large tin cans, holding upon an average five gallons each. Beneath each of these cans is a small iron fire-pot, perforated like a rushlight shade, and here charcoal is continually burning, so as to keep the coffee or tea, with which the cans are filled, hot throughout the early part of the morning. The board of the stall has mostly a compartment for bread and butter, cake, and ham sandwiches, and another for the coffee mugs. There is generally a small tub under each of the stalls, in which the mugs and saucers are washed. The "grandest" stall in this line is the one before-mentioned, as standing at the corner of Duke-street, Oxford-street (of which an engraving is here given). It is a large truck on four wheels, and painted a bright green. The cans are four in number, and of bright polished tin, mounted with brass-plates. There are compartments for bread and butter, sandwiches, and cake. It is lighted by three large oil lamps, with bright brass mountings, and covered in with an oil-cloth roof. The coffee-stalls, generally, are lighted by candle-lamps. Some coffee-stalls are covered over with tarpaulin, like a tent, and others screened from the sharp night or morning air by a clothes-horse covered with blankets, and drawn half round the stall.

Some of the stall-keepers make their appearance at twelve at night, and some not till three or four in the morning. Those that come out at midnight, are for the accommodation of the "night-walkers"—"fast gentlemen" and loose girls; and those that come out in the morning, are for the accommodation of the working men.

It is, I may add, piteous enough to see a few young and good-looking girls, some without the indelible mark of habitual depravity on their countenances, clustering together for warmth round a coffee-stall, to which a penny expenditure, or the charity of the proprietor, has admitted them. The thieves do not resort to the coffee-stalls, which are so immediately under the eye of the policeman.

The coffee-stall keepers usually sell coffee and tea, and some of them cocoa. They keep hot milk in one of the large cans, and coffee, tea, or cocoa in the others. They supply bread and butter, or currant cake, in slices—ham sandwiches, water-cresses, and boiled eggs. The price is 1*d.* per mug, or ½*d.* per half-mug, for coffee, tea, or cocoa; and ½*d.* a slice the bread and butter or cake. The ham sandwiches are 2*d.* (or 1*d.*) each, the boiled eggs 1*d.*, and the water-cresses a halfpenny a bunch. The coffee, tea, cocoa, and sugar they generally purchase by the single pound, at a grocer's. Those who do an extensive trade purchase in larger quantities. The coffee is usually bought in the berry, and ground by themselves. All purchase chicory to mix with it. For the coffee they pay about 1*s.*; for the tea about 3*s.*; for the cocoa 6*d.* per lb.; and for the sugar 3½*d.* to 4*d.* For the chicory the price is 6*d.* (which is the amount of the duty alone on foreign chicory), and it is mixed with the coffee at the rate of 6 ozs. to the pound; many use as much as 9 and 12 ozs. The coffee is made of a dark colour by means of what are called "finings," which consist of burnt sugar—such, as is used for browning soups. Coffee is the article mostly sold at the stalls; indeed, there is scarcely one stall in a hundred that is supplied with tea, and not more than a dozen in all London that furnish cocoa. The stall-keepers usually make the cake themselves. A 4 lb. cake generally consists of half a pound of currants, half a pound of sugar, six ounces of beef dripping, and a quartern of flour. The ham for sandwiches costs 5½*d.* or 6*d.* per lb.; and when boiled produces in sandwiches about 2*s.* per lb. It is usually cut up in slices little thicker than paper. The bread is usually "second bread;" the butter, salt, at about 8*d.* the pound. Some borrow their barrows, and pay 1*s.* a week for the hire of them. Many borrow the capital upon which they trade, frequently of their landlord. Some get credit for their grocery—some for their bread. If they borrow, they pay about 20 per cent. per week for the loan. I was told of one man that makes a practice of lending

money to the coffee-stall-keepers and other hucksters, at the rate of at least 20 per cent. a week. If the party wishing to borrow a pound or two is unknown to the money-lender, he requires security, and the interest to be paid him weekly. This money-lender, I am informed, has been transported once for receiving stolen property, and would now purchase any amount of plate that might be taken to him.

The class of persons usually belonging to the business have been either cab-men, policemen, labourers, or artisans. Many have been bred to dealing in the streets, and brought up to no other employment, but many have taken to the business owing to the difficulty of obtaining work at their own trade. The generality of them are opposed to one another. I asked one in a small way of business what was the average amount of his profits, and his answer was,—

"I usually buy 10 ounces of coffee a night. That costs, when good, 1*s.* 0½*d.* With this I should make five gallons of coffee, such as I sell in the street, which would require 3 quarts of milk, at 3*d.* per quart, and 1½ lb. of sugar, at 3½*d.* per lb., there is some at 3*d.* This would come to 2*s.* 2¾*d.*; and, allowing 1¼*d.* for a quarter of a peck of charcoal to keep the coffee hot, it would give 2*s.* 4*d.* for the cost of five gallons of coffee. This I should sell out at about 1½*d.* per pint; so that the five gallons would produce me 5*s.*, or 2*s.* 8*d.* clear. I generally get rid of one quartern loaf and 6 oz. of butter with this quantity of coffee, and for this I pay 5*d.* the loaf and 3*d.* the butter, making 8*d.*; and these I make into twenty-eight slices at ½*d.* per slice; so the whole brings me in 1*s.* 2*d.*, or about 6*d.* clear. Added to this, I sell a 4 lb. cake, which costs me 3½*d.* per lb. 1*s.* 2*d.* the entire cake; and this in twenty-eight slices, at 1*d.* per slice, would yield 2*s.* 4*d.*, or 1*s.* 2*d.* clear; so that altogether my clear gains would be 4*s.* 4*d.* upon an expenditure of 2*s.* 2*d.*—say 200 per cent."

This is said to be about the usual profit of the trade. Sometimes they give credit. One person assured me he trusted as much as 9½*d.* that morning, and out of that he was satisfied there was 4*d.*, at least, he should never see. Most of the stalls are stationary, but some are locomotive. Some cans are carried about with yokes, like milk-cans, the mugs being kept in a basket. The best district for the night-trade is the City, and the approaches to the bridges. There are more men and women, I was told, walking along Cheapside, Aldersgate-street, Bishopsgate-street, and Fleet-street. In the latter place a good trade is frequently done between twelve at night and two in the morning. For the morning trade the best districts are the Strand, Oxford-street, City-road, New-road (from one end to the other), the markets, especially Covent Garden, Billingsgate, Newgate, and the Borough. There are no coffee-stalls in Smithfield. The reason is that the drovers, on arriving at the market, are generally tired and cold, and prefer sitting down to their coffee in a warm shop rather than drink it in the open street. The best days for coffee-stalls are market-mornings, viz. Tuesday, Thursday, and Saturday. On these days the receipts are generally half as much again as those of the other mornings. The best time of the year for the business is the summer. This is, I am told, because the workpeople and costermongers have more money to spend. Some stall-keepers save sufficient to take a shop, but these are only such as have a "pitch" in the best thoroughfares. One who did a little business informed me that he usually cleared, including Sunday, 11*s.*—last week his gains were 15*s.*; the week before that he could not remember. He is very frequently out all night, and does not earn sixpence. This is on wet and cold nights, when there are few people about. His is generally the night-trade. The average weekly earnings of the trade, throughout the year, are said to be 1*l.* The trade, I am assured by all, is overstocked. They are half too many, they say. "Two of us," to use their own words, "are eating one man's bread." "When coffee in the streets first came up, a man could go and earn," I am told, "his 8*s.* a night at the very lowest; but now the same class of men cannot earn more than 3*s.*" Some men may earn comparatively a large sum, as much as 38*s.* or 2*l.*, but the generality of the trade cannot make more than 1*l.* per week, if so much. The following is the statement of one of the class:—

"I was a mason's labourer, a smith's labourer, a plasterer's labourer, or a bricklayer's labourer. I was, indeed, a labouring man. I could not get employment. I was for six months without any employment. I did not know which way to support my wife and child (I have only one child). Being so long out of employment, I saw no other means of getting a living but out of the streets. I was almost starving before I took to it—that I certainly was. I'm not ashamed of telling anybody that, because it's true, and I sought for a livelihood wherever I could. Many said they wouldn't do such a thing as keep a coffee-stall, but I said I'd do anything to get a bit of bread honestly. Years ago, when I was a boy, I used to go out selling water-cresses, and apples, oranges, and radishes, with a barrow, for my landlord; so I thought, when I was thrown out of employment, I would take to selling coffee in the streets. I went to a tinman, and paid him 10*s.* 6*d.* (the last of my savings, after I'd been four or five months out of work) for a can. I didn't care how I got my living so long as I could turn an honest penny. Well; I went on, and knocked about, and couldn't get a pitch anywhere; but at last I heard that an old man, who had been in the habit of standing for many years at the entrance of one of the markets, had fell ill; so, what did I do, but I goes and pops into his pitch, and there I've done better than ever I did afore. I get 20*s.* now where I got 10*s.* one time; and

if I only had such a thing as 5*l.* or 10*l.*, I might get a good living for life. I cannot do half as much as the man that was there before me. He used to make his coffee down there, and had a can for hot water as well; but I have but one can to keep coffee and all in; and I have to borrow my barrow, and pay 1*s.* a week for it. If I sell my can out, I can't do any more. The struggle to get a living is so great, that, what with one and another in the coffee-trade, it's only those as can get good 'pitches' that can get a crust at it."

As it appears that each coffee-stall keeper on an average, clears 1*l.* a week, and his takings may be said to be at least double that sum, the yearly street expenditure for tea, coffee, &c., amounts to 31,200*l.* The quantity of coffee sold annually in the streets, appears to be about 550,000 gallons.

To commence as a coffee-stall keeper in a moderate manner requires about 5*l.* capital. The truck costs 2*l.*, and the other utensils and materials 3*l.* The expense of the cans is near upon 16*s.* each. The stock-money is a few shillings.

Of the Street Sale of Ginger-beer, Sherbet, Lemonade, &c.

The street-trade in ginger-beer—now a very considerable traffic—was not known to any extent until about thirty years ago. About that time (1822) a man, during a most sultry drought, sold extraordinary quantities of "cool ginger-beer" and of "soda-powders," near the Royal Exchange, clearing, for the three or four weeks the heat continued, 30*s.* a day, or 9*l.* weekly. Soda-water he sold "in powders," the acid and the alkali being mixed in the water of the glass held by the customer, and drunk whilst effervescing. His prices were 2*d.* and 3*d.* a glass for ginger-beer; and 3*d.* and 4*d.* for soda-water, "according to the quality;" though there was in reality no difference whatever in the quality—only in the price. From that time, the numbers pursuing this street avocation increased gradually; they have however fallen off of late years.

The street-sellers who "brew their own beer" generally prepare half a gross (six dozen) at a time. For a "good quality" or the "penny bottle" trade, the following are the ingredients and the mode of preparation:—3 gallons of water; 1 lb. of ginger, 6*d.*; lemon-acid, 2*d.*; essence of cloves, 2*d.*; yeast, 2*d.*; and 1 lb. of raw sugar, 7*d.* This admixture, the yeast being the last ingredient introduced, stands 24 hours, and is then ready for bottling. If the beverage be required in 12 hours, double the quantity of yeast is used. The bottles are filled only "to the ridge," but the liquid and the froth more than fill a full-sized half-pint glass. "Only half froth," I was told, "is reckoned very fair, and it's just the same in the shops." Thus, 72 bottles, each to be sold at 1*d.*, cost—apart from any outlay in utensils, or any consideration of the value of labour—only 1*s.* 7*d.*, and yield, at 1*d.* per bottle, 6*s.* For the cheaper beverage—called "playhouse ginger-beer" in the trade—instead of sugar, molasses from the "private distilleries" is made available. The "private" distilleries are the illicit ones: "'Jiggers,' we call them," said one man; "and I could pass 100 in 10 minutes' walk from where we're talking." Molasses, costing 3*d.* at a jigger's, is sufficient for a half-gross of bottles of ginger-beer; and of the other ingredients only half the quantity is used, the cloves being altogether dispensed with, but the same amount of yeast is generally applied. This quality of "beer" is sold at ½*d.* the glass.

About five years ago "fountains" for the production of ginger-beer became common in the streets. The ginger-beer trade in the open air is only for a summer season, extending from four to seven months, according to the weather, the season last year having been over in about four months. There were then 200 fountains in the streets, all of which, excepting 20 or 30 of the best, were hired of the ginger-beer manufacturers, who drive a profitable trade in them. The average value of a street-fountain, with a handsome frame or stand, which is usually fixed on a wheeled and movable truck, so as one man's strength may be sufficient to propel it, is 7*l.*; and, for the rent of such a fountain, 6*s.* a week is paid when the season is brisk, and 4*s.* when it is slack; but last summer, I am told, 4*s.* 6*d.* was an average. The largest and handsomest ginger-beer fountain in London was—I speak of last summer—in use at the East-end, usually standing in Petticoat-lane, and is the property of a dancing-master. It is made of mahogany, and presents somewhat the form of an upright piano on wheels. It has two pumps, and the brass of the pump-handles and the glass receivers is always kept bright and clean, so that the whole glitters handsomely to the light. Two persons "serve" at this fountain; and on a fine Sunday morning, from six to one, that being the best trading time, they take 7*l.* or 8*l.* in halfpennies—for "the beer" is ½*d.* a glass—and 2*l.* each other day of the week. This machine, as it may be called, is drawn by two ponies, said to be worth 10*l.* a-piece; and the whole cost is pronounced—perhaps with a sufficient exaggeration—to have been 150*l.* There were, in the same neighbourhood, two more fountains on a similar scale, but commoner, each drawn by only one pony instead of the aristocratic "pair."

The ingredients required to feed the "ginger-beer" fountains are of a very cheap description. To supply 10 gallons, 2 quarts of lime-juice (as it is called, but it is, in reality, lemon-juice), costing 3*s.* 6*d.*, are placed in the recess, sometimes with the addition of a pound of sugar (4*d.*); while some, I am assured, put in a smaller quantity of juice, and add twopennyworth of oil of vitriol, which "brings out the sharpness of the lime-juice." The rest is water. No process of brewing or fermentation is necessary, for the fixed air pumped into

the liquid as it is drawn from the fountain, communicates a sufficient briskness or effervescence. "The harder you pumps," said one man who had worked a fountain, "the frothier it comes; and though it seems to fill a big glass—and the glass an't so big for holding as it looks—let it settle, and there's only a quarter of a pint." The hirer of a fountain is required to give security. This is not, as in some slop-trades, a deposit of money; but a householder must, by written agreement, make himself responsible for any damage the fountain may sustain, as well as for its return, or make good the loss: the street ginger-beer seller is alone responsible for the rent of the machine. It is however, only men that are known, who are trusted in this way. Of the fountains thus hired, 50 are usually to be found at the neighbouring fairs and races. As the ginger-beer men carry lime-juice, &c., with them, only water is required to complete the "brewing of the beer" and so conveyance is not difficult.

There is another kind of "ginger-beer," or rather of "small acid tiff," which is sold out of barrels at street-stalls at ½*d.* the glass. To make 2½ gallons of this, there is used ½lb. tartaric, or other acid, 1*s.*; ½ lb. alkali (soda), 10*d.*; ½ lb. lump sugar, bruised fine, 4*d.*; and yeast 1*d.* Of these "barrel-men" there are now about one hundred.

Another class of street-sellers obtain their stock of ginger-beer from the manufacturers. One of the largest manufacturers for the street-trade resides near Ratcliffe-highway, and another in the Commercial-road. The charge by the wholesale traders is 8*d.* the doz., while to a known man, or for ready money, 13 are given to the dozen. The beer, however, is often let out on credit—or in some cases security is given in the same way as for the fountains—and the empty bottles must be duly returned. It is not uncommon for two gross of beer to be let out in this way at a time. For the itinerant trade these are placed on a truck or barrow, fitted up with four shelves, on which are ranged the bottles. These barrows are hired in the same way as the costers' barrows. Some sell their beer at stalls fitted up exclusively for the trade, a kind of tank being let into the centre of the board and filled with water, in which the glasses are rinsed or washed. Underneath the stall there is usually a reserve of the beer, and a keg containing water. Some of the best frequented stalls were in Whitechapel, Old-street-road, City-road, Tottenham-court-road, the New-cut, Elephant and Castle, the Commercial-road, Tower-hill, the Strand, and near Westminster-bridge.

The stationary beer business is, for the most part, carried on in the more public streets, such as Holborn and Oxford-street, and in the markets of Covent-garden, Smithfield, and Billingsgate; while the peripatetic trade, which is briskest on the Sundays—when, indeed, some of the stationary hands become itinerant—is more for the suburbs; Victoria-park, Battersea-fields, Hampstead-heath, Primrose-hill, Kennington-common, and Camberwell-green, being approved Sunday haunts.

The London street-sellers of ginger-beer, say the more experienced, may be computed at 3,000—of whom about one-third are women. I heard them frequently estimated at 5,000, and some urged that the number was at least as near 5,000 as 3,000. For my own part I am inclined to believe that half the smaller number would be nearer the truth. Judging by the number of miles of streets throughout the metropolis, and comparing the street-sellers of ginger-beer with the fruit-stall keepers, I am satisfied that in estimating the ginger-beer-sellers at 1,500 we are rather over than under the truth. This body of street-sellers were more numerous five years back by 15 or 20 per cent., but the introduction of the street fountains, and the trade being resorted to by the keepers of coal-sheds and the small shopkeepers—who have frequently a stand with ginger-beer in front of their shops —have reduced the amount of the street-sellers. In 1842, there were 1,200 ginger-beer sellers in the streets who had attached to their stalls or trucks labels, showing that they were members —or assumed to be members—of the Society of Odd Fellows. This was done in hopes of a greater amount of custom from the other members of the Society, but the expectation was not realised—and so the Odd Fellowship of the ginger-beer people disappeared. Of the street-traders 200 work fountains; and of the remaining portion the stationary and the itinerant are about equally divided. Of the whole number, however, not above an eighth confine themselves to the trade, but usually sell with their "pop" some other article of open-air traffic—fruit, sweet-stuff, or shell-fish. There are of the entire number about 350, who, whenever the weather permits, stay out all night with their stands or barrows, and are to be found especially in all the approaches to Covent-garden, and the other markets to which there is a resort during the night or at day-break. These men, I was told by one of their body, worked from eight in the evening to eight or ten next morning, then went to bed, rose at three, and "plenty of 'em then goes to the skittles or to get drunk."

The character of the ginger-beer-sellers does not differ from what I have described as pertaining to the costermonger class, and to street-traders generally. There is the same admixture of the reduced mechanic, the broken-down gentleman's servant, the man of any class in life who cannot brook the confinement and restraint of ordinary in-door labour, and of the man "brought up to the streets." One experienced and trustworthy man told me that from his own knowledge he could count up twenty "classical men," as he styled them, who were in the street ginger-beer-trade, and of these four had been, or were said to have been "parsons," two being of the same name (Mr. S ——); but my informant did not know if they stood in any degree of consanguinity one

to another. The women are the wives, daughters, or other connections of the men.

Some of the stalls at which ginger-beer is sold —and it is the same at the coal-sheds and the chandlers' shops—are adorned pictorially. Erected at the end of a stall is often a painting, papered on a board, in which a gentleman, with the bluest of coats, the whitest of trousers, the yellowest of waistcoats, and the largest of guard-chains or eye-glasses, is handing a glass of ginger-beer, frothed up like a pot of stout, and containing, apparently, a pint and a half, to some lady in flowing white robes, or gorgeous in purple or orange.

To commence in this branch of the street business requires, in all 18*s.* 3*d.*: six glasses, 2*s.* 9*d.*; board, 5*s.*; tank, 1*s.*; keg, 1*s.*; gross of beer, 8*s.* (this is where the seller is not also the maker); and for towels, &c., 6*d.*; if however the street-seller brew his own beer, he will require half a gross of bottles, 5*s.* 6*d.*; and the ingredients I have enumerated, 1*s.* 7*d.*

In addition to the street-sale of ginger-beer is that of other summer-drinks. Of these, the principal is lemonade, the consumption of which is as much as that of all the others together. Indeed, the high-sounding names given to some of these beverages—such as "Nectar" and "Persian Sherbet"—are but other names for lemonade, in a slightly different colour or fashion.

Lemonade is made, by those vendors who deal in the best articles, after the following method: 1 lb. of carbonate of soda, 6*d.*; 1 lb. of tartaric acid, 1*s.* 4*d.* ("at least," said an informant, '*I* pay 1*s.* 4*d.* at 'Pothecaries Hall, but it can be had at 1*s.*"); 1 lb. of loaf-sugar, 5½*d.*; essence of lemon, 3*d.* This admixture is kept, in the form of a powder, in a jar, and water is drawn from what the street-sellers call a "stone-barrel"—which is a stone jar, something like the common-shaped filters, with a tap—and a larger or smaller spoonful of the admixture in a glass of water supplies an effervescing draught for 1*d.* or ½*d.* "There's sometimes shocking roguishness in the trade," said one man, "and there is in a many trades—some uses vitriol!" Lemonade, made after the recipe I have given, is sometimes bottled by the street-sellers, and sold in the same way as ginger-beer. It is bought, also, for street sale of the ginger-beer manufacturers—the profit being the same—but so bought to less than a twentieth of the whole sale. The water in the stone barrel is spring-water, obtained from the nearest pump, and in hot weather obtained frequently, so as to be "served" in as cool a state as possible. Sometimes lemonade powders are used; they are bought at a chemist's, at 1*s.* 6*d.* the pound. "Sherbet" is the same admixture, with cream of tartar instead of tartaric acid. "Raspberry" has, sometimes, the addition of a few crusted raspberries, and a colouring of cochineal, with, generally, a greater degree of sweetening than lemonade. "If cochineal is used for colouring," said one man, "it sometimes turns brown in the sun, and the rasberry don't sell. A little lake's better." "Lemon-juice" is again lemonade, with a slight infusion of saffron to give it a yellow or pale orange colour. "Nectar," in imitation of Soyer's, has more sugar and less acid than the lemonade; spices, such as cinnamon, is used to flavour it, and the colouring is from lake and saffron.

These "cooling drinks" are sold from the powder or the jar, as I have described, from fountains, and from bottles. The fountain sale is not above a tenth of the whole. All is sold in ½*d.* and 1*d.* glasses, except the nectar, which is never less than 1*d.* The customers are the same as those who buy ginger-beer; but one "lemonader" with whom I conversed, seemed inclined to insist that they were a "more respectabler class." Boys are good customers—better, perhaps, than for the beer,—as "the colour and the fine names attracts them."

The "cooling drink" season, like that of the ginger-beer, is determined by the weather, and last summer it was only four months. It was computed for me that there were 200 persons, chiefly men, selling solely lemonade, &c., and an additional 300 uniting the sale with that of ginger-beer. One man, whose statement was confirmed by others, told me that on fine days he took 3*s.* 6*d.*, out of which he cleared 2*s.* to 2*s.* 6*d.*; and he concluded that his brother tradesmen cleared as much every fine day, and so, allowing for wet weather and diminished receipts, made 10*s.* a week. The receipts, then, for this street luxury—a receipt of 17*s.* 6*d.* affording a profit of 10*s.*—show a street expenditure in such a summer as the last, of 2,800*l.*, by those who do not unite ginger-beer with the trade. Calculating that those who do unite ginger beer with it sell only one-half as much as the others, we find a total outlay of 4,900*l.* One of the best trades is in the hands of a man who "works" Smithfield, and on the market days clears generally from 6*s.* to 9*s.*

The stalls, &c., are of the same character as those of the ginger-beer sellers. The capital required to start is:—stone barrel, with brass tap, 5*s.* 6*d.*; stand and trestle, 6*s.*; 6 tumbler glasses, 2*s.* 3*d.*; 2 towels, 6*d.*; stock money, 2*s.* 6*d.*; jar, 2*s.*; 12 bottles (when used), 3*s.* 6*d.*; in all, about a guinea.

In showing the money expended in the ginger-beer trade it must be borne in mind that a large portion of the profits accrues to persons who cannot be properly classed with the regular street-traders. Such is the proprietor of the great fountain of which I have spoken, who is to be classed as a speculative man, ready to embark capital in any way—whether connected with street-traffic or not—likely to be remunerative. The other and large participants in the profits are the wholesale ginger-beer manufacturers, who are also the letters-out of fountains, one of them having generally nine let out at a time. For a street trader to sell three gross of ginger-beer in bottle is now accounted a *good* week, and for that the receipts

Original from HARVARD UNIVERSITY

will be 36*s.* with a profit in the penny bottle trade, to the seller, if he buy of a manufacturer, of 12*s.*; if he be his own brewer—reckoning a fair compensation for labour, and for money invested in utensils, and in bottles, &c., of 20*s.* An ordinary week's sale is two gross, costing the public 24*s.*, with the same proportion of profit in the same trade to the seller. In a *bad* week, or "in a small way to help out other things," not more than one gross is sold.

The fountain trade is the most profitable to the proprietors, whether they send out their machines on their own account, or let them out on hire; but perhaps there are only an eighth of the number not let out on hire. Calculating that a fountain be let out for three successive seasons of twenty weeks each, at only 4*s.* the week, the gross receipts are 12*l.* for what on the first day of hire was worth only 7*l.*; so that the returns from 200 machines let out for the same term, would be 2,400*l.*, or a profit of 1,000*l.* over and above the worth of the fountain, which having been thus paid for is of course in a succeeding year the means of a clear profit of 4*l.* I am assured that the weekly average of "a fountain's takings," when in the hands of the regular street-dealers, is 18*s.*

The barrel traders may be taken as in the average receipt of 6*s.* a week.

The duration of the season was, last year, only sixteen weeks. Calculating from the best data I could acquire, it appears that for this period 200 street-sellers of ginger-beer in the bottle trade of the penny class take 30*s.* a week each (thus allowing for the inferior receipts in bad weather); 300 take 20*s.* each, selling for the most part at ½*d.* the bottle, and that the remaining 400 "in a small way" take 6*s.* each; hence we find 11,480*l.* expended in the bottled ginger-beer of the streets. Adding the receipts from the fountains and the barrels, the barrel season continuing only ten weeks, the total sum expended annually in street ginger-beer is altogether 14,660*l.* The bottles of ginger-beer sold yearly in the streets will number about 4,798,000, and the total street consumption of the same beverage may be said to be about 250,000 gallons per annum.

Of the Experience and Customers of a Ginger-beer Seller.

A slim, well-spoken man, with a half-military appearance, as he had a well trimmed moustache, and was very cleanlily dressed, gave me the following account: "I have known the ginger-beer trade for eight years, and every branch of it. Indeed I think I've tried all sorts of street business. I've been a costermonger, a lot-seller, a nut-seller, a secret-paper-seller (with straws, you know, sir), a cap-seller, a street-printer, a cakeman, a clown, an umbrella-maker, a toasting-fork maker, a sovereign seller, and a ginger-beer seller. I hardly know what I haven't been. I made my own when last I worked beer. Sunday was my best day, or rather Sunday mornings when there's no public-houses open. Drinking Saturday nights make dry Sunday mornings. Many a time men have said to me: 'Let's have a bottle to quench a spark in my throat,' or 'My mouth's like an oven.' I've had to help people to lift the glass to their lips, their hands trembled so. They couldn't have written their names plain if there was a sovereign for it. But these was only chance customers; one or two in a morning, and five or six on a Sunday morning. I've been a teetotaller myself for fifteen years. No, sir, I didn't turn one—but I never was a drinker—not from any great respect for the ginger-beer trade, but because I thought it gave one a better chance of getting on. I once had saved money, but it went in a long sickness. I used to be off early on Sunday mornings sometimes to Hackney Marsh, and sell my beer there to gentlemen—oldish gentlemen some of them—going a fishing. Others were going there to swim. One week I took 35*s.* at 1*d.* a bottle, by going out early in a morning; perhaps 20*s.* of it was profit, but my earnings in the trade in a good season wasn't more than 12*s.* one week with another. All the trades in the streets are bad now, I think. Eight years back I could make half as much more in ginger-beer as could be made last summer. Working people and boys were my other customers. I stuck to ginger-beer in the season and then went into something else, for I can turn my hand to anything. I began a street life at eight years old by selling memorandum-books in the bull-ring at Birmingham. My parents were ill and hadn't a farthing in the house. I began with 1*d.* stock-money, and I bought three memorandum-books for it at Cheap Jack's thatched house. I've been in London seventeen or eighteen years. I'm a roulette-maker now; I mean the roulette boxes that gentlemen take with them to play with when travelling on a railway or such times. I make loaded dice, too, and supply gaming-houses. I think I know more gaming-houses than any man in London. I've sold them to gentlemen and to parsons, that is ministers of religion. I can prove that. I don't sell those sort of things in the streets. I could do very well in the trade, but it's so uncertain and so little's wanted compared to what would keep a man going, and I have a mother that's sixty to support. Altogether my present business is inferior to the ginger-beer; but the fountains will destroy all the fair ginger-beer trade."

Of the Street-sellers of Hot Elder Wine.

The sale of hot elder wine in the streets is one of the trades which have been long established, but it is only within these eight or ten years that it has been carried on in its present form. It continues for about four months in the winter.

Elder wine is made from the berries of the elder-tree. Elder syrup—also made from the

berries — was formerly famous in the north of England as a curative for colds, and was frequently taken, with a small admixture of rum, at bedtime. Some of the street-sellers make the wine themselves; the majority, however, buy it of the British wine makers. The berries must be gathered when fully ripe, and on a dry day. They are picked, measured, and put into a copper, two gallons of water being added to every gallon of berries. They are then boiled till the berries are quite soft, when the liquor is strained and pressed from them through a strong hair sieve. The liquor thus expressed is again put into the copper, boiled an hour, skimmed, and placed in a tub along with a bread toast, on which yeast is spread thickly; it then stands two days, and is afterwards put into a cask, a few cloves and crusted ginger being hung in a muslin bag from the bung-hole, so as to flavour the liquor. Sometimes this spicing is added afterwards, when the liquor is warmed. The berries are sold in the markets, principally in Covent-garden,—the price varying, according to the season, from 1*s.* 6*d.* to 3*s.* a gallon. Of all elder-wine makers the Jews are the best as regards the street commodity. The costermongers say they "have a secret;" a thing said frequently enough when superior skill is shown, and especially when, as in the case of the Jews' elder wine, better pennyworths are given. The Jews, I am told, add a small quantity of raspberry vinegar to their "elder," so as to give it a "sharp pleasant twang." The heat and pungency of the elder wine sold in the streets is increased by some street-sellers by means of whole black pepper and capsicums.

The apparatus in which the wine is now kept for sale in the streets is of copper or brass, and is sometimes "handsome." It is generally an urn of an oblong form, erected on a sort of pedestal, with the lid or top ornamented with brass mouldings, &c. Three plated taps give vent to the beverage. Orifices are contrived and are generally hidden, or partially hidden, with some ornament, which act as safety-valves, or, as one man would have it, "chimneys." The interior of these urns holds three or four quarts of elder wine, which is surrounded with boiling water, and the water and wine are kept up to the boiling pitch by means of a charcoal fire at the foot of the vessel. Fruit of some kind is generally sold by the elder-wine men at their stand.

The elder wine urn is placed on a stand covered with an oil-cloth, six or eight glasses being ranged about it. It is sold at a halfpenny and a penny a glass; but there is "little difference in some elder wines," I was told, "between the penn'orths and the ha'porths." A wine glass of the "regular" size is a half-quartern, or the eighth of a pint.

Along with each glass of hot elder wine is given a small piece of toasted bread. Some buyers steep this bread in the wine, and so imbibe the flavour. "It ain't no good as I know on," said an elder-wine seller, "but it's the fashion, and so people must have it." The purchasers of elder wine are the working classes—but not the better order of them—and the boys of the street. Some of these lads, I was told, were very choice and critical in their elder wines. Some will say: "It ain't such bad wine, but not the real spicy."—"The helder I thinks," said another, "is middlin', but somehow there's nothing but hotness for to taste."

Of these traders there are now perhaps fifty in London. One man counted up thirty of his brethren whom he knew personally, or knew to be then "working elder," and he thought that there might be as many more, but I am assured that fifty is about the mark. The sellers of elder wine have been for the most part mechanics who have adopted the calling for the reasons I have often given. None of them, in the course of my inquiry, depended entirely upon the sale of the wine, but sold fruit in addition to it. All complained of the bad state of trade. One man said, that four or five years back he had replenished the wine in a three quart urn twelve times a day, a jar of the wine being kept at the stall in readiness for that purpose. This amounted to 576 glasses sold in the course of the day, and a receipt—reckoning each glass at a penny—of 48*s.*; but probably not more than 40*s.* would be taken, as some would have halfpenny glasses. Now the same man rarely sells three quarts in a day, except perhaps on a Saturday, and on wet days he sells none at all. The elder wine can be bought at almost any price at the wine makers, from 4*d.* to 1*s.* 6*d.* the quart. The charge in the public-houses is twice as high as in the streets, but the inn wine, I was told by a person familiar with the trade, contains spirit, and is more highly spiced.

A decent-looking middle-aged man who had been in a gentleman's service, but was disabled by an accident which crushed his hand, and who thereupon resorted to street-selling and had since continued in it, in different branches, from fifteen to twenty years, gave me an account of his customers. He had not been acquainted with the elder-wine trade above four or five years when he bought an elder can for about 15*s.* among a cheap miscellaneous "lot" in Smithfield one Friday afternoon, and so he commenced:

"It's a poor trade, sir," he said. "I don't suppose any of us make 10*s.* a week at it alone, but it's a good help to other things, and I do middling. I should say less than a 1*s.* a day was above the average profits of the trade. Say 5*s.* a week, for on wet days we can't sell at all. No one will stop to drink elder wine in the wet. They'll rather have a pennor'th of gin, or half a pint of beer with the chill off, under shelter. I sell sometimes to people that say they're teetotallers and ask if there's any spirit in my wine. I assure them there's not, just the juice of the berry. I start when I think the weather's

Original from HARVARD UNIVERSITY

cold enough, and keep at it as long as there's any demand. My customers are boys and poor people, and I sell more ha'porths than pennor'ths. I've heard poor women that's bought of me say it was the only wine they ever tasted. The boys are hard to please, but I won't put up with their nonsense. It's not once in fifty times that a girl of the town buys my wine. It's not strong enough for her, I fancy. A sharp frosty dry day suits me best. I may then sell three or four quarts. I don't make it, but buy it. It's a poor trade, and I think it gets worse every year, though I believe there's far fewer of us."

One elder-wine stand in Tottenham-court-road cost, when new, 7*l.*, but that was six or seven years ago. Calculating that 50 persons clear 5*s.* a week for 16 weeks, their profit being at least cent. per cent., the street outlay in this very British wine will be only 200*l.*, and the street-consumption of it in the course of the year 1,500 gallons.

Of the Street Sale of Peppermint-Water.

Perhaps the only thing which can be called a cordial or a liqueur sold in the streets (if we except elder wine), is peppermint-water, and of this the sale is very limited. For the first 15 or 20 years of the present century, I was told by one who spoke from a personal knowledge, "a peppermінter" had two little taps to his keg, which had a division in the interior. From one tap was extracted "peppermint-water;" from the other, "strong peppermint-water." The one was at that time 1*d.* a glass, the other from 2*d.* to 4*d.*, according to the size of the glass. With the "strong" beverage was mixed smuggled spirit, but so strongly impregnated with the odour of the mint, that a passer-by could not detect the presence of the illicit compound. There are six persons selling peppermint-water in the winter, and only half that number in the summer. The trade is irregular, as some pursue it only of a night, and generally in the street markets; others sell at Billingsgate, and places of great traffic, when the traffic is being carried on. They are stationary for awhile, but keep shifting their ground. The vendors generally "distilled their own mint," when the sale was greater, but within these six or eight years they have purchased it at a distilling chemist's, and have only prepared it for sale. Water is added to the distilled liquid bought of the chemist, to increase the quantity; but to enhance the heat of the draught—which is a draw to some buyers—black pepper (unground), or ginger, or, but rarely, capsicums, are steeped in the beverage. The peppermint-water is lauded by the vendors, when questioned concerning it, as an excellent stomachic; but nothing is said publicly of its virtues, the cry being merely, "Pep-permint water, a halfpenny a glass."

The sellers will generally say that they distil the peppermint-water themselves, but this is not now commonly the case. The process, however, is simple enough. The peppermint used is gathered just as it is bursting into flower, and the leaves and buds are placed in a tub, with just water enough to cover them. This steeping continues 24 hours, and then a still is filled three-parts full, and the water is "over" drawn very slowly.

The price at the chemist's is 1*s.* a quart for the common mint-water; the street price is ½*d.* a glass, containing something short of the eighth of a pint. What costs 1*s.*, the street-seller disposes of for 2*s.*, so realising the usual cent. per cent.

To take 2*s.* is now accounted "a tidy day's work;" and calculating that four "peppermінters" take that amount the year round, Sundays excepted, we find that nearly 125*l.* is spent annually in peppermint-water and 900 gallons of it consumed every year in the streets of London.

The capital required is, keg, 3*s.* 6*d.*, or jar, 2*s.* (for they are used indifferently); four glasses, 1*s.*; towel, 4*d.*, and stock-money, 4*s.*; or, in all, about 8*s.* The "water"-keg, or jar, is carried by the vendor, but sometimes it is rested on a large stool carried for the purpose. A distilling apparatus, such as the street-sellers used, was worth about 10*s.* The vendors are of the same class of street-sellers as the ginger-beer people.

Of Milk Selling in St. James's Park.

The principal sale of milk from the cow is in St. James's Park. The once fashionable drink known as syllabubs—the milk being drawn warm from the cow's udder, upon a portion of wine, sugar, spice, &c.—is now unknown. As the sellers of milk in the park are merely the servants of cow-keepers, and attend to the sale as a part of their business, no lengthened notice is required.

The milk-sellers obtain leave from the Home Secretary, to ply their trade in the park. There are eight stands in the summer, and as many cows, but in the winter there are only four cows. The milk-vendors sell upon an average, in the summer, from eighteen to twenty quarts per day; in the winter, not more than a third of that quantity. The interrupted milking of the cows, as practised in the Park, often causes them to give less milk, than they would in the ordinary way. The chief customers are infants, and adults, and others, of a delicate constitution, who have been recommended to take new milk. On a wet day scarcely any milk can be disposed of. Soldiers are occasional customers.

A somewhat sour-tempered old woman, speaking as if she had been crossed in love, but experienced in this trade, gave me the following account:

"It's not at all a lively sort of life, selling milk from the cows, though some thinks it's a gay time in the Park! I've often been dull enough, and could see nothing to interest one, sitting alongside a cow. People drink new milk for their health, and I've served a good many such. They're mostly young women, I think, that's de-

licate, and makes the most of it. There's twenty women, and more, to one man what drinks new milk. If they was set to some good hard work, t would do them more good than new milk, or ass's milk either, I think. Let them go on a milk-walk to cure them—that's what I say. Some children come pretty regularly with their nurses to drink new milk. Some bring their own china mugs to drink it out of; nothing less was good enough for them. I've seen the nurse-girls frightened to death about the mugs. I've heard one young child say to another: 'I shall tell mama that Caroline spoke to a mechanic, who came and shook hands with her.' The girl was as red as fire, and said it was her brother. Oh, yes, there's a deal of brothers comes to look for their sisters in the Park. The greatest fools I've sold milk to is servant-gals out for the day. Some must have a day, or half a day, in the month. Their mistresses ought to keep them at home, I say, and not let them out to spend their money, and get into nobody knows what company for a holiday; mistresses is too easy that way. It's such gals as makes fools of themselves in liking a soldier to run after them. I've seen one of them—yes, some would call her pretty, and the prettiest is the silliest and easiest tricked out of money, that's my opinion, anyhow—I've seen one of them, and more than one, walk with a soldier, and they've stopped a minute, and she's taken something out of her glove and given it to him. Then they've come up to me, and he's said to her, 'Mayn't I treat you with a little new milk, my dear?' and he's changed a shilling. Why, of course, the silly fool of a gal had given him that there shilling. I thought, when Annette Myers shot the soldier, it would be a warning, but nothing's a warning to some gals. *She* was one of those fools. It was a good deal talked about at the stand, but I think none of us know'd her. Indeed, we don't know our customers but by sight. Yes, there's now and then some oldish gentlemen—I suppose they're gentlemen, anyhow, they're idle men—lounging about the stand: but there's no nonsense there. They tell me, too, that there's not so much lounging about as there was; those that's known the trade longer than me thinks so. Them children's a great check on the nusses, and they can't be such fools as the servant-maids. I don't know how many of them I've served with milk along with soldiers: I never counted them. They're nothing to me. Very few elderly people drink new milk. It's mostly the young. I've been asked by strangers when the Duke of Wellington would pass to the Horse-Guards or to the House of Lords. He's pretty regular. I've had 6*d.* given me—but not above once or twice a year—to tell strangers where was the best place to see him from as he passed. I don't understand about this Great Exhibition, but, no doubt, more new milk will be sold when it's opened, and that's all I cares about."

OF THE STREET SALE OF MILK.

DURING the summer months milk is sold in Smithfield, Billingsgate, and the other markets, and on Sundays in Battersea-fields, Clapham-common, Camberwell-green, Hampstead-heath, and similar places. About twenty men are engaged in this sale. They usually wear a smock frock, and have the cans and yoke used by the regular milk-sellers; they are not itinerant. The skim milk—for they sell none else—is purchased at the dairies at 1½*d.* a quart, and even the skim milk is also further watered by the street-sellers. Their cry is "Half-penny half-pint! Milk!" The tin measure however in which the milk-and-water is served is generally a "slang," and contains but half of the quantity proclaimed. The purchasers are chiefly boys and children; rarely men, and never costermongers, I was told, "for they reckon milk sickly." These street-sellers—who have most of them been employed in the more regular milk-trade—clear about 1*s.* 6*d.* a day each, for three months; and as the profit is rather more than cent. per cent. it appears that about 4,000 gallons of milk are thus sold, and upwards of 260*l.* laid out upon these persons, yearly in its purchase.

A pair of cans with the yoke cost 15*s.*, and 1*l.* is amply sufficient as capital to start in this trade, as the two measures used may be bought for 2*s.*; and 3*s.* can be devoted to the purchase of the liquid.

OF THE STREET-SALE OF CURDS AND WHEY.

THE preparations of milk which comprise the street-trade, are curds and whey and rice-milk, the oldest street-sellers stating that these were a portion of the trade in their childhood. The one is a summer, and the other a winter traffic, and both are exclusively in the hands of the same middle-aged and elderly women. The vendors prepare the curds and whey in all cases themselves. "Skim-milk," purchased at the dairies, is used by the street-purveyors, a gallon being the quantity usually prepared at a time. This milk gallon is double the usual quantity, or eight quarts. The milk is first "scalded," the pan containing it being closely watched, in order that the contents may not boil. The scalding occupies 10 or 15 minutes, and it is then "cooled" until it attains the lukewarmness of new milk. Half a pound of sugar is then dissolved in the milk, and a tea-spoonful of rennet is introduced, which is sufficient to "turn" a gallon. In an hour, or in some cases two, the milk is curded, and is ready for use. The street-sale is confined to stalls; the stall, which is the ordinary stand, being covered with a white cloth, or in some cases an oil-cloth, and on this the curds, in a bright tin kettle or pan, are deposited. There are six mugs on the board, and a spoon in each, but those who affect a more modern style have glasses. One of the neatest stalls, as regards the display of glass, and the bright cleanliness

Original from HARVARD UNIVERSITY

of the vessel containing the curds, is in Holborn; but the curd-seller there has only an average business. The mugs or glasses hold about the third of a pint, and "the full of one" is a pennyworth; for a halfpenny-worth the vessel is half filled. The season is during the height of summer, and continues three or four months, or, as one woman tersely and commercially expressed it, "from Easter to fruit." The number of street-saleswomen is about 100. Along with the curds they generally sell oranges, or such early fruit as cherries.

A woman who had sold "cruds"—as the street-people usually call it—for eighteen years, gave me the following account:—"Boys and girls is my best customers for cruds, sir. Perhaps I sell to them almost half of all I get rid of. Very little fellows will treat girls, often bigger than themselves, at my stall, and they have as much chaffing and nonsense about it's being 'stunning good for the teeth,' and such like, as if they was grown-up. Some don't much like it at first, but they gets to like it. One boy, whose young woman made faces at it—and it *was* a little sour to be sure that morning—got quite vexed and said, 'Wot a image you're a-making on yourself!' I don't know what sort the boys are, only that they're the street-boys mostly. Quiet working people are my other customers, perhaps rather more women than men. Some has told me they was teetotallers. Then there's the women of the town of the poorer sort, *they're* good customers,—as indeed I think they are for most cooling drinks at times, for they seem to me to be *always* thirsty. I never sell to dustmen or that sort of people. Saturday is my best day. If it's fine and warm, I sell a gallon then, which makes about 40 penn'orths: sometimes it brings me 3*s.*, sometimes 3*s.* 6*d.*; it's rather more than half profits. Take it altogether, I sell five gallons in fine dry weeks, and half that in wet; and perhaps there's what I call a set down wet week for every two dry. Nobody has a better right to pray against wet weather than poor women like me. Ten years ago I sold almost twice as much as I can now. There's so many more of us at present, I think, and let alone that there's more shops keeps it too."

Another old woman told me, that she used, "when days was longest," to be up all night, and sell her "cruds" near Drury-lane theatre, and often received in a few hours 5*s.* or 6*s.*, from "ladies and gentlemen out at night." But the men were so rackety, she said, and she'd had her stall so often kicked over by drunken people, and no help for it, that she gave up the night-trade, and she believed it was hardly ever followed now.

To start in the curds and whey line requires the following capital:—Saucepan, for the scalding and boiling, 2*s.*; stall, 5*s*; 6 mugs, 6*d.*; or 6 glasses, 2*s.* 6*d.*; 6 spoons, 3*d.*; tin kettle on stall, 3*s.* 6*d.*; pail for water to rinse glasses, 1*s.* Then for stock-money: 1 gallon skimmed milk, 1*s.* 6*d.* or 1*s.* 8*d.*; and ½ lb. sugar, 2*d.* In all, 14*s.* 1*d.*, reckoning the materials to be of the better sort.

Of the whole number of street curd-sellers, 50 dispose of as much as my informant, or 12½ gallons in 3 weeks; the other 50 sell only half as much. Taking the season at 3 months, we find the consumption of curds and whey in the street to be 2,812 double gallons (as regards the ingredient of milk), at a cost to the purchasers of 421*l.*, half of which is the profit accruing to the street-seller. The receipts of those having the better description of business being 9*s.* 4*d.* weekly; those of the smaller traders being 4*s.* 8*d.* There is a slight and occasional loss by the "cruds" being kept until unsaleable, in which case they are "fit for nothing but the hog-wash man."

OF THE STREET-SELLERS OF RICE-MILK.

To make rice-milk, the street-seller usually boils four quarts, of the regular measure, of "skim" with one pound of rice, which has been previously boiled in water. An hour suffices for the boiling of the milk; and the addition of the rice, swollen by the boiling water, increases the quantity to six quarts. No other process is observed, except that some sweeten their rice-milk before they offer it for sale; the majority, however, sweeten it to the customer's liking when he is "served," unless—to use the words of one informant—"he have a werry, werry sweet tooth indeed, sir; and that can't be stood." For the sweetening of six quarts, half a pound of sugar is used; for the "spicing," half an ounce of allspice, dashed over the milk freely enough from a pepper-castor. Rice-milk is always sold at stalls arranged for the purpose, and is kept in a tin pan fitted upon a charcoal brazier, so that the "drinkable" is always hot. This apparatus generally stands on the ground alongside the stall, and is elevated only by the feet of the brazier. The "rice-milk woman,"—for the street-sellers are generally females,—dips a large breakfast-cup, holding half a pint, into the pan, puts a tea-spoonful of sugar into it, browns the whole with allspice, and receives 1*d.*; a halfpennyworth is, of course, half the quantity. The rice-milk women are also sellers of oranges, chestnuts, apples, or some other fruit, as well as the rice-milk; but, sometimes, when the weather is *very* cold and frosty, they sell rice-milk alone. There are fifty street-sellers of rice-milk in London. Saturday night is the best time of sale, when it is not uncommon for a rice-milk woman to sell six quarts; but, in a good trade, four quarts a day for six days of the week is an average. The purchasers are poor people; and a fourth of the milk is sold to boys and girls, to whom it is often a meal. "Ah, sir," said one woman, "you should have seen how a poor man, last winter, swallowed a penn'orth. He'd been a-wandering all night, he said, and he looked it, and a gentleman gave him 2*d.*, for he took pity on his hungry look, and he spent 1*d.* with me, and I gave him another

cup for charity. 'God bless the gentleman and you!' says he, 'it's saved my life; if I'd bought a penny loaf, I'd have choked on it.' He wasn't a beggar, for I never saw him before, and I've never seen him again from that day to this." The same informant told me, that she believed no rice-milk was bought by the women of the town: "it didn't suit the likes of them." Neither is it bought by those who are engaged in noisome trades. If there be any of the rice-milk left at night, and the saleswoman have doubts of its "keeping," it is re-boiled with fresh rice and milk. The profit is considerable; for the ingredients, which cost less than 1*s.* 6*d.*, are made into 96 pennyworths, and so to realize 8*s.* In some of the poorer localities, however, such as Rosemary-lane, only ½*d.* the half-pint can be obtained, and 4*s.* is then the amount received for six quarts, instead of 8*s.*

To start "in rice-milk" requires 13*s.* capital, which includes a pan for boiling the milk, 2*s.*; a kettle, with brazier, for stall, 4*s.*; stall or stand, 5*s.*; six cups, 9*d.*; for stock-money 15½*d.*, with which is bought 4 quarts of skim-milk, 9*d.*; 1 lb. of rice, 3*d.*; ½ lb. of sugar, 2*d.*; allspice, 1*d.*

The season continues for four months; and calculating—a calculation within the mark—that one half of the 50 sellers have as good a trade as my informant—24 quarts weekly—and that, of the remaining 25, one half sell 12 quarts each weekly, at 1*d.* the half-pint, and the other half vend 24 quarts at ½*d.* the half-pint, we find that 320*l.* is annually spent in rice-milk and about 3,000 gallons of it yearly consumed in the streets of London.

Of Water-Carriers.

It may surprise many to learn that there are still existing water-carriers in London, and some of them depending upon the trade for a livelihood; while others, the "odd men" of the neighbourhood, carry pails of spring water to the publicans or eating-house keepers, who may not have servants to send to the nearest pump for it, and who require it fresh and cool for those who drink it at their meals. Of these men there are, as near as I can ascertain, from 100 to 150; their charge is 1*d.* per pail. Their earnings per day 6*d.* to 1*s.*. Perhaps none of them depend solely upon this labour for their support.

It is otherwise at Highgate and Hampstead, for in those places both men and women depend entirely for their daily bread on water carrying. At Hampstead the supply is derived from what may be called a double well, known as "the Conduit." The ground is flagged, and the water is seen at each corner of a wall built to the surface of the ground (about eight feet) and surmounted by an iron rail. The water is covered over, in one corner and not in the other, and the carrier descends a step or two, dips in his pails and walks away with them when filled. The water is carried by means of a "yoke," in the same way as we see the milk-pails carried in every street in London. The well and the field in which the Hampstead water is situated are the property of the Church, and the water is free to any one, in any quantity, either for sale or any other purpose, "without leave." In droughts or frosts the supply fails, and the carriers have sometimes to wait hours for their "turn," and then to bale the water into their pails with a basin. The nearest street to which the water is carried is half a mile distant. Some is carried three quarters of a mile, and some (occasionally) a mile. The two pails full, which contain seven gallons, are sold at 1½*d.* The weight is about 70 lbs. Seventeen years ago the price was 3*d.*; after which it fell to 2½*d.*, then to 2*d.*, and has been 1½*d.* these five or six years, while now there are three or four carriers who even "carry" at two pails a-penny to the nearer places. The supply of the well (apart from drought or frost) is fifty-six gallons an hour. The principal customers are the laundresses; but in wet weather their cisterns and water-tubs are filled, and the carriers, or the major part of them, are idle. The average earnings of the carriers are 5*s.* a week the year through. Two of them are men of seventy. There is a bench about midway to Hampstead, at which these labourers rest; and here on almost every fine day sits with them a palsied old soldier, a pensioner of about eighty, who regales them, almost daily, with long tales of Vinegar Hill, and Jemmy O'Brien (the informer), and all the terrors of the terrible times of the Irish rebellion of 1798; for the old man (himself an Irishman) had served through the whole of it. This appears to be a somewhat curious theme for constant expatiation to a band of London water-carriers.

There are now twenty individuals, fourteen men and six women, carrying at Hampstead, and twice that number at Highgate. Some leave the carrying when they get better work,—but three-fourths of the number live by it entirely. The women are the wives and widows of carriers. The men have been either mechanics or labourers, except six or eight youths (my informant was not certain which) who had been "brought up to the water, but would willingly get away from it if they could."

A well-spoken and intelligent-looking man, dressed in thick fustian, old and greasy, "but good enough for the carrying," gave me the following account.

"I was a copper-plate printer," he said, "and twenty years ago could earn my 25*s.* a week. But employment fell off. The lithographic injured it, and at last I could get very little work, and then none at all, so I have been carrying now between three and four years. My father-in-law was in the trade, and that made me think of it. My best day's work, and it's the same with all, is 2*s.*, which is sixteen turns. It's not possible to do more. If that could be done every day it would be very well, but in wet weather when the laundresses, who are my

customers, don't want water, I can't make 1*s.* a week. Then in a drought or a frost one has to wait such a long time for his turn, that it's not 6*d.* a day; a dry spring's the worst. Last March I had many days to wait six turns, and it takes well on to an hour for a turn then. We sit by the well and talk when we're waiting. O, yes, sir, the Pope has had his turn of talk. There's water companies both at Hampstead and Highgate, but our well water (Hampstead) is asked for, for all that. It's so with Highgate. It is beautiful water, either for washing or drinking. Perhaps it's better with a little drop of spirit for drinking, but I seldom taste it that way. The fatigue's so great that we *must* take a little drop of spirit on a long day. No, sir, we don't mix it; that spoils two good things. I've been at the well first light in the morning, and in summer I've been at work at it all night. There's no rule among us, but it's understood that every one has his turn. There's a little chaff sometimes, and some get angry at having to wait, but I never knew a fight. I have a wife and three children. She works for a laundress, and has 2*s.* 6*d.* a day. She has two days regular every week, and sometimes odd turns as well. I think that the women earn more than the men in Hampstead. My rent is 1*s.* 6*d.* a week for an unfurnished room. There is no trade on Sundays, but on fine summer Sundays old —— attends at the well and sells glasses of cool water. He gets 2*s.* 6*d.* some days. He makes no charge; just what any one pleases to give. Any body might do it, but the old gentleman would grumble that they were taking his post."

Computing the number of water carriers at the two places at sixty, and their average earnings through the year at 5*s.* a week, it appears that these men receive 1,452*l.* yearly. The capital required to start in the business is 9*s.*, the cost of a pair of pails and a yoke.

The old man who sells water on the summer Sunday mornings, generally leaving off his sale at church-time, told me that his best customers were ladies and gentlemen who loved an early walk, and bought of him "as it looked like a bit of country life," he supposed, more than from being thirsty. When such customers were not inhabitants of the neighbourhood, they came to him to ask their way, or to make inquiries concerning the localities. Sometimes he dispensed water to men who "looked as if they had been on the loose all night." One gentleman," he said, "looks sharp about him, and puts a dark-coloured stuff—very likely it's brandy—into the two or three glasses of water which he drinks every Sunday, or which he used to drink rather, for I missed him all last summer, I think. His hand trembled like a aspen; he mostly gave me 6*d.*" The water-seller spoke with some indignation of boys, and sometimes men, going to the well on a Sunday morning and "drinking out of their own tins that they'd taken with 'em."

Of the Street-sellers of Pastry and Confectionary.

The cooked provisions sold in the streets, it has been before stated, consist of three kinds—solids, liquids, and pastry and confectionary. The two first have now been fully described, but the last still remains to be set forth.

The street pastry may be best characterised as of a *strong* flavour. This is, for the most part, attributable to the use of old or rancid butter,—possessing the all-important recommendation of cheapness,—or to the substitution of lard, dripping, or some congenial substance. The "strong" taste, however, appears to possess its value in the estimation of street pastry-buyers, especially among the boys. This may arise from the palates of the consumers having been unaccustomed to more delicate flavours, and having become habituated to the relish of that which is somewhat rank; just in the same way as the "*fumet*" of game or venison becomes dear to the palate of the more aristocratic *gourmand.* To some descriptions of street pastry the epithet strong-flavoured may seem inappropriate, but it is appropriate to the generality of these comestibles,—especially to the tarts, which constitute a luxury, if not to the meat pies or puddings that may supply a meal.

The articles of pastry sold in the London streets are meat and fruit pies, boiled meat and kidney puddings, plum "duff" or pudding, and an almost infinite variety of tarts, cakes, buns, and biscuits; while the confectionary consists of all the several preparations included under the wide denomination of "sweet-stuff," as well as the more "medicinal" kind known as "cough drops;" in addition to these there are the more "aristocratic" delicacies recently introduced into street traffic, viz., penny raspberry creams and ices.

Of Street Piemen.

The itinerant trade in pies is one of the most ancient of the street callings of London. The meat pies are made of beef or mutton; the fish pies of eels; the fruit of apples, currants, gooseberries, plums, damsons, cherries, raspberries, or rhubarb, according to the season—and occasionally of mince-meat. A few years ago the street pie-trade was very profitable, but it has been almost destroyed by the "pie-shops," and further, the few remaining street-dealers say "the people now haven't the pennies to spare." Summer fairs and races are the best places for the piemen. In London the best times are during any grand sight or holiday-making, such as a review in Hyde-park, the Lord Mayor's show, the opening of Parliament, Greenwich fair, &c. Nearly all the men of this class, whom I saw, were fond of speculating as to whether the Great Exposition would be "any good" to them, or not.

The London piemen, who may number about forty in winter, and twice that number in summer, are seldom stationary. They go along with

their pie-cans on their arms, crying, "Pies all 'ot! eel, beef, or mutton pies! Penny pies, all 'ot—all 'ot!" The "can" has been before described. The pies are kept hot by means of a charcoal fire beneath, and there is a partition in the body of the can to separate the hot and cold pies. The "can" has two tin drawers, one at the bottom, where the hot pies are kept, and above these are the cold pies. As fast as the hot dainties are sold, their place is supplied by the cold from the upper drawer.

A teetotal pieman in Billingsgate has a pony and "shay cart." His business is the most extensive in London. It is believed that he sells 20*s.* worth or 240 pies a day, but his brother tradesmen sell no such amount. "I was out last night," said one man to me, "from four in the afternoon till half-past twelve. I went from Somers-town to the Horse Guards, and looked in at all the public-houses on my way, and I didn't take above 1*s.* 6*d.* I have been out sometimes from the beginning of the evening till long past midnight, and haven't taken more than 4*d.*, and out of that I have to pay 1*d.* for charcoal."

The pie-dealers usually make the pies themselves. The meat is bought in "pieces," of the same part as the sausage-makers purchase—the "stickings"—at about 3*d.* the pound. "People, when I go into houses," said one man, "often begin crying, 'Mee-yow,' or 'Bow-wow-wow!' at me; but there's nothing of that kind now. Meat, you see, is so cheap." About five-dozen pies are generally made at a time. These require a quartern of flour at 5*d.* or 6*d.*; 2 lbs. of suet at 6*d.*; 1½ lb. meat at 3*d.*, amounting in all to about 2*s.* To this must be added 3*d.* for baking; 1*d.* for the cost of keeping hot, and 2*d.* for pepper, salt, and eggs with which to season and wash them over. Hence the cost of the five dozen would be about 2*s.* 6*d.*, and the profit the same. The usual quantity of meat in each pie is about half an ounce. There are not more than 20 *hot*-piemen now in London. There are some who carry pies about on a tray slung before them; these are mostly boys, and, including them, the number amounts to about sixty all the year round, as I have stated.

The penny pie-shops, the street men say, have done their trade a great deal of harm. These shops have now got mostly all the custom, as they make the pies much larger for the money than those sold in the streets. The pies in Tottenham-court-road are very highly seasoned. "I bought one there the other day, and it nearly took the skin off my mouth; it was full of pepper," said a street-pieman, with considerable bitterness, to me. The reason why so large a quantity of pepper is put in is, because persons can't exactly tell the flavour of the meat with it. Piemen generally are not very particular about the flavour of the meat they buy, as they can season it up into anything. In the summer, a street pieman thinks he is doing a good business if he takes 5*s.* per day, and in the winter if he gets half that. On a Saturday night, however, he generally takes 5*s.* in the winter, and about 8*s.* in the summer. At Greenwich fair he will take about 14*s.* At a review in Hyde-park, if it is a good one, he will sell about 10*s.* worth. The generality of the customers are the boys of London. The women seldom, if ever, buy pies in the streets. At the public-houses a few pies are sold, and the pieman makes a practice of "looking in" at all the taverns on his way. Here his customers are found principally in the tap-room. "Here's all 'ot!" the pieman cries, as he walks in; "toss or buy! up and win 'em!" This is the only way that the pies can be got rid of. "If it wasn't for tossing we shouldn't sell one."

To "toss the pieman" is a favourite pastime with costermongers' boys and all that class; some of whom aspire to the repute of being gourmands, and are critical on the quality of the comestible. If the pieman win the toss, he receives 1*d.* without giving a pie; if he lose, he hands it over for nothing. The pieman himself never "tosses," but always calls head or tail to his customer. At the week's end it comes to the same thing, they say, whether they toss or not, or rather whether they win or lose the toss: "I've taken as much as 2*s.* 6*d.* at tossing, which I shouldn't have had if I had'nt done so. Very few people buy without tossing, and the boys in particular. Gentlemen 'out on the spree' at the late public-houses will frequently toss when they don't want the pies, and when they win they will amuse themselves by throwing the pies at one another, or at me. Sometimes I have taken as much as half-a-crown, and the people of whom I had the money has never eaten a pie. The boys has the greatest love of gambling, and they seldom, if ever, buys without tossing." One of the reasons why the street boys delight in tossing, is, that they can often obtain a pie by such means when they have only a halfpenny wherewith to gamble. If the lad wins he gets a penny pie for his halfpenny.

For street mince-meat pies the pieman usually makes 5lb. of mince-meat at a time, and for this he will put in 2 doz. of apples, 1lb. of sugar, 1lb. of currants, 2lb. of "critlings" (critlings being the refuse left after boiling down the lard), a good bit of spice to give the critlings a flavour, and plenty of treacle to make the mince-meat look rich.

The "gravy" which used to be given with the meat-pies was poured out of an oil-can, and consisted of a little salt and water browned. A hole was made with the little finger in the top of the meat pie, and the "gravy" poured in until the crust rose. With this gravy a person in the line assured me that he has known pies four days old to go off very freely, and be pronounced excellent. The street piemen are mostly bakers, who are unable to obtain employment at their trade. "I myself," said one, "was a bread and biscuit baker. I have been at the pie business now about two years and a

Original from HARVARD UNIVERSITY

half, and I can't get a living at it. Last week my earnings were not more than 7*s.* all the week through, and I was out till three in the morning to get that." The piemen seldom begin business till six o'clock, and some remain out all night. The best time for the sale of pies is generally from ten at night to one in the morning.

Calculating that there are only fifty street piemen plying their trade in London, the year through, and that their average earnings are 8*s.* a week, we find a street expenditure exceeding 3,000*l.*, and a street consumption of pies amounting nearly to three quarters of a million yearly.

To start in the penny pie business of the streets requires 1*l.* for a "can," 2*s.* 6*d.* for a "turn-halfpenny" board to gamble with, 12*s.* for a gross of tin pie-dishes, 8*d.* for an apron, and about 6*s.* 6*d.* for stock money—allowing 1*s.* for flour, 1*s.* 3*d.* for meat, 2*d.* for apples, 4*d.* for eels, 2*s.* for pork flare or fat, 2*d.* for sugar, ½*d.* for cloves, 1*d.* for pepper and salt, 1*d.* for an egg to wash the pies over with, 6*d.* for baking, and 1*d.* for charcoal to keep the pies hot in the streets. Hence the capital required would be about 2*l.* in all.

Of the Street-sellers of Boiled Puddings.

The sale of *boiled* puddings, meat and currant —which might perhaps be with greater correctness called dumplings—has not been known in London, I was informed by one in the trade, more than twelve or fourteen years. The ingredients for the meat puddings are not dissimilar to those I have described as required for the meat pies, but the puddings are boiled, in cotton bags, in coppers or large pans, and present the form of a round ball. The charge is a halfpenny each. Five or six years back a man embarked his means—said to be about 15*l.*—in the meat-pudding line, and prepared a superior article, which was kept warm in the street by means of steam, in a manner similar to that employed by the pieman. A mechanic out of work was engaged by this projector to aid him in the sale of his street luxuries, and the mechanic and his two boys made a living by this sale for two or three years. The original pudding-projector relinquished the street trade to go into business as a small shopkeeper, and the man who sold for him on a sort of commission, earning from 12*s.* to 18*s.* a week, made the puddings on his own account. His earnings, however, on his own account were not above from 1*s.* to 2*s.* 6*d.* a week beyond what he earned by commission, and a little while back he obtained work again at his own business, but his two boys still sell puddings in the street.

The sale of boiled meat puddings is carried on only in the autumn and winter months, and only in the evenings, except on Saturdays, when the business commences in the afternoon. The sale, I was informed by one of the parties, has been as many as forty-five dozen puddings on a Saturday evening. The tins in which the puddings are carried about hold from four to six dozen, and are replenished from the pans—the makers always living contiguous to the street where the vend takes place—as fast as the demand requires such replenishment. An average sale on a fine dry winter Saturday evening is thirty dozen, but then, as in most street callings, "the weather"—a remark often made to me—"has considerable to do with it." A frost, I was told, helped off the puddings, and a rain kept them back. Next to Saturday the best business night is Monday; but the average sale on the Monday is barely half that on the Saturday, and on the other evenings of the week about a third. This gives a weekly sale by each street-seller of 85 dozen, or 1,020 puddings, and as I am informed there are now but six street-sellers (regularly) of this comestible, the weekly aggregate would be—allowing for bad weather—5,400, or 129,600 in a season of 24 weeks; an expenditure on the part of the street boys and girls (who are the principal purchasers), and of the poor persons who patronise the street-trade, of about 270*l.* per annum. The wandering street-musicians of the poorer class—such as "Old Sarey" and the Italian boys—often make their dinner off a meat pudding purchased on their rounds; for it is the rule with such people never to return home after starting in the morning till their day's work is done.

The boys who ply their callings in the street, or are much in the open air, are very fond of these puddings, and to witness the way in which they throw the pudding, when very hot, from hand to hand, eyeing it with an expression that shows an eagerness to eat with a fear of burning the mouth, is sometimes laughable and sometimes painful, because not unfrequently there is a look of keen hunger about the—probably outcast—lad. The currant puddings are, I believe, sold only at Billingsgate and Petticoat-lane.

Of the Street-sellers of Plum "Duff" or Dough.

Plum dough is one of the street-eatables—though perhaps it is rather a violence to class it with the street-pastry — which is usually made by the vendors. It is simply a boiled plum, or currant, pudding, of the plainest description. It is sometimes made in the rounded form of the plum-pudding; but more frequently in the "roly-poly" style. Hot pudding used to be of much more extensive sale in the streets. One informant told me that twenty or thirty years ago, batter, or Yorkshire, pudding, "with plums in it," was a popular street business. The "plums," as in the orthodox plum-puddings, are raisins. The street-vendors of plum "duff" are now very few, only six as an average, and generally women, or if a man be the salesman he is the woman's husband. The sale is for the most part an evening sale, and some vend the plum dough only on a Saturday

Original from HARVARD UNIVERSITY

night. A woman in Leather-lane, whose trade is a Saturday night trade, is accounted "one of the best plum duffs" in London, as regards the quality of the comestible, but her trade is not considerable.

The vendors of plum dough are the street-sellers who live by vending other articles, and resort to plum dough, as well as to other things, "as a help." This dough is sold out of baskets in which it is kept hot by being covered with cloths, sometimes two and even three, thick; and the smoke issuing out of the basket, and the cry of the street-seller, "Hot plum duff, hot plum," invite custom. A quartern of flour, *5d.*; ½ lb. Valentia raisins, *2d.*; dripping and suet in equal proportions, *2½d.*; treacle, *½d.*; and all-spice, *½d.*—in all *10½d.*; supply a roly-poly of twenty pennyworths. The treacle, however, is only introduced "to make the dough look rich and spicy," and must be used sparingly.

The plum dough is sold in slices at *½d.* or 1*d.* each, and the purchasers are almost exclusively boys and girls—boys being at least three-fourths of the revellers in this street luxury. I have ascertained—as far as the information of the street-sellers enables me to ascertain—that take the year through, six "plum duffers" take 1*s.* a day each, for four winter months, including Sundays, when the trade is likewise prosecuted. Some will take from 4*s.* to 10*s.* (but rarely 10*s.*) on a Saturday night, and nothing on other nights, and some do a little in the summer. The vendors, who are all stationary, stand chiefly in the street-markets and reside near their stands, so that they can get relays of hot dough.

If we calculate then 42*s.* a week as the takings of six persons, for five months, so including the summer trade, we find that upwards of 200*l.* is expended in the street purchase of plum dough, nearly half of which is profit. The trade, however, is reckoned among those which will disappear altogether from the streets.

The capital required to start is: basket, 1*s.* 9*d.*; cloths, 6*d.*; pan for boiling, 2*s.*; knife, 2*d.*; stock-money, 2*s.*; in all about, 7*s.* 6*d.*

Of the Street-sellers of Cakes, Tarts, &c.

These men and boys—for there are very few women or girls in the trade—constitute a somewhat numerous class. They are computed (including Jews) at 150 at the least, all regular hands, with an addition, perhaps, of 15 or 20, who seek to earn a few pence on a Sunday, but have some other, though poorly remunerative, employment on the week-days. The cake and tart-sellers in the streets have been, for the most part, mechanics or servants; a fifth of the body, however, have been brought up to this or to some other street-calling.

The cake-men carry their goods on a tray slung round their shoulders when they are offering their delicacies for sale, and on their heads when not engaged in the effort to do business. They are to be found in the vicinity of all public places. Their goods are generally arranged in pairs on the trays; in bad weather they are covered with a green cloth.

None of the street-vendors make the articles they sell; indeed, the diversity of those articles renders that impossible. Among the regular articles of this street-sale are "Coventrys," or three-cornered puffs with jam inside; raspberry biscuits; cinnamon biscuits; "chonkeys," or a kind of mince-meat baked in crust; Dutch butter-cakes; Jews' butter-cakes; "bowlas," or round tarts made of sugar, apple, and bread; "jumbles," or thin crisp cakes made of treacle, butter, and flour; and jams, or open tarts with a little preserve in the centre.

All these things are made for the street-sellers by about a dozen Jew pastry-cooks, the most of whom reside about Whitechapel. They confine themselves to the trade, and make every description. On a fine holiday morning their shops, or rather bake-houses, are filled with customers, as they supply the small shops as well as the street-sellers of London. Each article is made to be sold at a halfpenny, and the allowance by the wholesale pastry-cook is such as to enable his customers to realise a profit of 4*d.* in 1*s.*; thus he charges 4*d.* a dozen for the several articles. Within the last seven years there has been, I am assured, a great improvement in the composition of these cakes, &c. This is attributable to the Jews having introduced superior dainties, and, of course, rendered it necessary for the others to vie with them; the articles vended by these Jews (of whom there are from 20 to 40 in the streets) are still pronounced, by many connoisseurs in street-pastry, as the best. Some sell penny dainties also, but not to a twentieth part of the halfpenny trade. One of the wholesale pastry-cooks takes 40*l.* a week. These wholesale men, who sometimes credit the street-people, buy ten, fifteen, or twenty sacks of flour at a time whenever a cheap bargain offers. They purchase as largely in Irish butter, which they have bought at 3*d.* or 2½*d.* the pound. They buy also "scrapings," or what remains in the butter-firkins when emptied by the butter-sellers in the shops. "Good scrapings" are used for the best cakes; the jam they make themselves. To commence the wholesale business requires a capital of 600*l.* To commence the street-selling requires a capital of only 10*s.*; and this includes the cost of a tray, about 1*s.* 9*d.*; a cloth 1*s.*; and a leathern strap, with buckle, to go round the neck, 6*d.*; while the rest is for stock, with a shilling, or two as a reserve. All the street-sellers insist upon the impossibility of any general baker making cakes as cheap as those they vend. "It's impossible, sir," said one man to me, "it's a trade by itself; nobody else can touch it. They was miserable little things seven years ago."

An acute-looking man, decently dressed, gave me the following account. He resided with his wife—who went out charing—in a decent little back-room at the East-end, for which he paid 1*s.* a week. He had no children:—

"I'm a 'translator' (a species of cobbler) by

trade," he said, "but I've been a cake and a tart-seller in the streets for seven or eight years. I couldn't make 1*s.* 3*d.* a day of twelve hours' work, and sometimes nothing, by translating. Besides, my health was failing; and, as I used to go out on a Sunday with cakes to sell for a cousin of mine, I went into the trade myself, because I'd got up to it. I did middling the first three or four years, and I'd do middling still, if it wasn't for the bad weather and the police. I've been up three times for 'obstructing.' Why, sir, I never obstructed a quarter as much as the print-shops and newspaper-shops down there" (pointing to a narrow street in the City). "But the keepers of them shops can take a sight at the Lord Mayor from behind their tills. The first time I was up before the Lord Mayor—it's a few years back—I thought he talked like an old wife. 'You mustn't stand that way,' he says, 'and you mustn't do this, and you mustn't do that.' 'Well, my lord,' says I, 'then I mustn't live honestly. But if you'll give me 9*s.* a week, I'll promise not to stand here, and not to stand there; and neither to do this, nor that, nor anything at all, if that pleases you better.' They was shocked, they said, at my impudence—so young a fellow, too! I got off each time, but a deal of my things was spoiled. I work the City on week-days, and Victoria Park on Sundays. In the City, my best customers is not children, but young gents; real gents, some of them with gold watches. They buys twopenn'orth, mostly—that's four of any sort, or different sorts. They're clerks in banks and counting-houses, I suppose, that must look respectable like on a little, and so feeds cheap, poor chaps! for they dine or lunch off it, never doubt. Or they may be keeping their money for other things. To sell eleven dozen is a first-rate days' work; that's 1*s.* 9*d.* or 1*s.* 10*d.* profit. But then comes the wet days, and I can't trade at all in the rain; and so the things get stale, and I have to sell them in Petticoat-lane for two a halfpenny. Victoria Park—I'm not let inside with my tray—is good and bad as happens. It's chiefly a tossing trade there. Oh, I dare say I toss 100 times some Sundays. I don't like tossing the coster lads, they're the wide-awakes that way. The thieves use 'grays.' They're ha'pennies, either both sides heads or both tails. Grays sell at from 2*d.* to 6*d.* I'm not often had that way, though. Working-people buy very few of me on Sundays; it's mostly boys: and next to the gents., why, perhaps, the boys is my best customers in the City. Only on Monday a lad, that had been lucky 'fiddling'" (holding horses, or picking up money anyhow) "spent a whole shilling on me. I clear, I think—and I'm among the cakes that's the top of the tree—about 10*s.* a week in summer, and hardly 7*s.* a week in winter. My old woman and me makes both ends meet, and that's all."

Reckoning 150 cake-sellers, each clearing 6*s.* a week, a sufficiently low average, the street outlay will be 2,340*l.*, representing a street-consumption of 1,123,200 cakes, tarts, &c.

Of other Cake-sellers in the Streets.

The street cake-selling of London is not *altogether* confined to the class I have described; but the others engaged in it are not regular pursuers of the business, and do not exceed thirty in number. Some stock their trays with flare-cakes, which are round cakes, made of flour and "unrendered" (unmelted) lard, and stuck over freely with currants. They are sold at a farthing and a halfpenny each. Others, again, carry only sponge-cakes, made of flour and eggs, packed closely and regularly together, so as to present an uniform and inviting surface. Others carry only gingerbread, made of flour and treacle. These small trades are sometimes resorted to for a temporary purpose, rather than a street-seller's remaining in compulsory idleness. I learned also that cake-sellers in the regular line, when unable to command sufficient capital to carry on their trade in the way they have been accustomed to, sell "flayers," so called from being made with pig's or sheep's "flay," or any other cheap cakes, and so endeavour to retrieve themselves. The profits on these plainer sorts is 1*d.* in 1*s.* more than that on the others, but the sale rarely exceeds half as much. I heard, however, of one man who deposited in pence, in eight days, 1*s.* 10*d.* with a wholesale pastry-cook. He had saved this sum by almost starving himself, on the sale of the inferior cakes, and the dealer trusted him the 10*d.* to make up eight dozen in the regular cake business. To commence the street sale of cheap cakes requires a capital of less than 5*s.*; for tray, 1*s.* 6*d.*; cloth, 6*d.*; strap, 6*d.*; and stock-money, 1*s.* 6*d.*

Three or four men are occupied in selling plum-cakes. These are generally sold in halfpenny and penny lots. The plum-cake is made by the same class of pastrycooks whom I have described as supplying the tarts, puffs, &c., and sold on the same terms. The profits are fifty per cent.—what cost 4*s.* bringing in 6*s.* One man who travels to all the fairs and races, and is more in the country than town in the summer and autumn, sells large quantities of plum-cake in Smithfield when in town, sometimes having 2*l.* worth and more on his stall. He sells cakes of a pound (ostensibly) at 4*d.*, 6*d.*, and 8*d.*, according to quality. He sometimes supplies the street-sellers on the same terms as the pastrycooks, for he was once a baker.

From the best data at my command, it appears that the sale of these inferior cakes does not realise above a fifth of that taken by the other sellers, of whom I have treated, amounting to about 450*l.* in all.

Of the Street-sellers of Gingerbread-nuts, &c.

The sale of gingerbread, as I have previously observed, was much more extensive in the

Original from HARVARD UNIVERSITY

streets than it is at present. Indeed, what was formerly known in the trade as "toy" gingerbread is now unseen in the streets, except occasionally, and that only when the whole has not been sold at the neighbouring fairs, at which it is still offered. But, even at these fairs, the principal, and sometimes the only, toy gingerbread that is vended is the "cock in breeches;" a formidable-looking bird, with his nether garments of gold. Twenty or thirty years ago, "king George on horseback" was popular in gingerbread. His Majesty, wearing a gilt crown, gilt spurs, and a gilt sword, bestrode the gilt saddle of his steed, and was eaten with great relish by his juvenile subjects. There were also sheep, and dogs, and other animals, all adorned in a similar manner, and looking as if they had been formed in close and faithful imitation of children's first attempts at cattle drawing. These edible toys were then sold in "white," as well as in "brown" gingerbread, the white being the same in all other respects as the brown, except that a portion of sugar was used in its composition instead of treacle.

There are now only two men in London who make their own gingerbread-nuts for sale in the streets. This preparation of gingerbread is called by the street-sellers, after a common elliptical fashion, merely "nuts." From the most experienced man in the street trade I had the following account: he was an intelligent, well-mannered, and well-spoken man, and when he laughed or smiled, had what may be best described as a pleasant look. After he had initiated me into the art and mystery of gingerbread making—which I shall detail separately—he said,

"I've been in the 'nut' trade 25 years, or thereabouts, and have made my own nuts for 20 years of that time. I bought of a gingerbread baker at first—there was plenty of them in them days—and the profit a living profit, too. Certainly it was, for what I bought for 5*s.* I could sell for 16*s.* I was brought up a baker, but the moment I was out of my time I started in the street nut trade for myself. I knew the profits of it, and thought it better than the slavery of a journeyman baker's life. You've mentioned, sir, in your work, a musical sort of a street-crier of gingerbread (see p. 160), and I think, and indeed I'm pretty certain, that it's the same man as was my partner 20 years back; aye, more than 20, but I can't tell about years." [The reader will have remarked how frequently this oblivion as to dates and periods characterises the statements of street-sellers. Perhaps no men take less note of time.] "At that time he was my partner in the pig trade. Dairy-fed, d'you say, sir? Not in the slightest. The outsides of the hanimals was paste, and the insides on 'em was all mince-meat. Their eyes was currants. We two was the original pigs, and, I believe, the only two pigs in the streets. We often made 15*s.* between us, in a day, in pigs alone. The musical man, as you call him—poor fellow, he dropped down dead in the street one day as he was crying; he was regular worn out—cried himself into his grave you *may* say—poor fellow, he used to sing out

'Here's a long-tailed pig, and a short-tailed pig,
And a pig with a curly tail:
Here's a Yorkshire pig, and a Hampshire pig,
And a pig without e'er a tail.'

"When I was first in the trade, I sold twice as many nuts as I do now, though my nuts was only 12 a penny then, and they're now 40. A little larger the 12 were, but not very much. I have taken 20*s.* and 24*s.* many and many a Saturday. I then made from 2*l.* to 2*l.* 10*s.* a week by sticking to it, and money might have been saved. I've taken between 7*l.* and 8*l.* at a Greenwich Fair in the three days, in them times, by myself. Indeed, last Easter, my wife and me—for she works as well as I do, and sells almost as much—took 5*l.* But gingerbread was money in the old times, and I sold 'lumps' as well as 'nuts;' but now lumps won't go off—not in a fair, no how. I've been in the trade ever since I started in it, but I've had turns at other things. I was in the service of a Custom-house agency firm; but they got into bother about contrabands, and the revenue, and cut off to America—I believe they took money with them, a good bit of it—and I was indicted, or whatever they call it, in the Court of Exchequer—I never was in the Court in my life—and was called upon, one fine day, to pay to the Crown 1,580*l.*, and some odd pounds and shillings besides! I never understood the rights of it, but it was about smuggling. I was indicted by myself, I believe. When Mr. Candy, and other great houses in the City, were found out that way, *they* made it all right; paid something, as I've heard, and sacked the profits. Well; when *I* was called on, it wasn't, I assure you, sir—ha, ha, ha!—at all convenient for a servant—and I was only that—to pay the fifteen hundred and odd; so I served 12 months and 2 days in prison for it. I'd saved a little money, and wasn't so uncomfortable in prison. I could get a dinner, and give a dinner. When I came out, I took to the nuts. It was lucky for me that I had a trade to turn to; for, even if I could have shown I wasn't at all to blame about the Exchequer, I could never have got another situation—never. So the streets saved me: my nuts was my bread.

"At this present time, sir, if I make, the year through, 9*s.* a week, and my wife 1*s.* or 2*s.* less, that's the extent. When the Queen opened Parliament, the two on us took 10*s.* The Queen's good for that, anyhow, in person. If the opening was by proclamation" [so he called it, three or four times], "it wouldn't have been worth while going to—not at all. If there's not a crowd, the police interfere, and 'move on!' is the order. The Queen's popular with me, for her opening Parliament herself. I count it her duty. The police are a great trouble. I can't say they disturb me in the place (never mind mentioning it, sir) where you've seen me, but they do in

other places. They say there's no rest for the wicked; but, in the streets, there's no rest for a man trying to make an honest living, as I'm sure I do. I could pitch anywhere, one time.

"My chief dependence is on working-men, who buys my nuts to take home to their young 'uns. I never sell for parties, or desserts, that I know of. I take very little from boys—very little. The women of the town buy hardly any of me. I used to sell a good many pigs to them, in some of the streets about Brunswick-square; kept misses, and such like—and very pleasant customers they was, and good pay: but that's all over now. *They* never 'bated me—never."

To make about 56 lbs. of the gingerbread-nuts sold by my informant, takes 28 lbs. of treacle, 7*s.*; 48 lbs. of flour, 14*s.*; ½ lb. of ginger, 4*d.*; and ½ lb. of allspice, 4*d.* From 18 to 20 dozen of small nuts go to the pound. This quantity, at 40 a penny, reckoning 18 dozen to a pound, realises about 5*d.* per pound; or about 25*s.* for an outlay of 11*s.* 8*d.* The expense of baking, however, and of "appurtenances," reduces the profit to little more than cent. per cent.

The other nut-sellers in the streets vend the "almond nuts." Of these vendors there are not less than 150; of them, 100 buy their goods of the bakers (what they sell for 1*s.* costing them 4*d.*), and the other 50 make their own. The materials are the same as those of the gingerbread, with the addition of 4 lbs. of butter, 8*d.* per lb.; 1 lb. of almonds, 1*s.* 4*d.*; and 2 lbs. of volatile salts, 8*d.* Out of this material, 60 lbs. of "almond nuts" may be made. A split almond is placed in the centre of each of these nuts; and, as they are three times as large as the gingerbread nuts, 12 a penny is the price. To sell 36 dozen a day—and so clearing 2*s.*—is accounted a "very tidy day's work." With the drawback of wet weather, the average weekly earnings of the almond nut-sellers are, perhaps, the same as the gingerbread nut man's—9*s.* weekly. These almond nut-sellers are, for the most part, itinerant, their localities of sale being the same as in the "cake and tart" line. They carry their goods, neatly done up in paper, on trays slung from the shoulder. The gingerbread-nuts are carried in a large basket, and are ready packed in paper bags.

Some of the "almond" men call at the public-houses, but the sale in such places is very small. Most of those who make their own nuts have been brought up as bakers—a class of workmen who seem to resort and adapt themselves to a street trade more readily than others. The nuts are baked in the usual way, spread on tin trays. To erect a proper oven for the purpose costs about 5*l.*, but most of the men hire the use of one.

I have already specified the materials required to make 56 lb. of gingerbread nuts, the cost being 11*s.* 8*d.* To that, the capital required to start in the business must be added, and this consists of basket, 6*s.*; baize cloth, 1*s.*; pan for dough, 1*s.*; rolling-pin, 3*d.*, and baking-tins, 1*s.* In all about 21*s.* To begin in a small way in the "almond" line, buying the nuts ready made, requires as capital: tray, 2*s.*; leather strap, 6*d.*; baize, 1*s.*; stock-money, 1*s.* 6*d.*—in all 5*s.* The sale is prosecuted through the year, but hot weather is unfavourable to it, as the nuts then turn soft.

Calculating that 150 of these street-dealers take 17*s.* each weekly (clearing 9*s.*), we find 6,630*l.* spent yearly in "spice" nuts in the streets of London.

Of the Street-sellers of Hot-Cross Buns, and of Chelsea Buns.

Perhaps no cry—though it is only for one morning—is more familiar to the ears of a Londoner, than that of "One-a-penny, two-a-penny, hot-cross buns," on Good Friday. The sale is unknown in the Irish capital; for among Roman Catholics, Good Friday, I need hardly say, is a strict fast, and the eggs in the buns prevent their being used. One London gentleman, who spoke of fifty years ago, told me that the street-bun-sellers used to have a not unpleasing distich. On reflection, however, my informant could not be certain whether he had heard this distich cried, or had remembered hearing the elders of his family speak of it as having been cried, or how it was impressed upon his memory. It seems hardly in accordance with the usual style of street poetry:—

> "One-a-penny, two-a-penny, hot-cross buns!
> If your daughters will not eat them, give them to your sons.
> But if you hav'n't any of those pretty little elves,
> You cannot then do better than eat them all yourselves."

A tradesman who had resided more than fifty years in the Borough had, in his boyhood, heard, but not often, this ridiculous cry:—

> "One-a-penny, poker; two-a-penny, tongs!
> One-a-penny; two-a-penny, hot-cross buns."

The sellers of the Good Friday buns are principally boys, and they are of mixed classes—costers' boys, boys habitually and boys occasionally street-sellers, and boys street-sellers for that occasion only. One great inducement to embark in the trade is the hope of raising a little money for the Greenwich Fair of the following Monday.

I am informed that 500 persons are employed on Good Friday in the streets of London in the sale of hot-cross buns, each itinerant selling upon the day's average six dozen halfpenny, and seven dozen penny buns, for which he will take 12*s.* 6*d.* (his profits being 3*d.* in the shilling or 3*s.* 1½*d.*). One person informed me that last Good Friday he had sold during the day forty dozen penny buns, for which he received 50*s.*

The bun-selling itinerants derive their supplies principally from the wholesale pastrycooks, and, in a less degree, from the small bakers and pastrycooks, who work more for "the trade" than themselves. The street hot-cross bun trade is less than it was seven or eight

Original from HARVARD UNIVERSITY

years ago, as the bakers have entered into it more freely, and send round for orders: so that the itinerants complain that they have lost many a good customer. One informant (a master pastry-cook, who had been in the business nearly fifty years) said to me: "Times are sadly altered to what they were when I was a boy. Why I have known my master to bake five sacks of flour in nothing but hot-cross buns, and that is sufficient for 20,000 buns" (one sack of flour being used for 4,000 buns, or 500 lbs. of raw material to the same quantity of buns). The itinerants carry their baskets slung on their arm, or borne upon the head. A flannel or green baize is placed at the bottom of the basket and brought over the buns, after which a white cloth is spread over the top of the baize, to give it a clean appearance.

A vendor of "hot-cross buns" has to provide himself with a basket, a flannel (to keep the buns warm), and a cloth, to give a clean appearance to his commodities. These articles, if bought for the purpose, cost—basket, 2*s.* 6*d.*; flannel and cloth, 2*s.*; stock-money, average, 5*s.* (largest amount 15*s.*, smallest 2*s.* 6*d.*); or about 10*s.* in all.

There is expended in one day, in hot-cross buns purchased in the London streets, 300*l.*, and nearly 100,000 buns thus bought.

The Chelsea buns are now altogether superseded by the Bath and Alexander's buns. "People," the street-sellers say, "want so much for their money." There are now but two Chelsea bun-houses; the one at Pimlico, and the other at Chelsea. The principal times Chelsea buns were sold in the streets was Good Friday, Easter, and Whitsuntide; and, with the exception of Good Friday, the great sales were at Greenwich Fair, and then they were sold with other cakes and sweetmeats. I am informed that twenty years ago there was one man, with a rich musical voice, who sold these buns, about Westminster principally, all the year round; his cry—which was one of the musical ones—was, "One a penny, two a penny, hot Chelsea buns! Burning hot! smoking hot! r-r-r-reeking hot! hot Chelsea buns!"

Of Muffin and Crumpet-selling in the Streets.

The street-sellers of muffins and crumpets rank among the old street-tradesmen. It is difficult to estimate their numbers, but they were computed for me at 500, during the winter months. They are for the most part boys, young men, or old men, and some of them infirm. There are a few girls in the trade, but very few women.

The ringing of the muffin-man's bell—attached to which the pleasant associations are not a few—was prohibited by a recent Act of Parliament, but the prohibition has been as inoperative as that which forbad the use of a drum to the costermonger, for the muffin bell still tinkles along the streets, and is rung vigorously in the suburbs. The sellers of muffins and crumpets are a mixed class, but I am told that more of them are the children of bakers, or worn-out bakers, than can be said of any other calling. The best sale is in the suburbs. "As far as I know, sir," said a muffin-seller, "it's the best Hackney way, and Stoke Newington, and Dalston, and Balls Pond, and Islington; where the gents that's in banks—the steady coves of them—goes home to their teas, and the missuses has muffins to welcome them; that's my opinion."

I did not hear of any street-seller who made the muffins or crumpets he vended. Indeed, he could not make the small quantity required, so as to be remunerative. The muffins are bought of the bakers, and at prices to leave a profit of 4*d.* in 1*s.* Some bakers give thirteen to the dozen to the street-sellers whom they know. The muffin-man carries his delicacies in a basket, wherein they are well swathed in flannel, to retain the heat: "People likes them warm, sir," an old man told me, "to satisfy them they're fresh, and they almost always *are* fresh; but it can't matter so much about their being warm, as they have to be toasted again. I only wish good butter was a sight cheaper, and that would make the muffins go. Butter's half the battle." The basket and flannels cost the muffin-man 2*s.* 6*d.* or 3*s.* 6*d.* His bell stands him in from 4*d.* to 2*s.*, "according as the metal is." The regular price of good-sized muffins from the street-sellers is a half-penny each; the crumpets are four a penny. Some are sold cheaper, but these are generally smaller, or made of inferior flour. Most of the street-sellers give thirteen, and some even fourteen to the dozen, especially if the purchase be made early in the day, as the muffin-man can then, if he deem it prudent, obtain a further supply.

A sharp London lad of fourteen, whose father had been a journeyman baker, and whose mother (a widow) kept a small chandler's shop, gave me the following account:—

"I turns out with muffins and crumpets, sir, in October, and continues until it gets well into the spring, according to the weather. I carries a fust-rate article; werry much so. If you was to taste 'em, sir, you'd say the same. If I sells three dozen muffins at ½*d.* each, and twice that in crumpets, it's a werry fair day, werry fair; all beyond that is a *good* day. The profit on the three dozen and the others is 1*s.*, but that's a great help, really a wonderful help, to mother, for I should be only mindin' the shop at home. Perhaps I clears 4*s.* a week, perhaps more, perhaps less; but that's about it, sir. Some does far better than that, and some can't hold a candle to it. If I has a hextra day's sale, mother 'll give me 3*d.* to go to the play, and that hencourages a young man, you know, sir. If there's any unsold, a coffee-shop gets them cheap, and puts 'em off cheap again next morning. My best customers is genteel houses, 'cause I sells a genteel thing. I likes wet days best, 'cause there's werry respectable ladies what don't

Original from HARVARD UNIVERSITY

keep a servant, and they buys to save themselves going out. We're a great conwenience to the ladies, sir—a great conwenience to them as likes a slap-up tea. I *have* made 1*s*. 8*d*. in a day; that was my best. I once took only 2½*d*.—I don't know why—that was my worst. The shops don't love me—I puts their noses out. Sunday is no better day than others, or werry little. I can read, but wish I could read easier."

Calculating 500 muffin-sellers, each clearing 4*s*. a week, we find 300*l*. a week expended on the metropolitan street sale of muffins; or, in the course of twenty weeks, 2,000*l*. Five shillings, with the price of a basket, &c., which is about 3*s*. 6*d*. more, is the capital required for a start.

Of the Street Sale of Sweet-stuff.

In this sale there are now engaged, as one of the most intelligent of the class calculated, 200 individuals, exclusive of twenty or thirty Jew boys. The majority of the sellers are also the manufacturers of the articles they vend. They have all been brought up to the calling, their parents having been in it, or having been artizans (more especially bakers) who have adopted it for some of the general reasons I have before assigned. The non-makers buy of the cheap confectioners.

The articles now vended do not differ materially, I am informed by men who have known the street trade for forty years, from those which were in demand when they began selling in the streets.

A very intelligent man, who had succeeded his father and mother in the "sweet-stuff" business—his father's drunkenness having kept them in continual poverty—showed me his apparatus, and explained his mode of work. His room, which was on the second-floor of a house in a busy thoroughfare, had what I have frequently noticed in the abodes of the working classes—the decency of a turn-up bedstead. It was a large apartment, the rent being 3*s*. 6*d*. a week, unfurnished. The room was cheerful with birds, of which there were ten or twelve. A remarkably fine thrush was hopping in a large wicker cage, while linnets and bullfinches showed their quick bright eyes from smaller cages on all sides. These were not kept for sale but for amusement, their owner being seldom able to leave his room. The father and mother of this man cleared, twenty years ago, although at that time sugar was 6*d*. or 7*d*. the pound, from 2*l*. to 3*l*. a week by the sale of sweet-stuff; half by keeping a stall, and half by supplying small shops or other stall-keepers. My present informant, however, who has—not the best—but one of the best businesses in London, makes 24*s*. or 25*s*. a week from October to May, and sarcely 12*s*. a week during the summer months, "when people love to buy any cool fresh fruit instead of sweet-stuff." The average profits of the generality of the trade do not perhaps exceed 10*s*. 6*d*. or 12*s*. a week, take the year round. They reside in all parts.

Treacle and sugar are the ground-work of the manufacture of all kinds of sweet-stuff. "Hardbake," "almond toffy," "halfpenny lollipops," "black balls," the cheaper "bulls eyes," and "squibs" are all made of treacle. One informant sold more of treacle rock than of anything else, as it was dispensed in larger halfpennyworths, and no one else made it in the same way. Of peppermint rock and sticks he made a good quantity. Half-a-crown's worth, as retailed in the streets, requires 4 lbs. of rough raw sugar at 4½*d*. per lb., 1½*d*. for scent (essence of peppermint), 1½*d*. for firing, and ½*d*. for paper—in all 1*s*. 8½*d*. calculating nothing for the labour and time expended in boiling and making it. The profit on the other things was proportionate, except on almond rock, which does not leave 2½*d*. in a shilling—almonds being dear. Brandy balls are made of sugar, water, peppermint, and a little cinnamon. Rose acid, which is a "transparent" sweet, is composed of loaf sugar at 6½*d*. per lb., coloured with cochineal. The articles sold in "sticks" are pulled into form along a hook until they present the whitish, or speckled colour desired. A quarter of a stone of materials will, for instance, be boiled for forty minutes, and then pulled a quarter of an hour, until it is sufficiently crisp and will "set" without waste. The flavouring—or "scent" as I heard it called in the trade—now most in demand is peppermint. Gibraltar rock and Wellington pillars used to be flavoured with ginger, but these "sweeties" are exploded.

Dr. Pereria, in his "Treatise on Diet," enumerates as many as ten different varieties and preparations of sugar used for dietetical purposes. These are (1) purified or refined sugar; (2) brown or raw sugar; (3) molasses or treacle—or fluid sugar; (4) aqueous solutions of sugar—or syrups; (5) boiled sugars, or the softer kinds of confectionary; (6) sugar-candy, or crystallized cane sugar; (7) burnt sugar, or caramel; (8) hard confectionary; (9) liquorice; (10) preserves. The fifth and eighth varieties alone concern us here.

Of the several preparations of *boiled sugar*, the Doctor thus speaks, "If a small quantity of water be added to sugar, the mixture heated until the sugar dissolves, and the solution boiled to drive off part of the water, the tendency of the sugar to crystallise is diminished, or, in some cases, totally destroyed. To promote this effect, confectioners sometimes add a small portion of cream of tartar to the solution while boiling. Sugar, thus altered by heat, and sometimes variously flavoured, constitutes several preparations sold by the confectioner. *Barley-sugar* and *acidulated drops* are prepared in this way from white sugar: powdered tartaric acid being added to the sugar while soft. *Hardbake* and *toffee* are made by a similar process from brown sugar. Toffee differs from hardbake from containing butter.

Original from HARVARD UNIVERSITY

The ornamented sugar pieces, or *caramel*-tops, with which pastrycooks decorate their tarts, &c., are prepared in the same way. If the boiled and yet soft sugar be rapidly and repeatedly extended, and pulled over a hook, it becomes opaque and white, and then constitutes *pulled sugar*, or *penides*. Pulled sugar, variously flavoured and coloured, is sold in several forms by the preparers of hard confectionary.

"Concerning this *hard confectionary*," Dr. Pereira says, "sugar constitutes the base of an almost innumerable variety of hard confectionary, sold under the names of *lozenges*, *brilliants*, *pipe*, *rock*, *comfits*, *nonpareils*, &c. Besides sugar, these preparations contain some flavouring ingredient, as well as flour or gum, to give them cohesiveness, and frequently colouring matter. Carraway, fruits, almonds, and pine seeds, constitute the nuclei of some of these preparations."

One of the appliances of the street sweet-stuff trade which I saw in the room of the seller before mentioned was—Acts of Parliament. A pile of these, a foot or more deep, lay on a shelf. They are used to wrap up the rock, &c., sold. The sweet-stuff maker (I never heard them called confectioners) bought his "paper" of the stationers, or at the old book-shops. Sometimes, he said, he got works in this way in sheets which had never been cut (some he feared were stolen,) and which he retained to read at his short intervals of leisure, and then used to wrap his goods in. In this way he had read through two Histories of England! He maintained a wife, two young children, and a young sister, who could attend to the stall; his wife assisted him in his manufactures. He used 1 cwt. of sugar a week on the year's average, ½ cwt. of treacle, and 5 oz. of scents, each 8*d*. an oz.

The man who has the best trade in London streets, is one who, about two years ago, introduced—after much study, I was told—short sentences into his "sticks." He boasts of his secret. When snapped asunder, in any part, the stick presents a sort of coloured inscription. The four I saw were: "Do you love me?" The next was of less touching character, "Do you love sprats?" The others were, "Lord Mayor's Day," and "Sir Robert Peel." This man's profits are twice those of my respectable informant's.

Of the Customers of the Sweet-stuff Street-sellers.

Another sweet-stuff man, originally a baker, but who, for a fortnight before I saw him, had been attending upon an old gentleman, disabled from an accident, gave me the following account of his customers. What I heard from the other street-sellers satisfies me of the correctness of the statement. It will be seen that he was possesed of some humour and observation:

"Boys and girls are my best customers, sir, and mostly the smallest of them; but then, again, some of them's fifty, aye, turned fifty; Lor' love you. An old fellow, that hasn't a stump of a tooth in front, why, *he'll* stop and buy a ha'porth of hard-bake, and he'll say, 'I've a deal of the boy left about me still.' He doesn't show it, anyhow, in his look. I'm sometimes a thinking I'll introduce a softer sort of toffy—boiled treacle, such as they call Tom Trot in some parts, but it's out of fashion now, just for old people that's 'boys still.' It was rolled in a ha'penny stick, sir, and sold stunnin'. The old ones wants something to suck, and not to chew. Why, when I was a lad at school, there was Jews used to go about with boxes on their backs, offering rings and pencil-cases, and lots of things that's no real use to nobody, and they told everybody they asked to buy 'that they sold everything, and us boys used to say—'Then give's a ha'porth of boiled treacle.' It was a regular joke. I wish I'd stuck more to my book then, but what can't be cured must be endured, you know. Now, those poor things that walks down there" (intimating, by a motion of the head, a thoroughfare frequented by girls of the town), "they're often customers, but not near so good as they was ten year ago; no, indeed, not six or eight year. *They* like something that bites in the mouth, such as peppermint-rock, or ginger-drops. They used to buy a penn'orth or two and offer it to people, but they don't now, I think. I've trusted them ha'pennies and pennies, sometimes. They always paid me. Some that held their heads high like, might say: 'I really have no change; I'll pay you to-morrow.' She hadn't no change, poor lass, sure enough, and she hadn't nothing to change either, I'll go bail. I've known women, that seemed working men's or little shopkeeper's wives, buy of me and ask which of my stuffs took greatest hold of the breath. I always knew what they was up to. They'd been having a drop, and didn't want it to be detected. Why, it was only last Saturday week two niceish-looking and niceish-dressed women, comes up to me, and one was going to buy peppermint-rock, and the other says to her: 'Don't, you fool, he'll only think you've been drinking gin-and-peppermint. Coffee takes it off best.' So I lost my customers. They hadn't had a *single* drain that night, I'll go bail, but still they didn't look like regular lushingtons at all. I make farthing's-worths of sweet-stuff, for children, but I don't like it; it's an injury to trade. I *was* afraid that when half-farthings was coined, they'd come among children, and they'd want half a farthing of brandy-balls. Now, talking of brandy-balls, there's a gentleman that sometimes has a minute's chat with me, as he buys a penn'orth to take home to his children—(every reasonable man ought to marry and have children for the sake of the sweet-trade, but it ain't the women's fault that many's single still)—when one gentleman I knows buys brandy-balls, he says, quite grave, 'What kind o' brandy do you put in them?' 'Not a drop of British,' says I, 'I

can assure you; not a single drop.' He's not finely dressed; indeed, he's a leetle seedy, but I know he's a gentleman, or what's the same thing, if he ain't rich; for a common fellow 'll never have his boots polished that way, every day of his life; *his* blacking bills must come heavy at Christmas. I can tell a gentleman, too, by his way of talk, 'cause he's never bumptious. It's the working people's children that's my great support, and they was a better support, by 2*s.* in every 10*s.*, and more, when times was better; and next to them among my patrons is poor people. Perhaps, this last year, I've cleared 11*s.* a week, not more, all through. I make my own stuffs, except the drops, and they require machinery. I would get out of the streets if I could."

Another of these traders told me, that he took more in farthings, than in halfpennies or pennies.

Calculating 200 sweet-stuff sellers, each clearing 10*s.* weekly, the outlay in rocks, candies, hard-bakes, &c., in the streets is 5,200*l.* yearly, or nearly two and a half millions of halfpenny-worths.

To start in the sweet-stuff business requires a capital of 35*s.*, including a saucepan in which to boil sugar, 2*s.*; weights and scales, 4*s.*; stock-money (average), 4*s.*; and barrow, 25*s.* If the seller be not his own manufacturer, then a tray, 1*s.* 9*d.*; and stock-money, 1*s.* 6*d.*; or 3*s.* 3*d.* in all will be sufficient.

Of the Street-sellers of Cough Drops and of Medical Confectionary.

Mr. Strutt, in his "Sports and Pastimes of the People of England" (1800), says of the Mountebank: "It is uncertain at what period this vagrant dealer in physic made his appearance in England; it is clear, however, that he figured away with much success in this country during the last two centuries. . . . . . The mountebanks usually preface the vending of their medicines with pompous orations, in which they pay as little regard to truth as to propriety." I am informed by a gentleman observant of the matter, that within his knowledge, which extends to the commencement of the present century, no mountebank (proper) had appeared in the streets of London proclaiming the virtues of his medicines; neither with nor without his "fool." The last seen by my informant, perhaps the latest mountebank in England, was about twenty years ago, in the vicinity of Yarmouth. He was selling "cough drops" and infallible cures for asthma, and was dressed in a periwig and an embroidered coat, with ruffles at his wrist, a sword to his side, and was a representation, in shabby genteel, of the fine gentleman of the reign of Queen Anne. The mountebank's most legitimate successor in the street cajolery of London, as regards his "orations," is the "Patterer," as I shall show in my account of the street trade in stationery literature. His successor in the vending of curative confectionaries and (in a small degree) of nostrums, salves, ointments, &c., are the sellers of "cough drops" and "horehound candy," and of the corn salves, and cures for bruises, sprains, burns, &c., &c., &c.

The street-traders in cough drops and their accompaniments, however, do not now exceed six, and of them only two—who are near relatives—manufacture their own stock-in-trade. I here treat of the street trade in "cough drops," as a branch of the itinerant sweet-stuff trade. The "mountebank" part of the business—that is to say, "the prefacing the vending of the medicines with *pompous orations*," I shall reserve till its proper place—viz. the "*pattering*" part of the street trade, of which an account will be given in the next Chapter.

The two principal vendors of cough drops wheel their stalls, which are fixed upon barrows, to different parts of town, but one principal stand is in Holborn. On their boards are displayed the cough cures, both in the form of "sticks" and "drops," and a model of a small distillery. The portion inclosing the still is painted to resemble brick-work, and a tin tube, or worm, appears to carry the distillation to a receiver. Horehound, colts-foot, and some other herbs lie in a dried state on the stall, but principally horehound, to which popular (street) opinion seems to attach the most and the greatest virtues. There are also on the stalls a few bottles, tied up in the way they are dispensed from a regular practitioner, while the cough drops are in the form of sticks (½*d.* each), also neatly wrapped in paper. The cry is both expressive and simply descriptive—"Long life candy! Candy from herbs!"

From the most experienced person in this curious trade, I had the following statement. He entertained a full assurance, as far as I could perceive, of the excellence of his remedies, and of the high art and mystery of his calling. In persons of his class, professing to heal, no matter in what capacity, or what may be the disease, this is an important element of success. My informant, whether answering my questions or speaking of his own accord, always took time to consider, and sometimes, as will be seen, declined replying to my inquiries. From him I received the following account:—

"The cough drop and herb trade is nothing now to what it was long ago. Thirty or forty years ago, it was as good as 3*l.* or 4*l.* a week to a person, and was carried on by respectable men. I know nothing of any 'humbugs' in the respectable part of the trade. What's done by those who are ignorant, and not respectable, is nothing to me. I don't know how many there were in the trade thirty or forty years ago; but I know that, ten or eleven years since, I supplied seven persons who sold cough drops, and such like, in the streets, and now I supply only myself and another. I sell only four or five months in the year—the cold months, in course; for, in the summer, people are not so subject to coughs and colds. I am the 'original' maker of my goods. I will cure any child of the hooping-

cough, and very speedily. I defy any medical man to dispute it, and I'll do it—'no cure, no pay.' I never profess to cure asthma. Nobody but a gravedigger can put an end to that there; but I can relieve it. It's the same with consumption; it may be relieved, but the gravedigger is the only man as can put a stop to it. Many have tried to do it, but they've all failed. I sell to very respectable people, and to educated people, too; and, what's more, a good deal (of cough drops) to medical men. In course, they can analyse it, if they please. They can taste the bitter, and judge for themselves, just as they can taste wine in the Docks. Perhaps the wives of mechanics are among my best customers. They are the most numerous, but they buy only ha'porths and penn'orths. Very likely, they would think more of the remedy if they had to pay 13½*d.* for it, instead of the 1½*d.* The Government stamp makes many a stuff sell. Oh! I know nothing about quackery: you must inquire at the Stamp-office, if you want to know about them kind of medicines. *They're* the people that help to sell them. Respectable people will pay me 1*s.* or 2*s.* at a time; and those who buy once, buy again. I'm sent to from as far off as Woolwich. I'll undertake to cure, or afford relief, in coughs, colds, or wind in the chest, or forfeit 1*s.* I can dispel wind in two minutes. I sell bottles, too, for those cures (as well as the candy from herbs): I manufacture them myself. They're decoctions of herbs, and the way to prepare them is my secret. I sell them at from 2*d.* to 1*s.* Why, I use one article that costs 24*s.* a pound, foreign, and twice that English. I've sold hundred weights. The decoctions are my secret. I will instruct any person—and have instructed a good many—when I'm paid for it. In course, it would never do to publish it in your work, for thousands would then learn it for 2*d.* My secret was never given to any person—only with what you may call a fee—except one, and only to him when he got married, and started in the line. He's a connection of mine. All *we* sell is genuine.

"I sell herbs, too, but it's not a street sale: I supply them to orders from my connection. It's not a large trade. I sell horehound, for tea or decoctions; coltsfoot, for smoking as herb tobacco (I gather the coltsfoot myself, but buy the horehound of a shopkeeper, as it's cultivated); ground-ivy is sold only for the blood (but little of it); hyssop for wind; and Irish moss for consumption. I'm never asked for anything improper. They won't ask *me* for —— or ——. And I'm never asked for washes or cosmetics; but a few nettles are ordered of me for complexions.

"Well, sir, I'd rather not state the quantities I sell, or my profits, or prices. I make what keeps myself, my wife, and seven children, and that's all I need say about it. I'd rather say no more on that part of the business: and so, I'm sure you won't press me. I don't know what others in the trade make. They buy of confectioners, and are only imitators of me. They buy coltsfoot-candy, and such like; how it's made so cheap, I don't know. In the summer, I give up cough-drop selling, and take to gold fish."

I am told that the cough-drop-makers, who are also street-sellers, prepare their sticks, &c., much in the same method as the manufacturers of the ordinary sweet-stuff (which I have described), using the decoction, generally of horehound or coltsfoot, as the "scents" are used. In the old times, it would appear that the preparation of a medicinal confection was a much more elaborate matter, if we may judge by the following extract from an obsolete medical work treating of the matter. The author styles such preparations "lohochs," which is an Arabic word, he says, and signifies "a thing to be licked." It would appear that the lohoch was not so hard as the present cough-drop. The following is one of the receipts, "used generally against diseases in the breast and lungs:"—

"Lohoch de farfara," the Lohoch of Coltsfoot.

Take of coltsfoot roots cleansed 8 ozs., marsh-mallow roots 4 ozs., boil them in a sufficient quantity of water, and press the pulp through a sieve, dissolve it again in the decoction, and let it boil once or twice; then take it from the fire, and add 2 lbs. of white sugar, honey of raisins 14 ozs., juice of liquorice 2½ drams, stir them well with a wooden pestle, sprinkling in of saffron and cloves in powder, of each 1 scruple, cinnamon and mace, of each 2 scruples; make them into a lohoch according to art. It is good for a cough and roughness of the windpipe.

Without wishing to infringe upon professional secrets, I may mention that the earnings of the principal man in the trade may be taken at 30*s.* a week for 20 weeks; that of another at 15*s.* for the same period; and those of the remaining four at 5*s.* each, weekly; but the latter sell acid drops, and other things bought of the chemists. Allowing the usual cent. per cent., we then find 130*l.* expended by street-buyers on cough-drops.

The best cough-drop stall seen in the streets is a kind of barrow, which can be shut up like a piano: it cost 3*l.* 10*s.* complete with the distilling apparatus before described. Scales and weights cost 5*s.*, and the stock-money for the supply of such a stall need not exceed 10*s.*; or, in all, about 4*l.* 10*s.* For an ordinary trade—ready-made articles forming the stock — the capital would be, stall and trestle, 7*s.*; scales and weights (which are not always used), 3*s.* 6*d.*, and stock-money, 2*s.* 6*d.*; in all, 13*s*

Of the Street-Sellers of Ices and of Ice Creams.

I have already treated of the street luxury of pine-apples, and have now to deal with the greater street rarity of ice-creams.

A quick-witted street-seller—but not in the "provision" line—conversing with me upon this subject, said: "Ices in the streets! Aye, and there'll be jellies next, and then mock turtle, and then the real ticket, sir. I don't know nothing of the difference between the real thing and the mock, but I once had some cheap mock in an eating-house, and it tasted like stewed tripe with a little glue. You'll keep

Original from HARVARD UNIVERSITY

your eyes open, sir, at the Great Exhibition; and you'll see a new move or two in the streets, take my word for it. Penny glasses of cham pagne, I shouldn't wonder."

Notwithstanding the sanguine anticipations of my street friend, the sale of ices in the streets has not been such as to offer any great encouragement to a perseverance in the traffic.

The sale of ice-creams was unknown in the streets until last summer, and was first introduced, as a matter of speculation, by a man who was acquainted with the confectionary business, and who purchased his ices of a confectioner in Holborn. He resold these luxuries daily to street-sellers, sometimes to twenty of them, but more frequently to twelve. The sale, however, was not remunerative, and had it not been generally united with other things, such as ginger-beer, could not have been carried on as a means of subsistence. The supplier of the street-traders sometimes went himself, and sometimes sent another to sell ice-cream in Greenwich Park on fine summer days, but the sale was sometimes insufficient to pay his railway expenses. After three or four weeks' trial, this man abandoned the trade, and soon afterwards emigrated to America.

Not many weeks subsequent to "the first start," I was informed, the trade was entered into by a street-seller in Petticoat-lane, who had become possessed, it was said, of Masters's Freezing Apparatus. He did not vend the ices himself for more than two or three weeks, and moreover confined his sale to Sunday mornings; after a while he employed himself for a short time in making ices for four or five street-sellers, some of whom looked upon the preparation as a wonderful discovery of his own, and he then discontinued the trade.

There were many difficulties attending the introduction of ices into street-traffic. The buyers had but a confused notion how the ice was to be swallowed. The trade, therefore, spread only very gradually, but some of the more enterprising sellers purchased stale ices from the confectioners. So little, however, were the street-people skilled in the trade, that a confectioner told me they sometimes offered ice to their customers in the streets, and could supply only water! Ices were sold by the street-vendors generally at 1*d.* each, and the trade left them a profit of 4*d.* in 1*s.*, when they served them "without waste," and some of the sellers contrived, by giving smaller modicums, to enhance the 4*d.* into 5*d.*; the profit, however, was sometimes what is expressively called "nil." Cent. per cent.—the favourite and simple rate known in the streets as "half-profits" was rarely attained.

From a street-dealer I received the following account:—

"Yes, sir, I mind very well the first time as I ever sold ices. I don't think they'll ever take greatly in the streets, but there's no saying. Lord! how I've seen the people splntter when they've tasted them for the first time. I did as much myself. They get among the teeth and make you feel as if you tooth-ached all over. I sold mostly strawberry ices. I haven't an idee how they're made, but it's a most wonderful thing in summer—freezing fruits in that way. One young Irish fellow—I think from his look and cap he was a printer's or stationer's boy—he bought an ice of me, and when he had scraped it all together with the spoon, he made a pull at it as if he was a drinking beer. In course it was all among his teeth in less than no time, and he stood like a stattey for a instant, and then he roared out,—'Jasus! I'm kilt. The could shivers is on to me!' But I said, 'O, you're all right, you are;' and he says, 'What d'you mane, you horrid horn,* by selling such stuff as that. An' you must have the money first, bad scran to the likes o' you!'

"The persons what enjoyed their ices most," the man went on, "was, I think, servant maids that gulped them on the sly. Pr'aps they'd been used, some on 'em, to get a taste of ices on the sly before, in their services. We sees a many dodges in the streets, sir—a many. I knew one smart servant maid, treated to an ice by her young man—they seemed as if they was keeping company—and he soon was stamping, with the ice among his teeth, but she knew how to take hern, put the spoon right into the middle of her mouth, and when she'd had a clean swallow she says: 'O, Joseph, why didn't you ask *me* to tell you how to eat your ice?' The conceit of sarvant gals is ridiculous. Don't you think so, sir? But it goes out of them when they gets married and has to think of how to get broth before how to eat ices. One hot day, about eleven, a thin tall gentleman, not very young, threw down 1*d.* to me, and says, says he, 'As much ice as you can make for that.' He knew how to take it. When he'd done, he says, says he, 'By G—, my good feller, you've saved my life. I've been keeping it up all night, and I was dying of a burnt-up throat, after a snooze, and had only 1*d.* So sick and hot was my stomach, I could have knelt down and taken a pull at the Thames'—we was near it at the time—'You've saved my life, and I'll see you again.' But I've never see'd him since. He was a gentleman, I think. He was in black, and wore a big black and gold ring—only one.

"The rest of my customers for ices, was people that bought out of curiosity, and there was gentlemen's servants among 'em, very little fellows some of 'em; and doctors' boys; and mechanics as was young and seemed of a smartish sort; and boys that seemed like schoolboys; and a few women of the town,—but mine's not much of a pitch for them."

From the information I obtained, I may state

* I inquired as to what was meant by the reproachful appellation, "horrid horn," and my informant declared that "to the best of his hearing," those were the words used; but doubtless the word was "omadhaun," signifying in the Erse tongue, a half-witted fellow. My informant had often sold fruit to the same lad, and said he had little of the brogue, or of "old Irish words," unless "his temper was riz, and then it came out powerful."

that, if the sale of street ices be calculated at twenty persons *taking*, not earning, 1*s*. 6*d*. daily for four weeks, it is as near the mark as possible. This gives an expenditure of 42*l*. in street ices, with a profit to the vendors of from 10 to 25 per cent. I am told that an unsuccessful start has characterised other street trades — rhubarb for instance, both in the streets and markets—which have been afterwards successful and remunerative.

For capital in the ice trade a small sum was necessary, as the vendors had all stalls and sold other commodities, except the "original street ice man," who was not a regular street trader, but a speculator. A jar—in which the ices were neither sufficiently covered nor kept cooled, though it was often placed in a vessel or "cooler," containing cold water—cost 1*s*., three cups, 3*d*. (or three glasses, 1*s*.), and three spoons, 3*d*., with 2*s*. stock-money; the total is, presuming glasses were used, 4*s*., or, with a vessel for water, 5*s*.

OF THE CAPITAL AND INCOME OF THE STREET-SELLERS OF EATABLES AND DRINKABLES.

I now give a summary of the Capital and Income of the street-sellers of eatables and drinkables. But, first, I will endeavour to arrive at an estimate of the total number of people belonging to the class.

The street-sellers engaged in the sale of eatables and drinkables, are, summing the several items before given, altogether 6,347: of whom 300 sell pea-soup and hot eels; 150, pickled whelks; 300, fried fish; 300, sheeps trotters; 60, ham-sandwiches; 200, baked 'tatoes; 4, hot green peas; 150, meat; 25, bread; 1,000, cat and dogs' meat; 300, coffee and tea; 1,700, ginger-beer, lemonade, sherbet, &c.; 50, elder-wine; 4, peppermint-water; 28, milk; 100, curds and whey and rice-milk; 60, water; 50, pies; 6, boiled pudding; 6, plum "duff"; 150, cakes and tarts; 4, plum-cakes; 30, other cheaper cakes; 150, gingerbread-nuts; 500, cross-buns; 500, muffins and crumpets; 200, sweet stuff; 6, cough-drops; 20, ice-creams. But many of the above are only temporary trades. The street-sale of hot cross-buns, for instance, lasts only for a day; that of muffins and crumpets, baked potatoes, plum-"duff," cough-drops, elder-wine, and rice-milk, are all purely winter trades, while the sale of ginger-beer, lemonade, ice-creams, and curds and whey, is carried on solely in the summer. By this means the number of the street-sellers of eatables and drinkables, never at any one time reaches the amount before stated. In summer there are, in addition to the 10,000 costers before mentioned, about 3,000 people, and in winter between 4,000 and 5,000, engaged in the eatable and drinkable branch of the street-traffic.

As regards the Capital and Income, many minute accounts have been prepared.

To show the care, as well as the fulness with which these returns have been made, I give one of the Tables in its integrity, merely remarking, that similar tables relative to all the other articles have been made; but I condense the details, lest a repetition, however curious in its statistics, should prove wearisome:

CAPITAL, OR STOCK IN TRADE, OF THE STREET-SELLERS OF EATABLES AND DRINKABLES.

Street-sellers of Hot Eels.	£	s.	d.
200 stalls, at 6*s*.	60	0	0
100 baskets, at 1*s*.	5	0	0
200 eel-kettles, at 3*s*. 6*d*.	35	0	0
100 jars for itinerants, at 6*d*.	2	10	0
300 stew-pans, at 2*s*.	30	0	0
300 strainers, at 1*s*.	15	0	0
300 ladles, at 4*d*.	5	0	0
2,400 cups, at 1*d*.	10	0	0
2,400 spoons, at 1*d*.	10	0	0
200 chafing-dishes, at 6*d*.	5	0	0
200 glasses for candles, at 3*d*.	2	10	0
240 vendors' stock-money, at 5*s*. each	60	0	0
60 ditto, at 25*s*. each.	75	0	0
100 itinerants' ditto, at 2*s*. each	10	0	0
300 cloths, at 4*d*. each	5	0	0
300 pairs of sleeves, at 4*d*. per pair	5	0	0
300 aprons at 4*d*. each	5	0	0
	£339	10	0

Street-sellers of Pea Soup.

	£	s.	d.
150 soup-kettles, 4*s*. each; 150 ladles, 6*d*. each; 150 pepper-boxes, 1*d*. each; 150 mint-boxes, 3*d*. each; 150 chafing-dishes, 6*d*. each; 1,800 basons, 1*d*. each; 1,800 spoons, 1*d*. each; stock-money, 3*s*. 6*d*. each*	81	5	0

Street-sellers of Pickled Whelks.

	£	s.	d.
100 stalls, 4*s*. each; 150 baskets, 2*s*. 6*d*. each; 150 tin boilers, 2*s*. 6*d*. each; 75 pans, 9*d*. each; 150 jars, 6*d*. each; 150 flour-dredgers, 4*d*. each; 1,800 saucers, ½*d*. each; 150 table-spoons, 2*d*. each; 150 knives, 2*d*. each; 150 vinegar-bottles, 1*d*. each; 150 serge aprons, 2*s*. each; stock-money, for 150 vendors, 5*s*. each	125	18	9

Street-sellers of Fried Fish.

	£	s.	d.
300 trays, 1*s*. 6*d*. each; 300 frying-pans, 1*s*. 6*d*. each; 300 salt-dredgers, 3*d*. each; 300 knives, 2*d*. each; 300 earthenware pans, 1*s*. each; 300 shallows, 1*s*. each; stock-money, for 150 vendors, 5*s*. each	156	5	0

* The hot-eel trade being in conjunction with the pea-soup, the same stall, candles, towels, sleeves, and aprons do for both.

Street-sellers of Sheeps' Trotters.

300 baskets, 1*s.* 4*d.* each; 300 cotton cloths, 4*d.* each; 300 forks, 2*d.* each; 300 knives, 3*d.* each; 300 pepper-boxes, 1*d.* each; 300 salt-cellars, 1*d.* each; stock-money, for 300 sellers, 1*s.* each . . . . . £48 15*s.* 0*d.*

Street-sellers of Ham Sandwiches.

60 baskets, 2*s.* each; 60 tin boilers, 2*s.* each; 60 knives and forks, 6*d.* per pair; 60 mustard-pots, 1*d.* each; 60 spoons, 1*d.* each; 60 cloths, 5*d.* each; 60 aprons, 4*d.* each; 60 pairs of sleeves, 4*d.* per pair; stock-money for 60 vendors, 7*s.* 2*d.* weekly . . 38 15 0

Street-sellers of Baked 'Tatoes.

300 cans, 2*l.* each; 300 knives, 3*d.* each; 300 pepper-boxes, 1*d.* each; stock-money for 300 vendors, 10*s.* each 755 0 0

Street-sellers of Hot Green Peas.

4 cans, 2*s.* 6*d.* each; 4 vinegar-bottles, 1*d.* each: 4 pepper-boxes, 3*d.* each; 12 saucers, 1*d.* each; 12 spoons, 1*d.* each; 4 cloths, 4*d.* each; stock-money for 4 vendors, 2*s.* each 1 2 8

Street-sellers of Meat ("Hawking Butchers.")

150 baskets, 4*s.* 6*d.* each; 150 saws, 2*s.* each; 150 cleavers, 1*s.* 6*d.* each; 150 steels, 1*s.* 6*d.* each; 150 belts for baskets, 1*s.* each; 150 do. for waist, 6*d.* each; 150 cloths, 6*d.* each; 150 aprons, 6*d.* each; 150 pairs of sleeves, 4*d.* per pair; 150 vendors' stock-money, 6*s* each per day 138 5 0

Street-sellers of Bread.

12 baskets, 4*s.* 6*d.* each; 12 barrows, 40*s.* each; 1 long bread-basket, 40*s.*; 1 barrow, 30*s.*; 13 sacks, 1*s.* each; stock-money for 25 vendors, at 1*l.* each 55 17 0

Street-sellers of Cats' and Dogs'-meat.

500 barrows, 18*s.* each; 1,000 baskets, 1*s.* 6*d.* each; 500 sets of weights and scales, 4*s.* each; 1,000 knives, 8*d.* each; 1,000 steels, 1*s.* each; stock-money of 1,500 vendors, 7*s.* 6*d.* per head 1,083 6 8

Street-sellers of Coffee and Tea.

150 tables, 2*s.* 6*d.* each; 75 stalls, 6*s.* each; 75 coffee-barrows, 1*l.* each; 400 coffee-cans (100 vendors having two cans, and 200 only one), 8*s.* each; 1,200 half-pint cups and saucers, 3*d.* each, and 900 pints, 6*d.* each; 2,100 spoons, 1*d.* each; 900 plates, 1½*d.* each; 300 knives, 2*d.* each; 300 pans, 9*d.* each; 600 canisters, 5*d.* each; 50 screens, 2*s.* 6*d.* each; stock-money of 300 vendors, 5*s.* each . 435 12 0

Street-sellers of Ginger-beer.

300 barrows, 1*l.* each; 1,000 stalls, 5*s.* each; 175 fountains, 7*l.* each; 20 ditto, 20*l.* each; 3 ditto, 100*l.* each; 9,000 glasses, 5*d.* each; 1,500 tanks, 1*s.* each; 3,000 towels, 6*d.* each; 500 sets of brewing utensils, corks, &c., 5*s.* each; 500 gross of bottles, 10*s.* per gross, and stock-money for 1,500 vendors, 5*s.* each . . . . £3,562 10*s.* 0*d.*

*Street-sellers of Lemonade, Nectar, Sherbet, &c.**

200 stalls, 6*s.* each; 500 stone barrels, 5*s.* 6*d.* each; 1,200 glasses, 4½*d.* each; 400 towels, 6*d.* each; 200 jars, 2*s.* each; 2,400 glass bottles, 3*d.* each; stock-money for 200 vendors, 2*s.* 6*d.* each 305 0 0

Street-sellers of Elder-wine.

3 elder-wine carriages and apparatus, 7*l.* each; 47 ditto ditto, 3*l.* 10*s.* each; 300 small wine-glasses, 2*d.* each; stock-money, 3*s.* per head . 195 10 0

Street-sellers of Peppermint-water.

2 kegs, 3*s.* 6*d.* each; 2 jars, 2*s.* each; 16 glasses, 3*d.* each; 4 cloths, 4*d.* each; stock-money, for four vendors, 1*s.* each 1 0 4

Milk-sellers in the Park.

16 cows, 20*l.* each; 8 lockers, 3*l.* each; 32 fixed seats, 3*s.* each; 48 forms, 3*s* each; 48 glasses, 4½*d.* each; 96 cups, 1*d.* each; 8 halters, for cows, 6*d.* each; 8 pans, 1*s.* each; 16 towels, 6*d.* each 358 6 0

Milk-sellers in Markets, &c.

20 yokes and pairs of cans, 15*s.* each; 20 sets of measures, 2*s.* per set; stock-money for 20 vendors, 3*s.* each 20 0 0

Street-sellers of Curds and Whey.

100 stalls, 5*s.* each; 100 saucepans, to scald the milk in, 2*s.* each; 300 cups, 1*d.* each; 300 glasses, 5*d.* each; 600 spoons, ½*d.* each; 100 tin kettles, for stalls, at 3*s.* 6*d.* each; 100 small tubs, 1*s* each; 100 cloths, 3*d.* each; stock-money for 100 vendors, at 2*s.* each 77 10 0

Street-sellers of Rice-milk. †

50 kettles and braziers, for stall, 4*s.* the two; 300 spice or peppermint-boxes, 1*d.* each; stock-money for fifty vendors, 1*s.* 3*d.* each . . . 14 7 6

Water-carriers.

120 pails, 2*s.* each; 60 yokes, 5*s.* each 27 0 0

* There are altogether 500 vendors of emonade in the streets, but 300 of these sell also ginger-beer, and consequently do not have separate stalls, &c.

† The street-sellers of rice-milk are included in the street-sellers of curds and whey; hence the stalls, saucepans, cups, &c., of the two classes are the same.

TOTAL CAPITAL INVESTED IN THE STREET SALE OF EATABLES AND DRINKABLES . . .	9,077	12	5

INCOME, OR "TAKINGS," OF STREET-SELLERS OF EATABLES AND DRINKABLES.

Street-sellers of Hot Eels.

There are upwards of 1,000,000 lbs. weight of hot eels sold yearly in the streets of London. 140 vendors each sell 6 lbs. of eels daily at their stands; 60 sell 40 lbs. daily; and 100 itinerant sell 5 lbs. nightly at the public-houses. The first mentioned take on an average 2*s.* daily; the second 16*s.*; and the third 1*s.* 8*d.* This gives a yearly street expenditure in the trade in hot eels amounting to £19,448

Street-sellers of Pea-soup.

The annual street consumption of pea-soup amounts to 1,680 gallons. 100 vendors sell each 4 gallons daily; and 50 vendors, each sell upon an average 10 gallons daily. The first mentioned take 3*s.* a day; and the last, 7*s.* 6*d.* This gives a street expenditure during the winter season of five months, of . . £4,050

Street-sellers of Pickled Whelks.

According to the Billingsgate returns, there are nearly 5,000,000 of whelks sold yearly in the streets of London. These are retailed in a boiled state, and flavoured with vinegar, at four a penny. 150 vendors take on an average 13*s.* weekly. This gives an annual street expenditure, of £5,000

Street-sellers of Fried Fish.

150 sellers make 10*s.* 6*d.* weekly, or yearly 27*l.* 6*s.*; and 150 sellers make half that amount, 13*l.* 13*s.* per annum. Reckoning 20*l.* a year as a medium earning, and adding 90 per cent. for

Original from HARVARD UNIVERSITY

profit, the annual consumption of fried fish supplied by London street-sellers amounts to 684,000 lbs., and the sum expended thereupon to £11,400

Street-sellers of Sheep's Trotters.

In the wholesale "trotter" establishment there are prepared, weekly, 20,000 sets, or 80,000 feet; giving a yearly average of 4,160,000 trotters, or the feet of 1,040,000 sheep. Of this quantity the street-folk buy seven-eighths, or 3,640,000 trotters yearly. The number of sheep trotter-sellers may be taken at 300; which gives an average of nearly 60 sets a week per individual. There is then expended yearly in London streets on trotters, calculating their sale, retail, at ½*d.* each, 6,500*l.*; but though the regular price is ½*d.*, some trotters are sold at four for 1½*d.*, very few higher than ½*d.*, and some are kept until they are unsaleable, so that the amount thus expended may be estimated at £6,000

Street-sellers of Ham-sandwiches.

60 vendors, take 8*s.* a week, and sell annually 486,800 sandwiches, at a cost of £1,800

Street-sellers of Baked 'Tatoes.

300 vendors, sell upon an average ¾ cwt. of baked potatoes daily, or 1,755 tons in the season. The average takings of each vendor amount to 6*s.* a day; and the receipts of the whole number throughout the season (which lasts from the latter end of September till March inclusive), a period of 6 months, are . .£14,000

The Street-sellers of Hot Green Peas.

The chief man of business sells 3 gallons a day (which, at 1*d.* the quarter-pint, would be 8*s.*, my informant said 7*s.*), the other three together sell the same quantity; hence there is an annual street consumption of 1,870 gallons, and a street expenditure on "hot green peas" of £250

Street-sellers of Meat.

The hawking butchers, taking their number at 150, sell 747,000 lbs. of meat, and take annually £12,450

Street-sellers of Bread.

25 men take 45*s.* a day for five months in the summer, and 12 regular traders take 1*l.* 12*s.* per day; this gives an annual street consumption of 700,000 quartern loaves of bread, and a street expenditure of £9,000

Street-sellers of Cats and Dogs' Meat.

There are 300,000 cats in the metropolis, and from 900 to 1,000 horses, averaging 2 cwt. of meat each, boiled down every week; the quantity of cats' and dogs' meat used throughout London is about 200,000 lbs. per week, and this, sold at the rate of 2½*d.* per lb., gives 2,000*l.* a week for the money spent in cats' and dogs' meat, or per year, upwards of £100,000

Street-sellers of Coffee, Tea, &c.

Each coffee-stall keeper on an average clears 1*l.* a week, and his takings may be said to be at least double that sum; hence the quantity of coffee sold annually in the streets, is about 550,000 gallons, while the yearly street expenditure for tea, coffee, &c., amounts to . . .£31,200

Street-sellers of Ginger-beer.

The bottles of ginger-beer sold yearly in the streets number about 4,798,000, and the total street consumption of the same beverage may be said to be about 250,000 gallons per annum. 200 street-sellers of ginger-beer in the bottle trade of the penny class take 30*s.* a week each (thus allowing for inferior receipts in bad weather); 300 take 20*s.* each, selling their "beer" for the most part at ½*d.* the bottle, while the remaining 400 "in a small way" take 6*s.* each; hence there is expended in the bottled ginger-beer of the streets 11,480*l.* Adding the receipts from the fountains and the barrels, the barrel season continuing only ten weeks, the total sum expended annually in street ginger-beer amounts altogether to £14,660

Street-sellers of Lemonade, Sherbet, Nectar, &c.

There are 200 persons, chiefly men, selling solely lemonade, &c., and an additional 300 uniting the sale with that of ginger-beer. Their average receipts on fine days are 3*s.* 6*d.* a day, or, allowing for wet weather and diminished receipts, 10*s.* a week. The receipts, then, for this street luxury, show a street expenditure in such a summer as the last, of 2,800*l.*, among those who do not unite ginger-beer with the trade. Calculating that those who *do* unite ginger-beer with it sell only one-half as much as the others, we find a total outlay of £4,900

Street-sellers of Elder-wine.

50 vendors clear 5*s.* a week for 16 weeks by the sale of elder-wine in the streets, their profit being at least cent. per cent.; hence the street consumption of this beverage in the course of the year is 1,500 gallons, and the outlay . . . £200

Street-sellers of Peppermint-water.

Calculating that 4 "pepperminters" take 2*s.* a day the year round, Sundays excepted, we find that 900 gallons of peppermint-water are consumed every year in the streets of London, while the sum expended in it amounts annually to £125

HARVARD UNIVERSITY

Street-sellers of Milk in the Markets, Parks, &c.

The vendors in the markets clear about 1*s.* 6*d.* a day each, for three months; and as the profit is rather more than cent. per cent., there are about 4,000 gallons of milk thus sold yearly. The quantity sold in the park averages 20 quarts a day for a period of nine months, or 1,170 gallons in the year. This is retailed at 4*d.* per quart; hence the annual expenditure is . . . £344

Street-sellers of Curds and Whey.

50 sellers dispose of 12½ gallons in 3 weeks; the other 50 sell only half as much. Taking the season at 3 months, the annual consumption of curds and whey in the streets is 2,812 double gallons (as regards the ingredients of milk), which is retailed at a cost to the purchasers of £412

Street-sellers of Rice-milk.

Calculating that 50 sellers dispose of 24 quarts weekly, while one-half of the remaining 25 sell 12 quarts each per week at 1*d.* the half-pint, and the other half vend 24 quarts at ½*d.* the half-pint, there are about 3,000 gallons of rice-milk yearly consumed in the streets of London, while the expenditure amounts to £320

Water-carriers.

The number of water-carriers are sixty, and their average earnings through the year 5*s.* a week; hence the sum annually expended in water thus obtained amounts to £780

Street Piemen.

There are fifty street piemen plying their trade in London, the year through, their average takings are one guinea a week; hence there is an annual street consumption of pies of nearly to three-quarters of a million, and a street expenditure amounting to £3,000

Street-sellers of Meat and Currant Puddings.

Each street-seller gets rid of, on an average, 85 dozen, or 1,020 puddings; there are now but six street-sellers (regularly) of these comestibles; hence the weekly aggregate would be—allowing for bad weather—5,400, and the total 129,600 meat and currant puddings sold in the streets, in a season of 24 weeks. This gives an annual expenditure on the part of the street boys and girls (who are the principal purchasers), and of the poor persons who patronise the street-trade, of about £270

Street-sellers of Plum "duff."

Calculating 42*s.* a week as the takings of six persons, for five months, we find there is yearly expended in the street purchase of plum dough upwards of . £250

Street-sellers of Cakes, Tarts, &c.

Reckoning 150 cake-sellers, each taking 6*s.* a week—a sufficiently low average—the street consumption of cakes, tarts, &c., will be 1,123,200 every year, and the street outlay about . . £2,350

Street-sellers of other and inferior Cakes.

The sale of the inferior street cakes realises about a fifth of that taken by the other cake-sellers; hence it may be estimated yearly at £450

Street-sellers of Gingerbread-nuts.

150 gingerbread-nut-sellers take 17*s.* each weekly (clearing 9*s.*); at this rate the sum spent yearly in "spice" nuts in the streets of London amounts to . £6,630

Street-sellers of Hot-cross Buns.

There are nearly 100,000 hot-cross buns sold every Good Friday in the streets of London; hence there is expended in one day, upon the buns thus bought about £300

Street-sellers of Muffins and Crumpets.

There are 500 muffin-sellers, each clearing 4*s.* and taking 12*s.* a week on an average; hence the metropolitan street sale of muffins and crumpets will be in 20 weeks about 120,000 dozen, and the sum expended thereon . . . £6,000

Street-sellers of Sweet-stuff.

The number of sweet-stuff sellers in London amounts to 200, each of whom, on an average, clears 10*s.*, and takes 20*s.* weekly; the yearly consumption, therefore, of rocks, candies, hard-bakes, &c., purchased in the streets is nearly two and a half millions of halfpenny-worths, or (at the rate of ½*d.* an ounce) about 70 tons weight per annum, costing the consumers about £10,000

Street-sellers of Cough-drops.

The earnings of the principal man in the "cough-drop" street trade may be taken at 30*s.* a week for twenty weeks; that of another at 15*s.* for the same period; and those of the remaining four street-sellers of the same compound at 5*s.* each, weekly; allowing the usual cent. per cent., we find there is annually expended by street-buyers on cough-drops £130

Street-sellers of Ice Creams.

The sale of street ices may be calculated at twenty persons, taking 1*s.* 6*d.* daily for four weeks. This gives a street consumption of 10,000 penny ices, and an annual expenditure thereon of . £42

TOTAL SUM EXPENDED YEARLY ON STREET EATABLES AND DRINKABLES £203,115

OF THE STREET-SELLERS OF STATIONERY, LITERATURE, AND THE FINE ARTS.

We now come to a class of street-folk wholly distinct from any before treated of. As yet we have been dealing principally with the uneducated portion of the street-people—men whom, for the most part, are allowed to remain in nearly the same primitive and brutish state as the savage—creatures with nothing but their appetites, instincts, and passions to move them, and made up of the same crude combination of virtue and vice—the same generosity combined with the same predatory tendencies as the Bedouins of the desert—the same love of revenge and disregard of pain, and often the same gratitude and susceptibility to kindness as the Red Indian—and, furthermore, the same insensibility to female honour and abuse of female weakness, and the same utter ignorance of the Divine nature of the Godhead as marks either Bosjesman, Carib, or Thug.

The costers and many other of the street-sellers before described, however, are bad—not so much from their own perversity as from our selfishness. That they partake of the natural evil of human nature is not their fault but ours,—who would be like them if we had not been taught by others better than ourselves to controul the bad and cherish the good principles of our hearts.

The street-sellers of stationery, literature, and the fine arts, however, differ from all before treated of in the *general*, though far from universal, education of the sect. They constitute principally the class of street-orators, known in these days as "patterers," and formerly termed "mountebanks,"—people who, in the words of Strutt, strive to "help off their wares by pompous speeches, in which little regard is paid either to truth or propriety." To patter, is a slang term, meaning to speak. To indulge in this kind of oral puffery, of course, requires a certain exercise of the intellect, and it is the consciousness of their mental superiority which makes the patterers look down upon the costermongers as an inferior body, with whom they object either to be classed or to associate. The scorn of some of the "patterers" for the mere costers is as profound as the contempt of the pickpocket for the pure beggar. Those who have not witnessed this pride of class among even the most degraded, can form no adequate idea of the arrogance with which the skilled man, no matter how base the art, looks upon the unskilled. "We are the haristocracy of the streets," was said to me by one of the street-folks, who told penny fortunes with a bottle. "People don't pay us for what we gives 'em, but only to hear us talk. We live like yourself, sir, by the hexercise of our hintellects—we by talking, and you by writing."

But notwithstanding the self-esteem of the patterers, I am inclined to think that they are less impressionable and less susceptible of kindness than the costers whom they despise. Dr. Conolly has told us that, even among the insane, the educated classes are the most difficult to move and govern through their affections. They are invariably suspicious, attributing unworthy motives to every benefit conferred, and consequently incapable of being touched by any sympathy on the part of those who may be affected by their distress. So far as my experience goes it is the same with the street-patterers. Any attempt to befriend them is almost sure to be met with distrust. Nor does their mode of life serve in any way to lessen their misgivings. Conscious how much their own livelihood depends upon assumption and trickery, they naturally consider that others have some "dodge," as they call it, or some latent object in view when any good is sought to be done them. The impulsive costermonger, however, approximating more closely to the primitive man, moved solely by his feelings, is as easily humanized by any kindness as he is brutified by any injury.

The patterers, again, though certainly more intellectual, are scarcely less immoral than the costers. Their superior cleverness gives them the power of justifying and speciously glossing their evil practices, but serves in no way to restrain them; thus affording the social philosopher another melancholy instance of the evil of developing the intellect without the conscience—of teaching people to *know* what is morally beautiful and ugly, without teaching them at the same time to feel and delight in the one and abhor the other—or, in other words, of quickening the cunning and checking the emotions of the individual.

Among the patterers marriage is as little frequent as among the costermongers; with the exception of the older class, who "were perhaps married before they took to the streets." Hardly one of the patterers, however, has been bred to a street life; and this constitutes another line of demarcation between them and the costermongers.

The costers, we have seen, are mostly hereditary wanderers—having been as it were born to frequent the public thoroughfares; some few of the itinerant dealers in fish, fruit, and vegetables, have it is true been driven by want of employment to adopt street-selling as a means of living, but these are, so to speak, the aliens rather than the natives of the streets. The patterers, on the other hand, have for the most part neither been born and bred nor driven to a street life—but have rather *taken* to it from a natural love of what they call "roving." This propensity to lapse from a civilized into a nomad state—to pass from a settler into a wanderer—is a peculiar charac-

teristic of the pattering tribe. The tendency however is by no means extraordinary; for ethnology teaches us, that whereas many abandon the habits of civilized life to adopt those of a nomadic state of existence, but few of the wandering tribes give up vagabondising and betake themselves to settled occupations. The innate "love of a roving life," which many of the street-people themselves speak of as the cause of their originally taking to the streets, appears to be accompanied by several peculiar characteristics; among the most marked of these are an indomitable "self-will" or hatred of the least restraint or controul—an innate aversion to every species of law or government, whether political, moral, or domestic—a stubborn, contradictory nature—an incapability of continuous labour, or remaining long in the same place occupied with the same object, or attending to the same subject—an unusual predilection for amusements, and especially for what partakes of the ludicrous—together with a great relish of all that is ingenious, and so finding extreme delight in tricks and frauds of every kind. There are two patterers now in the streets (brothers)—well-educated and respectably connected — who candidly confess they prefer that kind of life to any other, and would not leave it if they could.

Nor are the patterers less remarkable than the costermongers for their utter absence of all religious feeling. There is, however, this distinction between the two classes—that whereas the creedlessness of the one is but the consequence of brutish ignorance, that of the other is the result of natural perversity and educated scepticism—as the street-patterers include many men of respectable connections, and even classical attainments. Among them, may be found the son of a military officer, a clergyman, a man brought up to the profession of medicine, two Grecians of the Blue-coat School, clerks, shopmen, and a class who have been educated to no especial calling—some of the latter being the natural sons of gentlemen and noblemen—and who, when deprived of the support of their parents or friends, have taken to the streets for bread. Many of the younger and smarter men, I am assured, reside with women of the town, though they may not be dependent for their livelihood on the wages got by the infamy of these women. Not a few of the patterers, too, in their dress and appearance, present but little difference to that of the "gent." Some wear a moustache, while others indulge in a Henri-Quatre beard. The patterers are, moreover, as a body, not distinguished by that good and friendly feeling one to another which is remarkable among costermongers. If an absence of heartiness and good fellowship be characteristic of an aristocracy—as some political philosophers contend—then the patterers may indeed be said to be the aristocrats of the streets.

The patterers or oratorical street-sellers include among their class many itinerant traders, other than the wandering "paper-workers"—as those vending the several varieties of street-literature are generally denominated. The Cheap Jacks, or oratorical hucksters of hardware at fairs and other places, are among the most celebrated and humorous of this class. The commercial arts and jests of some of these people, display considerable cleverness. Many of their jokes, it is true, are traditional—and as purely a matter of parrotry as the witticisms of the "funny gentlemen" on the stage, but their ready adaptation of accidental circumstances to the purposes of their business, betrays a modicum of wit far beyond that which falls to the share of ordinary "low comedians." The street-vendors of cough drops—infallible cures for the toothache and other ailments—also belong to the pattering class. These are, as was before stated, the remains of the obsolete mountebanks of England and the *saltinbanque* of France—a class of *al fresco* orators who derived their names from the *bench*—the street pulpit, rostrum, or platform—that they ascended, in order the better to deliver their harangues. The street jugglers, actors, and showmen, as well as the street-sellers of grease-removing compositions, corn-salve, razor-paste, plating-balls, waterproof blacking, rat poisons, sovereigns sold for wagers, and a multiplicity of similar street-trickeries—such as oratorical begging — are other ingenious and wordy members of the same chattering, jabbering, or "pattering" fraternity. These will all be spoken of under the head of the different things they respectively sell or do. For the present we have only to deal with that portion of the "pattering" body who are engaged in the street sale of literature—or the "paper-workers" as they call themselves. The latter include the "running patterers," or "death-hunters;" being men (no women) engaged in vending last dying speeches and confessions—in hawking "se-cond edi-tions" of newspapers—or else in "working," that is to say, in getting rid of what are technically termed "cocks;" which, in polite language, means accounts of fabulous duels between ladies of fashion—of apochryphal elopements, or fictitious love-letters of sporting noblemen and certain young milliners not a hundred miles from the spot—"cooked" assassinations and sudden deaths of eminent individuals—pretended jealous affrays between Her Majesty and the Prince Consort (but these papers are now never worked) — or awful tragedies, including mendacious murders, impossible robberies, and delusive suicides.

The sellers of these choice articles, however, belong more particularly to that order or species of the pattering genus known as "running patterers," or "flying stationers," from the fact of their being continually on the move while describing the attractions of the "papers" they have to sell. Contradistinguished from them, however, are the "standing patterers," or those for whose less startling announcements a crowd is necessary, in order that the audience may have time to swallow the many marvels worked by

their wares. The standing patterers require, therefore, what they term a "pitch," that is to say a fixed locality, where they can hold forth to a gaping multitude for, at least, some few minutes continuously. They are mainly such street-sellers as deal in nostrums and the different kinds of street "wonders." Occasionally, however, the running patterer (who is especially literary) transmigrates into a standing one, betaking himself to "board work," as it is termed in street technology, and stopping at the corners of thoroughfares with a large pictorial placard raised upon a pole, and glowing with a highly-coloured exaggeration of the interesting terrors of the pamphlet he has for sale. This is either "The Life of Calcraft, the Hangman," "The Diabolical Practices of Dr. —— on his Patients when in a state of Mesmerism," or "The Secret Doings at the White House, Soho," and other similar attractively-repulsive details. Akin to this "board work" is the practice of what is called "strawing," or selling straws in the street, and giving away with them something that is either really or fictionally forbidden to be sold,—as indecent papers, political songs, and the like. This practice, however, is now seldom resorted to, while the sale of "secret papers" is rarely carried on in public. It is true, there are three or four patterers who live chiefly by professing to dispose of "sealed packets" of obscene drawings and cards for gentlemen; but this is generally a trick adopted to extort money from old debauchees, young libertines, and people of degraded or diseased tastes; for the packets, on being opened, seldom contain anything but an odd number of some defunct periodical. There is, however, a large traffic in such secret papers carried on in what is called "the public-house trade," that is to say, by itinerant "paper-workers" (mostly women), who never make their appearance in the streets, but obtain a livelihood by "busking," as it is technically termed, or, in other words, by offering their goods for sale only at the bars and in the tap-rooms and parlours of taverns. The excessive indulgence of one appetite is often accompanied by the disease of a second; the drunkard, of course, is super-eminently a sensualist, and is therefore easily taken by anything that tends to stimulate his exhausted desires: so sure is it that one form of bestiality is a necessary concomitant of another. There is another species of patterer, who, though usually included among the standing patterers, belongs rather to an intermediate class, viz., those who neither stand nor "*run*," as they descant upon what they sell; but those walk at so slow a rate that, though never stationary, they can hardly be said to move. These are the reciters of dialogues, litanies, and the various street "squibs" upon passing events; they also include the public propounders of conundrums, and the "hundred and fifty popular song" enumerators—such as are represented in the engraving here given. Closely connected with them are the "chaunters," or those who do not cry, but (if one may so far stretch the English language) *sing* the contents of the "papers" they vend.

These traffickers constitute the principal street-sellers of literature, or "paper-workers," of the "pattering" class. In addition to them there are many others vending "papers" in the public thoroughfares, who are mere traders resorting to no other acts for the disposal of their goods than a simple cry or exposition of them; and many of these are but poor, humble, struggling, and inoffensive dealers. They do not puff or represent what they have to sell as what it is not—(allowing them a fair commercial latitude). They are not of the "enterprising" class of street tradesmen. Among these are the street-sellers of stationery—such as note-paper, envelopes, pens, ink, pencils, sealing-wax, and wafers. Belonging to the same class, too, are the street-vendors of almanacs, pocket-books, memorandum and account-books. Then there are the sellers of odd numbers of periodicals and broadsheets, and those who vend either playing cards, conversation cards, stenographic cards, and (at Epsom, Ascot, &c.) racing cards. Besides these, again, there are the vendors of illustrated cards, such as those embellished with engravings of the Crystal Palace, Views of the Houses of Parliament, as well as the gelatine poetry cards—all of whom, with the exception of the racing-card sellers (who belong generally to the pattering tribe), partake of the usual characteristics of the street-selling class.

After these may be enumerated the vendors of old engravings out of inverted umbrellas, and the hawkers of coloured pictures in frames. Then there are the old book-stalls and barrows, and "the pinners-up," as they are termed, or sellers of old songs pinned against the wall, as well as the vendors of manuscript music. Moreover, appertaining to the same class, there are the vendors of playbills and "books of the performance" outside the theatre; and lastly, the pretended sellers of tracts—such as the Lascars and others, who use this kind of street traffic as a cloak for the more profitable trade of begging. The street-sellers of images, although strictly comprised within those who vend fine art productions in the public thoroughfares will be treated of under the head of THE STREET ITALIANS, to which class they mostly belong.

OF THE FORMER AND PRESENT STREET-PATTERERS.

OF the street-patterers the running (or flying) trader announces the contents of the paper he is offering for sale, as he proceeds on his mission. It is usually the detail of some "barbarious and horrible murder," or of some extraordinary occurrence—such as the attack on Marshal Haynau—which has roused public attention; or the paper announced as descriptive of a murder, or of some exciting event, may in reality be some odd number of a defunct periodical. "It's astonishing," said one patterer to me, "how few people ever complain of having been took in. It hurts their feelings to lose a halfpenny, but it

hurts their pride too much, when they're had, to grumble in public about it." On this head, then, I need give no further general explanation.

In times of excitement the running patterer (or "stationer," as he was and is sometimes called) has reaped the best harvest. When the Popish plot agitated England in the reign of Charles II. the "Narratives" of the design of a handful of men to assassinate a whole nation, were eagerly purchased in the streets and taverns. And this has been the case during the progress of any absorbing event subsequently. I was told by a very old gentleman, who had heard it from his grandfather, that in some of the quiet towns of the north of England, in Durham and Yorkshire, there was the greatest eagerness to purchase from the street-sellers any paper relative to the progress of the forces under Charles Edward Stuart, in 1745. This was especially the case when it became known that the "rebels" had gained possession of Carlisle, and it was uncertain what might be their route southward. About the period of the "affair of the '45," and in the autumn following the decisive battle of Culloden (in April, 1746), the "Northern Lights" were more than usually brilliant, or more than usually remarked, and a meteor or two had been seen. The street-sellers were then to be found in fairs and markets, vending wonderful accounts of these wonderful phenomena.

I have already alluded to the character of the old mountebank, and to his "pompous orations," having "as little regard to truth as to propriety." There certainly is little pompousness in the announcements of the patterers, though in their general disregard of truth they resemble those of the mountebank. The mountebank, however, addressed his audience from a stage, and made his address attractive by mixing up with it music, dancing, and tumbling; sometimes, also, equestrianism on the green of a village; and by having always the services of a merry-andrew, or clown. The nostrums of these quacks were all as unequalled for cheapness as for infallibility, and their impudence and coolness ensured success. Their practices are as well exposed in some of the *Spectators* of 1711-12 as the puppet-playing of Powel was good-humouredly ridiculed. One especial instance is cited, where a mountebank, announcing himself a native of Hammersmith, where he was holding forth, offered to make a present of 5*s.* to every brother native of Hammersmith among his audience. The mountebank then drew from a long bag a handful of little packets, each of which, he informed the spectators, was constantly sold for 5*s.* 6*d.*, but that out of love to his native hamlet he would bate the odd 5*s.* to every inhabitant of the place. The whole assembly immediately closed with his generous offer."

There is a scene in Moncrieff's popular farce of "*Rochester*," where the hero personates a mountebank, which may be here cited as affording a good idea of the "pompous orations" indulged in by the street orators in days of yore:

"Silence there, and hear me, for my words are more precious than gold; I am the renowned and far-famed Doctor Paracelsus Bombastes Esculspus Galen dam Humbug von Quack, member of all the colleges under the Moon: M.D., L.M.D., F.R.S., L.L.D., *A.S.S.*—and all the rest of the letters in the alphabet: I am the seventh son of a seventh son—kill or cure is my motto—and I always do it; I cured the great Emperor of Nova Scotia, of a polypus, after he had been given over by all the faculty—he lay to all appearance dead: the first pill he took, he opened his eyes; the second, he raised his head; and the third, he jumped up and danced a hornpipe. I don't want to sound my own praise—blow the trumpet, Balaam (*Balaam blows trumpet*); but I tapped the great Cham of Tartary at a sitting, of a terrible dropsy, so that I didn't leave a drop in him! I cure the palsy, the dropsy, the lunacy, and all the sighs, without costing anybody a sigh: vertigo, pertigo, lumbago, and all the other go's are sure to go, whenever I come."

In his unscrupulousness and boldness in street announcements, and sometimes in his humour and satire, we find the patterer of the present day to be the mountebank of old descended from his platform into the streets—but without his music, his clown, or his dress.

There was formerly, also, another class, differing little from the habits of that variety of patterers of the present day who "busk" it, or "work the public-houses."

"The jestours," says Mr. Strutt, in his "Sports and Pastimes of the People of England," "or, as the word is often written in the old English dialect, 'gesters,' were the relaters of the gestes, that is, the actions of famous persons, whether fabulous or real; and these stories were of two kinds, the one to excite pity, and the other to move laughter, as we learn from Chaucer:

> 'And jestours that tellen tales,
> Both of wepying and of game.'

The tales of 'game,' as the poet expresses himself were short jocular stories calculated to promote merriment, in which the reciters paid little respect to the claims of propriety or even of common decency. The tales of 'game,' however, were much more popular than those of weeping, and probably for the very reason that ought to have operated the most powerfully for their suppression. The gestours, whose powers were chiefly employed in the hours of conviviality, finding by experience that lessons of instruction were much less seasonable at such times, than idle tales productive of mirth and laughter, accommodated their narrations to the general taste of the times, regardless of the mischiefs they occasioned by vitiating the morals of their hearers. Hence it is that the author of the 'Vision of Pierce the Ploughman' calls them contemptibly 'japers and juglers, and janglers of gests.' He describes them as haunters of taverns and common ale-houses, amusing the lower classes of the people with 'myrth of minstrelsy and losels' tales,' (loose vulgar tales,) and calls them tale-tellers and 'tutelers in ydell,' (tutors of idleness,) occasioning their auditory, 'for love of tales, in tavernes to drink,' where they learned from them to jangle and to jape, instead of attending to their more serious duties.

"The japers, I apprehend, were the same as the bourdours, or rybauders, an inferior class of minstrels, and properly called jesters in the modern acceptation of the word; whose wit, like that of the merry-andrews of the present day (1800) consisted in low obscenity accompanied with ludicrous gesticulation. They sometimes, however, found admission into the houses of the opulent. Knighton, indeed, mentions one of these japers who was a favourite in the English court, and could obtain any grant from the king 'a burdando,' that is, by jesting. They are well described by the poet:

> 'As japers and janglers, Judas' chyldren,
> Fayneth them fantasies, and fooles them maketh.'"

"It was a very common and a very favourite amusement, so late as the 16th century, to hear the recital of verses and moral speeches, learned for that purpose by a set of men who obtained their livelihood thereby, and who, without ceremony, intruded themselves, not only into taverns and other places of public resort, but also into the houses of the nobility"

The resemblance of the modern patterer to the classes above mentioned will be seen when I describe the public-house actor and reciter of the present day, as well as the standing patterer, who does not differ so much from the running patterer in the quality of his announcements, as in his requiring more time to make an impression, and being indeed a sort of lecturer needing an audience; also of the present reciters "of verses and moral speeches." But of these curious classes I shall proceed to treat separately.

Of the Habits, Opinions, Morals, and Religion of Patterers generally.

In order that I might omit nothing which will give the student of that curious phase of London life in London streets—the condition of the patterers—a clear understanding of the subject, I procured the following account from an educated gentleman (who has been before alluded to in this work), and as he had been driven to live among the class he describes, and to support himself by street-selling, his remarks have of course all the weight due to personal experience, as well as to close observation:—

"If there is any truth in phrenology," writes the gentleman in question, "the patterers—to a man—are very large in the organ of 'self-esteem,' from which suggestion an enquiry arises, viz., whether they possess that of which they may justly pique themselves. To arrive at truth about the patterers is very difficult, and indeed the persons with whom they live are often quite in the dark about the history, or in some cases the pursuits of their lodgers.

"I think that the patterers may be divided into three classes. First,—those who were well born and brought up. Secondly, — those whose parents have been dissipated and gave them little education. Thirdly,—those who—whatever their early history—will not be or do anything but what is of an itinerant character. I shall take a glance at the *first* of these classes, presupposing that they were cradled in the lap of indulgence, and trained to science and virtue.

"If these people take to the streets, they become, with here and there an exception, the most reprobate and the least reclaimable. I was once the inmate of a lodging-house, in which there were at one time five University-men, three surgeons, and several sorts of broken-down clerks, or of other professional men. Their general habits were demoralised to the last degree—their oaths more horrid, extravagant, and far-fetched than anything I ever heard: they were stupid in logic, but very original in obscenity. Most of them scoffed at the Bible, or perverted its passages to extenuate fraud, to justify violence, or construct for themselves excuses for incontinence and imposition. It will appear strange that these educated persons, when they turn out upon the street, generally sell articles which have no connection with literature, and very little with art. The two brothers, who sell that wonder-working paste which removes grease from the outside of your collar by driving it further in, were both scholars of Christ's Hospital. They were second Grecians, and might have gone to college; but several visits to suburban fairs, and their accompanying scenes of debauch, gave them a *penchant* for a vagabond life, and they will probably never relinquish it. The very tall man—there are several others—who sells razors and paste on a red pagoda-looking stall, was apprenticed to a surgeon in Colchester, with a premium of 300 guineas; and the little dark-visaged man, who sells children's money-boxes and traps to catch vermin, is the son of a late upholsterer in Bath, who was also a magistrate of that city. The poor man alluded to was a law-student, and kept two terms in Trinity Hall, Cambridge. Many similar cases might be mentioned — cases founded on real observation and experience. Some light may be thrown upon this subject by pointing out the *modus operandi* by which a friend of mine got initiated into the 'art and mystery of patterism.' 'I had lived,' he said, 'more than a year among the tradesmen and tramps, who herd promiscuously together in low lodging-houses. One afternoon I was taking tea at the same table with a brace of patterers. They eyed me with suspicion; but, determined to know their proceedings, I launched out the only cant word I had then learned. They spoke of going to Chatham. Of course, I knew the place, and asked them, "Where do you stall to in the huey?" which, fairly translated, means, "Where do you lodge in the town?" Convinced that I was "fly," one of them said, "We drop the main toper (go off the main road) and slink into the crib (house) in the back drum (street)." After some altercation with the "mot" of the "ken" (mistress of the lodging-house) about the cleanliness of a knife or fork, my new acquaintance began to arrange "ground," &c., for the night's work. I got into their confidence by degrees; and I give below a vocabulary of their talk to each other:'

Word.	Meaning.
Crabshells	Shoes.
Kite	Paper.
Nests	Varieties.
Sticky	Wax.
Toff	Gentleman.
Burerk	Lady.
Camister	Minister.
Crocus	Doctor.
Bluff	An excuse.
Balmy	Insane.
Mill Tag	A shirt.
Smeesh	A shift.
Hay-bag	A woman.
Doxy	A wife.
Flam	A lie.
Teviss	A shilling

Bull . . . . A crown.
Flag . . . . An apron.

"The cant or slang of the patterer is not the cant of the costermonger, but a system of their own. As in the case of the costers, it is so interlarded with their general remarks, while their ordinary language is so smothered and subdued, that unless when they are professionally engaged and talking of their wares, they might almost pass for foreigners.

"There can be no doubt," continues my informant, "that the *second* class of street-patterers, to whom nature, or parents, or circumstances have been unpropitious, are the most moral, and have a greater sense of right and wrong, with a quicksightedness about humane and generous things, to which the 'aristocratic' patterer is a stranger. Of the dealers in useful or harmless wares—although, of course, they use allowable exaggeration as to the goodness of the article—many are devout communicants at church, or members of dissenting bodies; while others are as careless about religion, and are still to be found once or twice a week in the lecture-rooms of the Mechanics' Institute nearest to their residence. Orchard-street, Westminster, is a great locality for this sort of patterers. Three well-known characters,—Bristol George, Corporal Casey, and Jemmy the Rake, with a very respectable and highly-informed man called 'Grocer,' from his having been apprenticed to that business,—have maintained a character for great integrity among the neighbours for many years.

"I come now to the *third* class of patterers,—those who, whatever their early pursuits and pleasures, have manifested a predilection for vagrancy, and neither can nor will settle to any ordinary calling. There is now on the streets a man scarcely thirty years old, conspicuous by the misfortune of a sabre-wound on the cheek. He is a native of the Isle of Man. His father was a captain in the Buffs, and himself a commissioned officer at seventeen. He left the army, designing to marry and open a boarding-school. The young lady to whom he was betrothed died, and *that* event *might* affect his mind; at any rate, he has had 38 situations in a dozen years, and will not keep one a week. He has a mortal antipathy to good clothes, and will not keep them one hour. He sells anything—chiefly needle-cases. He 'patters' very little in a *main drag* (public street); but in the little private streets he preaches an outline of his life, and makes no secret of his wandering propensity. His aged mother, who still lives, pays his lodgings in Old Pye-street.

"From the hasty glance I have taken at the patterers, any well-constructed mind may deduce the following inference: because a great amount of intelligence sometimes consists with a great want of principle, that no education, or *mis*-education, leaves man, like a reed floating on the stream of time, to follow every direction which the current of affairs may give him.

"There is yet another and a larger class, who are wanderers from choice,—who would rather be street-orators, and quacks, and performers, than anything else in the world. In nine cases out of ten, the street-patterers are persons of intemperate habits, no veracity, and destitute of any desire to improve their condition, even where they have the chance. One of this crew was lately engaged at a bazaar; he had 18*s*. a week, and his only work was to walk up and down and extol the articles exhibited. This was too monotonous a life; I happened to pass him by as he was taking his wages for the week, and heard him say, 'I shall cut this b—y work; I can earn more on the streets, and be my own master.'"

It would be a mistake to suppose that the patterers, although a vagrant, are a disorganized class. There is a telegraphic dispatch between them, through the length and breadth of the land. If two patterers (previously unacquainted) meet in the provinces, the following, or something like it, will be their conversation:—"Can you 'voker romeny' (can you speak cant)? What is your 'monekeer' (name)?"—Perhaps it turns out that one is "White-headed Bob," and the other "Plymouth Ned." They have a "shant of gatter" (pot of beer) at the nearest "boozing ken" (ale-house), and swear eternal friendship to each other. The old saying, that "When the liquor is in, the wit is out," is remarkably fulfilled on these occasions, for they betray to the "flatties" (natives) all their profits and proceedings.

It is to be supposed that, in country districts, where there are no streets, the patterer is obliged to call at the houses. As they are mostly without the hawker's licence, and sometimes find wet linen before it is lost, the rural districts are not fond of their visits; and there are generally two or three persons in a village reported to be "gammy," that is (unfavourable). If a patterer has been "crabbed," that is (offended) at any of the "cribbs" (houses), he mostly chalks a signal on or near the door. I give one or two instances:

◊ "Bone," meaning good.

▽ "Cooper'd," spoiled by the imprudence of some other patterer.

□ "Gammy," likely to have you taken up.

⊙ "Flummut," sure of a month in quod.

In most lodging-houses there is an old man who is the guide to every "walk" in the vicinity, and who can tell every house, on every round, that is "good for a cold 'tater." In many cases there is over the kitchen mantle-piece a map of the district, dotted here and there with memorandums of failure or success.

Patterers are fond of carving their names and avocations about the houses they visit. The old jail at Dartford has been some years a "padding-ken." In one of the rooms appears the following autographs:

"Jemmy, the Rake, bound to Bristol; bad beds, but no bugs. Thank God for all things."

"Razor George and his moll slept here the

Original from HARVARD UNIVERSITY

day afore Christmas; just out of 'stir' (jail), for 'muzzling a peeler.'"

"Scotch Mary, with 'driz' (lace), bound to Dover and back, please God."

Sometimes these inscriptions are coarse and obscene; sometimes very well written and orderly. Nor do they want illustrations.

At the old factory, Lincoln, is a portrait of the town beadle, formerly a soldier; it is drawn with different-coloured chalks, and ends with the following couplet:

"You are a B for false swearing,
In hell they'll roast you like a herring."

Concubinage is very common among patterers, especially on their travels; they have their regular rounds, and call the peregrination "going on circuit." For the most part they are early risers; this gives them a facility for meeting poor girls who have had a night's shelter in the union workhouses. They offer such girls some refreshment,—swear they are single men,—and promise comforts certainly superior to the immediate position of their victims. Consent is generally obtained; perhaps a girl of 14 or 15, previously virtuous, is induced to believe in a promise of constant protection, but finds herself, the next morning, ruined and deserted; nor is it unlikely that, within a month or two, she will see her seducer in the company of a dozen incidental wives. A gray-headed miscreant called "Cutler Tom" boasts of 500 such exploits; and there is too great reason to believe that the picture of his own drawing is not greatly overcharged.

Some of the patterers are married men, but of this class very few are faithful to the solemn obligation. I have heard of a renowned patterer of this class who was married to four women, and had lived in criminal intercourse with his own sister, and his own daughter by one of the wives. This sad rule has, however, I am happy to state, some splendid exceptions. There is a man called "Andy"—well known as the companion of "Hopping Ned;" this "Andy" has a wife of great personal attractions, a splendid figure, and teeth without a parallel. She is a strictly-virtuous woman, a most devoted wife, and tender mother; very charitable to any one in want of a meal, and very constant (she is a Catholic) in her religious duties. Another man of the same school, whose name has escaped me, is, with his wife, an exception to the stigma on almost the whole class; the couple in question have no children. The wife, whose name is Maria, has been in every hospital for some complaint in her knees, probably white swelling: her beauty is the theme of applause, and whenever she opens her mouth silence pervades the "paddin' ken." Her common conversation is music and mathematics combined, her reading has been masculine and extensive, and the whisper of calumny has never yet attacked her own demeanour or her husband's.

Of patterers who have children, many are very exemplary; sending them to Day and Sunday-schools, causing them to say grace before and after meals, to attend public worship, and always to speak the truth: these, instances, however, stand in fearful contrast with the conduct of other parents.

"I have seen," proceeds my reverend informant, "fathers and mothers place their boys and girls in positions of incipient enormity, and command them to use language and gestures to each other, which would make an harlot blush, and almost a heathen tremble. I have hitherto viewed the patterer as a salesman,—having something in his hand, on whose merits, real or pretended, he talks people out of their money. By slow degrees prosperity rises, but rapid is the advance of evil. The patterer sometimes gets 'out of stock,' and is obliged, at no great sacrifice of conscience, to 'patter' in another strain. In every large town sham official documents, with crests, seals, and signatures, can be got for half-a-crown. Armed with these, the patterer becomes a 'lurker,'—that is, an impostor; his papers certify any and every 'ill that flesh is heir to.' Shipwreck is called a 'shake lurk;' loss by fire is a 'glim.' Sometimes the petitioner has had a horse, which has dropped dead with the mad staggers; or has a wife ill or dying, and six or seven children at once sickening of the small-pox. Children are borrowed to support the appearance; the case is certified by the minister and churchwardens of a parish which exists only in imagination; and as many people dislike the trouble of investigation, the patterer gets enough to raise a stock in trade, and divides the spoil between the swag-shop and the gin-palace. Sometimes they are detected, and get a 'drag' (three months in prison). They have many narrow escapes: one occurs to me, of a somewhat ludicrous character. A patterer and lurker (now dead) known by the name of 'Captain Moody,' unable to get a 'fakement' written or printed, was standing almost naked in the streets of a neighbouring town. A gentleman stood still and heard his piteous tale, but having been 'done' more than once, he resolved to examine the affair, and begged the petitioner to conduct him to his wife and children, who were in a garret on a bed of languishing, with neither clothes, food, nor fire, but, it appeared, with faith enough to expect a supply from 'Him who feedeth the ravens,' and in whose sacred name even a cold 'tater was implored. The patterer, or half-patterer and half-beggar, took the gentleman (who promised a sovereign if every thing was square) through innumerable and intricate windings, till he came to an outhouse or sort of stable. He saw the key outside the door, and begged the gentleman to enter and wait till he borrowed a light of a neighbour, to show him up-stairs. The illumination never arrived, and the poor charitable man found that the miscreant had locked him into the stable. The patterer went to the padding-ken,—told the story with great glee, and left that locality within an hour of the occurrence."

[Concerning the mendicancy and vagrancy of

patterers, I shall have more to say when I speak of vagrancy in general, and when I describe the general state and characteristics of the low lodging-houses in London, and those in the country, which are in intimate connection with the metropolitan abodes of the vagrant. My present theme is the London patterer, who is also a street-seller.]

Of the Publishers and Authors of Street-Literature.

The best known, and the most successful printer and publisher of all who have directed their industry to supply the "paper" in demand for street sale, and in every department of street literature, was the late "Jemmy Catnach," who is said to have amassed upwards of 10,000*l.* in the business. He is reported to have made the greater part of this sum during the trial of Queen Caroline, by the sale of whole-sheet "papers," descriptive of the trial, and embellished with "splendid illustrations." The next to Catnach stood the late "Tommy Pitt," of the noted toy and marble-warehouse. These two parties were the Colburn and Bentley of the "paper" trade. Catnach retired from business some years ago, and resided in a country-house at Barnet, but he did not long survive his retirement. "He was an out and out sort," said one old paper-worker to me, "and if he knew you—and he could judge according to the school you belonged to, if he hadn't known you long—he was friendly for a bob or two, and sometimes for a glass. He knew the men that was stickers though, and there was no glass for them. Why, some of his customers, sir, would have stuck to him long enough, if there'd been a chance of another glass—supposing they'd managed to get *one*—and then would have asked him for a coach home! When I called on him, he used to say, in his north country way—he wasn't Scotch, but somewhere north of England—and he was pleasant with it, 'Well, d— you, how are you?' He got the cream of the pail, sir."

The present street literature printers and publishers are, Mrs. Ryle (Catnach's niece and successor), Mr. Birt, and Mr. Paul (formerly with Catnach), all of the Seven Dials; Mr. Powell (formerly of Lloyd's), Brick-lane, Whitechapel; and Mr. Good, Aylesbury-street, Clerkenwell. Mr. Phairs, of Westminster; Mr. Taylor, of the Waterloo-road; and Mr. Sharp, of Kent-street, Borough, have discontinued street printing. One man greatly regretted Mr. Taylor's discontinuing the business; "he was so handy for the New-cut, when it *was* the New-cut." Some classes of patterers, I may here observe, work in "schools" or "mobs" of two, three, or four, as I shall afterwards show.

The authors and poets who give its peculiar literature, alike in prose or rhyme, to the streets, are now six in number. They are all in some capacity or other connected with street-patter or song, and the way in which a narrative or a "copy of werses" is prepared for press is usually this:—The leading members of the "schools," some of whom refer regularly to the evening papers, when they hear of any out-of-the-way occurrence, resort to the printer and desire its publication in a style proper for the streets. This is usually done very speedily, the school (or the majority of them) and the printer agreeing upon the author. Sometimes an author will voluntarily prepare a piece of street literature and submit it to a publisher, who, as in the case of other publishers, accepts or declines, as he believes the production will or will not prove remunerative. Sometimes the school carry the manuscript with them to the printer, and undertake to buy a certain quantity, to insure publication. The payment to the author is the same in all cases—a shilling.

Concerning the history and character of our street and public-house literature, I shall treat hereafter, when I can comprise the whole, and after the descriptions of the several classes engaged in the trade will have paved the way for the reader's better appreciation of the curious and important theme. I say, *important;* because the street-ballad and the street-narrative, like all popular things, have their influence on masses of the people. Specimens will be found adduced, as I describe the several classes, or in the statements of the patterers.

It must be borne in mind that the street author is closely restricted in the quality of his effusion. It must be such as the patterers approve, as the chaunters can chaunt, the ballad-singers sing, and—above all—such as street-buyers will buy. One chaunter, who was a great admirer of the "Song of the Shirt," told me that if Hood himself had written the "Pitiful Case of Georgy Sloan and his Wife," it would not have sold so well as a ballad he handed to me, from which I extract a verse:

> "Jane Wilbred we did starve and beat her very hard
> I confess we used her very cruel,
> But now in a jail two long years we must bewail,
> We don't fancy mustard in the gruel."

What I have said of the *necessity* which controls street authorship, may also be said of the art which is sometimes called in to illustrate it.

The paper now published for the streets is classed as quarter sheets, which cost (wholesale) 1*s.* a gross; half sheets, which cost 2*s.*; and whole or broad sheets (such as for executions), which cost 3*s.* 6*d.* a gross the first day, and 3*s.* the next day or two, and afterwards, but only if a ream be taken. 5*s.* 6*d.*; a ream contains forty dozen. When "illustrated," the charge is from 3*d.* to 1*s.* per ream extra. The books, for such cases as the Sloanes, or the murder of Jael Denny, are given in books—which are best adapted for the suburban and country trade, when London is "worked" sufficiently—are the "whole sheet" printed so as to fold into eight pages, each side of the paper being then, of course, printed upon. A book is charged from 6*d.* to 1*s.* extra (to a whole sheet) per gross, and afterwards the same extra per ream.

OF LONG SONG-SELLERS.

I have this week given a daguerreotype of a well-known long-song seller, and have preferred to give it as the trade, especially as regards London, has all but disappeared, and it was curious enough. "Long songs" first appeared between nine and ten years ago.

The long-song sellers did not depend upon patter—though some of them pattered a little—to attract customers, but on the veritable cheapness and novel form in which they vended popular songs, printed on paper rather wider than this page, "three songs abreast," and the paper was about a yard long, which constituted the "three" yards of song. Sometimes three slips were pasted together. The vendors paraded the streets with their "three yards of new and popular songs" for a penny. The songs are, or were, generally fixed to the top of a long pole, and the vendor "cried" the different titles as he went along. This branch of "the profession" is confined solely to the summer; the hands in winter usually taking to the sale of song-books, it being impossible to exhibit "the three yards" in wet or foggy weather. The paper songs, as they fluttered from a pole, looked at a little distance like huge much-soiled white ribbons, used as streamers to celebrate some auspicious news. The cry of one man, in a sort of recitative, or, as I heard it called by street-patterers, "sing-song," was, "Three yards a penny! Three yards a penny! Beautiful songs! Newest songs! Popular Songs! Three yards a penny! Song, song, songs!" Others, however, were generally content to announce merely "Three yards a penny!" One cried "Two under fifty a fardy!" As if two hundred and fifty songs were to be sold for a farthing. The whole number of songs was about 45. They were afterwards sold at a halfpenny, but were shorter and fewer. It is probable that at the best had the songs been subjected to the admeasurement of a jury, the result might have been as little satisfactory as to some tradesmen who, however, after having been detected in attempts to cheat the poor in weights and scales, and to cheat them hourly, are still "good men and true" enough to be jurymen and parliamentary electors. The songs, I am informed, were often about 2½ yards, (not as to paper but as to admeasurement of type); 3 yards, occasionally, at first, and not often less than 2 yards.

The crying of the titles was not done with any other design than that of expressing the great number of songs purchasable for "the small charge of one penny." Some of the patterers I conversed with would have made it sufficiently droll. One man told me that he had cried the following songs in his three yards, and he believed in something like the following order, but he had cried penny song books, among other things, lately, and might confound his more ancient and recent cries:

"I sometimes began," he said, "with singing, or trying to sing, for I'm no vocalist, the first few words of any song, and them quite loud. I'd begin

> 'The Pope he leads a happy life,
> He knows no care'——

'Buffalo gals, come out to-night;' 'Death of Nelson;' The gay cavalier;' 'Jim along Josey;' 'There's a good time coming;' 'Drink to me only;' 'Kate Kearney;' 'Chuckaroo-choo, choo-choo-choot-lah;' 'Chockala-roony-ninkaping-nang;' 'Paga-daway-dusty-kanty-key;' 'Hottypie-gunnypo-china-coo' (that's a Chinese song, sir); 'I dreamed that I dwelt in marble halls;' 'The standard bearer:' 'Just like love;' 'Whistle o'er the lave o't;' 'Widow Mackree;' 'I've been roaming;' 'Oh! that kiss;' 'The old English gentleman,' &c., &c. &c. I dares say they was all in the three yards, or was once, and if they wasn't there was others as good."

The chief purchasers of the "long songs" were boys and girls, but mostly boys, who expended 1*d.* or ½*d.* for the curiosity and novelty of the thing, as the songs were not in the most readable form. A few working people bought them for their children, and some women of the town, who often buy anything fantastic, were also customers.

When "the three yards was at their best," the number selling them was about 170; the wholesale charge is from 3*d.* to 5*d.* a dozen, according to size. The profit of the vendors in the first instance was about 8*d.* a dozen. When the trade had all the attractions of novelty, some men sold ten dozen on fine days, and for three or four of the summer months; so clearing between 6*s.* and 7*s.* a day. This, however, was not an average, but an average might be at first 21*s.* a week profit. I am assured that if twenty persons were selling long songs in the street last summer it was "the outside," as long songs are now "for fairs and races and country work." Calculating that each cleared 9*s.* in a week, and to clear that took 15*s.*, the profit being smaller than it used to be, as many must be sold at ½*d.* each—we find 120*l.* expended in long songs in the streets. The character of the vendor is that of a patterer of inferior genius.

The stock-money required is 1*s.* to 2*s.*; which with 2*d.* for a pole, and ½*d.* for paste, is all the capital needed. Very few were sold in the public-houses, as the vendors scrupled to expose them there, "for drunken fellows would snatch them, and make belts of them for a lark."

OF RUNNING PATTERERS.

Few of the residents in London—but chiefly those in the quieter streets—have not been aroused, and most frequently in the evening, by a hurly-burly on each side of the street. An attentive listening will not lead any one to an accurate knowledge of what the clamour is about. It is from a "mob" or "school" of the running patterers (for both those words are

Original from HARVARD UNIVERSITY

used), and consists of two, three, or four men. All these men state that the greater the noise they make, the better is the chance of sale, and better still when the noise is on each side of a street, for it appears as if the vendors were proclaiming such interesting or important intelligence, that they were vieing with one another who should supply the demand which must ensue. It is not possible to ascertain with any certitude *what* the patterers are so anxious to sell, for only a few leading words are audible. One of the cleverest of running patterers repeated to me, in a subdued tone, his announcements of murders. The words "Murder," "Horrible," "Barbarous," "Love," "Mysterious," "Former Crimes," and the like, could only be caught by the ear, but there was no announcement of anything like "particulars." If, however, the "paper" relate to any well-known criminal, such as Rush, the name is given distinctly enough, and so is any new or pretended fact. The running patterers describe, or profess to describe, the contents of their papers as they go rapidly along, and they seldom or ever stand still. They usually deal in murders, seductions, crim.-cons., explosions, alarming accidents, "assassinations," deaths of public characters, duels, and love-letters. But popular, or notorious, murders are the "great goes." The running patterer cares less than other street-sellers for bad weather, for if he "work" on a wet and gloomy evening, and if the work be "a cock," which is a fictitious statement or even a pretended fictitious statement, there is the less chance of any one detecting the *ruse*. But of late years no new "cocks" have been printed, excepting for temporary purposes, such as I have specified as under its appropriate head in my account of "Death and Fire-Hunters." Among the old stereotyped "cocks" are love-letters. One is well known as "The Husband caught in a Trap," and being in an epistolary form subserves any purpose: whether it be the patterer's aim to sell the "Love Letters" of any well-known person, such as Lola Montes, or to fit them for a local (pretended) scandal, as the "Letters from a Lady in this neighbourhood to a Gentleman not 100 miles off."

Of running patterers there are now in London from 80 to 100. They reside—some in their own rooms, but the majority in lodging-houses —in or near Westminster, St. Giles's, Whitechapel, Stratford, Deptford, Wandsworth, and the Seven Dials. The "Dials," however, is their chief locality, being the residence of the longest-established printers, and is the "head meet" of the fraternity.

It is not easy to specify with exactitude the number of running or flying patterers at any one time in London. Some of these men become, occasionally, standing patterers, chaunters, or ballad-singers—classes I shall subsequently describe—and all of them resort at intervals to country rounds. I heard, also, many complaints of boys having of late "taken to the running patter" when anything attractive was before the public, and of ignorant fellows—that wouldn't have thought of it at one time—"trying their hands at it." Waiving these exceptional augmentations of the number, I will take the body of running patterers, generally employed in their peculiar craft in London, at 90. To ascertain their earnings presents about the same difficulties as to ascertain their number; for as all they earn is spent—no patterer ever saving money—they themselves are hardly able to tell their incomes. If any new and exciting fact be before the public, these men may each clear 20*s.* a week; when there is no such fact, they may not earn 5*s.* The profit is contingent, moreover, upon their being able to obtain 1*d.*, or only ½*d.*, for their paper. Some represented their average weekly earnings at 12*s.* 6*d.* the year through; some at 10*s.* 6*d.*; and others at less than half of 12*s.* 6*d.* Reckoning, however, that only 9*s.* weekly is an average profit per individual, and that 14*s.* be taken to realise that profit, we find 3,276*l.* expended yearly on running patterers in London; but in that sum the takings of the chaunters must be included, as they are members of the same fraternity, and work with the patterers.

The capital required to commence as a running patterer is but the price of a few papers—from 2*d.* to 1*s.* The men have no distinctive dress: "our togs," said one of them, "is in the latest fashion of Petticoat-lane;" unless on the very rare occasions, when some character has to be personated, and then coloured papers and glazed calicoes are made available. But this is only a venture of the old hands.

Experience of a Running Patterer.

From a running patterer, who has been familiar with the trade for many years, I received, upwards of a twelvemonth ago, the following statement. He is well known for his humour, and is a leading man in his fraternity. After some conversation about "cocks," the most popular of which, my informant said, was the murder at Chigwell-row, he continued:

"That's a trump, to the present day. Why, I'd go out now, sir, with a dozen of Chigwell-rows, and earn my supper in half an hour off of 'em. The murder of Sarah Holmes at Lincoln is good, too—that there has been worked for the last five year successively every winter. Poor Sarah Holmes! Bless her! she has saved me from walking the streets all night many a time. Some of the best of these have been in work twenty years—the Scarborough murder has full twenty years. It's called 'The Scarborough Tragedy.' I've worked it myself. It's about a noble and rich young naval officer seducing a poor clergyman's daughter. She is confined in a ditch, and destroys the child. She is taken up for it, tried, and executed. This has had a great run. It sells all round the country places, and would sell now if they had it out. Mostly all our customers is females. They are the chief

dependence we have. The Scarborough Tragedy is very attractive. It draws tears to the women's eyes to think that a poor clergyman's daughter, who is remarkably beautiful, should murder her own child; it's very touching to every feeling heart. There's a copy of verses with it, too. Then there's the Liverpool Tragedy—that's very attractive. It's a mother murdering her own son, through gold. He had come from the East Indies, and married a rich planter's daughter. He came back to England to see his parents after an absence of thirty years. They kept a lodging-house in Liverpool for sailors; the son went there to lodge, and meant to tell his parents who he was in the morning. His mother saw the gold he had got in his boxes, and cut his throat—severed his head from his body; the old man, upwards of seventy years of age, holding the candle. They had put a washing-tub under the bed to catch his blood. The morning after the murder, the old man's daughter calls and inquires for a young man. The old man denies that they have had any such person in the house. She says he had a mole on his arm, in the shape of a strawberry. The old couple go up-stairs to examine the corpse, and find they have murdered their own son, and then they both put an end to their existence. This is a deeper tragedy than the Scarborough Murder. That suits young people better; they like to hear about the young woman being seduced by the naval officer; but the mothers take more to the Liverpool Tragedy—it suits them better. Some of the 'cocks' were in existence long before ever I was born or thought of. The 'Great and important battle between the two young ladies of fortune,' is what we calls 'a ripper.' I should like to have that there put down correct," he added, "'cause I've taken a tidy lot of money out of it."

My informant, who had been upwards of 20 years in the running patter line, told me that he commenced his career with the "Last Dying Speech and Full Confession of William Corder." He was sixteen years of age, and had run away from his parents. "I worked that there," he said, "down in the very town (at Bury) where he was executed. I got a whole hatful of halfpence at that. Why, I wouldn't even give 'em seven for sixpence—no, that I wouldn't. A gentleman's servant come out and wanted half a dozen for his master and one for himself in, and I wouldn't let him have no such thing. We often sells more than that at once. Why, I sold six at one go to the railway clerks at Norwich about the Manning affair, only a fortnight back. But Steinburgh's little job—you know he murdered his wife and family, and committed suicide after—that sold as well as any 'die.' Pegsworth was an out-and-out lot. I did tremendous with him, because it happened in London, down Ratcliff-highway — that's a splendid quarter for working—there's plenty of feelings—but, bless you, some places you go to you can't move no how, they've hearts like paving-stones. They wouldn't have 'the papers' if you'd give them to 'em — especially when they knows you. Greenacre didn't sell so well as might have been expected, for such a diabolical out-and-out crime as he committed; but you see he came close after Pegsworth, and that took the beauty off him. Two murderers together is never no good to nobody. Why there was Wilson Gleeson, as great a villain as ever lived—went and murdered a whole family at noon-day—but Rush coopered him—and likewise that girl at Bristol—made it no draw to any one. Daniel Good, though, was a first-rater; and would have been much better if it hadn't been for that there Madam Toosow. You see, she went down to Rochampton, and guv 2*l.* for the werry clogs as he used to wash his master's carriage in; so, in course, when the harristocracy could go and see the real things—the werry identical clogs—in the Chamber of 'Orrors, why the people wouldn't look at our authentic portraits of the fiend in human form. Hocker wasn't any particular great shakes. There was a deal expected from him, but he didn't turn out well. Courvoisier was much better; he sold wery well, but nothing to Blakesley. Why I worked him for six weeks. The wife of the murdered man kept the King's Head that he was landlord on open on the morning of the execution, and the place was like a fair. I even went and sold papers outside the door myself. I thought if she war'n't ashamed, why should I be? After that we had a fine 'fake'—that was the fire of the Tower of London—it sold rattling. Why we had about forty apprehended for that—first we said two soldiers was taken up that couldn't obtain their discharge, and then we declared it was a well-known sporting nobleman who did it for a spree. The boy Jones in the Palace wasn't much of an affair for the running patterers; the ballad singers—or street screamers, as we calls 'em—had the pull out of that. The patter wouldn't take; they had read it all in the newspapers before. Oxford, and Francis, and Bean were a little better, but nothing to crack about. The people doesn't care about such things as them. There's nothing beats a stunning good murder, after all. Why there was Rush—I lived on him for a month or more. When I commenced with Rush, I was 14*s.* in debt for rent, and in less than fourteen days I astonished the wise men in the east by paying my landlord all I owed him. Since Dan'el Good there had been little or nothing doing in the murder line—no one could cap him—till Rush turned up a regular trump for us. Why I went down to Norwich expressly to work the execution. I worked my way down there with '*a sorrowful lamentation*' of his own composing, which I'd got written by the blind man expressly for the occasion. On the morning of the execution we beat all the regular newspapers out of the field; for we had the full, true, and particular account down, you see, by our own express, and that can beat anything that ever they can publish; for we gets it printed several days afore it comes off,

and goes and stands with it right under the drop; and many's the penny I've turned away when I've been asked for an account of the whole business *before* it happened. So you see, for herly and correct hinformation, we can beat the *Sun*—aye, or the moon either, for the matter of that. Irish Jem, the Ambassador, never goes to bed but he blesses Rush the farmer; and many's the time he's told me we should never have such another windfall as that. But I told him not to despair; there's a good time coming, boys, says I, and, sure enough, up comes the Bermondsey tragedy. We might have done very well, indeed, out of the Mannings, but there was too many examinations for it to be any great account to us. I've been away with the Mannings in the country ever since. I've been through Hertfordshire, Cambridgeshire, and Suffolk, along with George Frederick Manning and his wife—travelled from 800 to 1,000 miles with 'em, but I could have done much better if I had stopped in London. Every day I was anxiously looking for a confession from Mrs. Manning. All I wanted was for her to clear her conscience afore she left this here whale of tears (that's what I always calls it in the patter), and when I read in the papers (mind they was none of my own) that her last words on the brink of heternity was, 'I've nothing to say to you, Mr. Rowe, but to thank you for your kindness,' I guv her up entirely—had completely done with her. In course the public looks to us for the last words of all monsters in human form, and as for Mrs. Manning's, they were not worth the printing."

Of the Recent Experience of a Running Patterer.

From the same man I had the following account of his vocation up to the present time:

"Well, sir," he said, "I think, take them altogether, things hasn't been so good this last year as the year before. But the Pope, God bless him! he's been the best friend I've had since Rush, but Rush licked his Holiness. You see, the Pope and Cardinal Wiseman is a one-sided affair; of course the Catholics won't buy anything against the Pope, but *all* religions could go for Rush. Our mob once thought of starting a cardinal's dress, and I thought of wearing a red hat myself. I did wear a shovel hat when the Bishop of London was our racket; but I thought the hat began to feel too hot, so I shovelled it off. There was plenty of paper that would have suited to work with a cardinal's hat. There was one,—'Cardinal Wiseman's Lament,'—and it was giving his own words like, and a red hat would have capped it. It used to make the people roar when it came to snivelling, and grumbling at little Jack Russell—by Wiseman, in course; and when it comes to this part—which alludes to that 'ere thundering letter to the Bishop of Durham—the people was stunned:

> 'He called me a buffalo, bull, and a monkey,
> And then with a soldier called Old Arthur conkey
> Declared they would buy me a ninepenny donkey,
> And send me to Rome to the Pope.'

"They shod me, sir. *Who's* they? Why, the Pope and Cardinal Wiseman. I call my clothes after them I earn money by to buy them with. My shoes I call Pope Pius; my trowsers and braces, Calcraft; my waistcoat and shirt, Jael Denny; and my coat, Love Letters. A man must show a sense of gratitude in the best way he can. But I didn't start the cardinal's hat; I thought it might prove disagreeable to Sir Robert Peel's dress lodgers." [What my informant said further of the Pope, I give under the head of the Chaunter.] "There was very little doing," he continued, "for some time after I gave you an account before; hardly a slum worth a crust and a pipe of tobacco to us. A slum's a paper fake,—make a foot-note of that, sir. I think Adelaide was the first thing I worked after I told you of my tomfooleries. Yes it was,—her helegy. She weren't of no account whatsomever, and Cambridge was no better nor Adelaide. But there was poor Sir Robert Peel,—he *was* some good; indeed, I think he was as good as *5s.* a day to me for the four or five days when he was freshest. Browns were thrown out of the windows to us, and one copper cartridge was sent flying at us with 13½*d.* in it, all copper, as if it had been collected. I worked Sir Robert at the West End, and in the quiet streets and squares. Certainly we had a most beautiful helegy. Well, poor gentleman, what we earned on him was some set-off to us for his starting his new regiment of the Blues—the Cook's Own. Not that they've troubled me much. I was once before Alderman Kelly, when he was Lord Mayor, charged with obstructing, or some humbug of that sort. 'What are you, my man?' says he quietly, and like a gentleman. 'In the same line as yourself, my lord,' says I. 'How's that?' says he. 'I'm a paper-worker for my living, my lord,' says I. I was soon discharged; and there was such fun and laughing, that if I'd had a few slums in my pocket, I believe I could have sold them all in the justice-room.

"Haynau was a stunner, and the drayman came their caper just in the critical time for us, as things was growing very taper. But I did best with him in chaunting; and so, as you want to hear about chaunting, I'll tell you after. We're forced to change our patter—first running, then chaunting, and then standing—oftener than we used to.

"Then Calcraft was pretty tidy browns. He was up for starving his mother,—and what better can you expect of a hangman? Me and my mate worked him down at Hatfield, in Essex, where his mother lives. It's his native, I believe. We sold her one. She's a limping old body. I saw the people look at her, and they told me arterards who she was. 'How much?' says she. 'A penny, marm,' say I. 'Sarve him right,' says she. We worked it, too, in the street in Hoxton where he lives, and he sent out for two, which shows he's a sensible sort of character in some points, after all. Then we had a 'Woice from the Gaol! or the Horrors

of the Condemned Cell! Being the Life of William Calcraft, the present Hangman.' It's written in the high style, and parts of it will have astonished the hangman's nerves before this. Here's a bit of the patter, now:

"Let us look at William Calcraft," says the eminent author, "in his earliest days. He was born about the year 1801, of humble but industrious parents, at a little village in Essex. His infant ears often listened to the children belonging to the Sunday schools of his native place, singing the well-known words of Watt's beautiful hymn,

'When e'er I take my walks abroad,
How many poor I see, &c.'

But alas for the poor farmer's boy, he never had the opportunity of going to that school to be taught how to shun 'the broad way leading to destruction.' To seek a chance fortune he travelled up to London where his ignorance and folorn condition shortly enabled that fell demon which ever haunts the footsteps of the wretched, to mark him for her own."

"Isn't that stunning, sir? Here it is in print for you. 'Mark him for her own!' Then, poor dear, he's so sorry to hang anybody. Here's another bit:

'But in vain he repents, he has no real friend in the world but his wife, to whom he can communicate his private thoughts, and in return receive consolation, can any lot be harder than this? Hence his nervous system is fast breaking down, every day rendering him less able to endure the excruciating and agonizing torments he is hourly suffering, he is haunted by remorse heaped upon remorse, every fresh victim he is required to strangle being so much additional fuel thrown upon that mental flame which is scorching him.'

"You may believe me, sir, and I can prove the fact—the author of that beautiful writing ain't in parliament! Think of the mental flame, sir! O, dear."

"Sirrell was no good either. Not salt to a herring. Though we worked him in his own neighbourhood, and pattered about gold and silver all in a row. 'Ah!' says one old woman, 'he was a 'spectable man.' 'Werry, marm,' says I.

"Hollest weren't no good either, 'cause the wictim was a parson. If it had happened a little later, *we'd* have had it to rights; the newspapers didn't make much of it. We'd have shown it was the 'Commencement of a Most Horrid and Barbarious Plot got up by the Pope and Cardinal Wiseman *for-r* the Mas-ser-cree-ing of all good Protestant Ministers.' That would have been the dodge, sir! A beautiful idear, now, isn't it? But the murder came off badly, and you can't expect fellows like them murderers to have any regard for the interest of art and literature. Then there's so long to wait between the murder and the trial, that unless the fiend in human form keeps writing beautiful love-letters, the excitement can't be kept up. *We* can write the love-letters for the fiend in human? That's quite true, and we once had a great pull that way over the newspapers. But Lord love you, there's plenty of 'em gets more and more into our line. They treads in our footsteps, sir; they follows our bright example. O! isn't there a nice rubbing and polishing up. This here copy won't do. This must be left out, and that put in; 'cause it suits the walk of the paper. Why, you must know, sir. *I* know. Don't tell me. You can't have been on the *Morning Chronicle* for nothing.

"Then there was the 'Horrid and Inhuman Murder, Committed by T. Drory, on the Body of Jael Denny, at Donninghurst, a Village in Essex.' We worked it in every way. Drory had every chance given to him. We had half-sheets, and copies of werses, and books. A very tidy book it was, setting off with showing how 'The secluded village of Donninghurst has been the scene of a most determined and diabolical murder, the discovery of which early on Sunday, the 12th, in the morning has thrown the whole of this part of the country into a painful state of excitement.' Well, sir, well—very well; that bit was taken from a newspaper. Oh, we're not above acknowledging when we condescends to borrow from any of 'em. If you remember, when I saw you about the time, I told you I thought Jael Denny would turn out as good as Maria Martin. And without any joke or nonsense, sir, it really is a most shocking thing. But she didn't. The weather coopered her, poor lass! There was money in sight, and we couldn't touch it; it seemed washed away from us, for you may remember how wet it was. I made a little by her, though. For all that, I haven't done with Master Drory yet. If God spares my life, he shall make it up to me. Why, now, sir, is it reasonable, that a poor man like me should take so much pains to make Drory's name known all over the country, and walk miles and miles in the rain to do it, and get only a few bob for my labour? It can't be thought on. When the Wile and Inhuman Seducer takes his trial, he must pay up my just claims. I'm not going to take all that trouble on his account, and let him off so easy."

My informant then gave me an account of his sale of papers relating to the Pope and Cardinal Wiseman, but as he was then a chaunter, rather than a patterer (the distinction is shown under another head), I give his characteristic account, as the statement of a chaunter. He proceeded after having finished his recital of the street business relating to the Pope, &c.:

"My last paying caper was the Sloanes. They beat Haynau. I declare to you, sir, the knowingest among us couldn't have invented a cock to equal the conduct of them Sloanes. Why, it's disgusting to come near the plain truth about them. I think, take it altogether, Sloane was as good as the Pope, but he had a stopper like Pius the Ninth, for that was a one-sided affair, and the Catholics wouldn't buy; and Sloane was too disgusting for the gentry, or better sort, to buy him. But I've been in little streets where some of the windows was without sashes, and some that had sashes had stockings thrust between the frames, and I've taken half a bob in ha'pennies. Oh! you should have heard what poor women said about

Original from HARVARD UNIVERSITY

him, for it was women that bought him most They was more savage against him than against her. Why, they had fifty deaths for him. Rolling in a barrel, with lots of sharp nails inside, down Primrose-hill, and turned out to the women on Kennington-common, and boiled alive in oil or stuff that can't be mentioned, or hung over a slow fire. 'O, the poor dear girl,' says they, 'what she's suffered.' We had accounts of Mistress Sloane's apprehension before the papers. We had it at Jersey, and they had it at Boulogne, but we were first. Then we discovered, because we *must* be in advance of the papers, that Miss Devaux was Sloane's daughter by a former wife, and Jane Wilbred was Mrs. Sloane's daughter by a former husband, and was entitled to 1,000*l.* by rights. Haynau was a fool to Sloane.

"I don't know of anything fresh that's in hand, sir. One of our authors is coming out with something spicy, against Lord John, for doing nothing about Wiseman; 'cause he says as no one thing that he's written for Lord John ever sold well, something against him may."

Of the Chaunters.

"As the minstrel's art," writes Mr. Strutt, in his "Sports and Pastimes," "consisted of several branches, the professors were distinguished by different denominations, as 'rimours, *chanterres*, conteours, jougleours or jongleurs, jestours, lecours, and troubadours or trouvers:' in modern language, rhymers, singers, story-tellers, jugglers, relaters of heroic actions, buffoons, and poets; but all of them were included under the general name of minstrel. An eminent French antiquary says of the minstrels, that some of them themselves composed the subjects they sang or related, as the trouvers and the conteurs; and some of them used the compositions of others, as the jougleours and the chanteurs. He further remarks, that the trouvers may be said to have embellished their productions with rhyme, while the conteurs related their histories in prose; the jougleours, who in the middle ages were famous for playing upon the vielle" [a kind of hurdy-gurdy], "accompanied the songs of the trouvers. These jougleours were also assisted by the chanteurs; and this union of talents rendered the compositions more harmonious and more pleasing to the auditory, and increased their rewards, so that they readily joined each other, and travelled together in large parties. It is, however, very certain that the poet, the songster, and the musician were frequently united in the same person." My account of the authors, &c., of street literature shows that the analogy still holds.

The French antiquary quoted was Fauchet, in his "Origine de la Langue et Poësie Françoise" (1581); and though he wrote concerning his own country, his descriptions apply equally to the English minstrels, who were principally Normans, for many reigns after the Conquest, and were of the same race, and habits, and manners as on the French side of the Channel.

Of the minstrels, I shall have more to say when I treat of the ballad-singers and the bands of street and public-house musicians of to-day, between whom and the minstrels of old there is, in many respects, a somewhat close resemblance. Minstrelsy fell gradually from its high estate, and fell so low that, in the 39th year of Elizabeth's reign—a period when the noblest poetry of any language was beginning to command the ear of the educated in England—the minstrels were classed in a penal statute with rogues, vagabonds, and sturdy beggars! Putenham, in his "Arte of English Poesie" (1589), speaks of "taverne minstrels that give a fit of mirth for a groat." One of the statutes enacted in Cromwell's Protectorate was directed against all persons "commonly called fidlers or minstrells."

In the old times, then, the jougeleurs and jestours were assisted by the chanteurs. In the present day the running patterer—who, as I have shown, is the sufficiently legitimate descendant of the jestour, and in some respects of the mountebank—is accompanied generally by a chaunter, so presenting a further point of resemblance between ancient and modern street-folk. The chaunter now not only sings, but fiddles, for within these few years the running patterers, to render their performances more attractive, are sometimes accompanied by musicians. The running performer then, instead of hurrying along with the members of his mob, making sufficient noise to arouse a whole street, takes his stand with the chaunter in any promising place, and as the songs which are the most popular are—as is the case at many of the concert-rooms—sometimes "spoken" as well as sung, the performers are in their proper capacity, for the patterer not only "speaks," but speaks more than is set down for him, while the chaunter fiddles and sings. Sometimes the one patters while the other sings, and their themes are the same.

I am told, however, that there are only fifty running patterers who are regularly their own chaunters, fiddling to their songs, while the mob work as usual, or one man sings, or speaks and sings, with the chaunter. Two of these men are known as Brummagem Jack, and the Country Paganini. From twenty to thirty patterers, however, are chaunters also, when they think the occasion requires it.

Further to elucidate chaunting, and to show the quality of the canticles, and the way of proceeding, I cite a statement of his experience as a chaunter, from the running patterer, whose details of his more especial business I have already given, but who also occasionally chaunts:—

Of the Experience of a Chaunter.

"The Pope, sir," he began, "was as one-sided to chaunt as to patter, in course. We had the Greeks (the lately-arrived Irish) down upon us more than once. In Liverpool-street, on the night of the meeting at Guildhall about

the Papal Aggression, we had a regular skrimmage. One gentleman said: 'Really, you shouldn't sing such improper songs, my men.' Then up comes another, and he was a little crusted with port wine, and he says: 'What, against that cove the Pope! Here, give me half a dozen of the papers.' The city was tidy for the patter, sir, or the chaunt; there was sixpences; but there was shillings at the West End. And for the first time in their innocent lives, the parsons came out as stunning patrons of the patter. One of 'em as we was at work in the street give a bit of a signal and was attended to without any parade to the next street, and was good for half-a-crown! Other two stopped, that wery same day, and sent a boy to us with a Joey. Then me and my mate went to the Rev. W.'s, him as came it so strong for the fire-works on the Fifth of November. And we pattered and we pattered, and we chaunted and we chaunted, but no go for a goodish bit. His servant said he weren't at home. In course *that* wouldn't do for us, so down he came his-self at last, and says, werry soft: 'Come to-morrow morning, my men, and there'll be two gentlemen to hear you.' We stuck to him for something in hand, but he said the business had cost him so much already, he really couldn't. Well, we bounced a bob out of him, and didn't go near him again. After all we did for his party, a shilling was black ingratitude. Of course *we* has no feeling either for or agin the Pope. *We* goes to it as at an election; and let me tell you, sir, we got very poorly paid, it couldn't be called paid, for working for Lord John at the City Election; and I was the original of the live rats, which took well. But there's a good time coming to pay Lord Johnny off.

"Some of the tunes—there's no act of parliament about tunes, you know, sir—was stunners on the fiddle; as if a thousand bricks was falling out of a cart at once. I think 'The Pope and Cardinal Wiseman,' one of the first of the songs, did as well as any. This werse was greatly admired:—

'Now Lord John Russell did so bright,
to the Bishop of Durham a letter write
Saying while I've a hand I'll fight,
The pope and cardinal wiseman,
Lord John's ancestor as I tell,
Lord William Russell then known well
His true religion would not sell,
A martyr he in glory fell,
And now Lord John so bold and free,
Has got a rope as we may see,
To hang up on each side of a tree,
The pope and cardinal wiseman.'

"This finishing werse, too, was effective, and out came a few browns:—

'Now we don't care a fig for Rome,
why can't they let the girls alone,
And mind their business at home,
the pope and cardinal wiseman.
With their monsical red cardinals hat,
And lots of wafers in a sack,
If they come here with all their clack,
we'll wound them fil fal la ra whack,
In England they shall not be loose,
Their hum bugging is all no use,
If they come here we'll cook their goose,
The pope and Cardinal Wiseman.

CHORUS
Monks and Nuns and fools afloat,
We'll have no bulls shoved down our throat,
Cheer up and shout down with the Pope,
And his bishop cardinal Wiseman.'

"Then there was another, sir. 'The Pope he is coming; oh, crikey, oh dear!' to the tune of the 'Camels are coming.' There was one bit that used to tickle them. I mayn't exactly remember it, for I didn't do anything beyond a spurt in it, and haven't a copy for you, but it tickled 'em with others. This was the bit:—

'I've heard my old grandmother's grandmother say,
They burnt us in Smithfield full ten every day.
O, what shall I do, for I feel very queer,
The Pope he's a-coming, oh! crikey, oh, dear!'

"Bless you, sir, if I see a smart dressed servant girl looking shyly out of the street-door at us, or through the area railings, and I can get a respectful word in and say, 'My good young lady, do buy of a poor fellow, we haven't said a word to your servants, we hasn't seen any on 'em,' then she's had, sir, for 1*d*. at least, and twice out of thrice; that 'good young lady' chloroforms her.

"Then this one, now, is stunning. It's part of what the Queen was a going to sing at the opening of the parliament, but she changed her mind, and more's the pity, for it would have had a grand effect. It's called 'The Queen, the Pope, and the Parliament,' and these is the best of the stanzas; I calls them werses in common, but stanzas for Wick:

'My lords and my gentlemen all,
The bishops and great house of commons
On you for protection I call,
For you know I am only a woman,
I am really quite happy indeed—
To meet you like birds of a feather,
So I hope you will all struggle with me,
And pull away boys altogether,
My name is Victoria the Queen.

'Our bishops and deans did relent,
And say they for ever was undone,
Bishop Philpott a long challenge sent
To his lordship the bishop of London,
To fight him on Hounslow Heath—
But the bishop of London was coosey,
He gave him one slap in the mouth,
And then sent a letter to pusey,
No humbuggery stories for vick—

'I heard my old grandfather say
His great grandmother easily loved reckon
When they made a fool run away,
Whose name was king Jemmy the second.
Billy gave him a ticket for soup,
Though Bill married old Jemmy's daughter
He knocked him from old Palace yard,
To Ireland, across the Boyne water,
Long life to Victoria the Queen.

'Come here my old friend Joey Hume,
I know you in silence wont mope now,
Go up and get inside the moon
And make fast a great torry rope now,
And then give a spring and a jump
And you to a peerage shall rise then,
For we'll swing up old Pius the Pope
And his eminence cardinal Wiseman,
Old England and down with the Pope.'

"Then there wasn't no risk with Haynau—I told you of the Pope first, 'cause he was most chaunted—no fear of a *ferricadouzer* for the butcher. How is it spelled, sir? Well, if you can't find it in the dictionary, you must use your own judgment. What does it mean? It means a dewskitch (a good thrashing). I've been threatened with dark nights about the Pope, after the Greeks has said: 'Fat have you to say agin the holy gintleman? To the divil wid all the likes o' ye.' Haynau was a fair stage and no favour. This werse was best liked:—

'The other day as you must know,
In Barclay's brewhouse he did go
And signed his bloody name "Haynau.
The fellow that flogged the women.
Baron Rothchild did him shend,
And in the letter which he penn'd
He shaid the sheneral wash his friend,
And so good a man he could not mend.

CHORUS
Rumpsey bumsy—bang him well—
Make his back and sides to swell
Till he roars aloud with dreadful yell,
The fellow that flogged the women.'

"The women bought very free; poor women, mostly; we only worked him to any extent in the back drags. One old body at Stepney was so pleased that she said, 'O, the bloody-minded willain! Whenever you come this way again, sir, there's always 1*d*. for you.' She didn't pay in advance though.

"Then it ended, sir, with a beautiful moral as appeals to every female bosom:—

'That man who would a female harm,
Is never fit to live.'

"We always likes something for the ladies, bless 'em. They're our best customers.

"Then there was poor Jael Denny, but she was humped, sir, and I've told you the reason. Her copy of werses began:—

'Since Corder died on Buystree,
No mortal man did read or see,
Of such a dreadful tragedy,
As I will now unfold.
A maid in bloom—to her silent tomb,
Is hurried in the prime of life,
How could a villain cause such strife
She worthy was a famous wife.
The like was seldom told.

CHORUS.
She was young and gay,
Like the flowers of may,
In youth and vigour health and bloom,
She is hurried to the silent tomb.
Through Essex, such a dreadfull gloom,
Jael Denny's murder caused.'

"My last chaunt was Jane Wilbred; and her werses—and they did tidy well—began:—

'A Case like this you seldom read,
Or one so sad and true,
And we sincerely hope the perper-
trators both will rue
To serve a friendless servant girl,
Two years they did engage,
Her name it is Jane Willbred,
And eighteen years of age.'

"What do you think of the Great Exhibition, sir? I shall be there. Me and my mates. We are going to send in a copy of werses in letters of gold for a prize. *We'll* let the foreigners know what the real native melodies of England is, and no mistake."

OF THE DEATH AND FIRE HUNTERS.

I have described the particular business of the running patterer, who is known by another and a very expressive cognomen — as a "Death Hunter." This title refers not only to his vending accounts of all the murders that become topics of public conversation, but to his being a "murderer" on his own account, as in the sale of "cocks" mentioned incidentally in this narrative. If the truth be saleable, a running patterer prefers selling the truth, for then—as one man told me—he can "go the same round comfortably another day." If there be no truths for sale—no stories of criminals' lives and loves to be condensed from the diffusive biographies in the newspapers—no "helegy" for a great man gone—no prophecy and no crim. con.—the death hunter invents, or rather announces, them. He puts some one to death for the occasion, which is called "a cock." The paper he sells may give the dreadful details, or it may be a religious tract, "brought out in mistake," should the vendor be questioned on the subject; or else the poor fellow puts on a bewildered look and murmurs, "O, it's shocking to be done this way—but I can't read." The patterers pass along so rapidly that this detection rarely happens.

One man told me that in the last eight or ten years, he, either singly or with his "mob," had twice put the Duke of Wellington to death, once by a fall from his horse, and the other time by a "sudden and myst-erious" death, without any condescension to particulars. He had twice performed the same mortal office for Louis Phillipe, before that potentate's departure from France; each death was by the hands of an assassin; "one was stabbing, and the other a shot from a distance." He once thought of poisoning the Pope, but was afraid of the street Irish. He broke Prince Albert's leg, or arm, (he was not sure which), when his royal highness was out with his harriers. He never had much to say about the Queen; "it wouldn't go down," he thought, and perhaps nothing had lately been said. "Stop, there, sir," said another patterer, of whom I inquired as to the correctness of those statements, (after my constant custom in sifting each subject thoroughly.) "stop, stop, sir. I *have* had to say about the Queen lately. In coorse, nothing can be said against her, and nothing ought to; that's true enough, but the last time she was confined, I cried her *accouchement* (the word was pronounced as spelt to a merely English reader, or rather more broadly) of *three!* Lord love you, sir, it would have been no use crying *one;* people's so used to that; but a Bobby came up and he stops me, and said it was some impudence about the Queen's *coachman!* Why look at it, says I, fat-head—I knew I was safe—and see if there's

Original from HARVARD UNIVERSITY

anything in it about the Queen or her coachman! And he looked, and in coorse there was nothing. I forget just now what the paper *was* about." My first-mentioned informant had apprehended Feargus O'Connor on a charge of high treason. He assassinated Louis Napoleon, "from a *fourth* edition of the *Times*," which "did well." He caused Marshal Haynau to die of the assault by the draymen. He made Rush hang himself in prison. He killed Jane Wilbred, and put Mrs. Sloane to death; and he announced the discovery that Jane Wilbred was Mrs. Sloane's daughter.

This informant did not represent that he had originated these little pieces of intelligence, only that he had been a party to their sale, and a party to originating one or two. Another patterer and of a higher order of genius—told me that all which was stated was undoubtedly correct, "but me and my mates, sir," he said, "did Haynau in another style. A splendid slum, sir! Capital! We assassinated him—*mys*-terious. Then about Rush. His hanging hisself in prison was a fake, I know; but we've had him lately. His ghost appeared—as is shown in the Australian papers—to Emily Sandford, and threatened her; and took her by the neck, and there's the red marks of his fingers to be seen on her neck to this day!" The same informant was so loud in his praise of the "Ass-sass-sination" of Haynau that I give the account. I have little doubt it was his own writing. It is confused in passages, and has a blending of the "I" and the "we:"—

"We have just received upon undisputed authority, that, that savage and unmanly tyrant, that enemy to civil and religious liberty, the inhuman Haynau has at last finished his career of guilt by the hand of an assassin, the term assassin I have no doubt will greet harshly upon the ears of some of our readers, yet never the less I am compelled to use it although I would gladly say the *average* of outraged innocence, which would be a name more suitable to one who has been the means of ridden the world of such a despicable monster."

[My informant complained bitterly, and not without reason, of the printer. "Average," for instance (which I have *italicised*), should be "avenger." The "average of outraged innocence!"]

"It appears by the Columns of the Corour le Constituonal of Brussels," runs the paper, "that the evening before last, three men one of which is supposed to be the miscreant, Haynau entered a Cafe in the Neighbourhood of Brussels kept by a man in the name of Priduex, and after partaking of some refreshments which were ordered by his two companions they desired to be shown to their chambers, during their stay in the public or Travellers Room, they spoke but little and seemed to be very cautious as to joining in the conversations which was passing briskly round the festive board, which to use the landlord's own words was rather strange, as his Cafe was mostly frequented by a set of jovial fellows, M. Priduex goes on to state that after the three strangers had retired to rest some time a tall and rather noble looking man enveloped in a large cloak entered and asked for a bed, and after calling for some wine he took up a paper and appeared to be reading it very attentively, in due time he was shown to bed and all passed on without any appearance of anything wrong until about 6 o'clock in the morning, when the landlord and his family, were roused by a noise over head and cries of murder, and upon going up stairs to ascertain the cause, he discovered the person who was [known] to be Marshal Haynau, lying on his bed with his throat cut in a frightful manner, and his two companions standing by his bed side bewailing his loss. On the table was discovered a card, on which was written these words 'Monster, I am avenged at last. Suspicion went upon the tall stranger, who was not anywhere to be found, the Garde arms instantly were on the alert, and are now in active persuit of him but up to the time of our going to press nothing further has transpired."

It is very easy to stigmatise the death-hunter when he sets off all the attractions of a real or pretended murder,—when he displays on a board, as does the standing patterer, "illustrations" of "the 'dentical pick-axe" of Manning, or the stable of Good,—or when he invents or embellishes atrocities which excite the public mind. He does, however, but follow in the path of those who are looked up to as "the press,"—as the "fourth estate." The conductors of the *Lady's Newspaper* sent an artist to Paris to give drawings of the scene of the murder by the Duc de Praslin,—to "illustrate" the blood-stains in the duchess's bed-chamber. The *Illustrated London News* is prompt in depicting the locality of any atrocity over which the curious in crime may gloat. The *Observer*, in costly advertisements, boasts of its 20 columns (sometimes with a supplement) of details of some vulgar and mercenary bloodshed,—the details being written in a most honest deprecation of the morbid and savage tastes to which the writer is pandering. Other weekly papers have engravings—and only concerning murder—of any wretch whom vice has made notorious. Many weekly papers had expensive telegraphic despatches of Rush's having been hung at Norwich, which event, happily for the interest of Sunday newspapers, took place in Norwich at noon on a Saturday. [I may here remark, that the patterers laugh at telegraphs and express trains for rapidity of communication, boasting that the press strives in vain to rival *them*,—as at a "hanging match," for instance, the patterer has the full particulars, dying speech, and confession included—if a confession be feasible—ready for his customers the moment the drop falls, and while the criminal may still be struggling, at the very scene of the hanging. At a distance he sells it before the hanging. "If the *Times* was cross-examined about it," observed one patterer, "he must confess he's outdone, though he's a rich *Times*, and we is poor fellows." But to resume—]

A penny-a-liner is reported, and without contradiction, to have made a large sum by having hurried to Jersey in Manning's business, and by being allowed to accompany the officers when they conducted that paltry tool of a vindictive woman from Jersey to Southampton by steamer, and from Southampton to London by "special engine," as beseemed the popularity of so distinguished a rascal and homicide; and next morning the daily papers, in all the typographical honour of "leads" and "a good place," gave details of this fellow's—this Manning's—conversation, looks, and demeanour.

Until the "respectable" press become a more healthful public instructor, we have no right to blame the death-hunter, who is but an imitator —a follower—and that for a meal. So strong has this morbid feeling about criminals become, that an earl's daughter, who had "an order" to see Bedlam, would not leave the place until she had obtained Oxford's autograph for her album! The rich vulgar are but the poor vulgar—without an excuse for their vulgarity.

"Next to murders, fires are tidy browns," I was told by a patterer experienced both in "murders" and "fires." The burning of the old Houses of Parliament was very popular among street-sellers, and for the reason which ensures popularity to a commercial people; it was a source of profit, and was certainly made the most of. It was the work of incendiaries,—of ministers, to get rid of perplexing papers,—of government officers with troublesome accounts to balance,—of a sporting lord, for a heavy wager,—of a conspiracy of builders,—and of "a unsuspected party." The older "hands" with whom I conversed on the subject, all agreed in stating that they "did well" on the fire. One man said, "No, sir, it wasn't only the working people that bought of me, but merchants and their clerks. I s'pose they took the papers home with 'em for their wives and families, which is a cheap way of doing, as a newspaper costs *3d.* at least. But stop, sir,—stop; there wasn't no threepennies then,—nothing under *6d.*, if they wasn't more; I can't just say, but it was better for us when newspapers was high. I never heard no sorrow expressed,—not *in* the least. Some said it was a good job, and they wished the ministers was in it." The burning of the Royal Exchange was not quite so beneficial to the street-sellers, but "was uncommon tidy." The fire at the Tower, however, was almost as great a source of profit as that of the Houses of Parliament, and the following statement shows the profit reaped.

My informant had been a gentleman's servant, his last place being with a gentleman in Russell-square, who went to the East Indies, and his servant was out of a situation so long that he "parted with everything." When he was at the height of his distress, he went to see the fire at the Tower, as he "had nothing better to do." He remained out some hours, and before he reached his lodging, men passed him, crying the full and true particulars of the fire. "I bought one," said the man, "and changed my last shilling. It was a sudden impulse, for I saw people buy keenly. I never read it, but only looked at the printer's name. I went to him at the Dials, and bought some, and so I went into the paper trade. I made *6s.* or *7s.* some days, while the Tower lasted; and *3s.* and *4s.* other days, when the first polish was off. I sold them mostly at *1d.* a piece at first. It was good money then. The Tower was good, or middling good, for from 14 to 20 days. There was at least 100 men working nothing but the Tower. There's no great chance of any more great buildings being burnt; worse luck. People don't care much about private fires. A man in this street don't heed so much who's burnt to death in the next. But the foundation-stone of the new Royal Exchange—fire led to that—was pretty fair, and portraits of Halbert went off, so that it was for two or three days as good as the Tower. Fires is our best friends next to murders, if they're *good* fires. The hopening of the Coal Exchange was rather tidy. I've been in the streets ever since, and don't see how I could possibly get out of them. At first I felt a great degradation at being driven to the life. I shunned grooms and coachmen, as I might be known to them. I didn't care for others. That sort of feeling wears out though. I'm a widower now, and my family feels, as I did at first, that what I'm doing is 'low.' They won't assist—though they may give me *1s.* now and then—but they won't assist me to leave the streets. They'll rather blame me for going into them, though there was only that, or robbing, or starving. The fire at Ben. Caunt's, where the poor children was burnt to hashes, was the best of the private house fires that I've worked, I think. I made *4s.* on it one day. He was the champion once, and was away at a fight at the time, and it was a shocking thing, and so people bought."

After the burning of York Minster by Jonathan Martin, I was told by an old hand, the (street) destruction of the best known public buildings in the country was tried; such as Canterbury Cathedral, Dover Castle, the Brighton Pavilion, Edinburgh Castle, or Holyrood House—all known to "travelling" patterers—but the success was not sufficiently encouraging. It was no use, I was told, firing such places as Hampton Court or Windsor Castle, for unless people *saw* the reflection of a great fire, they wouldn't buy.

Of the Sellers of Second Editions.

These "second editions" are, and almost universally, second or later editions of the newspapers, morning and evening, but three-fourths of the sale may be of the evening papers, and more especially of the *Globe* and *Standard.*

I believe that there is not now in existence—unless it be in a workhouse and unknown to his fellows, or engaged in some other avocation and lost sight of by them—any one who sold "second editions" (the *Courier* evening paper being then in the greatest demand) at the time of the Duke of York's Walcheren expedition, at the period of the battle of the Nile, during the continuance of the Peninsular war, or even at the battle of Waterloo. There were a few old men—some of whom had been soldiers or sailors, and others who have simulated it—surviving within these 5 or 6 years, and some later, who "worked Waterloo," but they were swept off, I was told, by the cholera.

"I was assured by a gentlemen who had a perfect remembrance of the "second editions"

(as they were generally called) sold in the streets, and who had often bought them upwards of forty years ago, that a sketch in the "Monthly Review," in a notice of Scott's "Lord of the Isles" (published in 1815), gave the best notion he had met with of what the second edition sale really was. At the commencement of the sixth canto of his poem, Sir Walter, somewhat too grandiloquently, in the judgment of his reviewer, asks—

"O who, that shared them, ever shall forget
The emotions of the spirit-rousing time,
When breathless in the mart the couriers met,
Early and late, at evening and at prime?"

"Who," in his turn asks the reviewer, "can avoid conjuring up the idea of men with broad sheets of foolscap, scored with 'VICTORIES' rolled round their hats, and horns blowing loud defiance in each other's mouth, from the top to the bottom of Pall-mall or the Haymarket, when he reads such a passage? We actually hear the Park and Tower guns, and the clattering of ten thousand bells, as we read, and stop our ears from the close and sudden intrusion of some hot and *horn-fisted* patriot, blowing ourselves, as well as Bonaparte to the devil!"

The horn carried by these "*horn*-fisted" men was a common tin tube, from two to three feet long, and hardly capable of being made to produce any sound beyond a sudden and discordant "trump, trump." The men worked with papers round their hats, in a way not very dissimilar to that of the running patterers of to-day.

The "editions" cried by these men during the war-time often contained spurious intelligence, but for that the editors of the journals were responsible—or the stock-jobbers who had imposed upon them. Any one who has consulted a file of newspapers of the period to which I have referred, will remember how frequent, and how false, were the announcements, or the rumours, of the deaths of Bonaparte, his brothers, or his marshals, in battle or by assassination.

As there was no man who was personally conversant with this traffic in what is emphatically enough called the "war-time," I sought out an old street-patterer who had been acquainted with the older hands in the trade, whose experience stretched to the commencement of the present century, and from him I received the following account:

"Oh, yes," he began, "I've worked 'seconds.' We used to call the editions generally seconds, and cry them sometimes, as the *latest* editions, whatever it was. There was Jack Griffiths, sir,—now wasn't he a hand at a second edition? I believe you. I do any kind of patter now myself, but I've done tidy on second editions, when seconds was to be had. Why, Jack Griffiths, sir—he'd been a sailor and was fond of talking about the sea—Jack Griffiths—you would have liked to have heard him—Jack told me that he once took 10*s.* 6*d.*—it was Hyde Park way—for a second edition of a paper when Queen Caroline's trial was over. Besides Jack, there was Tom Cole, called the Wooden Leg (he'd been a soldier I believe), and Whitechapel, and Old Brummagem, and Hell-fire Jack. Hell-fire Jack was said to be something to a man that was a trainer, and a great favourite of the old Duke of Queensberry, and was called Hell-fire Dick; but I can't say how it was. I began to work second editions, for the first time when George IV. died. They went off pretty well at 1*s.* a piece, and for three or four I got 2*s.* 6*d.* If it's anything good I get 1*s.* still, but very seldom any more. I always show anybody that asks that the paper *is* just what I've cried it. There's no regular cry; we cries what's up: '*Here's* the second edition of the *Globe* with the full perticlers of the death of his Majesty King George IV.' We work much in the same way as the running patter. Three of us shouts in the same spot. I was one of three who one night sold five quires, mostly *Globe* and *Standard*. It was at the Reform Bill time, and something about the Reform Bill. I never much heeded what the paper was about. I only wanted the patter, and soon got it. A mate, or any of us, looks out for anything good in the evening papers, to be ready. Why that night I speak of I was kept running backards and for'ards to the newspaper offices—and how they does keep you waiting at times!—mostly the *Globe* and *Standard*; we worked them all at the West End. There's twenty-seven papers to a quire, and we gave 4*d.* a piece for 'em and sold none, as well as I mind, for under 1*s.* I carried them mostly under my arm or in my hat, taking care they wasn't spoiled. Belgrave-square way, and St. George's, Hanover-square way, and Hyde Park way, are the best. The City's no good. There's only sixpences there. The coffee-shops has spoiled the City, as I'm afeard they will other parts. Murders in second editions don't sell now, and aren't tried much, beyond a few, if there's a late verdict. Curviseer (Courvoisier) was tidy. The trial weren't over 'til evening, and I sold six papers, and got 7*s.* for them, to gentlemen going away by the mail. I've heard that Greenacre was good in the same way, but I wasn't in town at the time. The French Revolution—the last one—was certainly a fairish go. Lewis Fillup was good many ways. When he used to be shot at—if the news weren't too early in the day—and when he got to England, and when he was said to have got back, or to have been taken. Why, of course he wern't to compare with Rush in the regular patter, but he was very fair. I have nothing to say against him, and wish he was alive, and could do it all over again. Lord Brougham's death wern't worth much to us. You remember the time, I dare say, sir, when they said he killed hisself in the papers, to see what folks would say on him. The resignation of a prime minister is mostly pretty good. Lord Melbourne was, and so was Sir Robert Peel. There's always somebody to say,

'Hurra! that's right!' and to buy a paper because he's pleased. I had a red paper in my hat when I worked the French Revolution. French news is generally liked in a fashionable drag. Irish news is no good, for people don't seem to believe it. Smith O'Brien's battle, though, did sell a little. It's not possible to tell you exactly what I've made on seconds. How can I? One week I may have cleared 1*l.* in them, and for six months before not a blessed brown. Perhaps—as near as I can recollect and calculate—I've cleared 3*l.* (if that) each year, one with another, in second editions in my time, and perhaps twenty others has done the same."

Another man who also knew the old hands said to me: "Lord bless us, how times is changed! you should have heard Jack Griffiths tell how he cried his gazettes: '*He-ere's* the *London Gazette* Ex-teromary, containing the hof-ficial account of the bloody and decisive wictory of Sally-manker.' Something that way. Patter wern't required then; the things sold theirselves. Why, the other day I was talking to a young chap that conceits hisself to be a hout-and-houter in patter, and I mentions Jack's crying *Gazettes* and getting 5*s.* apiece for many a one on 'em, and this young chap says, says he: '*Gazettes!* What did they cry *Gazettes?*—bankrupts, and all that?' 'Bankrupts be blowed!' said I, 'wictories!' I heerd Waterloo cried when I was a little 'un. The speeches on the opening of parliament, which the newspapers has ready, has no sale in the crowd to what they had. I only sold two papers at 6*d.* each this last go. I ventured on no more, or should have been a loser. If the Queen isn't there, none's sold. But we always has a speech ready, as close as can be got from what the morning papers says. One gent. said to me: 'But that ain't the real speech!' 'It's a far better,' says I, and so it is. Why now, sir, there's some reading and spirit in this bit. The Queen says:

'It is my determination by the assistance of divine providence to uphold and protect the Protestant Church of the British Empire, which has been enjoyed three hundred years without interruption, the Religion which our ancestors struggled to obtain. And as long as it shall please God to spare me, I will endeavour to maintain the rights and perogatives of our holy Protestant Church. And now my Lords, I leave you to your duties, to the helm of the state, to the harbour of peace, and happiness.'"

This man showed me the street speech, which was on a broad sheet set off with the royal arms. The topics and arrangement were the same as those in the speech delivered by her Majesty.

On Monday morning last (Feb. 24), I asked the man who told me that prime ministers' resignations were "pretty good" for the street traffic, if he had been well remunerated by the sale of the evening papers of Saturday, with the account of Lord John Russell's resignation. "It wern't tried, sir," he answered; "there was nothing new in the evenings, and we thought nobody seemed to care about it. The newspaper offices and their boarders (as he called the men going about with announcements on boards) didn't make very much of it, so we got up a song instead; but it was no good,—not salt to a fresh herring—for there was some fresh herrings in. It was put strong, though. This was the last verse:

'From the House to the Palace it has caused a bother,
Old women are tumbling one over another,
The Queen says it is with her, one thing or 'tother,
They must not discharge Little John;
Her Majesty vows that she is not contented,
And many ere long will have cause to repent it,
Had she been in the house she would nobly resent it,
And fought like a brick for Lord John.'"

Adopting the calculation of my first informant, and giving a profit of 150 per cent., we find 150*l.* yearly expended in the streets, in second editions, or probably it might be more correct to say 200*l.* in a year of great events, and 50*l.* in a year when such events are few.

Of the Standing Patterers.

The standing patterer I have already described in his resemblance to the mountebank of old, and how, like his predecessor, he required a "pitch" and an audience. I need but iterate that these standing patterers are men who remain in one place, until they think they have exhausted the custom likely to accrue there, or until they are removed by the police; and who endeavour to attract attention to their papers, or more commonly pamphlets, either by means of a board with coloured pictures upon it, illustrative of the contents of what they sell, or else by gathering a crowd round about them, in giving a lively or horrible description of the papers or books they are "working." The former is what is usually denominated in street technology, "board work." A few of the standing patterers give street recitations or dialogues.

Some of the "illustrations" most "in vogue" of late for the boards of the standing patterers were,—the flogging of the nuns of Minsk, the blood streaming from their naked shoulders, (anything against the Emperor of Russia, I was told, was a good street subject for a painting); the young girl, Sarah Thomas, who murdered her mistress in Bristol, dragged to the gallows by the turnkeys and Calcraft, the hangman; Calcraft himself, when charged with "starving his mother;" Haynau, in the hands of the draymen; the Mannings, and afterwards the Sloanes. The two last-mentioned were among the most elaborate, each having a series of "compartments," representing the different stages of the events in which those heroes and heroines flourished. I shall speak afterwards of street-artists who are the painters of these boards, and then describe the pictures more fully. There are also, as before alluded to, what may be called "cocks" in street paintings, as well as street literature.

Two of the most favourite themes of the standing patterers were, however, the "Annals of the White House in Soho-square," and the

Public Domain, Google-digitized / http://www.hathitrust.org/access_use#pd-google

"Mysteries of Mesmerism." Both supplied subjects to the boards.

The White House was a notorious place of ill fame. Some of the apartments, it is said, were furnished in a style of costly luxury; while others were fitted up with springs, traps, and other contrivances, so as to present no appearance other than that of an ordinary room, until the machinery was set in motion. In one room, into which some wretched girl might be introduced, on her drawing a curtain as she would be desired, a skeleton, grinning horribly, was precipitated forward, and caught the terrified creature in his, to all appearance, bony arms. In another chamber the lights grew dim, and then seemed gradually to go out. In a little time some candles, apparently self-ignited, revealed to a horror stricken woman, a black coffin, on the lid of which might be seen, in brass letters, ANNE, or whatever name it had been ascertaind the poor wretch was known by. A sofa, in another part of the mansion, was made to descend into some place of utter darkness; or, it was alleged, into a room in which was a store of soot or ashes.

Into the truth or exaggeration of these and similar statements, it is not my business to inquire; but the standing patterer made the most of them. Although the house in question has been either rebuilt or altered—I was told that each was the case—and its abominable character has ceased to apply to it for some years, the patterer did not scruple to represent it as still in existence (though he might change the venue as to the square at discretion) and that all the atrocities perpetrated—to which I have not ventured even to allude—were still the ordinary procedures of "high life." Neither did the standing patterer scruple, as one man assured me, to "name names;" to attribute vile deeds to any nobleman or gentleman whose name was before the public; and to embellish his story by an allusion to a recent event. He not unfrequently ended with a moral exhortation to all ladies present to avoid this "abode of iniquity for the rich." The board was illustrated with skeletons, coffins, and other horrors; but neither on it, nor in a hardly intelligible narrative which the patterer sold, was there anything indecent.

The "Mysteries of Mesmerism" was an account of the marvels of that "newly-discovered and most wonderful power in natur and art." With it Dr. Elliotson's, or some well-known name, was usually associated, and any marvel was "pattered," according to the patterer's taste and judgment. The illustrations were of persons, generally women, in a state of coma, but in this also there was no indecency; nor was there in the narrative sold.

Of these two popular exhibitions there are, I am informed, none now in town, and both, I was told, was more the speculations of a printer, who sent out men, than in the hands of the regular patterers.

It may tend somewhat to elucidate the character of the patterers, if I here state, that in my conversation with the whole of them, I heard from their lips strong expressions of disgust at Sloane,—far stronger than were uttered in abhorrence of any murderer. Rush, indeed, was, and is, a popular man among them. One of them told me, that not long before Madame Tussaud's death, he thought of calling upon that "wenerable lady," and asking her, he said, "to treat me to something to drink the immortal memory of Mr. Rush, my friend and her'n."

It is admitted by all concerned in the exercise of street elocution, that "the stander" must have "the best of patter." He usually works alone,—there are very rarely two at standing patter,—and beyond his board he has no adventitious aids, as in the running patter, so that he must be all the more effective; but the board is pronounced "as good as a man." When the standing patterer visits the country, he is accompanied by a mate, and the "copy of werses" is then announced as being written by an "underpaid curate" within a day's walk. "It tells mostly, sir," said one man; "for it's a blessing to us that there always is a journeyman parson what the people knows, and what the patter fits." Sometimes the poetry is attributed to a sister of mercy, or to a popular poetess; very frequently, by the patterers who best understand the labouring classes, to Miss Eliza Cook. Sometimes the verses are written by "a sympathising gent. in that parish," but his name wasn't to be mentioned. Another intelligent patterer whom I questioned on the subject, told me that my information was correct. "It's just the same in the newspapers," he continued; "why the 'sympathising gent.' is the same with us as what in the newspapers is called "other intelligence (about any crime), to publish which might defeat the ends of justice." That means, they know nothing at all about it, and can't so much as venture on a guess. I've known a little about it for the papers, sir,—it doesn't matter in what line."

Some standing patterers are brought up to the business from childhood. Some take to it through loss of character, or through their inability to obtain a situation from intemperate habits, and some because "a free life suits me best." In a former inquiry into a portion of this subject, I sought a standing patterer, whom I found in a threepenny lodging-house in Mint-street, Southwark. On my inquiring what induced him to adopt, or pursue, that line of life, he said:—

"It was distress that first drove me to it. I had learnt to make willow bonnets, but that branch of trade went entirely out. So, having a wife and children, I was drove to write out a paper that I called 'The People's Address to the King on the Present State of the Nation.' I got it printed, and took it into the streets and sold it. I did very well with it, and made 5*s.* a day while it lasted. I never was brought up to any mechanical trade. My father was a cler-

Original from HARVARD UNIVERSITY

gyman" [here he cried bitterly]. "It breaks my heart when I think of it. I have as good a wife as ever lived, and I would give the world to get out of my present life. It would be heaven to get away from the place where I am. I am obliged to cheer up my spirits. If I was to give way to it, I shouldn't live long. It's like a little hell to be in the place where we live" [crying], "associated with the ruffians that we are. My distress of mind is awful, but it won't do to show it at my lodgings—they'd only laugh to see me down-hearted; so I keep my trouble all to myself. Oh, I am heartily sick of this street work—the insults I have to put up with—the drunken men swearing at me. Yes, indeed, I am heartily sick of it."

This poor man had some assistance forwarded to him by benevolent persons, after his case had appeared in my letter in the *Morning Chronicle*. This was the means of his leaving the streets, and starting in the "cloth-cap trade." He seemed a deserving man.

Experience of a Standing Patterer.

From one of this body I received, at the period just alluded to, the following information:—

"I have taken my 5*s*. a day (said my informant); but 'paper' selling now isn't half so good as it used to be. People haven't got the money to lay out; for it all depends with the working man. The least we take in a day is, upon an average, sixpence; but taking the good and bad together, I should say we take about 10*s*. a week. I know there's some get more than that, but then there's many take less. Lately, I know, I haven't taken 9*s*. a week myself, and people reckon me one of the best patterers in the trade. I'm reckoned to have the gift—that is, the gift of the gab. I never works a last dying speech on any other than the day of execution—all the edge is taken off of it after that. The last dying speeches and executions are all printed the day before. They're always done on the Sunday, if the murderers are to be hung on the Monday. I've been and got them myself on the Sunday night, over and over again. The flying stationers goes with the papers in their pockets, and stand under the drop, and as soon as ever it falls, and long before the breath is out of the body, they begin bawling out." [Here my informant gave a further account of the flying stationers under the gallows, similar to what I have given. He averred that they "invented every lie likely to go down."] "'Here you have also an exact likeness,' they say, 'of the murderer, taken at the bar of the Old Bailey!' when all the time it is an old wood-cut that's been used for every criminal for the last forty years. I know the likeness that was given of Hocker was the one that was given for Fauntleroy; and the wood-cut of Tawell was one that was given for the Quaker that had been hanged for forgery twenty years before. Thurtell's likeness was done expressly for the 'papers;' and so was the Mannings' and Rush's likenesses too. The murders are bought by men, women, and children. Many of the tradespeople bought a great many of the affair of the Mannings. I went down to Deptford with mine, and did uncommonly well. I sold all off. Gentlefolks won't have anything to do with murders sold in the street; they've got other ways of seeing all about it. We lay on the horrors, and picture them in the highest colours we can. We don't care what's in the 'papers' in our hands. All we want to do is to sell 'em; and the more horrible we makes the affairs, the more sale we have. We do very well with 'love-letters.' They are 'cocks;' that is, they are all fictitious. We give it out that they are from a tradesman in the neighbourhood, not a hundred yards from where we are a-standing. Sometimes we say it's a well-known sporting butcher; sometimes it's a highly respectable publican—just as it will suit the tastes of the neighbourhood. I got my living round Cornwall for one twelvemonth with nothing else than a love-letter. It was headed, 'A curious and laughable love-letter and puzzle, sent by a sporting gentleman to Miss H—s—m, in *this* neighbourhood;' that suits any place that I may chance to be in; but I always patter the name of the street or village where I may be. This letter, I say, is so worded, that had it fallen into the hands of her mamma or papa, they could not have told what it meant; but the young lady, having so much wit, found out its true meaning, and sent him an answer in the same manner. You have here, we say, the number of the house, the name of the place where she lives (there is nothing of the kind, of course), and the initials of all the parties concerned. We dare not give the real names in full, we tell them; indeed, we do all we can to get up the people's curiosity. I did very well with the 'Burning of the House of Commons.' I happened by accident to put my pipe into my pocket amongst some of my papers, and burnt them. Then, not knowing how to get rid of them, I got a few straws. I told the people that my burnt papers were parliamentary documents that had been rescued from the flames, and that, as I dare not sell them, I would let them have a straw for a penny, and give them one of the papers. By this trick I got rid of my stock twice as fast, and got double the price that I should have done. The papers had nothing at all to do with the House of Commons. Some was 'Death and the Lady,' and 'Death and the Gentleman,' and others were the 'Political Catechism,' and 365 lies, Scotch, English, and Irish, and each lie as big round as St. Paul's. I remember a party named Jack Straw, who laid a wager, half-a-gallon of beer, that he'd bring home the money for two dozen blank papers in one hour's time. He went out into the Old-street-road, and began a patter about the political affairs of the nation, and Sir Robert Peel, and the Duke of Wellington, telling the public that he dared not sell his papers, they were treasonable; so he gave them with a straw—that he sold for one penny. In less than the hour he was sold clean out, and returned and drank the beer. The

Original from HARVARD UNIVERSITY

chief things that I work are quarter-sheets of recitations and dialogues. One is 'Good Advice to Young Men on Choosing their Wives.' I have done exceedingly well with that—it's a good moral thing. Another is the 'Drunkard's Catechism;' another is 'The Rent Day; or, the Landlord gathering his Rents.' This is a dialogue between the landlord and his tenant, beginning with 'Good morning, Mrs. Longface; have you got my rent ready, ma'am?' The next one is 'The Adventures of Larry O'Flinn.' It's a comic story, and a very good got-up thing. Another is 'A Hint to Husbands and Wives;' and 'A Pack of Cards turned into a Bible, a Prayer-book, and an Almanack.' These cards belonged to Richard Middleton, of the 60th regiment of foot, who was taken a prisoner for playing at cards in church during divine service. But the best I do is 'The Remarkable Dream of a Young Man of loose character, who had made an agreement to break into a gentleman's house at twelve at night on Whitsun Monday, but, owing to a little drink that he took, he had a remarkable dream, and dreamed he was in hell. The dream had such influence on his mind that he refused to meet his comrade. His comrade was taken up for the burglary, found guilty, and executed for it. This made such an impression on the young man's mind that he became a reformed character.' There is a very beautiful description of hell in this paper," said my informant, "that makes it sell very well among the old women and the apprentice lads, for the young man was an apprentice himself. It's all in very pretty poetry, and a regular 'cock.' The papers that I work chiefly are what are called 'the standing patters;' they're all of 'em stereotype, and some of them a hundred years old. We consider the 'death hunters' are the lowest grade in the trade. We can make most money of the murders while they last, but they don't last, and they merely want a good pair of lungs to get them off. But it's not every one, sir, that can work the standing patters. Many persons I've seen try at it and fail. One old man I knew tried the 'Drunkard's Catechism' and the 'Soldier's Prayer-book and Bible.' He could manage to patter these because they'll almost work themselves; but 'Old Mother Clifton' he broke down in. I heard him do it in Sun-street and in the Blackfriars-road; but it was such a dreadful failure—he couldn't humour it a bit—that, thinks I to myself, you'll soon have to give up, and sure enough he's never been to the printer's since. He'd a very poor audience, chiefly boys and girls, and they were laughing at him because he made so many blunders in it. A man that's never been to school an hour can go and patter a dying speech or 'A Battle between Two Ladies of Fortune.' They require no scholarship. All you want is to stick a picture on your hat, to attract attention, and to make all the noise you can. It's all the same when they does an 'Assassination of Louis Philippe,' or a 'Diabolical Attempt on the Life of the Queen'—a good stout pair of lungs and plenty of impudence is all that is required. But to patter 'Bounce, the Workhouse Beadle, and the Examination of the Paupers before the Poor-law Commissioners,' takes a good head-piece and great gift of the gab, let me tell you. It's just the same as a play-actor. I can assure you I often feel very nervous. I begin it, and walk miles before I can get confidence in myself to make the attempt. I got rid of two quire last night. I was up among the gentlemen's servants in Crawford-street, Baker-street, and I had a very good haul out of the grown-up people. I cleared 1*s.* 8*d.* altogether. I did that from seven till nine in the evening. It's all chance-work. If it's fine, and I can get a crowd of grown-up people round me, I can do very well, but I can't do anything amongst the boys. There's very little to be done in the day-time. I begin at ten in the day, and stop out till one. After that I starts off again at five, and leaves off about ten at night. Marylebone, Paddington, and Westminster I find the best places. The West-end is very good the early part of the week, for any thing that's genteel, such as the 'Rich Man and his Wife quarrelling because they have no Family.' Our customers there are principally the footmen, the grooms, and the maid-servants. The east end of the town is the best on Friday and Saturday evenings. I very often go to Limehouse on Friday evening. Most part of the dock-men are paid then, and anything comic goes off well among them. On Saturdays I go to the New-cut, Ratcliff-highway, the Brill, and such places. I make mostly 2*s.* clear on a Saturday night. After nineteen years' experience of the patter and paper line in the streets, I find that a foolish nonsensical thing will sell twice as fast as a good moral sentimental one; and, while it lasts, a good murder will cut out the whole of them. It's the best selling thing of any. I used at one time to patter religious tracts in the street, but I found no encouragement. I did the 'Infidel Blacksmith'—that would not sell. 'What is Happiness? a Dialogue between Ellen and Mary'—that was no go. No more was the 'Sorrows of Seduction.' So I was driven into the comic standing patters."

The more recent "experiences" of standing patterers, as they were detailed to me, differ so little in subject, or anything else, from what I have given concerning running patterers, that to cite them would be a repetition.

From the best information to be obtained, I have no doubt that there are always at least 20 standing patterers—sometimes they are called "boardmen"—at work in London. Some of them "run" occasionally, but an equal number or more, of the regular "runners" resort now and then to the standing patter, so the sum is generally kept up.

Notwithstanding the drawbacks of bad weather, which affects the standing, and does not affect the running, patterer; and notwithstanding the more frequent interruptions of the police, I am of opinion that the standing patterer earns

Original from HARVARD UNIVERSITY

on an average 1*s.* a week more than his running brother. His earnings too are often all his own; whereas the runners are a 'school,' and, their gains divided. More running patterers become, on favourable occasions, stationary, with boards, perhaps in the proportion of five to four, than the stationary become itinerant. One standing patterer told me, that, during the excitement about the Sloanes, he cleared full 3*s.* a day for more than a week; but at other times he had cleared only 1*s.* 6*d.* in a whole week, and he had taken nothing when the weather was too wet for the standing work, and there was nothing up to "run" with.

If, then, 20 standing patterers clear 10*s.* weekly, each, the year through—"taking" 15*s.* weekly—we find that 780*l.* is yearly expended in the standing patter of London streets.

The capital required for the start of the standing is greater than that needed by the running patterer. The painting for a board costs 3*s.* 6*d.*; the board and pole, with feet, to which it is attached, 5*s.* 6*d.*; and stock-money, 2*s.*; in all, 11*s.*

Of Political Litanies, Dialogues, etc.

To "work a litany" in the streets is considered one of the higher exercises of professional skill on the part of the patterer. In working this, a clever patterer—who will not scruple to introduce anything out of his head which may strike him as suitable to his audience—is very particular in his choice of a mate, frequently changing his ordinary partner, who may be good "at a noise" or a ballad, but not have sufficient acuteness or intelligence to patter politics as if he understood what he was speaking about. I am told that there are not twelve patterers in London whom a critical professor of street elocution will admit to be capable of 'working a catechism' or a litany. "Why, sir," said one patterer, "I've gone out with a mate to work a litany, and he's humped it in no time." To 'hump,' in street parlance, is equivalent to 'botch,' in more genteel colloquialism. "And when a thing's humped," my informant continued, "you can only 'call a go.'" To 'call a go,' signifies to remove to another spot, or adopt some other patter, or, in short, to resort to some change or other in consequence of a failure.

An elderly man, not now in the street trade, but who had "pattered off a few papers" some years ago, told me that he had heard three or four old hands—"now all dead, for they're a short-lived people"—talk of the profits gained and the risk ran by giving Hone's parodies on the Catechism, Litany, St. Athanasius' Creed, &c. in the streets, after the three consecutive trials and the three acquittals of Hone had made the parodies famous and Hone popular. To work them in the streets was difficult, "for though," said my informant, "there was no new police in them days, there was plenty of officers and constables ready to pull the fellows up, and though Hone was acquitted, a beak that wanted to please the high dons, would find some way of stopping them that sold Hone's things in the street, and so next to nothing could be done that way, but a little was done." The greatest source of profit, I learned from the reminiscences of the same man, was in the parlours and tap-rooms of public-houses, where the patterers or reciters were well paid "for going through their catechisms," and sometimes, that there might be no interruption, the door was locked, and even the landlord and his servants excluded. The charge was usually 2*d.* a copy, but 1*d.* was not refused.

During Queen Caroline's trial there were the like interruptions and hindrances to similar performances; and the interruptions continued during the passing of the Catholic Emancipation Bill until about the era of the Reform Bill, and then the hindrance was but occasional. "And perhaps it was our own fault, sir," said one patterer, "that we was then molested at all in the dialogues and catechisms and things; but we was uncommon bold, and what plenty called sarcy, at that time: we was so."

Thus this branch of a street profession continued to be followed, half surreptitiously, until after the subsidence of the political ferment consequent on the establishment of a new franchise and the partial abolition of an old one. The calling, however, has never been popular among street purchasers, and I believe that it is sometimes followed by a street-patterer as much from the promptings of the pride of art as from the hope of gain.

The street-papers in the dialogue form have not been copied nor derived from popular productions—but even in the case of Political Litanies and Anti-Corn-law Catechisms and Dialogues are the work of street authors.

One intelligent man told me, that properly to work a political litany, which referred to ecclesiastical matters, he "made himself up," as well as limited means would permit, as a bishop! and "did stunning, until he was afraid of being stunned on skilly." Of the late papers on the subject of the Pope, I cite the one which was certainly the best of all that appeared, and concerning which indignant remonstrances were addressed to some of the newspapers. The "good child" in the patter, was a tall bulky man; the examiner (also the author), was rather diminutive:—

"*The old English Bull John v. the Pope's Bull of of Rome.*

"My good Child as it is necessary at this very important crisis; when, that good pious and very reasonable old gentleman Pope Pi-ass the nineth has promised to favor us with his presence, and the pleasures of Popery—and trampled on the rights and privilages which, we, as Englishmen, and Protestants, have engaged for these last three hundred years—Since Bluff, king Hal. began to take a dislike to the broad brimmed hat of the venerable Cardinal Wolsey, and proclaimed himself an heretic; It is necessary I say, for you, and all of you, to be perfect in your Lessons so as you may be able to verbly chastize this saucy prelate, his newly made Cardinal Foolishman, and the whole host of Puseites and protect our beloved Queen, our Church, and our Constitution.

"*Q.* Now my boy can you tell me what is your Name?

"*A.* B—— Protestant.

"Q. How came you by that name?

"A. At the time of Harry the stout, when Popery was in a galloping consumption the people protested against the surpremacy and instalence of the Pope; and his Colleges had struck deep at the hallow tree of superstition I gained the name of Protestant, and proud ant I, and ever shall be to stick to it till the day of my death.

"Let us say.

"From all Cardinals whether wise or foolish. Oh! Queen Spare us.

"Spare us, Oh Queen.

"From the pleasure of the Rack, and the friendship of the kind hearted officers of the Inquisition. Oh! Johnny hear us.

"Oh! Russell hear us.

"From the comforts of being frisled like a devil'd kindney. Oh! Nosey save us.

"Hear us Oh Arthur.

"From such saucy Prelates, as Pope Pi-ass. Oh! Cumming's save us.

"Save us good Cumming.

"And let us have no more Burnings in smithfield, no more warm drinks in the shape of boiled oil, or, molten lead, and send the whole host of Pusyites along with the Pope, Cardinals to the top of mount Vesuvius there to dine off of hot lava, so that we may live in peace & shout long live our Queed, and No Popery!"

For some pitches the foregoing was sufficient, for a street auditory "hates too long a patter;" but where a favourable opportunity offered, easily tested by the pecuniary beginnings, the "Lesson of the Day" was given in addition, and was inserted after the second "Answer" in the foregoing parody, so preceding the "Let us say:"

"The Lesson of the Day.

"You seem an intelligent lad, so I think you are quite capable of Reading with me the Lessons for this day's service.

"Now the Lesson for the day is taken from all parts of the Book of Martyr's, beginning at just where you like.

"It was about the year 1835, that a certain renagade of the name of Pussy—I beg his pardon, I mean Pusey, like a snake who stung his master commenced crawling step by step, from the master; he was bound to serve to worship a puppet, arrayed in a spangle and tincel of a romish showman.

"And the pestelance that he shed around spread rapidly through the minds of many unworthy members of our established Church; even up to the present year, 1850, inasmuch that St Barnabus, of Pimlico, unable to to see the truth by the aid of his occulars, mounted four pounds of long sixes in the mid-day, that he might see through the fog of his own folly, by which he was surrounded.

"And Pope Pi-ass the nineth taking advantage of the hubub, did create unto himself a Cardinal in the person of one Wiseman of Westminster.

"And Cardinal broadbrim claimed four counties in England as his dioces, and his master the Pope claimed as many more as his sees, but the people of England could not see that, so they declared aloud they would see them blowed first.

"So when Jack Russell heard of his most impudent intentions, he sent him a Letter saying it was the intention of the people of England never again to submit to their infamous mumerys for the burnings in Smithfield was still fresh in their memory.

"And behold great meetings were held in different parts of England where the Pope was burnt in effigy, like unto a Yarmouth Bloater, as a token of respect for him and his followers.

"And the citizens of London were stanch to a man, and assembled together in the Guildhall of our mighty City and shouted with stentarian lungs, long live the Queen and down with the Pope, the sound of which might have been heard even unto the vatican of Rome.

"And when his holyness the Pope heard that his power was set at naught, his nose became blue even as a bilberry with rage and declared Russell and Cummings or any who joined in the No Popery cry, should ever name the felisity of kissing his pious great toe.

"Thus Endeth the Lesson."

In the course of my inquiries touching this subject I had more than once occasion to observe that an acute patterer had always a reason, or an excuse for anything. One quick-witted Irishman, whom I knew to be a Roman Catholic, was "working" a "patter against the Pope," (not the one I have given), and on my speaking to him on the subject, and saying that I supposed he did it for a living, he replied: "That's it then, sir. You're right, sir, yes. I work it just as a Catholic lawyer would plead against a Catholic paper for a libel on Protestants—though in his heart he knew the paper was right—and a Protestant lawyer would defend the libel hammer and tongs. Bless you, sir, you'll not find much more honour that way among us (laughing) than among them lawyers; not much." The readiness with which the sharpest of those men plead the doings not only of tradesmen, but of the learned and sacred professions, to justify themselves, is remarkable.

Sometimes a dialogue is of a satirical nature. One man told me that the "Conversation between Achilles and the Wellington Statue," of which I give the concluding moiety, was "among the best," (he meant for profit), "but no great thing." My informant was Achilles—or, as he pronounced it, Atchilees—and his mate was the statue, or "man on the horse." The two lines, in the couplet form, which precede every two paragraphs of dialogue, seem as if they represent the speakers wrongfully. The answer should be attributed, in each case, to Achilles.

"The hoarse voice it came from the statue of Achilles
And 'twas answer'd thus by the man on the horse.

"Little man of little mind havn't I now got iron blinds, and bomb-proof rails when danger assails, a cunning devised job, to keep out an unruly mob, with high and ambitious views and remarkable queer shoes; I say, Old Nakedness, I say, come and see my frontage over the way, but I believe you can't get out after ten!

"No, you're as near where you are as at Quatre Bras, I hear a great deal what the public think and feel, plain as the nose on your face, we're deemed a national disgrace; they grumble at your high-ness, and at my want of shyness, and say many unpleasant things of Ligny and Marchienne!

"The hoarse voice it came from the statue of Achilles
And 'twas answer'd thus by the man on the horse.

"Ah! its a few days since the Nive, where Soult found me all alive, and the grand toralloo I made at Bordeaux; wasn't I in a nice mess, when Boney left Elba and left no address, besides 150 other jobs with the chill off I could bring to view.

"But then people will say, poor unfortunate Ney, and that you were dancing at a ball, and not near Hogumont at all, and that the job of St. Helena might have been done rather cleaner, and it was a shameful go to send Sir Hudson Lowe, and that you took particular care of No. 1, at Waterloo.

"The hoarse voice it came from the statue of Achilles
And 'twas answer'd thus by the man on the horse.

"Why flog 'em and 'od 'rot em, who said 'Up Guards and at 'em!' and you know that nice treat I received in Downing Street, when hooted by a thousand or near, defended by an old grenadier, so no whopping I got,

good luck to his old tin pot, oh! there's a deal of brass in me I'll allow.

"Its prophecied you'll break down, they're crying it about town, and many jokes are past, that you're brought to the scaffold at last, and they say I look black, because I've no shirt to my back, and its getting broad daylight, I vow!

"The hoarse voice it came from the statue of Achilles
But 'twas answer'd thus by the man on the horse.
"H. V. HOOKER."

Of parodies other than the sort of compound of the Litany and other portions of the Church Service, which I have given, there are none in the streets—neither are there political duets. Such productions as parodies on popular songs, "Cab! cab! cab!" or "Trip! trip! trip!" are now almost always derived, for street-service, from the concert-rooms. But they relate more immediately to ballads, or street song; and not to patter.

OF "COCKS," ETC.

THESE "literary forgeries," if so they may be called, have already been alluded to under the head of the "Death and Fire Hunters," but it is necessary to give a short account of a few of the best and longest know nof those stereotyped; no new cocks, except for an occasion, have been printed for some years.

One of the stereotyped cocks is, the "Married Man Caught in a Trap." One man had known it sold "for years and years," and it served, he said, when there was any police report in the papers about sweethearts in coal-cellars, &c. The illustration embraces two compartments. In one a severe-looking female is assaulting a man, whose hat has been knocked off by the contents of a water-jug, which a very stout woman is pouring on his head from a window. In the other compartment, as if from an adjoining room, two women look on encouragingly. The subject matter, however, is in no accordance with the title or the embellishment. It is a love-letter from John S—n to his most "adorable Mary." He expresses the ardour of his passion, and then twits his adored with something beyond a flirtation with Robert E—, a "decoyer of female innocence." Placably overlooking this, however, John S—n continues:—

"My dearest angel consent to my request, and keep me no longer in suspense—nothing, on my part, shall ever be wanting to make you happy and comfortable. My apprenticeship will expire in four months from hence, when I intend to open a shop in the small ware line, and your abilities in dress-making and self-adjusting stay-maker, and the assistance of a few female mechanics, we shall be able to realize an independency."

"Many a turn in seductions talked about in the papers and not talked about nowhere," said one man, "has that slum served for, besides other things, such as love-letters, and confessions of a certain lady in this neighbourhood."

Another old cock is headed, "Extraordinary and Funny Doings in this Neighbourhood." The illustration is a young lady, in an evening dress, sitting with an open letter in her hand, on a sort of garden-seat, in what appears to be a churchyard. After a smart song, enforcing the ever-neglected advice that people should "look at home and mind their own business," are two letters, the first from R. G.; the answer from S. H. M. The gentleman's epistle commences:—

"Madam,
"The love and tenderness I have hitherto expressed for you is false, and I now feel that my indifference towards you increases every day, and the more I see you the more you appear ridiculous in my eyes and contemptible—I feel inclined & in every respect disposed & determined to hate you. Believe me, I never had any inclination to offer you my hand."

The lady responds in a similar strain, and the twain appear very angry, until a foot-note offers an explanation: "By reading every other line of the above letters the true meaning will be found."

Of this class of cocks I need cite no other specimens, but pass on to one of another species—the "Cruel and Inhuman Murder Committed on the Body of Capt. Lawson." The illustration is a lady, wearing a coronet, stabbing a gentleman, in full dress, through the top button of his waistcoat. The narrative commences:—

"WITH surprise we have learned that this neighbourhood for a length of time was amazingly alarmed this day by a crowd of people carrying the body of Mr. James Lawless, to a doctor while streams of blood besmeared the way in such a manner that the cries of Murder re-echoed the sound of numerous voices. It appears that the cause of alarm, originated through a court-ship attended with a solemn promise of marriage between him and miss Lucy Guard, a handsome young Lady of refined feelings with the intercourse of a superior enlightened mind she lived with her aunt who spared neither pain nor cost to improve the talents of miss G. those seven years past, since the death of her mother in Ludgate Hill, London, and bore a most excellent character until she got entangled by the delumps aleurement of Mr. L."

The writer then deplores Miss Guard's fall from virtue, and her desertion by her betrayer, "on account of her fortune being small." Capt. Lawson, or Mr. James Lawless, next woos a wealthy City maiden, and the banns are published. What follows seems to me to be a rather intricate detail:—

"We find that the intended bride learned that miss Guard, held certain promissory letters of his, and that she was determined to enter an action against him for a breach of promise, which moved clouded Eclipse over the extacy of the variable miss Lawless who knew that Miss G had Letters of his sufficient to substantiate her claims in a court."

Lawson visits Miss Guard to wheedle her out of his letters, but "she drew a large carving-knife and stabbed him under the left breast." At the latest account the man was left without hope of recovery, while "the valiant victress" was "ordered to submit to judicial decorum in the nineteenth year of her age." The murders and other atrocities for which this "cock" has been sponsor, are—I was informed emphatically—a thundering lot!

I conclude with another cock, which may be called a narrative "on a subject," as we have "ballads on a subject" (afterwards to be described), but with this difference, that the narrative is fictitious, and the ballad must be founded

Original from HARVARD UNIVERSITY

on a real event, however embellished. The highest newspaper style, I was told, was aimed at. Part of the production reads as if it had done service during the Revolution of February, 1848.

"Express from Paris. Supposed Death of LOUIS NAPOLEON. We stop the press to announce, that Luis Napoleon has been assasinated, by some it is said he is shot dead, by others that he is only wounded in the right arm.

"We have most important intelligence from Paris. That capital is in a state of insurrection. The vivacious people, who have herefore defeated the goverment by paving-stones, have again taken up those missiles. On Tuesday the Ministers forbade the reform banquet, and the prefect of police published a proclamation warning the people to respect the laws, which he declared were violated, and he meant to enforce them. But the people dispised the proclamation and rejected his authority. They assembled in great multitudes round the Chambers of Deputies, and forced their way over the walls. They were attacked by the troops and dispersed, but, re-assembled in various quarters. They showed their hatred of M. Guizot by demolishing his windows and attempting to force an entrance into his hotel, but were again repulced by the troops. All the military in Paris, and all the National Guard, have been summoned to arms, and every preparation made on the part of the government to put down the people.

"The latter have raised barricades in various places, and have unpaved the streets, overturned omnibusses, and made preparations for a vigorous assault, or a protracted resistance.

"Five o'Closk—At this momont the Rue St. Honore is blockaded by a detachment dragoons, who fill the market-place near the Rue des Petits Champs, and are charging the people sword in hand, carriages full of deople are being taken to the hospitals.

"In fact the maddest excitement reigns throughout the capital.

"Half past Six.—During the above we have instituted enquiries at the Foreign office, they have not received any inteligence of the above report, if it has come, it must have been by pigeon express. We have not given the above in our columns with a view of its authenticity, any further information as soon as obtained shall be immediately announced to the public."

Of "Strawing."

I have already alluded to "strawing," which can hardly be described as quackery. It is rather a piece of mountebankery. Many a quack—confining the term to its most common signification, that of a "quack doctor"—has faith in the excellence of his own nostrums, and so proffers that which he believes to be curative: the strawer, however, sells what he *knows* is not what he represents it.

The strawer offers to *sell* any passer by in the streets a straw and to *give* the purchaser a paper which he *dares not* sell. Accordingly as he judges of the character of his audience, so he intimates that the paper is political, libellous, irreligious, or indecent.

I am told that as far back as twenty-five or twenty-six years, straws were sold, but only in the country, with leaves from the *Republican*, a periodical published by Carlile, then of Fleet-street, which had been prosecuted by the government; but it seems that the trade died away, and was little or hardly known again until the time of the trial of Queen Caroline, and then but sparingly. The straw sale reached its highest commercial pitch at the era of the Reform Bill. The most successful trader in the article is remembered among the patterers as "Jack Straw," who was oft enough represented to me as the original strawer. If I inquired further, the answer was: "He was the first in my time." This Jack Straw was, I am told, a fine-looking man, a natural son of Henry Hunt, the blacking manufacturer. He was described to me as an inveterate drunkard and a very reckless fellow. One old hand was certain that this man was Hunt's son, as he himself had "worked" with him, and was sometimes sent by him when he was "in trouble," or in any strait, to 32, Broadwall, Blackfriars, for assistance, which was usually rendered. (This was the place where Hunt's "Matchless Blacking" and "Roasted Corn" were vended.) Jack Straw's principal "pitch" was at Hyde Park Corner, "where," said the man whom I have mentioned as working with him, "he used to come it very strong against Old Nosey, the Hyde Park bully as he called him. To my knowledge he's made 10*s*., and he's made 15*s*. on a night. O, it didn't matter to him what he sold with his straws, religion or anything. There was no three-pennies (three-penny newspapers) then, and he had had a gentleman's education, and knew what to say, and so the straws went off like smoke." The articles which this man "durst not sell" were done up in paper, so that no one could very well peruse them on the spot, as a sort of stealth was implied. On my asking Jack Straw's co-worker if he had ever drank with him, "Drank with him!" he answered, "Yes, many a time. I've gone out and pattered, or chaunted, or anything, to get money to buy him two glasses of brandy—and good brandy was very dear then—before he could start, for he was all of a tremble until he had his medicine. If I couldn't get brandy, it was the best rum, 'cause he had all the tastes of a gentleman. Ah! he's been dead some years, sir, but where he died I don't know. I only heard of his death. He was a nice kindly fellow."

The *ruse* in respect of strawing is not remarkable for its originality. It was an old smuggler's trick to *sell* a sack and *give* the keg of contraband spirit placed within it and padded out with straw so as to resemble a sack of corn. The hawkers, prior to 1826, when Mr. Huskisson introduced changes into the Silk Laws, *gave* "real Ingy handkerchiefs" (sham) to a customer, and *sold* him a knot of tape for about 4*s*. The price of a true Bandana, then prohibited, and sold openly in the draper's shops, was about 8*s*. The East India Company imported about a million of Bandanas yearly; they were sold by auction for exportation to Hamburgh, &c., at about 4*s*. each, and were nearly all smuggled back again to England, and disposed of as I have stated.

It is not possible to give anything like statistics as to the money realised by strawing. A well-informed man calculated that when the

trade was at its best, or from 1832 to 1836, there might be generally fifty working it in the country and twenty in London; they did not confine themselves, however, to strawing, but resorted to it only on favourable opportunities. Now there are none in London—their numbers diminished gradually—and very rarely any in the country.

Of the Sham Indecent Street-trade.

This is one of those callings which are at once repulsive and ludicrous; repulsive, when it is considered under what pretences the papers are sold, and ludicrous, when the disappointment of the gulled purchaser is contemplated.

I have mentioned that one of the allurements held out by the strawer was that his paper—the words used by Jack Straw—could "not be admitted into families." Those following the "sham indecent trade" for a time followed his example, and professed to sell straws and give away papers; but the London police became very observant of the sale of straws—more especially under the pretences alluded to—and it has, for the last ten years, been rarely pursued in the streets.

The plan now adopted is to sell the sealed packet itself, which the "patter" of the street-seller leads his auditors to believe to be some improper or scandalous publication. The packet is some coloured paper, in which is placed a portion of an old newspaper, a Christmas carol, a religious tract, or a slop-tailor's puff (given away in the streets for the behoof of another class of gulls). The enclosed paper is, however, never indecent.

From a man who had, not long ago, been in this trade, I had the following account. He was very anxious that nothing should be said which would lead to a knowledge that he was my informant. After having expressed his sorrow that he had ever been driven to this trade from distress, he proceeded to justify himself. He argued—and he was not an ignorant man—that there was neither common sense nor common justice in interfering with a man like him, who, "to earn a crust, pretended to sell what *shop-keepers*, that must pay church and all sorts of rates, sold without being molested." The word "shopkeepers" was uttered with a bitter emphasis. There are, or were, he continued, shops—for he seemed to know them all—and some of them had been carried on for years, in which shameless publications were not only sold, but exposed in the windows; and why should he be considered a greater offender than a shopkeeper, and be knocked about by the police? There are, or lately were, he said, such shops in the Strand, Fleet-street, a court off Ludgate-hill, Holborn, Drury-lane, Wych-street, the courts near Drury-lane Theatre, Haymarket, High-street, Bloomsbury, St. Martin's-court, May's buildings, and elsewhere, to say nothing of Holywell-street! Yet *he* must be interfered with!

[I may here remark, that I met with no street-sellers who did not disbelieve, or affect to disbelieve, that they were really meddled with by the police for obstructing the thoroughfare. They either hint, or plainly state, that they are removed solely to please the shop-keepers. Such was the reiterated opinion, real or pretended, of my present informant.]

I took a statement from this man, but do not care to dwell upon the subject. The trade, in the form I have described, had been carried on, he thought, for the last six years. At one time, 20 men followed it; at present, he believed there were only 6, and they worked only at intervals, and as opportunities offered: some going out, for instance, to sell almanacs or memorandum books, and, when they met with a favourable chance, offering their sealed packets. My informant's customers were principally boys, young men, and old gentlemen; but old gentlemen chiefly when the trade was new. This street-seller's "great gun," as he called it, was to make up packets, as closely resembling as he could accomplish it, those which were displayed in the windows of any of the shops I have alluded to. He would then station himself at some little distance from one of those shops, and, if possible, so as to encounter those who had stopped to study the contents of the window, and would represent—broadly enough, he admitted, when he dared—that he could sell for 6*d*. what was charged 5*s*., or 2*s*. 6*d*., or whatever price he had seen announced, "in that very neighbourhood." He sometimes ventured, also, to mutter something, unintelligibly, about the public being imposed upon! On one occasion, he took 6*s*. in the street in about two hours. On another evening he took 4*s*. 8*d*. in the street and was called aside by two old gentlemen, each of whom told him to come to an address given (at the West-end), and ask for such and such initials. To one he sold two packets for 2*s*.; to the other, five packets, each 1*s*.—or 11*s*. 8*d*. in one evening. The packets were in different coloured papers, and had the impressions of a large seal on red wax at the back; and he assured the old gents., as he called them, one of whom, he thought, was "silly," that they were all different. "And very likely," he said, chucklingly, "they were different; for they were made out of a lot of missionary tracts and old newspapers that I got dirt cheap at a 'waste' shop. I should like to have seen the old gent.'s face, as he opened his 5*s*. worth, one after another!" This trade, however, among old gentlemen, was prosperous for barely a month: "It got blown then, sir, and they wouldn't buy any more, except a very odd one."

This man—and he believed it was the same with all the others in the trade—never visited the public-houses, for a packet would soon have been opened and torn there, which, he said, people was ashamed to do in the public streets. As well as he could recollect, he had never sold a single packet to a girl or a woman. Drunken women of the town had occasionally made loud comments on his calling, and offered

to purchase; but on such occasions, fearful of a disturbance, he always hurried away.

I have said that the straw trade is now confined to the country, and I give a specimen of the article vended there, by the patterer in the sham indecent trade. It was purchased of a man, who sold it folded in the form of a letter, and is addressed, "On Royal Service. By Express. Private. To Her Royal Highness, Victoria, Princess Royal. Kensington Palace, London. Entered at Stationer's Hall." The man who sold it had a wisp of straw round his neck, and introduced his wares with the following patter:

"I am well aware that many persons here present will say what an absurd idea—the idea of selling straws for a halfpenny each, when there are so many lying about the street; but the reason is simply this: I am not allowed by the authorities to sell these papers, so I give them away and sell my straws. There are a variety of figures in these papers for gentlemen; some in the bed, some on the bed, some under the bed." The following is a copy of the document thus sold:—

> "Bachelors or Maidens, Husbands and Wives,
> Will love each other and lead happy lives;
> If both these Letters to read are inclined,
> Secrets worth knowing therein they will find.

"Dated from the Duchy of Coburg.

"Your adored Lover,
"ALBERT,
"Prince of Coburg."

On the back of this page is the following cool initiation of the purchaser into the mysteries of the epistle:

"**Directions for the purchasers to understand the** ***Royal Love Letters,*** and showing them how to practise the art of Secret Letter Writing:—

"Proceed to lay open 'Albert's Letter' by the side of 'Victoria's,' and having done so, then look carefully down them until you have come to a word at the left hand corner, near the end of each Letter, having two marks thus — —, when you must commence with that word, and read from left to right after you have turned them bottom upwards before a looking glass so that you may peruse the copy reflected therein. But you must notice, throughout all the words every other letter is upside down, also every other word single; but the next two words being purposely joined together, therefore they are double; and in addition to those letters placed upside down, makes it more mysterious in the reading. The reader is recommended to copy each word in writing, when he will be able to read the letters forward, and after a little practice he can soon learn to form all his words in the same curious manner, when he wants to write a 'secret letter.'

"Be sure when holding it up side down before a looking-glass, that the light of a candle, is placed between them by the reflection it will show much plainer, and be sooner discovered.

"If you intend to practise a *Joke* and make it answer the purpose of a Valentine, write what you think necessary on the adjoining *blank page*; then post it, with the superscription filled up in this manner:—After the word To, *write the name and address of the party* also place the word FROM *before* 'VICTORIA'S' name: then the address on the outside of this letter will read somewhat after the following fashion:—To Mr. or Mrs. so and so, (with the number if any,) in such and such a street: at the same time your letter will appear as if it came from Royalty.

"N.B. You must first buy both the letters, as the other letter is an answer to this one; and because, without the reader has got both letters, he will not have the secrets perfect."

Notwithstanding the injunction to buy *both* letters, and the seeming necessity of having both to understand the "directions," the patterer was selling only the one I have given.

That the trade in sham indecent publications was, at one time, very considerable, and was not unobserved by those who watch, as it is called, "the signs of the times," is shown by the circumstance that the Anti-Corn-Law League paper, called the *Bread Basket*, could only be got off by being done up in a sealed packet, and sold by patterers as a pretended improper work.

The really indecent trade will be described hereafter.

For a month my informant thought he had cleared 35*s.* a week; for another month, 20*s.*; and as an average, since that time, from 5*s.* to 7*s.* 6*d.* weekly, until he discontinued the trade. It is very seldom practised, unless in the evening, and perhaps only one street-seller depends entirely upon it.

Supposing that 6 men last year each cleared 6*s.* weekly, we find upwards of 93*l.* expended yearly in the streets on this rubbish.

The capital required to start in the business is 6*d.* or 1*s.*, to be expended in paper, paste, and sometimes sealing-wax.

Of Religious Tract Sellers.

The sellers of religious tracts are now, I am informed, at the least, about 50, but they were at one time, far more numerous. When penny books were few and very small, religious tracts were by far the cheapest things in print. It is common, moreover, for a religious society, or an individual, to give a poor person, children especially, tracts for sale. A great many tract sellers, from 25 to 35 years ago, were, or pre-

Original from HARVARD UNIVERSITY

tended to be, maimed old soldiers or sailors. The traffic is now in the hands of what may be called an anomalous body of men. More than one half of the tract sellers are foreigners, such as Malays, Hindoos, and Negros. Of them, some cannot speak English, and some—who earn a spare subsistence by selling Christian tracts — are Mahometans, or worshippers of Bramah! The man whose portrait supplies the daguerreotyped illustration of this number is unable to speak a word of English, and the absence of an interpreter, through some accident, prevented his statement being taken at the time appointed. I shall give it, however, with the necessary details on the subject, under another head.

With some men and boys, I am informed, tract-selling is but a pretext for begging.

Of a Benefit Society of Patterers.

In the course of my inquiries, I received an account of an effort made by a body of these people to provide against sickness,—a step so clearly in the right direction, and perhaps so little to be expected from the habits of the class, that I feel bound to notice it. It was called the "Street-sellers' Society;" but as nearly all the *bonâ-fide* members (or those who sought benefit from its funds) were patterers in paper, or ballad-singers, I can most appropriately notice their proceedings here.

The society "sprung up accidental," as it was expressed to me. A few paper-workers were conversing of the desirableness of such an institution, and one of the body suggested a benefit club, which it was at once determined to establish. It was accordingly established between six and seven years ago, and was carried on for about four years. The members varied in number from 40 to 50; but of a proportion of 40, as many as 18 might be tradesmen who were interested in the street-trade, either in supplying the articles in demand for it, or from keeping public-houses resorted to by the fraternity, or any such motive, or who were merely curious to mix in such society. Mr. C—— was conductor; Mr. J. H—— (a poet, and the writer of "Black Bess," "the Demon of the Sea," and other things which "took" in the streets), secretary; and a well-known patterer was under-conductor, with which office was mixed up the rather onerous duties of a kind of master of the ceremonies on meeting-nights. None of the officers were paid.

The subscription was *2d.* a week, and meetings of the members were held once a week. Each member, not an officer, paid ½*d.* for admission to the fund, and could introduce a visitor, who also paid ½*d.* No charge was made for the use of the club-room (in a public-house), which was entirely in the control of the members. Every one using bad language, or behaving improperly, was fined ½*d.*, and on a second offence was ejected, and sometimes, if the misbehaviour was gross, on the first. Any one called upon to sing, and refusing, or being unable, was fined ½*d.*, and was liable to be called upon again, and pay another fine. A visitor sometimes, instead of ½*d.*, offered *6d.* when fined; but this was not accepted,—only ½*d.* could be received. The members' wives could and did often accompany their husbands to the meetings; but women of the town, whether introduced by members or not, were not permitted to remain. "They found their way in a few times," said the man who was under-conductor to me, "but I managed to work them out without any bother, and without insulting them—God forbid!"

The assistance given was *5s.* weekly to sick members, who were not in arrear in their subscriptions. If the man had a family to support, a gathering was made for him, in addition to his weekly allowance,—for the members were averse to "distress the box" (fund). There was no allowance for the burial of a member, but a gathering took place, and perhaps a raffle, to raise funds for a wake (sometimes) and an interment; and during the existence of the society, three members, I was told, were buried that way "comfortably." The subscriptions were paid up regularly enough; "indeed," said a member to me, "if a man earned anything, his mates knew of it: we all know how the cat jumps that way, so he must either pay or be scratched." The members not unfrequently lent each other money to pay up their subscriptions. Fashionable young "swells," I was told, often visited the house, and stayed till 3 or 4 in the morning, but were very seldom in the club-room, which was closed regularly at 12. After that hour, the "swells" who were bent upon seeing life —(and they are a class whom the patterers, on all such occasions, not so very unreasonably consider "fair game" for bamboozling)—could enjoy the society congenial to their tastes or gratifying to their curiosity. On one occasion two policemen were among the visitors, and were on friendly terms enough with the members, some of whom they had seen before.

From the beginning there seems to have been a distrust of one another among the members, but a distrust not invincible or the club would never have been formed. Instead of the "box," or fund (the money being deposited in a box), being allowed to accumulate, so that an investment might be realised, available for any emergency, the fund was divided among the members quarterly, and then the subscription went on anew. The payments, however, fell off. The calling of the members was precarious, their absence in the country was frequent, and so the society ceased to exist, but the members were satisfied that every thing was done honourably.

The purpose to which the funds, on a quarterly division, were devoted, was one not confined to such men as the patterers—to a supper. "None of your light suppers, sir," said a member; "not by no means. And we were too fly to send anybody to market but ourselves. We used to go to Leadenhall, and buy a cut off a

sirloin, which was roasted prime, and smelt like a angel. But not so often, for its a dear jint, the bones is heavy. One of the favouritest jints was a boiled leg of mutton with caper trimmings. That *is* a good supper,—I believe you, my hero."

Of the Abodes, Tricks, Marriage, Character, and Characteristics of the Different Grades of Patterers.

Having now giving an account of those who may be called the literary patterers (proper), or at any rate of those who do not deem it vain so to account themselves, because they "work paper," I proceed to adduce an account of the different grades of patterers generally, for patter has almost as many divisions as literature. There is patter pathetic, as from beggars; bouncing, to puff off anything of little or no value; comic, as by the clowns; descriptive, as in the cases where the vendor describes, however ornately, what he really sells; religious, as occasionally by the vendors of tracts; *real patter* (as it is understood by the profession) to make a thing believed to be what it is not; classical, as in the case of the sale of stenographic cards, &c.; and sporting, as in race cards.

The pattering tribe is by no means confined to the traffic in paper, though it may be the principal calling as regards the acuteness of its professors. Among these street-folk are the running and standing patterers (or stationers as they are sometimes, but rarely, styled)—and in these are included, the Death and Fire Hunters of whom I have spoken; Chaunters; Second Edition-sellers; Recitets; Conundrum-sellers; Board-workers; Strawers; Sellers of (Sham) Indecent Publications; Street Auctioneers; Cheap Jacks; Mountebanks (quacks); Clowns; the various classes of Showmen; Jugglers; Conjurors; Ring-sellers for wagers; Sovereign-sellers; Corn-curers; Grease-removers; French-polishers; Blacking-sellers; Nostrum-vendors; Fortune-tellers; Oratorical-beggars; Turnpike-sailors; the classes of Lurkers; Stenographic Card-sellers, and the Vendors of Race-cards or lists.

The following accounts have been written for me by the same gentleman who has already described the Religion, Morals, &c., of patterers. He has for some years resided among the class, and has pursued a street calling for his existence. What I have already said of his opportunities of personal observation and of dispassionate judgment I need not iterate.

"I wish," says the writer in question, "in the disclosures I am now about to make concerning the patterers generally, to *do more* than merely put the public on their guard. I take no cruel delight in dragging forth the follies of my fellow-men. Before I have done with my subject, I hope to draw forth and exhibit some of the latent virtues of the class under notice, many of whom I know to sigh in secret over that *one* imprudent step (whatever its description), which has furnished the censorious with a weapon they have been but too ready to wield. The first thing for me to do is to give a glance at the *habitations* of these outcasts, and to set forth their usual conduct, opinions, conversation and amusements. As London (including the ten mile circle), is the head quarters of lodging-house life, and least known, because most crowded, I shall lift the veil which shrouds the vagrant hovel where the patterer usually resides.

"As there are many individuals in lodging-houses who are not regular patterers or professional vagrants, being rather, as they term themselves, 'travellers' (or tramps), so there are multitudes who do *not* inhabit such houses who really belong to the fraternity, pattering, or vagrant. Of these some take up their abode in what they call 'flatty-kens,' that is, houses the landlord of which is not 'awake' or 'fly' to the 'moves' and dodges of the trade; others resort to the regular 'padding-kens,' or houses of call for vagabonds; while others—and especially those who have families—live constantly in furnished rooms, and have little intercourse with the 'regular' travellers, tramps, or wanderers.

"The medium houses the London vagrant haunts, (for I have no wish to go to extremes either way,) are probably in Westminster, and perhaps the fairest 'model' of the '*monkry*' is the house in Orchard-street—once the residence of royalty—which has been kept and conducted for half a century by the veteran who some fifty years ago was the *only* man who amused the population with that well-known ditty,

> 'If I'd as much money as I could tell,
> I would not cry young lambs to sell.'

Mister (for that is the old man's title) still manufactures lambs, but seldom goes out himself; his sons (obedient and exemplary young men) take the toys into the country, and dispose of them at fairs and markets. The wife of this man is a woman of some beauty and good sound sense, but far too credulous for the position of which she is the mistress.

"So much for the establishment. I have now to deal with the inmates.

"No one could be long an inmate of Mr. ——'s without discerning in the motley group persons who had seen better days, and, seated on the same bench, persons who are 'seeing' the best days they *ever* saw. When I took up my abode in the house under consideration, I was struck by the appearance of a middle-aged lady-like woman, a native of Worcester, bred to the glove trade, and brought up in the lap of plenty, and under the high sanction of religious principle. She had evidently some source of mental anguish. I believe it was the conduct of her husband, by whom she had been deserted, and who was living with a woman to whom, it is said, the wife had shown much kindness. By her sat a giant in size, and candour demands

Original from HARVARD UNIVERSITY

that I should say a 'giant in sin.' When Navy Jem, as he is called, used to *work* for his living (it was a long while ago) he drove a barrow at the formation of the Great Western Railway. At present the man lies in bed till mid-day, and when he makes his appearance in the kitchen,

> 'The very kittens on the hearth
> They dare not even play.'

His breakfast embraces all the good things of the season. He divides his delicacies with a silver fork—where did he get it? The mode in which this man obtains a livelihood is at once a mixture and a mystery. His prevailing plan is to waylay gentlemen in the decline of life, and to extort money by threats of accusation and exposure, to which I can do no more than allude. His wife, a notorious shoplifter, is now for the third time 'expiating her offences' in Coldbath-fields.

"Next to Navy Jem may be perceived a little stunted woman, of pretended Scotch, but really Irish extraction, whose husband has died in the hospital for consumption at least as many times as the hero of Waterloo has seen engagements. At last the man *did* die, and his widow has been collecting money to bury him for eight years past, but has not yet secured the required sum. This woman, whose name I never knew, has a boy and a girl; to the former she is very kind, the latter she beats without mercy, always before breakfast, and with such (almost) unvaried punctuality that her brother will sometimes whisper (after saying grace), 'Mother, has our Poll had her licks yet?'

"Among the records of mortality lately before the public, is the account of a notorious woman, who was found suffocated in a stagnant pool, whether from suicide or accident it was impossible to determine. She had been in every hospital in town and country, suffering from a disease, entirely self-procured. She applied strong acids to wounds previously punctured with a pin, and so caused her body to present one mass of sores. She was deemed incurable by the hospital doctors, and liberal collections were made for her among the benevolent in various places. The trick, however, was ultimately discovered, and the failure of her plan (added to the bad state of health to which her bodily injuries had gradually led) preyed upon her mind and hastened her death.

"This woman had been the paramour of 'Peter the crossing-sweeper,' a man who for years went about showing similar wounds, which he pretended had been inflicted while fighting in the Spanish Legion—though, truth to say, he had never been nearer Spain than Liverpool is to New York. He had followed the 'monkry' from a child, and chiefly, since manhood, as a 'broken-down weaver from Leicester,' and after singing through every one of the provinces 'We've got no work to do,' he scraped acquaintance with a 'school of shallow coves;' that is, men who go about half-naked, telling frightful tales about shipwrecks, hair-breadth escapes from houses on fire, and such like aqueous and igneous calamities. By these Peter was initiated into the '*scaldrum dodge*,' or the art of burning the body with a mixture of acids and gunpowder, so as to suit the hues and complexions of the accident to be deplored. Such persons hold every morning a 'committee of ways and means,' according to whose decision the movements of the day are carried out. Sometimes when on their country rounds, they go singly up to the houses of the gentry and wealthy farmers, begging shirts, which they hide in hedges while they go to another house and beg a similar article. Sometimes they go in crowds, to the number of from twelve to twenty; they are most successful when the 'swell' is not at home; if they can meet with the 'Burerk' (Mistress), or the young ladies, they 'put it on them for dunnage' (beg a stock of general clothing), flattering their victims first and frightening them afterwards. A friend of mine was present in a lodging-house in Plymouth, when a school of the shallow coves returned from their day's work with *six suits of clothes, and twenty-seven shirts, besides children's apparel and shoes*, (all of which were sold to a broker in the same street), and, besides these, the donations in money received amounted to 4*s.* 4*d.* a man.

"At this enterprise 'Peter' continued several years, but—to use his own words—'everything has but a time,' the country got 'dead' to him, and people got 'fly' to the 'shallow brigade;' so Peter came up to London to 'try his hand at something else.' Housed in the domicile of 'Sayer the barber,' who has enriched himself by beer-shops and lodging-house-keeping, to the tune it is said of 20,000*l.*, Peter amused the 'travellers' of Wentworth-street, Whitechapel, with recitals of what he had seen and done. Here a profligate, but rather intelligent man, who had really been in the service of the Queen of Spain, gave him an old red jacket, and with it such instructions as equipped him for the imposition. One sleeve of this jacket usually hung loosely by his side, while the arm it should have covered was exposed naked, and to all appearance withered. His rule was to keep silence till a crowd assembled around him, when he began to '*patter*' to them to the following effect: 'Ladies and gentlemen, it is with feelings of no common reluctance that I stand before you at this time; but although I am not without *feelings*, I am totally without friends, and frequently without food. This wound (showing his disfigured arm) I received in the service of the Queen of Spain, and I have many more on different parts of my person. I received a little praise for my brave conduct, but not a penny of pension, and here I am (there's no deception you see) ill in health—poor in pocket, and exposed without proper nourishment to wind and weather—the cold is blowing through me till I am almost perished.' His '*Doxy*' stood by and received

the 'voluntary contributions' of the audience in a soldier's cap, which our hero emptied into his pocket, and after snivelling out his thanks, departed to renew the exhibition in the nearest available thoroughfare. Peter boasted that he could make on an average fifteen of these pitches a day, and as the proceeds were estimated at something considerable in each pitch (he has been known to take as much as half-a-crown in pence at one standing), he was able to sport his figure at Astley's in the evening—to eat 'spring lamb,' and when reeling home under the influence of whiskey, to entertain the peaceful inhabitants with the music of—'We won't go home till morning———'

"Whether the *game* got *stale*, or Peter became honest, is beyond the purport of my communication to settle. If any reader, however, should make his purchases at the puffing fishmonger's in Lombard-street, they may find Peter now pursuing the more honest occupation of sweeping the crossing, by the church of St. Gabriel, Fenchurch-street.

"Among the most famous of the 'lurking patterers' was 'Captain Moody,' the son of poor but honest parents in the county of Cornwall, who died during his boyhood, leaving him to the custody of a maiden aunt. This lady soon, and not without reason, got tired of her incorrigible charge. Young Moody was apprenticed successively to three trades, and wanted not ability to become expert in any of them, but having occasional interviews with some of the gipsey tribe, and hearing from themselves of their wonderful achievements, he left the sober walks of life and joined this vagrant fraternity.

"His new position, however, was attractive only while it was novel. Moody, who had received a fair education, soon became disgusted with the coarseness and vulgarity of his associates. At the solicitation of a neighbouring clergyman, he was restored to the friendship of his aunt, who had soon sad reason to regret that her compassion had got the better of her prudence; for one Sunday afternoon, while she was absent at church, young Moody who had pleaded indisposition and so obtained permission to stay at home, decamped (after dispatching the servant to the town, a mile distant, to fetch the doctor) in the meantime, emptying his aunt's 'safety cupboard' of a couple of gold watches and £72 in cash and country notes.

"His roving disposition then induced him to try the sea, and the knowledge he obtained during several voyages fitted him for those maritime frauds which got him the name of 'Captain Moody, the lurker.' The frauds of this person are well known, and often recounted with great admiration among the pattering fraternity. On one occasion, the principal butcher in Gosport was summoned to meet a gentlemen at an hotel. The *Louisa*, a brig, had just arrived at Portsmouth, the captain's name was Young, and this gentleman Moody personated for the time being. 'I have occasion,' said he to the butcher, 'for an additional supply of beef for the *Louisa;* I have heard you spoken of by Captain Harrison' (whom Moody knew to be an old friend of the butcher's), 'and I have thus given you the preference. I want a bullock, cut up in 12 lb. pieces; it must be on board by three to-morrow.' The price was agreed upon, and the captain threw down a few sovereigns in payment, but, of course, discovered that he had not gold enough to cover the whole amount, so he proposed to give him a cheque he had just received from Captain Harrison for £100, and the butcher could give him the difference. The tradesman was nothing loth, for a cheque upon 'Vallance, Mills, and West,' with Captain Harrison's signature, was reckoned equal to money any day, and so the butcher considered the one he had received, until the next morning, when the draft and the order proved to be forgeries. The culprit was, of course, nowhere to be found, nor, indeed, heard of till two years after, when he had removed the scene of his depredations to Liverpool.

"In that port he had a colleague, a man whose manners and appearance were equally prepossessing. Moody sent his 'pal' into a jeweller's shop, near the corner of Lord-street, who there purchased a small gold seal, paid for it, and took his leave. Immediately afterwards, Moody entered the shop under evident excitement, declaring that he had seen the person, who had just left the shop secrete two, if not three, seals up his coat-sleeve; adding, that the fellow had just gone through the Exchange, and that if the jeweller were quick he would be sure to catch him. The jeweller ran out without his hat, leaving his kind friend in charge of the shop, and soon returned with the supposed criminal in his custody. The 'captain,' however, in the mean time, had decamped, taking with him a tray from the window, containing precious materials to the value of 300*l.*

"At another time, the 'captain' prepared a document, setting forth 'losses in the Baltic trade,' and a dismal variety of disasters; and concluding with a melancholy shipwreck, which had really taken place just about that time in the German Ocean. With this he travelled over great part of Scotland, and with almost unprecedented success. Journeying near the Frith of Forth, he paid a visit to Lord Dalmeny—a nobleman of great benevolence—who had read the account of the shipwreck in the local journals, and wondered that the petition was not signed by influential persons *on the spot;* and, somewhat suspicious of the reality of the 'captain's' identity, placed a terrestrial globe before him, and begged to be shown 'in what latitude he was cast away.' The awkwardness with which Moody handled the globe showed that *he* was 'out of *his* latitude' altogether. His lordship thereupon committed the document to the flames, but generously gave the 'captain' a sovereign and some good advice; the former he appropriated at the nearest public-house, of the latter he never made the least use.

"Old, and worn out by excesses and imprisonment, he subsists now by 'sitting pad' about the suburban pavements; and when, on a recent evening, he was recognised in a low public-house in Deptford, he was heard to say, with a sigh: 'Ah! once I could "screeve a fakement" (write a petition) or "cooper a monekur" (forge a signature) with any man alive, and my heart's game now; but I'm old and asthmatic, and got the rheumatis, so that I ain't worth a d—n.'

"'The Lady Lurker.'—Of this person very little is known, and *that* little, it is said, makes her an object of pity. Her father was a dissenting minister in Bedfordshire. She has been twice married; her first husband was a schoolmaster at Hackney, and nephew of a famous divine who wrote a Commentary on the Bible, and was chaplain to George III. She afterwards married a physician in Cambridgeshire (a Dr. S——), who is alleged to have treated her ill, and even to have attempted to poison her. She has no children; and, since the death of her husband, has passed through various grades, till she is now a cadger. She dresses becomingly in black, and sends in her card (Mrs. Dr. S——) to the houses whose occupants are known, or supposed, to be charitable. She talks with them for a certain time, and then draws forth a few boxes of lucifers, which, she says, she is compelled to sell for her living. These lucifers are merely excuses, of course, for begging; still, nothing is known to have ever transpired in her behaviour wholly unworthy of a distressed gentlewoman. She lives in private lodgings."

I continue the account of these habitations, and of their wretched occupants, from the pen of the same gentleman whose vicissitudes (partly self-procured) led him to several years' acquaintance with the subject.

"Padding-kens" (lodging-houses) in the country are certainly preferable abodes to those of St. Giles's, Westminster, or Whitechapel; but in country as in town, their condition is extremely filthy and disgusting; many of them are scarcely ever washed, and as to sweeping, once a week is miraculous. In most cases they swarm with vermin, and, except where their position is very airy, the ventilation is imperfect, and frequent sickness the necessary result. It is a matter of surprise that the nobility, clergy, and gentry of the realm should permit the existence of such horrid dwellings.

"I think," continues my informant, "that the majority of these poor wretches are without even the idea of respectability or 'home comforts,'—many of them must be ranked among the worst of our population. Some, who could live elsewhere, prefer these wretched abodes, because they answer various evil purposes. With beggars, patterers, hawkers, tramps, and vendors of their own manufacture, are mingled thieves, women of easy virtue, and men of no virtue at all; a few, and by far the smallest portion, are persons who once filled posts of credit and affluence, but whom bankruptcy, want of employment, or sickness has driven to these dismal retreats. The vast majority of London vagrants take their summer vacation in the country, and the 'dodges' of both are interchanged, and every new 'move' circulates in almost no time.

"I will endeavour to sketch a few of the most renowned 'performers' on this theatre of action. By far the most illustrious is 'Nicholas A——,' an ame known to the whole cadging fraternity as a *real* descendant from Bamfylde Moore Carew, and the 'prince of lurkers' and patterers for thirty years past. This man owes much of his success to his confessedly imposing appearance, and many of his escapes to the known respectability of his connections. His father—yet alive—is a retired captain in the Royal Navy, a gentleman of good private property, and one of her Majesty's justices of peace for the county of Devon—the southern extremity of which was the birth-place of Nicholas. But little is known of his early days. He went to school at Tavistock, where he received a good education, and began life by cheating his schoolfellows.

"The foolish fondness of an indulgent mother, and some want of firmness in paternal discipline, accelerated the growth of every weed of infamy in Nicholas, and baffled every experiment, by sea and land, to 'set' him up in life.

"Scarcely was he out of his teens, when he honoured the sister country with his visits and his depredations. About the centre of Sackville-street, Dublin, there lived a wealthy silversmith of the name of Wise. Into his shop (accompanied by one of his *pals* in livery) went Nicholas, whose gentlemanly exterior, as I have already hinted, would disarm suspicion in a stranger.

"'Good morning sir, is your name Wise?—Yes, sir.—Well, that is *my* name.—Indeed, of the English family, I suppose?—Yes, sir, East Kent.—Oh, indeed! related to the ladies of Leeds Castle, I presume?—I have the honour to be their brother.—James, is your name James or John?—Neither, sir, it is Jacob.—Oh, indeed! a very ancient name.—Well, I have occasion to give a party at the Corn Exchange Tavern, and I want a little plate on hire, can you supply me?'—A very polite affirmative settled this part of the business. Plate to the amount of 150*l.* was selected and arranged, when Nicholas discovered that his pocket-book was at home (to complete the deception, his right arm was in a sling). 'Will you, Mr. Wise (you see my infirmity), write me a few lines?—With the greatest pleasure,' was the silversmith's reply.—'Well, let me see. "*My dear, do not be surprised at this; I want 150l., or all the money you can send, per bearer; I will explain at dinner-time.* J. WISE."

"'Now, John, take this to your mistress, and be quick.' As John was not very hasty in his return, Nicholas went to look for him, leaving a strict injunction that the plate should be sent to the Corn Exchange Tavern, as soon as the deposit was received. This happened at eleven

in the forenoon—the clock struck five and no return of either the master or the man.

"The jeweller left a message with his apprentice, and went home to his dinner. He was met at the door of his suburban villa by his 'better half,' who wondered what made him so late, and wished to know the nature of the exigency which had caused him to send home for so much money? The good man's perplexity was at an end when he saw his own handwriting on the note; and every means within the range of constabulary vigilance was taken to capture the offender, but Nicholas and his servant got clear off.

"This man's ingenuity was then taxed as to the next move, so he thought it expedient to *tax* somebody else. He went with his 'pal' to a miscellaneous repository, where they bought a couple of old ledgers—useful only as waste paper, a bag to hold money, two ink-bottles, &c. Thus equipped, they waited on the farmers of the district, and exhibited a 'fakement,' setting forth parliamentary authority for imposing a tax upon the geese! They succeeded to admiration, and weeks elapsed before the hoax was discovered. The coolness of thus assuming legislatorial functions, and being, at the same time, the executive power, has rarely been equalled.

"There is an old proverb, that 'It is an ill wind that blows *nobody* good.' The gallant 'captain' was domiciled at a lodging-house in Gainsborough, Lincolnshire, where he found all the lodgers complaining of the badness of the times—most of them were makers of nets. He sallied forth to all the general shops, and left his (fictitious) 'captain' card at each, with an order for an unusual number of nets. This 'dodge' gave a week's work to at least twenty poor people; but whether the shopkeepers were 'caught in a net,' or the articles were paid for and removed by the 'captain,' or whether it was a piece of pastime on his part, I did not stay long enough to ascertain.

"Nicholas A—— is now in his sixty-second year, a perfect hypochondriac. On his own authority—and it is, no doubt, too true—he has been 'lurking' on every conceivable system, from forging a bill of exchange down to '*maundering on the fly*,' for the greater part of his life; and, excepting the 'hundred and thirteen times' he has been in provincial jails, society has endured the scourge of his deceptions for a quarter of a century at least. He now lives with a young prostitute in Portsmouth, and contributes to her wretched earnings an allowance of 5*s.* a week, paid to him by the attorney of a distant and disgusted relative."

The writer of this account was himself two whole years on the "monkry," before he saw a lodging-house for tramps; and the first he *ever* saw was one well-known to every patterer in Christendom, and whose fame he says is "gone out into all lands," for its wayfaring inmates are very proud of its popularity.

"It may be as well," writes the informant in question, "before submitting the following account, to state that there are other, and more elaborate marks—the hieroglyphics of tramping—than those already given. I will accordingly explain them.

"Two hawkers (pals) go together, but separate when they enter a village, one taking each side of the road, and selling different things; and, so as to inform each other as to the character of the people at whose houses they call, they chalk certain marks on their door-posts:

"⌒– means 'Go on. *I* have called here; don't *you* call—it's no go.'

"⌒+ means 'Stop—you may call here; they want' (for instance) 'what *you* sell, though not what *I* sell;' or else, 'They had no change when I was there, but may have it now;' or, 'If they don't buy, at least they'll treat you civilly.'

"⊃– on a corner-house, or a sign-post, means, 'I went this way;' or 'Go on in this direction.'

"⊃+ on a corner-house, or sign-post, means 'Stop—don't go any further in this direction.'

"⊙ as before explained, means 'danger.'

"Like many other young men, I had lived above my income, and, too proud to crave parental forgiveness, had thrown off the bonds of authority for a life of adventure. I was now homeless upon the world. With a body capable of either exertion or fatigue, and a heart not easily terrified by danger, I endured rather than enjoyed my itinerant position. I sold small articles of Tunbridge ware, perfumery, &c., &c., and by 'munging' (begging) over them—sometimes in Latin—got a better living than I expected, or probably deserved. I was always of temperate and rather abstemious habits, but ignorant of the haunts of other wanderers, (whom I saw in dozens every day upon every road, and every conceivable pursuit) I took up my nightly quarters at a sort of third-rate public-houses, and supposed that my contemporaries did the same. How long my ignorance might have continued (if left to myself) I can hardly determine; an adventure at a road-side inn, however, removed the veil from my eyes, and I became gradually and speedily 'awake' to 'every move on the board.' It was a lovely evening in July, the air was serene and the scenery romantic; my own feelings were in unison with both, and enhanced perhaps by the fact that I had beguiled the last two miles of my deliberate walk with a page out of my pocket-companion, 'Burke on the Sublime and Beautiful.' I was now smoking my pipe and quaffing a pint of *real* 'Yorkshire stingo' in the 'keeping room' (a term which combines parlour and kitchen in one word) of a *real* 'Yorkshire village,' Dranfield, near Sheffield. A young person of the other sex was my only and accidental companion; she had been driven into the house by the over-officiousness of a vigilant village constable, who finding that she sold lace without a license, and—infinitely worse—refused to listen to his advances, had warned her to 'make herself scarce' at her 'earliest possible convenience.'

"Having elicited what I did for a living, she popped the startling question to me, 'Where do you "hang out" in Sheffield?' I told her that I had never been in Sheffield, and did not 'hang out' my little wares, but used my persuasive art to induce the purchase of them. The lady said, 'Well, you are "green." I mean, where do you *dos?*' This was no better, it seemed something like Greek,—'*delta, omicron, sigma*,' (I retain the "patterer's" own words to show the education of the class)—but the etymology was no relief to the perplexity. 'Where do you mean to sleep?' she inquired. I referred to my usual practice of adjourning to an humble public-house. My companion at once threw off all manner of disguise, and said, 'Well, sir, you are a young man that I have taken a liking to, and if you think you should like my company, I will take you to a lodging where there is plenty of travellers, and you will see "all sorts of life."' I liked the girl's company, and our mutual acquiescence made us companions on the road. We had not got far before we met the aforesaid constable in company with an unmistakeable member of the Rural Police. They made some inquiries of me, which I thought exceeded their commission. I replied to them with a mutilated Ode of Horace, when they both determined that I was a Frenchman, and allowed us to 'go on our way rejoicing.'

"The smoky, though well-built, town of Sheffield was now near at hand. The daylight was past,' and the 'shades of the evening were stretching out;' we were therefore enabled to journey through the thoroughfares without impertinent remarks, or perhaps any observation, except from a toothless old woman, of John Wesley's school, who was 'sorry to see two such nice young people going about the country,' and wondered if we 'ever thought of eternity!'

"After a somewhat tedious ramble, we arrived at Water-lane;—at the 'Bug-trap,' which from time immemorial has been the name of the most renowned lodging-house in that or perhaps any locality. Water-lane is a dark narrow street, crowded with human beings of the most degraded sort—the chosen atmosphere of cholera, and the stronghold of theft and prostitution. In less than half an hour, my fair companion and myself were sipping our tea, and eating Yorkshire cake in this same lodging-house.

"'God bless every happy couple!' was echoed from a rude stentorian voice, while a still ruder hand bumped down upon our tea-table a red earthen dish of no small dimensions, into which was poured, from the mouth of a capacious bag, fragments of fish, flesh, and fowl, viands and vegetables of every sort, intermingled with bits of cheese and dollops of Yorkshire pudding. The man to whom this heterogeneous mass belonged, appeared anything but satisfied with his lot. 'Well,' said he, 'I don't know what this 'ere monkry *will* come to, after a bit. Three bob and a tanner, and that there dish o' scran (enough to feed two families for a fortnight) 'is all I got this blessed day since seven o'clock in the morning, and now it's nine at night.' I ventured to say something, but a remark, too base for repetition, 'put the stunners on me,' and I held my peace.

"I was here surprised, on conversing with my young female companion, to find that she went to church, said her prayers night and morning, and knew many of the collects, some of which she repeated, besides a pleasing variety of Dr. Watts's hymns. At the death of her mother, her father had given up housekeeping; and, being too fond of a wandering life, had led his only child into habits like his own.

"As the night advanced, the party at the 'Bug-trap' more than doubled. High-flyers, shallow-coves, turnpike-sailors, and swells out of luck, made up an assembly of fourscore human beings, more than half of whom were doomed to sleep on a 'make-shift'—in other words, on a platform, raised just ten inches above the floor of the garret, which it nearly equalled in dimensions. Here were to be huddled together, with very little covering, old men and women, young men and children, with no regard to age, sex, or propensities.

"The 'mot' of the 'ken' (nickname for 'matron of the *establishment*') had discovered that I was a 'more bettermost' sort of person, and hinted that, if I would 'come down' with twopence more (threepence was the regular nightly charge), I, 'and the young gal as I was with,' might have a little 'crib' to ourselves in a little room, along with another woman wot was married and had a 'kid,' and whose husband had got a month for 'griddling in the main drag' (singing in the high street), and being 'cheekish' (saucy) to the beadle.

"Next morning I bade adieu to the 'Bug-trap,' and I hope for ever."

The same informant further stated that he was some time upon "tramp" before he even knew of the existence of a common lodging-house: "After I had 'matriculated' at Sheffield," he says, "I continued some time going to public-houses to sleep, until my apparel having got shabby and my acquintance with misfortune more general, I submitted to be the associate of persons whom I never spoke to out of doors, and whose even slight acquaintance I have long renounced. My first introduction to a London paddin' ken was in Whitechapel, the place was then called Cat and Wheel-alley (now Commercial-street). On the spot where St. Jude's church now stands was a double lodging-house, kept by a man named Shirley—one side of it was for single men and women, the other married couples; as these 'couples' made frequent exchanges, it is scarcely probable that Mr. Shirley ever 'asked to see their marriage lines.' These changes were, indeed, as common as they were disgusting. I knew two brothers (Birmingham nailers) who each brought a young woman out of service from the country. After a while each became dissatisfied

with his partner. The mistress of the house (an old procuress from Portsmouth) proposed that they should change their wives. They did so, to the amusement of nine other couples sleeping on the same floor, and some of whom followed the example, and more than once during the night.

"When Cat and Wheel-alley was pulled down, the crew removed to George-yard; the proprietor died, and his wife sold the concern to a wooden-legged Welshman named Hughes (commonly called 'Taff'). I was there some time. 'Taff' was a notorious receiver of stolen goods. I knew two little boys, who brought home six pairs of new Wellington boots, which this miscreant bought at 1*s.* per pair; and, when they had no luck, he would take the strap off his wooden-leg, and beat them through the nakedness of their rags. He boarded and lodged about a dozen Chelsea and Greenwich pensioners. These he used to follow and watch closely till they got paid; then (after they had settled with him) he would make them drunk, and rob them of the few shillings they had left.

"One of these dens of infamy may be taken as a specimen of the whole class. They have generally a spacious, though often ill-ventilated, kitchen, the dirty dilapidated walls of which are hung with prints, while a shelf or two are generally, though barely, furnished with crockery and kitchen utensils. In some places knives and forks are not provided, unless a penny is left with the 'deputy,' or manager, till they are returned. A brush of any kind is a stranger, and a looking-glass would be a miracle. The average number of nightly lodgers is in winter 70, and in summer (when many visit the provinces) from 40 to 45. The general charge is, if two sleep together, 3*d.* per night, or 4*d.* for a single bed. In either case, it is by no means unusual to find 18 or 20 in one small room, the heat and horrid smell from which are insufferable; and, where there are young children, the staircases are the lodgment of every kind of filth and abomination. In some houses there are rooms for families, where, on a rickety machine, which they dignify by the name of a bedstead, may be found the man, his wife, and a son or daughter, perhaps 18 years of age; while the younger children, aged from 7 to 14, sleep on the floor. If they have linen, they take it off to escape vermin, and rise naked, one by one, or sometimes brother and sister together. This is no ideal picture; the subject is too capable of being authenticated to need that meaningless or dishonest assistance called 'allowable exaggeration.' The amiable and deservedly popular minister of a district church, built among lodging-houses, has stated that he has found 29 human beings in one apartment; and that having with difficulty knelt down between two beds to pray with a dying woman, his legs became so jammed that he could hardly get up again.

"Out of some fourscore such habitations," continues my informant, "I have only found *two* which had any sort of garden; and, I am happy to add, that in neither of these two was there a single case of cholera. In the others, however, the pestilence raged with terrible fury.

"Of all the houses of this sort, the best I know is the one (previously referred to) in Orchard-street, Westminister, and another in Seven Dials, kept by a Mr. Mann (formerly a wealthy butcher). Cleanliness is inscribed on every wall of the house; utensils of every kind are in abundance, with a plentiful supply of water and gas. The beds do not exceed five in a room, and they are changed every week. There is not one disorderly lodger; and although the master has sustained heavy losses, ill health, and much domestic affliction, himself and his house may be regarded as patterns of what is wanted for the London poor.

"As there is a sad similarity between these abodes, so there is a sort of *caste* belonging in general to the inmates. Of them it may be averred that whatever their pursuits, they are more or less alike in their views of men and manners. They hate the aristocracy. Whenever there is a rumour or an announcement of an addition to the Royal Family, and the news reaches the padding-ken, the kitchen, for half-an-hour, becomes the scene of uproar—'another expense coming on the b—y country!' The 'patterers' are very fond of the Earl of Carlisle, whom, in their attachment, they still call Lord Morpeth; they have read many of his lordship's speeches at *soirées*, &c., and they think he wishes well to a poor man. Sir James Graham had better not show face among them; they have an idea (whence derived we know not) that this nobleman invented fourpenny-pieces, and now, they say, the swells give a 'joey' where they used to give a 'tanner.' The hero of Waterloo is not much amiss 'if he lets politics alone.' The name of a bishop is but another name for a Beelzebub; but they are very fond of the inferior clergy. Lay-agents and tract-distributors they cannot bear; they think they are spies come to see how much 'scran' (food) they have got, and then go and 'pyson' the minds of the public against poor people.

"I was once (says our informant) in a house of this kind, in George-street, St. Giles's,—the missionary who visited them on that occasion (Sunday afternoon) had the misfortune to be suspected as the author of some recent exposure in the newspapers.—They accused him, and he rebutted the accusation; they replied, and he rejoined; at last one of the men said, 'What do you want poking your nose in here for?' 'The City Mission,' was the answer, 'had authorised ——.' 'Authorised be d—d! are you ordained?' 'No, not yet, friend.' The women then tore the poor gentleman's nether garments in a way I must not describe. The men carried him into the yard, filled his mouth with flour of mustard and then put him in a water-butt.

"It is, I am satisfied, quite a mistake to

suppose that there is much real infidelity among these outcast beings. They almost all believe in a hereafter; most of them think that the wicked will be punished for a few years, and then the whole universe of people be embraced in the arms of one Great Forgiving Father. Some of them think that the wicked will not rise at *all;* the punishment of 'losing Heaven' being as they say 'Hell enough for anybody.' Points of doctrine they seldom meddle with.

"There are comparatively few Dissenters to be found in padding-kens, though many whose parents were Dissenters. My own opinion (writes my informant) is, that dissent seldom lasts long in one family. In eight years' experience I have found two hundred apparently pious men and women, and at least two thousand who call themselves Protestants, but never go to any church or chapel.

"The politics of these classes are, perhaps, for the most part, 'liberal Tory.' In most lodging-houses they take one or two papers: the *Weekly Dispatch,* and *Bell's Weekly Messenger,* are the two usually taken. I know of no exception to this rule. The beggars hate a Whig Ministry, and I know that many a tear was shed in the hovels and cellars of London when Sir Robert Peel died. I know a publican, in Westminster, whose daily receipts are enormous, and whose only customers are soldiers, thieves, and prostitutes, who closed his house the day of the funeral, and put himself, his family, and even his beer-machines and gas-pipes, into mourning for the departed statesman.

"The pattering fraternity, that I write of, are generally much given to intemperance. Their amusements are the theatre, the free-and-easy, the skittle-ground, and sometimes cards and dominoes. They read some light works, and some of them subscribe to libraries, and a few, very few, attend lectures. Eliza Cook is a favourite writer with them, and Capt. Marryatt, the 'top-sawyer,' as a novelist. Ainsworth is the idol of another class, when they can read. Mr. Dickens *was* a favourite, but he has gone down sadly in the scale since his *Household Words* 'came it so strong' against the begging letter department. These poor creatures seldom rise in society. They make no effort to extricate themselves, while by others they are unpitied because unknown. To this rule, however, there are some happy and honourable exceptions.

"Taken as a body, patterers, lurkers, &c. are by no means quick-sighted as to the sanctions of moral obligation. They would join the hue and cry against the persecutors of Jane Wilbred, but a promiscuous robbery, even accompanied by murder—if it was 'got up clever' and 'done clean,' so long as the parties escaped detection—might call forth a remark that 'there was no great harm done,' and perhaps some would applaud the perpetrators."

Before quitting this part of my subject (viz. the character, habits, and opinions of *all* classes of patterers), I will give an account of the pretended missionary proceedings of a man, well-known to the vagrant fraternity as "Chelsea George." I received the following narrative from the gentleman whose statements I have given previously. The scheme was concocted in a low lodging-house:

"After a career of incessant 'lurking' and deceit, Chelsea George left England, and remained abroad," writes my informant, "four or five years. Exposure to the sun, and allowing his beard to grow a prodigious length, gave him the appearance of *a* foreigner. He had picked up enough French and Italian, with a little Dutch and German, and a smattering of Spanish, to enable him to 'hail for any part of the globe,' and from the designed inarticulateness with which he spoke (sometimes four languages in one sentence) added to his sun-burnt and grotesque appearance, it was difficult to *pall* him upon any *racket* (detect him in any pretence), so that the most incredulous,—though often previously imposed upon—gave credence to his story, relief to his supposed necessities, and sometimes letters of introduction to their friends and neighbours.

"Some time after his return to England, and while pursuing the course of a 'high-flyer' (genteel beggar), he met with an interruption to his pursuits which induced him to alter his plan without altering his behaviour. The newspapers of the district, where he was then located, had raised before the eye and mind of the public, what the 'patterers' of his class proverbially call a 'stink,'—that is, had opened the eyes of the unwary to the movements of 'Chelsea George;' and although he ceased to renew his appeals from the moment he heard of the notice of him, his appearance was so accurately described that he was captured and committed to Winchester jail as a rogue and vagabond. The term of his imprisonment has escaped my recollection. As there was no definite charge against him, probably he was treated as an ordinary vagrant and suffered a calendar month in durance. The silent system was not then in vogue, consequently there existed no barrier to mutual intercourse between prisoners, with all its train of conscience-hardening tendencies. I do not say this to intimate unqualified approval of the solitary system, I merely state a fact which has an influence on my subject.

"George had by this time scraped acquaintance with two fellow-prisoners—Jew Jem and Russia Bob. The former in 'quod' for 'pattering' as a 'converted Jew,' the latter for obtaining money under equally false, though less theological, pretences.

"Liberated about one time, this trio laid their heads together,—and the result was a plan to evangelize, or rather victimize, the inhabitants of the collier villages in Staffordshire and the adjoining counties. To accomplish this purpose, some novel and imposing representation must be made, both to lull suspicion and give the air of piety to the plan, and disinterestedness to the agents by whom it was carried out.

"George and his two fellow-labourers were 'square-rigged'—that is, well dressed. Something, however, must be done to colour up the scene, and make the appeal for money touching, unsuspected, and successful. Just before the time to which I allude, a missionary from Sierra Leone had visited the larger towns of the district in question, while the inhabitants of the surrounding hamlets had been left in ignorance of the 'progress of missions in Africa and the East.' George and his comrades thought it would be no great harm at once to enlighten and fleece this scattered and anxious population. The plan was laid in a town of some size and facility. They 'raised the wind' to an extent adequate to some alteration of their appearances, and got bills printed to set forth the merits of the cause. The principal actor was Jew Jim, a converted Israelite, with 'reverend' before his name, and half the letters of the alphabet behind it. He had been in all the islands of the South Sea, on the coast of Africa, all over Hindostan, and half over the universe; and after assuring the villagers of Torryburn that he had carried the Gospel to various dark and *uninhabited* parts of the earth, he introduced Russia Bob (an Irishman who had, however, been in Russia) as his worthy and self-denying colleague, and Chelsea George as the first-fruits of their ministry—as one who had left houses and land, wife and children, and taken a long and hazardous voyage to show Christians in England that their sable brethren, children of one common Parent, were beginning to cast their idols to the moles and to the bats. Earnest was the gaze and breathless the expectation with which the poor deluded colliers of Torry-burn listened to this harangue; and as argument always gains by illustration, the orator pulled out a tremendous black doll, bought for a 'flag' (fourpence) of a retired rag-merchant, and dressed up in Oriental style. This, Jew Jim assured the audience, was an idol brought from Murat in Hindostan. He presented it to Chelsea George for his worship and embraces. The convert indignantly repelled the insinuation, pushed the idol from him, spat in its face, and cut as many capers as a dancing-bear. The trio at this stage of the performances began 'puckering' (talking privately) to each other in murdered French, dashed with a little Irish; after which, the missionaries said that their convert (who had only a few words of English) would now profess his faith. All was attention as Chelsea George came forward. He stroked his beard, put his hand in his breast to keep down his dickey, and turning his eyes upwards, said: 'I believe in Desus Tist—dlory to 'is 'oly Name!'

"This elicited some loud 'amens' from an assemblage of nearly 1,000 persons, and catching the favourable opportunity, a 'school of pals,' appointed for the purpose, went round and made the collection. Out of the abundance of their credulity and piety the populace contributed sixteen pounds! The whole scene was enacted out of doors, and presented to a stranger very pleasing impressions. I was present on the occasion, but was not then aware of the dodge. One verse of a hymn, and the blessing pronounced, was the signal for separation. A little shaking of hands concluded the exhibition, and 'every man went into his own house.'

"The missionary party and their 'pals' took the train to Manchester, and as none of them were teetotallers, the proceeds of their imposition did not last long. They were just putting on their considering caps, for the contrivance of another dodge, when a gentleman in blue clothes came into the tap-room, and informed Jew Jem that he was 'wanted.' It appears that 'Jem' had come out of prison a day or two before his comrades, and being 'hard up,' had ill-used a lady, taken her purse, and appropriated its contents. Inquiries, at first useless, had now proved successful—the 'missionary' stood his trial, and got an 'appointment' on Norfolk Island. Russia Bob took the cholera and died, and 'George the convert' was once more left alone to try his hand at something else."

Of the Low Lodging-houses of London.

The patterers, as a class, usually frequent the low lodging-houses. I shall therefore now proceed to give some further information touching the abodes of these people—reminding the reader that I am treating of patterers in general, and not of any particular order, as the "paper workers."

In applying the epithet "low" to these places, I do but adopt the word commonly applied, either in consequence of the small charge for lodging, or from the character of their frequenters. To some of these domiciles, however, as will be shown, the epithet, in an opprobrious sense, is unsuited.

An intelligent man, familiar for some years with some low lodging-house life, specified the quarters where those abodes are to be found, and divided them into the following districts, the correctness of which I caused to be ascertained.

Drury-lane District. Here the low lodging-houses are to be found principally in the Coal-yard, Charles-street, King-street, Parker-street, Short's-gardens, Great and Little Wyld-streets, Wyld-court, Lincoln-court, Newton-street, Star-court.

Gray's-inn Lane. Fox-court, Charlotte-buildings, Spread Eagle-court, Portpool-lane, Bell-court, Baldwin's-gardens, Pheasant-court, Union-buildings, Laystall-street, Cromer-street, Fulwood's-rents (High Holborn).

Chancery-lane. Church-passage, and the Liberty of the Rolls.

Bloomsbury. George-street, Church-lane, Queen-street, Seven-dials, Puckeridge-street (commonly called the Holy Land).

Saffron-hill and Clerkenwell. Peter-street, Cow-cross, Turnmill-street, Upper and Lower White-cross-street, St. Helen's-place, Playhouse-yard, Chequer-alley, Field-lane, Great Saffron-hill.

Westminster. Old and New Pye-streets, Ann-

street, Orchard-street, Perkins's-rents, Rochester-row.

Lambeth. Lambeth-walk, New-cut.

Marylebone. York-court, East-street.

St. Pancras. Brooke-street.

Paddington. Chapel-street, Union-court.

Shoreditch. Baker's-rents, Cooper's-gardens.

Islington. Angel-yard.

Whitechapel, Spitalfields, &c. George-yard, Thrawl-street, Flower and Dean-street, Wentworth-street, Keate-street, Rosemary-lane, Glasshouse-yard, St. George's-street, Lambeth-street, Whitechapel, High-street.

Borough. Mint-street, Old Kent-street, Long-lane, Bermondsey.

Stratford. High-street.

Limehouse. Hold (commonly called Hole).

Deptford. Mill-lane, Church-street, Gifford-street.

There are other localities, (as in Mile-end, Ratcliffe-highway, Shadwell, Wapping, and Lisson-grove,) where low lodging-houses are to be found; but the places I have specified may be considered the *districts* of these hotels for the poor. The worst places, both as regards filth and immorality, are in St. Giles's and Wentworth-street, Whitechapel. The best are in Orchard-street, Westminster (the thieves having left it in consequence of the recent alterations and gone to New Pye-street), and in the Mint, Borough. In the last-mentioned district, indeed, some of the proprietors of the lodging-houses have provided considerable libraries for the use of the inmates. In the White Horse, Mint-street, for instance, there is a collection of 500 volumes, on all subjects, bought recently, and having been the contents of a circulating library, advertised for sale in the *Weekly Dispatch.*

Of lodging-houses for "travellers" the largest is known as the Farm House, in the Mint: it stands away from any thoroughfare, and lying low is not seen until the visitor stands in the yard. Tradition rumour states that the house was at one time Queen Anne's, and was previously Cardinal Wolsey's. It was probably some official residence. In this lodging-house are forty rooms, 200 beds (single and double), and accommodation for 200 persons. It contains three kitchens,—of which the largest, at once kitchen and sitting-room, holds 400 people, for whose uses in cooking there are two large fire-places. The other two kitchens are used only on Sundays; when one is a preaching-room, in which missionaries from Surrey Chapel (the Rev. James Sherman's), or some minister or gentleman of the neighbourhood, officiates. The other is a reading-room, supplied with a few newspapers and other periodicals; and thus, I was told, the religious and irreligious need not clash. For the supply of these papers each person pays 1*d.* every Sunday morning; and as the sum so collected is more than is required for the expenses of the reading-room, the surplus is devoted to the help of the members in sickness, under the management of the proprietor of the lodging-house, who appears to possess the full confidence of his inmates. The larger kitchen is detached from the sleeping apartments, so that the lodgers are not annoyed with the odour of the cooking of fish and other food consumed by the poor; for in lodging-houses every sojourner is his own cook. The meal in most demand is tea, usually with a herring, or a piece of bacon.

The yard attached to the Farm House, in Mint-street, covers an acre and a half; in it is a washing-house, built recently, the yard itself being devoted to the drying of the clothes —washed by the customers of the establishment. At the entrance to this yard is a kind of porter's lodge, in which reside the porter and his wife who act as the "deputies" of the lodging-house. This place has been commended in sanitary reports, for its cleanliness, good order, and care for decency, and for a proper division of the sexes. On Sundays there is no charge for lodging to known customers; but this is a general practice among the low lodging-houses of London.

In contrast to this house I could cite many instances, but I need do no more in this place than refer to the statements, which I shall proceed to give; some of these were collected in the course of a former inquiry, and are here given because the same state of things prevails now. I was told by a trustworthy man that not long ago he was compelled to sleep in one of the lowest (as regards cheapness) of the lodging-houses. All was dilapidation, filth, and noisomeness. In the morning he drew, for purposes of ablution, a basinfull of water from a pailfull kept in the room. In the water were floating alive, or apparently alive, bugs and lice, which my informant was convinced had fallen from the ceiling, shaken off by the tread of some one walking in the rickety apartments above!

"Ah, sir," said another man with whom I conversed on the subject, "if you had lived in the lodging-houses, you would say what a vast difference a penny made,—it's often all in all. It's 4*d.* in the Mint House you've been asking me about; you've sleep and comfort there, and I've seen people kneel down and say their prayers afore they went to bed. Not so many, though. Two or three in a week at nights, perhaps. And it's wholesome and sweet enough there, and large separate beds; but in other places there's nothing to smell or feel but bugs. When daylight comes in the summer—and it's often either as hot as hell or as cold as icicles in those places; but in summer, as soon as its light, if you turn down the coverlet, you'll see them a-going it like Cheapside when it's throngest." The poor man seemed to shudder at the recollection.

One informant counted for me 180 of these low lodging-houses; and it is reasonable to say that there are, in London, at least 200 of them. The average number of beds in each was computed for me, by persons cognizant of such

Original from HARVARD UNIVERSITY

matters, from long and often woful experience, at 52 single or 24 double beds, where the house might be confined to single men or single women lodgers, or to married or pretendedly married couples, or to both classes. In either case, we may calculate the number that can be, and generally are, accommodated at 50 per house; for children usually sleep with their parents, and 50 may be the lowest computation. We have thus no fewer than 10,000 persons domiciled, more or less permanently, in the low lodging-houses of London—a number more than doubling the population of many a parliamentary borough.

The proprietors of these lodging-houses mostly have been, I am assured, vagrants, or, to use the civiller and commoner word, "travellers" themselves, and therefore sojourners, on all necessary occasions, in such places. In four cases out of five I believe this to be the case. The proprietors have raised capital sufficient to start with, sometimes by gambling at races, sometimes by what I have often, and very vaguely, heard described as a "run of luck;" and sometimes, I am assured, by the proceeds of direct robbery. A few of the proprietors may be classed as capitalists. One of them, who has a country house in Hampstead, has six lodging-houses in or about Thrawl-street, Whitechapel. He looks in at each house every Saturday, and calls his deputies—for he has a deputy in each house —to account; he often institutes a stringent check. He gives a poor fellow money to go and lodge in one of his houses, and report the number present. Sometimes the person so sent meets with the laconic repulse—"Full;" and woe to the deputy if his return do not evince this fulness. Perhaps one in every fifteen of the low lodging-houses in town is also a beer-shop. Very commonly so in the country.

To "start" a low lodging-house is not a very costly matter. Furniture which will not be saleable in the ordinary course of auction, or of any traffic, is bought by a lodging-house "starter." A man possessed of some money, who took an interest in a bricklayer, purchased for 20*l.*, when the Small Pox Hospital, by King's-cross, was pulled down, a sufficiency of furniture for *four* lodging-houses, in which he "started" the man in question. None others would buy this furniture, from a dread of infection.

It was the same at Marlborough-house, Peckham, after the cholera had broken out there. The furniture was sold to a lodging-house keeper, at 9*d.* each article. "Big and little, sir," I was told; "a penny pot and a bedstead —all the same; each 9*d.* Nobody else would buy."

To about three-fourths of the low lodging-houses of London, are "deputies." These are the conductors or managers of the establishment, and are men or women (and not unfrequently a married, or proclaimed a married couple), and about in equal proportion. These deputies are paid from 7*s.* to 15*s.* a week each, according to the extent of their supervision; their lodging always, and sometimes their board, being at the cost of "the master." According to the character of the lodging-house, the deputies are civil and decent, or roguish and insolent. Their duty is not only that of general superintendence, but in some of the houses of a nocturnal inspection of the sleeping-rooms; the deputy's business generally keeping him up all night. At the better-conducted houses strangers are not admitted after twelve at night; in others, there is no limitation as to hours.

The rent of the low lodging-houses varies, I am informed, from 8*s.* to 20*s.* a week, the payment being for the most part weekly; the taxes and rates being of course additional. It is rarely that the landlord, or his agent, can be induced to expend any money in repairs,—the wear and tear of the floors, &c., from the congregating together of so many human beings being excessive: this expenditure in consequence falls upon the tenant.

Some of the lodging-houses present no appearance differing from that of ordinary houses; except, perhaps, that their exterior is dirtier. Some of the older houses have long flat windows on the ground-floor, in which there is rather more paper, or other substitutes, than glass. "The windows there, sir," remarked one man, "are not to let the light in, but to keep the cold out."

In the abodes in question there seems to have become tacitly established an arrangement as to what character of lodgers shall resort thither; the thieves, the prostitutes, and the better class of street-sellers or traders, usually resorting to the houses where they will meet the same class of persons. The patterers reside chiefly in Westminster and Whitechapel.

Some of the lodging-houses are of the worst class of low brothels, and some may even be described as brothels for children.

On many of the houses is a rude sign, "Lodgings for Travellers, 3*d.* a night. Boiling water always ready," or the same intimation may be painted on a window-shutter, where a shutter is in existence. A few of the better order of these housekeepers post up small bills, inviting the attention of "travellers," by laudations of the cleanliness, good beds, abundant water, and "gas all night," to be met with. The same parties also give address-cards to travellers, who can recommend one another.

The beds are of flock, and as regards the mere washing of the rug, sheet, and blanket, which constitute the bed-furniture, are in better order than they were a few years back; for the visitations of the cholera alarmed even the reckless class of vagrants, and those whose avocations relate to vagrants. In perhaps a tenth of the low lodging-houses of London, a family may have a room to themselves, with the use of the kitchen, at so much a week—generally 2*s.* 6*d.* for a couple without family, and 3*s.* 6*d.* where there are children. To let out "beds" by the night is however the general rule.

The illustration presented this week is of a place in Fox-court, Gray's-inn-lane, long notorious as a "thieves' house," but now far less frequented. On the visit, a few months back, of an informant (who declined staying there), a number of boys were lying on the floor gambling with marbles and halfpennies, and indulging in savage or unmeaning blasphemy. One of the lads jumped up, and murmuring something that it wouldn't do to be idle any longer, induced a woman to let him have a halfpenny for "a stall;" that is, as a pretext with which to enter a shop for the purpose of stealing, the display of the coin forming an excuse for his entrance. On the same occasion a man walked into "the kitchen," and coolly pulled from underneath the back of his smock-frock a large flat piece of bacon, for which he wanted a customer. It would be sold at a fourth of its value.

I am assured that the average takings of lodging-house keepers may be estimated at 17*s.* 6*d.* a night, not to say 20*s.*; but I adopt the lower calculation. This gives a weekly payment by the struggling poor, the knavish, and the outcast, of 1,000 guineas weekly, or 52,000 guineas in the year. Besides the rent and taxes, the principal expenditure of the lodging-house proprietors is for coals and gas. In some of the better houses, blacking, brushes, and razors are supplied, without charge, to the lodgers: also pen and ink, soap, and, almost always, a newspaper. For the meals of the frequenters salt is supplied gratuitously, and sometimes, but far less frequently, pepper also; never vinegar or mustard. Sometimes a halfpenny is charged for the use of a razor and the necessary shaving apparatus. In one house in Kent-street, the following distich adorns the mantel-piece:

"To save a journey up the town,
A razor lent here for a *brown*:
But if you think the price too high,
I beg you won't the razor try."

In some places a charge of a halfpenny is made for hot water, but that is very rarely the case. Strong drink is admitted at almost any hour in the majority of the houses, and the deputy is generally ready to bring it; but little is consumed in the houses, those addicted to the use or abuse of intoxicating liquors preferring the tap-room or the beer-shop.

Of the Filth, Dishonesty, and Immorality of Low Lodging-houses.

In my former and my present inquiries, I received many statements on this subject. Some details, given by coarse men and boys in the grossest language, are too gross to be more than alluded to, but the full truth must be manifested, if not detailed. It was remarked when my prior account appeared, that the records of gross profligacy on the part of some of the most licentious of the rich (such as the late Marquis of Hertford and other worthies of the same depraved habits) were equalled, or nearly equalled, by the account of the orgies of the lowest lodging-houses. Sin, in any rank of life, shows the same features.

And first, as to the want of cleanliness, comfort, and decency: "Why, sir," said one man, who had filled a commercial situation of no little importance, but had, through intemperance, been reduced to utter want, "I myself have slept in the top room of a house not far from Drury-lane, and you could study the stars, if you were so minded, through the holes left by the slates having been blown off the roof. It was a fine summer's night, and the openings in the roof were then rather an advantage, for they admitted air, and the room wasn't so foul as it might have been without them. I never went there again, but you may judge what thoughts went through a man's mind—a man who had seen prosperous days—as he lay in a place like that, without being able to sleep, watching the sky."

The same man told me (and I received abundant corroboration of his statement, besides that incidental mention of the subject occurs elsewhere), that he had scraped together a handful of bugs from the bed-clothes, and crushed them under a candlestick, and had done that many a time, when he could only resort to the lowest places. He had slept in rooms so crammed with sleepers—he believed there were 30 where 12 would have been a proper number—that their breaths in the dead of night and in the unventilated chamber, rose (I use his own words) "in one foul, choking steam of stench." This was the case most frequently a day or two prior to Greenwich Fair or Epsom Races, when the congregation of the wandering classes, who are the supporters of the low lodging-houses, was the thickest. It was not only that two or even three persons jammed themselves into a bed not too large for one full-sized man; but between the beds—and their partition one from another admitted little more than the passage of a lodger—were placed shakes-down, or temporary accommodation for nightly slumber. In the better lodging-houses the shake-downs are small palliasses or mattresses; in the worst, they are bundles of rags of any kind; but loose straw is used only in the country for shake-downs. One informant saw a traveller, who had arrived late, eye his shake-down in one of the worst houses with anything but a pleased expression of countenance; and a surly deputy, observing this, told the customer he had his choice, "which," the deputy added, "it's not all men as has, or I shouldn't have been waiting here on you. But you has your choice, I tell you;—sleep there on that shake-down, or turn out and be d——; that's fair." At some of the busiest periods, numbers sleep on the kitchen floor, all huddled together, men and women (when indecencies are common enough), and without bedding or anything but their scanty clothes to soften the hardness of the stone or brick floor. A penny is saved to the lodger by this means. More than 200 have been accommodated in this way in a large

house. The Irish, at harvest-time, very often resort to this mode of passing the night.

I heard from several parties, of the surprise, and even fear or horror, with which a decent mechanic—more especially if he were accompanied by his wife—regarded one of these foul dens, when destitution had driven him there for the first time in his life. Sometimes such a man was seen to leave the place abruptly, though perhaps he had pre-paid his last halfpenny for the refreshment of a night's repose. Sometimes he was seized with sickness. I heard also from some educated persons who had "seen better days," of the disgust with themselves and with the world, which they felt on first entering such places. "And I have some reason to believe," said one man, "that a person, once well off, who has sunk into the very depths of poverty, often makes his first appearance in one of the worst of those places. Perhaps it is because he keeps away from them as long as he can, and then, in a sort of desperation fit, goes into the cheapest he meets with; or if he knows it's a vile place, he very likely says to himself—I did—'I may as well know the worst at once.'"

Another man who had moved in good society, said, when asked about his resorting to a low lodging-house: "When a man's lost caste in society, he may as well go the whole hog, bristles and all, and a low lodging-house is the entire pig."

Notwithstanding many abominations, I am assured that the lodgers, in even the worst of these habitations, for the most part sleep soundly. But they have, in all probability, been out in the open air the whole of the day, and all of them may go to their couches, after having walked, perhaps, many miles, exceedingly fatigued, and some of them half-drunk. "Why, in course, sir," said a "traveller," whom I spoke to on this subject, "if you is in a country town or village, where there's only one lodging-house, perhaps, and that a bad one—an old hand can always suit his-self in London—you *must* get half-drunk, or your money for your bed is wasted. There's so much rest owing to you, after a hard day; and bugs and bad air'll prevent its being paid, if you don't lay in some stock of beer, or liquor of some sort, to sleep on. It's a duty you owes yourself; but, if you haven't the browns, why, then, in course, you can't pay it." I have before remarked, and, indeed, have given instances, of the odd and sometimes original manner in which an intelligent patterer, for example, will express himself.

The information I obtained in the course of this inquiry into the condition of low lodging-houses, afforded a most ample corroboration of the truth of a remark I have more than once found it necessary to make before—that persons of the vagrant class will sacrifice almost anything for warmth, not to say heat. Otherwise, to sleep, or even sit, in some of the apartments of these establishments would be intolerable.

From the frequent state of weariness to which I have alluded, there is generally less conversation among the frequenters of the low lodging-houses than might be expected. Some are busy cooking, some (in the better houses) are reading, many are drowsy and nodding, and many are smoking. In perhaps a dozen places of the worst and filthiest class, indeed, smoking is permitted even in the sleeping-rooms; but it is far less common than it was even half-a-dozen years back, and becomes still less common yearly. Notwithstanding so dangerous a practice, fires are and have been very unfrequent in these places. There is always some one awake, which is one reason. The lack of conversation, I ought to add, and the weariness and drowsiness, are less observable in the lodging-houses patronised by thieves and women of abandoned character, whose lives are comparatively idle, and whose labour a mere nothing. In their houses, if the conversation be at all general, it is often of the most unclean character. At other times it is carried on in groups, with abundance of whispers, shrugs, and slang, by the members of the respective schools of thieves or lurkers.

I have now to speak of the habitual violation of all the injunctions of law, of all the obligations of morality, and of all the restraints of decency, seen continually in the vilest of the lodging-houses. I need but cite a few facts, for to detail minutely might be to disgust. In some of these lodging-houses, the proprietor—or, I am told, it might be more correct to say, the proprietress, as there are more women than men engaged in the nefarious traffic carried on in these houses—are "fences," or receivers of stolen goods in a small way. *Their* "fencing," unless as the very exception, does not extend to any plate, or jewellery, or articles of value, but is chiefly confined to provisions, and most of all to those which are of ready sale to the lodgers.

Of very ready sale are "fish got from the gate" (stolen from Billingsgate); "sawney" (thieved bacon), and "flesh found in Leadenhall" (butcher's-meat stolen from that market). I was told by one of the most respectable tradesmen in Leadenhall-market, that it was infested—but not now to so great an extent as it was—with lads and young men, known there as "finders." They carry bags round their necks, and pick up bones, or offal, or pieces of string, or bits of papers, or "anything, sir, please, that a poor lad, that has neither father nor mother, and is werry hungry, can make a ha'penny by to get him a bit of bread, please, sir." This is often but a cover for stealing pieces of meat, and the finders, with their proximate market for disposal of their meat in the lowest lodging-houses in Whitechapel, go boldly about their work, for the butchers, if the "finder" be detected, "won't," I was told by a sharp youth who then was at a low lodging-house in Keate-street, "go bothering theirselves to a beak, but gives you a scruff of the neck and a kick and lets you go. But some of them kicks

Original from HARVARD UNIVERSITY

werry hard." The tone and manner of this boy — and it is a common case enough with the "prigs"—showed that he regarded hard kicking merely as one of the inconveniences to which his business-pursuits were unavoidably subjected; just as a struggling housekeeper might complain of the unwelcome calls of the tax-gatherers. These depredations are more frequent in Leadenhall-market than in any of the others, on account of its vicinity to Whitechapel. Even the Whitechapel meat-market is less the scene of prey, for it is a series of shops, while Leadenhall presents many stalls, and the finders seem loath to enter shops without some plausible pretext.

Groceries, tea especially, stolen from the docks, warehouses, or shops, are things in excellent demand among the customers of a lodging-house fence. Tea, known or believed to have been stolen "genuine" from any dock, is bought and sold very readily; 1*s.* 6*d.*, however, is a not unfrequent price for what is known as 5*s.* tea. Sugar, spices, and other descriptions of stolen grocery, are in much smaller request.

Wearing-apparel is rarely bought by the fences I am treating of; but the stealers of it can and do offer their wares to the lodgers, who will often, before buying, depreciate the garment, and say "It's never been nothing better nor a Moses"

"Hens and chickens" are a favourite theft, and "go at once to the pot," but in no culinary sense. The hens and chickens of the roguish low lodging-houses are the publicans' pewter measures; the bigger vessels are "hens;" the smaller are "chickens." Facilities are provided for the melting of these stolen vessels. and the metal is sold by the thief—very rarely if ever, by the lodging-house keeper, who prefers dealing with the known customers of the establishment—to marine-store buyers.

A man who at one time was a frequenter of a thieves' lodging-house, related to me a conversation which he chanced to overhear — he himself being then in what his class would consider a much superior line of business—between a sharp lad, apparently of twelve or thirteen years of age, and a lodging-house (female) fence. But it occurred some three or four years back. The lad had "found" a piece of Christmas beef, which he offered for sale to his landlady, averring that it weighed 6 lbs. The fence said and swore that it wouldn't weigh 3 lbs., but she would give him 5*d.* for it. It probably weighed above 4 lbs. "Fip-pence!" exclaimed the lad, indignantly; "you haven't no fairness. Vy, its sixpun' and Christmas time. Fip-pence! A tanner and a flag (a sixpence and a four-penny piece) is the werry lowest terms." There was then a rapid and interrupted colloquy, in which the most frequent words were: "Go to blazes!" with retorts of "You go to blazes!" and after strong and oathful imputations of dishonest endeavours on the part of each contracting party, to over-reach the other, the meat was sold to the woman for 6*d.*

Some of the "fences" board, lodge, and clothe, two or three boys or girls, and send them out regularly to thieve, the fence usually taking all the proceeds, and if it be the young thief has been successful, he is rewarded with a trifle of pocket-money, and is allowed plenty of beer and tobacco.

One man, who keeps three low lodging-houses (one of which is a beer-shop), not long ago received from a lodger a valuable great-coat, which the man said he had taken from a gig. The fence (who was in a larger way of business than others of his class, and is reputed rich,) gave 10*s.* for the garment, asking at the same time, "Who was minding the gig?" "A charity kid," was the answer. "Give him a deuce" (2*d.*), "and stall him off" (send him an errand), said the fence, "and bring the horse and gig, and I'll buy it." It was done, and the property was traced in two hours, but only as regarded the gig, which had already had a new pair of wheels attached to it, and was so metamorphosed, that the owner, a medical gentleman, though he had no moral doubt on the subject, could not swear to his own vehicle. The thief received only 4*l.* for gig and horse; the horse was never traced.

The licentiousness of the frequenters, and more especially of the juvenile frequenters of the low lodging-houses, must be even more briefly alluded to. In some of these establishments, men and women, boys and girls,—but perhaps in no case, or in very rare cases, unless they are themselves consenting parties, herd together promiscuously. The information which I have given from a reverend informant indicates the nature of the proceedings, when the sexes are herded indiscriminately, and it is impossible to present to the reader, in full particularity, the records of the vice practised.

Boys have boastfully carried on loud conversations, and from distant parts of the room, of their triumphs over the virtue of girls, and girls have laughed at and encouraged the recital. Three, four, five, six, and even more boys and girls have been packed, head and feet, into one small bed; some of them perhaps never met before. On such occasions any clothing seems often enough to be regarded as merely an incumbrance. Sometimes there are loud quarrels and revilings from the jealousy of boys and girls, and more especially of girls whose "chaps" have deserted or been inveigled from them. At others, there is an amicable interchange of partners, and next day a resumption of their former companionship. One girl, then fifteen or sixteen, who had been leading this vicious kind of life for nearly three years, and had been repeatedly in prison, and twice in hospitals—and who expressed a strong desire to "get out of the life" by emigration—said: "Whatever that's bad and wicked, that any one can fancy could be

Original from HARVARD UNIVERSITY

done in such places among boys and girls that's never been taught, or won't be taught, better, *is* done, and night after night." In these haunts of low iniquity, or rather in the room into which the children are put, there are seldom persons above twenty. The younger lodgers in such places live by thieving and pocket-picking, or by prostitution. The charge for a night's lodging is generally 2*d.*, but smaller children have often been admitted for 1*d.* If a boy or girl resort to one of these dens at night without the means of defraying the charge for accommodation, the "mot of the ken" (mistress of the house) will pack them off, telling them plainly that it will be no use their returning until they have stolen something worth 2*d.* If a boy or girl do not return in the evening, and have not been heard to express their intention of going elsewhere, the first conclusion arrived at by their mates is that they have "got into trouble" (prison).

The indiscriminate admixture of the sexes among adults, in many of these places, is another evil. Even in some houses considered of the better sort, men and women, husbands and wives, old and young, strangers and acquaintances, sleep in the same apartment, and if they choose, in the same bed. Any remonstrance at some act of gross depravity, or impropriety on the part of a woman not so utterly hardened as the others, is met with abuse and derision. One man who described these scenes to me, and had long witnessed them, said that almost the only women who ever hid their faces or manifested dislike of the proceedings they could not but notice (as far as he saw), were poor Irishwomen, generally those who live by begging: "But for all that," the man added, "an Irishman or Irishwoman of that sort will sleep anywhere, in any mess, to save a halfpenny, though they may have often a few shillings, or a good many, hidden about them."

There is no provision for purposes of decency in some of the places I have been describing, into which the sexes are herded indiscriminately; but to this matter I can only allude. A policeman, whose duty sometimes called him to enter one of those houses at night, told me that he never entered it without feeling sick.

There are now fewer of such filthy receptacles than there were. Some have been pulled down—especially for the building of Commercial-street, in Whitechapel, and of New Oxford-street—and some have fallen into fresh and improved management. Of those of the worst class, however, there may now be at least thirty in London; while the low lodgings of all descriptions, good or bad, are more frequented than they were a few years back. A few new lodging-houses, perhaps half a dozen, have been recently opened, in expectation of a great influx of "travellers" and vagrants at the opening of the Great Exhibition.

Of the Children in Low Lodging-Houses.

The informant whose account of patterers and of vagrant life in its other manifestations I have already given, has written from personal knowledge and observation the following account of the children in low lodging-houses:

"Of the mass of the indigent and outcast," he says, "of whom the busy world know nothing, except from an occasional paragraph in the newspaper, the rising generation, though most important, is perhaps least considered. Every Londoner must have seen numbers of ragged, sickly, and ill-fed children, squatting at the entrances of miserable courts, streets, and alleys, engaged in no occupation that is either creditable to themselves or useful to the community. These are, in many cases, those whose sole homes are in the low lodging-houses; and I will now exhibit a few features of the 'juvenile performers' among the 'London Poor.'

"In many cases these poor children have lost *one* of their parents; in some, they are without either father or mother; but even when both parents are alive, the case is little mended, for if the parents be of the vagrant or dishonest class, their children are often neglected, and left to provide for the cost of their food and lodging as they best may. The following extract from the chaplain's report of one of our provincial jails, gives a melancholy insight into the training of many of the families. It is not, I know, without exception; but, much as we could wish it to be otherwise, it is so general an occurrence, varied into its different forms, that it may be safely accounted as the rule of action.

"'J. G. was born of poor parents. At five years old his father succeeded to a legacy of 500*l.* He was quiet, indolent, fond of drink, a good scholar, and had twelve children. He never sent any of them to school! "Telling lies," said the child, "I learned from my mother: she did things unknown to father, and gave me a penny not to tell him!" The father (on leaving home) left, by request of the mother, some money to pay a man; she slipped up stairs, and told the children to say she was out.

"'From ten to twelve years of age I used to go to the ale-house. I stole the money from my father, and got very drunk. My father never punished me for all this, as he ought to have done. In course of time I was apprenticed to a tanner; he ordered me to chapel, instead of which I used to play in the fields. When out of my time I got married, and still carried on the same way, starving my wife and children. I used to take my little boy, when only five years old, to the public-house, and make him drunk with whatever I drank myself. A younger one could act well a drunken man on the floor. My wife was a sober steady women; but, through coming to fetch me home she learned to drink

Digitized by Google Original from HARVARD UNIVERSITY

too. One of our children used to say, "Mam, you are drunk, like daddy."'

"It may be argued that this awful 'family portrait' is not the average character, but I have witnessed too many similar scenes to doubt the *general* application of the sad rule.

"Of those children of the poor, as has been before observed, the most have either no parents, or have been deserted by them, and have no regular means of living, nor moral superintendance on the part of relatives or neighbours; consequently, they grow up in habits of idleness, ignorance, vagrancy, or crime. In some cases they are countenanced and employed. Here and there may be seen a little urchin holding a few onions in a saucer, or a diminutive sickly girl standing with a few laces or a box or two of lucifers. But even *these* go with the persons who have 'set them up' daily to the public-house (and to the lodging-house at night); and after they have satisfied the cravings of hunger, frequently expend their remaining halfpence (if any) in gingerbread, and as frequently in gin. I have overheard a proposal for 'half-a-quartern and a two-out' (glass) between a couple of shoeless boys under nine years old. One little fellow of eleven, on being remonstrated with, said that it was the only pleasure in life that he had, and he weren't a-going to give that up. Both sexes of this juvenile class frequent, when they can raise the means, the very cheap and 'flash' places of amusement, where the precocious delinquent acquires the most abandoned tastes, and are often allured by elder accomplices to commit petty frauds and thefts.

"Efforts have been made to redeem these young recruits in crime from their sad career, with its inevitable results. In some cases, I rejoice to believe that success has crowned the endeavour. There is that, however, in the cunning hardihood of the majority of these immature delinquents, which presents almost insuperable barriers to benevolence, and of this I will adduce an instance.

"A gentleman, living at Islington, who attends one of the city churches, is in the habit of crossing the piece of waste ground close to Saffron-hill. Here he often saw (close to the ragged school) a herd of boys, and as nearly as he could judge always the *same* boys. One of them always bowed to him as he passed. He thought—and thought right—that they were gambling, and after, on one occasion, talking to them very seriously, he gave each of them two-pence and pursued his way. However, he found himself followed by the boy before alluded to, accompanied by a younger lad, who turned out to be his brother. Both in one breath begged to know if 'his honour' could please to give them any sort of a job. The gentleman gave them his card, inquired their place of residence (a low lodging-house) and the next morning, at nine o'clock, both youths were at his door. He gave them a substantial breakfast, and then took them into an out-house where was a truss of straw, and having himself taken off the band, he desired them to convey the whole, *one straw at a time*, across the garden and deposit it in another out-house. The work was easy and the terms liberal, as each boy was to get dinner and tea, and one shilling per day as long as his services should be required. Their employer had to go to town, and left orders with one of his domestics to see that the youths wanted nothing, and to watch their proceedings; their occupation was certainly not laborious, but then it was *work*, and although that was the first of their requests, it was also the last of their wishes.

"Taking advantage of an adjoining closet, the servant perceived that the weight even of a straw had been too much for these hopeful boys. They were both seated on the truss, and glibly recounting some exploits of their own, and how they had been imposed upon by others. The eldest—about fourteen—was vowing vengeance upon 'Taylor Tom' for attempting to 'walk the barber' (seduce his 'gal'); while the younger—who had scarcely seen eleven summers—averred that it was 'wery good of the swell to give them summut to eat,' but 'precious bad to be shut up in that crib all day without a bit o' backer'). Before the return of their patron they had transported all the straw to its appointed designation; as it was very discernible, however, that this had been effected by a wholesale process, the boys were admonished, paid, and dismissed. They are now performing more ponderous work in one of the penal settlements. Whether the test adopted by the gentleman in question was the best that might have been resorted to, I need not now inquire.

"It would be grateful to my feelings if in these disclosures I could omit the misdemeanors of the other sex of juveniles; but I am obliged to own, on the evidence of personal observation, that there are girls of ages varying from eleven to fifteen who pass the day with a 'fakement' before them ('Pity a poor orphan'), and as soon as evening sets in, loiter at shop-windows and ogle gentlemen in public walks, making requests which might be expected only from long-hardened prostitution. Their nights are generally passed in a low lodging-house. They frequently introduce themselves with 'Please, sir, can you tell me what time it is?' If they get a kindly answer, some other casual observations prepare the way for hints which are as unmistakeable as they are unprincipled.

Of the Low Lodging-houses throughout the Country.

Further to elucidate this subject, full of importance, as I have shown, I give an account of low lodging-houses (or "padding-kens") at the "stages" (so to speak) observed by a patterer "travelling" from London to Birmingham.

I give the several towns which are the usual sleeping places of the travellers, with the character and extent of the accommodation provided for

HARVARD UNIVERSITY

them, and with a mention of such incidental matters as seemed to me, in the account I received, to be curious or characteristic. Circuitous as is the route, it is the one generally followed. Time is not an object with a travelling patterer. "If I could do better in the way of tin," said one of the fraternity to me, "in a country village than in London, why I'd stick to the village—if the better tin lasted—for six months; aye, sir, for six years. What's places to a man like me, between grub and no grub?" It is probable that on a trial, such a man would soon be weary of the monotony of a village life; but into that question I need not now enter.

I give each stage without the repetition of stating that from "here to there" is so many miles; and the charge for a lodging is at such and such a rate. The distance most frequently "travelled" in a day varies from ten to twenty miles, according to the proximity of the towns, and the character and capabilities (for the patterer's purposes) of the locality. The average charge for a lodging, in the better sort of country lodging-houses, is 4*d.* a night,—at others, 3*d.* In a slack time, a traveller, for 4*d.*, has a bed to himself. In a busy time—as at fairs or races—he will account himself fortunate if he obtain *any* share of a bed for 4*d.* At some of the places characterised by my informant as "rackety," "queer," or "Life in London," the charge is as often 3*d.* as 4*d.*

The first stage, then, most commonly attained on tramp, is—

Romford.—"It's a good circuit, sir," said my principal informant, "and if you want to see life between from London to Birmingham, why you can stretch it and see it for 200 miles." The Romford "house of call" most frequented by the class of whom I treat, is the King's Arms (a public-house.) There is a back-kitchen for the use of travellers, who pay something extra if they choose to resort, and are decent enough to be admitted, into the tap-room. "Very respectable, sir," said an informant, "and a proper division of married and single, of men and women. Of course they don't ask any couple to show their marriage lines; no more than they do any lord and lady, or one that ain't a lady, if she's with a lord, at any fash'nable hotel at Brighton. I've done tidy well on slums about 'ladies in a Brighton hotel,' just by the Steyne; werry tidy." In this house they make up forty beds; some of them with curtains.

Chelmsford.—The Three Queens (a beer-shop.) "A rackety place, sir," said the man, "one of the showfuls; a dicky one; a free-and-easy. You can get a pint of beer and a punch of the head, all for 2*d.* As for sleeping on a Saturday night there, 'O, no, we never mention it.' It mayn't be so bad, indeed it ain't, as some London lodging-houses, because there ain't the chance, and there's more known about it." Fourteen beds.

Braintree.—The Castle (a beer-shop.) "Takes in all sorts and all sizes; all colours and all nations; similar to what's expected of the Crystal Palace. I was a *muck-snipe* when I was there—why, a muck-snipe, sir, is a man regularly done up, coopered, and humped altogether—and it was a busyish time, and when the deputy paired off the single men, I didn't much like my bed-mate. He was a shabby-genteel, buttoned up to the chin, and in the tract line. I thought of Old Scratch when I looked at him, though he weren't a Scotchman, I think. I tipped the wink to an acquaintance there, and told him I thought my old complaint was coming on. That was, to kick and bite like a horse, in my sleep, a'cause my mother was terrified by a wicious horse not werry long afore I was born. So I dozed on the bed-side, and began to whinny; and my bed-mate jumped up frightened, and slept on the floor." Twenty-two beds.

Thaxton.—"A poor place, but I stay two days, it's so comfortable and so country, at the Rose and Crown. It's a sort of rest. It's decent and comfortable too, and it's about 6*d.* a night to me for singing and patter in the tap-room. That's my cokum (advantage)." Ten beds.

Saffron Walden.—The Castle. "Better now—was very queer. Slovenly as could be, and you had to pay for fire, though it was a house of call for curriers and other tradesmen, but they never mix with us. The landlord don't care much whose admitted, or how they go on." Twenty-four beds.

Cambridge.—"The grand town of all. London in miniature. It would be better but for the police. I don't mean the college bull-dogs. They don't interfere with us, only with women. The last time I was at Cambridge, sir, I hung the Mannings. It was the day, or two days, I'm not sure which, after their trial. We pattered at night, too late for the collegians to come out. We 'worked' about where we knew they lodged—I had a mate with me—and some of the windows of their rooms, in the colleges themselves, looks into the street. We pattered about later news of Mr. and Mrs. Manning. Up went the windows, and cords was let down to tie the papers to. But we always had the money first. We weren't a-going to trust such out-and-out going young coves as them. One young gent. said: 'I'm a sucking parson; won't you trust *me?*' 'No,' says I, 'we'll not trust Father Peter.' So he threw down 6*d.* and let down his cord, and he says, 'Send six up.' We saw it was Victoria's head all right, so we sends up three. 'Where's the others?' says he. 'O,' says I, 'they're 1*d.* a piece, and 1*d.* a piece extra for hanging Mr. and Mrs. Manning, as we have, to a cord; so it's all right.' Some laughed, and some said, 'D—n you, wait till I see you in the town.' But they hadn't that pleasure. Yorkshire Betty's is the head quarters at Cambridge,—or in Barnwell, of course, there's no such places in Cambridge. It's known as 'W— and Muck Fort.' It's the real college touch—the seat of learning, if you're seeing life. The college lads used to look in there oftener than they do now. They're get-

Original from HARVARD UNIVERSITY

ting shyer. Men won't put up with black eyes for nothing. Old Yorkshire Betty's a motherly body, but she's no ways particular in her management. Higgledy-piggledy; men and women; altogether." Thirty beds.

Newmarket.—"The Woolpack. A lively place; middling other ways. There's generally money to be had at Newmarket. I don't stay there so long as some, for I don't care about racing; and the poorest snob there's a sporting character." Six beds.

Bury St. Edmund's.—"Old Jack Something's. He was a publican for forty years. But he broke, and I've heard him say that if he hadn't been a player on the fiddle, he should have destroyed his-self. But his fiddle diverted him in his troubles. He has a real Cremona, and can't he play it? He's played at dances at the Duke of Norfolk's. I've heard him give the tune he played on his wedding night, years and years back, before I was born. He's a noble-looking fellow; the fac-simile of Louis Philippe. It's a clean and comfortable, hard and honest place." Twelve beds.

Mildenhall.—"A private house; I forget the landlord's name. The magistrates is queer there, and so very little work can be done in my way. I've been there when I was the only lodger." Seven beds.

Ely.—"The Tom and Jerry. Very queer. No back kitchen or convenience. A regular rough place. Often quarrelling there all night long. Any caper allowed among men and women. The landlord's easy frightened." Five beds.

St. Ives.—"Plume of Feathers. Passable." Eleven beds.

St. Neot's.—"Bell and Dicky, and very dicky too. Queer doings in the dos (sleeping) and everything. It's an out-of-the-way place, or the town's people might see to it, but they won't take any notice unless some traveller complains, and they won't complain. They're a body of men, sir, that don't like to run gaping to a beak. The landlord seems to care for nothing but money. He takes in all that offer. Three in a bed often; men, women, and children mixed together. It's anything but a tidy place." Thirteen beds.

Bedford.—The Cock. "Life in London, sir; I can't describe it better. Life in Keate-street, Whitechapel." Fifteen beds.

Irchester.—"I don't mind the name. A most particular place. You must go to bed by nine, or be locked out. It's hard and honest; clean and rough." Six beds.

Wellingborough.—"A private house. Smith or Jones, I know, or some common name. Ducker, the soldier that was shot in the Park by Annette Meyers, lived there. I worked him there myself, and everybody bought. I did the gun-trick, sir, (had great success.) It's an inferior lodging place. They're in no ways particular, not they, who they admit or how they dos. At a fair-time, the goings on is anything but fair." Ten beds.

Northampton.—"Mrs. Bull's. Comfortable and decent. She takes in the *Dispatch*, to oblige her travellers. It's a nice, quiet, Sunday house." Twelve beds.

Market Harborough.—"There's a good lady there gives away tracts and half-a-crown. A private house is the traveller's house, and some new name. Middling accommodation." Nine beds.

Lutterworth.—"A private house, and I'll go there no more. Very queer. Not the least comfort or decency. They're above their business, I think, and take in too many, and care nothing what the travellers do. Higgledy-piggledy together." Ten beds.

Leicester.—"The Rookery. Rosemary-lane over again, sir, especially at Black Jack's. He shakes up the beds with a pitchfork, and brings in straw if there's more than can possibly be crammed into the beds. He's a fighting man, and if you say a word, he wants to fight you." Twelve beds.

Hinckley.—"The Tea-board. Comfortable." Eight beds.

Nuneaton.—"The same style as Hinckley. A private house." Eight beds.

Coventry.—"Deserves to be sent further. Bill Cooper's. A dilapidated place, and no sleep, for there's armies of bugs,—great black fellows. I call it the Sikh war there, and they're called Sikhs there, or Sicks there, is the vermin; but I'm sick of all such places. They're not particular there,—certainly not." Twenty beds.

Birmingham.—"Mrs. Leach's. Comfortable and decent, and a good creature. I know there's plenty of houses in Birmingham bad enough,—London reduced, sir; but I can't tell you about them from my own observation, 'cause I always go to Mrs. Leach's." Thirty beds.

Here, then, in the route most frequented by the pedestrian "travellers," we find, taking merely the accommodation of one house in each place (and in some of the smaller towns there is but one), a supply of beds which may nightly accommodate, on an average, 489 inmates, reckoning at the rate of 12 sleepers to every 8 beds. At busy times, double the number will be admitted. And to these places resort the beggar, the robber, and the pick-pocket; the street-patterer and the street-trader; the musician, the ballad-singer, and the street-performer; the diseased, the blind, the lame, and the half-idiot; the outcast girl and the hardened prostitute; young and old, and of all complexions and all countries.

Nor does the enumeration end here. To these places must often resort the wearied mechanic, travelling in search of employment, and even the broken-down gentleman, or scholar, whose means do not exceed 4*d.*

A curious history might be written of the frequenters of low lodging-houses. Dr. Johnson relates, that when Dean Swift was a young man, he paid a yearly visit from Sir William Temple's seat, Moor Park, to his mother at Leicester.

"He travelled on foot, unless some violence of weather drove him into a waggon; and at night he would go to a penny lodging, where he purchased clean sheets for sixpence. This practice Lord Orrery imputes to his (Swift's) innate love of grossness and vulgarity; some may ascribe it to his desire of surveying human life through all its varieties." Perhaps it might not be very difficult to trace, in Swift's works, the influence upon his mind of his lodging-house experience.

The same author shows that his friend, Richard Savage, in the bitterness of his poverty, was also a lodger in these squalid dens: "He passed the night sometimes in mean houses, which are set open at night to any casual wanderer; sometimes in cellars, among the riot and filth of the meanest and most profligate of the rabble." A Richard Savage of to-day might, under similar circumstances, have the same thing said of him, except that "cellars" might now be described as "ground-floors."

The great, and sometimes the only, luxury of the frequenters of these country lodging-houses is tobacco. A man or women who cannot smoke, I was told, or was not "hardened" to tobacco smoke, in a low lodging-house was half-killed with coughing. Sometimes a couple of men, may be seen through the thick vapour of the tobacco-smoke, peering eagerly over soiled cards, as they play at all-fours. Sometimes there is an utter dulness and drowsiness in the common sitting-room, and hardly a word exchanged for many minutes. I was told by one man of experience in these domiciles, that he had not very unfrequently heard two men who were conversing together in a low tone, and probably agreeing upon some nefarious course, stop suddenly, when there was a pause in the general conversation, and look uneasily about them, as if apprehensive and jealous that they had been listened to. A "stranger" in the lodging-house is regarded with a minute and often a rude scrutiny, and often enough would not be admitted, were not the lodging-house keeper the party concerned, and he of course admits "all what pays."

One patterer told me of two "inscriptions," as he called them, which he had noticed in country lodgings he had lately visited; the first was:—

"He who smokes, thinks like a philosopher, and feels like a philanthropist."—*Bulwer's Night and Morning.*

The second was an intimation from the proprietor of the house, which, in spite of its halting explanation, is easily understood:—

"No sickness allowed, unles by order of the Mare."

Of the Street Stationers, and the Street Card-sellers.

I have before mentioned that the street-stationers — the sellers of writing-paper, envelopes, pens, and of the other articles which constitute the stationery in the most general demand— were not to be confounded with the pattering "paper-workers." They are, indeed, a different class altogether. The majority of them have been mechanics, or in the employ of tradesmen whose callings were not mechanical (as regards handicraft labour), but what is best described perhaps as commercial; or as selling but not producing; as in the instances of the large body of "warehousemen" in the different departments of trade. One street-stationer thought that of his entire body, not more than six had been gentlemen's servants. He himself knew four who had been in such employment, and one only as a boy—but there might be six.

The card-sellers are, in the instances I shall show, more akin to the class of patterers, and I shall, therefore, give them first. The more especially as I can so preserve the consecutiveness of the accounts, in the present number, by presenting the reader with a sketch of the life of an informant, in whose revelations I find that many have taken a strong interest.

Of the Seller of the Penny Short-hand Cards.

All ladies and gentlemen who "take their walks abroad," must have seen, and of course heard, a little man in humble attire engaged in selling at one penny each a small card, containing a few sentences of letter-press, and fifteen stenographic characters, with an example, by which, it is asserted, anybody and everybody may "learn to write short-hand in a few hours." With the merits of the production, self-considered, this is not the place to meddle; suffice it that it is one of the many ways of getting a crust common to the great metropolis, and perhaps the most innocent of all the street performances. A kind of a street lecture is given by the vendor, in which the article is sufficiently puffed off. Of course this lecture is, so to speak, stereotyped, embracing the same ideas in nearly the same words over and over and over again. The exhibitor, however, pleads that the constant exchange and interchange of passengers, and his desire to give each and all a fair amount of information, makes the repetition admissible, and even necessary. It is here given as a specimen of the style of the educated "patterer."

The Lecture.

"Here is an opportunity which has seldom if ever been offered to the public before, whereby any person of common intellect may learn to write short-hand in a few hours, without any aid from a teacher. The system is entirely my own. It contains no vowels, no arbitrary characters, no double consonants, and no terminations; it may therefore properly be called 'stenography,' an expression which conveys its own meaning; it is derived from two Greek words; *stenos*, short, and *grapho*, I write, or *graphi*, the verb *to* write, and embraces all that is necessary in fifteen characters. I know that a prejudice obtains to a great extent against anything and everything said or done in the street, but I have nothing to

do with either the majority or minority of street pretenders. I am an educated man, and not a mere pretender, and if the justice or genuineness of a man's pretensions would always lead him to success I had not been here to-day. But against the tide of human disappointment, the worthy and the undeserving are so equally compelled to struggle, and so equally liable to be overturned by competition, that till you can prove that wealth is the guage of character, it may be difficult to determine the ability or morality of a man from his position. I was lately reading an account of the closing life of that leviathan in literature, Dr. Johnson, and an anecdote occurred, which I relate, conceiving that it applies to one of the points at issue—I mean the ridicule with which my little publication has sometimes been treated by passers-by, who have found it easier to speculate on the texture of my coat, than on the character of my language. The Doctor had a niece who had embraced the peculiarities of Quakerism; after he had scolded her some time, and in rather unmeasured terms, her mother interfered and said, 'Doctor, don't scold the girl—you'll meet her in heaven, I hope.'—'I hope not,' said the Doctor, 'for I hate to meet *fools* anywhere.' I apply the same observation to persons who bandy about the expressions 'gift of the gab,' 'catch-penny,' &c., &c., which in my case it is somewhat easier to circulate than to support. At any rate they ought to be addressed to *me* and not to the atmosphere. The man who meets a foe to the face, gives him an equal chance of defence, and the sword openly suspended from the belt is a less dangerous, because a less cowardly weapon than the one which, like that of Harmodius, is concealed under the wreaths of a myrtle.

"If you imagine that professional disappointment is confined to people out of doors, you are very much mistaken. Look into some of the middle-class streets around where we are standing: you will find here and there, painted or engraved on a door, the words 'Mr. So-and-so, surgeon.' The man I am pre-supposing shall be qualified, — qualified in the technical sense of the expression, a Member of the College of Surgeons, a Licentiate of Apothecaries' Hall, and a Graduate of some University. He may possess the talent of Galen or Hippocrates; or, to come to more recent date, of Sir Astley Cooper himself, but he never becomes popular, and dies unrewarded because unknown: before he dies, he may crawl out of his concealed starvation into such a thoroughfare as this, and see Professor Morrison, or Professor Holloway, or the Proprietor of Parr's Life Pills, or some other quack, ride by in their carriage; wealth being brought them by the same waves that have wafted misfortune to himself; though that wealth has been procured by one undeviating system of Hypocrisy and Humbug, of Jesuitism and Pantomime, such as affords no parallel since the disgusting period of Oliverian ascendancy. Believe me, my friends, a man may form his plans for success with profound sagacity, and guard with caution against every approach to extravagance, but neither the boldness of enterprise nor the dexterity of stratagem will always secure the distinction they deserve. Else that policeman would have been an inspector!

"I have sometimes been told, that if I possessed the facilities I professedly exhibit, I might turn them to greater personal advantage: in coarse, unfettered, Saxon English, 'That's a LIE;' for on the authority of a distinguished writer, there are 2,000 educated men in London and its suburbs, who rise every morning totally ignorant where to find a breakfast. Now I am not *quite* so bad as that, so that it appears I am an exception to the rule, and not the rule open to exception. However, it is beyond all controversy, that the best way to keep the fleas from biting you in bed is to 'get out of bed;' and by a parity of reasoning, the best way for you to sympathize with me for being on the street is to take me off, as an evidence of your sympathy. I remember that, some twenty years ago, a poor man of foreign name, but a native of this metropolis, made his appearance in Edinburgh, and advertised that he would lecture on mnemonics, or the art of memory. As he was poor, he had recourse to an humble lecture-room, situated up a dirty court. Its eligibility may be determined by the fact that sweeps' concerts were held in it, at ½*d.* per head, and the handbill mostly ended with the memorable words: 'N. B.—No gentleman admitted without shoes and stockings.' At the close of his first lecture (the admission to which was 2*d.*), he was addressed by a scientific man, who gave him 5*s.*—(it will relieve the monotony of the present address if some of you follow his example)—and advised him to print and issue some cards about his design, which he did. I saw one of them—the ink on it scarcely dry—as he had got it back at the house of a physician, and on it was inscribed: 'Old birds are not caught with chaff. From Dr. M——, an old bird.' The suspicious doctor, however, was advised to hear the poor man's twopenny lecture, and was able, at the end of it, to display a great feat of memory himself. What was the result? The poor man no longer lectured for 2*d.* But it is tedious to follow him through a series of years. He was gradually patronised throughout the kingdom, and a few months ago he was lecturing in the Hanover-square Rooms, with the Earl of Harrowby in the chair. Was he not as clever a man when he lectured in the sweeps' concert-room? Yes; but he had not been brought *under the shadow of a great name.* Sometimes that 'great name' comes too late. You are familiar with the case of Chatterton. He had existed, rather than lived, three days on a penny loaf; then he committed suicide, and was charitably buried by strangers. Fifty years or more had elapsed, when people found out how clever he had been, and collected money for the erection of that monument which

now stands to his memory by St. Mary Redcliff Church, in Bristol. Now, if you have any idea of doing that for me, please to collect some of it while I am *alive!*"

On occasions when the audience is not very liberal, the lecturer treats them to the following hint:

"When in my golden days—or at the least they were silver ones compared to these—I was in the habit of lecturing on scientific subjects, I always gave the introductory lecture *free*. I suppose this is an 'introductory lecture,' for it yields very little money at present. I have often thought, that if everybody a little richer than myself was half as conscientious, I should either make a rapid fortune, or have nobody to listen to me at all; for I never sanction long with my company anything I don't believe. Now, if what I say is untrue or grossly improbable, it does not deserve the sanction of an audience; if otherwise, it must be meritorious, and deserve more efficient sanction. As to any insults I receive, Christianity has taught me to forgive, and philosophy to despise them."

These very curious, and perhaps unique, specimens of street elocution are of course interrupted by the occasional sale of a card, and perhaps some conversation with the purchaser. The stenographic card-seller states that he has sometimes been advised to use more commonplace language. His reply is germane to the matter. He says that a street audience, like some other audiences, is best pleased with what they least understand, and that the way to appear sublime is to be incomprehensible. He can occasionally be a little sarcastic. A gentleman informed me that he passed him at Bagnigge-wells on one occasion, when he was interrupted by a "gent." fearfully disfigured by the small-pox, who exclaimed: "It's a complete humbug." "No, sir," retorted Mr. Shorthand, "but if any of the ladies present were to call you handsome, *that* would be a humbug." On another occasion a man (half-drunk) had been annoying him some time, and getting tired of the joke, said: "Well—I see you are a learned man, you must pity my ignorance." "No," was the reply, "but I pity your father." "Pity my father!—why?" was the response. "Because Solomon says, 'He that begetteth a fool shall have sorrow of him.'" This little *jeu-d'ésprit*, I was told, brought forth loud acclamations from the crowd, and a crown-piece from a lady who had been some minutes a listener. These statements are among the most curious revelations of the history of the streets.

The short-hand card-seller, as has partly appeared in a report I gave of a meeting of street-folk, makes no secret of having been fined for obstructing a thoroughfare,—having been bound down to keep the peace, and several times imprisoned as a defaulter. He tells me that he once "got a month" in one of the metropolitan jails. It was the custom of the chaplain of the prison in which he was confined, to question the prisoners every Wednesday, from box to box (as they were arranged before him) on some portion of Holy Writ, and they were expected, if able, to answer. On one occasion, the subject being the Excellence of Prayer, the chaplain, remarked that, "even among the heathen, every author, without exception, had commended prayer to a real or supposed Deity." The card-seller, I am told, cried out "Question!" "Who is that?" said the chaplain. The turnkey pointed out the questioner. "Yes," said the card-seller, "you know what Seneca says:—'Quid opus votis? Fac teipsum felicem, vel bonum.' 'What need of prayer? Make thou thyself happy and virtuous.' Does *that* recommend prayer?" The prisoners laughed, and to prevent a mutiny, the classical querist was locked up, and the chaplain closed the proceedings. It is but justice, however, to the worthy minister to state, his querist came out of durance vile better clothed than he went in.

The stenographic trade, of which the informant in question is the sole pursuer, was commenced eleven years ago. At that time 300 cards were sold in a day; but the average is now 24, and about 50 on a Saturday night. The card-seller tells me that he is more frequently than ever interrupted by the police, and his health being delicate, wet days are "nuisances" to him. He makes an annual visit to the country, he tells me, to see his children, who have been provided for by some kind friends. About two years ago he was returning to London and passed through Oxford. He was "hard up," he says, having left his coat for his previous night's lodging. He attended prayers (without a coat) at St. Mary's church, and when he came out, seated himself on the pavement beside the church, and wrote with chalk inside an oval border.

"Δε λίμῳ απολλύμαι."—Lucam xv. 17.
"I perish with hunger."

He was not long unnoticed, he tells me, by the scholars; some of whom "rigged him out," and he left Oxford with 6*l.* 10*s.* in his pocket.

"Let us indulge the hope," writes one who knows this man well, "that whatever indiscretions may have brought a scholar, whom few behold without pity, or converse with without respect for his acquirements, to be a street-seller, nevertheless his last days will be his best days, and that, as his talents are beyond dispute and his habits strictly temperate, he may yet arise out of his degradation."

Of this gentleman's history I give an account derived from the only authentic source. It is, indeed, given in the words of the writer from whom it was received.—

"The *Reverend* Mr. Shorthand" [his real name is of no consequence—indeed, it would be contrary to the rule of this work to print it] "was born at Hackney, in the county of Middlesex, on Good Friday, the 15th of April, 1808; he is, therefore, now in his 43rd year. Of his parents very little is known; he was brought up

by guardians, who were 'well to do,' and who gave him every indulgence and every good instruction and example. From the earliest dawn of reason he manifested a strong predilection for the church; and, before he was seven years old, he had preached to an infant audience, read prayers over a dead animal, and performed certain mimic ceremonies of the church among his schoolfellows.

"The directors of his youthful mind were strong Dissenters, of Antinomian sentiments. With half-a-dozen of the same denomination he went, before he was thirteen, to the anniversary meeting of the Countess of Huntingdon's College, at Cheshunt. Here, with a congregation of about forty persons, composed of the students and a few strangers, he adjourned, while the parsons were dining at the 'Green Dragon,' to the College Chapel, where, with closed doors, the future proprietor of the 'penny short-hand' delivered his first public sermon.

"Before he was quite fourteen, the stenographic card-seller was apprenticed to a draper in or near Smithfield. In this position he remained only a few months, when the indentures were cancelled by mutual consent, and he resumed his studies, first at his native place, and afterwards as a day-scholar at the Charterhouse. He was now sixteen, and it was deemed high time for him to settle to some useful calling. He became a junior clerk in the office of a stock-broker, and afterwards amanuensis to an 'M.D.,' who encouraged his thirst for learning, and gave him much leisure and many opportunities for improvement. While in this position he obtained two small prizes in the state lottery, gave up his situation, and went to Cambridge with a private tutor. As economy was never any part of his character, he there 'overrun the constable,' and to prevent," he says, "any constable running after him. He decamped in the middle of the night, and came to London by a waggon—all his property consisting of a Greek Prayer-book, Dodd's Beauties of Shakspere, two shirts, and two half-crowns.

"At this crisis a famous and worthy clergyman, forty years resident in Hackney (the Rev. H. H. N——, lately deceased), had issued from the press certain strictures against the Society for promoting Christianity among the Jews. The short-hand seller wrote an appendix to this work, under the title of the 'Church in Danger.' He took it to Mr. N——, who praised the performance and submitted to the publication. The impression cast off was limited, and the result unprofitable. It had, however, one favourable issue; it led to the engagement of its author as private and travelling tutor to the children of the celebrated Lady S——, who, though (for adultery) separated from her husband, retained the exclusive custody of her offspring. While in this employment, my informant resided chiefly at Clifton, sometimes in Bath, and sometimes on her ladyship's family property in Derbyshire. While here, he took deacon's orders, and became a popular preacher. In whatever virtues he might be deficient, his charities, at least, were unbounded. This profusion ill suited a limited income, and *a forgery* was the first step to suspension, disgrace, and poverty. In 1832 he married; the union was not felicitous.

"About this date my informant relates, that under disguise and change of name he supplied the pulpits of several episcopal chapels in Scotland with that which was most acceptable to them. Unable to maintain a *locus standi* in connexion with the Protestant church, he made a virtue of necessity, and avowed himself a seceder. In this new disguise he travelled and lectured, proving to a demonstration (always pecuniary) that 'the Church of England was the hospital of Incurables.'

"Always in delicate health, he found continued journeys inconvenient. The oversight of a home missionary station, comprising five or six villages, was advertised; the card-seller was the successful candidate, and for several years performed Divine service four times every Sunday, and opened and taught *gratuitously* a school for the children of the poor. Here report says he was much beloved, and here he ought to have remained; but with that restlessness of spirit which is so marked a characteristic of the class to which he now belongs, he thought otherwise, and removed to a similar sphere of labour near Edinburgh. The town, containing a population of 14,000, was visited to a dreadful extent with the pestilence of cholera. The future street-seller (to his honour be it spoken) was the only one among eight or ten ministers who was not afraid of the contagion. He visited many hundreds of cases, and, it is credibly asserted, added medicine, food, and nursing to his spiritual consolations. The people of his charge here embraced the Irving heresy; and unable, as he says, to determine the sense of 'the unknown tongues,' he resigned his charge, and returned to London in 1837. After living some time upon his money, books, and clothes, till all was expended, he tried his hand at the 'begging-letter trade.' About this time, the card-seller declares that a man, also from Scotland, and of similar history and personal appearance, lodged with him at a house in the Mint, and stole his coat, and with it his official and other papers. This person had been either a city missionary or scripture-reader, having been dismissed for intemperance. The street card-seller states that he has 'suffered much persecution from the officers of the Mendicity Society, and in the opinion of the public, by the blending of his own history with that of the man who robbed him.'' Be the truth as it may, or let his past faults have been ever so glaring, still it furnishes no present reason why he should be maltreated in the streets, where he is *now* striving for an honest living. Since the card-seller's return to London, he has been *five* times elected and re-elected to a temporary engagement in the Hebrew School, Goodman's-fields; so that, at the worst, his habits of life cannot be *very* outrageous."

The "pomps and vanities of this wicked world," have, according to his own account, had very little share in the experience of the short-hand parson. He states, and there is no reason for doubting him, that he *never witnessed any sort of public amusement in his life;* that he was a hard student when he was young, and now keeps no company, living much in retirement. He "attends the ministry," he says, "of the Rev. Robert Montgomery,—reads the daily lessons at home, and receives the communion twice every month at the early service in Westminster Abbey."

Of course these are matters that appear utterly inconsistent with his present mode of life. One well-known peculiarity of this extraordinary character is his almost idolatrous love of children, to whom, if he "makes a good Saturday night," he is very liberal on his way home. This is, perhaps, his "ruling passion" (an acquaintance of his, without knowing why I inquired, fully confirmed this account); and it displays itself sometimes in strong emotion, of which the following anecdote may be cited as an instance:—One of his favourite spots for stenographic demonstration is the corner of Playhouse-yard, close to the *Times* office. Directly opposite lives a tobacconist, who has a young family. One of his little girls used to stand and listen to him; to her he was so strongly attached, that when he heard of her death (he had missed her several weeks), he went home much affected, and did not return to the spot for many months. At the death of the notorious Dr. Dillon, the card-seller offered himself to the congregation as a successor; they, however, declined the overture.

Of the Sellers of Race Cards and Lists.

This trade is not carried on in town; but at the neighbouring races of Epsom and Ascot Heath, and, though less numerously, at Goodwood, it is pursued by persons concerned in the street paper-trade of London.

At Epsom I may state that the race-card sale is in the hands of two classes (the paper or sheet-lists sale being carried on by the same parties) — viz. those who confine themselves to "working" the races, and those who only resort to such work occasionally. The first-mentioned sellers usually live in the country, and the second in town,

Between these two classes, there is rather a strong distinction. The country race-card sellers are not unfrequently "sporting characters." The town professor of the same calling feels little interest in the intrigues or great "events" of the turf. Of the country traders in this line some act also as touters, or touts; they are for the most part men, who having been in some capacity or other, connected with racing or with race-horses, and having fallen from their position or lost their employment, resort to the selling of race-cards as one means of a livelihood, and to touting, or watching race-horses, and reporting anything concerning them to those interested, as another means. These men, I am assured, usually "make a book" (a record and calculation of their bets) with grooms, or such gentlemen's servants, as will bet with them, and sometimes one with another.

The most notorious of the race-card selling fraternity is known as Captain Carrot. He is the successor, I am told, of Gentleman Jerry, who was killed some time back at Goodwood races—having been run over. Gentleman Jerry's attire, twenty-five to thirty-five years ago, was an exaggeration of what was then accounted a gentleman's style. He wore a light snuff-coloured coat, a "washing" waistcoat of any colour, cloth trowsers, usually the same colour as his coat, and a white, or yellow white, and ample cravat of many folds. His successor wears a military uniform, always with a scarlet coat, Hessian boots, an old umbrella, and a tin eye-glass. Upon the card-sellers, however, who confine their traffic to races, I need not dwell, but proceed to the metropolitan dealers, who are often patterers when in town.

It is common, for the smarter traders in these cards to be liberal of titles, especially to those whom they address on the race-ground. "This is the sort of style, sir," said one race-card-seller to me, "and it tells best with cockneys from their shops. 'Ah, my lord. I hope your lordship's well. I've backed your horse, my lord. He'll win, he'll win. Card, my lord, correct card, only 6*d.* I'll drink your lordship's health after the race.' Perhaps this here 'my lord,' may be a barber, you see, sir, and never had so much as a donkey in his life, and he forks out a bob; but before he can get his change, there always *is* somebody or other to call for a man like me from a little distance, so I'm forced to run off and cry, 'Coming, sir, coming. Coming, your honour, coming.'"

The mass of these sellers, however, content themselves with the customary cry: "Here's Dorling's Correct Card of the Races.—Names, weights, and colours of the Riders.—Length of Bridle, and Weight of Saddle."

One intelligent man computed that there were 500 men, women, and children, of all descriptions of street-callings, who on a "Derby day" left London for Epsom. Another considered that there could not be fewer than 600, at the very lowest calculation. Of these, I am informed, the female sellers may number something short of a twentieth part from London, while a twelfth of the whole number of regular street-sellers attending the races vend at the races cards. But card-selling is often a cloak, for the females—and especially those connected with men who depend solely on the races—vend improper publications (usually at 6*d.*), making the sale of cards or lists a pretext for the more profitable traffic.

If a man sell from ten to twelve dozen cards on the "Derby day," it is accounted "a good day;" and so is the sale of three-fourths of

that quantity on the Oaks day. On the other, or "off" days, 2*s.* is an average earnig.

The cards are all bought of Mr. Dorling, the printer, at 2*s.* 6*d.* a dozen. The price asked is always 6*d.* each. "But those fourpenny bits," said one card-seller, "is the ruination of every thing. And now that they say that the threepenny bits is coming in more, things will be wuss and wuss." The lists vary from 1*s.* 6*d.* to 2*s.* 6*d.* the dozen, according to size. To clear 10*s.* and 8*s.* on the two great days is accounted "tidy doings," but that is earned only by those who devote themselves to the sale of the race-cards, which all the sellers do not. Some, for instance, are ballad-singers, who sell cards immediately before a race comes off, as at that time they could obtain no auditory for their melodies. Ascot-heath races, I am told, are rather better for the card seller than Epsom, as "there's more of the nobs there," and fewer of the London vendors of cards. The sale of the "lists" is less than one-eighth that of the sale of cards. They are chiefly "return lists," (lists with a specification of the winning horses, &c., "returned" as they acquitted themselves in each race), and are sold in the evening, or immediately after the conclusion of the "sport," for the purpose of being posted or kept.

Of the Street-sellers of Gelatine, of Engraved, and of Playing Cards, &c.

There are yet other cards, the sale of which is carried on in the streets; of these, the principal traffic has lately been in "gelatines" (gelatine cards). Those in the greatest demand contain representations of the Crystal Palace, the outlines of the structure being given in gold delineation on the deep purple, or mulberry, of the smooth and shining gelatine. These cards are sold in blank envelopes, for the convenience of posting them as a present to a country friend; or of keeping them unsoiled, if they are retained as a memento of a visit to so memorable a building. The principal sale was on Sunday mornings, in Hyde Park, and to the visitors who employed that day to enjoy the sight of the "palace." But on the second Sunday in February—as well as my informant could recollect, for almost all street-traders will tell you, if not in the same words as one patterer used, that their recollections are "not worth an old button without a neck"—the police "put down" the sale of these Exhibition cards in the Park, as well as that of cakes, tarts, gingerbread, and such like dainties. This was a bitter disappointment to a host of street-sellers, who looked forward very sanguinely to the profits they might realise when the Great Exhibition was in full operation, and augured ill to their prospects from this interference. I am inclined to think, that, on this occasion, the feelings of animosity entertained by the card-sellers towards the police and the authorities were even bitterer than I have described as affecting the costermongers. "Why," said one man, "when I couldn't be let sell my cards, I thrust my hands into my empty pockets, and went among the crowd near the Great Exhibition place to look about me. There was plenty of ladies and gentlemen—say about 12 o'clock at Sunday noon, and as many as could be. Plenty of 'em had nice paper bags of biscuits, or cakes, that, of course, they'd bought that morning at a pastrycook's, and they handed 'em to their party. Some had newspapers they was reading—about the Exhibition, I dare say—papers which was bought, and, perhaps, was printed that very blessed morning; but for us to offer to earn a crust then—oh, it's agen the law. In course it is."

Some of the gelatine cards contain pieces of poetry, in letters of gold, always—at least, I could hear of no exceptions—of a religious or sentimental character. "A Hymn," "The Child's Prayer," "The Christian's Hope," "To Eliza," "To a Daisy," "Forget-me-not," and "Affection's Tribute," were among the titles. Some contained love-verses, and might be used for valentines, and some a sentimental song.

In the open-air sale, nearly all the traffic was in "Exhibition gelatines," and the great bulk were sold in and near Hyde Park. For two or three months, from as soon as the glass palace had been sufficiently elevated to command public attention, there were daily, I am told, 20 persons selling those cards in the Park and its vicinity, and more than twice that number on Sundays. One man told me, that, on one fine bright Sunday, the sale being principally in the morning, he had sold 10 dozen, with a profit of about 5*s.* On week-days three dozen was a good sale; but on wet, cold, or foggy days, none at all could be disposed of. If, therefore, we take as an average the sale of two dozen daily per each individual, and three dozen on a Sunday, we find that 180*l.* was expended on street-sold "gelatines." The price to the retailer is 5*d.* a dozen, with 1*d.* or 1¼*d.* for a dozen of the larger-sized envelopes, so leaving the usual profit—cent. per cent. The sellers were not a distinct class, but in the hands of the less enterprising of the paper-workers or patterers. The "poetry gelatines" were hardly offered at all in the streets, except by a few women and children, with whom it was a pretext for begging.

Of "engraved" Exhibition-cards, sold under similar circumstances, there might be one third as many sold as of the gelatines, or an expenditure of 60*l.*

The sale of playing-cards is only for a brief interval. It is most brisk for a couple of weeks before Christmas, and is hardly ever attempted in any season but the winter. The price varies from 1*d.* to 6*d.*, but very rarely 6*d.*; and seldom more than 3*d.* the pack. The sellers for the most part announce their wares as "New cards. New playing-cards. Two-pence a pack." This subjects the sellers (the cards being unstamped) to a penalty of 10*l.*, a matter of which the street-traders know and care nothing; but there is no penalty on the sale of second-hand cards. The best of the cards are

generally sold by the street-sellers to the landlords of the public-houses and beer-shops where the customers are fond of a "hand at cribbage," a "cut-in at whist," or a "game at all fours," or "all fives." A man whose business led him to public-houses told me that for some years he had not observed any other games to be played there, but he had heard an old tailor say that in his youth, fifty years ago, "put" was a common public-house game. The cheaper cards are frequently imperfect packs. If there be the full number of fifty-two, some perhaps are duplicates, and others are consequently wanting. If there be an ace of spades, it is unaccompanied by those flourishes which in the duly stamped cards set off the announcement, "Duty, One Shilling;" and sometimes a blank card supplies its place. The smaller shop-keepers usually prefer to sell playing-cards with a piece cut off each corner, so as to give them the character of being second-hand; but the street-sellers prefer vending them without this precaution. The cards—which are made up from the waste and spoiled cards of the makers—are bought chiefly, by the retailers, at the "swag shops."

Playing cards are more frequently sold with other articles—such as almanacks—than otherwise. From the information I obtained, it appears that if twenty dozen packs of cards are sold daily for fourteen days, it is about the quantity, but rather within it. The calculation was formed on the supposition that there might be twenty street playing-card sellers, each disposing (allowing for the hinderances of bad weather, &c.), of one dozen packs daily. Taking the average price at 3*d.* a pack, we find an outlay of 42*l.* The sale used to be far more considerable and at higher prices, and was "often a good spec. on a country round."

There is still another description of cards sold in the streets of London; viz., conversation-cards; but the quantity disposed of is so trifling as to require no special comment.

Of the Street-sellers of Stationery.

Of this body of street-traders there are two descriptions, the itinerant and the "pitching." There are some also who unite the two qualities, so far as that they move a short distance, perhaps 200 yards, along a thoroughfare, but preserve the same locality.

Of the itinerant again, there are some who, on an evening, and more especially a Saturday evening, take a stand in a street-market, and pursue their regular "rounds" the other portions of the day.

The itinerant trader carries a tray, and in no few cases, as respects the "display" of his wares, emulates the tradesman's zeal in "dressing" a window temptingly. The tray most in use is painted, or mahogany, with "ledges," front and sides; or, as one man described it, "an upright four-inch bordering, to keep things in their places." The back of the tray, which rests against the bearer's breast, is about twelve inches high. Narrow pink tapes are generally attached to the "ledges" and back, within which are "slipped" the articles for sale. At the bottom of the tray are often divisions, in which are deposited steel pens, wafers, wax, pencils, pen-holders, and, as one stationer expressed it, "packable things that you can't get much show out of." One man—who rather plumed himself on being a thorough master of his trade—said to me: "It's a grand point to display, sir. Now, just take it in this way. Suppose you yourself, sir, lived in my round. Werry good. You hear me cry as I'm a approaching your door, and suppose you was a customer, you says to yourself: 'Here's Penny-a-quire,' as I'm called oft enough. And I'll soon be with you, and I gives a extra emphasis at a customer's door. Werry good, you buys the note. *As* you buys the note, you gives a look over my tray, and then you says, 'O, I want some steel pens, and is your ink good?' and you buys some. But for the 'display,' you'd have sent to the shop-keeper's, and I should have lost custom, 'cause it wouldn't have struck you."*

The articles more regularly sold by the street-sellers of stationery are note-paper, letter-paper, envelopes, steel pens, pen-holders, sealing-wax, wafers, black-lead pencils, ink in stonebottles, memorandum-books, almanacks, and valentines. Occasionally, they sell India-rubber, slate-pencil, slates, copy-books, story-books, and arithmetical tables.

The stationery is purchased, for the most part, in Budge-row and Drury-lane. The half-quires (sold at 1*d.*) contain, generally, 10 sheets; if the paper, however, be of superior quality, only 8 sheets. In the paper-warehouses it is known as "outsides," with no more than 10 sheets to the half-quire, the price varying from 4*s.* to 6*s.* the ream (20 quires); or, if bought by weight, from 7*d.* to 9*d.* the pound. The envelopes are sold (wholesale) at from 6*d.* to 15*d.* the dozen; the higher-priced being adhesive, and with impressions—now, generally, the Crystal Palace—on the place of the seal. The commoner are retailed in the streets at 12, and the better at 6, a penny. Sometimes "a job-lot," soiled, is picked up by the street-stationer at 4*d.* a pound. The sealing, a pound, retailed at ½*d.* each; the "flat" wax, however, is 1*s.* 4*d.* per lb., containing from 30 to 36 sticks, retailed at 1*d.* each. Wafers (at the same swag shops) are 3*d.* or 4*d.* the lb.—in small boxes, 9*d.* the gross; ink, 4½*d.* or 5*d.* the dozen bottles; pencils, 7*d.* to 8*s.* a gross; and steel pens from 4*d.* (waste) to 3*s.* a gross; but the street-stationers do not go beyond 2*s.* the gross, which is for magnum bonums.

Of the Experience of a Street-Stationer.

A middle-aged man gave me the following

* I may here observe that I have rarely heard tradesmen dealing in the same wares as street-sellers, described by those street-sellers by any other term than that of "shopkeepers."

account. He had pursued the trade for upwards of twelve years. He was a stout, cosey-looking man, wearing a loose great coat. The back of his tray rested against his double-breasted waistcoat; the pattern of which had become rather indistinct, but which was buttoned tightly up to his chin, as if to atone for the looseness of his coat. The corner of his mouth, toward his left ear, was slightly drawn down, for he seemed in "crying" to pitch his voice (so that it could be heard a street off) out of the corner of his only partially-opened mouth.

"Middlin', sir," he said, "times is middlin' with me; they might be better, but then they might be worse. I can manage to live. The times is changed since I was first in the business. There wasn't no 'velops (envelopes) then, and no note-paper—least I had none; but I made as good or a better living than I do now; a better indeed. When the penny-postage came in—I don't mind the year, but I hadn't been long in the trade [it was in 1840]—I cried some of the postage 'velops. They was big, figured things at first, with elephants and such like on them, and I called them at prime cost, if anything was bought with 'em. The very first time, a p'liceman says, 'You mustn't sell them covers. What authority have you to do it?' 'Why, the authority to earn a dinner,' says I; but it was no go. Another peeler came up and said I wasn't to cry them again, or he'd have me up; and so that spec. came to nothing. I sell to ladies and gentlemen, and to servant-maids, and mechanics, and their wives; and indeed all sorts of people. Some fine ladies, that call me to the door on the sly, do behave very shabby. Why, there was one who wanted five half-quire of note for 4*d.*, and I told her I couldn't afford it, and so she said 'that she knew the world, and never gave nobody the price they first asked.' 'If that's it, ma'am,' says I, 'people that knows your plan can 'commodate you.' That knowing card of a lady, sir, as she reckons herself, had as much velvet to her body—such a gown!—as would pay *my* tailor's bills for twenty year. But I don't employ a fashionable tailor, and can patch a bit myself, as I was two years with a saddler, and was set to work to make girths and horse-clothes. My master died, and all went wrong, and I had to turn out, without nobody to help me,—for I had no parents living; but I was a strong young fellow of sixteen. I first tried to sell a few pairs of girths, and a roller or two, to livery-stable keepers, and horse-dealers, and job-masters. But I was next to starving. They wouldn't look at anything but what was good, and the stuff was too high, and the profit too little—for I couldn't get regular prices, in course—and so I dropped it. There's no men in the world so particular about good things as them as is about vallyable horses. I've often thought if rich people cared half as much about poor men's togs, that was working or them for next to nothing, as they cared for their horse-clothes, it would be a better world. I was dead beat at last; but I went down to Epsom and sold a few race-cards. I'd borrowed 1*s.* of a groom to start with, and he wouldn't take it back when I offered it; and that wax is bought at general warehouses, known as "swag shops" (of which I may speak hereafter), at 8*d.* the pound, there being 48 round sticks in, was my beginning in the paper trade. I felt queer at first, and queerer when I wasn't among horses, as at the races like—but one get's reconciled to anything, 'cept, to a man like me, a low lodging-house. A stable's a palace to it. I got into stationery at last, and it's respectable.

"I've heard people say how well they could read and write, and it was no good to them. It has been, and is still, a few pence to me; though I can only read and write middlin'. I write notes and letters for some as buys paper of me. Never anything in the beggin' way—never. It wouldn't do to have my name mixed up that way. I've often got extra pennies for directing and doing up valentines in nice 'velops. Why, I spoke to a servant girl the other day; she was at the door, and says I, 'Any nice paper to-day, to answer your young man's last love-letter, or to write home and ask your mother's consent to your being wed next Monday week?' That's the way to get them to listen, sir. Well, I finds that she can't write, and so I offers to do it for a pint of beer, and she to pay for paper of course. And then there was so many orders what to say. Her love to no end of aunts, and all sorts of messages and inquiries about all sorts of things; and when I'd heard enough to fill a long 'letter' sheet, she calls me back and says, 'I'm afraid I've forgot uncle Thomas.' I makes it all short enough in the letter, sir. 'My kind love to all inquiring friends,' takes in all uncle Thomases. I writes them when I gets a bite of dinner. Sometimes I posts them, if I'm paid beforehand; at other times I leaves them next time I pass the door. There's no mystery made about it. If a missus says, 'What's that?' I've heard a girl answer, 'It's a letter I've got written home, ma'am. I haven't time myself,' or 'I'm no scholar, ma'am.' But that's only where I'm known. I don't write one a week the year round—perhaps forty in a year. I charge 1*d.* or 2*d.*, or if it's a very poor body, and no gammon about it, nothing. Well, then, I think I never wrote a love-letter. Women does that one for another, I think, when the young housemaid can't write as well as she can talk. I jokes some as I knows, and says I writes all sorts of letters but love-letters, and for them, you see, says I, there's wanted the best gilt edge, and a fancy 'velop, and a Dictionary. I take more for note and 'velops than anything else, but far the most for note. Some has a sheet folded and fitted into a 'velop when they buys, as they can't fit it so well theirselves, they say. Perhaps I make 2*s.* a day, take it all round. Some days I may make as much as 3*s.* 6*d.*; at others, 'specially wet days, not 1*s.* But I call mine a tidy round, and better than an average. I've only myself, and pays 1*s.* 9*d.* a week for a tidy room, with a few of my own sticks in it. I

HARVARD UNIVERSITY

buy sometimes in Budge-row, and sometimes in Drury-lane. Very seldom at a swag-shop (Birmingham house), for I don't like them.

"Well, now, I've heard, sir, that poor men like me ain't to be allowed to sell anything in the Park at the Great Exhibition. How's that, sir?" I told him I could give no information on the subject.

"It's likely enough to be true," he resumed; "the nobs 'll want to keep it all to theirselves. I read *Lloyd's Weekly Newspaper* on a Sunday, and what murders and robberies there is now! What will there be when the Great Exhibition opens! for rogues is worst in a crowd, and they say they'll be plenty come to London from all arts and parts? Never mind; if I can see anything better to do in a fair way at the Exhibition, I'll cut the streets.

"Perhaps my earnings is half from working people and half from private houses; that's about it. But working people's easiest satisfied."

I have given this man's statement more fully than I should have thought necessary, that I might include his account of letter-writing. The letter-writer was at one period a regular street-labourer in London, as he is now in some continental cities—Naples, for instance. The vocation in London seems in some respects to have fallen into the hands of the street-stationer, but the majority of letters written for the uneducated—and their letter-receiving or answering is seldom arduous—is done, I believe, by those who are rather vaguely but emphatically described as—"friends."

I am told that there are 120 street-stationers in London, a small majority of whom may be itinerant, but chiefly on regular rounds. On a Sunday morning, in such places as the Brill, are two or three men, but not regularly, who sell stationery only on Sunday mornings. Taking the number, however, at 120, I am assured that their average profits may be taken at 8*s.* weekly, each stationer. On note-paper of the best sort the profit is sometimes only 50 per cent.; but, take the trade altogether, we may calculate it at cent. per cent. (on some things it is higher); and we find 4,992*l.* yearly expended in street-stationery.

Of a "Reduced" Gentlewoman, and a "Reduced" Tradesman, as Street-sellers of Stationery.

I now give two statements, which show the correctness of my conclusion, that among the street-stationers were persons of education who had known prosperity, and that, as a body, those engaged in this traffic were a better class than the mass of the "paper-workers." They are also here cited as illustrations of the causes which lead, or rather force, many to a street-life.

The first statement is that of a lady:—

"My father," she said, "was an officer in the army, and related to the Pitt family. After his death, I supported myself by teaching music. I was considered very talented by my profession, both as teacher and composer." (I may here interrupt the course of the narrative by saying, that I myself have had printed proofs of the lady's talents in this branch of art.) "A few years ago, a painful and protracted illness totally incapacitated me from following my profession; consequently, I became reduced to a state of great destitution. For many weeks I remained ill in my own room. I often, during that time, went without nourishment the day through. I might have gone into an hospital; but I seemed to dread it so much, that it was not until I was obliged to give up my room that I could make up my mind to enter one. From that time, until within a few weeks ago, I have been an inmate of several hospitals: the last I was in was the Convalescent Establishment at Carshalton. On my coming to London, I found I had to begin the world again, as it were, in a very different manner from what I have been accustomed to. I had no head to teach—I felt that; and what to do I hardly knew. I had no home to go to, and not a halfpenny in the world. I had heard of the House of Charity, in Soho-square, and, as a last resource, I went there; but before I could have courage to ask admittance, I got a woman to go in and see what kind of a place it was—I seemed to fear it so much. I met with great kindness there, however; and, by the time I left, the care they had bestowed upon me had restored my health in a measure, but not my head. The doctors advised me to get some out-door occupation (I am always better in the open air); but what to do I could not tell. At last I thought of a man I had known, who made fancy envelopes. I went to him, and asked him to allow me to go round to a few houses with some of them for a small per centage. This he did, and I am thereby enabled, by going along the streets and calling to offer my envelopes at any likely house, just to live. None but those who have suffered misfortunes (as I have done) can tell what my feelings were on first going to a house. I *could* not go where I was known; I had not the courage, nor would my pride allow me. My pupils had been very kind to me during my illnesses, but I could not bear the idea of going to them and offering articles for sale.

"My fear of strangers is so great, that I tremble when I knock at a door—lest I should meet with an angry word. How few have any idea of the privations and suffering that have been endured before a woman (brought up as I have been) can make up her mind to do as I am obliged to do! I am now endeavouring to raise a little money to take a room, and carry on the envelope business myself. I might do pretty well, I think; and, should my head get better, in time I might get pupils again. At present I could not teach, the distressed state of my mind would not allow me."

The tradesman's statement he forwarded to me in writing, supplying me with every facility to test the full accuracy of his assertions, which it is right I should add I have done, and found all as he has stated. I give the narrative in the

writer's words (and his narrative will be found at once diffuse and minute), as a faithful representation of a "reduced" tradesman's struggles, thoughts, and endurances, before being forced into the streets.

"I was brought up," he writes, "as a linen-draper. After filling every situation as an assistant, both in the wholesale and retail trade, I was for a considerable time in business. Endeavouring to save another from ruin, I advanced what little money I had at my banker's, and became security for more, as I thought I saw my way clear. But a bond of judgment was hanging over the concern (kept back from me of course) and the result was, I lost my money to the amount of some hundreds, of which I have not recovered one pound. Since that time I have endeavoured to gain a livelihood as a town traveller. In 1845 I became very much afflicted, and the affliction continued the greater part of the following year. At one time I had fifteen wounds on my body, and lost the use of one side. I was reduced by bodily disease, as well as in circumstances. My wife went to reside among her friends, and I, after my being an out-patient of Bartholomew's Hospital went, through necessity, to Clerkenwell Workhouse. When recovered, I made another effort to do something among my own trade, and thought, after about two years struggle, I should recover in a measure my position. In August, 1849, I sent for a few shillings-worth of light articles from London (being then at Dunstable). I received them, and sold one small part; I went the following day to the next village nearer London. There I had a violent attack of cholera; which once more defeated my plans, leaving me in a weak condition. I was obliged to seek the refuge of my parish, and consider that very harshly was I treated there. They refused me admittance, and suffered me to walk the street two days and two nights. I had no use of my arm, was ill and disabled. About half-past seven on the third night, a gentleman, hearing of my sufferings, knocked at the door of the Union, took me inside, and dared them to turn me thence. This was in October, 1849. I lay on my bed there for seven weeks nearly, and a few days before Christmas-day the parish authorities brought me before the Board, and turned me out, with one shilling and a loaf; one of the overseers telling me to go to h—ll and lodge anywhere. I came to lodge at the Model Lodging-house, King-street, Drury-lane; but being winter-time they were full. Although I remained there in the day-time, I was obliged to sleep at another house. At this domicile I saw how many ways there were of getting what the very poor call a living, and various suggestions were offered. I was promised a gift of 2*s.* 6*d.* by an individual, on a certain day,—but I had to live till that day, and many were the feelings of my mind, how to dispose of what might remain when I received the 2*s.* 6*d.*, as I was getting a little into debt. My debt, when paid, left me but 9½*d.* out of the 2*s.* 6*d.* to trade with. I had never hawked an article before that time; to stand the streets was terrible to my mind, and how to invest this small sum sadly perplexed me. My mind was racked by painful anxiety; one moment almost desponding, the next finding so much sterling value in a shilling, that I saw in it the means of rescuing me from my degradation. Wanting many of the necessaries of life, but without suitable attire for my own business, and still weak from illness, I mad up my mind. On the afternoon of 2nd Jan., 1850, I purchased 1½ doz. memorandum-books, of a stationer in Clerkenwell, telling him my capital. I obtained the name of 'Ninepence-halfpenny Man' (the amount of my funds) at that shop. The next step was how to dispose of my books. I thought I would go round to some coffee and public-houses, as I could not endure the streets. I went into one, where I was formerly known, and sold 6*d.*-worth, and meeting a person who was once in my own line, at another house, I sold 4*d.*-worth more. The first night, therefore, I got over well. The next day I did a little, but not so well, and I found out that what I had bought was not the most ready sale. My returns that week were only 6*s.* 2*d.* I found I must have something different,—one thing would not do alone; so I bought a few childrens' books and almanacks—sometimes going to market with as little as seven farthings. I could not rise to anything better in the way of provisions during this time than dry toast and coffee, as the rent must be looked to. I struggled on, hoping against hope. At one period I had a cold and lost my voice. Two or three wet days in a week made me a bankrupt. If I denied myself food, to increase my stock, and went out for a day or two to some near town, I found that with small stock and small returns I could not stem the tide.

"I always avoided associating with any but those a step higher in the grades of society—a circumstance that caused me not to know as much of the market for my cheap articles as I might have done. I am perhaps looked on as rather an 'aristocrat,' as I am not often seen by the street-sellers at a stand. My difficulties have been of no ordinary kind; with a desire for more domestic comfort on one hand, and painful reflections from want of means on the other, I have had to call to my aid all the philosophy I possess, to keep up a proper equilibrium, lest I should be tempted to anything derogatory or dishonest. I am desirous of a rescue at the only time likely for it to take place with advantage, as I am persuaded when persons continue long in a course that endangers their principles and self-respect, a rescue becomes hopeless. Should I have one small start with health, the privations I have undergone show not what comforts I have had, or may hope ever to have, but what I can absolutely do without.

"I found the first six months not quite so good as the latter; March and May being the worst. The entire amount taken from January 2nd to December 31st, 1850; was 28*l.* 10*s.* 6*d.*,—

an average of about 11*s.* 4*d.* a week; say for cost of goods, 6*s.* per week; and rent, 1*s.* 9*d.*; leaving me but 3*s.* 7*d.* clear for living. This statement, sir, is strictly correct, as I do not get cent. per cent. on all the articles; and yet with so small a return I am not behind one single crown at the present time.

"On New Year's-day last, I had but the cost price of stock, 5*d.* Up to the evening of February 10th, I have taken 2*l.* 19*s.* 8*d.*;—having paid for goods, 1*l.* 10*s.* 5*d.*; and for rent, 8*s.* 10*d.*: leaving me 1*l.* 5*d.* to exist on during nearly six weeks. These facts and figures show that without a little assistance it is impossible to rise; and remember this circumstance—I have had to walk on some occasions as much as twenty or twenty-two miles in a day. If those whom Providence has blessed with a little more than their daily wants would only enter into the conflicts of the really reduced person, they would not be half so niggardly in spending a few coppers for useful articles, at least, nor overbearing in their requirements as to bulk, when purchasing of the itinerant vendor. Did they but reflect that they themselves might be in the same condition, or some of their families, I am sure they would not act as they do; for I would venture to say that the common street beggar does not get more rebuffs or insults than the educated and unfortunate reduced tradesmen in the streets. The past year has been one of the most trying and painful, yet I hope instructive, periods of my existence, and one of which I trust I never shall see the like again."

I subjoin one of the testimonies that have been furnished me, as to this man's character, and which I thought it right to procure before giving publicity to the above statement. It is from a minister of the gospel—the street-seller's father-in-law.

"DEAR SIR,—I received a letter, last Tuesday, from Mr. Knight, intimating that he was requested by you to inquire into the character of Mr. J—— N——.

"It is quite correct, as he states, that his wife is my daughter. They lived together several years in London; but eventually, notwithstanding her efforts in the millinery and straw-work, they became so reduced that their circumstances obliged my daughter to take her two little girls with herself to us.

"This was in the summer, 1845. His wife and children have been of no expense to Mr. N. since that time. The sole cause of their separation was poverty.

"I consider him to have acted imprudently in giving up his situation to depend on an income arising from a small capital; whereas, if he had kept in a place, whilst she attended to her own business, they might have gone on comfortably; and should they, through the interposition of a kind Providence, gain that position again, it is to be hoped that they will improve the circumstance to the honour and glory of the Author of all our mercies, and with gratitude to the instrument who may be raised up for their good.

"I am, dear Sir, respectfully yours,
"J. D."

Other vouchers have been received, and all equally satisfactory.

OF THE STREET-SALE OF MEMORANDUM-BOOKS AND ALMANACKS.

THE memorandum-books in demand in street-sale are used for weekly "rent-books." The payment of the rent is entered by the landlord, and the production of one of these books, showing a punctuality of payment, perhaps for years, is one of the best "references" that can be given by any one in search of a new lodging. They are bought also for the entrance of orders, and then of prices, in the trade at chandler's shops, &c., where weekly or monthly accounts are run. All, or nearly all, the street-stationers sell memorandum-books, and in addition to them, there may be, I am told, sometimes as many as fifty poor persons, including women and children, who sell memorandum-books with other trifling articles, not necessarily stationery, but such things as stay-laces or tapes. If a man sell memorandum-books alone it is because his means limit him to that stock, he being at the time, what I heard a patterer describe as, a "dry-bread cove." The price is 6*d.* the dozen, or 9*d.* (with almanacks pasted inside the cover), and thirteen to the dozen. No more than 1*d.* is obtained in the streets for any kind of memorandum-books.

The almanack street trade, I heard on all hands, had become a mere nothing. "What else can you expect, sir," said one street-seller, "when so many publicans sends almanacks round, or gives them away to their customers; and when the slop tailors' shilling-a-day men thrust one into people's hands at every corner? It was a capital trade once, before the duty was taken off—capital! The duty wasn't in our way so much as in the shop-keepers', though *they* did a good deal on the sly in unstamped almanacks. Why of a night in October I've many a time cleared 5*s.* and more by selling in the public-houses almanacks at 2*d.* and 3*d.* a-piece (they cost me 1*s.* and 1*s.* 2*d.* a dozen at that time). Anything that way, when Government's done, has a ready sale; people enjoys it; and I suppose no man, as ever was, thinks it much harm to do a tax-gatherer! I don't pay the income-tax myself (laughing). One evening I sold, just by Blackfriars-bridge, fourteen dozen of diamond almanacks to fit into hat-crowns. I was liable, in course, and ran a risk. I sold them mostly at 1*d.* a piece, but sometimes got 6*d.* for three. I cleared between 6*s.* and 7*s.* The 'diamonds' cost me 8*d.* a dozen."

The street almanack trade is now carried on by the same parties as I have specified in my account of memorandum-books. Those sold are of any cheap kind, costing wholesale 6*d.* a dozen, but they are almost always announced as "Moore's."

OF THE STREET-SALE OF POCKET-BOOKS AND DIARIES.

THE sale of pocket-books, in the streets, is not, I was told by several persons, "a living for a man now-a-days." Ten years ago it was common to find men in the streets offering "half-crown pocket-books" for 1*s.*, and holding them open so as to display the engravings, if there

were any. The street-sale usually takes place in March, when the demand for the regular trade has ceased, and the publishers dispose of their unsold stock. The trade is now, I am assured, only about a tenth of its former extent. The reason assigned for the decline is that almanacks, diaries, &c., are so cheap that people look upon 1*s*. as an enormous price, even for a "beautiful morocco-bound pocket-book," as the street-seller proclaims it. The binding is roan (a dressed sheep-skin, morocco being a goat-skin), an imitation of morocco, but the pocket-books are really those which in the October preceding have been published in the regular way of trade. Some few of them may, however, have been damaged, and these are bought by the street-people as a "job lot," and at a lower price than that paid in the regular way; which is 4*s*. 6*d*. to 5*s*. 6*d*. the dozen, thirteen to the dozen. The "job lot" is sometimes bought for 2*s*. 6*d*. a dozen, and sold at 6*d*. each, or as low as 4*d*.,—for street-sellers generally bewail their having often to come down to "fourpenny-bits, as they're going so much now." One man told me that he was four days last March in selling a dozen pocket-books, though the weather was not unfavourable, and that his profit was 5*s*. Engravings of the "fashions," the same man told me, were "no go now." Even poorly-dressed women (but they might, he thought, be dress-makers) had said to him the last time he displayed a pocket-book with fashions—"They're out now." The principal supplier of pocket-books, &c., to the street-trade is in Bride-lane, Fleet-street. Commercial diaries are bought and sold at the same rate as pocket-books; but the sale becomes smaller and smaller.

I am informed that "last season" there were twenty men, all street-traders in "paper," or "anything that was up," at other times, selling pocket-books and diaries. For this trade Leicester-square is a favourite place. Calculating, from the best data I can command, that each of those men took 15*s*. weekly for a month (half of it their profit), we find 60*l*. expended in the streets in this purchase. Ledgers are sometimes sold in the streets; but as the sale is more a hawker's than a regular street-seller's, an account of the traffic is not required by my present subject.

Of the Street-sellers of Songs.

These street-traffickers, with the exception, in a great degree, of the "pinners-up," are of the same class, but their callings are diversified. There are long song-sellers, ballad-sellers (who are generally singers of the ballads they vend, unless they are old and infirm, and offer ballads instead of begging), chaunters, pinners-up, and song-book-sellers. The three first-mentioned classes I have already described in their connection with the patterers; and I now proceed to deal with the two last-mentioned.

The "pinners-up" (whom I have mentioned as an exceptional body), are the men and women —the women being nearly a third of the number of the men—who sell songs which they have "pinned" to a sort of screen or large board, or have attached them, in any convenient way, to a blank wall; and they differ from the other song-sellers, inasmuch as that they are not at all connected with patter, and have generally been mechanics, porters, or servants, and reduced to struggle for a living as "pinners-up."

Of the Street "Pinners-up," or Wall Song-sellers.

These street-traders, when I gave an account of them in the winter of 1849, were not 50 in number; they are now, I learn, about 30. One informant counted 28, and thought "that was nearly all."

I have, in my account of street song-sellers, described the character of the class of pinners-up. Among the best-accustomed stands are those in Tottenham-court Road, the New-road, the City-road, near the Vinegar-works, the Westminster-road, and in Shoreditch, near the Eastern Counties Station. One of the best-known of the pinners-up was a stout old man, wearing a great-coat in all weathers, who "pinned-up" in an alley leading from White-friars-street to the Temple, but now thrown into an open street. He had old books for sale on a stall, in addition to his ballads, and every morning was seen reading the newspaper, borrowed from a neighbouring public-house which he "used," for he was a keen politician. "He would quarrel with any one," said a person who then resided in the neighbourhood—an account confirmed to me at the public-house in question —"mostly about politics, or about the books and songs he sold. Why, sir, I've talked to him many a time, and have stood looking through his books; and if a person came up and said, 'Oh, Burn's Works, 1*s*.; I can't understand him,'—then the old boy would abuse him for a fool! Suppose another came and said—for I've noticed it myself—'Ah! Burns—he was a poet!' that didn't pass; for the jolly old pinner-up would say, 'Well, now, I don't know about that.' In my opinion, he cared nothing about this side or that—this notion or the opposite—but he liked to *shine*." The old man was carried off in the prevalence of the cholera in 1849.

At the period I have specified, I received the following statement from a man who at that time pinned-up by Harewood-place, Oxford-street:

"I'm forty-nine," he said. "I've no children, thank God, but a daughter, who is eighteen, and no incumbrance to me, as she is in a 'house of business;' and as she has been there nine years, her character can't be so very bad. (This was said proudly.) I worked twenty-two years with a great sculptor as a marble polisher, and besides that, I used to run errands for him, and was a sort of porter, like, to him. I couldn't get any work, because he hadn't no more marble-work to do; so nine or ten years back I went into this line. I knew a man what done well in it—but times

was better then—and that put it into my head. It cost me 2*l.* 10*s.* to stock my stall, and get all together comfortable; for I started with old books as well as songs. I got leave to stand here from the landlord. I sell ballads and manuscript music (beautifully done these music sheets were), which is 'transposed' (so he worded it) from the nigger songs. There's two does them for me. They're transposed for the violin. One that does them is a musicianer, who plays outside public-houses, but I think his daughter does most of it. I sell my songs at a halfpenny,—and, when I can get it, a penny a piece. Do I yarn a pound a week? Lor' bless you, no. Nor 15*s.*, nor 12*s.* I don't yarn, one week with another, not 10*s.*, sometimes not 5*s.* My wife don't yarn nothing. She used to go out charing, but she can't now. I am at my stall at nine in the morning, and sometimes I have walked five or six miles to buy my 'pubs' before that. I stop till ten at night oft enough. The wet days is the ruin of us; and I think wet days increases. [This was said on a rainy day.] Such a day as yesterday now I didn't take, not make,—but I didn't *take* what would pay for a pint of beer and a bit of bread and cheese. My rent's 2*s.* 3*d.* a week for one room, and I've got my own bits of sticks there. I've always kept *them*, thank God!"

Generally, these dealers know little of the songs they sell,—taking the printer's word, when they purchase, as to "what was going." The most popular comic songs (among this class I heard the word *song* used far more frequently than *ballad*) are not sold so abundantly as others,—because, I was told, boys soon picked *them* up by heart, hearing them so often, and so did not buy them. Neither was there a great demand for nigger songs, nor for "flash ditties," but for such productions as "A Life on the Ocean Wave," "I'm Afloat," "There's a Good Time coming," "Farewell to the Mountain," &c., &c. Three-fourths of the customers of these traders, one man assured me, were boys.

Indecent songs are not sold by the pinners-up. One man of whom I made inquiries was quite indignant that I should even think it necessary to ask such questions. The "songs" cost the pinners-up, generally, 2*d.* a dozen, sometimes 2½*d.*, and sometimes less than 2*d.*, according to the quality of the paper and the demand.

On fine summer days the wall song-sellers take 2*s.* on an average. On short wintry days they may not take half so much, and on very foggy or rainy days they take nothing at all. Their ballads are of the same sort as those I proceed to describe under especial heads, and I have shown what are of readiest sale. Reckoning that each pinner-up, thirty in number, now takes 10*s.* 6*d.* weekly (7*s.* being the profit), we find that 780 guineas are yearly expended in London streets, in the ballads of the pinners-up.

Of Ancient and Modern Street Ballad Minstrelsy.

Mr. Strutt, in his "Sports and Pastimes of the People of England," shows, as do other authorities, that in the reigns subsequent to the Norman Conquest the minstrels "were permitted to perform in the rich monasteries, and in the mansions of the nobility, which they frequently visited in large parties, and especially upon occasions of festivity. They entered the castles without the least ceremony, rarely waiting for any previous invitation, and there exhibited their performances for the entertainment of the lord of the mansion and his guests. They were, it seems, admitted without any difficulty, and handsomely rewarded for the exertion of their talents."

Of the truth of this statement all contemporary history is a corroboration. The minstrels then, indeed, constituted the theatre, the opera, and the concert of the powerful and wealthy. They were decried by some of the clergy of that day,—as are popular performers and opera singers (occasionally) by some zealous divine in our own era. John of Salisbury stigmatizes minstrels as "ministers of the devil."

"The large gratuities collected by these artists," the same antiquarian writer further says, "not only occasioned great numbers to join their fraternity, but also induced many idle and dissipated persons to assume the characters of minstrels, to the disgrace of the profession. These evils became at last so notorious, that in the reign of King Edward II. it was thought necessary to restrain them by a public edict, which sufficiently explains the nature of the grievance. It states, that many indolent persons, under the colour of minstrelsy, intruded themselves into the residences of the wealthy, where they had both meat and drink, but were not contented without the addition of large gifts from the householder. To restrain this abuse, the mandate ordains, that no person should resort to the houses of prelates, earls, or barons, to eat, or to drink, who was not a professed minstrel; nor more than three or four minstrels of honour at most in one day (meaning, I presume, the king's minstrels of honour and those retained by the nobility), except they came by invitation from the lord of the house."

The themes of the minstrels were the triumphs, victories, pageants, and great events of the day; commingled with the praise, or the satire of individuals, as the humour of the patron or of the audience might be gratified. It is stated that Longchamp, the favourite and justiciary of Richard Cœur-de-lion, not only engaged poets to make songs and poems in his, Bishop Longchamp's, praise, but the best singers and minstrels to sing them in the public streets!

In the ninth year of the reign of Edward IV. another royal edict was issued, as little favourable to the minstrels as the one I have given an account of; and those functionaries seem to

have gradually fallen in the estimation of the public, and to have been contemned by the law, down to the statute of Elizabeth, already alluded to, subjecting them to the same treatment as rogues, vagabonds, and sturdy beggars. A writer of the period (1589) represents the (still-styled) minstrels, singing "ballads and small popular musickes" for the amusement of boys and others "that passe by them in the streete." It is related also that their "matters were for the most part stories of old time; as the tale of Sir Topas, Bevis of Southampton, Guy of Warwick, Adam Bell, and Clymme of the Clough, and such other old romances or historical rhymes, made purposely for the recreation of the common people at Christmas dinners and bride ales, and in tavernes and alehouses, and such other places of base resort."

These "stories of old time" are now valuable as affording illustrations of ancient manners, and have been not unfertile as subjects of antiquarian annotation.

Under the head of the "Norman Minstrels," Mr. Strutt says: "It is very certain that the poet, the songster, and the musician were frequently united in the same person."

From this historical sketch it appears evident that the ballad-singer and seller of to-day is the sole descendant, or remains, of the minstrel of old, as regards the business of the streets; he is, indeed, the minstrel having lost caste, and being driven to play cheap.

The themes of the minstrels were wars, and victories, and revolutions; so of the modern man of street ballads. If the minstrel celebrated with harp and voice the unhorsings, the broken bones, the deaths, the dust, the blood, and all the glory and circumstance of a tournament,—so does the ballad-seller, with voice and fiddle, glorify the feelings, the broken bones, the blood, the deaths, and all the glory and circumstance of a prize-fight. The minstrel did not scoff at the madness which prevailed in the lists, nor does the ballad-singer at the brutality which rules in the ring. The minstrels had their dirges for departed greatness; the ballad-singer, like old Allan Bane, also "pours his wailing o'er the dead"—for are there not the street "helegies" on all departed greatness? In the bestowal of flattery or even of praise the modern minstrel is far less liberal than was his prototype; but the laudation was, in the good old times, very often "paid for" by the person whom it was sung to honour. Were the same measure applied to the ballad-singer and writer of today, there can be no reason to doubt that it would be attended with the same result. In his satire the modern has somewhat of an advantage over his predecessor. The minstrel not rarely received a "largesse" to satirize some one obnoxious to a rival, or to a disappointed man. The ballad-singer (or chaunter, for these remarks apply with equal force to both of these street-professionals), is seldom hired to abuse. I was told, indeed, by a clever chaunter, that he had been sent lately by a strange gentleman to sing a song—which he and his mate (a patterer) happened at the time to be working—in front of a neighbouring house. The song was on the rogueries of the turf; and the "move" had a doubly advantageous effect. "One gentleman, you see, sir, gave us 1*s.* to go and sing; and afore we'd well finished the chorus, somebody sent us from the house another 1*s.* to go away agin." I believe this to be the only way in which the satire of a ballad-singer is rewarded, otherwise than by sale to his usual class of customers in the streets or the public-houses. The ancient professors of street minstrelsy unquestionably played and sung satirical lays, depending for their remuneration on the liberality of their out-of-door audience; so is it precisely with the modern. The minstrel played both singly and with his fellows; the ballad-singer "works" both alone (but not frequently) and with his "mates" or his "school."

In the persons of some of these modern street professionals, as I have shown and shall further show, are united the functions of "the poet, the songster, and the musician." So in the days of yore. There are now female ballad-singers; there were female minstrels, or glee-women. The lays which were poured forth in our streets and taverns some centuries back, either for the regalement of a miscellaneous assemblage, or of a select few, were sometimes of an immoral tendency. Such, it cannot be denied, is the case in our more enlightened days at our Cyder-cellars, Coal-holes, Penny Gaffs, and such like places. Rarely, however, are such things sung in the streets of London; but sometimes at country fairs and races.

In one respect the analogy between the two ages of these promoters of street enjoyment does not hold. The minstrel's garb was distinctive. It was not always the short laced tunic, tight trousers, and russet boots, with a well plumed cap,—which seems to be the modern notion of this tuneful itinerant. The king's and queen's minstrels wore the royal livery, but so altered as to have removed from its appearance what might seem menial. The minstrels of the great barons also assumed their patron's liveries, with the like qualification. A minstrel of the highest class might wear "a fayre gowne of cloth of gold," or a military dress, or a "tawnie coat," or a foreign costume, or even an ecclesiastical garb,—and some of them went so far as to shave their crowns, the better to resemble monks. Of course they were imitated by their inferiors. The minstrel, then, wore a particular dress; the ballad-singer of the present day wears no particular dress. During the terrors of the reign of Henry VIII., and after the Reformation, a large body of the minstrels fell into meanness of attire; and in that respect the modern ballad-singer *is* analogous.

It must be borne in mind that I have all along spoken—except when the description is necessarily general—of the *street*, or itinerant, minstrel of old. The highest professors of the

art were poets and composers, men often of genius, learning, and gravity, and were no more to be ranked with the mass of those I have been describing than is Alfred Tennyson with any Smithfield scribbler and bawler of some Newgate "Copy of Verses."

How long "Sir Topas" and the other "old stories" continued to be sung in the streets there are no means of ascertaining. But there are old songs, as I ascertained from an intelligent and experienced street-singer, still occasionally heard in the open air, but more in the country than the metropolis. Among those still heard, however rarely, are the Earl of Dorset's song, written on the night before a naval engagement with the Dutch, in 1665:

"To all you ladies now on land,
We men at sea indite."

I give the titles of the others, not chronologically, but as they occurred to my informant's recollection—"A Cobbler there was, and he liv'd in a Stall"—Parnell's song of "My Days have been so wond'rous Free," now sung in the streets to the tune of Gramachree." A song (of which I could not procure a copy, but my informant had lately heard it in the street) about the Cock-lane Ghost—

"Now ponder well, you parents dear
The words which I shall write;
A doleful story you shall hear,
In time brought forth to light."

the "Children in the Wood" and "Chevy-chase." Concerning this old ditty one man said to me: "Yes, sir, I've sung it at odd times and not long ago in the north of England, and I've been asked whereabouts Chevy-chase lay, but I never learned."

"In Scarlet towne, where I was borne,
There was a faire maid dwellin',
Made every youth crye, Well-awaye!
Her name was Barbara Allen."

"Barbara Allen's selling yet," I was told. "Gilderoy was a Bonnie Boy," is another song yet sung occasionally in the streets.

"The ballad," says a writer on the subject, "may be considered as the native species of poetry of this country. It very exactly answers the idea formerly given of original poetry, being the rude uncultivated verse in which the popular tale of the time was recorded. As our ancestors partook of the fierce warlike character of the northern nations, the subjects of their poetry would chiefly consist of the martial exploits of their heroes, and the military events of national history, deeply tinctured with that passion for the marvellous, and that superstitious credulity, which always attend a state of ignorance and barbarism. Many of the ancient ballads have been transmitted to the present times, and in them the character of the nation displays itself in striking colours."

The "Ballads on a Subject," of which I shall proceed to treat, are certainly "the rude uncultivated verse in which the popular tale of the times is recorded," and what may be the character of the nation as displayed in them I leave to the reader's judgment.

Of Street "Ballads on a Subject."

There is a class of ballads which may with perfect propriety be called *street* ballads, as they are written by street authors for street singing (or chaunting) and street sale. These effusions, however, are known in the trade by a title appropriate enough — "Ballads on a Subject." The most successful workers in this branch of the profession, are the men I have already described among the patterers and chaunters.

The "Ballads on a Subject" are always on a political, criminal, or exciting public event, or one that has interested the public, and the celerity with which one of them is written, and then sung in the streets, is in the spirit of "these railroad times." After any great event, "a ballad on the subject" is often enough written, printed, and sung in the street, in little more than an hour. Such was the case with a song "in honour," it was announced, "of Lord John Russell's resignation." Of course there is no time for either the correction of the rhymes or of the press; but this is regarded as of little consequence—while an early "start" with a new topic is of great consequence, I am assured; "yes, indeed, both for the sake of meals and rents." If, however, the songs were ever so carefully revised, their sale would not be greater.

I need not treat this branch of our street literature at any great length, as specimens of the "Ballad on a Subject" will be found in many of the preceding statements of paper-workers.

It will have struck the reader that all the street lays quoted as popular have a sort of burthen or jingle at the end of each verse. I was corrected, however, by a street chaunter for speaking of this burthen as a jingle. "It's a chorus, sir," he said. "In a proper ballad on a subject, there's often twelve verses, none of them under eight lines,—and there's a four-line chorus to every verse; and, if it's the right sort, it'll sell the ballad." I was told, on all hands, that it was not the words that ever "made a ballad, but the subject; and, more than the subject,—the chorus; and, far more than either,—*the tune!*" Indeed, many of the street-singers of ballads on a subject have as supreme a contempt for words as can be felt by any modern composer. To select a tune for a ballad, however, is a matter of deep deliberation. To adapt the ballad to a tune too common or popular is injudicious; for then, I was told, any one can sing it—boys and all. To select a more elaborate and less-known air, however appropriate, may not be pleasing to some of the members of "the school" of ballad-singers, who may feel it to be beyond their vocal powers; neither may it be relished by the critical in street song, whose approving criticism induces them to purchase as well as to admire.

The license enjoyed by the court jesters, and, in some respects, by the minstrels of old, is certainly enjoyed, undiminished, by the street-writers and singers of ballads on a subject. They are unsparing satirists, who, with a rare impartiality, lash all classes and all creeds, as well as any individual. One man, upon whose information I can rely, told me that, eleven years ago, he himself had "worked," in town and country, 23 different songs at the same period and on the same subject—the marriage of the Queen. They all "sold,"—but the most profitable was one "as sung by Prince Albert in character." It was to the air of the "Dusty Miller;" and "it was good," said the ballad-man, "because we could easily dress up to the character given to Albert." I quote a verse:

> "Here I am in rags
> From the land of All-dirt,
> To marry England's Queen,
> And my name it is Prince Albert."

"And what's more, sir," continued my informant, "not very long after the honeymoon, the Duchess of L—— drove up in her carriage to the printer's, and bought all the songs in honour of Victoria's wedding, and gave a sovereign for them and wouldn't take the change. It was a duchess. Why I'm sure about it—though I can't say whether it were the Duchess of L—— or S——; for didn't the printer, like an honest man, when he'd stopped the price of the papers, hand over to us chaps the balance to drink, and *didn't* we drink it! There can't be a mistake about *that*."

Of street ballads on political subjects, or upon themes which have interested the whole general public, I need not cite additional instances. There are, however, other subjects, which, though not regarded as of great interest by the whole body of the people are still eventful among certain classes, and for them the street author and ballad-singer cater.

I first give a specimen of a ballad on a Theatrical Subject. The best I find, in a large collection of these street effusions, is entitled "Jenny Lind and Poet B." After describing how Mr. Bunn "flew to Sweden" and engaged Miss Lind, the poet proceeds,—the tune being "Lucy Long":

> "After Jenny sign'd the paper,
> She repented what she'd done,
> And said she must have been a cake,
> To be tempted by A. Bunn.
> The English tongue she must decline,
> It was such awkward stuff,
> And we find 'mongst our darling dames,
> That one tongue's quite enough.
>
> CHORUS.
>
> So take your time Miss Jenny,
> Oh, take your time Miss Lind,
> You're only to raise your voice,
> John Bull, will raise the wind.
>
> Says Alfred in the public eye,
> My name you shan't degrade,
> So birds that can and won't sing
> Why in course they must be made
> This put Miss Jenny's pipe out,
> Says Bunn your tricks I see,
> Altho' you are a Nightingale,
> You shan't play larks with me.
>
> The Poet said he'd seek the law,
> No chance away he'd throw;
> Says Jenny if you think I'll come,
> You'll find it is no go!
> When a bird-catcher named 'Lummy
> With independence big,
> Pounced down upon the Nightingale,
> And with her hopp'd the twig!"

I am inclined to think—though I know it to be an unusual case—that in this theatrical ballad the street poet was what is tenderly called a "plagiarist." I was assured by a chaunter that it was written by a street author,—but probably the chaunter was himself in error or forgetfulness.

Next, there is the Ballad on a Civic Subject. In the old times the Lord Mayor had his laureate. This writer, known as "poet to the City of London," eulogised all lord mayors, and glorified all civic pageants. That of the 9th November, especially, "lived in Settle's numbers, one day more,"—but Elkanah Settle was the last of such scribes. After his death, the city eschewed a poet. The office has now descended to the street bard, who annually celebrates the great ceremony. I cite two stanzas and the chorus from the latest of these civic Odes:

> "Now Farncombe's out and Musgrove's in,
> And grand is his position,
> Because he will be made a king,
> At the Hyde Park Exhibition;
> A feast he'll order at Guildhall,
> For hypocrites and sinners,
> And he has sent Jack Forester to Rome,
> To invite the Pope to dinner!
>
> A day like this we never saw,
> The truth I am confessing,
> Batty's astonishing menagerie,
> Is in the great procession;
> There's lions, tigers, bears and wolves,
> To please each smiling feature,
> And elephants in harness drawing
> Drury Lane Theatre!
>
> CHORUS.
>
> "It is not as it used to be,
> Cut on so gay and thrifty,
> The funny Lord Mayor's Show to see,
> In eighteen hundred and fifty."

There is, beside the descriptions of ballads above cited, the Ballad Local. One of these is headed the "Queer Doings in Leather-lane," and is on a subject concerning which street-sellers generally express themselves strongly—Sunday trading. The endeavour to stop street trading (generally) in Leather-lane, with its injurious results to the shopkeepers, has been already mentioned. The ballad on this local subject presents a personality now, happily, almost confined to the street writers:

> "A rummy saintly lot is there,
> A domineering crew,
> A Butcher, and a Baker,
> And an Undertaker too,
> Besides a cove who deals in wood,
> And makes his bundles small,
> And looks as black on Sunday
> As the Undertaker's pall.

CHORUS.

You must not buy, you must not sell,
Oh! is it not a shame?
It is a shocking place to dwell,
About sweet Leather Lane.

The Butcher does not like to hear
His neighbours holloa, buy!
Although he on the Sunday
Sells a little on the sly;
And the Coffin Maker struts along
Just like the great Lord Mayor,
To bury folks on Sundays,
Instead of going to prayers."

There are yet three themes of these street songs, of which, though they have been alluded to, no specimens have been given. I now supply them. The first is the election ballad. I quote two stanzas from "Middlesex and Victory! or, Grosvenor and Osborne for ever!"

"Now Osborne is the man
To struggle for your rights,
He will vote against the Bishops,
You know, both day and night,
He will strive to crush the Poor Law Bill,
And that with all his might,
And he will never give his vote
To part a man from his wife.

CHORUS.

Then cheer Osborne and Lord Grosvenor,
Cheer them with three times three,
For they beat the soldier, Tommy Wood,
And gained the victory.

I have not forgot Lord Grosvenor,
Who nobly stood the test,
For the electors of great Middlesex
I know he'll do his best;
He will pull old Nosey o'er the coals,
And lay him on his back,
And he swears that little Bob's head
He will shove into a rat trap."

Then come the "elegies." Of three of these I cite the opening stanza. That on the "Death of Queen Adelaide" has for an illustration a figure of Britannia leaning on her shield, with the "Muse of History," (as I presume from her attributes,) at Britannia's feet. In the distance is the setting sun:

"Old England may weep, her bright hopes are fled,
The friend of the poor is no more;
For Adelaide now is numbered with the dead,
And her loss we shall sadly deplore.
For though noble her birth, and high was her station
The poor of this nation will miss her,
For their wants she relieved without ostentation,
But now she is gone, God bless her!
God bless her! God bless her!
But now she is gone, God bless her!"

The elegy on the "Death of the Right Honourable Sir Robert Peel, Bart. M.P.," is set off with a very fair portrait of that statesman.

"Britannia! Britannia! what makes thee complain,
O why so in sorrow relenting,
Old England is lost, we are born down in pain,
And the nation in grief is lamenting,
That excellent man—the pride of the land,
Whom every virtue possessed him,
Is gone to that Home, from whence no one returns,
Our dear friend, Sir Robert, God rest him.

The verses which bewail the "Death of H. R. H. the Duke of Cambridge," and which are adorned with the same illustration as those upon Queen Adelaide, begin

"Oh! death, thou art severe, and never seems contented,
Prince Adolphus Frederick is summoned away,
The death of Royal Cambridge in sorrow lamented,
Like the good Sir Robert Peel, he no longer could stay;
His virtues were good, and noble was his actions,
His presence at all places caused much attraction,
Britannia for her loss is driven to distraction,
Royal Cambridge, we'll behold thee no more!"

The third class of street-ballads relates to "fires." The one I quote, "On the Awful Fire at B. Caunt's, in St. Martin's-lane," is preceded by an engraving of a lady and a cavalier, the lady pointing to a column surmounted by an urn. I again give the first stanza:

"I will unfold a tale of sorrow,
List, you tender parents dear,
It will thrill each breast with horror,
When the dreadful tale you hear.
Early on last Wednesday morning,
A raging fire as we may see,
Did occur, most sad and awful,
Between the hours of two and three."

In a subsequent stanza are four lines, not without some rough pathos, and adapted to move the feelings of a street audience. The writer is alluding to the grief of the parents who had lost two children by a terrible death:

"No more their smiles they'll be beholding,
No more their pretty faces see,
No more to their bosoms will they fold them,
Oh! what must their feelings be."

I find no difference in style between the ballads on a subject of to-day, and the oldest which I could obtain a sight of, which were sung in the present generation—except that these poems now begin far less frequently with what at one time was as common as an invocation to the Muse—the invitation to good Christians to attend to the singer. One on the Sloanes, however, opens in the old fashion:

"Come all good Christians and give attention,
Unto these lines I will unfold,
With heartfelt feelings to you I'll mention,
I'm sure 'twill make your blood run cold."

I now conclude this account of street-ballads on a subject with two verses from one on the subject of "The Glorious Fight for the Championship of England." The celebration of these once-popular encounters is, as I have already stated, one of the points in which the modern ballad-man emulates his ancient brother minstrel:

"On the ninth day of September,
Eighteen hundred and forty five,
From London down to Nottingham
The roads were all alive;
Oh! such a sight was never seen,
Believe me it is so,
Tens of thousands went to see the fight,
With Caunt and Bendigo.

And near to Newport Pagnell,
Those men did strip so fine,
Ben Caunt stood six feet two and a half,
And Bendigo five foot nine;
Ben Caunt, a giant did appear,
And made the claret flow,
And he seemed fully determined
Soon to conquer Bendigo.

CHORUS.

With their hit away and slash away,
So manfully you see,
Ben Caunt has lost and Bendigo
Has gained the victory."

Of the Street Poets and Authors.

Authorship, for street sale, is chiefly confined to the production of verse, which, whatever be its nature, is known through the trade as "ballads." Two distinctions, indeed, are recognised—"Ballads" and "Ballads on a Subject." The last-mentioned is, as I have said and shown, the publication which relates to any specific event; national or local, criminal or merely extraordinary, true or false. Under the head "Ballads," the street-sellers class all that does not come under the description of "Ballads on a Subject."

The same street authors—now six in number—compose indiscriminately any description of ballad, including the copy of verses I have shown to be required as a necessary part of all histories or trials of criminals. When the printer has determined upon a "Sorrowful Lamentation," he sends to a poet for a copy of verses, which is promptly supplied. The payment I have already mentioned—1*s.*; but sometimes, if the printer (and publisher) like the verses, he "throws a penny or two over;" and sometimes also, in case of a great sale, there is the same over-sum.

Fewer ballads, I was assured, than was the case ten or twelve years ago, are now written expressly for street sale or street minstrelsy. "They come to the printer, for nothing, from the concert-room. He has only to buy a 'Ross' or a 'Sharp'" [song-books] "for 1*d.*, and there's a lot of 'em; so, in course, a publisher ain't a-going to give a bob, if he can be served for a farthing, just by buying a song-book."

Another man, himself not a "regular poet," but a little concerned in street productions, said to me, with great earnestness: "Now look at this, sir, and I hope you'll just say, sir, as I tell you. You've given the public a deal of information about men like me, and some of our chaps abuses you for it like mad; but I say it's all right, for it's all true. Now you'll have learned, sir, or, any way, you will learn, that there's songs sung in the streets, and sometimes in some tap-rooms, that isn't decent, and relates to nothing but wickedness. There wasn't a few of those songs once written for the streets, straight away, and a great sale they had, I know—but far better at country fairs and races than in town. Since the singing-houses—I don't mean where you pay to go to a concert, no! but such as your Cyder-cellars, and your night-houses, where there's lords, and gentlemen, and city swells, and young men up from the colleges—since these places has been up so flourishing, there hasn't, I do believe, been *one* such song written by one of our poets. They all come from the places where the lords, and genelmen, and collegians is capital customers; and they never was a worse sort of ballads than now. In course those houses is licensed, and perticler respectable, or it wouldn't be allowed; and if I was to go to the foot of the bridge, sir (Westminster-bridge), and chaunt any such songs, and my mate should sell them, why we should very soon be taking reg'lar exercise on Colonel Chesterton's everlasting staircase. We has a great respect for the law—O, certainly!"

Parodies on any very popular song, which used to be prepared expressly for street trade, are now, in like manner, derived from the night-house or the concert-room; but not entirely so. The parody "Cab, cab, cab!" which was heard in almost every street, was originated in a concert-room.

The ballads which have lately been written, and published expressly for the street sale, and have proved the most successful, are parodies or imitations of "The Gay Cavalier." One street ballad, commencing in the following words, was, I am told, greatly admired, both in the streets and the public-houses.

"'Twas a dark foggy night,
 And the moon gave no light,
  And the stars were all put in the shade:
 When leary Joe Scott,
 Dealt in 'Donovan's hot'
  Said he'd go to court his fair maid."

I now give three stanzas of "The Way to Live Happy Together,"—a ballad said to have been written expressly for street sale. Its popularity is anything but discreditable to the street-buyers.

"From the time of this world's first formation
 You will find it has been the plan,
In every country and nation,
 That woman was formed to please man;
And man for to love and protect them,
 And shield them from the frowns of the world,
Through the smooth paths of life to direct them,
 And he who would do less is a churl.

Then listen to me!
If you would live happy together,
 As you steer through the troubles of life,
Depend that this world's greatest treasure,
 Is a kind and a good-tempered wife.

Some men will ill-use a good woman,
 And say all they do turns out wrong,
But as I mean to offend no one,
 You'll find faults to both sides belong:
But if both were to look at the bright side,
 And each other's minds cease to pain,
They would find they have looked at the right side
 For all would be summer again.

Then listen to me!
If you would live happy together, &c.

Married women, don't gossip or tattle,
 Remember it oft stirs up strife,
But attend to your soft children's soft prattle,
 And the duties of mother and wife.
And men, if you need recreation,
 With selfish companions don't roam,
Who might lead you to sad degradation,
 But think of your comforts at home.

Then listen to me!
If you would live happy together, &c."

"It's all as one, sir," was the answer of a man whom I questioned on the subject; "it's the same poet; and the same tip for any ballad. No more nor a bob for nothing."

A large number of ballads which I procured, and all sold and sung in the street, though not written expressly for the purpose, presented a curious study enough. They were of every class. I specify a few, to show the nature of

Original from HARVARD UNIVERSITY

the collection (not including ballads on a subject): "Ye Banks and Braes o' Bonnie Doun," with (on the same sheet) "The Merry Fiddler," (an indecent song)—"There's a good Time coming, Boys," "Nix, my Dolly," "The Girls of —— shire," (which of course is available for any county)—"Widow Mahoney," "Remember the Glories of Brian the Brave," "Clementina Clemmins," "Lucy Long," "Erin Go Bragh," "Christmas in 1850," "The Death of Nelson," "The Life and Adventures of Jemmy Sweet," "The Young May Moon," "Hail to the Tyrol," "He was sich a Lushy Cove," &c. &c.

I may here mention—but a fuller notice may be necessary when I treat of street art—that some of these ballads have an "illustration" always at the top of the column. "The Heart that can Feel for Another" is illustrated by a gaunt and savage-looking lion. "The Amorous Waterman of St. John's Wood," presents a very short, obese, and bow-legged grocer, in top-boots, standing at his door, while a lady in a huge bonnet is "taking a sight at him," to the evident satisfaction of a "baked 'tater" man. "Rosin the Beau" is heralded by the rising sun. "The Poachers" has a cut of the Royal Exchange above the title. "The Miller's Ditty" is illustrated by a perfect dandy, of the slimmest and straightest fashion; and "When I was first Breeched," by an engraving of a Highlander. Many of the ballads, however, have engravings appropriate enough.

Of the Experience of a Street Author, or Poet.

I have already mentioned the present number of street authors, as I most frequently heard them styled, though they write only verses. I called upon one on the recommendation of a neighbouring tradesman, of whom I made some inquiries. He could not tell me the number of the house in the court where the man lived, but said I had only to inquire for the Tinker, or the Poet, and any one would tell me.

I found the poor poet, who bears a good character, on a sick bed; he was suffering, and had long been suffering, from abscesses. He was apparently about forty-five, with the sunken eyes, hollow cheeks, and, not pale but thick and rather sallow complexion, which indicate ill-health and scant food. He spoke quietly, and expressed resignation. His room was not very small, and was furnished in the way usual among the very poor, but there were a few old pictures over the mantel-piece. His eldest boy, a lad of thirteen or fourteen, was making dog-chains; at which he earned a shilling or two, sometimes 2*s.* 6*d.*, by sale in the streets.

"I was born at Newcastle-under-Lyne," the man said, "but was brought to London when, I believe, I was only three months old. I was very fond of reading poems, in my youth, as soon as I could read and understand almost. Yes, very likely, sir; perhaps it was that put it into my head to write them afterwards. I was taught wire-working, and jobbing, and was brought up to hawking wire-work in the streets, and all over England and Wales. It was never a very good trade—just a living. Many and many a weary mile we've travelled together,—I mean, my wife and I have: and we've sometimes been benighted, and had to wander or rest about until morning. It wasn't that we hadn't money to pay for a lodging, but we couldn't get one. We lost count of the days sometimes in wild parts; but if we did lose count, or thought we had, I could always tell when it was Sunday morning by the look of nature; there was a mystery and a beauty about it as told me. I was very fond of Goldsmith's poetry always. I can repeat 'Edwin and Emma' now. No, sir; I never read the 'Vicar of Wakefield.' I found 'Edwin and Emma' in a book called the 'Speaker.' I often thought of it in travelling through some parts of the country.

"Above fourteen years ago I tried to make a shilling or two by selling my verses. I'd written plenty before, but made nothing by them. Indeed I never tried. The first song I ever sold was to a concert-room manager. The next I sold had great success. It was called the 'Demon of the Sea,' and was to the tune of 'The Brave Old Oak.' Do I remember how it began? Yes, sir, I remember every word of it. It began:

Unfurl the sails,
We've easy gales;
And helmsman steer aright,
Hoist the grim death's head—
The Pirate's head—
For a vessel heaves in sight!

That song was written for a concert-room, but it was soon in the streets, and ran a whole winter. I got only 1*s.* for it. Then I wrote the 'Pirate of the Isles,' and other ballads of that sort. The concert-rooms pay no better than the printers for the streets.

"Perhaps the best thing I ever wrote was the 'Husband's Dream.' I'm very sorry indeed that I can't offer you copies of some of my ballads, but I haven't a single copy myself of any of them, not one, and I dare say I've written a thousand in my time, and most of them were printed. I believe 10,000 were sold of the 'Husband's Dream.' It begins:

O Dermot, you look healthy now,
Your dress is neat and clean;
I never see you drunk about, .
Then tell me where you've been.

Your wife and family—are they well?
You once did use them strange:
O, are you kinder to them grown,
How came this happy change?

"Then Dermot tells how he dreamed of his wife's sudden death, and his childrens' misery as they cried about her dead body, while he was drunk in bed, and as he calls out in his misery, he wakes, and finds his wife by his side. The ballad ends:

'I pressed her to my throbbing heart,
Whilst joyous tears did stream;
And ever since, I've heaven blest,
For sending me that dream.'

Original from HARVARD UNIVERSITY

"Dermot turned teetotaller. The teetotallers were very much pleased with that song. The printer once sent me 5*s*. on account of it.

"I have written all sorts of things—ballads on a subject, and copies of verses, and anything ordered of me, or on anything I thought would be accepted, but now I can't get about. I've been asked to write indecent songs, but I refused. One man offered me 5*s*. for six such songs.—'Why, that's less than the common price,' said I, 'instead of something over to pay for the wickedness.'—All those sort of songs come now to the streets, I believe all do, from the concert-rooms. I can imitate any poetry. I don't recollect any poet I've imitated. No, sir, not Scott or Moore, that I know of, but if they've written popular songs, then I dare say I have imitated them. Writing poetry is no comfort to me in my sickness. It might if I could write just what I please. The printers like hanging subjects best, and I don't. But when any of them sends to order a copy of verses for a 'Sorrowful Lamentation' of course I must supply them. I don't think much of what I've done that way. If I'd my own fancy, I'd keep writing acrostics, such as one I wrote on our rector." "God bless him," interrupted the wife, "he's a good man." "That he is," said the poet, "but he's never seen what I wrote about him, and perhaps never will." He then desired his wife to reach him his big Bible, and out of it he handed me a piece of paper, with the following lines written on it, in a small neat hand enough:

"C elestial blessings hover round his head,
H undreds of poor, by his kindness were fed,
A nd precepts taught which he himself obeyed.
M an, erring man, brought to the fold of God,
P reaching pardon through a Saviour's blood.
N o lukewarm priest, but firm to Heaven's cause;
E xamples showed how much he loved its laws.
Y outh and age, he to their wants attends,
S teward of Christ—the poor man's sterling friend."

"There would be some comfort, sir," he continued, "if one could go on writing at will like that. As it is, I sometimes write verses all over a slate, and rub them out again. Live hard! yes, indeed, we do live hard. I hardly know the taste of meat. We live on bread and butter, and tea; no, not any fish. As you see, sir, I work at tinning. I put new bottoms into old tin tea-pots, and such like. Here's my sort of bench, by my poor bit of a bed. In the best weeks I earn 4*s*. by tinning, never higher. In bad weeks I earn only 1*s*. by it, and sometimes not that,—and there are more shilling than four shilling weeks by three to one. As to my poetry, a good week is 3*s*., and a poor week is 1*s*.—and sometimes I make nothing at all that way. So I leave you to judge, sir, whether we live hard; for the comings in, and what we have from the parish, must keep six of us—myself, my wife, and four children. It's a long, hard struggle." "Yes, indeed," said the wife, "it's just as you've heard my husband tell, sir. We've 2*s*. a week and four loaves of bread from the parish, and the rent 's 2*s*. 6*d*., and the landlord every week has 2*s*.,—and 6*d*. he has done for him in tinning work. Oh, we do live hard, indeed."

As I was taking my leave, the poor man expressed a desire that I would take a copy of an epitaph which he had written for himself. "If ever," he said, "I am rich enough to provide for a tomb-stone, or my family is rich enough to give me one, this shall be my epitaph" [I copied it from a blank page in his Bible:]

"Stranger, pause, a moment stay,
Tread lightly o'er this mound of clay.
Here lies J—— H——. in hopes to rise,
And meet his Saviour in the skies.
Christ his refuge, Heaven his home,
Where pain and sorrow never come.
His journey's done, his trouble's past,
With God he sleeps in peace at last."

Of the Street-Sellers of Broad-Sheets.

The broad-sheet known in street-sale is an unfolded sheet, varying in size, and printed on one side. The word is frequently used to signify an account of a murder or execution, but it may contain an account of a fire, an "awful accident and great loss of life," a series of conundrums, as in those called "Nuts to Crack," a comic or intended comic engraving, with a speech or some verses, as recently in satire of the Pope and Cardinal Wiseman (these are sometimes called "comic exhibitions"), or a "bill of the play." The "cocks" are more frequently a smaller size than the broad-sheet.

The sellers of these articles (play-bills excepted), are of the class I have described as patterers. The play-bill sellers are very rarely patterers on other "paper work." Some of them are on the look-out during the day for a job in porterage or such like, but they are not mixed up with any pattering,—and a regular patterer looks down upon a play-bill seller as a poor creature, "fit for nothing but play-bills." I now proceed to describe such of these classes as have not been previously given.

Of the "Gallows" Literature of the Streets.

Under this head I class all the street-sold publications which relate to the hanging of malefactors. That the question is not of any minor importance must be at once admitted, when it is seen how very extensive a portion of the reading of the poor is supplied by the "Sorrowful Lamentations" and "Last Dying Speech, Confession, and Execution" of criminals. One paper-worker told me, that in some small and obscure villages in Norfolk, which, he believed, were visited only by himself in his line, it was not very uncommon for two poor families to *club* for 1*d*. to purchase an execution broad-sheet! Not long after Rush was hung, he saw, one evening after dark, through the uncurtained cottage window, eleven persons, young and old, gathered round a scanty fire, which was made to blaze by being fed with a few sticks. An old man was reading, to an attentive audience, a

Original from HARVARD UNIVERSITY

broad-sheet of Rush's execution, which my informant had sold to him; he read by the fire-light; for the very poor in those villages, I was told, rarely lighted a candle on a spring evening, saying that "a bit o' fire was good enough to talk by." The scene must have been impressive, for it had evidently somewhat impressed the perhaps not very susceptible mind of my informant.

The procedure on the occasion of a "good" murder, or of a murder expected to "turn out well," is systematic. First appears a quarter-sheet (a hand-bill, 9¾ in. by 7½ in.) containing the earliest report of the matter. Next come half-sheets (twice the size) of later particulars, or discoveries, or—if the supposed murderer be in custody—of further examinations. The sale of these bills is confined almost entirely to London, and in their production the newspapers are for the most part followed closely enough. Then are produced the whole, or broad-sheets (twice the size of the half-sheets), and, lastly, but only on great occasions, the *double* broad-sheet. [I have used the least technical terms that I might not puzzle the reader with accounts of "crowns," "double-crowns," &c.]

The most important of all the broad-sheets of executions, according to concurrent, and indeed unanimous, testimony is the case of Rush. I speak of the testimony of the street-folk conerned, who all represent the sale of the papers relative to Rush, both in town and country, as the best in their experience of late years.

The sheet bears the title of "The Sorrowful Lamentation and Last Farewell of J. B. Rush, who is ordered for Execution on Saturday next, at Norwich Castle." There are three illustrations. The largest represents Rush, cloaked and masked, "shooting Mr. Jermy, Sen." Another is of "Rush shooting Mrs. Jermy." A prostrate body is at her feet, and the lady herself is depicted as having a very small waist and great amplitude of gown-skirts. The third is a portrait of Rush,—a correct copy, I was assured, and have no reason to question the assurance,—from one in the *Norwich Mercury*. The account of the trial and biography of Rush, his conduct in prison, &c., is a concise and clear enough condensation from the newspapers. Indeed, Rush's Sorrowful Lamentation is the best, in all respects, of any execution broad-sheet I have seen; even the "copy of verses" which, according to the established custom, the criminal composes in the condemned cell—his being unable, in some instances, to read or write being no obstacle to the composition—seems, in a literary point of view, of a superior strain to the run of such things. The matters of fact, however, are introduced in the same peculiar manner. The worst part is the morbid sympathy and intended apology for the criminal. I give the verses entire:

"This vain world I soon shall leave,
Dear friends in sorrow do not grieve;
Mourn not my end, though 'tis severe,
For death awaits the murderer.

Now in a dismal cell I lie,
For murder I'm condemn'd to die;
Some may pity when they read,
Oppression drove me to the deed.

My friends and home to me were dear,
The trees and flowers that blossom'd near;
The sweet loved spot where youth began
Is dear to every Englishman.

I once was happy—that is past,
Distress and crosses came at last;
False friendship smiled on wealth and me,
But shunned me in adversity.

The scaffold is awaiting me,
For Jermy I have murdered thee;
Thy hope and joys—thy son I slew,
Thy wife and servant wounded too.

I think I hear the world to say—
'Oh, Rush, why didst thou Jermy slay?
His dear loved son why didst thou kill,
For he had done to thee no ill.'

If Jermy had but kindness shown,
And not have trod misfortune down,
I ne'er had fired the fatal ball
That caus'd his son and him to fall.

My cause I did defend alone,
For learned counsel I had none;
I pleaded hard and questions gave,
In hopes my wretched life to save.

The witness to confound did try,
But God ordained that I should die;
Eliza Chestney she was there,—
I'm sorry I have injured her.

Oh, Emily Sandford, was it due
That I should meet my death through you?
If you had wish'd me well indeed,
How could you thus against me plead?

I've used thee kind, though not my wife:
Your evidence has cost my life;
A child by me you have had born,
Though hard against me you have sworn.

The scaffold is, alas! my doom,—
I soon shall wither in the tomb:
God pardon me—no mercy's here
For Rush—the wretched murderer!"

Although the execution broad-sheet I have cited may be the best, taken altogether, which has fallen under my observation, nearly all I have seen have one characteristic—the facts can be plainly understood. The narrative, embracing trial, biography, &c., is usually prepared by the printer, being a condensation from the accounts in the newspapers, and is perhaps intelligible, simply because it *is* a condensation. It is so, moreover, in spite of bad grammar, and sometimes perhaps from an unskilful connection of the different eras of the trial.

When the circumstances of the case permit, or can be at all constrained to do so, the Last Sorrowful Lamentation contains a "Love Letter," written—as one patterer told me he had occasionally expressed it, when he thought his audience suitable—"from the depths of the condemned cell, with the condemned pen, ink, and paper." The style is stereotyped, and usually after this fashion:

"Dear ——,—Shrink not from receiving a letter from one who is condemned to die as a murderer. Here, in my miserable cell, I write to one whom I have

Original from HARVARD UNIVERSITY

from my first acquaintanceship, held in the highest esteem, and whom, I believe, has also had the same kindly feeling towards myself. Believe me, I forgive all my enemies and bear no malice. O, my dear ——, guard against giving way to evil passions, and a fondness for drink. Be warned by my sad and pitiful fate."

If it be not feasible to have a love-letter—which can be addressed to either wife or sweetheart—in the foregoing style, a "last letter" is given, and this can be written to father, mother, son, daughter, or friend; and is usually to the following purport:

"Condemned Cell, ——

"My Dear ——,—By the time you receive this my hours, in this world, will indeed be short. It is an old and true saying, that murderers will one day meet their proper reward. No one can imagine the dreadful nights of anguish passed by me since the commital of the crime on poor ——. All my previous victims have appeared before me in a thousand different shapes and forms. My sufferings have been more than I can possibly describe. Let me entreat you to turn from your evil ways and lead a honest and sober life. I am suffering so much at the present moment both from mind and body that I can write no longer. Farewell! farewell!

"Your affectionate ——."

I have hitherto spoken of the Last Sorrowful Lamentation sheets. The next broad-sheet is the "Life, Trial, Confession, and Execution." This presents the same matter as the "Lamentation," except that a part—perhaps the judge's charge at the trial, or perhaps the biography—is removed to make room for the "Execution," and occasionally for a portion of the "Condemned Sermon." To judge by the productions I treat of, both subjects are marvelously similar on all occasions. I cite a specimen of the Condemned Sermon, as preached, according to the broad-sheet, before Hewson, condemned for the murder of a turnkey It will be seen that it is of a character to fit *any* condemned sermon whatever:

"The rev. gent. then turned his discourse particularly to the unhappy prisoner doomed to die on the morrow, and told him to call on Him who alone had the power of forgiveness; who had said, 'though his sins were red as scarlet,' he would 'make them white as snow,' though he had been guilty of many heinous crimes, there was yet an opportunity of forgiveness.—During the delivery of this address, the prisoner was in a very desponding state, and at its conclusion was helped out of the chapel by the turnkeys."

The "Execution" is detailed generally in this manner. I cite the "Life, Trial, Confession, and Execution of Mary May, for the Murder of W. Constable, her Half-brother, by Poison, at Wix, near Manningtree:"

"At an early hour this morning the space before the prison was very much crowded by persons anxious to witness the execution of Mary May, for the murder of William Constable, her half-brother, by poison, at Wix, Manningtree, which gradually increased to such a degree, that a great number of persons suffered extremely from the pressure, and gladly gave up their places on the first opportunity to escape from the crowd. The sheriffs and their attendants arrived at the prison early this morning and proceeded to the condemn cell, were they found the reverend ordinary engaged in prayer with the miserable woman. After the usual formalities had been observed of demanding the body of the prisoner into their custody she was then conducted to the press-room. The executioner with his assistants then commenced pinioning her arms, which opperation they skillfully and quickly dispatched. During these awful preparations the unhappy woman appeared mently to suffer severely, but uttered not a word when the hour arrived and all the arrangements having been completed, the bell commenced tolling, and then a change was observed, to come over the face of the prisoner, who trembling violently, walked with the melancholy procession, proceeded by the reverend ordinary, who read aloud the funeral service for the dead. When the bell commenced tolling a moment was heard from without, and the words "Hats off," and "Silence," were distinctly heard, from which time nothing but a continual sobbing was heard. On arriving at the foot of the steps leading to the scaffold she thanked the sheriffs and the worthy governor of the prison, for their kind attentions to her during her confinement; & then the unfortunate woman was seen on the scaffold, there was a death like silence prevailed among the vast multitude of people assembled. In a few seconds the bolt was drawn, and, after a few convulsive struggles, the unhappy woman ceased to exist."

I cannot refrain from calling the reader's attention to the "copy of verses" touching Mary May. I give them entire, for they seem to me to contain all the elements which made the old ballads popular—the rushing at once into the subject—and the homely reflections, though crude to all educated persons, are, nevertheless, well adapted to enlist the sympathy and appreciation of the class of hearers to whom they are addressed:

COPY OF VERSES.

"The solemn bell for me doth toll,
And I am doom'd to die
(For murdering by brother dear,)
Upon a tree so high.
For gain I did premeditate
My brother for to slay,—
Oh, think upon the dreadful fate
Of wretched Mary May.

CHORUS.

Behold the fate of Mary May,
Who did for gain her brother slay.

In Essex boundry I did dwell,
My brother lived with me,
In a little village called Wix,
Not far from Manningtree.
In a burial club I entered him,
On purpose him to slay;
And to obtain the burial fees
I took his life away.

One eve he to his home return'd,
Not thinking he was doom'd,
To be sent by a sister's hand
Unto the silent tomb.
His tea for him I did prepare,
And in it poison placed,
To which I did administer,—
How dreadful was his case.

Before he long the poison took
In agony he cried;
Upon him I in scorn did look,—
At length my brother died.
Then to the grave I hurried him,
And got him out of sight,
But God ordain'd this cruel deed
Should soon be brought to light.

I strove the money to obtain,
For which I did him slay,
By which, also, suspicion fell
On guilty Mary May.
The poison was discovered,
Which caused me to bewail,
And I my trial to await
Was sent to Chelmsford jail.

And for this most atrocious deed
  I at the bar was placed,
The Jury found me guilty,—
  How dreadful was my case.
The Judge the dreadful sentence pass'd,
  And solemn said to me,
'You must return from whence you came,
  And thence unto the tree.'

On earth I can no longer dwell,
  There's nothing can me save;
Hark! I hear the mournful knell
  Which calls me to the grave.
Death appears in ghostly forms,
  To summon me below;
See, the fatal bolt is drawn,
  And Mary May must go.

Good people all, of each degree,
  Before it is too late,
See me on the fatal tree,
  And pity my sad fate.
My guilty heart stung with grief,
  With agony and pain,—
My tender brother I did slay
  That fatal day for gain."

This mode of procedure in "gallows" literature, and this style of composition, have prevailed for from twenty to thirty years. I find my usual impossibility to *fix* a date among these street-folk; but the Sorrowful Lamentation sheet was unknown until the law for prolonging the term of existence between the trial and death of the capitally-convicted, was passed. "Before that, sir," I was told, "there wasn't no time for a Lamentation; sentence o' Friday, and scragging o' Monday. So we had only the Life, Trial, and Execution." Before the year 1820, the Execution broad-sheets, &c., were "got-up" in about the same, though certainly in an inferior and more slovenly manner than at present; and *one* copy of verses often did service for the canticles of all criminals condemned to be hung. These verses were to sacred or psalm tunes, such as Job, or the Old Hundredth. I was told by an aged gentleman that he remembered, about the year 1812, hearing a song, or, as he called it, "stave," of this description, not only given in the street with fiddle and nasal twang, to the tune of the Old Hundredth, but commencing in the very words of Sternhold and Hopkins—

"All people that on earth do dwell."

These "death-verses," as they were sometimes called, were very frequently sung by blind people, and in some parts of the country blind men and women still sing—generally to the accompaniment of a fiddle—the "copy of verses." A London chaunter told me, that, a few years back, he heard a blind man at York announce the "verses" as from the "solitudes" of the condemned cell. At present the broad-sheet sellers usually sing, or chaunt, the copy of verses.

An intelligent man, now himself a street-trader, told me that one of the latest "execution songs" (as he called them) which he remembered to have heard in the old style—but "no doubt there were plenty after that, as like one another as peas in a boiling"—was on the murder of Weare, at Elstree, in Hertfordshire. He took great interest in such things when a boy, and had the song in question by heart, but could only depend upon his memory for the first and second verses:

"Come, all good Christians, praise the Lord,
  And trust to him in hope.
God in his mercy Jack Thurtell sent
  To hang from Hertford gallows rope.

Poor Weare's murder the Lord disclosed—
  Be glory to his name:
And Thurtell, Hunt, and Probert too,
  Were brought to grief and shame."

Another street paper-worker whom I spoke to on the subject, and to whom I read these two verses, said: "That's just the old thing, sir; and it's quite in old Jemmy Catnach's style, for he used to write werses—anyhow, he said he did, for I've heard him say so, and I've no doubt he did in reality—it was just his favourite style, I know, but the march of intellect put it out. It did so."

In the most "popular" murders, the street "papers" are a mere recital from the newspapers, but somewhat more brief, when the suspected murderer is in custody; but when the murderer has not been apprehended, or is unknown, "then," said one Death-hunter, "we has our fling, and I've hit the mark a few chances that way. We had, at the werry least, half-a-dozen coves pulled up in the slums that we printed for the murder of 'The Beautiful Eliza Grimwood, in the Waterloo-road.' I did best on Thomas Hopkins, being the guilty man —I think he was Thomas Hopkins—'cause a strong case was made out again him."

I received similar accounts of the street-doings in the case of "mysterious murders," as those perpetrations are called by the paper workers, when the criminal has escaped, or was unknown. Among those leaving considerable scope to the patterer's powers of invention were the murders of Mr. Westwood, a watchmaker in Prince's-street, Leicester-square; of Eliza Davis, a bar-maid, in Frederick-street, Hampstead-road; and of the policeman in Dagenham, Essex. One of the most successful "cocks," relating to murders which actually occurred, was the "Confession to the Rev. Mr. Cox, Chaplain of Aylesbury Gaol, of John Tawell the Quaker." I had some conversation with one of the authors of this "Confession," —for it was got up by three patterers; and he assured me that "it did well, and the facts was soon in some of the newspapers—as what we 'riginates often is." This sham confession was as follows:

"The Rev. Mr. Cox, the chaplain of Aylesbury Gaol, having been taken ill, and finding his end approaching, sent for his son, and said, 'Take this confession; now I am as good as my word; I promised that unhappy man, John Tawell, that while I lived his confession should not be made public, owing to the excited state of the public mind. Tawell confessed to me, that besides the murder of Sarah Hart, at Salt-hill, for while he suffered the last penalty of the law at Aylesbury, he was guilty of two other barbarous murders which abroad as a transport in Van Dieman's Land. One of these barbarous and horrid murders was on the

body of one of the keepers. He knocked him down with the keys, which he wrenched from him, and then cut his throat with his own knife, leaving the body locked up in his cell; and before that, to have the better opportunity of having the turnkey single-handed. John Tawell feigned illness. He then locked the keeper, in the cell, and went to a young woman in the town, a beautiful innkeeper's daughter, whom he had seduced as he worked for her father, as he had the privilege of doing in the day-times. He went to her, and she, seeing him in a flurried state, with blood upon his hand, questioned him. He told the unhappy young woman how he had killed the keeper for the love of her, and the best thing to be done was for her to get possession of all the money she could, and escape with him to this country, where he would marry her, and support her like a lady. The unhappy young woman felt so terrified, that at the moment she was unable to say yes or no. He became alarmed for his safety, and with the identical knife that he killed the keeper with, he left his unhappy victim a weltering in her gore. He then fled from the house unobserved, and went into the bush, where he met three men, who had escaped through his killing the keeper. He advised them to go down with him to an English vessel lying off the coast. When they reached the shore, they met a crew in search of fresh water; to them they made out a pitiful story, and were taken on board the ship. All being young men, and the captain being short of hands, and one of them having been really a seaman transported for mutiny, the captain, after putting questions which the seaman answered, engaged them to work their passage home. Tawell was the captain of the gang, and was most looked up to. They worked their passage home, behaving well during the voyage, so that the captain said he would make each of them a present, and never divulge. When they reached Liverpool, Tawell robbed the captain's cabin of all the money contained in it, which was a very considerable sum. After that he left Liverpool, and adopted the garb of a Quaker, in which he could not easily be recognized, and then pursued the course of wickedness and crime which led him to a shameful death."

The "confession" of Rush to the chaplain of Norwich Castle, was another production which was remunerative to the patterers. "There was soon a bit of it in the newspapers," said one man, "for us and them treads close on one another's heels. The newspapers 'screeved' about Rush, and his mother, and his wife; but we, in our patter, made him confess to having murdered his old grandmother fourteen years back, and how he buried her under the apple-tree in the garden, and how he murdered his wife as well."

These ulterior Confessions are very rarely introduced, in lieu of some matter displaced, into the broad-sheet, but form separate bills. It was necessary to mention them here, however, and so preserve the sequence of the whole of the traffic consequent upon a conviction for murder, in this curious trade.

Sometimes the trial, &c., form also separate bills, as well as being embodied afterwards in the Sorrowful Lamentation. This is only, however, in cases which are deemed important. One of the papers I obtained, for instance, is the "Trial of Mr. and Mrs. Manning for the Murder of Mr. Patrick O'Connor." The trial alone occupies a broad-sheet; it is fairly "got up." A portrait of Mr. Patrick O'Connor heads the middle column. From the presence of a fur collar to the coat or cloak, and of what is evidently an order with its insignia, round the neck, I have little doubt that the portrait of Mr. O'Connor was originally that of the sovereign in whose service O'Connor was once an excise-officer—King William IV.

The last publication to which the trade has recourse is "the book." This is usually eight pages, but sometimes only four of a larger size. In authorship, matter, or compilation, it differs little from the narratives I have described. The majority of these books are prepared by one man. They are in a better form for being preserved as a record than is a broad-sheet, and are frequently sold, and almost always offered by the patterers when they cry a new case on a sheet, as "people that loves such reading likes to keep a good account of the best by them; and so, when I've sold Manning's bills, I've often shoved off Rush's books." The books, like the bills, have generally the letters and the copy of verses.

Some of these books have the title-page set forth in full display,—for example: "*Horrible Murder and Mutilation of Lucy Game, aged* 15, *by her Cruel Brother, William Game, aged* 9, *at Westmill, Hertfordshire. His Committal and Confession. With a Copy of Letter. Also, Full Particulars of the Poisonings in Essex.*" Here, as there was no execution, the matter was extended, to include the poisonings in Essex. The title I have quoted is expanded into thirteen lines. Sometimes the title-page is adorned with a portrait. One, I was told, which was last employed as a portrait of Calcraft, had done severe service since Courvoisier's time,—for my informant thought that Courvoisier was the original. It is the bust of an ill-looking man, with coat and waistcoat fitting with that unwrinkled closeness which characterises the figures in tailors' "fashions."

The above style of work is known in the trade as "the book;" but other publications, in the book or pamphlet form, are common enough. In some I have seen, the title-page is a history in little. I cite one of these:—"*Founded on Facts. The Whitby Tragedy; or, the Gambler's Fate. Containing the Lives of Joseph Carr, aged* 21, *and his sweetheart, Maria Leslie, aged* 19, *who were found Dead, lying by each other, on the morning of the 23rd of May. Maria was on her road to Town to buy some Ribbon, &c., for her Wedding Day, when her lover in a state of intoxication fired at her, and then run to rob his prey, but finding it to be his Sweetheart, reloaded his Gun, placed the Muzzle to his Mouth, and blew out his Brains, all through cursed Cards, Drink, &c. Also, an affectionate Copy of Verses.*"

To show the extent of the trade in execution broad-sheets, I obtained returns of the number of copies relating to the principal executions of late, that had been sold:

Of Rush	2,500,000	copies.
„ the Mannings .	2,500,000	„
„ Courvoisier . .	1,666,000	„
„ Good	1,650,000	„
„ Corder . . .	1,650,000	„
„ Greenacre . .	1,666,000	„

Of Thurtell I could obtain no accounts—"it was so long ago;" but the sale, I was told, was enormous. Reckoning that each copy was sold for 1*d*. (the regular price in the country, where the great sale is,) the money expended for such things amounts to upwards of 48,500*l*. in the case of the six murderers above given. All this number was printed and got up in London; a few "broad-sheets" concerning Rush were printed also in Norwich.

Touching the issue of "cocks," a person connected with the trade calculated for me, from data at his command, that 3,456 copies were struck off weekly, and sold in the streets, in the metropolis; and reckoning them at only a ½*d*. each, we have the sum of 7*l*. 4*s*. spent every week in this manner. At this rate, there must be 179,712 copies of "cocks" printed in a year, on which the public expend no less than 374*l*. 8*s*.

Of the style of illustrations usually accompanying this class of street literature the two large engravings here given are *fac similes*—while the smaller ones are faithful copies of the average embellishments to the halfpenny ballads. On another occasion I shall speak at length on "Street-Art."

Of the Street-sellers of Conundrums.

Among the more modern street sales are "conundrums," generally vended, both in the shops and the streets, as "Nuts to Crack," when not in the form of books. This is another of the "broad-sheets," and is sufficiently clever and curious in its way.

In the centre, at the top, is the "Wonderful Picture," with the following description: "This Picture when looked at from a particular point of view, will not only appear perfect in all respects and free from distortion, but the figures will actually appear to stand out in relief from the paper." The wonderful picture, which is a rude imitation of a similar toy picture sold in a box, "with eye-piece complete," at the shops, presents a distorted view of a church-spire, a light-house, a donjon-keep, castellated buildings backed by mountains, a moat on which are two vessels, an arch surmounted by a Britannia, a palm-tree (I presume), and a rampart, or pier, or something that way, on which are depicted two figures, with the gestures of elocutionists. The buildings are elongated, like shadows at sunset or sunrise. What may be the "particular point of view" announced in the description of the Wonderful Picture, is not described in the "Nuts," but the following explanation is given in a little book, published simultaneously, and entitled, "The Nutcrackers, a Key to Nuts to Crack, or Enigmatical Repository:"

"The Wonderful Picture.—Cut out a piece of cardboard 2½ inches long, make a round hole about the size of a pea in the top of it; place this level with the right-hand side of the Engraving and just 1½ inches distant from it, then apply your eye to the little hole and look at the picture, and you will find that a beautiful symmetry pervades the landscape, there is not the slightest appearance of distortion, and the different parts appear actually to stand up in relief on the paper."

Below the "Wonderful Picture" are other illustrations; and the border of the broad-sheet presents a series of what may be called pictorial engravings. The first is,

D I O
C C
1.—Lately presented to a "Wise man" by a usurper.

The answer being evidently "Diocese." No. 26 is

A 4
26.—The Child's "Tidy."

"Pinafore" is the solution. Of the next "hieroglyphic"—for a second title to the "Nuts" tells of "209 Hieroglyphics, Enigmas, Conundrums, Curious Puzzles, and other Ingenious Devices,"—I cannot speak very highly. It consists of "AIMER," (a figure of a hare at full speed,) and "EKA." Answer.—"America."

In the body of the broad-sheet are the Enigmas, &c., announced; of each of which I give a specimen, to show the nature of this street performance or entertainment. Enigma 107 is—

> "I've got no wings, yet in the air
> I often rise and fall;
> I've got no feet, yet clogs I wear,
> And shoes, and boots, and all."

As the answer is foot-ball, the two last lines should manifestly have been placed first.

The "Conundrums" are next in the arrangement, and I cite one of them:

"Why are there, strictly speaking, only 325 days in the year?"

"Because," is the reply, "forty of them are lent and never returned." The "Riddles" follow in this portion of the "Nuts to Crack." Of these, one is not very difficult to be solved, though it is distinguished for the usual grammatical confusion of tenses:

"A man has three daughters, and each of these have a brother. How many children had he?"

The "Charades" complete the series. Of these I select one of the best:

> "I am a word of letters seven,
> I'm sinful in the sight of heaven,
> To every virtue I'm opposed,
> Man's weary life I've often closed.
> If to me you prefix two letters more,
> I mean exactly what I meant before."

The other parts of the letter-press consist of "Anagrams," "Transpositions," &c.

When a clever patterer "works conundrums"—for the trade is in the hands of the pattering class—he selects what he may consider the best, and reads or repeats them in the street, sometimes with and sometimes without the answer. But he does not cripple the probable quickness

Original from HARVARD UNIVERSITY

of his sale by a slavish adherence to what is in type. He puts the matter, as it were, personally. "What gentleman is it," one man told me he would ask, "in this street, that has—

'Eyes like saucers, a back like a box,
A nose like a pen-knife, and a voice like a fox?'

You can learn for a penny. Or sometimes I'll go on with the patter, thus," he continued, "What lady is it that we have all seen, and who can say truly—

'I am brighter than day, I am swifter than light,
And stronger than all the momentum of might?'

More than once people have sung out 'the Queen,' for they seem to think that the momentum of might couldn't fit any one else. It's 'thought' as is the answer, but it wouldn't do to let people think it's anything of the sort. It must seem to fit *somebody*. If I see a tailor's name on a door, as soon as I've passed the corner of the street, and sometimes in the same street, I've asked—

'Why is Mr. So-and-so, the busy tailor of this (or the next street) never at home?'

'Because he's always cutting out.' I have the same questions for other tradesmen, and for gentlemen and ladies in this neighbourhood, and no gammon. All for a penny. Nuts to Crack, a penny. A pair of Nutcrackers to crack 'em, only one penny."

Sometimes this man, who perhaps is the smartest in the trade, will take a bolder flight still, and when he knows the residence of any professional or public man, he will, if the allusion be complimentary, announce his name, or —if there be any satire — indicate by a motion of the head, or a gesture of the hand, the direction of his residence. My ingenuous, and certainly ingenious, informant obliged me with a few instances: — "In Whitechapel parish I've said—it ain't in the print, it was only in the patter — 'Why won't the Reverend Mr. Champneys lay up treasures on earth?'—'Because he'd rather lay up treasures in heaven.' That's the reverend gentleman not far from this spot; but in this sheet—with nearly 100 engravings by the first artists, only a penny — I have other questions for other parsons, not so easy answered; nuts as is hard to crack. 'Why is the Reverend Mr. Popjoy,' or the Honourable Lawyer Bully, or Judge Wiggem,—and then I just jerks my thumb, sir, if it's where I know or think such people live —'Why is the Reverend Mr. Popjoy (or the others) like *two* balloons, one in the air to the east, and the 'tother in the air to the west, in this parish of St. George's, Hanover-square?' There's no such question, and as it's a sort of a 'cock,' of course there's no answer. I don't know one. But a gentleman's servant once sung out: ''Cause he's uppish.' And a man in a leather apron once said: 'He's a raising the wind,' which was nonsense. But I like that sort of interruption, and have said—'You'll not find *that* answer in the Nutcrackers,' only a penny—and, Lord knows, I told the truth when I said so, and it helps the sale. No fear of any one's finding out all what's in the sheet before I'm out of the 'drag.' Not a bit. And you must admit that any way it's a cheap pennorth." That it is a cheap harmless pennyworth is undeniable.

The street-sale of conundrums is carried on most extensively during a week or two before Christmas; and on summer evenings, when the day's work is, or ought to be, over even among the operatives of the slop employers. As the conundrum patterer requires an audience, he works the quieter streets, preferring such as have no horse-thoroughfare — as in some of the approaches from the direction of Golden-square to Regent-street. The trade is irregularly pursued, none following it all the year; and from the best information I could acquire, it appears that fifteen men may be computed as working conundrums for two months throughout the twelve, and clearing 10*s*. 6*d*. weekly. per individual. The cost of the "Nuts to Crack" (when new) is 5*d*. a doz. to the seller; but old "Nuts" often answer the purpose of the street-seller, and may be had for about half the price; the cost of the "Nutcrackers" 2*s*. to 2*s*. 6*d*. It may be calculated, then, that to realize the 10*s*. 6*d*., 15*s*. must be taken. This shows the street expenditure in "Nuts to Crack" and "Nut-crackers" to be 90*l*. yearly.

OF THE STREET-SELLERS OF COMIC EXHIBITIONS, MAGICAL DELUSIONS, &c.

THE street sale of "Comic Exhibitions" (properly so called) is, of course, as modern as the last autumn and winter; and it is somewhat curious that the sale of any humorous, or meant to be humorous sheet of engravings, is now becoming very generally known in [illegible] street sale as a "Comic Exhibition." Amor[illegible]hese—as I have before intimated—are many c[illegible]catures of the Pope, the Church of Rome, Cardinal Wiseman, the Church of England, the Bishop of London (or any bishop or dignitary), or of any characteristic of the conflicting creeds. In many of these, John Bull figures personally, and so does the devil.

The Comic Exhibition (proper) is certainly a very cheap pennyworth. No. 1 is entitled, "The Ceremonial of the Opening of the Great Exhibition, in 1851, with Illustrations of the Contributions of All Nations." The "contributions," however, are reserved for Nos. 2 and 3. Two larger "cuts," at the head of the broad-sheet, may be considered geographical, as regards the first, and allegorical as regards the second. "Table Bay" presents a huge feeder (evidently), and the "Cape of Good Hope" is a spare man obsequiously bowing to the table and its guest in good hope of a dinner. Of the Sandwich Islands and of Hung(a)ry, the "exhibition" is of the same description. The second larger cut shows the Crystal Palace ascending by the agency of a balloon, a host of people of all countries looking on. Then comes the

'Procession from Palace-yard to Hyde Park." The first figure in this procession is described as "Beefeaters piping hot and well puffed out," though there is but one beefeater, with head larger than his body and legs ridiculously small (as have nearly all the sequent figures), smoking a pipe as if it were a trombone, duly followed by "Her Majesty's Spiritual Body-guard" (five beefeaters, drunk), and by "Prince Albert blowing his own trumpet" (from the back of a very sorry steed), with "Mops and brooms," and a "Cook-oo" (a housemaid and cook) as his supporters. Then follow figures, grotesque enough, of which the titles convey the character: "A famous Well-in-Town;" "Nae Peer-ye;" "Humorous Estimates" (Mr. Hume); "A Jew-d'esprit" (Mr. D'Israeli); "An exemplification of Cupidity in Pummicestone" (Lord Palmerston); "Old Geese" and "Young Ducks" (old and angry-looking and young and pretty women); "Some gentlemen who patronise Moses in the Minories" (certainly no credit to the skill of a tailor); "A Jew Lion" (M. Jullien); "Fine high screams" (ice-creams) and "Capers" (chorister boys and ballet-girls); "Hey-day, you don't take advantage here" (Joseph Ady); and "Something to give the milk a head" (a man with a horse's head on a tray). These, however, are but a portion of the figures. The Comic Exhibition-sheet contains ninety such figures, independent of those in the two cuts mentioned as headings.

"Galleries of Comicalities," or series of figures sometimes satirically, sometimes grotesquely given without any aim at satire, are also sold by the same parties, and are often announced as a "Threepenny gallery for a penny!—and dirt cheap at threepence. As big as a newspaper."

Another [illegible]ad-sheet sold this winter in the streets is e[illegible]tled, "Optical and Magical Delusions," a[illegible] was announced as "Dedicated to and Prepared for his Royal Highness the Prince of Wales—the only original copy." The engravings are six in number, and are in three rows, each accompanying engraving being reversed from its fellow: where the head is erect on one side, it is downward on the other. The first figure is a short length of a very plain woman, while on the opposite side is that of a very plain man, both pleased and smirking in accordance with a line below: "O what joy when our lips shall meet!" "Cat-a-gorical" is a spectacled and hooded cat. "Dog-matical" is a dog with the hat, wig, and cane once held proper to a physician. "Cross purposes" is an austere lady in a monster cap, while her opposite husband is pointing bitterly to a long bill. The purport of these figures is shown in the following

"DIRECTIONS—Paste all over the Back of the sheet, and put a piece of thick paper between, to stiffen it, then fold it down the centre, so that the marginal lines fall exactly at the back of each other, (which may be ascertained by holding it to the light)—press it quite flat—when cut separate they will make three cards—shave them close to the margin—then take a needle-full of double thread and pass it through the dot at each end of the card; cut the thread off about three inches long. By twisting the threads between your fore fingers and thumbs, so as to spin the card round backwards and forwards with a rapid motion, the figures will appear to connect and form a pleasing delusion."

Then there are the "Magical Figures," or rude street imitations of Dr. Paris' ingenious toy, called the "Thaumascope." Beside these are what at the first glance appear mere black, and very black, marks, defining no object; but a closer examination shows the outlines of a face, or of a face and figure. Of such there are sometimes four on a broad-sheet, but they are also sold separately, both in the streets and the small stationers' shops. When the white or black portion of the paper is cut away (for both colours are so prepared), what remains, by a disposition of the light, throws a huge shadow of a grotesque figure on the wall, which may be increased or diminished according to the motions of the exhibitor. The shadow-figures sold this winter by one of my informants were of Mr. and Mrs. Manning, the Queen, Prince Albert, the Princess Royal, and the Prince of Wales; "but you see, sir," observed the man, "the Queen and the Prince does for any father and mother—for she hasn't her crown on—and the Queen's kids for anybody's kids."

I mention these matters more particularly, as it certainly shows something of a change in the winter-evenings' amusements of the children of the working-classes. The principal street customers for these penny papers were mechanics, who bought them on their way home for the amusement of their families. Boys, however, bought almost as many.

The sale of these papers is carried on by the same men as I have described working conundrums. A superior patterer, of course, shows that his magical delusions and magical figures combine all the wonders of the magic lantern and the dissolving views, "and all for one penny." The trade is carried on only for a short time in the winter as regards the magical portion; and I am informed that, including the "Comic Exhibitions," it extends to about half of the sum taken for conundrums, or to about 45*l.*

Of the Street-sellers of Play-Bills.

The sellers of play-bills carry on a trade which is exceedingly uncertain, and is little remunerative. There are now rather more than 200 people selling play-bills in London, but the number has sometimes been as high as 400. "Yes, indeed," a theatrical gentleman said to me, "and if a dozen more theatres were opened to-morrow, why each would have more than its twenty bill-sellers the very first night. Where they come from, or what they are, I haven't a notion."

The majority of the play-bill sellers are either old or young, the sexes being about equally engaged in this traffic. Some of them have followed the business from their childhood. I met with very few indeed who knew anything of

theatres beyond the names of the managers and of the principal performers, while some do not even enjoy that small modicum of knowledge, and some can neither read nor write. The boys often run recklessly alongside the cabs which are conveying persons to the theatre, and so offer their bills for sale. One of these youths said to me, when I spoke of the danger incurred, "The cabman knows how to do it, sir, when I runs and patters; and so does his hoss." An intelligent cabman, however, who was in the habit of driving parties to the Lyceum, told me that these lads clung to his cab as he drove down to Wellington-street in such a way, for they seemed never to look before them, that he was in constant fear lest they should be run over. Ladies are often startled by a face appearing suddenly at the cab window, "and thro' my glass," said my informant, "a face would look dirtier than it really is." And certainly a face gliding along with the cab, as it were, no accompanying body being visible, on a winter's night, while the sound of the runner's footsteps is lost in the noise of the cab, has much the effect of an apparition.

I did not hear of one person who had been in any way connected with the stage, even as a supernumerary, resorting to play-bill selling when he could not earn a shilling within the walls of a theatre. These bill-sellers, for the most part, confine themselves, as far as I could ascertain, to that particular trade. The youths say that they sometimes get a job in errand-going in the daytime, but the old men and women generally aver they can do nothing else. An officer, who, some years back, had been on duty at a large theatre, told me that at that time the women bill-sellers earned a trifle in running errands for the women of the town who attended the theatres; but, as they were not permitted to send any communication into the interior of the house, their earnings that way were insignificant, for they could only send in messages by any other "dress woman" entering the theatre subsequently.

In the course of my inquiries last year, I met with a lame woman of sixty-eight, who had been selling play-bills for the last twelve years. She had been, for six or eight months before she adopted that trade, the widow of a poor mechanic, a carpenter. She had first thought of resorting to that means of a livelihood owing to a neighbouring old woman having been obliged to relinquish her post from sickness, when my informant "succeeded her." In this way, she said, many persons "succeeded" to the business, as the recognised old hands were jealous of and uncivil to any additional new comers, but did not object to a "successor." These parties generally know each other; they murmur if the Haymarket hands, for instance, resort to the Lyceum for any cause, or *vice versâ*, thus overstocking the business, but they offer no other opposition. The old woman further informed me that she commenced selling play-bills at Astley's, and then realized a profit of 4*s.* per week. When the old Amphitheatre was burnt down, she went to the Victoria; but "business was not what it was," and her earnings were from 6*d.* to 1*s.* a week less; and this, she said, although the Victoria was considered one of the most profitable stations for the play-bill seller, the box-keeper there seldom selling any bill in the theatre. "The boxes," too, at this house, more frequently buy them outside. Another reason why "business" was better at the Victoria than elsewhere was represented to me, by a person familar with the theatres, to be this: many go to the Victoria who cannot read, or who can read but imperfectly, and they love to "make-believe" they are "good scholards" by parading the consulting of a play-bill!

On my visit the bill-sellers at the Victoria were two old women (each a widow for many years), two young men, besides two or three, though there are sometimes as many as six or seven children. The old women "fell into the business" as successors by virtue of their predecessors' leaving it on account of sickness. The children were generally connected with the older dealers. The young men had been in this business from boyhood; some sticking to the practice of their childhood unto manhood, or towards old age. The number at the Victoria is now, I am informed, two or three more, as the theatre is often crowded. The old woman told me that she had known two and even four visitors to the theatre club for the purchase of a bill, and then she had sometimes to get farthings for them.

A young fellow—who said he believed he was only eighteen, but certainly looked older—told me that he was in the habit of selling play-bills, but not regularly, as he sometimes had a job in carrying a board, or delivering bills at a corner, "or the likes o' that;"—he favoured me with his opinion of the merits of the theatres he was practically acquainted with as regarded their construction for the purposes of the bill-seller. His mother, who had been dead a few years, had sold bills, and had put him into the business. His ambition seemed to be to become a general bill-sticker. He could not write but could read very imperfectly.

"Vy, you see, sir," he said, "there's sets off. At the Market (Haymarket), now, there's this: there's only one front, so you may look sharp about for there goes, boxes, pit, and gallery. The 'Delphis as good that way, and so is the Surrey, but them one's crowded too much. The Lyceum's built shocking orkered. Vy, the boxes is in one street, and the pit in another, and the gallery in another! It's true, sir. The pit's the best customer in most theatres, I think. Ashley's and the Wick is both spoiled that way—Ashley's perticler—as the gallery's a good step from the pit and boxes; at the Wick it's round the corner. But the shilling gallery aint so bad at Ashley's. Sadler's Wells I never tried, it's out of the way, and I can't tell you much about the 'Lympic or the Strand. The Lane is middling. I don't know that either plays or actors makes much difference to me. Perhaps it's rather vorser

ven it's anything werry prime, as everybody seems to know every think about it aforehand. No, sir, I can't say, sir, that Mr. Macready did me much good. I sometimes runs along by a cab because I've got a sixpence from a swell for doing it stunnin', but werry seldom, and I don't much like it; though ven you're at it you don't think of no fear. I makes 3*s*. or rather more a week at bill-selling, and as much other vays. I never saw a play but once at the Wick. I'd rather be at a Free and Heasy. I don't know as I knows any of the actors or actresses, either hes or shes."

The sellers of play-bills purchase their stock of the printer, at 3*s*. 4*d*. the hundred, or in that proportion for half or quarter-hundreds. If a smaller quantity be purchased, the charge is usually thirteen for 6*d*.; though they used to be only twelve for 6*d*. These sellers are among the poorest of the poor; after they have had one meal, they do not know how to get another. They reside in the lowest localities, and some few are abandoned and profligate in character. They reckon it a good night to earn 1*s*. clear, but upon an average they clear but 3*s*. per week. They lose sometimes by not selling out their nightly stock. What they have left, they are obliged to sell for waste-paper at 2*d*. per lb. Christmas, Easter, and Whitsuntide are generally their best times—they will then make 9*d*. per night clear. The printer of the play-bills prints but a certain number, the demand being nearly ascertained week by week. These are all sold (by the printer or some person appointed) to the regular customers, in preference to others, but the "irregulars" can get supplied, though often not without trouble. The profit on all sold is rather more than cent. per cent. As I have intimated, when some theatres are closed, the bill-sellers are driven to others; and as the demand is necessarily limited, a superflux of sellers affects the profits, and then 2*s*. 6*d*. is considered a good week's work. During the opera season, I am told, a few mechanics, out of work, will sell bills there and books of the opera, making about 6*s*. a week, and doing better than the regular hands, as they have a better address and are better clad.

Taking the profits at 3*s*. a week at cent. per cent. on the outlay, and reckoning 200 sellers, including those at the saloons, concert-rooms, &c., we find that 60*l*. is now expended weekly on play-bills purchased in the streets of London.

Of the Street-sellers of Periodicals, Pamphlets, Tracts, Books, etc.

These street-sellers are a numerous body, and the majority of them show a greater degree of industry and energy than is common to many classes of street-folk. They have been for the most part connected with the paper, newspaper, or publishing trade, and some of them have "known better days." One intelligent man I met with, a dealer in "waste" (paper), had been brought up as a compositor, but late hours and glaring gas-lights in the printing-office affected his eyes, he told me; and as a half-blind compositor was about of as little value, he thought, as a "horse with a wooden leg," he abandoned his calling for out-of-door labour. Another had been a gun-smith, and when out of his apprenticeship was considered a "don hand at hair triggers, for hair triggers were more wanted then," but an injury to his right hand and arm had disabled him as a mechanic, and he had recourse to the streets. A third had been an ink-maker's "young man," and had got to like the streets by calling for orders, and delivering bottles of ink, at the shops of the small stationers and chandlers, and so he had taken to them for a living. Of the book-stall-keepers I heard of one man who had died a short time before, and who "once had been in the habit of buying better books for his own pleasure than he had afterwards to sell for his bread." Of the book-stall proprictors, I have afterwards spoken more fully.

All the street-sellers in question are what street estimation pronounces to be educated men; they can all, as far as I could ascertain, read and write, and some of them were "keenish politicians, both free-traders, and against free-trade when they was a-talking of the better days when they was young." Nearly all are married men with families.

The divisions into which these street traffickers may be formed are — Odd Number-sellers — Steamboat Newsvendors — Railway Newsvendors, (though the latter is now hardly a street traffic),—the Sellers of Second Editions (which I have already given as a portion of the patterers)—Board-workers (also previously described, and for the same reason)—Tract-sellers (of whom I have given the number, character, &c.. and who are regarded by the other street-sellers as the idlers, beggars, and pretenders of the trade),—the Sellers of Childrens' Books and Song Books—Book-auctioneers, and Book-stall-keepers.

Of the Street-sale of Back Numbers.

This trade is carried on by the same class of patterers as work race-cards, second editions, &c. The collectors of waste-paper frequently find back numbers of periodicals in "a lot" they may have purchased at a coffee-shop. These they sell to warehousemen who serve the street-sellers. The largest lot ever sold at one time was some six or seven years ago, of the *Pictorial Times*, at least a ton weight. A dealer states—

"I lost the use of this arm ever since I was three months old. My mother died when I was ten years of age, and after that my father took up with an Irishwoman, and turned me and my youngest sister (she was two years younger than me) out into the streets. My youngest sister got employment at my father's trade, but I couldn't get no work because of my crippled arm. I walked about, till I fell down in the streets for want. At last, a man, who had a sweetmeat-shop, took pity on me. His wife made the sweetmeats, and minded

the shop while he went out a juggling in the streets, in the Ramo Samee line. He told me as how, if I would go round the country with him and sell a few prints while he was a juggling in the public-houses, he'd find me in wittles, and pay my lodging. I joined him, and stopped with him two or three year. After that I went to work for a werry large waste-paper dealer. He used to buy up all the old back numbers of the cheap periodicals and penny publications, and send me out with them to sell at a farden' a piece. He used to give me 4*d.* out of every shilling, and I done very well with that, till the periodicals came so low, and so many on 'em, that they wouldn't sell at all. Sometimes I could make 15*s.* on a Saturday night and a Sunday morning, a-selling the odd numbers of periodicals,—such as tales; 'Tales of the Wars,' 'Lives of the Pirates,' 'Lives of the Highwaymen,' &c. I've often sold as many as 2,000 numbers on a Saturday night in the New-cut, and the most of them was works about thieves, and highwaymen, and pirates. Besides me, there was three others at the same business. Altogether, I dare say my master alone used to get rid of 10,000 copies of such works on a Saturday night and a Sunday morning. Our principal customers was young men. My master made a good bit of money at it. He had been about eighteen years in the business, and had begun with 2*s.* 6*d.* I was with him fifteen year, on and off, and at the best time. I used to earn my 30*s.* a week full at that time. But then I was foolish, and didn't take care of my money. When I was at the 'odd number business,' I bought a peep-show, and left the trade to go into that line."

OF THE SALE OF WASTE NEWSPAPERS AT BILLINGSGATE.

THIS trade is so far peculiar that it is confined to Billingsgate, as in that market alone the demand supplies a livelihood to the man who carries it on. His principal sale is of newspapers to the street-fishmongers, as a large surface of paper is required for the purposes of a fish-stall. The "waste" trade—for "waste" and not "waste-paper" is the word always applied—is not carried on with such facility as might be expected, for I was assured that "waste" is so scarce that only a very insufficient supply of paper can at present be obtained. "I hope things will change soon, sir," said one collector, gravely to me, "or I shall hardly be able to keep myself and my family on my waste."

This difficulty, however, does not affect such a street-seller as the man at Billingsgate, who buys of the collectors—"collecting," however, a portion himself at the neighbouring coffee-shops, public-houses, &c.; for the wants of a regular customer must, by some means or other, be supplied.

The Billingsgate paper-seller carries his paper round, offering it to his customers, or to those he wishes to make purchasers; some fishmongers, however, obtain their "waste" first-hand from the collectors, or buy it at a news-agent's.

The retail price varies from 2*d.* to 3½*d.* the pound, but 3½*d.* is only given for "very clean and prime, and perhaps uncut," newspapers; for when a newsvendor has, as it is called, "over-stocked" himself, he sells the uncut papers at last to the collector, or the "waste" consumer. This happens, I was told, twenty times as often with the "weeklys" as the "dailys;" for, said my informant, "suppose it's a wet Sunday morning—and all newsvendors as does pray, prays for wet Sundays, because then people stays at home and buys a paper, or some number, to read and pass away the time. Well, sir, suppose it's a soaker in the morning, the newsman buys a good lot, an extra nine, or two extra nines, or the like of that, and then may be, after all, it comes out a fine day, and so he's over-stocked; in which case there's some for the waste."

When they consider it a favourable opportunity, the workers carry waste to offer to the Billingsgate salesmen; but the chief trade is in the hands of the regular frequenter of the market.

From the best information I could obtain, it appears that from 70 to 100 pounds weight of "waste"—about three-fourths being newspapers, of which some are foreign—is supplied to Billingsgate market and its visitants. Two numbers of the *Times*, with their supplements, one paper-buyer told me, "when cleverly damped, and they're never particularly dry," will weigh about a pound. The average price is not less than 2½*d.* a pound, or from that to 3*d.* A single paper is 1*d.* At 2½*d.* per pound, and 85 pounds a day, upwards of 275*l.* is spent yearly in waste paper at Billingsgate, in the street or open-air purchase alone.

OF THE SALE OF PERIODICALS ON THE STEAM-BOATS AND STEAM-BOAT PIERS.

IN this traffic are engaged about 20 men, "when the days are light until eight o'clock;" from 10 to 15, if the winter be a hard winter; and if the river steamers are unable to run—none at all. This winter, however, there has been no cessation in the running of the "boats," except on a few foggy days. The steam-boat paper-sellers are generally traders on their own account (all, I believe, have been connected with the newsvendors' trade); some few are the servants of newsvendors, sent out to deal at the wharfs and on board the boats.

The trade is not so remunerative that any payment is made to the proprietors of the boats or wharfs for the privilege of selling papers there (as in the case of the railways), but it is necessary to "obtain leave," from those who have authority to give it.

The steam-boat paper-seller steps on board a few minutes before the boat starts, when there are a sufficient number of voyagers assembled. He traverses the deck and dives into the cabins, offering his "papers," the titles of which he

announces: "Punch, penny Punch, *real* Punch, last number for 3*d*.—comic sheets, a penny—all the London periodicals—Guide to the Thames."

From one of these frequenters of steam-boats for the purposes of his business, I had the following account:

"I was a news-agent's boy, sir, near a pier, for three or four year, then I got a start for myself, and now I serve a pier. It's not such a trade as you might think, still it's bread and cheese and a drop of beer. I go on board to sell my papers. It's seldom I sell a newspaper; there's no call for it on the river, except at the foreign-going ships—a few as is sold to them—but I don't serve none on 'em. People reads the news for nothing at the coffee-shops when they breakfasts, I s'pose, and goes on as if they took in the *Times*, *Chron*, and '*Tiser*—pubs. we calls the '*Tiser*—all to their own cheek. It's penny works I sell the most of; indeed, it's very seldom I offer anything else, 'cause it's little use. Penny Punches is fair sale, and I calls it 'Punch'—just Punch. It's dead now, I believe, but there's old numbers; still they'll be done in time. The real Punch—I sell from six to twelve a week—I call that there as the reel Punch. Galleries of Comicalities is a middling sale; people take them home with them, I think. Guides to the Thames is good in summer. They're illustrated; but people sometimes grumbles and calls them catchpennies. It ain't my fault if they're not all that's expected, but people expects everything for 1*d*. Joe Millers and 'Stophelees" (Mephistopheles) "I've sold, and said they was oppositions to Punch; that's a year or more back, but they was old, and to be had cheap. I sell Lloyd's and Reynolds's pennies—fairish, both of them; so's the Family Herald and the London Journal—very fair. I don't venture on any three-halfpenny books on anything like a spec., acause people says at once: 'A penny—I'll give you a penny.' I sell seven out of eight of what I do sell to gents.; more than that, perhaps; for you'll not often see a woman buy nothing wots intended to improve her mind. A young woman, like a maid of all work, buys sometimes and looks hard at the paper; but I sometimes thinks it's to show she can read. A summer Sunday's my best time, out and out. There's new faces then, and one goes on bolder. I've known young gents. buy, just to offer to young women, I'm pretty well satisfied. It's a introduction. *I have* met with real gentlemen. They've looked over all I offered for sale and then said: 'Nothing I want, my good fellow, but here's a penny for your trouble.' I wish there was more of them. I do sincerely. Sometimes I've gone on board and not sold one paper. I buy in the regular way, 9*d*. for a dozen (sometimes thirteen to the dozen) of penny pubs. I don't know what I make, for I keep no count; perhaps a sov. in a good week and a half in another."

I am informed that the average earnings of these traders, altogether, may be taken at 15*s*. weekly; calculating that twelve carry on the trade the year through, we find that (assuming each man to sell at thirty-three per cent. profit—though in the case of old works it will be cent. per cent.) upwards of 1,500*l*. are expended annually in steam-boat papers.

Of the Sale of Newspapers, Books, &c., at the Railway Stations.

Although the sale of newspapers at the railway termini, &c., cannot strictly be classed as a street-sale, it is so far an open-air traffic as to require some brief notice, and it has now become a trade of no small importance.

The privilege of selling to railway-passengers, within the precincts of the terminus, is disposed of by tender. At present the newsvendor on the North-Western Line, I am informed, pays to the company, for the right of sale at the Euston-square terminus, and the provincial stations, as large a sum as 1,700*l*. per annum. The amount usually given is of course in proportion to the number of stations, and the traffic of the railway.

The purchaser of this exclusive privilege sends his own servants to sell the newspapers and books, which he supplies to them in the quantity required. The men thus engaged are paid from 20*s*. to 30*s*. a week, and the boys receive from 6*s*. to 10*s*. 6*d*. weekly, but rarely 10*s*. 6*d*.

All the morning and evening papers are sold at the Station, but of the weekly press, those are sent for sale which in the manager's judgment are likely to sell, or which his agent informs him are "asked for." It is the same with the weekly unstamped publications. The reason seems obvious; if there be more than can be sold, a dead loss is incurred, for the surplusage, as regards newspapers, is only saleable as waste paper.

The books sold at railways are nearly all of the class best known as "light reading," or what some account light reading. The price does not often exceed 1*s*.; and among the books offered for sale in these places are novels in one volume, published at 1*s*.—sometimes in two volumes, at 1*s*. each; "monthly parts" of works issued in weekly numbers; shilling books of poetry; but rarely political or controversial pamphlets. One man, who understood this trade, told me that "a few of the pamphlets about the Pope and Cardinal Wiseman sold at first; but in a month or six weeks, people began to say, 'A shilling for that! I'm sick of the thing.'"

The large sum given for the privilege of an exclusive sale, shows that the number of books and papers sold at railway stations must be very considerable. But it must be borne in mind, that the price, and consequently the profit on the daily newspapers, sold at the railways, is greater than elsewhere. None are charged less than 6*d*., the regular price at a news-agent's shop being 5*d*., so that as the cost price is 4*d*.

the profit is double. Nor is it unusual for a passenger by an early train, who grows impatient for his paper, to cry out, "A shilling for the *Times!*" This, however, is only the case, I am told, with those who start very early in the morning; for the daily papers are obtained for the railway stations from among the earliest impressions, and can be had at the accustomed price as early as six o'clock, although, if there be exciting news and a great demand, a larger amount may be given.

Of the Street Booksellers.

The course of my inquiry now leads me to consider one of the oldest, and certainly not least important of the street traffics—that of the book-stalls. Of these there are now about twenty in the London streets, but in this number I include only those which are *properly* street-stalls. Many book-stalls, as in such a locality as the London-road, are appendages to shops, being merely a display of wares outside the bookseller's premises; and with these I do not now intend to deal.

The men in this trade I found generally to be intelligent. They have been, for the most part, engaged in some minor department of the bookselling or newspaper trade, in the regular way, and are unconnected with the street-sellers in other lines, of whose pursuits, habits, and characters, they seem to know nothing.

The street book-stalls are most frequent in the thoroughfares which are well-frequented, but which, as one man in the trade expressed himself, are not so "shoppy" as others—such as the City-road, the New-road, and the Old Kent-road. "If there's what you might call a recess," observed another street book-stall-keeper, "*that's* the place for us; and you'll often see us along with flower-stands and pinners-up." The stalls themselves do not present any very smart appearance; they are usually of plain deal. If the stock of books be sufficiently ample, they are disposed on the surface of the stall, "fronts up," as I heard it described, with the titles, when lettered on the back, like as they are presented in a library. If the "front" be unlettered, as is often the case with the older books, a piece of paper is attached, and on it is inscribed the title and the price. Sometimes the description is exceeding curt, as, "Poetry," "French," "Religious," "Latin" (I saw an odd volume, in Spanish, of Don Quixote, marked "Latin," but it was at a shop-seller's stall,) "Pamphlets," and such like; or where it seems to have been thought necessary to give a somewhat fuller appellation, such titles are written out as "Locke's Understanding," "Watts's Mind," or "Pope's Rape." If the stock be rather scant, the side of the book is then shown, and is either covered with white paper, on which the title and price are written, or "brushed," or else a piece of paper is attached, with the necessary announcement.

Sometimes these announcements are striking enough, as where a number of works of the same size have been bound together (which used to be the case, I am told, more frequently than it is now); or where there has been a series of stories in one volume. One such announcement was, "Smollett's Peregrine Pickle Captain Kyd Pirate Prairie Rob of the Bowl Bamfyeld Moore Carew 2*s*." Alongside this miscellaneous volume was, "Wilberforce's Practical View of Christianity, 1*s*.;" "Fenelon's Aventures de Télémaque, plates, 9*d*.;" "Arres, de Predestinatione, 1*s*." (the last-mentioned work, which, at the first glance, seems as if it were an odd mixture of French and Latin, was a Latin quarto); "Coronis ad Collationem Hagiensem, &c. &c., Gulielmo Amesio." Another work, on another stall, had the following description: "Lord Mount Edgecumbe's Opera What is Currency Watts's Scripture History Thoughts on Taxation only 1*s*. 3*d*." Another was, "Knickerbocker Bacon 1*s*." As a rule, however, the correctness with which the work is described is rather remarkable.

At some few of the street-stalls, and at many of the shop-stalls, are boxes, containing works marked, "All 1*d*.," or 2*d*., 3*d*., or 4*d*. Among these are old Court-Guides, Parliamentary Companions, Railway Plans, and a variety of sermons, and theological, as well as educational and political pamphlets. To show the character of the publications thus offered—not, perhaps, as a rule, but generally enough, for sale—I copied down the titles of some at 1*d*. and 2*d*.

"*All these at* 1*d*.—'Letters to the Right Honourable Lord John Russell, on State Education, by Edward Baines, jun.;' 'A Pastoral Letter to the Clergy and Members of the Protestant Episcopal Church in the United States of America;' 'A Letter to the Protestant Dissenters of England and Wales, by the Rev. Robert Ainslie;' 'Friendly Advice to Conservatives;' 'Elementary Thoughts on the Principles of Currency and Wealth, and on the Means of Diminishing the Burthens of the People, by J. D. Basset, Esq., price 2*s*. 6*d*.'" The others were each published at 1*s*.

"*All these at* 2*d*.—'Poems,' by Eleanor Tatlock, 1811, 2 vols., 9*s*.;' 'Two Sermons, on the Fall and Final Restoration of the Jews, by the Rev. John Stuart;' 'Thoughts and Feelings, by Arthur Brooke, 1820;' 'The Amours of Philander and Sylvia, being the third and last part of Love-letters between a Nobleman and his Sister. Volume the Second. The Seventh Edition. London.'"

From a cursory examination of the last-mentioned twopenny volume, I could see nothing of the nobleman or his sister. It is one of an inane class of books, originated, I believe, in the latter part of the reign of Charles II. Such publications professed to be (and some few were) records of the court and city scandal of the day, but in general they were works founded on the reputation of the current scandal. In short, to adopt the language of patterers, they were "cocks" issued by the publishers of that period; and

they continued to be published until the middle of the eighteenth century, or a little later. I notice this description of literature the more, particularly as it is still frequently to be met with in street-sale. "There's oft enough," one street-bookseller said to me, "works of that sort making up a 'lot' at a sale, and in very respectable rooms. As if they were make-weights, or to make up a sufficient number of books, and so they keep their hold in the streets."

As many of my readers may have little, if any, knowledge of this class of street-sold works, I cite a portion of the "epistle dedicatory," and a specimen of the style, of "Philander and Sylvia," to show the change in street, as well as in general literature, as no such works are now published:

"To the Lord Spencer, My Lord, when a new book comes into the world, the first thing we consider is the dedication; and according to the quality and humour of the patron, we are apt to make a judgment of the following subject. If to a statesman we believe it grave and politic; if to a gownman, law or divinity; if to the young and gay, love and gallantry. By this rule, I believe the gentle reader, who finds your lordship's name prefixed before this, will make as many various opinions of it, as they do characters of your lordship, whose youthful sallies have been the business of so much discourse; and which, according to the relator's sense or good nature, is either aggravated or excused: though the woman's quarrel to your lordship has some more reasonable foundation, than that of your own sex; for your lordship being formed with all the beauties and graces of mankind, all the charms of wit, youth, and sweetness of disposition (derived to you from an illustrious race of heroes) adapting you to the noblest love and softness, they cannot but complain on that mistaken conduct of yours, that so lavishly deals out those agreeable attractions, squandering away that youth and time on many, which might be more advantageously dedicated to some one of the fair; and by a liberty (which they call not being discreet enough) rob them of all the hopes of conquest over that heart which they believe can fix no where; they cannot caress you into tameness: or if you sometimes appear so, they are still upon their guard with you; for like a young lion you are ever apt to leap into your natural wildness; the greatness of your soul disdaining to be confined to lazy repose; though the delicacy of your person and constitution so absolutely require it; your lordship not being made for diversions so rough and fatiguing, as those your active mind would impose upon it."

The last sentence is very long, so that a shorter extract may serve as a specimen of the staple of this book-making:

"To Philander,—False and perjured as you are, I languish for a sight of you, and conjure you to give it me as soon as this comes to your hands. Imagine not that I have prepared those instruments of revenge that are so justly due to your perfidy: but rather, that I have yet too tender sentiments for you, in spite of the outrage you have done my heart; and that for all the ruin you have made, I still adore you: and though I know you are now another's slave, yet I beg you would vouchsafe to behold the spoils you have made, and allow me this recompense for all, to say—Here was the beauty I once esteemed, though now she is no more Philander's Sylvia."

Having thus described what may be considered the divisional parts of this stall trade, I proceed to the more general character of the class of books sold.

Of the Character of Books of the Street-sale.

There has been a change, and in some respects a considerable change, in the character or class of books sold at the street-stalls, within the last 40 or 50 years, as I have ascertained from the most experienced men in the trade. Now sermons, or rather the works of the old divines, are rarely seen at these stalls, or if seen, are rarely purchased. Black-letter editions are very unfrequent at street book-stalls, and it is twenty times more difficult, I am assured, for street-sellers to pick up anything really rare and curious, than it was in the early part of the century.

One reason assigned for this change by an intelligent street-seller was, that black-letter or any ancient works, were almost all purchased by the second-hand booksellers, who have shops and issue catalogues, as they had a prompt sale for them whenever they could pick them up at book-auctions or elsewhere. "Ay, indeed," said another book-stall keeper, "anything scarce or curious, when it's an old book, is kept out of the streets; if it's not particular decent, sir," (with a grin), "why it's reckoned all the more curious,—that's the word, sir, I know,—'curious.' I can tell how many beans make five as well as you or anybody. Why, now, there's a second-hand bookseller not a hundred miles from Holborn—and a pleasant, nice man he is, and does a respectable business—and he puts to the end of his catalogue—they all have catalogues that's in a good way—two pages that he calls 'Facetiæ.' They're titles and prices of queer old books in all languages—indecent books, indeed. He sends his catalogues to a many clergymen and learned people; and to any that he thinks wouldn't much admire seeing his 'Facetiæ,' he pulls the last leaf out, and sends his catalogue, looking finished without it. Those last two pages aren't at all the worst part of his trade among buyers that's worth money."

In one respect a characteristic of this trade is unaltered; I allude to the prevalence of "odd volumes" at the cheaper stalls,—not the odd volumes of a novel, but more frequently of one of the essayists—the "Spectator" especially. One stall-keeper told me, that if he purchased an old edition of the "Spectator," in eight vols., he could more readily sell it in single volumes, at 4*d.* each, than sell the eight vols. altogether for 2*s.*, or even 1*s.* 4*d.*, though this was but 2*d.* a volume.

"There's nothing in my trade," said one street-bookseller with whom I conversed on the subject, "that sells better, or indeed so well, as English classics. I can't offer to draw fine distinctions, and I'm just speaking of my own plain way of trade; but *I* call English classics such works as the 'Spectator,' 'Tatler,' 'Guardian,' 'Adventurer,' 'Rambler,' 'Rasellas,' 'The Vicar of Wakefield,' 'Peregrine Pickle,' 'Tom Jones, 'Goldsmith's His-

Original from HARVARD UNIVERSITY

tories of Greece, Rome, and England' (they all sell quick), 'Enfield's Speaker,' 'mixed plays,' the 'Sentimental Journey,' no, sir, 'Tristram Shandy,' rather hangs on hand, the 'Pilgrim's Progress' (but it must be sold *very* low), 'Robinson Crusoe,' 'Philip Quarles,' 'Telemachus,' 'Gil Blas,' and 'Junius's Letters.' I don't remember more at this moment, such as are of good sale. I haven't included poetry, because I'm speaking of English classics, and of course they must be oldish works to be classics."

Concerning the street sale of poetical works I learned from street book-sellers, that their *readiest* sale was of volumes of Shakespeare, Pope, Thomson, Goldsmith, Cowper, Burns, Byron, and Scott. "You must recollect, sir," said one dealer, "that in nearly all those poets there's a double chance for sale at book-stalls. For what with old editions, and new and cheap editions, there's always plenty in the market, and very low. No, I can't say I could sell Milton as quickly as any of those mentioned, nor 'Hudibras,' nor 'Young's Night Thoughts,' nor Prior, nor Dryden, nor 'Gay's Fables.' It's seldom that we have any works of Hood, or Shelley, or Coleridge, or Wordsworth, or Moore at street stalls—you don't often see them, I think, at booksellers' stalls—for they're soon picked up. Poetry sells very fair, take it altogether."

Another dealer told me that from twenty to thirty years ago there were at the street-stalls a class of works rarely seen now. He had known them in all parts and had disposed of them in his own way of business. He specified the "Messiah" (Klopstock's) as of this class, the "Death of Abel," the "Castle of Otranto" ("but that's seen occasionally still," he observed), the "Old English Baron" ("and that's seen still too, but nothing to what it were once"), the "Young Man's Best Companion" "Zimmerman on Solitude," and "Burke on the Sublime and Beautiful" ("but I have that yet sometimes.") These works were of heavy sale in the streets, and my informant thought they had been thrown into the street-trade because the publishers had not found them saleable in the regular way. "I was dead sick of the 'Death of Abel,'" observed the man, "before I could get out of him." Occasionally are to be seen at most of the stalls, works of which the majority of readers have heard, but may not have met with. Among such I saw "Laura," by Capel Lloftt, 4 vols. 1*s.* 6*d.* "Darwin's Botanic Garden," 2*s.* "Alfred, an Epic Poem," by H. J. Pye, Poet Laureate, 10*d.* "Cœlebs in search of a Wife," 2 vols. in one, 1*s.*

The same informant told me that he had lived near an old man who died twenty-five years ago, or it might be more, with whom he was somewhat intimate. This old man had been all his life familiar with the street trade in books, which he had often hawked—a trade now almost unknown; his neighbour had heard him say that fifty to seventy years ago, he made his two guineas a week "without distressing hisself," meaning, I was told, that he was drinking every Monday at least. This old man used to tell that in his day, the "Whole Duty of Man," and the "Tale of a Tub," and "Pomfret's Poems," and "Pamela," and "Sir Charles Grandison" went off *well*, but "Pamela" the best. "And I've heard the old man say, sir," I was further told, "how he had to tread his shoes straight about what books he showed publicly. He sold 'Tom Paine' on the sly. If anybody bought a book and would pay a good price for it, three times as much as was marked, he'd *give* the 'Age of Reason' in. I never see it now, but I don't suppose anybody would interfere if it was offered. A sly trade's always the best for paying, and for selling too. The old fellow used to laugh and say his stall was quite a godly stall, and he wasn't often without a copy or two of the 'Anti-Jacobin Review,' which was all for Church and State and all that, though he had 'Tom Paine' in a drawer."

The books sold at the street-stalls are purchased by the retailers either at the auctions of the regular trade, or at "chance," or general auctions, or of the Jews or others who may have bought books cheap under such circumstances. Often, however, the stall-keeper has a market peculiarly his own. It is not uncommon for working men or tradesmen, if they become "beaten-down and poor" to carry a basket-full of books to a stall-keeper, and say, "Here, give me half-a-crown for these." One man had forty parts, each issued at 1*s.*, of a Bible, offered to him at 1*d.* a part, by a mechanic who could not any longer afford to "take them in," and was at last obliged to sell off what he had. Of course such things are nearly valueless when imperfect. Very few works are bought for street-stall sale of the regular booksellers.

OF THE EXPERIENCE OF A STREET BOOK-SELLER.

I now give a statement, furnished to me by an experienced man, as to the nature of his trade, and the class of his customers. Most readers will remember having seen an account in the life of some poor scholar, having read—and occasionally, in spite of the remonstrances of the stall-keeper—some work which he was too needy to purchase, and even of his having read it through at intervals. That something of this kind is still to be met with will be found from the following account:

"My customers, sir, are of all sorts," my informant said. "They're gentlemen on their way from the City, that have to pass along here by the City-road. Bankers' clerks, very likely, or insurance-office clerks, or such like. They're fairish customers, but they often screw me. Why only last month a gentleman I know very well by sight, and I see him pass in his brougham in bad weather, took up an old Latin book—if I remember right it was an odd volume

of a French edition of Horace—and though it was marked only 8*d.*, it was long before he would consent to give more than 6*d.* And I should never have got my price if I hadn't heard him say quite hastily, when he took up the book, 'The very thing I've long been looking for!' Mechanics are capital customers for scientific or trade books, such as suit their business; and so they often are for geography and history, and some for poetry; but *they're* not so screwy. I know a many such who are rare ones for searching into knowledge. Women buy very little of me in comparison to men; sometimes an odd novel, in one volume, when its cheap, such as 'The Pilot,' or 'The Spy,' or 'The Farmer of Inglewood Forest,' or 'The Monk.' No doubt some buy 'The Monk,' not knowing exactly what sort of a book it is, but just because it's a romance; but some young men buy it, I know, because they have learned what sort it's like. Old three vol. novels won't sell at all, if they're ever so cheap. Boys very seldom buy of me, unless it's a work about pigeons, or something that way.

"I can't say that odd vols. of Annual Registers are anything but a bad sale, but odd vols. of old Mags. (magazines), a year or half-year bound together, are capital. Old London Mags., or Ladies', or Oxford and Cambridges, or Town and Countrys, or Universals, or Monthly Reviews, or Humourists, or Ramblers, or Europeans, or any of any sort, that's from 40 to 100 years old, no matter what they are, go off rapidly at from 1*s.* 6*d.* to 3*s.* 6*d.* each, according to size, and binding, and condition. Odd numbers of Mags. are good for little at a stall. The old Mags. in vols. are a sort of reading a great many are very fond of. Lives of the Princess Charlotte are a ready penny enough. So are Queen Carolines, but not so good. Dictionaries of all kinds are nearly as selling as the old Mags., and so are good Latin books. French are only middling; not so well as you might think."

My informant then gave me a similar account to what I had previously received concerning English classics, and proceeded: "Old religious books, they're a fair trade enough, but they're not so plentiful on the stalls now, and if they're black-letter they don't find their way from the auctions or anywhere to any places but the shops or to private purchasers. Mrs. Rowe's 'Knowledge of the Heart' goes off, if old. Bibles, and Prayer-books, and Hymn-books, are very bad." [This may be accounted for by the cheapness of these publications, when new, and by the facilities afforded to obtain them gratuitously.] "Annuals are dull in going off; very much so, though one might expect different. I can hardly sell 'Keepsakes' at all. Children's books, such as are out one year at 2*s.* 6*d.* apiece, very nicely got up, sell finely next year at the stalls for from 6*d.* to 10*d.* Genteel people buy them of us for presents at holiday times. They'll give an extra penny quite cheerfully if there's 'Price 2*s.* 6*d.*' or 'Price 3*s.* 6*d.*' lettered on the back or part of the title-page. School-books in good condition don't stay long on hand, especially Pinnock's. There's not a few people who stand and read and read for half an hour or an hour at a time. It's very trying to the temper when they take up room that way, and prevent others seeing the works, and never lay out a penny theirselves. But they seem quite lost in a book. Well, I'm sure I don't know what they are. Some seem very poor, judging by their dress, and some seem shabby genteels. I can't help telling them, when I see them going, that I'm much obliged, and I hope that perhaps next time they'll manage to say 'thank ye,' for they don't open their lips once in twenty times. I know a man in the trade that goes dancing mad when he has customers of this sort, who aren't customers. I dare say, one day with another, I earn 3*s.* the year through; wet days are greatly against us, for if we have a cover people won't stop to look at a stall. Perhaps the rest of my trade earn the same." This man told me that he was not unfrequently asked, and by respectable people, for indecent works, but he recommended them to go to Holywell-street themselves. He believed that some of his fellow-traders *did* supply such works, but to no great extent.

An elderly man, who had known the street book-trade for many years, but was not concerned in it when I saw him, told me that he was satisfied he had sold old books, old plays often, to Charles Lamb, whom he described as a stuttering man, who, when a book suited him, sometimes laid down the price, and smiled and nodded, and then walked away with it in his pocket or under his arm, without a word having been exchanged. When we came to speak of dates, I found that my informant—who had only conjectured that this was Lamb—was unquestionably mistaken. One of the best customers he ever had for anything old or curious, and in Italian, if he remembered rightly, as well as in English, was the late Rev. Mr. Scott, who was chaplain on board the Victory, at the time of Nelson's death at Trafalgar. "He had a living in Yorkshire, I believe it was," said the man, "and used to come up every now and then to town. I was always glad to see his white head and rosy face, and to have a little talk with him about books and trade, though it wasn't always easy to catch what he said, for he spoke quick, and not very distinct. But he was a pleasant old gentleman, and talked to a poor man as politely as he might to an admiral. He was very well known in my trade, as I was then employed."

The same man once sold to a gentleman, he told me, and he believed it was somewhere about twenty-five years ago, if not more, a Spanish or Portuguese work, but what it was he did not know. It was marked 1*s.* 9*d.*, being a good-sized book, but the stall-keeper was tired of having had it a long time, so that he gladly would have taken 9*d.* for it. The gentleman in question handed him half-a-crown, and, as he had not the change, the purchaser said: "O,

Original from HARVARD UNIVERSITY

don't mind; it's worth far more than half-a-crown to me." When this liberal customer had walked away, a gentleman who had been standing at the stall all the time, and who was an occasional buyer, said, "Do you know him?" and, on receiving an answer in the negative, he rejoined, "That's Southey."

Another stall-keeper told me that his customers—some of whom he supplied with any periodical in the same way as a newsvendor—had now and then asked him, especially "the ladies of the family," who glanced, when they passed, at the contents of his stall, why he had not newer works? "I tell them," said the stall-keeper, "that they haven't become cheap enough yet for the streets, but that they would come to it in time." After some conversation about his trade, which only confirmed the statements I have given, he said laughingly, "Yes, indeed, you all come to such as me at last. Why, last night I heard a song about all the stateliest buildings coming to the ivy, and I thought, as I listened, it was the same with authors. The best that the best can do is the book-stall's food at last. And no harm, for he's in the best of company, with Shakespeare, and all the great people."

Calculating 15*s.* weekly as the average earnings of the street book-stall keepers—for further information induces me to think that the street bookseller who earned 18*s.* a week regularly, cleared it by having a "tidy pitch"—and reckoning that, to clear such an amount, the bookseller takes, at least, 1*l.* 11*s.* 6*d.* weekly, we find 5,460 guineas yearly expended in the purchase of books at the purely street-stalls, independently of what is laid out at the open-air stalls connected with book-shops.

Of Street Book-auctioneers.

The sale of books by auction, in the streets, is now inconsiderable and irregular. The "auctioning" of books—I mean of new books—some of which were published principally with a view to their sale by auction, was, thirty to forty years ago, systematic and extensive. It was not strictly a street-sale. The auctioneer offered his books to the public, nine cases out of ten, in town, in an apartment (now commonly known as a "mock-auction room"), which was so far a portion of the street that access was rendered easier by the removal of the door and window of any room on a ground-floor, and some of the bidders could and did stand in the street and take part in the proceedings. In the suburbs—which at that period were not so integral a portion of the metropolis as at present—the book-auction sales were carried on strictly in the open air, generally in front of a public-house, and either on a platform erected for the purpose, or from a covered cart; the books then being deposited in the vehicle, and the auctioneer standing on a sort of stage placed on the propped-up shafts. In the country, however, the auction was often carried on in an inn.

The works thus sold were generally standard works. The poems were those of Pope, Young, Thomson, Goldsmith, Falconer, Cowper, &c. The prose writings were such works as "The Pilgrim's Progress," "The Travels of Mr. Lemuel Gulliver," "Johnson's Lives of the Poets," "The Vicar of Wakefield," the most popular of the works of Defoe, Fielding, and Smollett, and "Hervey's Meditations among the Tombs" (at one time highly popular). These books were not correctly printed, they were printed, too, on inferior paper, and the frontispiece—when there *was* a frontispiece—was often ridiculous. But they certainly gave to the public what is called an "impetus" for reading. Some were published in London (chiefly by the late Mr. Tegg, who at one time, I am told, himself "offered to public competition," by auction, the works he published); others were printed in Edinburgh, Aberdeen, Newcastle-upon-Tyne, Ipswich, Bungay, &c.

One of my informants remembered being present at a street-sale, about twenty or thirty years ago; he perfectly remembered, however, the oratory of the auctioneer, of whom he purchased some books. The sale was in one of the streets in Stoke Newington, a door or two from a thoroughfare. My informant was there—as he called it—"accidentally," and knew little of the neighbourhood. The auctioneer stood at the door of what appeared to have been a coach-house, and sold his books, which were arranged within, very rapidly: "Byron," he exclaimed; "Lord Byron's latest and best po'ms. Sixpence! Sixpence! Eightpence! I take penny bids under a shilling. Eightpence for the poems written by a lord—Gone! Yours, sir" (to my informant). The auctioneer, I was told, "spoke very rapidly, and clipped many of his words." The work thus sold consisted of some of Byron's minor poems. It was in the pamphlet form, and published, I have no doubt, surreptitiously; for there was, in those days, a bold and frequent piracy of any work which was thought distasteful to the Government, or to which the Court of Chancery might be likely to refuse the protection of the law of copyright.

The auctioneer went on: "Coop'r—Coop'r! Published at 3*s.* 6*d.*, as printed on the back. Superior to Byron—Coop'r's 'Task.' No bidders? Thank you, sir. One-and-six,—your's, sir. Young—'Young's Night Thoughts. Life, Death, and Immortality,'—great subjects. London edition, marked 3*s.* 6*d.* Going!—last bidder—two shillings—gone!" The purchaser then complained that the frontispiece—a man seated on a tombstone—was exactly the same as to a copy he had of "Hervey's Meditations," but the auctioneer said it was impossible.

I have thus shown what *was* the style and nature of the address of the street book-auctioneer, formerly, to the public. If it were not strictly "patter," or "pompous oration," it certainly partook of some of the characteristics of patter. At present, however, the street book-auctioneer may be described as a true patterer.

It will be seen from the account I have

given, that the books were then really "sold by auction"—knocked down to the highest bidder. This however was, and is not always the case. Legally to sell by auction, necessitates the obtaining of a licence, at an annual cost of 5*l.*; and if the bookseller conveys his stock of books from place to place, a hawker's licence is required as well,—which entails an additional expenditure of 4*l.* The itinerant bookseller evades, or endeavours to evade, the payment for an auctioneer's licence, by "putting-up" his books at a high price, and *himself* decreasing the terms, instead of offering them at a low price, and allowing *the public* to make a series of "advances." Thus, a book may be offered by a street-auctioneer at half-a-crown—two shillings—eighteenpence—a shilling—tenpence, and the moment any one assents to a specified sum, the volume handed to him; so that there is no competition—no bidding by the public one in advance of another. Auction, however, is resorted to as often as the bookseller dares.

One experienced man in the book-stall trade calculated that twenty years ago there might be twelve book-auctioneers in the streets of London, or rather, of its suburbs. One of these was a frequenter of the Old Kent-road; another, "Newington way;" and a third resorted to "any likely pitch in Pimlico"—all selling from a sort of van. Of these twelve, however, my informant thought that there were never more than six in London at one time, as they were all itinerant; and they have gradually dwindled down to two, who are now not half their time in town. These two traders are brothers, and sell their books from a sort of platform erected on a piece of waste-ground, or from a barrow. The works they sell are generally announced as new, and are often uncut. They are all recommended as explanatory of every topic of the day, and are often set forth as "spicy." Three or four years ago, a gentleman told me how greatly he was amused with the patter of one of these men, who was selling books at the entrance of a yard full of caravans, not far from the School for the Blind, Lambeth. One work the street-auctioneer announced at the top of his voice, in the following terms, as far as a good memory could retain them: "'The Rambler!' Now you rambling boys—now you young devils, that's been staring those pretty girls out of countenance—here's the very book for you, and more shame for you, and perhaps for me too; but I must sell—I must do business. If any lady or gen'lman 'll stand treat to a glass of brandy and water, 'warm with,' I'll tell more about this 'Rambler'—I'm too bashful, as it is. Who bids? Fifteen-pence—thank'ee, sir. Sold again!" The "Rambler" was Dr. Johnson's!

The last time one of my informants heard the "patter" of the smartest of the two brothers, it was to the following effect: "Here is the 'History of the Real Flying Dutchman,' and *no* mistake; no fiction, I assure you, upon my honour. Published at 10*s.*—who bids half-a-crown? Sixpence; thank you, sir. Ninepence; going—going! Any more?—gone!"

A book-stall-keeper, who had sold goods to a book-auctioneer, and attended the sales, told me he was astonished to hear how his own books—"old new books," he called them, were set off by the auctioneer: "Why, there was a vol. lettered 'Pamphlets,' and I think there *was* something about Jack Sheppard in it, but it was all odds and ends of other things, I know. 'Here's the *real* Jack Sheppard,' sings out the man, 'and no gammon!' The real edition—no spooniness here, but set off with other interesting histories, valuable for the rising generation and all generations. This is the real Jack. This will

> '—— put you up to the time o' day,
> Nix, my dolly pals, *bid* away.'

"Then he went on: 'Goldsmith's History of England. Continued by the first writers of the day—to the very last rumpus in the palace, and no mistake. Here it is; genuine.' Well, sir," the stall-keeper continued, "the man didn't do well; perhaps he cleared 1*s.* 6*d.* or a little more that evening on books. People laughed more than they bought. But it's no wonder the trade's going to the dogs — they're not allowed to have a pitch now; I shouldn't be surprised if they was not *all* driven out of London next year. It's contrary to Act of Parliament to get an honest living in the streets now-a-days."

A man connected with the street book-trade considered that if one of these auctioneers earned a guinea in London streets in the six days it was a "good week." Half-a-guinea was nearer the average, he thought, "looking at the weather and everything." What amount is expended to enable this street-dealer to earn his guinea or half-guinea, is so uncertain, from the very nature of an auction, that I can obtain no data to rely upon.

The itinerant book-auctioneer is now confined chiefly to the provincial towns, and especially the country markets. The reason for this is correctly given in the statement above cited. The street-auction requires the gathering of so large a crowd that the metropolitan police consider the obstruction to the public thoroughfares warrants their interference. The two remaining book-auctioneers in London generally restrict their operations to the outskirts—the small space which fronts "the George Inn" in the Commercial-road, and which lays a few yards behind the main thoroughfare, and similar suburban "retreats" being favourite "pitches." The trade is, as regards profits, far from bad—the books sold consisting chiefly of those picked up in cheap "lots" at the regular auctions; so that what fetches 6*d.* in the streets has generally been purchased for less than a penny. The average rate of profit may be taken at 250*l.* per cent. at the least. Exorbitant however as this return may appear, still it should be remembered

that the avocation is one that can be pursued only occasionally, and that solely in fine weather. Books are now more frequently sold in the London streets from barrows. This change of traffic has been forced upon the street-sellers by the commands of the police—that the men should "keep moving." Hence the well-known light form of street conveyance is now fast superseding not only the book-auctioneer, but the book-stall in the London streets. Of these book-barrowmen there is now about fifty trading regularly in the metropolis, and taking on an average from *3s.* to *5s. 6d.* a day.

Of the Street-sale of Song-books, and of Children's Books.

The sale of song-books in the streets, at *1d.* and at *½d.* each, is smaller than it was two years ago. One reason that I heard assigned was that the penny song-books—styled "The Universal Song-book," "The National," "The Bijou," &c.—were reputed to be so much alike (the same songs under a different title), that people who had bought one book were averse to buy another. "There's the 'Ross' and the 'Sam Hall' song-books," said one man, "the 'eighteenth series,' and I don't know what; but I don't like to venture on working them, though they're only a penny. There's lots to be seen in the shop-windows; but they might be stopped in the street, for they an't decent—'specially the flash ones."

One of the books which a poor man had found the most saleable is entitled, "The Great Exhibition Song-book; a Collection of the Newest and Most Admired Songs. Embellished with upwards of one Hundred Toasts and Sentiments." The toasts and sentiments are given in small type, as a sort of border to the thirty-two pages of which the book consists. The toast on the title-page is as follows:

"I'll toast England's daughters, let all fill their glasses,
Whose beauty and virtue the whole world surpasses."

To show the nature of the songs in street demand, I cite those in the book: "The Gathering of the Nations," "Bloom is on the Rye," "Wilt thou Meet me there, Love?" "Minna's Tomb," "I'll Love thee ever Dearly" (Arnold), "When Phœbus wakes the Rosy Hours," "Money is your Friend," "Julia and Caspar" (G. M. Lewis), "That pretty word, Yes" (E. Mackey), "Farewell, Forget me Not," "The Queen and the Navy" (music published by H. White, Great Marlborough-street), "I resign Thee every Token" (music published by Duff and Co.), "Sleep, gentle Lady;" a serenade (H. J. Payne), "The Warbling Waggoner," "The Keepsake," "A Sequel to the Cavalier," "There's room enough for All" (music at Mr. Davidson's), "Will you Come to the Dale?" "Larry O'Brian," "Woman's Love," "Afloat on the Ocean" (sung by Mr. Weiss, in the Opera of the "Heart of Mid Lothian," music published by Jefferys, Soho-square), "Together, Dearest, let us Fly" (sung by Mr. Braham, in the Opera of the "Heart of Mid Lothian," music published by Jefferys, Soho-square), "The Peremptory Lover" (Tune—"John Anderson, my Joe"). There are forty-seven songs in addition to those whose titles I have quoted, but they are all of the same character.

The penny song-books (which are partly indecent), and entitled the "Sam Hall" and "Ross" Songsters, are seldom or never sold in the streets. Many of those vended in the shops outrage all decency. Some of these are styled the "Coal-Hole Companion," "Cider-Cellar Songs," "Captain Morris's Songs," &c. (the filthiest of all.) These are generally marked *1s.* and sold at *6d.*; and have a coloured folded frontispiece. They are published chiefly by H. Smith, Holywell-street. The titles of some of the songs in these works are sufficient to indicate their character. "The Muff," "The Two Miss Thy.s," "George Robins's Auction," "The Woman that studied the Stars," "A Rummy Chaunt" (frequently with no other title), "The Amiable Family," "Joe Buggins' Wedding," "Stop the Cart," "The Mot that can feel for another," "The Irish Giant," "Taylor Tim," "The Squire and Patty."

Some titles are unprintable.

The children's books in best demand in the street-trade, are those which have long been popular: "Cinderella," "Jack the Giant-killer," "Baron Munchausen," "Puss and the Seven-leagued Boots," "The Sleeping Beauty," "The Seven Champions of Christendom," &c. &c. "There's plenty of 'Henry and Emmas,'" said a penny bookseller, "and 'A Present for Christmas,' and 'Pictorial Alphabets,' and 'Good Books for Good Boys and Girls;' but when people buys really for their children, they buys the old stories—at least they does of me. I've sold 'Penny Hymns' (hymn-books) sometimes; but when they're bought, or 'Good Books' is bought, it's from charity to a poor fellow like me, more than anything else."

The trade, both in songs and in children's books, is carried on in much the same way as I have described of the almanacks and memorandum-books, but occasionally the singers of ballads sell books. Sometimes poor men, old or infirm, offer them in a tone which seems a whine for charity rather than an offer for sale, "Buy a penny book of a poor old man—very hungry, very hungry." Children do the same, and all far more frequently in the suburbs than in the busy parts of the metropolis. Those who purchase really for the sake of the books, say, one street-seller told me, "Give me something that'll interest a child, and set him a-thinking. They can't understand—poor little things!—your fine writing; do you understand that?" Another man had said, "Fairy tales! bring me nothing but fairies; they set children a-reading." The price asked is most frequently a penny, but some are offered at a halfpenny, which is often given (without a purchase) out of compassion, or to be rid of importunity. The profit is at least cent. per cent.

Of the Street-sellers of Account-books.

The sale of account-books is in the hands of about the same class of street-sellers as the stationery, but one man in the trade thought the regular hands were more trusted, if anything, than street-stationers. "People, you see," he said, "won't buy their 'accounts' of *ruff;* they won't have them of any but respectable people." The books sold are bought at 4*s.* the dozen, or 4½*d.* a piece, up to 70*s.* the dozen, or 5*s.* 9*d.*, or 6*s.* a piece. It is rarely, however, that the street account-bookseller gives 4*s.* 9*d.*, and very rarely that he gives as much as 5*s.* 9*d.* for his account-books. His principal sale is of the smaller "waste," or "day-books," kept by the petty traders; the average price of these being 1*s.* 9*d.* The principal purchasers are the chandlers, butchers, &c., in the quieter streets, and more especially "a little way out of town, where there ain't so many cheap shops." A man, now a street-stationer, with a "fixed pitch," had carried on the account-book trade until an asthmatic affliction compelled him to relinquish it, as the walking became impossible to him, and he told me that the street-trade was nothing to what it once was. "People," he said, "aren't so well off, I think, sir; and they'll buy half a quire of outside foolscap, or outside post, for from 5*d.* to 8*d.*, and stitch it together, and rule it, and make a book of it. Rich tradesmen do that, sir. I bought of a stationer some years back, and he told me that he was a relation of a rich grocer, and had befriended him in his (the grocer's) youth, but he wouldn't buy account-books, for he said, the make-shift books that his shopman stitched together for him opened so much easier. People never want a good excuse for acting shabby."

There are now, I am informed, twelve men selling account-books daily, which they carry in a covered basket, or in a waterproof bag, or, in fine weather, under the arm. Some of these street-sellers are not itinerant when there is a congregation of people for business, or indeed for any purpose; at other times they "keep moving." The fixed localities are, on market days, at Smithfield and Mark-lane: and to Hungerford-market, an old man, unable to "travel," resorts daily. The chief trade, however, is in carrying, or hawking these account-books from door to door. A man, "having a connection," does best "on a round;" if he be known, he is not distrusted, and sells as cheap, or rather cheaper, than the shop-keepers.

The twelve account-book sellers (with connections) may clear 2*s.* 6*d.* a day each, taking, for the realisation of such profit, 7*s.* per diem. Thus 1,310*l.* will be taken by these street-sellers in the course of a year. The capital required to start is, stock-money, 15*s.*; basket, 3*s.* 6*d* · waterproof bag, 2*s.* 6*d*; 21*s.* in all.

Of the Street-sellers of Guide-books, &c.

This trade, as regards a street-sale, has only been known for nine or ten years, and had its origination in the exertions of Mr. Hume, M.P., to secure to persons visiting the national exhibitions the advantage of a cheap catalogue. The guide-books were only sold, prior to this time, *within* any public exhibition; and the profits—as is the case at present—were the perquisite of some official. When the sale was a monopoly, the profit must have been considerable, as the price was seldom less than 6*d.*, and frequently 1*s.* The guide-books, or, as they are more frequently called, catalogues, are now sold by men who stand at the entrance, the approaches, at a little distance on the line, or at the corners of the adjacent streets, at the following places:—the National Gallery, the Vernon Gallery, the British Museum, Westminster Abbey, the House of Lords, the Society of Arts (occasionally), the Art-Union (when open "free"), Greenwich Hospital, the Dulwich Gallery, Hampton Court, Windsor Castle, and Kew Gardens.

At any temporary exhibition, also, the same trade is carried on—as it was largely when the "designs," &c., for the decoration of the New Houses of Parliament were exhibited in Westminster Hall. There are, of course, very many other catalogues, or explanatory guides, sold to the visitors of other exhibitions, but I speak only of the *street*-sale.

There are now, at the National Gallery, three guidebook-sellers plying their trade in the streets; eight at the British Museum; two at Westminster Abbey; one at the House of Lords, but only on Saturdays, when the House is shown, by orders obtained gratuitously at the Lord Chamberlain's office, or "when appeals are on;" one at the Vernon Gallery; two at Dulwich (but not regularly, as there are none at present), two at Hampton Court, "one near each gate;" and one, and sometimes three, at Windsor (generally sent out by a shopkeeper there). There used to be one at the Thames Tunnel, but "it grew so bad at last," I was told, "that a rat couldn't have picked up his grub at it—let alone a man."

Among all these sellers I heard statements of earning a most wretched pittance, and all attributed it to the same cause. By the National Gallery is a board, on which is an announcement that the only authorized catalogue of the works of art can be obtained in the hall. There are similar announcements at other public places. One man who had been in this street trade, but had abandoned it, spoke of these "boards," as he called them, with intense bitterness. "They're the ruin of any trade in the streets," he said. "You needn't think because I'm out of it now, that I have a pleasure in abusing the regulations; no, sir, I look at it this way. Mr. Hume had trouble enough, I know, to get the public a cheap catalogue, and poor men were allowed to earn honest bread by selling them in the streets, and honest bread they would earn still, if it weren't for the board. I declare solemnly a man can't

get a living at the trade. The publishers can't prepare their catalogues without leave, and when they've got leave, and do prepare and print them, why isn't a man allowed to sell them in the streets, as I've sold second editions of the *Globe* without ever the office putting out a notice that the only authorized copy was to be had within? God bless your soul, sir, it's shocking, shocking, poor men being hindered every way. Anybody that looks on the board looks on us as cheats and humbugs, and thinks that our catalogues are all takes-in. But I've heard gentlemen, that I'm sure knew what they were talking about, say, in case they'd bought in the street first, and then seen the board and bought within after, so as to be sure of the real thing—I've heard gentlemen, say, sir,—'Why what we got in the street is the best after all.' Free trade! There's plenty said about free trade, but that board, sir, or call it what you please, gives a monopoly against us. What I have said, when I was starving on catalogues, is this: Kick us out of the streets, commit us for selling catalogues, as rogues and vagabonds; or give us a fair chance. If we *may* sell, why is the only authorised catalogue sold only within? I wish Mr. Hume, or Mr. Cobden, either, only understood the rights of the matter —it's of no account to me myself now—and I think they'd soon set it to rights. Free trade! Over the left, and with more hooks than one."

I have no doubt that this representation and this opinion would have been echoed by the street catalogue-sellers, but they were evidently unwilling to converse freely on this branch of the subject, knowing the object for which I questioned them, and that publicity would follow. I attribute this reluctance chiefly to the fact that, all these poor men look forward to the opening of the Great Exhibition with earnest hope and anxiety that the influx of visiters will add greatly to their sale and profits; and they are unwilling to jeopardise their privilege of sale.

One man told me that he believed, from his own knowledge, for he had not always "sold outside," that the largest buyers of these publications were country people, sight-seeing in London, for they bought the book not only as an explanatory guide, but to preserve as a memento of their visit. Such customers, however, I heard from several quarters, the moment they saw a "notice" as to the only authorised copy, looked upon the street-sellers as a systematised portion of the London sharpers, seeking whom they might devour, and so bought their catalogues "within."

The best customers in the streets for the catalogues are, I am assured, the working-classes, who visit the national exhibitions on a holiday. "I've oft enough heard them say," one man stated, "'I'd rather pay a poor man 2*d.* any day, when I can spare it, than rich people 1*d.* I know what it is to fight for a crust.'"

At the National Gallery, the street-sold catalogues are 1*d.*, 3*d.*, and 6*d.*; in the hall, the authorised copy is sold at 4*d.* and 1*s.* At the British Museum, the street-charges are 3*d.* and 6*d.*; there were 1*d.* catalogues of this institution, but they have been discontinued for the last half-year, being found too meagre. At the Vernon Gallery, the charge is 1*d.*; but the 6*d.* guide-book to the National Gallery contains also an account of the pictures in the Vernon Gallery. At Westminster Abbey the price is 6*d.*, and the same at the House of Lords. At Hampton-court it is 2*d.*, 4*d.*, and 6*d.*, and at the same rate as regards the other places mentioned. At Hampton-court, I was told, the street-sellers were not allowed to approach the palace nearer than a certain space. One man told me that he was threatened with being "had in for trespassing, and Mr. G—— would make him wheel a roller. Of course," the man continued, "there's an authorised catalogue there."

The best sale of catalogues in the streets was at the exhibition of the works of art for the Houses of Parliament. The sellers, then—about 20 in number, among whom were four women—cleared 2*s.* and 2*s.* 6*d.* each daily. At present, I am assured, that a good week is considered one in which 5*s.* is made, but that 3*s.* is more frequently the weekly earning. It must be borne in mind, that at the two places most resorted to—the National Gallery and the British Museum—the street sale is only for four days in the week at the first mentioned, and three days at the second. "You may think that more is made," said one man, "but it isn't. Sweeping a good crossing is far better, far. Bless your soul, only stand a few minutes looking on, any day, and see what numbers and numbers of people pass in and out of a free admission place without ever laying out 1*d.* Why, only last Monday and Wednesday (March 17 and 19, both very rainy days) I took only 5*d.* I didn't *take* more than 5*d.*, and I leave you to judge the living I shall *clear* out of that; and I know that the man with the catalogue at another place, didn't take 1*d.* It's sad work, sir, as you stand in the wet and cold, with no dinner for yourself, and no great hope of taking one home to your family."

These street-sellers contrive, whenever they can, to mix up other avocations with catalogue selling, as the public institutions close early. One, on every occasion, sells second editions of the newspapers; another has "odd turns at portering;" a third sells old umbrellas in the streets; some sold exhibition cards in the Park, on Sundays, until the sale was stopped; another sells a little stationery; and nearly the whole of them resort, on favourable opportunities, to the sale of "books of the play," or of "the opera."

Reckoning that there are regularly sixteen street-sellers of guide-books—they do not interfere with each other's stations—and that each clears 4*s.* weekly, we find £832 expended in this street traffic. I have calculated only on the usual bookseller's allowance of 25 per cent.,

though, in some instances, these sellers are supplied on lower terms — besides having, in some of the catalogues, thirteen to the dozen; but the amount specified does not exceed the mark.

The greatest number of these guide-books which I heard of as having been sold, in any one day, was four dozen, disposed of on a fine Whit-Monday, and for these the street-seller only took 6*s.* 8*d.* There are, I was informed, half as many more "threepennies" as "sixpennies" sold, and three times as many "pennies" as the other two together.

The capital required to start is what may suffice to "lay in" a stock of books—5*s.* generally.

Of the Street-sellers of Fine Arts.

These traders may be described as partaking more of the characteristics of the street stationers than of the "paper-workers," as they are not patterers. The trade is less exclusively than the "paper-trade" in the hands of men. Those carrying on this branch of the street-traffic may be divided into the sellers of pictures in frames, and of engravings (of all kinds), in umbrellas. Under this head may also be ranked the street-artists (though this is a trade associated with street-life rather than forming an integrant part of it), I allude more particularly to the illustrated "boards" which are prepared for the purposes of the street-patterers, and are adapted for no other use. The same artist that executes the greater portion of the street-art, also prepares the paintings which decorate the exterior of shows. There are also the writers of manuscript music, and the makers and sellers of "images" of all descriptions, but this branch of the subject I shall treat under the head of the street-Italians. Under the same curious head I shall also speak of the artists whose skill produces the street-sold medallions, in wax or plaster, they being of the same class as the "image" men. In both "images" and "casts" and "moulded" productions of all kinds the change and improvement that have taken place, from the pristine rudeness of "green parrots" is most remarkable and creditable to the taste of working people, who are the chief purchasers of the smaller articles.

Of Street Art.

The artists who work for the street-sellers are less numerous than the poets for the same trade. Indeed, there is now but one man who can be said to be *solely* a street-artist. The inopportune illustration of ballads of which specimens have already been given—or of any of the street papers—are the work of cheap wood-engravers, who give the execution of these orders to their boys. But it is not often that illustrations are prepared expressly for anything but what I have described as "Gallows literature." Of these, samples have also been furnished. The one of a real murder, and the other of a fabulous one, or "cock," together with a sample (in the case of Mr. Patrick Connor) of the portraits given in such productions. The cuts for the heading of ballads are very often such as have been used for the illustration of other works, and are "picked up cheap."

The artist who works especially for the street trade—as in the case of the man who paints the patterers' boards—must address his art plainly to the eye of the spectator. He must use the most striking colours, be profuse in the application of scarlet, light blue, orange—not yellow I was told, it ain't a good candlelight colour—and must leave nothing to the imagination. Perspective and back-grounds are things of but minor consideration. Everything must be sacrificed for effect.

These paintings are in water colours, and are rubbed over with a solution of some gum-resin to protect them from the influence of rainy weather. Two of the subjects most in demand of late for the patterers' boards were "the Sloanes" and "the Mannings." The treatment of Jane Wilbred was "worked" by twenty boardmen, each with his "illustration" of the subject. The illustrations were in six "compartments." In the first Mr. and Mrs. Sloane are "picking out" the girl from a line of workhouse children. She is represented as plump and healthy, but with a stupid expression of countenance. In another compartment, Sloane is beating the girl, then attenuated and wretched-looking, with a shoe, while his wife and Miss Devaux (a name I generally heard pronounced among the street-people as it is spelt to an English reader) look approvingly on. The next picture was Sloane compelling the girl to swallow filth. The fourth represented her as in the hospital, with her ribs protruding from her wasted body —"just as I've worked Sarah Simpole," said a patterer, "who was confined in a cellar and fed on 'tato peels. Sarah was a cock, sir, and a ripper." Then came the attack of the people on Sloane, one old woman dressed after the fashion of Mrs. Gamp, "prodding" him with a huge and very green umbrella. The sixth and last was, as usual, the trial.

I have described the "Sloanes' board" first, as it may be more fresh in the remembrance of any reader observant of such things. In the "Mannings' board" there were the same number of compartments as in the Sloanes'; showing the circumstances of the murder, the discovery of the body of Connor, the trial, &c. One standing patterer, who worked a Mannings' board, told me that the picture of Mrs. Manning, beautifully "dressed for dinner" in black satin, with "a low front," firing a pistol at Connor, who was "washing himself," while Manning, in his shirt sleeves, looked on in evident alarm, was greatly admired, especially out of town. "The people said," observed the patterer, "'O, look at him a-washing hisself; he's a doing it so nattral, and ain't a-thinking he's a-going to be murdered. But was he really so ugly as that? Lor! such a beautiful woman to have to do with

him.' You see, sir, Connor weren't flattered, and perhaps Mrs. Manning was. I have heard the same sort of remarks both in town and country. I patters hard on the women such times, as I points them out on my board in murders or any crimes. I says: 'When there's mischief a woman's always the first. Look at Mrs. Manning there on that werry board—the work of one of the first artists in London—it's a faithful likeness, taken from life at one of her examinations, look at *her*. She fires the pistol, as you can see, and her husband was her tool.' I said, too, that Sloane was Mrs. Sloane's tool. It answers best, sir, in my opinion, going on that patter. The men likes it, and the women doesn't object, for they'll say: 'Well, when a woman is bad, she *is* bad, and is a disgrace to her sex.' There's the board before them when I runs on that line of patter, and when I appeals to the 'lustration, it seems to cooper the thing. They *must* believe their eyes."

When there is "a run" on any particular subject, there are occasionally jarrings—I was informed by a "boardman"—between the artist and his street-customers. The standing patterers want "something more original" than their fellows, especially if they are likely to work in the same locality, while the artist prefers a faithful copy of what he has already executed. The artist, moreover, and with all reasonableness, will say: "Why, you must have the facts. Do you want me to make Eliza Chestney killing Rush?" The matter is often compromised by some change being introduced, and by the characters being differently dressed. One man told me, that in town and country he had seen Mrs. Jermy shot in the following costumes, "in light green welwet, sky-blue satin, crimson silk, and vite muslin." It was the same with Mrs. Manning.

For the last six or eight years, I am told, the artist in question has prepared all the boards in demand. Previously, the standing patterers prepared their own boards, when they fancied themselves capable of such a "reach of art," or had them done by some unemployed painter, whom they might fall in with at a lodging-house, or elsewhere. This is rarely done now, I am told; not perhaps more than six times in a twelvemonth, and when done it is most frequently practised of "cock-boards;" for, as was said to me, "if a man thinks he's getting up a fakement likely to take, and wants a board to help him on with it, he'll try and keep it to hisself, and come out with it quite fresh."

The charge of the popular street-artist for the painting of a board is 3*s*. or 3*s*. 6*d*., according to the simplicity or elaborateness of the details; the board itself is provided by the artist's employer. The demand for this peculiar branch of street art is very irregular, depending entirely upon whether anything be "up" or not; that is, whether there has or has not been perpetrated any act of atrocity, which has riveted, as it is called, the public attention. And so great is the uncertainty felt by the street-folk, whether "the most beautiful murder will take or not," that it is rarely the patterer will order, or the artist will speculate, in anticipation of a demand, upon preparing the painting of any event, until satisfied that it has become "popular." A deed of more than usual daring, deceit, or mystery, may be at once hailed by those connected with murder-patter, as "one that will do," and some speculation may be ventured upon; as it was, I am informed, in the cases of Tawell, Rush, and the Mannings; but these are merely exceptional. Thus, if the artist have a dozen boards ordered "for this ten days, he may have two, or one, or none for the next ten;" so uncertain, it appears, is all that depends, without intrinsic merit, on mere popular applause.

I am unable to give—owing to the want of account-books, &c., which I have so often had to refer to as characteristic of street-people—a precise account of the average number of boards thus prepared in a year. Perhaps it may be as close to the fact as possible to conclude that the artist in question, who, unlike the majority of the street-poets, is not a street-seller, but works, as a professional man, *for* but not *in* the streets, realises on his boards a profit of 7*s*. 6*d*. weekly. The pictorial productions for street-shows will be more appropriately described in the account of street-performers and showmen.

This artist, as I have shown concerning some of the street-professors of the sister art of poesy, has the quality of knowing how to adapt his works exactly to the taste of his patrons the sellers, and of their patrons, the buyers in the streets.

OF THE STREET-SELLERS OF ENGRAVINGS, ETC., IN UMBRELLAS, ETC.

THE sale of "prints," "pictures," and "engravings"—I heard them designated by each term—in umbrellas in the streets, has been known, as far as I could learn from the street-folk for some fifteen years, and has been general from ten to twelve years. In this traffic the umbrella is inverted and the "stock" is disposed within its expanse. Sometimes narrow tapes are attached from rib to rib of the umbrella, and within these tapes are placed the pictures, one resting upon another. Sometimes a few pins are used to attach the larger prints to the cotton of the umbrella, the smaller ones being "fitted in at the side" of the bigger. "Pins is best, sir, in my opinion," said a little old man, who used to have a "print umbrella" in the New Cut; "for the public has a more unbrokener display. I used werry fine pins, though they's dearer, for people as has a penny to spare likes to see things nice, and big pins makes big holes in the pictures."

This trade is most pursued on still summer evenings, and the use of an inverted umbrella seems so far appropriate that it can only be so used, in the street, in *dry* weather. "I used to keep a sharp look-out, sir," said the same informant, "for wind or rain, and many's the time them devils o' boys—God forgive me,

they's on'y poor children—but they *is* devils—has come up to me and has said—one in particler, standin' afore the rest: 'It'll thunder in five minutes, old bloke, so hup with yer humbereller, and go 'ome; hup with it jist as it is; it'll show stunnin; and sell as yer goes.' O, they're a shocking torment, sir; nobody can feel it like people in the streets,—shocking."

The engravings thus sold are of all descriptions. Some have evidently been the frontispieces of sixpenny or lower-priced works. These works sometimes fall into hands of the "waste collectors," and any "illustrations" are extracted from the letter-press and are disposed of by the collectors, by the gross or dozen, to those warehousemen who supply the small shopkeepers and the street-sellers. Sometimes, I was informed, a number of engravings, which had for a while appeared as "frontispieces" were issued for sale separately. Many of these were and are found in the "street umbrellas;" more especially the portraits of popular actors and actresses. "Mr. J. P. Kemble, as Hamlet"—"Mr. Fawcett, as Captain Copp"—"Mr. Young, as Iago"—"Mr. Liston, as Paul Pry"—"Mrs. Siddons, as Lady Macbeth"—"Miss O'Neil, as Belvidera," &c., &c. In the course of an inquiry into the subject nearly a year and a half ago, I learned from one "umbrella man" that, six or seven years previously, he used to sell more portraits of "Mr. Edmund Kean, as Richard III.," than of anything else. Engravings, too, which had first been admired in the "Annuals"—when half-a-guinea was the price of the "Literary Souvenir," the "Forget-me-not," "Friendship's Offering," the "Bijou," &c., &c.—are frequently found in these umbrellas; and amongst them are not unfrequently seen portraits of the aristocratic beauties of the day, from "waste" "Flowers of Loveliness" and old "Court Magazines," which "go off very fair." The majority of these street-sold "engravings" are "coloured," in which state the street-sellers prefer them, thinking them much more saleable, though the information I received hardly bears out their opinion.

The following statement, from a middle-aged woman, further shows the nature of the trade, and the class of customers:

"I've sat with an umbrella," she said, "these seven or eight years, I suppose it is. My husband's a penny lot-seller, with just a middling pitch" [the vendor of a number of articles, sold at a penny "a lot"] "and in the summer I do a little in engravings, when I'm not minding my husband's 'lots,' for he has sometimes a day, and oftener a night, with portering and packing for a tradesman, that's known him long. Well, sir, I think I sell most 'coloured.' 'Master Toms' wasn't bad last summer. 'Master Toms' was pictures of cats, sir—you must have seen them—and I had them different colours. If a child looks on with its father, very likely, it'll want 'pussy,' and if the child cries for it, it's almost a sure sale, and more, I think, indeed I'm sure, with men than with women. Women knows the value of money better than men, for men never understand what housekeeping is. I have no children, thank God, or they might be pinched, poor things. 'Miss Kitties' was the same sale. Toms is hes, and Kitties is she cats. I've sometimes sold to poor women who was tiresome; they must have just what would fit over their mantel-pieces, that was papered with pictures." [My readers may remember that some of the descriptions I have given, long previous to the present inquiry, of the rooms of the poor, fully bear out this statement.] "I seldom venture on anything above 1*d.*, I mean to sell at 1*d.* I've had Toms and Kitties at 2*d.* though. 'Fashions' isn't worth umbrella room; the poorest needlewoman won't be satisfied with them from an umbrella. 'Queens' and 'Alberts' and 'Wales's' and the other children isn't near so good as they was. There's so many 'fine portraits of Her Majesty,' or the others, given away with the first number of this or of that, that people's overstocked. If a working-man can buy a newspaper or a number, why of course he may as well have a picture with it. They gave away glasses of gin at the opening of that baker's shop there, and it's the same doctrine" [The word she used]. "I never offer penny theatres, or comic exhibitions, or anything big; they spoils the look of the umbrella, and makes better things look mean. I sell only to working people, I think; seldom to boys, and seldomer to girls; seldom to servant-maids and hardly ever to women of the town. I *have* taken 6*d.* from one of them though. I think boys buy pictures for picture books. I never had what I suppose was old pictures. To a few old people, I've known, 'Children' sell fairly, when they're made plump, and red cheeked, and curly haired. They sees a resemblance of their grandchildren, perhaps, and buys. Young married people does so too, but not so oft, I think. I don't remember that ever I have made more than 1*s.* 10*d.* on an evening. I don't sell, or very seldom indeed, at other times, and only in summer, and when its fine. If I clear 5*s.* I counts that a good week. It's a great help to the lot-selling. I seldom clear so much. Oftener 4*s.*"

The principal sale of these "pictures," in the streets, is from umbrellas. Occasionally, a street-stationer, or even a miscellaneous lot-seller, when he has met with a cheap lot, especially of portraits of ladies, will display a collection of prints, pyramidally arranged on his stall,—but these are exceptions. Sometimes, too, an "umbrella print-seller" will have a few "pictures in frames," on a sort of stand alongside the umbrella.

The pictures for the umbrellas are bought at the warehouse, or the swag-shops, of which I have before spoken. At these establishments "prints" are commonly supplied from 3*d.* to 5*s.* the dozen. The street-sellers buy at 5*d.* and 6*d.* the dozen, to sell at a 1*d.* a piece; and

at 3*d*. to sell at ½*d*. *None* of the pictures thus sold are prepared expressly for the streets.

In so desultory and—as one intelligent street-seller with whom I conversed on the subject described it—so *weathery* a trade, it is difficult to arrive at exact statistics. From the best data at my command, it may be computed, that for twelve weeks of the year, there are thirty umbrella print-sellers (all exceptional traders therein included) each clearing 6*s*. weekly, and taking 12*s*. Thus it appears that 216*l*. is yearly expended in the streets in this purchase. Many of the sellers are old or infirm; one who was among the most prosperous before the changes in the streets of Lambeth, was dwarfish, and was delighted to be thought "a character."

Of the Street-sellers of Pictures in Frames.

From about 1810, or somewhat earlier, down to 1830, or somewhat later, the street-sale of pictures in frames was almost entirely in the hands of the Jews. The subjects were then nearly all scriptural: "The Offering up of Isaac;" "Jacob's Dream;" "The Crossing of the Red Sea;" "The Death of Sisera;" and "The Killing of Goliath from the Sling of the youthful David." But the Jew traders did not at all account it necessary to confine the subjects of their pictures to the records of the Old—their best trade was in the illustrations of the New Testament. Perhaps the "Stoning of St. Stephen" was their most saleable "picture in a frame." There were also "The Nativity;" "The Slaying of the Children, by order of Herod" (with the quotation of St. Matthew, chap. ii. verse 17, "Then was fulfilled that which was spoken by Jeremy the prophet"); "The Sermon on the Mount;" "The Beheading of John the Baptist;" "The Entry of Christ into Jerusalem;" "The Raising of Lazarus;" "The Betrayal on the part of Judas;" "The Crucifixion;" and "The Conversion of St. Paul." There were others, but these were the principal subjects. All these pictures were coloured, and very deeply coloured. St. Stephen was stoned in the lightest of sky-blue short mantles. The pictures were sold in the streets of London, mostly in the way of hawking; but ten times as extensively, I am told, in the country, as in town. Indeed, at the present time, many a secluded village alehouse has its parlour walls decorated with these scriptural illustrations, which seem to have superseded

> "The pictures placed for ornament and use;
> The twelve good rules; the royal game of goose,"

mentioned by Goldsmith as characteristic of a village inn. These "Jew pictures" are now yielding to others.

Most of these articles were varnished, and 2*s*. or 2*s*. 6*d*. each was frequently the price asked, 1*s*. 6*d*. being taken "if no better could be done," and sometimes 1*s*. A smaller amount per single picture was always taken, if a set were purchased. These productions were prepared principally for street-sale and for hawkers. The frames were narrower and meaner-looking than in the present street-pictures of the kind; they were stained like the present frames, in imitation of maple, but far less skilfully. Sometimes they were a black japan; sometimes a sorry imitation of mahogany.

In the excitement of the Reform Bill era, the street-pictures in frames most in demand were Earl Grey, Earl Spencer's (or Lord Althorp), Lord Brougham's, and Lord John Russell's. O'Connell's also "sold well," as did William IV. "Queen Adelaide," I was told, "went off middling, not much more than half as good as William." Towards the close of King William's life, the portraits of the Princess Victoria of Kent were of good sale in the streets, and her Royal Highness was certainly represented as a young lady of undue plumpness, and had hardly justice done to her portraiture. The Duchess of Kent, also, I was informed, "sold fairish in the streets." In a little time, the picture in a frame of the Princess Victoria of Kent, with merely an alteration in the title, became available as Queen Victoria I., of Great Britain and Ireland. Since that period, there have been the princes and princesses, her Majesty's offspring, who present a strong family resemblance.

The street pictures, so to speak, are not unfrequently of a religious character. Pictures of the Virgin and Child, of the Saviour seated at the Last Supper, of the Crucifixion, or of the different saints, generally coloured. The principal purchasers of these "religious pictures" are the poorer Irish. I remember seeing, in the course of an inquiry among street-performers last summer, the entire wall of a poor street-dancer's one room, except merely the space occupied by the fireplace, covered with small coloured pictures in frames, the whole of which, the proprietor told me, with some pride, he had picked up in the streets, according as he could spare a few pence. Among them were a crucifix (of bone), and a few medallions, of a religious character, in plaster or wax. This man was of Italian extraction; but I have seen the same thing in the rooms of the Roman Catholic Irish, though never to the same extent.

The general subjects now most in demand for street-sale are, "Lola Montes," "Louis Philippe and his Queen," "The Sailor's Return," "The Soldier's Return," and the "Parting" of the same individuals, Smugglers, in different situations, Poachers also; "Turpin's Ride to York," the divers feats attributed to Jack Sheppard (but less popular than "Turpin's Ride,") "Courtship," "Marriage" (the one a couple caressing, and the other bickering), "Father Mathew" (in very black large boots), "Napoleon Bonaparte crossing the Alps," and his "Farewell to his Troops at Fontainebleau," "Scenes of Piracy." None of these subjects are modern; "Lola Montes" (a bold-faced woman, in a riding-

Original from HARVARD UNIVERSITY

habit), being the newest. "Why," said one man familiar with the trade, "there hasn't been no Louis Napoleon in a frame-picture for the streets, nor Cobdens, nor Feargus O'Connors, nor Sir John Franklins; what is wanted for us is something exciting."

The prices of frame-pictures (as I sometimes heard them called) made expressly for street-sale, vary from 1*d.* to 1*s.* a pair. The 1*d.* a pair are about six inches by four, very rude, and on thin paper, and with frames made of lath-wood (stained), but put together very compactly. The cheaper sorts are of prints bought at the swag-shops, or of waste-dealers, sometimes roughly coloured, and sometimes plain. The greatest sale is of those charged from 2*d.* to 4*d.* the pair.

Some of the higher-priced pictures are painted purposely for the streets, but are always copies of some popular engraving, and their sale is not a twentieth of the others. These frame-pictures were, and are, generally got up by a family, the girls taking the management of the paper-work, the boys of the wood. The parents have, many of them, been paper-stainers. This division of labour is one reason of the exceeding cheapness of this street branch of the fine arts. These working artists—or whatever they are to be called—also prepare and frame for street-sale the plates given away in the first instance with a number of a newspaper or a periodical, and afterwards "to be had for next to nothing." The prevalence of such engravings has tended greatly to diminish the sale of the pictures prepared expressly for the streets.

Ten years ago this trade was ten times greater than it is now. The principal sale still is, and always was, at the street-markets on Saturday evenings. They are sold piled on a small stall, or carried under the arm. To sell 10*s.* worth on a Saturday night is an extraordinary sale, and 2*s.* 6*d.* is a bad one, and the frame-picturer must have "middling patter to set them off at all. 'Twopence a pair!' he'll say; 'only twopence a pair! Who'd be without an ornament to his dwelling?'"

There are now about fifty persons engaged in this sale on a Saturday night, of whom the majority are the artists or preparers of the pictures. On a Monday evening there are about twenty sellers; and not half that number on other evenings—but some "take a round in the suburbs."

If these people take 10*s.* weekly for frame-pictures the year through, 1,040*l.* is yearly expended in this way. I estimate the average number at twenty daily. Their profits are about cent. per cent.; boys and working people buy the most. The trade is often promoted by a raffle at a public-house. Many mechanics, I was told, now frame their own pictures.

Of the Street-sellers of Manuscript and other Music.

This trade used to be more extensively carried on in the streets than it is at present. The reasons I heard assigned for the decadence were the greater cheapness of musical productions generally, and the present fondness for lithographic embellishments to every polka, waltz, quadrille, ballad, &c., &c. "People now hates, I do believe, a *bare* music-sheet," one street-seller remarked.

The street manuscript-music trade was, certainly, and principally, piratical. An air became popular perhaps on a sudden, as it was pointed out to me, in the case, of "Jump, Jim Crow." At a musical publisher's, such an affair in the first bloom of its popularity, would have been charged from 2*s.* to 3*s.* 6*d.*, twenty-five years ago, and the street-seller at that time, often also a book-stall keeper, would employ, or buy of those who offered them for sale, and who copied them for the purpose, a manuscript of the demanded music, which he could sell cheap in comparison.

A man who, until the charges of which I have before spoken, kept a second-hand book-stall, in a sort of arched passage in the New Cut, Lambeth, sold manuscript-music, and was often "sadly bothered," he said, at one time by the musical propensities of a man who looked like a journeyman tailor. This man, whenever he had laid out a trifle at the book-stall, looked over the music, and often pulled a small flute from his pocket, and began to play a few bars from one of the manuscripts, and this he continued doing, to the displeasure of the stall-keeper, until a crowd began to assemble, thinking, perhaps, that the flute-player was a street-musician; he was then obliged to desist. Of the kind of music he sold, or of its mode of production, this street-bookseller knew nothing. He purchased it of a man who carried it to his stall, and as he found it sell tolerably well, he gave himself no further trouble concerning it. The supplier of the manuscript pencilled on each sheet the price it was to be offered at, allowing the stall-keeper from 50 to 150 per cent. profit, if the price marked was obtained. "I haven't seen anything of him, sir," said the street-bookseller, "for a long while. I dare say he was some poor musicianer, or singer, or a reduced gentleman, perhaps, for he always came after dusk, or else on bad dark days."

Although but partially connected with street-art, I may mention as a sample of the music sometimes offered in street-sale, that a book-stall keeper, three weeks ago showed me a pile of music which he had purchased from a "waste collector," about eight months before, at 2½*d.* the pound. Among this was some MS. music, which I specify below, and which the book-stall keeper was confident, on very insufficient grounds, I think, had been done for street-sale.

The music had, as regards three-fourths of it, evidently been bound, and had been torn from the boards of the book, as only the paper portion is purchased for "waste." Some, however, were loose sheets, which had evidently never been subjected to the process of stitching. I

now cite some of the titles of this street-sale: "Le Petit Tambour. Sujet d'un Grand Rondeau pour le Piano Forte. Composé par L. Zerbini," (MS.) "Di Tanti Palpiti. The Celebrated Cavatina, by Rossini, &c." "Twenty Short Lessons, or Preludes in the most Convenient Keys for the Harp. Composed and Respectfully Dedicated to Lady Ann Collins. By John Baptist Meyer. Price 5s." "An Cota Caol (given in the ancient Irish character.) The Slender Coat," (MS.) "Cailin beog chruite na mbo (also in Irish). The Pretty Girl Milking the Cow," (MS.)

There are now no persons regularly employed in preparing MS. music for the streets. But occasionally a person skilled in music writing will, when he or she, I was told, had nothing better in hand, do a little for the street sale, disposing of the MSS. to any street-stationer or bookseller. If four persons are this way employed, receiving 4s. a week each, the year through—which I am assured is the extent—we find upwards of 40*l.* thus earned, and about twice that sum taken by the street retailers.

OF THE CAPITAL AND INCOME OF THE STREET-SELLERS OF STATIONERY, LITERATURE, AND THE FINE ARTS.

I now proceed to give a summary of the capital, and income of the above classes. I will first however, endeavour to give a summary of the number of individuals belonging to the class.

This appears to be made up (so far as I am able to ascertain) of the following items:—120 sellers of stationery; 20 sellers of pocket-books and diaries; 50 sellers of almanacks and memorandum-books; 12 sellers of account-books; 31 card-sellers; 6 secret papers-sellers; 250 sellers of songs and ballads; 90 running patterers; 20 standing patterers; 8 sellers of "cocks" (principally elopements); 15 selling conundrums, "comic exhibitions," &c.; 200 selling play-bills and books for the play; 40 back-number-sellers; 4 waste paper-sellers at Billingsgate; 40 sellers of tracts and pamphlets; 12 newsvenders, &c., at steam-boat piers; 2 book auctioneers; 70 book-stall keepers and book barrow-men; 16 sellers of guide-books; 30 sellers of song-books and children's books; 40 dealers in pictures in frames; 30 vendors of engravings in umbrellas, and 4 sellers of manuscript music—making altogether a total of 1,110. Many of the above street-trades are, however, only temporary. As, for instance, the street-sale of playing-cards, continues only fourteen days in the year; pocket-books and diaries, four weeks; others, again, are not regularly pursued from day to day, as the sale of prints and engravings in umbrellas, which affords employment for but twelve weeks out of the fifty-two, and conundrums for two months. One trade, however, (namely, that of "Comic Exhibition Papers," gelatine and engraved cards of the Exhibition) is entirely now in the streets. In the broad-sheet trade, again, the "running patterers" work what are called "cocks," when there are no incidents happening to incite the public mind. Hence, making due allowances for such variations, we may fairly assume that the street-sellers belonging to this class number at least 1,000. The following statistics will show the whole amount of capital, and the gross income of this branch of street traffic.

CAPITAL OR VALUE OF THE STOCK-IN-TRADE OF THE STREET-SELLERS OF STATIONERY, LITERATURE AND THE FINE ARTS.

	£	s.	d.
Street-sellers of Stationery.			
40 stalls, 4s. each; 80 boxes, 3s. 6d. each; and stock-money for 120 sellers, 10s. each	82	0	0
Street-sellers of Pocket-books and Diaries.			
Stock-money for 20 vendors, 10s. each	10	0	0
Street-sellers of Almanacks and Memorandum-books.			
Stock-money for 50 vendors, 1s. per head	2	10	0
Street-sellers of Account-books.			
12 baskets, 3s. each; 12 waterproof bags, 2s. 6d. each; stock-money for 12 sellers, 15s. each	12	6	0
Street-sellers of Cards.			
Stock-money for 20 sellers, 1s. 6d. each	2	5	0
Street-seller of Stenographic-cards.			
Stock-money for 1 seller	0	1	6
Street-sellers of Long-songs.			
20 poles to which songs are attached, 2d. each; stock-money for 20 sellers, 1s. each	1	3	4
Street-sellers of Wall-songs ("Pinners-up.")			
30 canvass frames, to which songs are hung, 2s. each; stock-money for 30 sellers, 1s. each	4	10	0
Street-sellers of Ballads ("Chaunters.")

TOTAL CAPITAL INVESTED IN THE STREET-SALE OF STATIONERY, LITERATURE, AND THE FINE ARTS 411 5 10

INCOME, OR AVERAGE ANNUAL "TAKINGS," OF THE STREET-SELLERS OF STATIONERY, LITERATURE, AND THE FINE ARTS.

Street-sellers of Stationery.

There are 120 vendors of stationery, who sell altogether during the year, 224,640 quires of writing paper at 3*d.* per quire; 149,760 doz. envelopes, at 1½*d.* per doz.; 37,440 doz. pens, at 3*d.* per doz.; 24,960 bottles of ink, at 1*d.* each; 112,320 black lead pencils, at 1*d.* each; 24,960 pennyworths of wafers, and 49,920 sticks of sealing-wax, at ½*d.* per stick; amounting altogether to £4,992

Street-sellers of Pocket-books and Diaries.

During the year 1,440 pocket-books, at 6*d.* each, and 960 diaries, at 6*d.* each, are sold in the streets by 20 vendors; amounting to £60

Street-sellers of Almanacks and Memorandum-books.

There are sold during the year, in the streets of London, 280,800 memorandum-books, at 1*d.* each, and 4,800 almanacks at 1*d.* each, among 50 vendors, altogether amounting to . . . £1,190

Street-sellers of Account-books.

There are now 12 itinerants vending account-books in various parts of the metropolis, each of whom sells daily, upon an average, 4 account-books, at 1*s.* 9*d.* each: the number sold during the year is therefore 14,976, and the sum expended thereon amounts to . . £1,310

Street-sellers of "Gelatine," "Engraved," and "Playing-cards."

There are 20 street-sellers vending gelatine and engraved cards during the day, and 30 selling playing-cards (for 14 days) at night. These vendors get rid of, among them, in the course of the year, 43,200 gelatine, and 14,400 engraved cards, at 1*d.* each, and 3,360 packs of playing-cards, at 3*d.* per pack; so that the money spent in the streets on the sale of engraved, gelatine, and playing-cards, during the year, amounts to £282

Street-seller of Stenographic Cards.

There is only 1 individual "working" stenographic cards in the streets of London, and the number he sells in the course of the year is 7,448 cards, at 1*d.* each, amounting to £31 4

Street-sellers of Long Songs.

I am assured, that if 20 persons were selling long songs in the street last summer (during a period of 12 weeks), it was "the outside;" as long songs are now "for fairs and races, and country work." Calculating that each cleared 9*s.* in a week, and to clear that took 15*s.*, we find there is expended in long songs in the streets annually . . £180

Street-sellers of Wall Songs ("Pinners-up.")

On fine summer days, the wall song-sellers (of whom there are 30) take 2*s.* on an average. On short wintry days

Original from HARVARD UNIVERSITY

they may not take half so much, and on very foggy or rainy days they take nothing at all. Reckoning that each wall song-man now takes 10*s.* 6*d.* weekly (7*s.* being the profit), we find there is expended yearly in London streets, in the ballads of the pinners-up £810

Street-sellers of Ballads ("Chaunters.")

There are now 200 chaunters, who also sell the ballads they sing; the average takings of each are 3*s.* per day; altogether amounting to . . . £4,680

Street-sellers of Executions, &c. ("Running Patterers.")

Some represent their average weekly earnings at 12*s.* 6*d.* the year through; some at 10*s.* 6*d.*; and others at less than half of 12*s.* 6*d.* Reckoning, however, that only 9*s.* weekly is an average profit per individual, and that 14*s.* be taken to realise that profit, we find there is expended yearly, on executions, fires, deaths, &c., in London . . . £3,276

Street-sellers of Dialogues, Litanies, &c. (Standing Patterers.)

If 20 standing patterers clear 10*s.* weekly, each, the year through, and take 15*s.* weekly, we find there is yearly expended in the standing patter of London streets £780

Street-sellers of "Cocks" (Elopements, Love Letters, &c.

There are now 8 men who sell nothing but "Cocks," each of whom dispose daily of 6 dozen copies at ½*d.* per copy, or altogether, during the year, 179,712 copies, amounting to £374 8*s.*

Street-sellers of Conundrums—"Nuts to Crack," &c.

From the best information I could acquire, it appears that fifteen men may be computed as working conundrums for two months throughout the twelve, and clearing 10*s.* 6*d.* weekly, per individual. The cost of the "Nuts to Crack" (when new) is 5*d.* a dozen to the seller; but old "Nuts" often answer the purpose of the street-seller, and may be had for about half the price; the cost of the "Nut-crackers" is 2*s.* to 2*s.* 6*d.* It may be calculated, then, that to realize the 10*s.* 6*d.* above-mentioned 15*s.* must be taken. This shows the street expenditure in "Nuts to Crack" and "Nut-crackers" to be yearly . . . £90

Street-sellers of Exhibition Papers, Magical Delusions, &c.

This trade is carried on only for a short time in the winter, as regards the magical portion; and I am informed that, including the "Comic Exhibitions," it extends to about half of the sum taken for conundrums; or to about £45

Street-sellers of Secret Papers.

Supposing that 6 men last year each cleared 6*s.* weekly, we find expended yearly in the streets on this rubbish £93

Street-sellers of Play-bills and Books.

Taking the profits at 3*s.* a week, at cent. per cent. on the outlay, and reckoning 200 sellers, including those at the saloons, concert-rooms, &c., there is expended yearly on the sale of play-bills purchased in the streets of London £3,120

Street-sellers of Back Numbers.

There are now 40 vendors in the streets of London, each selling upon an average 3 dozen copies daily, at ½*d.* each, or during the year 336,960 odd numbers. Hence, the sum expended annually in the streets for back numbers of periodicals amounts to upwards of £700

Street-sellers of Waste-paper at Billingsgate.

There are 4 individuals selling waste-paper at Billingsgate, one of whom informed me that from 70 to 100 pounds weight of "waste"—about three-fourths being newspapers—is supplied to Billingsgate market and its visitants. The average price is not less than 2½*d.* a pound, or from that to 3*d.* A single paper is 1*d.* Reckoning that 85 pounds of waste-paper are sold a day, at 2½*d.* per pound, we find that the annual expenditure in waste-paper at Billingsgate is upwards of £275

Street-sellers of Tracts and Pamphlets.

From the information I obtained from one of this class of street-sellers, I find there are 40 individuals gaining a livelihood in selling tracts and pamphlets in the streets, full one half are men of colour, the other half consists of old and infirm men, and young boys, the average takings of each is about 1*s.* a day, the year through; the annual street expenditure in the sale of tracts and pamphlets is thus upwards of £620

Street-sellers of Newspapers (Second Edition.)

There are 20 who are engaged in the street sale of newspapers, second edition, each of whom take weekly (for a period of 6 weeks in the year) 1*l.* 5*s.*; so that, adopting the calculation of my informant, and giving a profit of 150 per cent., the yearly expenditure in the streets, in second editions, amounts to £150

Street-sellers of Newspapers, &c., at Steam-Boat Piers.

I am informed that the average earnings of these traders, altogether, may be taken at 15*s.* weekly; calculating that twelve carry on the trade the year through, we find that (assuming each man to sell at thirty-three per cent. profit—though in the case of old works it will be often cent. per cent.), the sum expended annually in steam-boat papers is upwards of . £1,500

Street-sellers of Books (by Auction).

There are at present only 2 street-sellers of books by auction in London, whose clear weekly earnings are 10*s.* 6*d.* each. Calculating their profits at 250*l.* per cent., their weekly receipts will amount to 35*s.* each per week; giving a yearly expenditure of £91

Street-sellers of Books on Stalls and Barrows.

The number of book-stalls and barrows in the streets of the metropolis is 70. The proprietors of these sell weekly upon an average 42 volumes each. The number of volumes annually sold in the streets is thus 1,375,920, and reckoning each volume sold to average 9*d.*, we find that the yearly expenditure in the sale of books in the street amounts to £5,733

Street-sellers of Guide-books.

The street-sellers of guide-books to public places of amusement, are 16 in number, the profit of each is 4*s.* weekly, at 25 per cent., hence the takings must be 20*s.*; thus making the annual expenditure in the street-sale of such books amount to £832

Street-sale of Song-books and Chidren's books.

There are 30 street-sellers who vend children's books and song-books, and dispose of, among them, 2 dozen each daily, or during the year 224,640 books, at 1*d.* each; hence the sum yearly expended in the street-sale of children's books and song-books is £936

Street-sellers of Pictures in Frames.

If we calculate 40 persons selling pictures in frames, and each taking 10*s.* weekly; we find the annual amount spent in the streets in the sale of these articles is £1,040

Street-sellers of Prints and Engravings in Umbrellas.

The street-sale of prints and engravings in umbrellas lasts only 12 weeks. There are 30 individuals who gain a livelihood in the sale of these articles during that period. The average takings of each seller is 12*s.* weekly; so that the annual street-expenditure upon prints and engravings is £216

Street-sellers of Manuscript Music.

There are only 4 sellers of manuscript music in the streets, who take on an average 4*s.* each weekly; hence we find the annual expenditure in this article amounts in round numbers to £40

TOTAL SUM EXPENDED YEARLY IN THE STREETS ON STATIONERY, LITERATURE, AND THE FINE ARTS . . . . £33,446 12*s.*

AN EPITOME OF THE PATTERING CLASS.

I wish, before passing to the next subject—the street-sellers of manufactured articles (of one of whom the engraving here given furnishes a well-known specimen)—I wish, I say, as I find some mistakes have occurred on the subject, to give the public a general view of the patterers, as well as to offer some few observations concerning the means of improving the habits of street-people in general.

The patterers consist of three distinct classes; viz., those who sell something, and patter to help off their goods; those who exhibit something, and patter to help off the show; and those who do nothing but patter, with a view to elicit alms. Under the head of "Patterers who sell" may be classed

Paper Workers,	Dealers in Razor Paste,
Quack Doctors,	" French Polish,
Cheap Jacks,	" Plating Balls,
Grease Removers,	" CandleShades,
Wager Patterers,	" Rat Poisons, &
Ring Sellers,	" Blacking,
Dealers in Corn Salve,	Book Auctioneers.

The second class of patterers includes jugglers, showmen, clowns, and fortune-tellers; beside several exhibitors who invite public notice to the wonders of the telescope or microscope.

The third and last class of patterers are those who neither sell nor amuse, but only victimise those who get into their clutches. These (to use their own words) "do it on the bounce." Their general resort is an inferior public-house, sometimes a brothel, or a coffee-shop. One of the tricks of these worthies is to group together at a window, and if a well-dressed person pass by, to salute him with the contents of a flour-bag. One of their pals—better dressed than the rest—immediately walks out, declares it was purely accidental, and invites the gentleman in "to be brushed." Probably he consents, and still more probably, if he be "good-natured," he is plied with liquor, drugged with snuff for the occasion, and left in some obscure court, utterly stupified. When he awakes, he finds that his watch, purse, &c., are gone.

"A casual observer, or even a stranger, may be induced to contract a wayside acquaintance with the parties to whom I allude," says one of the pattering class, from whom I have received much valuable information; "and if he be a visitor of fairs and races, that acquaintance, though slight, may sometimes prove expensive.

Generated at University of Pennsylvania on 2022-01-19 20:55 GMT / https://hdl.handle.net/2027/hvd.hwx4x8

Original from HARVARD UNIVERSITY

But casual observers cannot, from the complexity and varied circumstances of the characters now under notice, form anything like a correct view of them. I am convinced that no one can, but those who have visited their haunts and indeed lived among them for months together. They are not to be known, any more than the great city was to be built, in a day. This advantage—if so it may be called—has fallen to my lot."

The three classes of patterers above enumerated must not be confounded. The two first are essentially distinct from the last—at least they do *something* for their living; and though the pattering street-tradesmen may generally overstep the bounds of truth in their glowing descriptions of the virtues of the goods they sell, still it should be remembered they are no more dishonest in their dealings than the "enterprising" class of shopkeepers, who resort to the *printed* mode of puffing off their wares,—indeed the street-sellers are far less reprehensible than their more wealthy brother puffers of the shops, who cannot plead want as an excuse for their dishonesty. The recent revelations made by the *Lancet*, as to the adulteration of the articles of diet sold by the London grocers, show that the patterers who sell, practise far less imposition than some of our "merchant princes."

"A tradesman in Tottenham-court Road, whose address the *Lancet* advertises gratis, thus proclaims the superior qualities of his '*Finest* WHITE PEPPER. One package of this article, which is the interior part of the kernel of the finest pepper, being equal in strength to nearly three times the quantity of black pepper (which is the inferior, small, shrivelled berries, and often little more than husks), it will be not only the best but the cheapest for every purpose.' This super-excellent pepper, 'sold in packages, price 1*d*.,' was found on analysis to consist of finely-ground *black pepper, and a very large quantity of wheat-flour.*"

Indeed the *Lancet* has demonstrated that as regards tea, coffee, arrow-root, sugar, and pepper sold by "pattering" shopkeepers, the rule invariably is that those are articles which are the most puffed, and "warranted free from adulteration," and "to which the attention of families and *invalids* is particularly directed as being of the finest quality ever imported into this country," are uniformly the most scandalously adulterated of all.

We should, therefore, remember while venting our indignation against pattering street-sellers, that they are not the only puffers in the world, and that they, at least, can plead poverty in extenuation of their offence; whereas, it must be confessed, that shopkeepers can have no other cause for their acts but their own brutalizing greed of gain.

The class of patterers with whom we have here to deal are those who patter to help off their goods—but while describing them it has been deemed advisable to say a few words, also, on the class who *do nothing but patter*, as a means of exciting commiseration to their assumed calamities. These parties, it should be distinctly understood, are in no way connected with the puffing street-sellers, but in the exaggerated character of the orations they deliver, they are mostly professional beggars—or bouncers (that is to say cheats of the lowest *kind*), and *will* not work or do anything for their living. This, at least, cannot be urged against the pattering street-sellers who, as was before stated, do *something* for the bread they eat.

Further to show the extent, and system, of the lodging and routes throughout the country of the class of "lurkers," &c., here described—as all resorting to those places—I got a patterer to write me out a list, from his own knowledge, of divers routes, and the extent of accommodation in the lodging-houses. I give it according to the patterer's own classification.

"*Brighton* is a town where there is a great many furnished cribs, let to needys (nightly lodgers) that are molled up," [that is to say, associated with women in the sleeping-rooms.]

"*Bristol*.—A few years back an old woman kept a padding-ken here. She was a strong Methodist, but had a queer method. There was thirty standing beds, besides make-shifts and furnished rooms, which were called 'cottages.' It's not so bad now. The place was well-known to the monkry, and you was reckoned flat if you hadn't been there. The old woman, when any female, old or young, who had no tin, came into the kitchen, made up a match for her with some men. Fellows half-drunk had the old women. There was always a broomstick at hand, and they was both made to jump over it, and that was called a broomstick wedding. Without that ceremony a couple weren't looked on as man and wife. In course the man paid, in such case, for the dos (bed.)

of robbery. 'Keyhole whistlers,' the skipper-birds are sometimes called, but they 're regular travellers. Kent's the first county in England for them. They start early to good houses for victuals, when gentlefolk are not up. I've seen them doze and sleep against the door. They like to be there before any one cuts their cart (exposes their tricks). Travellers are all early risers. It's good morning in the country when it's good night in town.

OF THE "SCREEVERS," OR WRITERS OF BEGGING-LETTERS AND PETITIONS.

"SCREEVING"—that is to say, *writing* false or exaggerated accounts of afflictions and privations, is a necessary corollary to "Pattering," or making pompous *orations* in public—and I here subjoin a brief description of the "business"—for although the "screevers," "economically" considered, belong properly to the class who will *not work*, yet as they are intimately connected with the street-trade of begging I have thought it best to say a few words on the subject here, reserving a more comprehensive and scientific view of the subject till such time as I come to treat of the *professional* beggar, under the head of those who are *able* but *unwilling* to labour for their livelihood, in contradistinction to the involuntary beggars, who belong more properly to those who are *willing* but *unable* to work. The subjoined information has been obtained from one who has had many opportunities of making himself acquainted with the habits and tricks of the class here treated of,—indeed, at one part of his life he himself belonged to the "profession."

"In England and Wales the number of vagrants committed to prison annually amounts to 19,621; and as many are not imprisoned more than a dozen times during their lives, and a few never at all, the number of tramps and beggars may be estimated, at the very lowest, at 22,000 throughout England and Wales. The returns from Scotland are indeterminate. Of this wretched class many are aged and infirm; others are destitute orphans; while not a few are persons whose distress is real, and who suffer from temporary causes.

"With this excusable class, however, I have not now to do. Of professional beggars there are two kinds—those who 'do it on the *blob*' (by word of mouth), and those who do it by '*screeving*,' that is, by petitions and letters, setting forth imaginary cases of distress.

"Of these documents there are two sorts, 'slums' (letters) and 'fakements' (petitions). These are seldom written by the persons who present or send them, but are the production of a class of whom the public little imagine either the number or turpitude. I mean the 'professional begging-letter writers.'

"Persons who write begging-letters for others sometimes, though seldom, beg themselves. They are in many cases well supported by the fraternity for whom they write. A professional of this kind is called by the 'eadgers,' 'their man of business.' Their histories vary as much as their abilities; generally speaking they have been clerks, teachers, shopmen, reduced gentle-

Original from HARVARD UNIVERSITY

men, or the illegitimate sons of members of the aristocracy; while others, after having received a liberal education, have broken away from parental control, and commenced the 'profession' in early life, and will probably pursue it to their graves.

"I shall take a cursory view of the various pretences set forth in these begging documents," says my informant, "and describe some of the scenes connected with their preparation. The documents themselves are mournful catalogues of all the ills that flesh is heir to.

"I address myself first to that class of petitions which represent losses by sea, or perhaps shipwreck itself. These documents are very seldom carried by one person, unless indeed he is really an old sailor; and, to the credit of the navy be it spoken, this is very seldom the case. When the imposition under notice has to be carried out, it is, for the most part, conducted by half-a-dozen worthless men, dressed in the garb of seamen (and known as turnpike sailors), one of their number having really been at sea and therefore able to reply to any nautical inquiries which suspicion may throw out. This person mostly carries the document; and is, of course, the spokesman of the company. Generally speaking, the gang have a subscription-book, sometimes only a fly-leaf or two to the document, to receive the names of contributors.

"It may not be out of place here, to give a specimen—drawn from memory—of one of those specious but deceitful 'fakements' upon which the 'swells,' (especially those who have 'been in the service,') 'come down with a *couter*' (sovereign) if they 'granny the mauley' (perceive the signature) of a brother officer or friend. The document is generally as follows—

"'**These are to Certify**, to all whom it may concern, that the THUNDERER, Captain Johnson, was returning on her homeward-bound passage from China, laden with tea, fruit, &c., and having beside, twenty passengers, chiefly ladies, and a crew of thirty hands, exclusive of the captain and other officers. That the said vessel encountered a tremendous gale off the banks of Newfoundland, and was dismasted, and finally wrecked at midnight on' (such a day, including the hour, latitude, and other particulars). 'That the above-named vessel speedily foundered, and only the second mate and four of the crew (the bearers of this certificate) escaped a watery grave. These, after floating several days on broken pieces of the ship, were providentially discovered, and humanely picked up by the brig INVINCIBLE, Captain Smith, and landed in this town and harbour of Portsmouth, in the county of Hants. That we, the Master of Customs, and two of her Majesty's Justices of the Peace for the said harbour and county, do hereby grant and afford to the said' (here follows the names of the unfortunate mariners) 'this our vouchment of the truth of the said wreck, and their connection therewith, and do empower them to present and use this certificate for twenty-eight days from the date hereof, to enable them to get such temporal aid as may be adequate to reaching their respective homes, or any sea-port where they may be re-engaged. And this certificate further showeth, that they are not to be interrupted in the said journey by any constabulary or other official authority; provided, that is to say, that no breach of the peace or other cognizable offence be committed by the said Petitioners,

'As witness our hands,

John Harris, M.C. . . .	£1 0 0
James Flood, J.P.	1 0 0
Capt. W. Hope, R.N., J.P. . .	1 10 0

Given at Portsmouth, this 10th day of October, 1850.

'GOD SAVE THE QUEEN.'

Rev. W. Wilkins	£1 0 0
An Officer's Widow . . .	0 10 0
An Old Sailor	0 5 0
A Friend	0 2 6'

"I have already hinted at the character and description of the persons by whom these forgeries are framed. It would seem, from the example given, that such documents are available in every sea-port or other considerable town; but this is not the case. It is true that certain kinds of documents, especially sham hawkers' licenses, may be had in the provinces, at prices suited to the importance of their contents, or to the probable gains of their circulation; but all the 'regular bang-up fakes' are manufactured in the 'Start' (metropolis), and sent into the country to order, carefully packed up, and free from observation. The following note, sent to 'Carotty Poll, at Mrs. Finder's Login-ouse facin the orse and trumpet bere shop han street Westminster London with spede,' may tend to illuminate the uninitiated as to how such 'fakements' are obtained:

'Dere pol—I ope this will find yu an george in good helth and spirits—things is very bad ere, yure sister Lizer has been konfined an got a fine strappin boye, they was very bad off wen it happend. they say in mi country it never ranes but it pores and so it was pol. for mi William as got a month along with Cockny Harry for a glim lurk and they kum out nex Mundie and i av porned my new shift and every indivigual thing to get them a brekfust and a drop a rum the mornin they kums out. They wont hav no paper to work and I dont know what they will do. Tayler Tom lent me a shillin wish I send inklosed and yu must porn sumthing for anuther shilling and get Joe the Loryer to rite a fake for William not a glim' (loss by fire) 'but a brake say as e ad a hors fell downe with the mad staggurs an broke all is plates and dishes an we are starvin you can sa that the children is got the mesuls—they av ben ill thats *no* lie—an we want to rase a little munney to git anuther hanimul to dror the kart put a fu monekurs' (names) 'tu it and make it durty and date it sum time bak do not neglect and dont fale to pay the post no more at preasant from yure luvin sister Jane N—— at Mister John H—— the Sweep—nex dore to the five Bels grinsted Colchester Essex. good by.'

"The person from whom the above letter was obtained, was in the lodging-house when it

arrived, and had it given him to read and retain for reference. Lawyer Joe was soon sent for; and the following is an outline of the scene that occurred, given in my informant's own words:

"I had called at the house whither the above letter had been addressed, to inquire for a man whom I had known in his and my own better days. The kitchen-door, or rather cellar-door, was thrust open, and in came Carrotty Poll herself.

"'Well, Poll,' asked the deputy, 'how does the world use you?'

"'B— bad,' was the reply, 'where's Lawyer Joe?'

"'Oh, he's just gone to Mother Linstead's for some tea and sugar; here he comes.'

"'Joe, I've a job for you. How much do you charge for screeving a "brake?"'

"'Oh, half a bull (half-a-crown).'

"'No, I'll give you a deuce o' deeners (two shillings), co's don't ye see the poor b— is in "stir" (prison).'

"'Well, well, I shan't stand for a tanner. Have you got paper?'

"'Yes, and a Queen's head, and all.'

"The pen and ink were found, a corner of the table cleared, and operations commenced.

"'He writes a good hand,' exclaimed one, as the screever wrote the petition.

"'I wish I could do it,' said another.

"'If you could, you'd soon be transported,' said a third; while the whole kitchen in one chorus, immediately on its completion, proclaimed, that it was d—d well done, adding to that, not one 'swell' in a score would view it in any other light than a 'ream' (genuine) concern.

"Lawyer Joe was up to his trade—he folded the paper in official style—creased it as if it was long written and often examined, attached the signatures of the minister and churchwardens, and dipping his fingers under the fireplace, smeared it with ashes, and made the whole the best representation of a true account of 'a horse in the mad staggers' and 'a child in the measles' that could be desired by the oldest and best cadger on the monkry.

"These professional writers are in possession of many autographs of charitable persons, and as they keep a dozen or more bottles of different shades of ink, and seldom write two documents on exactly the same sort of paper, it is difficult to detect the imposition. A famous lurker who has been previously alluded to in this work, was once taken before a magistrate at York whose *own* signature was attached to his fakement. The imitation was excellent, and the 'lurker' swore hard and fast to the worthy justice that he (the justice) *did* write it in his own saddle-room, as he was preparing to ride, and gave him five shillings, too. The effrontery and firmness of the prisoner's statement gained him his discharge!

"It is not uncommon in extensive districts—say, for instance, a section of a county taking in ten or a dozen townships—for a school of lurkers to keep a secretary and remit his work and his pay at the same time. In London this functionary is generally paid by commission, and sometimes partly in food, beer, and tobacco. The following is a fair estimate of the scale of charges:

	s.	d.
Friendly letter	0	6
Long ditto	0	9
Petition	1	0
Ditto, with ream monekurs (genuine signatures)	1	6
Ditto, with gammy monekurs (forged names)	2	6
Very "heavy" (dangerous)	3	0
Manuscript for a broken down author	10	0
Part of a play for ditto	7	6

"To this I may add the prices of other articles in the begging line.

	s.	d.
Loan of one child, without grub	0	9
Two ditto	1	0
Ditto, with grub and Godfrey's Cordial	0	9
If out after twelve at night, for each child, extra	0	2
For a school of children, say half-a-dozen	2	6
Loan of any garment, per day	0	2
Going as a pal to vindicate any statement	1	0

"Such is an outline, open to circumstantial variation, of the pay received for the sort of accommodation required.

"There is a very important species of 'lurking' or 'screeving,' which has not yet been alluded to.

"It is well-known that in the colliery districts an explosion of fire-damp frequently takes place, when many lives are lost, and the men who escape are often so wounded as to render amputation of a leg or arm the only probable means of saving them from the grave. Of course the accident, with every particular as to date and locality, goes the round of the newspapers. Such an event is a sort of God-send to the begging-letter writer. If he is anything of a draughtsman, so much the better. He then procures a sheet of vellum, and heads it with a picture of an explosion, and exhibiting men, boys, and horses up in the air, and a few nearer the ground, minus a head, a leg, or an arm; with a background of women tearing their hair, and a few little girls crying. Such a 'fakement,' professionally filled up and put into the hands of an experienced lurker, will bring the 'amanuensis,' or 'screever,' two guineas at least, and the proceeds of such an expedition have in many cases averaged 60*l.* per week. The lurker presenting this would have to take with him three or four countrymen, dressed in the garb of colliers, one at least knowing something of underground work. These he would engage at 'a bob a nob' (one shilling each), and if he made a

Original from HARVARD UNIVERSITY

good day, give them a 'toothful o' rum' beside. As such men are always le. : outside the jigger (door) of the houses, they are of course ignorant of the state of the subscription-list.

"A famous lurker, to whom we have previously referred, Nicholas A——, kept 'a man of business' to himself, and gave him from 5*s.* to 10*s.* 6*d.* per day. Nicholas, who was tolerably educated, could write very well, but as his 'secretary' could imitate twelve different hands, he was of course no trifling acquisition.

"It would not be easy to trace the history of all, or even many of the men, who pursue the begging-letter trade as professional writers. Many of the vagrant tribe write their own letters, but the vast majority are obliged to have assistance. Of course, they are sometimes detected by the fact that their conversation does not tally with the rhetorical statement of the petition. The few really deserving persons, well-born and highly educated, who subsist by begging, are very retired and cautious in their appeals. They write concisely, and their statements are generally true to a certain extent, or perhaps rigidly so in relation to an earlier part of their history. These seldom live in the very common lodging-houses.

"The most renowned of the tribe who write for others, and whose general trade lies in forged certificates of bankruptcy, seizure of goods for rent, and medical testimonies to infirmity, is an Irishman, brought up in London, and who may be seen almost every night at the bar of a certain public-house in Drury-lane. He lives, or did live, at one of the model lodging-houses. Very few persons know his occupation. They suppose that he is 'connected with the press.' Several years ago this person, says one who knew this trade well, was 'regularly hard up,' and made a tender of his services to a distinguished M.P., who took a lively interest in the emancipation of the Jews. He offered to visit the provinces, hold meetings, and get up petitions. The hon. member tested his abilities, and gave him clothes and a ten-pound note to commence operations. 'I saw him' (says my informant) 'the same night, and he mooted the subject to me over a glass of whiskey-punch. 'Not that *I* care (said he) if all the b—y Jews were in h—ll, but I must do something.'

"'But how,' asked my informant, 'will you get up the meetings?—and then the signatures, you know!'

"'Meetings!' was the reply, 'don't mention it; I can get *millions of signatures!*'

"The pretended Jewish Advocate never left London. He got (from Ireland) a box of old documents relative to bygone petitions for repeal, &c., and on these he put a frontispiece suited to his purpose — got them sent to Bath and Bristol, and thence transmitted to his employer—who praised his perseverance, and sent more money to the post-office of one of the above-named towns; this was countermanded to London, and jovially spent at 'Tom Spring's' in Holborn.

"Hitherto the movements of the begging-letter writer—self-considered—have been chiefly dwelt upon. There is another class of the fraternity, however, of whom some notice must here be taken; viz., those, who to meet cases of great pretension, and consequent misgivings on the part of the noblemen or gentry to whom fakements are presented, become referees to professional beggars. These referees are kept by local 'schools' of beggars in well-furnished apartments at respectable houses, and well dressed; their allowance varies from 1*l.* to 3*l.* per week.

"But the most expert and least suspected dodge is referring to some dignified person in the country; a person however who exists nowhere but in imagination. Suppose (says my informant) I am a beggar, I apply to you for relief. Perhaps I state that I am in prospect of lucrative employment, if I could get enough money to clothe myself. You plead the number of impositions; I consent to that fact, but offer you references as to the truth of my statement. I refer you to the Hon. and Rev. Mr. Erskine, at Cheltenham (any name or place will do). You promise to write, and tell me to call in a few days; meanwhile, I assume the name of the gentleman to whom I have referred you, and write forthwith to the post-master of the town in question, requesting that any letter coming there directed to the Hon. and Rev. Mr. Erskine, may be forwarded to my present address. I thus discover what you have written, frame a flattering reply, and address it to you. I send it (under cover) to a pal of mine at Cheltenham, or elsewhere, who posts it; I call half an hour after you receive it, and, being satisfied, you give me a donation, and perhaps introduce me to some of your friends. Thus I raise a handsome sum, and the fraud is probably never found out.

"One of the London lurkers, who has good means of forming a calculation on the subject, assures me that the average earnings of 'lurkers' in London alone (including those who write for them), cannot be less than 6,000*l.* per annum.

"Two of the class were lately apprehended, at the instance of the Duke of Wellington; on their persons was found fifteen sovereigns, one five-pound note, a silver watch with gold guard, and two gold watches with a ribbon attached to each; their subscription-book showed that they had collected 620*l.* during the current year.

"A man named M'Kensie—who was transported at the last Bristol Assizes—had just received a cheque for 100*l.* from a nobleman lately deceased.

"Most of the 'professionals' of this class include a copy of the 'Court Guide' among their stock in trade. In this all the persons known to be charitable, have the mark ⊕ set against their names. I have been furnished with a list of such persons, accompanied with comments, from the note-book of 'an old

stager' 'thirty years on the monkery,' and, as he adds, 'never quodded but twice.'

"The late Queen Dowager.
Hon. Wm. Ashley.
The Bishop of Norwich.
Serjeant Talfourd.
Charles Dickins.
Samuel Rogers, the Poet.
Samuel Warren (Author of 'Extracts from the Diary of a Physician).
Hon. G. C. Norton, the 'beak' (magistrate), but good for all that.
Rev. E. Holland, Hyde-park-gardens.
The late Sir Robert Peel.
Countess of Essex (only good to sickness, or distressed authorship).
Marquess of Bredalbane (good on anything religious).
The Editor of the 'Sun.'
Madame Celeste.
Marquess of Blandford.
Duke of Portland.
Duke of Devonshire.
Lord George Bentinck (deceased; God A'mighty wouldn't let him live; he was too good for this world.)
Lord Skelmersdale.
Lord John Manners.
Lord Lyttleton.
Mrs. Elder, Exeter.
Lady Emily Ponsonby (a devilish pretty wench).
Miss Burdett Coutts.
F. Stewart, Esq., Bath.
Mrs. Groves, Salisbury.
Mrs. Mitchell, Dorchester.
Mrs. Taggart, Bayswater (her husband is a Unitarian minister, not so good as *she*, but he'll stand a 'bob' if you look straight at him and keep to one story.)
Archdeacon Sinclair, at Kensington (but not so good as Archdeacon Pott, as was there afore him; he *was* a good man; he couldn't refuse a dog, much more a Christian; but he had a butler, a regular 'knark,' who was a b— and a half, *good weight*,)
Lady Cottenham used to be good, but she is 'coopered' (spoilt) now, without you has a 'slum,' any one as she knows, and then she won't stand above a 'bull' (five shillings)."

Of the Probable Means of Reformation.

I shall now conclude this account of the patterers, lurkers, and screevers, with some observations from the pen of one who has had ample means of judging as to the effect of the several plans now in operation for the reformation or improvement of the class.

"In looking over the number of institutions," writes the person alluded to, "designed to reform and improve the classes under review, we are, as it were, overwhelmed with their numerous branches; and though it is highly gratifying to see so much good being done, it is necessary to confine this notice to the examination of only the most prominent, with their general characteristics.

"The churches, on many considerations—personal feelings being the smallest, but not unknown—demand attention first. I must treat this subject (for your work is not a theological magazine) without respect to doctrine, principle, or legislation.

"The object of erecting churches in poor neighbourhoods is to benefit the poor; why is it, then, that the instruction communicated should exercise so little influence upon the vicious, the destitute, and the outcast? Is it that Christian ordinances are less adapted to them than to others? Or, rather, is it not that the public institutions of the clergy are not made *interesting* to the wretched community in question? The great hindrance (in my opinion) to the progress of religion among the unsettled classes is, that having been occasionally to church or chapel, and heard nothing but doctrinal lectures or feverish mental effusions, they cannot see the application of these to every-day trade and practice; and so they arrive at the conclusion, that they can get as much or more good at home.

"Our preachers seem to be *afraid* of ascertaining the sentiments, feelings, and habits of the more wretched part of the population; and, without this, their words will die away upon the wind, and no practical echo answer their addresses.

"It will, perhaps, relieve the monotony of this statement if I give an illustration communicated to me by a person well qualified to determine the merits of the question.

"Your readers will probably recollect the opposition experienced by Dr. Hampden on his promotion to the bishopric of Hereford. Shortly after the affair was settled, his lordship accepted an invitation to preach on behalf of the schools connected with the 'ten new churches' of Bethnal-green. The church selected for the purpose was the one on Friar's-mount. It was one July Sunday in 1849, and, as I well remember, the morning was very wet; but, supposing the curiosity, or better motives, of the public would induce a large congregation, I went to the church at half-past ten. The free-seats occupying the middle aisle were all filled, and chiefly with persons of the lowest and worst classes, many of whom I personally knew, and was agreeably surprised to find them in such a place.

"I sat in the midst of the group, and at the elbow of a tall attenuated beggar, known by the name of 'Lath and Plaster,' of whom it is but justice to say that he repeated the responsive parts of the service very correctly. It is true he could not read; but having 'larned a few prayers' in the 'Downs' (Tothill-fields prison), 'he always sed 'em, night and morning, if he wasn't drunk, and then he sed 'em *twice* next day, 'cos,' reasoned he, 'I likes to rub off as I goes on.'

"In course of time, the bishop made his appearance in the pulpit. His subject was

neglected education, and he illustrated it from the history of Eli.

"I thought proper to hang back, and observe the group as they passed out of church. There was Tailor Tom, and Brummagem Dick, and Keate-street Nancy, and Davy the Duke, and Stationer George, and at least two dozen more, most of whom were miserably clad, and several apparently without a shirt. They were not, however, without halfpence; and as I was well known to several of the party, and flattered as being 'a very knowledgeable man,' I was invited to the Cat and Bagpipes afterwards, to 'have share of what was going.'

"I was anxious," continues my informant, "to learn from my companions their opinion of the right reverend prelate. They thought, to use their own words, 'he was a jolly old brick.' But did they think he was sound in opinion about the Trinity, or was he (as alleged) a Unitarian?' They did not even understand the meaning of these words. All they *did* understand was, that 'a top-sawyer parson at Oxford, called Dr. Pussy,' had 'made himself disagreeable,' and that some of the bishops and nobility had 'jined him;' that these had persecuted Dr. Hampden, because he was 'more cleverer' than themselves; and that Lord John Russell, who, generally speaking, was 'a regular muff,' had 'acted like a man' in this instance, and 'he ought to be commended for it; and,' added the man who pronounced the above sentiment, '*it's just a picture of ourselves.*' To other ears than mine, the closing remark would have appeared impertinent, but I 'tumbled to' it immediately. It was a case of oppression; and whether the oppressors belonged to Oxford University or to Scotland-yard militated nothing against the aphorism: 'it's just a picture of ourselves!'

"It seems to me that these poor creatures understood the *circumstances* better than they did the sermon; and my inference is, that whether from the parochial pulpit, or the missionary exhortation, or in the printed form of a tract, those who wish to produce a practical effect must themselves be practical men. I, who have been in the Christian ministry, and am familiar, unhappily, with the sufferings of men of every grade among the outcast, would say: 'If you wish to do these poor outcasts real good, you must mould your language to their ideas, get hold of their common phrases—those which tell so powerfully when they are speaking to each other — let them have their own *fashion* of things, and, where it does not interfere with order and decency, use yourselves language which their unpolished minds will appreciate; and then, having gained their entire confidence, and, perhaps, their esteem, you may safely strike home, though it be as with a sledge-hammer, and they will even 'love you for the smart.'

"The temperance movement next claims attention, and I doubt not that much crime and degradation has been prevented by total abstinence from all intoxicating drinks; but I would rather raise the tone of moral feeling by intelligent and ennobling means than by those spasmodic efforts, which are without deliberation, and often without permanency. The object sought to be obtained, however, is good,—so is the motive,—and I leave to others to judge what means are most likely to secure it.

"I may also allude, as another means of reformation, to the Ragged-schools which are now studding the localities of the poorest neighbourhoods. The object of these schools is, one would hope, to take care of the uncared for, and to give instruction to those who would be otherwise running wild and growing up as a pest to society. A few instances of real reform stand, however, in juxtaposition with many of increased hardihood. I, as a man, seeing those who resort to ragged-schools, cannot understand the propriety of insulting an honest though ragged boy by classing him with a young thief; or the hope of improving the juvenile female character where the sexes are brought in promiscuous contact, and left unrestrained on their way home to say and do everything subversive of the good instruction they have received." [It is right I should here state, that these are my informant's own unbiassed sentiments, delivered without communication with myself on the subject. I say thus much, because, my own opinions being known, it might perhaps appear as if I had exerted some influence over the judgment of my correspondent.]

"The most efficient means of moral reform among the street-folk, appear to have been consulted by those who, in Westminster and other places, have opened institutions cheaper, but equally efficient, as the mechanics' institutes of the metropolis. In these, for one farthing per night, three-halfpence a week, or sixpence a month, lectures, exhibitions, newspapers, &c., are available to the *very* poor. These, and such as these, I humbly, but earnestly would commend to public sympathy and support, believing that, under the auspices of heaven, they may 'deliver the outcast and poor' from their own mistaken views and practices, and make them ornamental to that society to which they have long been expensive and dangerous."

Another laudable attempt to improve the condition of the poorer class is by the erection of model lodging-houses. The plan which induced this measure was good, and the success has been tolerable; but I am inclined to think the management of these houses, as well as their internal regulation, is scarcely what their well-meaning founders designed. The principal of these buildings is in George-street, St. Giles's; the building is spacious and well ventilated, there is a good library, and the class of lodgers very superior to what might be expected This latter circumstance makes the house in question scarcely admissible to the catalogue of reformed lodging-houses for the *very* poor.

"The next 'model lodging-house' in importance is the one in Charles-street, Drury-lane. This, from personal observation (having lodged in it more than four months)," says my informant, "I can safely say (so far as social reform is concerned), is a miserable failure. The bed-rooms are clean, but the sitting-room, though large, is the scene of dirt and disorder. Noise, confusion, and intemperance abound from morning till night.

"There is a model lodging-house in Westminster, the private property of Lord Kinnaird. It is generally well conducted. His lordship's agent visits the place once a week. There is an almost profuse supply of cooking utensils and other similar comforts. There are, moreover, two spacious reading-rooms, abundance of books and periodicals, and every lodger, on payment of 6*d*., is provided with two lockers—one in his bed-room, and the other below-stairs. The money is returned when the person leaves the house. There is divine service every day, conducted by different missionaries, and twice on Sundays. Attendance on these services is optional; and as there are two ways of ingress and egress, the devout and undevout need not come in contact with each other. The kitchen is very large and detached from the house. The master of this establishment is a man well fitted for his situation. He is a native of Saffron Walden in Essex, where his father farmed his own estate. He received a superior education, and has twice had a fortune at his own disposal. He *did* dispose of it, however; and 'after many roving years,' as a 'traveller,' 'lurker,' and 'patterer,' he has settled down in his present situation, and maintained it with great credit for a considerable period. The beds in this house are only 3*d*. per night, and no small praise is due to Lord Kinnaird for the superiority of this 'model' over others of the same denomination.

"Such are a few of the principal of these establishments. Giving every credit to their founders, however, for purity and even excellence of motive, I doubt if 'model lodging-houses,' as at present conducted, are likely to accomplish much real good for those who get their living in the streets. Ever and anon they are visited by dukes and bishops, lords and ladies, who march in procession past every table, scrutinise every countenance, make their remarks upon the quantity and quality of food, and then go into the lobby, sign their names, jump into their carriages, and drive away, declaring that 'after all' there is not so much poverty in London as they supposed.

"The poor inmates of these houses, moreover," adds my informant, "are kept in bondage, and made to *feel* that bondage, to the almost annihilation of old English independence. It is thought by the managers of these establishments, and with some share of propriety, that persons who get their living by any honest means may get home and go to bed, according to strict rule, at a certain prescribed hour—in one house it is ten o'clock, in the others eleven. But many of the best-conducted of these poor people, if they be street-folk, are at those very hours in the height of their business, and have therefore to pack up their goods, and carry homeward their cumbersome and perhaps heavy load a distance usually varying from two or three to six or seven miles. *If they are a minute beyond time, they are shut out, and have to seek lodgings in a strange place. On their return next morning, they are charged for the bed they were prevented from occupying, and if they demur they are at once expelled!* Thus the 'model' lodgers are kept, as it were, in leading-strings, and triumphed over by lords and ladies, masters and matrons, who, while they pique themselves on the efforts they are making to 'better the condition of the poor,' are making them their slaves, and driving them into unreasonable thraldom; while the rich and noble managers, reckless of their own professed benevolence, are making the poor poorer, by adding insult to wretchedness. If my remarks upon these establishments appear," adds the writer of the above remarks, "to be invidious, it is only in 'appearance' that they are so. I give their promoters credit for the best intentions, and, as far as sanitary and moral measures are concerned, I rejoice in the benefit while suggesting the improvement.

"Everything even moderately valuable has its counterfeit. We have counterfeit money, counterfeit virtue, counterfeit modesty, counterfeit religion, and last, but not least, 'counterfeit model lodging-houses.' Many private adventurers have thus dignified their domiciles, and some of them highly merit the distinction, while with others it is only a cloak for greater uncleanliness and grosser immorality.

"There has come to my knowledge the case of one man, who owns nearly a dozen of these dens of infamy, in one of which a poor girl under fifteen was lately ruined by a gray-headed monster, who, according to the pseudo-'model' regulations, slept in an adjoining bed. The sham model-houses to which I more particularly allude," says my correspondent, "are in Short's-gardens, Drury-lane; Mill-yard, Cable-street; Keate-street, Flower and Dean-street, Thrawl-street, Spitalfields; Plough-court, Whitechapel; and Union-court, Holborn. All of these are, *without exception*, twopenny brothels, head-quarters of low-lived procuresses, and resorts of young thieves and prostitutes. Each of the houses is managed by a 'deputy,' who receives an income of 8*s*. 2*d*. per week, out of which he has to provide coke, candles, soap, &c. Of course it is impossible to do this from such small resources, and the men consequently increase their salaries by 'taking in couples for a little while,' purchasing stolen goods, and other nefarious practices. *Worse than all, the person owning these houses is a member of a strict Baptist church, and the son of a deceased minister. He lives in great splendour in one of the fashionable streets in Pimlico.*

"It still remains for me," my correspondent continues, "to contemplate the best agency for

promoting the reformation of the poor. The 'City Mission,' if properly conducted, as it brings many good men in close contact with the 'outcast and poor,' might be made productive of real and extensive good. Whether it has done so, or done so to any extent, is perhaps an open question. Our town missionary societies sprang up when our different Christian denominations were not fully alive to the apprehension of their own duties to their poorer brethren, who were lost to principle, conscience, and society. That the object of the London City Mission is most noble, needs no discussion, and admits of no dispute. The method of carrying out this great object is by employing agents, who are required to give their whole time to the work, without engaging in any secular concerns of life; and regarding the operation of the work so done, I must say that great good has resulted from the enterprise. At the commencement of the labours of the Mission in any particular locality great opposition was manifested, and a great amount of prejudice, with habits of the most immoral kind —openly carried on without any public censure—had to be overcome. The statements of the missionaries have from time to time been published, and lie recorded against us as a nation, of the glaring evils and ignorance of a vast portion of our people. It is principally owing to the city missionaries that the other portions of society have known what they now do of the practices and habits of the poor; it is principally due to their exertions that schools have been established in connection with their labours; and the Ragged-schools—one of the principal movements of the last few years—are mainly to be attributed to their efforts.

"A man," says my informant in conclusion, "can receive little benefit from a thing he does not understand; the talk which will do for the senate will not do for the cottage, and the argument which will do for the study will not do for the man who spends all his spare time in a public-house. These remarks will apply to the distribution of tracts, which should be couched in the very language that is used by the people to whom they are addressed; then the ideas will penetrate their understanding. Some years back I met with an old sailor in a lodging-house in Westminster, who professed a belief that there had *once* been a God, but that he was either dead, or grown old and diseased. He did not dispute the inspiration of the Bible. He believed that there had been revelations made to our forefathers when God was alive and active, but that now the Almighty did not 'fash' (trouble) himself about his creatures at all!

"I endeavoured to instruct the man in his own rude language and ideas; and after he had thus been made to comprehend the doctrine of the Atonement, he said, 'I see it all plain enough—though I've liked a drop o' drink, and been a devil among the gals, and all that, in my time, if I'll humble myself I can have it all wiped off; and, as the song says, "We may be happy yet," because, as the saying is, it's all square with God A'mighty.' Whether the sailor permanently reformed, I am unable to say, for I lost sight of him shortly after; at any rate he *understood* the subject, and was thus qualified to profit by it. And what can the teachers of Christianity among the British heathen—herded together in courts and alleys —tell their poor ignorant hearers better than the old sailor's aphorism, 'You have, indeed, gone astray from your greatest and best Friend, but, if you so desire, "You may be happy yet," because it's all square with God A'mighty?'

"Before quitting this subject, I would add, if you really wish to do these poor creatures good, you must remember that your instructions are not intended for so-called fashionable society, but for those who have a fashion of their own. If you lose sight of this fact, your words will die away upon the wind, and no echo in the hearts of these poor people will answer your addresses."

The above observations are from the pen of one who has not only had the means, but is likewise possessed of the power, of judging as to the effect of the several plans (now in course of operation) for the reformation and improvement of the London poor. I have given the comments in the writer's own language, because I was anxious that the public should know the opinions of the best informed of the street-people themselves on this subject; and I trust I need not say that I have sought in no way to influence my correspondent's judgment.

I now subjoin a communication from a clergyman in the country, touching the character of the tramps and lurkers frequenting his neighbourhood, together with some suggestions concerning the means of improving the condition of the London poor. These I append, because it is advisable that in so difficult a matter the sentiments of every one having sufficient experience, judgment, and heart to fit him to speak on the subject should be calmly attended to, so that amid much counsel there may be at least some little wisdom.

"The subject of the welfare of our poorer brethren was one which engaged much of my attention twenty years ago, when studying for the bar at Lincoln's Inn, before I entered into orders; and the inquiries, &c., then made by me in reference to London, are recalled by many of your pages. I have pursued the same course, according to my limited means and opportunities (for my *benefice*, like thousands of others, is but 100*l.* a-year) in this neighbourhood, and there are very many of my clerical brethren, also, deeply anxious and exerting their means for the country poor. The details given in your numbers as to the country tramps and patterers, I can fully corroborate from personal experience and knowledge, so far as the country part of it. We *never* give money to beggars here, on any pretence whatever. We never give clothes. We never give relief to a *naked* or *half-naked* man if we can avoid it (the imposture is too barefaced).

Medicine I *do* give occasionally to the sick, or pretended sick, and *see* them take it. Every beggar may have *dry bread*, or three or four tracts to sell, but never both. I know we are even thus *often* imposed on; but it is better to run this risk than to turn away, by chance, a starving man; and I do see the mendicants often sit down on a field near, and eat the dry bread with ravenous look. The tramps sometimes come to church on Sunday, and *then* beg: but we never give even bread on Sunday, because on that day they can get help at the Union workhouse, and it only tempts idlers. Sometimes we are days without a beggar, and then there will be ten to twenty per day, and then all at once the stream stops. There are no tramp lodging-houses in my parish (which is a village of 600 or 700 people). Most of the burglaries hereabouts seem connected with some inroad of tramps into the neighbourhood. The lodging-houses are very bad in some of the small towns near, but somehow the magistrates cannot get them put down. The gentry are alive here to the evil of crowded cottages, &c., and are using efforts to build better and more decent ones. But the evil results from the little landowners, who have an acre or two, or less, and build rows of cottages on them of the scantiest dimensions, at high rents,—ten per cent. on the cost of building. The rents of the gentry and nobility are very moderate to the poor, viz., scarcely two per cent. (beyond the yearly repairs) on the market value of the cottage.

"In 1832 I succeeded in getting land allotments for the poor here, and most of the parishes round have followed our example since. The success *to the poor* has always depended on the rent being a *real* rent, such as is paid by the land round about, and on the rules of good management and of payment of rent being rigidly enforced.

"The character of the poor of England *must* be raised, as well as their independence. They must not be left to lean on charity. I am sure that the sterling worth of the English character can only be raised by that means *to the surface* of society among the poor. The "English" is a fine material, but the poor neither value, nor are benefited, by mawkish nonsense or excessive feeling.

"I believe this parish was one of the most fearfully demoralized twenty years ago. It was said there was not *one* young female cottager of virtuous character. There was not one man who was not, or had not been, a drunkard; and theft, fighting, &c., &c., were universal. It is greatly better now—totally different—and I attribute the change to the land allotments, the provident society, the village horticultural society, the lending library, the clothing club, the coal club, the cultivating a taste for music, &c., &c., as subsidiary to the more directly pastoral work of a clergyman, and the schools, &c.

"I am probably visionary in my ideas, but the perusal of your pages has led me to think that, were I clergyman of a parish where the street-folks *lived*, I should aim at some schemes of this style, in addition to the benefit society and loan society (the last *most* important) as proposed by yourself.

"(1) To get music taught at ½*d.* a week, or something of the kind—*a ragged-school music-room*, if the people would learn gratis, would be still better—as a *step* to a "superior" music class at 1*d.* per week.

"(2) To get the poor to adorn their rooms *plentifully* with a better class of pictures—of places, of people, of natural history, and of historical and religious subjects—just as they might like, and a circulating library for pictures if they preferred change. This I find takes with the village poor. Provide these things excessively cheap for them—at *nominal prices*, just high enough to prevent them being *sold* at a profit by the poor.

"(3) To establish a monthly or fortnightly sheet—or little book for the poor—at ½*d.*, or some trifle, *full of pictures* such as they would like, but free from impropriety. It might be called 'The Coster's Barrow,' or some name which would take their fancy, and contain pictures for those who cannot read, and reading for those who can. Its contents should be instructive, and yet lively; as for instance, the 'History of London Bridge,' 'History of a Codfish,' 'Travels of Whelks,' 'Dreams of St. Paul's,' (old History of England), 'Voice from the Bottom of the Coal Exchange' (Roman tales), 'True Tale of Trafalgar,' &c., &c. All *very short articles*, at which perhaps they might be angry, or praise, or abuse, or *do anything*, but still would read, or hear, and talk about. If possible, the little work might have a corner called, 'The Next World's Page,' or any name of the kind, with *nothing* in it but the Lord's Prayer, or the Creed, or the Ten Commandments, or a Parable, or Miracle, or discourse of Christ's—in the exact words of Scripture—without *any* commentary; which could neither annoy the Roman Catholics nor others. Those parts in which the Douay version differs from ours might be avoided, and the Romanists be given to understand that they would *always* be avoided.

"The more difficult question of cheap amusements instead of the demoralizing ones now popular, is one which as yet I cannot see my way through—but it is one which *must* be grappled with if any good is to be done.

"I write thus," adds my correspondent, "because I feel you are a fellow-worker—so far as your labours show it, for the cause of God's poor—and therefore will sympathize in anything another worker can say from experience on the same subject."

Such are the opinions of two of my correspondents—each looking at the subject from different points of view—the one living among the people of whom he treats, and daily witnessing the effects of the several plans now in operation for the moral and physical improvement of the poor, and the other in frequent in-

tercourse with the tramps and lurkers, on their vagrant excursions through the country, as well as with the resident poor of his own parish—the former living in friendly communion with those of whom he writes, and the latter visiting them as their spiritual adviser and material benefactor.

I would, however, before passing to the consideration of the next subject, here pause to draw special attention to the distinctive features of the several classes of people obtaining their livelihood in the streets. These viewed in regard to the *causes* which have induced them to adopt this mode of life, may be arranged in three different groups, viz.:

(1.) Those who are *bred* to the streets.
(2.) Those who *take* to the streets.
(3.) Those who are *driven* to the streets.

The class bred to the streets are those whose fathers having been street-sellers before them, have sent them out into the thoroughfares at an early age to sell either watercresses, lavender, oranges, nuts, flowers, apples, onions, &c., as a means of eking out the family income. Of such street-apprenticeship several notable instances have already been given; and one or two classes of juvenile street-sellers, as the lucifer match, and the blacking-sellers, still remain to be described. Another class of street-apprentice is to be found in the boys engaged to wheel the barrows of the costers, and who are thus at an early age tutored in all the art and mystery of street traffic, and who rarely abandon it at maturity. These two classes may be said to constitute the *natives* of the streets—the tribe *indigenous* to the paving-stones—imbibing the habits and morals of the gutters almost with their mothers' milk. To expect that children thus nursed in the lap of the kennel, should when men not bear the impress of the circumstances amid which they have been reared, is to expect to find costermongers heroes instead of ordinary human beings. We might as well blame the various races on the face of the earth for those several geographical peculiarities of taste, which constitute their national characteristics. Surely there is a moral acclimatisation as well as a physical one, and the heart may become inured to a particular atmosphere in the same manner as the body; and even as the seed of the apple returns, unless grafted, to its original crab, so does the child, without training, go back to its parent stock—the vagabond savage. For the bred and born street-seller, who inherits a barrow as some do coronets, to be other than he is—it has here been repeatedly enunciated—is no fault of his but of ours, who could and yet *will* not move to make him otherwise. Might not "the finest gentleman in Europe" have been the greatest blackguard in Billingsgate, had he been born to carry a fish-basket on his head instead of a crown? and by a parity of reasoning let the roughest "rough" outside the London fish-market have had his lot in life cast, "by the Grace of God, King, Defender of the Faith," and surely his shoulders would have glittered with diamond epaulettes instead of fish scales.

I say thus much, to impress upon the reader a deep and devout sense, that we who have been appointed to another state, are, by the grace of God, what we are, and from no special merit of our own, to which, in the arrogance of our self-conceit, we are too prone to attribute the social and moral differences of our nature. Go to a lady of fashion and tell her she could have even become a fishfag, and she will think you some mad ethnologist (if indeed she had ever heard of the science). Let me not, however, while thus seeking to impress the reader's mind with a sense of the "antecedents" of the human character, be thought to espouse the doctrine that men are *merely* the creatures of events. All I wish to enforce is, that the three common causes of the social and moral differences of individuals are to be found in *race*, *organization*, and *circumstances*—that none of us are entirely proof against the influence of these three conditions—the *ethnological*, the *physiological*, and the *associative* elements of our idiosincracy. But, while I admit the full force of external nature upon us all, while I allow that we are, in many respects, merely patients, still I cannot but perceive that, in other respects we are self-agents, moving rather than being moved, by events—often stemming the current of circumstances, and at other times giving to it a special direction rather than being swept along with it. I am conscious that it is this directive and controlling power, not only over external events, but over the events of my own nature, that distinguishes me as well from the brute of the fields as it does my waking from my sleeping moments. I know, moreover, that in proportion as a man is active or passive in his operations, so is his humanity or brutality developed; that true greatness lies in the superiority of the internal forces over the external ones; and that as heroes, or extraordinary men are heroes, because they overcome the sway of one or other, or all, of the three material influences above-named, so ordinary people are ordinary, simply because they lack energy—principle—will (call it what you please) to overcome the material elements of their nature with the spiritual. And it is precisely because I know this, that I *do* know that those who are bred to the streets must bear about them the moral impress of the kennel and the gutter—unless *we* seek to develope the inward and controlling part of their constitution. If we allow them to remain the creatures of circumstances, to wander through life principleless, purposeless, conscienceless—if it be their lot to be flung on the wide waste of waters without a "guiding star" above, or a rudder or compass within, how can *we* (the well-fed) *dare* to blame them because, wanting bread, they prey and live upon their fellow-creatures?

I say thus much, because I feel satisfied that a large portion of the street-folk—and especially those who have been *bred* to the business—

are of improvable natures; that they crave knowledge, as starving men for "the staff of life;" that they are most grateful for instruction; that they are as deeply moved by any kindness and sympathy (when once their suspicion has been overcome) as they are excited by any wrong or oppression—and I say it moreover, because I feel thoroughly convinced of the ineffectiveness of the present educational resources for the poor. We think, if we teach them reading and writing, and to chatter a creed, that we have armed them against the temptations, the trials, and the exasperations of life, believing, because we have put the knife and fork in their hands that we have really filled with food the empty bellies of their brains. We exercise their memories, make them human parrots, and then wonder that they do not act as human beings. The intellect, the conscience, the taste, indeed all that refines, enlightens, and ennobles our nature, we leave untouched, to shrivel and wither like unused limbs. The beautiful, the admirable, the true, the right, are as hidden to them as at their first day's schooling. We impress them with no purpose, animate them with no principle; they are still the same brute creatures of circumstances—the same passive instruments—human waifs and strays—left to be blown about as the storms of life may whirl them.

Of the second group, or those who *take* to the streets, I entertain very different opinions. This class is distinguished from that above mentioned, in being wanderers by choice, rather than wanderers by necessity. In the early chapters of this work, I strove to point out to my readers that the human race universally consisted of two distinct classes: the wanderers and the settlers—the civilized and the savage—those who *produced* their food, and those who merely *collected* it. I sought further to show, that these two classes were not necessarily isolated, but that, on the contrary, almost every civilized tribe had its nomadic race, like parasites, living upon it. These nomadic races I proved, moreover, to have several characteristics common to the class, one of the most remarkable of which was, their adoption of a *secret* language, with the intent of concealing their designs and exploits. "Strange to say," I then observed, "that despite its privations, dangers, and hardships, those who have once taken to a wandering life rarely abandon it. There are countless instances," I added, "of white men adopting all the usages of an Indian hunter; but there is not one example of the Indian hunter or trapper, adopting the steady and regular habits of civilized society." That this passion for "a roving life" (to use the common expression by which many of the street-people themselves designate it), is a marked feature of some natures, there cannot be a doubt in the mind of any one who has contemplated even the surface differences of human beings; and nevertheless it is a point to which no social philosopher has yet drawn attention. To my mind, it is essentially the *physical* cause of crime. Too restive and volatile to pursue the slow process of production, the wanderers, and consequently the *collectors*, of subsistence must (in a land where all things are appropriated) live upon the stock of the *producers*. The nomadic or vagrant class have all an universal type, whether they be the Bushmen of Africa or the "tramps" of our own country; and Mr. Knapp, the intelligent master of the Wandsworth and Clapham Union, to whom I was referred at the time of my investigations touching the subject of vagrancy, as having the greatest experience upon the matter, gave me the following graphic account, which, as I said at the time of its first publication, had perhaps never been surpassed as an analysis of the habits and propensities of the vagabond class:

"Ignorance," to use the gentleman's own words, "is certainly not their prevailing characteristic: indeed, with a few exceptions, it is the reverse. The vagrants are mostly distinguished by their aversion to continuous labour of any kind. He never knew them to work. Their great inclination is to be on the move, and wandering from place to place, and they appear to receive a great deal of pleasure from the assembly and conversation of the casual ward. They are physically stout and healthy, and certainly not emaciated or sickly. They belong especially to the able-bodied class, being, as he says, full of health and mischief. They are very stubborn and self-willed. They are a most difficult class to govern, and are especially restive under the least restraint; they can ill brook control, and they find great delight in thwarting the authorities. They are particularly fond of amusements of all kinds. He never knew them love reading. They mostly pass under fictitious names. They are particularly distinguished by their libidinous propensities. They are not remarkable for a love of drink. He considers them to be generally a class possessing the keenest intellect, and of a highly enterprising character. They seem to have no sense of danger, and to be especially delighted with such acts as involve any peril. They are likewise characterised by their exceeding love of mischief. They generally are of a most restless and volatile disposition. They have great quickness of perception, but little power of continuous attention or perseverance. They have a keen sense of the ridiculous, and are not devoid of deep feeling. In the summer they make regular tours through the country, visiting all places that they have not seen. They are perfectly organized, so that any regulation affecting their comforts or interests becomes known among the whole body in a remarkably short space of time."

Every day my inquiries add some fresh proof to the justice of the above enumeration of the several phenomena distinguishing this class. To the more sedate portion of the human family, the attractions of "a roving life" are inexplicable. Nevertheless, there can be no doubt that, to the more volatile, the mere muscular exercise

and the continual change of scene, together with the wild delight which attends the overcoming of any danger, are sources of pleasure sufficient to compensate for all the privations and hardships attending such a state of existence.

Mr. Ruxton, one of the many who have passed from settlers to wanderers, has given us the following description of the enjoyments of a life in the wilderness:

"Although liable to an accusation of barbarism, I must confess that the very happiest moments of my life have been spent in the wilderness of the Far West; and I never recall, but with pleasure, the remembrance of my solitary camp in the Bayou Solade, with no friend near me more faithful than my rifle, and no companions more sociable than my good horse and mules, or the attendant cayute which nightly serenaded us. Seldom did I ever wish to change such hours of freedom for all the luxuries of civilized life; and unnatural and extraordinary as it may appear, yet such is the fascination of the life of the mountain hunter, that I believe not one instance could be adduced of even the most polished and civilized of men, who had once tasted the sweets of its attendant liberty and freedom from every worldly care, not regretting the moment when he exchanged it for the monotonous life of the settlements, nor sighing and sighing again once more to partake of its pleasures and allurements."

To this class of voluntary wanderers belong those who *take* to the streets, glad to exchange the wearisomeness and restraint of a settled occupation for the greater freedom and license of a nomad mode of life. As a class, they are essentially the non-working, preferring, as I said before, to *collect*, rather than *produce*, what they eat. If they sell, they do so because for sundry reasons they fear to infringe the law, and as traders their transactions certainly are not marked by an excess of honesty. I am not aware that any of them are professional thieves (for these are the more daring portion of the same vagrant fraternity), though the majority assuredly are habitual cheats—delighting in proving their cleverness by imposing upon simple-minded citizens—viewing all society as composed of the same dishonest elements as their own tribes, and looking upon all sympathy and sacrifice, even when made for their own benefit, as some "artful dodge" or trick, by which to snare them.

It should be remembered, however, that there are many grades of vagrants among us, and that though they are all essentially non-producing and, consequently, predatory, still many are in no way distinguished from a large portion of even our wealthy tradesmen—our puffing grocers and slopsellers. To attempt to improve the condition of the voluntary street-sellers by teaching of any kind, would be to talk to the wind. We might as well preach to Messrs. Moses, Nicol, and Co., in the hope of Christianising them. Those who *take* to the streets are *not*, like those who are *bred* to it, an uneducated class. They are intelligent and "knowing" enough, and it is this development of their intellect at the expense of their conscience which gives rise to that excessive admiration of mere cleverness, which makes skill the sole standard of excellence with them. They approve, admire, venerate nothing but what is ingenious. Wrong with them is mere folly—right, cunning; and those who think the simple cultivation of the intellect the great social panacea of the time, have merely to study the characteristics of this class to see how a certain style of education can breed the very vice it seeks to destroy. Years ago, I wrote and printed the following passage, and every year since my studies have convinced me more and more of its truth:

"Man, if deprived of his intellect, would be the most miserable and destitute,—if of his sympathy, the most savage and cunning, of all the brute creation: consequently, we may infer that, according as solely the one or the other of these powers is expanded in us, so shall we approximate in our nature either to the instinct of the brute or to the artifice of the demon, and that only when they are developed in an equal degree, can Man be said to be educated as Man. We should remember that the intellect simply executes; it is either the selfish or moral propensity that designs. The intellectual principle enables us to perceive the means of attaining any particular object; it is the selfish or else the moral principle in us, that causes us originally to desire that object. The two latter principles are the springs, the former is merely the instrument of all human action. They are masters, whereas the intellect is but the servant of the will; and hence it is evident that in proportion as the one or the other of these two predominant principles—as either the selfish or the moral disposition is educed in man, and thus made the chief director and stimulus of the intellectual power within him, so will the cultivation of that power be the source of happiness or misery to himself and others."

The third and last class, namely, those who are *driven* to the streets, is almost as large as any. Luckily, those who *take* to that mode of life, are by far the least numerous portion of the street-folk; and if those who are bred to the business are worthy of our pity, assuredly those who are driven to it are equally, if not more, so. With some who are deprived of the means of obtaining a maintenance for themselves, the sale of small articles in the streets may, perhaps, be an excuse for begging; but in most cases, I am convinced it is adopted from a horror of the workhouse, and a disposition to do, at least, *something* for the food they eat. Often is it the last struggle of independence—the desire to give something like an equivalent for what they receive. Over and over again have I noticed this honourable pride, even in individuals who, from some privations or affliction that rendered them utterly incompetent to labour for their living, had a just claim on our sympathies and assistance. The blind—the cripple—the maimed—

the very old—the very young—all have generally adopted a street-life, because they could do nothing else. With many it is the last resort of all. The smallness of the stock-money required—for a shilling, it has been shown, is sufficient to commence several street-trades—is one of the principal causes of so many of those who are helpless taking to the street-traffic. Moreover, the severity of the Poor-laws and the degradation of pauperism, and the aversion to be thought a common beggar by all, except the very lowest, are, I have no doubt, strong incentives to this course. There are many callings which are peculiar, as being followed principally by the disabled. The majority of the blind are musicians, or boot-lace or tape-sellers. The very old are sellers of water-cresses, lucifers, pincushions, ballads, and pins and needles, stay-laces, and such small articles as are light to carry, and require but a few pence for the outlay. The very young are sellers of flowers, oranges, nuts, onions, blacking, lucifers, and the like. Many of those who have lost an arm, or a leg, or a hand, turn showmen, or become sellers of small metal articles, as knives or nutmeg-graters; and many who have been born cripples may be seen in the streets struggling for self-support. But all who are *driven* to the streets have not been physically *disabled* for labour. Some have been *reduced* from their position as tradesmen or shopmen; others, again, have been gentlemen's servants and clerks; all, dragged down by a series of misfortunes, sometimes beyond their control, and sometimes brought about by their own imprudence or sluggishness. As we have seen, many are reduced to a state of poverty by long illness, and on their recovery are unable, from want of clothes or friends, to follow any other occupation.

But a still larger class than all, are the beaten-out mechanics and artizans, who, from want of employment in their own trade, take to make up small things (as clothes-horses, tin-ware, cutlery, brushes, pails, caps, and bonnets) on their own account. The number of artizans in the London streets speaks volumes for the independence of the working-men of this country; as well as for the difficulty of their obtaining employment at their own trades. Those who are unacquainted with the sterling pride of the destitute English mechanic, know not what he will suffer before becoming an inmate of a workhouse, or sinking to the debasement of a beggar. That handicraftsmen do occasionally pass into "lurkers" I know well; but these, I am convinced, have gradually been warped to the life by a long course of tramping, aided by the funds of their societies, and thus becoming disused to labour, have, after forfeiting all claims upon the funds of their trade, adopted beggary as a means of subsistence. But, that this is the exception rather than the rule, the following is sufficient to show:

"The destitute mechanics," said the Master of the Wandsworth and Clapham Union to me, "are entirely a different class from the regular vagrants; they have different habits, and indeed different features. During the whole of my experience I never knew a distressed artizan who applied for a night's shelter, commit an act of theft; and I have seen them," he added, "in the last stage of destitution. Occasionally they have sold the shirt and waistcoat off their backs before they applied for admittance into the workhouse, while some of them have been so weak from long starvation that they could scarcely reach the gate, and indeed had to be kept for several days in the Infirmary before their strength was recruited sufficiently to continue their journey." "The poor mechanic," said another of my informants, "will sit in the casual ward like a lost man, scared. Its shocking to think a decent mechanic's houseless. When he's beat out he's like a bird out of a cage; he doesn't know where to go, or how to get a bit."

I shall avail myself of another occasion to discuss the means of improving the condition of the street-people.

OF THE STREET-SELLERS OF MANUFACTURED ARTICLES.

These traders consist of: (1) The vendors of metal articles; (2) Of chemical articles; (3) Of China, glass, and stone articles; (4) Of linen, cotton, and other textile fabrics; and (5) Of miscellaneous articles. In this classification I do not include second-hand articles, nor yet the traffic of those who make the articles they sell, and who are indeed street-artizans rather than street-sellers.

Under the first head are included, the vendors of razors, table and penknives, tea-trays, dog-collars, key-rings, articles of hardware, small coins and medals, pins and needles, jewellery, snuffers, candlesticks, articles of tin-ware, tools, card-counters, herring-toasters, trivets, gridirons, pans, tray-stands (as in the roasting of meat), and Dutch ovens.

Of the second description are the vendors of blacking, black-lead, lucifer matches, corn-salves, grease-removing compositions, china and glass cements, plating-balls, rat and beetle poisons, crackers, detonating-balls, and cigar-lights.

Under the third head come all street-sold articles of China, glass, or stone manufacture, including not only "crockery," but vases, chimney-ornaments, and stone fruit.

The fourth head presents the street-vending of cotton, silken, and linen-manufactures; such as sheetings, shirtings, a variety of laces, sew-

Original from HARVARD UNIVERSITY

ing cotton, threads and tapes, articles of haberdashery and of millinery, artificial flowers, handkerchiefs, and pretended smuggled goods.

Among the fifth class, or the "miscellaneous" street-sellers, are those who vend cigars, pipes, tobacco and snuff-boxes and cigar-cases, accordions, spectacles, hats, sponge, combs and hair-brushes, shirt-buttons and coat-studs, "lots," rhubarb, wash-leather, paper-hangings, dolls, Bristol and other toys, saw-dust, fire-wood, and pin-cushions.

There are many other manufactured articles sold in the streets, but their description will be more proper under the head of Street Artisans.

The street-sellers of manufactured articles present, as a body, so many and often such varying characteristics, that I cannot offer to give a description of them as a whole, as I have been able to do with other and less diversified classes.

Among them are several distinct and peculiar street-characters, such as the pack-men, who carry their cotton or linen goods in packs on their backs, and are all itinerants. Then there are duffers, who vend pretended smuggled goods, handkerchiefs, silks, tobacco or cigars; also, the sellers of sham sovereigns and sham gold rings for wagers. The crockery-ware and glass-sellers (known in the street-trade as "crocks"), are peculiar from their principle of *bartering*. They will sell to any one, but they *sell* very rarely, and always clamour in preference for an exchange of their wares for wearing-apparel of any kind. They state, if questioned, that their reason for doing this is—at least I heard the statement from some of the most intelligent among them—that they do so because, if they "sold outright," they required a hawker's license, and could not sell or "swop" so cheap.

Some of the street-sellers of manufactured articles are also patterers. Among these are the "cheap Jacks," or "cheap Johns;" the grease and stain removers; the corn-salve and plate-ball vendors; the sellers of sovereigns and rings for wagers; a portion of the lot-sellers; and the men who vend poison for vermin and go about the streets with live rats clinging to, or running about, their persons.

This class of street-sellers also includes many of the very old and the very young; the diseased, crippled, maimed, and blind. These poor creatures sell, and sometimes obtain a charitable penny, by offering to sell such things as boxes of lucifer-matches; cakes of blacking; boot, stay, and other laces; pins, and sewing and knitting-needles; tapes; cotton-bobbins; garters; pincushions; combs; nutmeg-graters; metal skewers and meat-hooks; hooks and eyes; and shirt-buttons.

The rest of the class may be described as merely street-sellers; toiling, struggling, plodding, itinerant tradesmen.

Of the Street-sellers of Manufactured Articles in Metal.

These street-sellers are less numerous than might be imagined, when—according to my present division—the class is confined to the sellers of articles which they do not manufacture. The metal wares thus sold I have already enumerated, and I have now to describe the characteristics of the sellers.

The result of my inquiries leads me to the conclusion, that the street-vendors of any article which is the product of the skill of the handicraftsman, have been, almost always, in their first outset in a street life, connected in some capacity or other with the trade, the manufactures of which they vend.

One elderly man, long familiar with this branch of the street-trade, expressed to me his conviction that when a mechanic sought his livelihood in the streets, he naturally "gave his mind to sell what he understood. Now, in my own case," continued my informant, "I was born and bred a tinman, and when I was driven to a street-life, I never thought of selling anything but tins. How could I, if I wished to do the thing square and proper?—it would be like trying to speak another language. If I'd started on slippers—and I knew a poor man who was set up in the streets by a charitable lady on a stock of gentlemen's slippers—what could I have done? Why, no better than he told me he did. He was a potter down at Deptford, and knew of nothing but flower-pots, and honey-jars for grocers, and them red sorts of pottery. Poor fellow, he might have died of hunger, only the cholera came quickest. But when I'm questioned about my tins, I'm my own man; and it's a great thing, I'm satisfied, in a street-trade, when there's so many cheap shops, and the police and all again you, to understand the goods you're talking about."

This statement, I may repeat, is undoubtedly correct, so far as that a "beaten-out" mechanic, when driven to the streets, in the first instance offers to the public wares of which he understands the value and quality. Afterwards, in the experience or vagaries of a street-life, other commodities may be, or may appear to be, more remunerative, and for such the mechanic may relinquish his first articles of street-traffic. "Why, sir," I was told, "there was one man who left razors for cabbages; 'cause one day a costermonger wot lived in the same house with him and was taken ill, asked him to go out with a barrow of summer cabbages—the costermonger's boy went with him—and they went off so well that Joe [the former razor-seller] managed to start in the costering line, he was so encouraged."

The street-trade in metal manufactured articles is principally itinerant. Perhaps during the week upwards of three-fourths of those carrying it on are itinerant, while on a Saturday night, perhaps, all are stationary, and almost always in the street-markets. The itinerant

trade is carried on, and chiefly in the suburbs, by men, women, and children; but the children are always, or almost always, the offspring of the adult street-sellers.

The metal sold in the street may be divided into street-hardware, street-tinware, and street-jewellery. I shall begin with the former.

The street-sellers of hardware are, I am assured, in number about 100, including single men and families; for women "take their share" in the business, and children sell smaller things, such as snuffers or bread-baskets. The people pursuing the trade are of the class I have above described, with the exception of some ten or twelve who formerly made a living as servants to the gaming-booths at Epsom, Ascot, &c., &c., and "managed to live out of the races, somehow, most of the year;" since the gaming-booths have been disallowed, they have "taken to the street hardware."

All these street-sellers obtain their supplies at "the swag-shops;" of which I shall speak hereafter. The main articles of their trade are tea-boards, waiters, snuffers, candlesticks, bread-baskets, cheese-trays, Britannia metal tea-pots and spoons, iron kettles, pans, and coffee-pots. The most saleable things, I am told by a man who has been fifteen years in this and similar street trades, are at present 18-in. tea-boards, bought at "the swags" at from 10*s.* 6*d.* a doz., to 4*s.* each; 24-in. boards, from 20*s.* the doz. to 5*s.* each; bread-baskets, 4*s.* 6*d.* the doz.; and Britannia metal tea-pots, 10*s.* the doz. These tea-pots have generally what is called "loaded bottoms;" the lower part of the vessel is "filled with composition, so as to look as if there was great weight of metal, and as if the pot would melt for almost the 18*d.* which is asked for it, and very often got."

I learned from the same man, however, and from others in the trade, that it is far more difficult now than it was a few years ago, to sell "rubbish." There used to be also, but not within these six or eight years, a tolerable profit realised by the street-sellers of hardware in the way of "swop." It was common to take an old metal article, as part payment for a new one; and if the old article were of good quality, it was polished and tinkered up for sale in the Saturday evening street-markets, and often "went off well." This traffic, however, has almost ceased to exist, as regards the street-sellers of hardware, and has been all but monopolised by the men who barter "crocks" for wearing-apparel, or any old metal. Some hardware-men who have become well known on their "rounds"—for the principal trade is in the suburbs —sell very good wares, and at moderate profits.

"It's a poor trade, sir, is the hardware," said one man carrying it on, "and street trades are mostly poor trades, for I've tried many a one of them. I was brought up a clown, I may say; my father died when I was a child, and I might have been a clown still but for an accident (a rupture). That's long ago,—I can't say how long; but I know that before I was fifteen, I many a time wished I was dead, and I have many a time since. Why the day before yesterday, from 9 in the morning to 11 at night, I didn't take a farthing. Some days I don't earn 1*s.*, and I have a mother depending upon me who can do little or nothing. I'm a teetotaller; if I wasn't we shouldn't have a meal a day. I never was fond of drink, and if I'm ever so weary and out of sorts, and worried for a meal's meat, I can't say I ever long for a drop to cheer me up. Sometimes I can't get coffee, let alone anything else. O, I suffer terribly. Day after day I get wet through, and have nothing to take home to my mother at last. Our principal food is bread and butter, and tea. Not fish half so often as many poor people. I suppose, because we don't care for it. I know that our living, the two of us, stands to less than 1*s.* a day,—not 6*d.* a piece. Then I have two rents to pay. No, sir, not for two places; but I pay 2*s.* a week for a room, a tidy bit of a chamber, furnished, and 1*s.* a week rent, —I call it rent, for a loan of 5*s.* I've paid 1*s.* a week for four weeks on it, and must keep paying until I can hand over the 5*s.*, with 1*s.* for rent added to it, all in one sum. If I could tip up the 5*s.* the day after I'd paid the last week's 1*s.*, I must pay another shilling. The man who lends does nothing else; he lives by lending, and by letting out a few barrows to costermongers, and other street-people. I wish I could take a farewell sight of them."

The principal traffic carried on by these street-sellers is in the suburbs. Women constitute their sole customers, or nearly so. Their profits fluctuate from 20 per cent. to 100 per cent. The bread-baskets, which they buy at 4*s.* 6*d.* the doz., they retail at 6*d.* each; for it is very difficult, I have frequently been told, to get a price between 6*d.* and 1*s.* This, however, relates only to those things which are not articles of actual necessity. Half of these street-sellers, I am assured, take on an average from 20*s.* to 25*s.* weekly the year through; a quarter take 15*s.*, and the remaining quarter from 7*s.* 6*d.* to 10*s.* Calculating an average taking of 15*s.* each per week, throughout the entire class, men, women, and children, we find 780*l.* expended in street-sold hardwares. Ten years ago, I am told, the takings were not less than 2,000*l.*

The following is an extract from accounts kept, not long ago, by a street-seller of hardware. His principal sale was snuffers, knives and forks, iron candlesticks, padlocks, and bed-screws. His stock cost him 35*s.* on the Monday morning, and his first week was his *best*, which I here subjoin:

	Receipts.	Profits.
Monday	8*s.*	3*s.* 0*d.*
Tuesday	5	2 3
Wednesday	4	1 6
Thursday (always a slack day)	3	——
Friday (a better day about the docks, when people are paid)	7	3 0
Saturday Morning and Even.	23	6 1
	50	15 10

Of the Cheap Johns, or Street Han-sellers.

This class of street-salesmen, who are perhaps the largest dealers of all in hardware, are not so numerous as they were some few years ago—the Excise Laws, as I have before remarked, having interfered with their business. The principal portion of those I have met are Irishmen, who, notwithstanding, generally "hail" from Sheffield, and all their sales are effected in an attempt at the Yorkshire dialect, interspersed, however, with an unmistakeable brogue. The brogue is the more apparent when cheap John gets a little out of temper—if his sales are flat, for instance, he'll say, "By J—s, I don't belaive you've any money with you, or that you've lift any at home, at all, at all. Bad cess to you!"

There are, however, many English cheap Johns, but few of them are natives of Sheffield or Birmingham, from which towns they invariably "hail." Their system of selling is to attract a crowd of persons by an harangue after the following fashion: "Here I am, the original cheap John from Sheffield. I've not come here to get money; not I; I've come here merely for the good of the public, and to let you see how you've been imposed upon by a parcel of pompous shopkeepers, who are not content with less than 100 per cent. for rubbish. They got up a petition—which I haven't time to read to you just now—offering me a large sum of money to keep away from here. But no, I had too much friendship for you to consent, and here I am, cheap John, born without a shirt, one day while my mother was out, in a haystack; consequently I've no parish, for the cows eat up mine, and therefore I've never no fear of going to the workhouse. I've more money than the parson of the parish—I've in this cart a cargo of useful and cheap goods; can supply you with anything, from a needle to an anchor. Nobody *can* sell as cheap as me, seeing that I gets all my goods upon credit, and never means to pay for them. Now then, what shall we begin with? Here's a beautiful guard-chain; if it isn't silver, it's the same colour—I don't say it isn't silver, nor I don't say it is—in that affair use your own judgment. Now, in the reg'lar way of trade, you shall go into any shop in town, and they will ask you 1*l.* 18*s.* 6*d.* for an article not half so good, so what will you say for this splendid chain? Eighteen and sixpence without the pound? What, that's too much! Well, then say 17, 16, 15, 14, 13, 12, 11, 10 shillings; what, none of you give ten shillings for this beautiful article? See how it improves a man's appearance" (hanging the chain round his neck). "Any young man here present wearing this chain will always be shown into the parlour instead of the tap-room; into the best pew in church, when he and—but the advantages the purchaser of this chain will possess I haven't time to tell. What! no buyers? Why, what's the matter with ye? Have you no money, or no brains? But I'll ruin myself for your sakes. Say 9*s.* for this splendid piece of jewellery—8, 7, 6, 5, 4, 3, 2, 1—a shilling, will anybody give a shilling? Well, here 11*d.*, 10*d.*, 9*d.*, 8*d.*, 7*d.*, 6½*d.*, 6*d.*! Is there ever a buyer at sixpence? Now I'll ask no more and I'll take no less; sell it or never sell it." The concluding words are spoken with peculiar emphasis, and after saying them the cheap John never takes any lower sum. A customer perhaps is soon obtained for the guard-chain, and then the vendor elevates his voice: "Sold to a very respectable gentleman, with his mouth between his nose and chin, a most remarkable circumstance. I believe I've just one more—this is better than the last; I must have a shilling for this. Sixpence? To you, sir. Sold again, to a gentleman worth 30,000*l.* a year; only the right owner keeps him out of it. I believe I've just one more; yes, here it is; it's brighterer, longerer, strongerer, and betterer than the last. I must have at least tenpence for this. Well then, 9, 8, 7, 6; take this one for a sixpence. Sold again, to a gentleman, his father's pet and his mother's joy. Pray, sir, does your mother know you're out? Well, I don't think I've any more, but I'll look; yes, here is *one* more. Now this is better than all the rest. Sold again, to a most respectable gentleman, whose mother keeps a chandler's shop, and whose father turns the mangle." In this manner the cheap John continues to sell his guard-chain, until he has drained his last customer for that particular commodity. He has always his remark to make relative to the purchaser. The cheap John always takes care to receive payment before he hazards his jokes, which I need scarcely remark are ready made, and most of them ancient and worn threadbare, the joint property of the whole fraternity of cheap Johns. After supplying his audience with one particular article, he introduces another: "Here is a carving-knife and fork, none of your wasters, capital buck-horn handle, manufactured of the best steel, in a regular workmanlike manner; fit for carving in the best style, from a sparrow to a bullock. I don't ask 7*s.* 6*d.* for this—although go over to Mr. ——, the ironmonger, and he will have the impudence to ask you 15*s.* for a worse article." (The cheap Johns always make comparisons as to their own prices and the shopkeepers, and sometimes mention their names.) "I say 5*s.*

for the carving-knife and fork. Why, it's an article that'll almost fill your children's bellies by looking at it, and will always make 1 lb. of beef go as far as 6 lb. carved by any other knife and fork. Well, 4*s*., 3*s*., 2*s*., 1*s*. 11*d*., 1*s*. 10*d*., 1*s*. 9*d*., 1*s*. 8*d*., 1*s*. 7*d*., 18*d*. I ask no more, nor I'll take no less." The salesman throughout his variety of articles indulges in the same jokes, and holds out the same inducements. I give a few.

"*This* is the original teapot" (producing one), "formerly invented by the Chinese; the first that ever was imported by those celebrated people—only two of them came over in three ships. If I do not sell this to-day, I intend presenting it to the British Museum or the Great Exhibition. It is mostly used for making tea,—sometimes by ladies, for keeping a little drop on the sly; it is an article constructed upon scientific principles, considered to require a lesser quantity of tea to manufacture the largest quantity of tea-water, than any other teapot now in use—largely patronised by the tea-totallers. Now, here's a fine pair of bellows! Any of you want to raise the wind? This is a capital opportunity, if you'll try. I'll tell you *how*; buy these of me for 3*s*. 6*d*., and go and pawn them for 7*s*. Will you buy 'em, sir? No! well, then, you be blowed! Let's see—I said 3*s*. 6*d*.; it's too little, but as I have said it, they must go; well—3*s*.," &c. &c. "Capital article to chastise the children or a drunken husband. Well, take 'em for 1*s*.—I ask no more, and I'll take no less."

These men have several articles which they sell singly, such as tea-trays, copper kettles, fire-irons, guns, whips, to all of which they have some preamble; but their most attractive lot is a heap of miscellaneous articles:—"I have here a pair of scissors; I only want half-a-crown for them. What! you won't give 1*s*.? well, I'll add something else. Here's a most useful article—a knife with eight blades, and there's not a blade among you all that's more highly polished. This knife's a case of instruments in addition to the blades; here's a cork-screw, a button-hook, a file, and a picker. For this capital knife and first-rate pair of scissors I ask 1*s*. Well, well, you've no more conscience than a lawyer; here's something else—a pocket-book. This book no gentleman should be without; it contains a diary for every day in the week, an almanack, a ready-reckoner, a tablet for your own memorandums, pockets to keep your papers, and a splendid pencil with a silver top. No buyers! I'm astonished; but I'll add another article. Here's a pocket-comb. No young man with any sense of decency should be without a pocket-comb. What looks worse than to see a man's head in an uproar? Some of you look as if your hair hadn't seen a comb for years. Surely I shall get a customer now. What! no buyers—well I never! Here, I'll add half-a-dozen of the very best Britannia metal tea-spoons, and if you don't buy, you must be spoons yourselves. Why, you perfectly astonish me! I really believe if I was to offer all in the shop, myself included, I should not draw 1*s*. out of you. Well, I'll try again. Here, I'll add a dozen of black-lead pencils. Now, then, look at these articles"—(he spreads them out, holding them between his fingers to the best advantage)—"here's a pair of first-rate scissors, that will almost cut of themselves,—this valuable knife, which comprises within itself almost a chest of tools,—a splendid pocket-book, which must add to the respectability and consequence of any man who wears it,—a pocket-comb which possesses the peculiar property of making the hair curl, and dyeing it any colour you wish,—a half-dozen spoons, nothing inferior to silver, and that do not require half the usual quantity of sugar to sweeten your tea,—and a dozen beautiful pencils, at least worth the money I ask for the whole lot. Now, a reasonable price for these articles would be at least 10*s*. 6*d*.; I'll sell them for 1*s*. I ask no more, I'll take no less. Sold again!"

The opposition these men display to each other, while pursuing their business, is mostly assumed, for the purpose of attracting a crowd. Sometimes, when in earnest, their language is disgusting; and I have seen them, (says an informant), after selling, try and settle their differences with a game at fisticuffs: but this occurred but seldom. One of these men had a wife who used to sell for him,—she was considered to be the best "chaffer" on the road; not one of them could stand against her tongue: but her language abounded with obscenity. All the "cheap Johns" were afraid of her.

They never under-sell each other (unless they get in a real passion); this but seldom happens, but when it does they are exceedingly bitter against each other. I cannot state the language they use, further than that it reaches the very summit of blackguardism. They have, however, assumed quarrels, for the purpose of holding a crowd together, and chaff goes round, intended to amuse their expected customers.

"He's coming your way to-morrow," they'll say one of the other, "mind and don't hang your husbands' shirts to dry, ladies, he's very lucky at finding things before they're lost; he sells very cheap, no doubt—but mind, if you handle any of his wares, he don't make you a present of a Scotch fiddle for nothing. His hair looks as if it had been cut with a knife and fork."

The Irishmen, in these displays, generally have the best of it; indeed, most of their jokes have originated with the Irishmen, who complain of the piracies of other "cheap Johns," for as soon as the joke is uttered it is the property of the commonwealth, and not unfrequently used against the inventor half an hour after its first appearance.

A few of them are not over particular as to the respectability of their transactions. I recollect one purchasing a brick at Sheffield; the brick was packed up in paper, with a knife tied on the outside, it appeared like a package of

HARVARD UNIVERSITY

knives, containing several dozens. The "cheap John" made out that he bought them as stolen property; the biter was deservedly bitten. A few of the fraternity are well-known "Fences," and some of them pursue the double calling of "cheap John" and gambler—keeping gambling tables at races. However the majority are hard-working men, who unite untiring industry with the most indomitable perseverance, for the laudable purpose of bettering their condition.

I believe the most successful in the line have worked their way up from nothing, gaining experience as they proceeded. I have known two or three start the trade with plenty of stock, but, wanting the tact, they have soon been knocked off the road. There is a great deal of judgment required in knowing the best fairs, and even when there, as to getting a good stand; and these matters are to be acquired only by practice.

In the provinces, and in Scotland, there may be 100 "cheap Johns," or, as they term themselves, "Han-sellers." They are generally a most persevering body of men, and have frequently risen from small hawkers of belts, braces, &c. Their receipts are from *5l.* to *30l.* per day, their profits from 20 to 25 per cent.; *20l.* is considered a good day's work; and they can take about three fairs a week during the summer months. "I have known many of these men," a man well acquainted with them informs me, "who would walk 20 miles to a fair during the night, hawk the public-houses the whole of the day, and start again all night for a fair to be held 20 miles off upon the following day. I knew two Irish lads, named ——, and I watched their progress with some interest. Each had a stock of goods worth a few shillings; and now each has a wholesale warehouse,—one at Sheffield, in the cutlery line, and the other at Birmingham, in general wares."

The goods the han-seller disposes of are mostly purchased at Sheffield and Birmingham. They purchase the cheapest goods they can obtain. Many of the han-sellers have settled in various parts of England as "swag-shop keepers." There are two or three in London, I am told, who have done so; one in the Kent-road, a large concern, —the others I am not aware of their locality. Their mode of living while travelling is rather peculiar. Those who have their caravans, sleep in them, some with their wives and families; they have a man, or more generally a boy, to look after the horse, and other drudgery, and sometimes at a fair, to hawk, or act as a *button* (a *decoy*), to purchase the first lot of goods put up. This boy is accommodated with a bed made between the wheels of the cart or wagon, with some old canvas hung round to keep the weather out—not the most comfortable quarters, perhaps, —but, as they say, "it's nothing when you're used to it." The packing-up occurs when there's no more chance of effecting sales; the horse is put to, and the caravan proceeds on the road towards the next town intended to visit. After a sufficient days' travel, the "cheap John" looks out for a spot to encamp for the night. A clear stream of water, and provender for the horse, are indispensable; or perhaps the han-seller has visited that part before, and is aware of the halting-place. After having released the horse, and secured his fore-feet, so that he cannot stray, the next process is to look for some *crack* (some dry wood to light a fire); this is the boy's work. He is told not to despoil hedges, or damage fences: "cheap John" doesn't wish to offend the farmers; and during his temporary sojourn in the green lanes, he frequently has some friendly chat with the yeomen and their servants, sometimes disposes of goods, and often barters for a piece of fat bacon or potatoes. A fire is lighted between the shafts of the cart, —a stick placed across, upon which is suspended the cookery utensil. When the meal is concluded, the parties retire to bed,—the master within the caravan, and the boy to his chamber between the wheels. Sometimes they breakfast before they proceed on their journey; at other times they travel a few miles first.

Those who have children bring them up in such a manner as may be imagined considering their itinerant life: but there are very few who have families travelling with them; though in most cases a wife; generally the children of the "cheap John" are stationary, either out at nurse or with relatives.

Some of the "cheap Johns" have wagons upon four wheels, others have carts; but both are fitted up with a wooden roof. The proprietor invariably sleeps within his portable house, both for the protection of his property and also upon the score of economy. The vans with four wheels answer all the purposes of a habitation. The furniture consists of a bed placed upon boxes, containing the stock in trade. The bed extends the whole width of the vehicle, about 6 ft. 6 in., and many generally extend about 5 ft. into the body of the van, and occupies the farthest end of the machine from the door,— which door opens out upon the horse. The four-wheeled vans are 12 ft. long, and the two-wheeled carts 9 ft. During business hours the whole of the articles most likely to be wanted are spread out upon the bed, and the assistant (either the wife or a boy) hands them out as the salesman may require them. The furniture, in addition to the bed, is very scarce; indeed they are very much averse to carry more than is really necessary. The pail, the horse takes his corn and beans from (I don't know why, but they never use nose-bags,) serves the purpose of a wash-hand basin or a washing-tub. It is generally painted the same colour as the van, with the initials of the proprietor painted upon it, and, when travelling, hangs upon a hook under the machine. They mostly begin with a two-wheeled machine, and if successful a four-wheeler follows. The tables and chairs are the boxes in which the goods are packed. A tea-kettle and saucepan, and as few delf articles as possible, and corner-cupboard, and these comprise the whole of the furniture of the van.

In the four-wheeled wagons there is always a fire-place similar to those the captains of ships have in their cabins, but in the two-wheeled carts fire-places are dispensed with. These are mostly brass ones, and are kept very bright; for the "cheap Johns" are proud of their van and its contents. They are always gaudily painted, sometimes expensively; indeed they are most expensive articles, and cost from 80*l.* to 120*l.* The principal person for making these machines is a Mr. Davidson of Leeds. The showman's caravans are still more expensive; the last purchased by the late Mr. Wombwell cost more than 300*l.*, and is really a curiosity. He termed it, as all showmen do—the living wagon; viz. to live in—it has parlour and kitchen, and is fitted up most handsomely; its exterior presents the appearance of a first-class railway-carriage. The front exterior of the van during the trading operations of the "cheap Johns," is hung round with guns, saws, tea-trays, bridles, whips, centre-bits, and other articles, displayed to the best advantage. The name of the proprietor is always prominently displayed along the whole side of the vehicle, added to which is a signification that he is a wholesale hardwareman, from Sheffield, Yorkshire, or Birmingham, Warwickshire, and sometimes an extra announcement.

"*The original cheap John.*"

I do not know any class of men who are more fond of the good things of this life than "cheap John;" his dinner, during a fair, is generally eaten upon the platform outside his van, where he disposes of his wares, and invariably consists of a joint of baked meat and potatoes—that is where they can get a dinner baked. As little time as possible is occupied in eating, especially if trade is good. At a hill fair (that is where the fair is held upon a hill away from a town), a fire is made behind the cart, the pot is suspended upon three sticks, and dinner prepared in the usual camp fashion. The wife or boy superintends this. Tea and coffee also generally find their way to their table; and if there's no cold meat a plentiful supply of bacon, beef-steaks, eggs, or something in the shape of a relish, seem to be with "cheap John" indispensable. His man or boy (if John is unmarried) appears to be upon an equality with the master in the eating department; he is not allowanced, neither has he to wait until his superior has finished. Get it over as quick as you can seems to be the chief object. Perhaps from the circumstance of their selling guns, and consequently always having such implements in their possession, these men, when they have time on their hands, are fond of the sports of the field, and many a hare finds its way into the camp-kettle of "cheap John." I need not say that they practise this sport with but little respectful feeling towards the Game-laws; but they are careful when indulging in such amusement, and I never heard of one getting into a hobble.

During the winter (since the "cheap John" has been obliged to become a licensed auctioneer), some of them take shops and sell their goods by auction, or get up mock-auctions. I have been told by them that sometimes its a better game than "han-selling."

The commencement of the "cheap John's" season is at Lynn in Norfolk; there is a mart there commencing 14th February, it continues fourteen days. After this, there is Wisbeach, Spalding, Grantham, and other marts in Norfolk and Lincolnshire; which bring them up to Easter. At Easter there are many fairs—Manchester, Knott Mill, Blackburn, Darlington, Newcastle, &c., &c. The "cheap Johns" then disperse themselves through different parts of the country. Hill-fairs are considered the best; that is cattle-fairs, where there are plenty of farmers and country people. Hirings for servants are next to them. It may appear curious, but Sheffield and Birmingham fairs are two of the best for the "cheap John's" business in England. There are two fairs at each place during the year. Sheffield, at Whitsuntide and November; Birmingham, Whitsuntide and September. Nottingham, Derby, Leeds, Newcastle, Bristol, Glasgow—in fact, where the greatest population is, the chances for business are considered the best, and if I may judge from the number of traders in this line, who attend the largest towns, I should say they succeed better than in smaller towns.

If we calculate that there are 100 "cheap Johns" in London and in the country, and they are more or less itinerant, and that they each take 4*l.* per day for nine months in the year, or 24*l.* per week; this amounts to 2,400*l.* per week, or about 90,000*l.* in nine months. Supposing their profits to be 20 per cent., it would leave 18,000*l.* clear income. Say that during the winter there are seventy-five following the business, and that their receipts amount to 15*l.* each per week, this amounts to 3,500*l.* additional; and, at the rate of 20 per cent. profit, comes to 700*l.*,—making throughout the year the profits of the 100 "cheap Johns" 25,000*l.*, or 250*l.* a man.

The "cheap Johns" seldom frequent the crowded thoroughfares of London. Their usual pitches in the metropolis are, King's-cross, St. George's-in-the-East, Stepney, round about the London Docks, Paddington, Kennington, and such like places.

The Crippled Street-seller of Nutmeg-graters.

I now give an example of one of the classes *driven* to the streets by utter inability to labour. I have already spoken of the sterling independence of some of these men possessing the strongest claims to our sympathy and charity, and yet preferring to *sell* rather than *beg*. As I said before, many ingrained beggars certainly use the street *trade* as a cloak for alms-seeking, but as certainly many more, with every title to our assistance, use it as a means of redemption from

beggary. That the nutmeg-grater seller is a noble example of the latter class, I have not the least doubt. I have made all due inquiries to satisfy myself as to his worthiness, and I feel convinced that when the reader looks at the portrait here given, and observes how utterly helpless the poor fellow is, and then reads the following plain unvarnished tale, he will marvel like me, not only at the fortitude which could sustain him under all his heavy afflictions, but at the resignation (not to say philosophy) with which he bears them every one. His struggles to earn his own living (notwithstanding his physical incapacity even to put the victuals to his mouth after he has earned them), are instances of a nobility of pride that are I believe without a parallel. The poor creature's legs and arms are completely withered; indeed he is scarcely more than head and trunk. His thigh is hardly thicker than a child's wrist. His hands are bent inward from contraction of the sinews, the fingers being curled up and almost as thin as the claws of a bird's foot He is unable even to stand, and cannot move from place to place but on his knees, which are shod with leather caps, like the heels of a clog, strapped round the joint; the soles of his boots are on the *upper* leathers, that being the part always turned towards the ground while he is crawling along. His countenance is rather handsome than otherwise; the intelligence indicated by his ample forehead is fully borne out by the testimony as to his sagacity in his business, and the mild expression of his eye by the statements as to his feeling for all others in affliction.

"I sell nutmeg-graters and funnels," said the cripple to me; "I sell them at 1*d*. and 1½*d*. a piece. I get mine of the man in whose house I live. He is a tinman, and makes for the street-trade and shops and all. I pay 7*d*. a dozen for them, and I get 12*d*. or 18*d*. a dozen, if I can when I sell them, but I mostly get only a penny a piece—it's quite a chance if I have a customer at 1½*d*. Some days I sell only three—some days not one—though I'm out from ten o'clock till six. The most I ever took was 3*s*. 6*d*. in a day. Some weeks I hardly clear my expenses—and they're between 7*s*. and 8*s*. a week; for not being able to dress and ondress myself, I'm obligated to pay some one to do it for me—I think I don't clear more than 7*s*. a week take one week with another. When I don't make that much, I go without—sometimes friends who are kind to me give me a trifle, or else I should starve. As near as I can judge, I *take* about 15*s*. a week, and out of that I clear about 6*s*. or 7*s*. I pay for my meals as I have them—3*d*. or 4*d*. a meal. I pay every night for my lodging as I go in, if I can; but if not my landlady lets it run a night or two. I give her 1*s*. a week for my washing and looking after me, and 1*s*. 6*d*. for my lodging. When I do very well I have three meals a day, but it's oftener only two—breakfast and supper—unless of Sunday. On a wet day when I can't get out, I often go without food. I may have a bit of bread and butter give me, but that's all—then I lie a-bed. I feel miserable enough when I see the rain come down of a week day, I can tell you. Ah, it *is* very miserable indeed lying in bed all day, and in a lonely room, without perhaps a person to come near one—helpless as I am—and hear the rain beat against the windows, and all that without nothing to put in your lips. I've done *that* over and over again where I lived before; but where I am now I'm more comfortable like. My breakfast is mostly bread and butter and tea; and my supper, bread and butter and tea with a bit of fish, or a small bit of meat. What my landlord and landlady has I share with them. I never break my fast from the time I go out in the morning till I come home—unless it is a halfpenny orange I buy in the street; I do that when I feel faint. I have only been selling in the streets since this last winter. I was in the workhouse with a fever all the summer. I was destitute afterwards, and obliged to begin selling in the streets. The Guardians gave me 5*s*. to get stock. I had always dealt in tin ware, so I knew where to go to buy my things. It's very hard work indeed is street-selling for such as me. I can't walk no distance. I suffer a great deal of pains in my back and knees. Sometimes I go in a barrow, when I'm travelling any great way. When I go only a short way I crawl along on my knees and toes. The most I've ever crawled is two miles. When I get home afterwards, I'm in great pain. My knees swell dreadfully, and they're all covered with blisters, and my toes ache awful. I've corns all on top of them.

"Often after I've been walking, my limbs and back ache so badly that I can get no sleep. Across my lines it feels as if I'd got some great weight, and my knees are in a heat, and throb, and feel as if a knife was running into them. When I go up-stairs I have to crawl upon the back of my hands and my knees. I can't lift nothing to my mouth. The sinews of my hands is all contracted. I am obliged to have things held to my lipe for me to drink, like a child. I *can* use a knife and fork by leaning my arm on the table and then stooping my head to it. I can't wash nor ondress myself. Sometimes I think of my helplessness a great deal. The thoughts of it used to throw me into fits at one time—very bad. It's the Almighty's will that I am so, and I must abide by it. People says, as they passes me in the streets, 'Poor fellow, it's a shocking thing;' but very seldom they does any more than pity me; some lays out a halfpenny or a penny with me, but the most of 'em goes on about their business. Persons looks at me a good bit when I go into a strange place. I *do* feel it very much, that I haven't the power to get my living or to do a thing for myself, but I never begged for nothing. I'd sooner starve than I'd do that. I never thought that people whom God had given the power to help theirselves ought to help me. I *have* thought that I'm as I am—obliged to go on my hands and knees, from no fault of my own. Often I've done that, and I've over and over again laid in

bed and wondered why the Almighty should send me into the world in such a state; often I've done that on a wet day, with nothing to eat, and no friend to come a-nigh me. When I've gone along the streets, too, and been in pain, I've thought, as I've seen the people pass straight up, with all the use of their limbs, and some of them the biggest blackguards, cussing and swearing, I've thought, Why should I be deprived of the use of mine? and I've felt angry like, and perhaps at that moment I couldn't bring my mind to believe the Almighty was so good and merciful as I'd heard say; but then in a minute or two afterwards I've prayed to Him to make me better and happier in the next world. I've always been led to think He's afflicted me as He has for some wise purpose or another that I can't see. I think as mine is so hard a life in this world, I shall be better off in the next. Often when I couldn't afford to pay a boy, I've not had my boots off for four or five nights and days, nor my clothes neither. Give me the world I couldn't take them off myself, and then my feet has swollen to that degree that I've been nearly mad with pain, and I've been shivering and faint, but still I was obliged to go out with my things; if I hadn't I should have starved. Such as I am can't afford to be ill—it's only rich folks as can lay up, not we; for us to take to our beds is to go without food altogether. When I was without never a boy, I used to tie the wet towel round the back of one of the chairs, and wash myself by rubbing my face up against it. I've been two days without a bit of anything passing between my lips. I couldn't go and beg for victuals—I'd rather go without. Then I used to feel faint, and my head used to ache dreadful. I used then to drink a plenty of water. The women sex is mostly more kinder to me than the men. Some of the men fancies, as I goes along, that I can walk. They often says to me, 'Why, the sole of your boot is as muddy as mine;' and one on 'em is, because I always rests myself on that foot—the other sole, you see, is as clean as when it was first made. The women never seem frightened on me. My trade is to sell brooms and brushes, and all kinds of cutlery and tin-ware. I learnt it myself. I never was brought up to nothing, because I couldn't use my hands. Mother was a cook in a nobleman's family when I were born. They say as I was a love-child. I was not brought up by mother, but by one of her fellow-servants. Mother's intellects was so weak, that she couldn't have me with her. She used to fret a great deal about me, so her fellow-servant took me when she got married. After I were born, mother married a farmer in middling circumstances. They tell me as my mother was frightened afore I was born. I never knew my father. He went over to Buonos Ayres, and kept an hotel there—I've heard mother say as much. No mother couldn't love a child more than mine did me, but her feelings was such she couldn't bear to see me. I never went to mother's to live, but was brought up by the fellow-servant as I've told you of. Mother allowed her 30*l.* a-year. I was with her till two years back. She was always very kind to me—treated me like one of her own. Mother used to come and see me about once a-year—sometimes not so often: she was very kind to me then. Oh, yes; I used to like to see her very much. Whatever I wished for she'd let me have; if I wrote to her, she always sent me what I wanted. I was very comfortably then. Mother died four years ago; and when I lost her I fell into a fit—I was told of it all of a sudden. She and the party as I was brought up with was the only friends as I had in the world—the only persons as cared anything about a creature like me. I was in a fit for hours, and when I came to, I thought what would become of me: I knew I could do nothing for myself, and the only friend as I had as could keep me was gone. The person as brought me up was very good, and said, while she'd got a home I should never want; but, two years after mother's death, she was seized with the cholera, and then I hadn't a friend left in the world. When she died I felt ready to kill myself; I was all alone then, and what could I do—cripple as I was? She thought her sons and daughters as I'd been brought up with—like brothers and sisters—would look after me; but it was not in their power—they was only hard-working people. My mother used to allow so much a year for my schooling, and I can read and write pretty well." (He wrote his name in my presence kneeling at the table; holding the pen almost as one might fancy a bird would, and placing the paper sideways instead of straight before him.) "While mother was alive, I was always foraging about to learn something unbeknown to her. I wanted to do so, in case mother should leave me without the means of getting a living. I used to buy old bedsteads, and take them to a man, and get him to repair them, and then I'd put the sacking on myself; I can hold a hammer somehow in my right hand. I used to polish them on my knees. I made a bench to my height out of two old chairs. I used to know what I should get for the bedsteads, and so could tell what I could afford to give the man to do up the parts as I couldn't manage. It was so I got to learn something like a business for myself. When the person died as had brought me up, I *could* do a little; I had then got the means. Before her death I had opened a kind of shop for things in the general line; I sold tin-ware, and brass-work, and candlesticks, and fire-irons, and all old furniture, and gown-prints as well. I went into the tally business, and that ruined me altogether. I couldn't get my money in; there's a good deal owing to me now. Me and a boy used to manage the whole. I used to make all my account-books and everything. My lodgers didn't pay me my rent, so I had to move from the house, and live on what stock I had. In my new lodging

I went on as well as I could for a little while; but about eighteen months ago I could hold on no longer. Then I borrowed a little, and went hawking tin-ware and brushes in the country. I sold baking-dishes, Dutch ovens, roasting-jacks, skewers and gridirons, teapots, and saucepans, and combs. I used to exchange sometimes for old clothes. I had a barrow and a boy with me; I used to keep him, and give him 1*s.* a week. I managed to get just a living that way. When the winter came on I gave it up; it was too cold. After that I was took bad with a fever; my stock had been all gone a little while before, and the boy had left because I couldn't keep him, and I had to do all for myself. All my friends was dead, and I had no one to help me, so I was obligated to lay about all night in my things, for I couldn't get them off alone; and that and want of food brought on a fever. Then I was took into the workhouse, and there I stopped all the summer, as I told you. I can't say they treated me bad, but they certainly didn't use me well. If I could have worked after I got better, I could have had tea; but 'cause I couldn't do nothing, they gave me that beastly gruel morning and night. I had meat three times a week. They would have kept me there till now, but I would die in the streets rather than be a pauper. So I told them, if they would give me the means of getting a stock, I would try and get a living for myself. After refusing many times to let me have 10*s.*, they agreed to give me 5*s.* Then I came out, but I had no home, and so I crawled about till I met with the people where I am now, and they let me sit up there till I got a room of my own. Then some of my friends collected for me about 15*s.* altogether, and I did pretty well for a little while. I went to live close by the Blackfriars-road, but the people where I lodged treated me very bad. There was a number of girls of the town in the same street, but they was too fond of their selves and their drink to give nothing. They used to buy things of me and never pay me. They never made game of me, nor played me any tricks, and if they saw the boys doing it they would protect me. They never offered to give me no victuals; indeed, I shouldn't have liked to have eaten the food they got. After that I couldn't pay my lodgings, and the parties where I lodged turned me out, and I had to crawl about the streets for four days and nights. This was only a month back. I was fit to die with pain all that time. If I could get a penny I used to go into a coffee-shop for half-a-pint of coffee, and sit there till they drove me out, and then I'd crawl about till it was time for me to go out selling. Oh! dreadful, dreadful, it was to be all them hours—day and night—on my knees. I couldn't get along at all, I was forced to sit down every minute, and then I used to fall asleep with my things in my hand, and be woke up by the police to be pushed about and druv on by them. It seemed like as if I was walking on the bare bones of my knees. The pain in them was like the cramp, only much worse. At last I could bear it no longer, so I went afore Mr. Secker, the magistrate, at Union Hall, and told him I was destitute, and that the parties where I had been living kept my bed and the few things I had, for 2*s.* 6*d.* rent, that I owed them. He said he couldn't believe that anybody would force me to crawl about the streets, for four days and nights, cripple as I was, for such a sum. One of the officers told him I was a honest and striving man, and the magistrate sent the officer, with the money, to get my things, but the landlady wouldn't give them till the officer compelled her, and then she chucked my bed out into the middle of the street. A neighbour took it in for me and took care of it till I found out the tinman who had before let me sit up in his house. I should have gone to him at first, but he lived farther than I could walk. I am stopping with him now, and he is very kind to me. I have still some relations living, and they are well to do, but, being a cripple, they despise me. My aunt, my mother's sister, is married to a builder, in Petersham, near Richmond, and they are rich people—having some houses of their own besides a good business. I have got a boy to wheel me down on a barrow to them, and asked assistance of them, but they will have nothing to do with me. They won't look at me for my affliction. Six months ago they gave me half-a-crown. I had no lodgings nor victuals then; and *that* I shouldn't have had from them had I not said I was starving and must go to the parish. This winter I went to them, and they shut the door in my face. After leaving my aunt's, I went down to Ham Common, where my father-in-law lives, and there his daughter's husband sent for a policeman to drive me away from the place. I told the husband I had no money nor food; but he advised me to go begging, and said I shouldn't have a penny of them. My father-in-law was ill up-stairs at the time, but I don't think he would have treated me a bit better—and all this they do because the Almighty has made me a cripple. I can, indeed, solemnly say, that there is nothing else against me, and that I strive hard and crawl about till my limbs ache enough to drive me mad, to get an honest livelihood. With a couple of pounds I could, I think, manage to shift very well for myself. I'd get a stock, and go into the country with a barrow, and buy old metal, and exchange tin ware for old clothes, and, with that, I'm almost sure I could get a decent living. I'm accounted a very good dealer."

In answer to my inquiries concerning the character of this man, I received the following written communication:

"I have known C—— A—— twelve years; the last six years he has dealt with me for tinware. I have found him honest in all his dealings with me, sober and industrious.

"C—— H——, Tinman."

From the writer of the above testimonial I

received the following account of the poor cripple:—

"He is a man of generous a disposition, and very sensitive for the afflictions of others. One day while passing down the Borough he saw a man afflicted with St. Vitus's dance shaking from head to foot, and leaning on the arm of a woman who appeared to be his wife." The cripple told my informant that he should never forget what he felt when he beheld that poor man. "I thought," he said, "what a blessing it is I am not like him." Nor is the cripple, I am told, less independent than he is generous. In all his sufferings and privations he never pleads poverty to others; but bears up under the trials of life with the greatest patience and fortitude. When in better circumstances he was more independent than at present, having since, through illness and poverty, been much humbled.

"His privations have been great," adds my informant. "Only two months back, being in a state of utter destitution and quite worn out with fatigue, he called at the house of a person (where my informant occupied a room) about ten o'clock at night, and begged them to let him rest himself for a short while, but the inhuman landlady and her son laid hold of the wretched man, the one taking him by the arms and the other by the legs, and literally hurled him into the street. The next morning," my informant continued, "I saw the poor creature leaning against a lamp-post, shivering with the cold, and my heart bled for him; and since that he has been living with me."

Of the Swag-shops of the Metropolis.

By those who are not connected with the street trade, the proprietors of the swag-shops are often called "warehousemen" or "general dealers," and even "slaughterers." These descriptions apply but partially. "Warehousemen" or "general dealers" are vague terms, which I need not further notice. The wretchedly under-paid and over-worked shoe-makers, cabinet-makers and others call these places "slaughter-houses," when the establishment is in the hands of tradesmen who buy their goods of poor workmen without having given orders for them. On Saturday afternoons pale-looking men may be seen carrying a few chairs, or bending under the weight of a cheffonier or a chest of drawers, in Tottenham-court Road, and thoroughfares of a similar character in all parts. These are "small masters," who make or (as one man said to me, "No, sir, I don't make these drawers, I put them together, it can't be called making; it's not workmanship") who "put together" in the hastiest manner, and in any way not positively offensive to the eye, articles of household furniture. The "slaughterers" who supply all the goods required for the furniture of a house, buy at "starvation prices" (the common term), the artificer being often kept waiting for hours, and treated with every indignity. One East-end "slaughterer" (as I ascertained in a former inquiry) used habitually to tell that he prayed for wet Saturday afternoons, because it put 20*l.* extra into his pocket! This was owing to the damage sustained in the appearance of any painted, varnished, or polished article, by exposure to the weather; or if it had been protected from the weather, by the unwillingness of the small master to carry it to another slaughter-house in the rain. Under such circumstances—and under most of the circumstances of this unhappy trade—the poor workman is at the mercy of the slaughterer.

I describe this matter more fully than I might have deemed necessary, had I not found that both the "small masters" spoken of—for I called upon some of them again—and the street-sellers, very frequently confounded the "swag-shop" and the "slaughter-house." The distinction I hold to be this:—The slaughterer buys as a rule, with hardly an exception, the furniture, or whatever it may be, made for the express purpose of being offered to him on speculation of sale. The swag shop-keeper *orders* his goods as a rule, and buys, as an exception, in the manner in which the slaughterer buys ordinarily. The slaughterer sells by retail; the swag-shop keeper only by wholesale.

Most of the articles, of the class of which I now treat, are "Brummagem made." An experienced tradesman said to me: "All these low-priced metal things, fancy goods and all, which you see about, are made in Birmingham; in nineteen cases out of twenty at the least. They may be marked London, or Sheffield, or Paris, or any place — you can have them marked North Pole if you will—but they're genuine Birmingham. The carriage is lower from Birmingham than from Sheffield—that's one thing."

The majority of the swag-shop proprietors are Jews. The wares which they supply to the cheap shops, the cheap John's, and the street-sellers, in town and country, consist of every variety of article, apart from what is eatable, drinkable, or wearable, in which the trade class I have specified can deal. As regards what is wearable, indeed, such things as braces, garters, &c., form a portion of the stock of the swag-shop.

In one street (a thoroughfare at the east-end of London) are twenty-three of these establishments. In the windows there is little attempt at display; the design aimed at seems to be rather to *crowd* the window—as if to show the amplitude of the stores within, "the wonderful resources of this most extensive and universal establishment"—than to tempt purchasers by exhibiting tastefully what may have been tastefully executed by the artificer, or what it is desired should be held to be so executed.

In one of these windows the daylight is almost precluded from the interior by what may be called a perfect wall of "pots." A street-seller who accompanied me called them merely "pots" (the trade term), but they were all pot

ornaments. Among them were great store of shepherdesses, of greyhounds of a gamboge colour, of what I heard called "figures" (allegorical nymphs with and without birds or wreaths in their hands), very tall-looking Shaksperes (I did not see one of these windows without its Shakspere, a sitting figure), and some "pots" which seem to be either shepherds or musicians; from what I could learn, at the pleasure of the seller, the buyer, or the inquirer. The shepherd, or musician is usually seated under a tree; he wears a light blue coat, and yellow breeches, and his limbs, more than his body, are remarkable for their bulk; to call them merely fat does not sufficiently express their character, and in some "pots," they are as short and stumpy as they are bulky. On my asking if the dogs were intended for Italian greyhounds, I was told, "No, they are German." I alluded however to the species of the animal represented; my informant to the place of manufacture, for the pots were chiefly German. A number of mugs however, with the Crystal Palace very well depicted upon them, were unmistakably English. In another window of the same establishment was a conglomeration of pincushions, shaving-brushes, letter-stamps (all in bone), cribbage-boards and boxes (including a pack of cards), necklaces, and strings of beads.

The window of a neighbouring swag-shop presented, in the like crowding, and in greater confusion, an array of brooches (some in coloured glass to imitate rubies, topazes, &c., some containing portraits, deeply coloured, in purple attire, and red cheeks, and some being very large cameos), time-pieces (with and without glasses), French toys with moveable figures, telescopes, American clocks, musical boxes, shirt-studs, backgammon-boards, tea-trays (one with a nondescript bird of most gorgeous green plumage forming a sort of centrepiece), razor-strops, writing-desks, sailors' knives, hair-brushes, and tobacco-boxes.

Another window presented even a more "miscellaneous assortment;" dirks (apparently not very formidable weapons), a mess of steel pens, in brown-paper packages and cases, and of black-lead pencils, pipe-heads, cigar-cases, snuff-boxes, razors, shaving-brushes, letter-stamps, metal tea-pots, metal tea-spoons, glass globes with artificial flowers and leaves within the glass (an improvement one man thought on the old ornament of a reel in a bottle), Peel medals, Exhibition medals, roulette-boxes, scent bottles, quill pens with artificial flowers in the feathery part, fans, side-combs, glass pen-holders, and pot figures (caricatures) of Louis Philippe, carrying a very red umbrella, Marshal Haynau, with some instrument of torture in his hand, while over all boomed a huge English seaman, in yellow waistcoat and with a brick-coloured face.

Sometimes the furniture of a swag-shop window is less plentiful, but quite as heterogenous. In one were only American clocks, French toys (large), opera-glasses, knives and forks, and powder-flasks.

In some windows the predominant character is jewellery. Ear-drops (generally gilt), rings of all kinds, brooches of every size and shade of coloured glass, shawl-pins, shirt-studs, necklaces, bead purses, small paintings of the Crystal-palace, in "burnished 'gold' frames," watch-guards, watch-seals (each with three impressions or mottoes), watch-chains and keys, "silver" tooth-picks, medals, and snuff-boxes. It might be expected that the jewellery shops would present the most imposing display of any; they are, on the contrary, among the dingiest, as if it were not worth the trouble to put clean things in the window, but merely what sufficed to characterise the nature of the trade carried on.

Of the twenty-three swag-shops in question, five were confined to the trade in all the branches of stationery. Of these I saw one, the large window of which was perfectly packed from bottom to top with note-paper, account and copy-books, steel-pens, pencils, sealing-wax, enamelled wafers (in boxes), ink-stands, &c.

Of the other shops, two had cases of watches, with no attempt at display, or even arrangement. "Poor things," I was told by a person familiar with the trade in them, "fit only to offer to countrymen when they've been drinking at a fair, and think themselves clever."

I have so far described the exterior of these street-dealers' bazaars, the swag-shops, in what may be called their head-quarters. Upon entering some of these places of business, spacious rooms are seen to extend behind the shop or warehouse which opens to the street. Some are almost blocked up with what appears a litter of packing-cases, packages, and bales—but which are no doubt ordered systematically enough—while the shelves are crammed with goods in brown paper, or in cases or boxes. This uniformity of package, so to speak, has the effect of destroying the true character of these swag store-rooms; for they present the appearance of only three or four different kinds of merchandise being deposited on a range of shelves, when, perhaps, there are a hundred. In some of these swag-shops it appears certain, both from what fell under my own observation, and from what I learned through my inquiries of persons long familiar with such places, that the "litter" I have spoken of is disposed so as to present the appearance of an affluence of goods without the reality of possession.

In no warehouses (properly "swag," or wholesale traders) is there any arranged display of the wares vended. "Ve don't vant people here," one street-seller had often heard a swag-shopkeeper say, "as looks about them, and says, ''Ow purty!—Vot nice things!' Ve vants to sell, and not to show. Ve is all for bisness, and be d——d." All of these places which I saw were dark, more or less so, in the interior, as if a customer's inspection were uncared for.

Some of the swag-shop people present cards, or "circulars with prices," to their street and other customers, calling attention to the variety of their wares. These circulars are not given without inquiry, as if it were felt that one must not be wasted. On one I find the following enumeration:—

Shopkeepers and Dealers supplied with the following Articles:—

CLOCKS—American, French, German, and English eight-day dials.
WATCHES—Gold and Silver.
MUSICAL BOXES—Two, Four, Six, and Eight Airs.
WATCH-GLASSES—Common Flint, Geneva, and Lunettes.
MAIN-SPRINGS—Blue and Straw-colour, English and Geneva.
WATCH MATERIALS—Of every description.
JEWELLERY—A general assortment.
SPECTACLES—Gold, Silver, Steel, Horn, and Metal Frames, Concave, Convex, Coloured, and Smoked Eyes.
TELESCOPES—One, two, and three draws.
MATHEMATICAL INSTRUMENTS.
COMBS—Side, Dressing, Curl, Pocket, Ivory, Small-Tooth, &c.
MUSICAL INSTRUMENTS—Violins, Violincellos, Bows, &c., Flutes, Clarionets, Trombones, Ophoclides, Cornopeans, French-Horns, Po-t-Horns, Trumpets, and Passes, Violin Tailboards, Pegs, and Bridges.
ACCORDIONS—French and German of every size and style.

It must not be thought that swag-shops are mainly repositories of "fancy" articles, for such is not the case. I have described only the "windows" and outward appearances of these places—the interior being little demonstrative of the business; but the bulkier and more useful articles of swag traffic cannot be exposed in a window. In the miscellaneous (or Birmingham and Sheffield) shops, however, the useful and the "fancy" are mixed together; as is shown by the following extracts from the Circular of one of the principal swag-houses. I give each head, with an occasional statement of prices. The firm describe themselves as "Wholesale, Retail. and Export Furnishing Ironmongers, General Hardwaremen, Manufacturers of Clocks, Watches, and Steel Pens, and Importers of Toys, Beads, and other Foreign Manufactures."

Table Cutlery.

	s.	d.
Common knives and forks, per doz.	2	0
Ivory-handle table knives and fork, per set of fifty-pieces	30	0
Tables, per doz.	15	0
Desserts, per doz.	11	3
Carvers, per pair	4	0

Fire-Irons.

	s.	d.
Strong wrought-iron for kitchens, per set 2s. to	6	0
Ditto for parlours or libraries, bright pans, 4s. 6d. to	7	0

Fenders.

	s.	d.
Kitchen fenders, 3 ft. long, with sliding bar	3	0
Green ditto, brass tops, for bed rooms	1	8

"Britannia Metal Goods" (tea-pots, &c.), "German Silver Goods" (tea-spoons, 1s. to 2s. per dozen, &c.).

Bellows.

	s.	d.
Kitchen, each 10d. to	2	0
Parlour ditto, brass pipes and nails.... 2s 3d. to	3	0

Japanned goods, brass goods, iron saucepans, oval iron pots, iron tea-kettles, &c., iron stew-pans, &c. The prices here run very systematically:—

	s.	d.
One quart	1	2
Three pints	1	8
Two quarts	2	0
Three quarts	3	0
Four quarts	3	9
Five quarts	4	0

Patent enamelled saucepans, oval tin boilers, tin saucepans, tea-kettles, coffee-pots. In all these useful articles the prices range in the same way as in the iron stew-pans. Copper goods (kettles, coal-scoops, &c.), tin fish-kettles, dish-covers, rosewood workboxes, glass, brushes (tooth, hair, clothes, scrubbing, stove, shoe, japanned hearth, banister, plate, carpet, and dandy), tools, plated goods (warranted silver edges), snuffers, beads, musical instruments (accordions from 1s. to 5s., &c.). Then come dials and clocks, combs, optics, spectacles, eye-glasses, telescopes, opera glasses, each 10d. to 10s., China ornaments, lamps, sundries (these I give verbatim, to show the nature of the trade), crimping and goffering-machines, from 14s., looking-glasses, pictures, &c., beads of every kind, watch-guards, shaving-boxes, guns, pistols, powder-flasks, belts, percussion caps, &c., corkscrews, 6d. to 2s., nut-cracks, 6d. to 1s. 6d., folding measures, each 2s. to 4s., silver spoons, haberdashery, skates per pair 2s. to 10s., carpet bags, each 3s. to 10s., egg-boilers, tapers, flat and box irons, Italian irons and heaters, earthenware jugs, metal covers, tea-pots, plaited straw baskets, sieves, wood pails, camera-obscuras, medals, amulets, perfumery and fancy soaps of all kinds, mathematical instruments, steel pens, silver and German silver patent pencil-cases and leads, snuff-boxes "in great variety," strops, ink, slates, metal eyelet-holes and machines, padlocks, braces, belts, Congreves, lucifers, fuzees, pocket-books, bill-cases, bed-keys, and a great variety of articles too numerous to mention.

Notwithstanding the specific character and arrangement of the "Circulars with prices," it is common enough for the swag-shop proprietors to intimate to any one likely to purchase that those prices are not altogether to be a guidance, as thirty-five per cent. discount is allowed on the amount of a ready-money purchase. One of the largest "swags" made such an allowance to a street-seller last week.

The swag-shops (of which I state the numbers in a parenthesis) are in Houndsditch (their principal locality) (23), Minories (4), Whitechapel (2), Ratcliffe-highway (20), Shoreditch (1), Long-lane, Smithfield (4), Fleet-lane (2), Holywell-street, Strand (1), Tothill-street (4), Compton-street, Soho (1), Hatton-garden (2), Clerkenwell (10), Kent-street, Borough (8), New-cut (6), Blackman-street (2), Tooley-street (3), London-road (3), Borough-road (1), Waterloo-road (4)—in all 101; but a person who had been upwards of twenty years a frequenter of these places counted up fifty others, many of them in obscure courts and alleys near Houndsditch, Ratcliffe Highway, &c., &c. These "outsiders" are generally of a smaller class than those I have described; "and I can tell you, sir," the same man said, "some of them—ay, and some of the big ones,

Original from HARVARD UNIVERSITY

too—are real *swag*-shops still,—partly so, that is; you understand me, sir." The word "swag," I should inform my polite readers, means in slang language, "plunder."

It may be safely calculated, then, that there are 150 swag-shops to which the different classes of street-sellers resort for the purchase of stock. Among these establishments are pot swag, stationery swag, haberdashery swag, jewellery swag, and miscellaneous swag—the latter comprise far more than half of the entire number, and constitute the warehouses which are described by their owners as "Birmingham and Sheffield," or "English and Foreign," or "English and German." It is in these last-mentioned "swags" that the class I now treat of—the street-sellers of metal manufactures—find the commodities of their trade. To this, however, there is one exception. Tins for household use are not sold at the general swag-shops; but "fancy tins," such as japanned and embellished trays, are vended there extensively. The street-sellers of this order are supplied at the "tin-shops,"—the number of the wholesale tin-men supplying the street-sellers is about fifty. The principle on which the business is conducted is precisely that of the more general swag-shop; but I shall speak of them when I treat of the street-sellers of tins.

An intelligent man, who had been employed in different capacities in some of the principal swag-shops, told me of one which had been carried on by the same family, from father to son, for more than seventy years. In the largest of the "swags" about 200 "hands" are employed, in the various capacities of salesmen, buyers, clerks, travellers, unpackers, packers, porters, &c., &c. On some mornings twenty-five large packages—some of small articles entirely—are received from the carriers. In one week, when my informant assisted in "making up the books," the receipts were upwards of 3000*l.* "In my opinion, sir," he said, "and it's from an insight into the business, Mr. ——'s profit on that 3000*l.* was not less than thirty-five per cent.; for he's a great capitalist, and pays for everything down upon the nail; that's more than 1000*l.* profit in a week. Certainly it was an extra week, and there's the 200 hands to pay,—but that wouldn't range higher than 300*l.*, indeed, not so high; and there's heavy rent and taxes, and rates, no doubt, and he (the proprietor is a Jew) is a fair man to the trade, and not an uncharitable man—but he will drive a good bargain where it's possible; so considering everything, sir, the profits must be very great, and they are mostly made out of poor buyers, who sell it to poor people in the streets, or in small shops. It's a wonderful trade."

From the best information I could obtain I come to the conclusion that, including small and large shops, 3000*l.* yearly is the average receipt of each—or, as it is most frequently expressed, that sum is "turned over" by the swag-shop keepers yearly. There is great competition in the trade, and much of what is called "cutting," or one tradesman underselling another. The profit consequently varies from twenty to thirty-five and (rarely) fifty per cent. Sometimes a swag-shop proprietor is "hung-up" with a stock the demand for which has ceased, and he must dispose of it as "a job lot," to make room for other goods, and thus is necessarily "out of pocket." The smaller swag-shops do not "turn over" 500*l.* a year. The calculation I have given shows an outlay, yearly, of 450,000*l.* at the swag-shops of London; "but," said a partner in one of these establishments, "what proportion of the goods find their way into the streets, what to the shops, what to the country, and what for shipping, I cannot form even a guess, for we never ask a customer for what purpose he wants the goods, though sometimes he will say, 'I must have what is best for such or such a trade.' Say half a million turned over in a year, sir, by the warehousemen who sell to the street-people, among others, and you're within the mark."

I found the street-sellers characterize the "swags" as hard and grinding men, taking every advantage "in the way of trade." There is, too, I was told by a man lately employed in a swag-shop, a constant collision of clamour and bargaining, not to say of wits, between the smarter street-sellers—the pattering class especially—and the swag-men with whom they are familiar.

The points in which the "swag-shops" resemble the "slaughter-houses," are in the traffic in work-boxes, desks, and dressing-cases.

Of the Life of a Cheap-John.

The following narrative, relative to this curious class, who, in many respects, partake of the characteristics which I have pointed out as proper to the mountebank of old, was taken from one of the fraternity. It may be cited as an example of those who are bred to the streets:—"My father and mother," said he, "both followed a travelling occupation, and were engaged in vending different things, from the old brimstone matches up to clothes lines, clothes props, and clothes pegs. They never got beyond these,—the other articles were thread, tapes, nutmeg graters, shoe-ties, stay-laces, and needles. My father, my mother used to tell me, was a great scholard, and had not always been a travelling vagrant. My mother had never known any other life. I, however, did not reap any benefit from my father's scholarship. At a very early age, five or six perhaps, I recollect myself a poor little neglected wretch, sent out each day with a roll of matches, with strict injunctions not to come home without selling them, and to bring home a certain sum of money, upon pain of receiving a sound thrashing, which threat was mostly put into execution whenever I failed to perform the task imposed upon me. My father seldom worked, that is, seldom hawked, but my mother, poor thing, had to travel and work very hard to support four of us—my father, myself, and a sister, who is since dead. I was but little assistance, and sometimes when I did not bring home the sum required, she would make it up, and tell my father I had been a good boy. My father was an inveterate drinker, and a very violent temper. My mother, I am sorry to

say, used to drink too, but I believe that ill-usage drove her to it. They led a dreadful life; I scarcely felt any attachment for them; home we had none, one place was as good another to us. I left my parents when scarcely eight years old. I had received a thrashing the day before for being a defaulter in my sale, and I determined the following morning to decamp; and accordingly, with my nine-pennyworth of matches (the quantity generally allotted me), I set out to begin the world upon my own account. Although this occurred 25 years ago, I have never met my parents since. My father, I heard, died a few years after my leaving, but my mother I know not whether she be living or dead. I left my parents at Dover, and journeyed on to London. I knew there were lodging-houses for travellers in every town, some of them I had stopped at with my father and mother. I told the people of these houses that my parents would arrive the following day, and paid my 2*d.* for the share of a third, fourth, fifth, or even sixth part of a bed, according to the number of children who inhabited the lodging-house upon that particular night. My matches I could always sell if I tried, but I used to play my time away, and many times night has arrived before I thought of effecting sales sufficient to pay my expenses at the beggar's hotel. Broken victuals I got in abundance, indeed more than sufficient for my own consumption. The money I received for the matches, after paying my lodging, and purchasing a pennyworth of brimstone to make more (the wood I begged at the carpenters), I gambled away at cards. Yes, young as I was, I understood Blind Hookey. I invariably lost; of course I was cheated.

"I remained in a lodging house in Mill-lane, Deptford, for two years, discontinued the match-selling, and, having a tidy voice, took to hawking songs through the public-houses. The sailors used to ask me to sing, and there were few days that I did not accumulate 2*s.* 6*d.*, and from that to 4*s.*, especially when I chose to be industrious; but my love of pitch and toss and blind hookey always kept me poor. I often got into debt with my landlady, and had no difficulty in doing so, for I always felt a pride in paying. From selling the printed songs, I imbibed a wish to learn to read, and, with the assistance of an old soldier, I soon acquired sufficient knowledge to make out the names of each song, and shortly afterwards I could study a song and learn the words without any one helping me. I stopped in Deptford until I was something more than twelve years old. I had then laid the songs aside, and taken to hawking small wares, tapes, thread, &c.; and in the winter season I was a buyer of rabbit and hare skins. I kept at this for about three years, sometimes entirely without a stock. I had run it out, perhaps gambled it away; and at such times I suffered great privations. I never could beg. I have often tried, but never could. I have approached a house with a begging intention, knocked at the door, and when it has been opened I have requested a drink of water. When I was about 16 I joined in partnership with a man who used to make phosphorus boxes. I sold them for him. A piece of phosphorus was stuck in a tin tube, the match was dipped into the phosphorus, and it would ignite by friction. I was hawking these boxes in Norwich, when the constable considered they were dreadful affairs, and calculated to encourage and assist thieves and burglars. He took me before the magistrate, at the beak's own private house, and he being equally horrified, I was sent to prison for a month. I have often thought since that the proceeding was illegal. What would be said now if a man was to be sent to jail for selling lucifer matches? In Norwich prison I associated with the rest, and if I had been inclined to turn thief I had plenty of opportunities and offers of gratuitous instruction. The separate or silent system was not in vogue then. I worked on the treadmill. Dinner was allowed to be sent in on the Sunday by the prisoner's friends. My dinner was sent in on the first Sunday by the man I sold the boxes for, as it was on the second, third, and fourth; but I had lost it before I received it. I had always gambled it away, for there were plenty of opportunities of doing so in the prisons then. On leaving the jail I received 1*s.*; with this I purchased some songs and travelled to Yarmouth. I could do best among sailors. After a few weeks I had accumulated about 8*s.*, and with that sum I purchased some hardware at the swag-shop, commenced hawking, and cut the vocal department altogether; still I gambled and kept myself in poverty. In the course of time, however, I had amassed a basket of goods, worth, perhaps, 3*l.* I gambled and lost them all in one night. I was so downcast and unhappy from this circumstance, that it caused me to reflect seriously, and I made an oath that I never would gamble again. I have kept it, and have reason to bless the day that I made so good a resolution. After losing my basket of goods, the winner gave me articles amounting to a few shillings, and I began the world once more. Shortly afterwards I commenced rag gatherer, and changed my goods for old rags, of course not refusing cash in payment. My next step was to have some bills printed, whereon I requested all thrifty wives to look out their old rags or old metal, or old bones, &c.; stating at the bottom that the bill would be called for, and that a good price in ready money would be given for all useless lumber, &c. Some months at this business realized me a pretty sum of money. I was in possession of nearly 5*l.* Then I discontinued the rag-gathering; not that the trade was declining, but I did not like it—I was ambitious. I purchased a neat box, and started to sell a little Birmingham jewellery. I was now respectably dressed, was getting a living, and had entirely left off stopping at common lodging-houses; but I confined my visits to small villages—I was afraid of the law; and as I was pursuing my calling near Wakefield, a constable inquired for my hawker's licence. I had none to produce. He took me into custody, and introduced me to a magistrate, who committed me to prison for a

Original from HARVARD UNIVERSITY

month, and took away my box of goods. I endured the month's imprisonment upon the silent system; they cut my hair short; and at the expiration of the term I was thrust out upon the world heart-broken, without a shilling, to beg, to steal, or to starve.

"I proceeded to Leeds, the fair was on at this time. I got engaged to assist a person, from whom I had been accustomed occasionally to purchase goods. He was a 'Cheap-John.' In the course of the day he suggested that I should have a try at the hand-selling. I mounted the platform, and succeeded beyond my own expectations or that of my master. He offered me a regular engagement, which I accepted. At times I would help him sell, and at other times I hawked with his licence. I had regular wages, besides all I could get above a certain price that he placed upon each of the goods. I remained with this person some fifteen months, at the end of which period I commenced for myself, having saved nearly 25*l.* I began at once the hand-selling, and purchased a hawker's licence, which enabled me to sell without danger. Then I always called at the constable's house, and gave a louder knock at his door than any other person's, proud of my authority, and assured of my safety. At first I borrowed an empty cart, in which I stood and sold my wares. I could chaff as well as the best, and was as good a salesman as most of them. After that I purchased a second-hand cart from a person who had lately started a waggon. I progressed and improved in circumstances, and at last bought a very handsome waggon for myself. I have now a nice caravan, and good stock of goods, worth at least 500*l.* Money I have but little. I always invest it in goods. I am married, and have got a family. I always travel in the summer, but remain at home during the winter. My wife never travels. She remains behind, and manages a little swag-shop, which always turns in at least the family expenses."

The Street-Sellers of Cutlery.

The cutlery sold in the streets of London consists of razors, pen-knives, pocket-knives, table and carving-knives and forks, scissors, shears, nail-filers, and occasionally (if ordered) lancets. The knives are of various kinds—such as sailors' knives (with a hole through the handle), butchers' knives, together with choppers and steels (sold principally at Newgate and Billinsgate Markets, and round about the docks), oyster and fish-knives (sold principally at Billinsgate and Hungerford Markets), bread-knives (hawked at the bakers' shops), ham and beef knives (hawked at the ham and beef shops), cheese-knives with tasters, and ham-triers, shoemakers' knives, and a variety of others. These articles are usually purchased at the "swag-shops," and the prices of them vary from 2½*d.* to 1*s.* 1½*d.* each. They are bought either by the dozen, half-dozen, or singly, according to the extent of the street-seller's stock-money. Hence it would appear that the street-seller of cutlery can begin business with only a few pence; but it is only when the swag-shop keeper has known the street-seller that he will consent to sell one knife alone "to sell again;" to street-sellers with whom he is unacquainted, he will not vend less than half-a-dozen. Even where the street-seller is known, he has, if "cracked-up," to beg hard, I am told, before he can induce the warehouseman to let him have only one article. "The swag-shops won't be bothered with it," say the men—"what are our troubles to them? if the rain starves us out and makes us eat up all our stock-money, what is it to such folks? they wouldn't let us have even a row of pins without the money for 'em—no, not if we was to drop down dead for want of bread in their shops. They have been deceived by such a many that now they won't listen to none." I subjoin a list of the prices paid and received by the street-sellers of cutlery for the principal articles in which they deal:

	Lowest price paid per half-dozen.		Sold at in streets.		Highest price paid per half-dozen.		Sold at in streets.	
	s.	*d.*	*s.*	*d.*	*s.*	*d.*	*s.*	*d.*
Table-knives and forks..	1	3	2	0	5	0	7	6
Ditto, without forks	0	9	1	3	4	0	6	0
Pocket-knives	1	0	1	6	4	0	6	0
Pen-knives..............	1	9	2	6	2	6	3	9
Razors..................	1	9	2	6	5	0	7	6
Scissors	0	3½	0	6	1	9	2	6

Their usual rate of profit is 50 per cent., but rather than refuse a ready sale the street cutlery-seller will often take much less. Many of the sellers only pursue the trade for a few weeks in the year. A number of the Irish labourers take to it in the winter-time when they can get no work. Some few of the sellers are countrymen, but these mostly follow the business continuously. "I don't see as there is hardly one upon the list as has ever been a cutler by trade," said one street-seller to me, "and certainly none of the cutlery-sellers have ever belonged to Sheffield—they may say so, but its only a dodge." The cutlery street-sellers are not one-quarter so numerous as they were two years back. "The reason is," I am told, "that things are got so bad a man can't live by the trade—mayhap he has to walk three miles now before he can sell for 1*s.* a knife that has cost him 8½*d.*, and then mayhap he is faint, and what's 3½*d.*, sir, to keep body and soul together, when a man most likely has had no victuals all the day before." If they had a good bit of stock they might perhaps get a crust, they say. "Things within the last two or three years," to quote the words of one of my informants, "have been getting much worse in the streets; 'specially in the cutlery line. I can't give no account for it, I'm sure, sir; the sellers have not been half as many as they were. What's become of them that's gone, I can't tell; they 're in the workhouse, I dare say." But, notwithstanding this decrease in the number of sellers, there is a greater difficulty to vend their goods now than formerly. "It's all owing to the times, that's all I can say. People, shopkeepers, and all says to me, I can't tell why things is so bad, and has been so bad in

trade; but so they is. We has to walk farther to sell our goods, and people beat us down so terrible hard, that we can't get a penny out of them when we do sell. Sometimes they offers me 9*d*., yes, and often 6*d*. for an 8½*d*. knife; and often enough 4*d*. for one that stands you in 3½*d*. —a ½*d*. profit, think of that, sir. Then they say, 'Well, my man, will you take my money?' and so as to make you do so, they'll flash it before your eyes, as if they knew you was a starving, and would be sure to be took in by the sight of it. Yes, sir, it is a very hard life, and we has to put up with a good deal—a good deal—starvation and hard-dealing, and insults and knockings about, and all. And then you see the swag-shops is almost as hard on us as the buyers. The swag-men will say, if you merely makes a remark, that a knife they've sold you is cracked in the handle, 'Oh, is it; let me see whereabouts;' and when you hands it to 'em to show it 'em, they'll put it back where they took it from, and tell you, 'You're too particular by half, my man. You'd better go and get your goods somewhere else; here take your money, and go on about your business, for we won't sarve you at all.' They'll do just the same with the scissors too, if you complains about their being a bit rusty. 'Go somewhere else,' they'll say, 'We won't sarve you.' Ah, sir, that's what it is to be a poor man; to have your poverty flung in your teeth every minute. People says, 'to be poor and seem poor is the devil;' but to be poor, and be treated like a dog merely because you *are* poor, surely is ten thousand times worse. A street-seller now-a-days is looked upon as a 'cadger,' and treated as one. To try to get a living for one's self is to do something shameful in these times."

The man then gave me the following history of himself. He was a kindly-looking and hearty old man. He had on a ragged fustian jacket, over which he wore a black greasy-looking and tattered oilskin coat—the collar of this was torn away, and the green baize lining alone visible. His waistcoat was patched in every direction, while his trousers appeared to be of corduroy; but the grease and mud was so thick upon them, that it was difficult to tell of what material they were made. His shoes—or rather what remained of them—were tied on his feet with pieces of string. His appearance altogether denoted great poverty.

"My father was a farmer, sir. He had two farms, about 800 acres in all. I was one of eleven (ten sons and one daughter). Seven years before my father's death he left his farm, and went to live on his money. He had made a good bit at farming; but when he died it was all gone, and we was left to shift as we could. I had little or no education. My brothers could read and write, but I didn't take to it; I went a bird's-nesting, boy-like, instead, so that what little I did larn I have forgot. I am very sorry for that now. I used to drive the plough, and go a harrowing for father. I was brought up to nothing else. When father died, I thought as I should like to see London. I was a mere lad—about 20—and so I strolled up to town. I had 10*s*. with me, and that, with a bundle, was all that I possessed in the world. When I got to London I went to lodge at a public-house—the Red Lion—in Great Wild-street; and while I was there I sought about for work, but could not get any; when all was gone, I was turned out into the streets, and walked about for two days and two nights, without a bed, or a bit to eat, unless what I picked out of the gutter, and eat like a dog—orange-peel and old cabbage-stumps, indeed *anything* I could find. When I was very hard put to it, I was coming down Drury-lane, and I looked in, quite casual like, to ask for a job of work at the shop of Mr. Bolton, the needle-maker from Redditch. I told him as how I was nigh starving, and would do anything to get a crust; I didn't mind what I put my hand to. He said he would try me, and gave me two packets of needles to sell—they was the goolden-eyed ones of that time of day—and he said when I had got rid of them I was to come back to him, and I should have two packets more. He told me the price to ask—sixpence a paper—and away I went like a sand-boy, and got rid of the two in an hour and a half. Then I went back, and when I told him what I'd done, he shook hands with me, and said, as he burst out laughing, "Now, you see I've made a man of you." Oh, he was an uncommon nice gentleman! Then he told me to keep the shilling I had taken, and said he would trust me with two more packets. I sold them, and two others besides, that day. Then, he says, 'I shall give you something else, and he let me have two packets of tailors' needles and half a dozen of tailors' thimbles. He told me how to sell them, and where to go, and on them I did better. I went round to the tailors' shops and sold a good lot, but at last they stopped me, because I was taking the bread out of the mouths of the poor blind needle-sellers what supplies the journeymen tailors at the West-end. Then Mr. Bolton sent me down to one of his relations, a Mr. Crooks, in Fetter Lane, who was a Sheffield man, and sold cutlery to the hawkers; and Mr. Crooks and Mr. Bolton sot me up between them, and so I've followed the line ever since. I dare say I shall continue in it to my dying day. After I got fairly set agoing, I used to make—take good and bad, wet and dry days together—18*s*. a week; three shillings a day was what I calculated on at the least, and to do that I was obligated to take between 2*l*. and 3*l*. a week, or about eight or nine shillings each day. I went on doing this for upwards of thirty year. I have been nearly forty years, altogether, in the streets, selling cutlery. I did very tidy till about 4 years back—I generally made from 18*s*. to 1*l*. a week up to that time. I used to go round the country—to Margate, Brighton, Portsmouth—I mostly travelled by the coast, calling at all the sea-port towns, for I always did best among the sailors. I went away every Spring time, and came to London again at the fall of the year. Sixteen year ago, I married the widow of a printer—a pressman—she had no money, but you see I had no home, and I thought I should be more comfortable, and so

I have been—a great deal more comfortable—and so I should be now, if things hadn't got so bad. Four year ago, as I was a telling you, it was just after the railways had knocked off work, things began to get uncommon bad—before then, I had as good as 30s. or 40s. stock, and when things got slack, it went away, little by little. I couldn't make profit enough to support me and my old woman—she has got the rheumatics and can't earn me a halfpenny or a farden in the world; she hasn't done so for years. When I didn't make enough to live upon, of course I was obligated to break into my stock; so there it kept going shilling by shilling, and sixpence by sixpence, until I had got nothing left to work upon —not a halfpenny. You see, four or five months ago, I was took very bad with the rheumatic fever and gout. I got wet through in the streets, and my clothes dried on me, and the next day I was taken bad with pains in my limbs, and then everything that would fetch me a penny went to the pawn-shop; all my own and my old woman's clothes went to get us food—blankets, sheets and all. I never would go nigh the parish; I couldn't bring myself to have the talk about it. When I got well and out into the streets again, I borrowed 2s. or 3s. of my landlady—I have lived with her these three years—to get my stock again, but you see that got me so few things, that I couldn't fetch myself up. I lost the greater portion of my time in going backards and forrards to the shop to get fresh goods as fast as I sold them, and so what I took wasn't enough to earn the commonest living for me and my missus. Since December we have been nearly starving, and that's as true as you have got the pen in your very hand. Sunday after Sunday we have been without a bit of dinner, and I have laid a-bed all day because we have had no coal, and then been obligated to go out on Monday morning without a bit of victuals between my lips. I've been so faint I couldn't hardly walk. I've picked the crusts off the tables of the tap-rooms where I have been to hawk my goods, and put them in my pocket to eat them on the sly. Wet and dry I'm obligated to be out; let it come down ever so hard I must be in it, with scarcely a bit of shoe, and turned 60 years old, as I am. Look here, sir," he said, holding up his foot; "look at these shoes, the soles is all loose, you see, and let water. On wet days I hawk my goods to respectable shops; tap-rooms is no good, decent people merely get insulted there. But in most of the shops as I goes to people tells me, 'My good man it is as much as we can do to keep ourselves and our family in these cutting times.' Now, just to show you what I done last week. Sunday, I laid a-bed all day and had no dinner. Monday, I went out in the morning without a morsel between my lips, and with only 8½d. for stock-money; with that I bought a knife and sold it for a shilling, and then I got another and another after that, and that was my day's work—three times 3½d. or 10½d. in all, to keep the two of us. Tuesday, I sold a pair of small scissors and two little pearl-handled knives, at 6d. each article, and cleared 10½d. on the whole, and that is all I did. Wednesday, I sold a razor-strop for 6d., a four-bladed knife for a shilling, and a small hone for 6d.; by these I cleared 10d. altogether. Thursday, I sold a pair of razors for a shilling, clearing by the whole 11½d. Friday, I got rid of a pair of razors for 1s. 9d., and got 9d. clear." I added up the week's profits and found they amounted to 4s. 3½d. "That's about right," said the man, "out of that I shall have to pay 1s. for my week's rent; we've got a kitchen, so that I leave you to judge how we two can live out of what's remaining." I told him it would'nt average quite 6d. a day. "That's about it," he replied, "we have half a loaf of bread a day, and that thank God is only five farthings now. This lasts us the day, with two-penny-worth of bits of meat that my old woman buys at a ham-shop, where they pare the hams and puts the parings by on plates to sell to poor people; and when she can't get that, she buys half a sheep's head, one that's three or four days old, for then they sells 'em to the poor for 1½d. the half; and these with ¾d. worth of tea, and ½d. worth of sugar, ½d. for a candle, 1d. of coal—that's seven pounds—and ¾d. worth of coke—that's half a peck—makes up all we gets." These items amount to 6½d. in all. "That's how we do when we can't get it, and when we can't, why we lays in bed and goes without altogether."

Of the Blind Street-Sellers of Tailors' Needles, etc.

It is customary with many trades, for the journeymen to buy such articles as they require in their business of those members of their craft who have become incapacitated for work, either by old age, or by some affliction. The tailors—the shoemakers—the carpenters—and many others do this. These sellers are, perhaps, the most exemplary instances of men *driven* to the streets, or to hawking for a means of living; and they, one and all, are distinguished by that horror of the workhouse which I have before spoken of as constituting a peculiar feature in the operative's character. At present I purpose treating of the street-sellers of needles and "trimmings" to the tailors.

There are, I am informed, two dozen "broken-down" journeymen tailors pursuing this avocation in and around London. "There may be more," said one who had lost his sight stitching, "but I get my information from the needle warehouse, where we all buy our goods; and the lady there told me she knew as many as twenty-four hawkers who were once tailors. These are all either decayed journeymen, or their widows. Some are vicapicated by age, being between sixty and seventy years old; the greater part of the aged journeymen, however, are inmates of the tailors' almshouses. I am not aware," said my informant, "of there being more than one very old man hawking needles to the tailors, though there may be many that I know nothing about. The one I am acquainted with is close upon eighty, and he is a very respectable man, much esteemed in St.

James's and St. George's; he sells needles, and 'London Labour and the London Poor' to the journeymen: he is very feeble indeed, and can scarcely get along." Of the two dozen needle-sellers above mentioned, there are only six who confine their "rounds" solely to the metropolis. Out of these six my informant knew two who were blind beside himself (one of these sells to the journeymen in the city). There are other blind tailors who were formerly hawkers of needles, but being unable to realize a subsistence thereby, have been obliged to become inmates of the workhouses; others have recently gained admission into the almshouses. Last February, I am assured, there were two blind needle-sellers, and two decrepit, in St. James's workhouse. There are, moreover, two widows selling tailors' needles in London. One of these, I am told, is wretchedly poor, being "eat up with the rheumatics, and scarcely able to move"—she is the relict of a blind journeyman, and well known in St. James's. The other widow is now in St. Pancras Workhouse, having been unable, to use the words of my informant, "to get anything to keep life and soul together at the needle trade;" she, too, I am told, is well known to the journeymen. The tailors' needle-sellers confining themselves more particularly to London consist of, at present, one old man, three blind, one paralyzed, and one widow; besides these, there are now in the alms-houses, two decrepit and one paralyzed; and one widow in the workhouse, all of whom, till recently, were needle-sellers, and originally connected with the trade.

"That is all that I believe are now in London," said one to me, "I should, I think, know if there were more; for it is not from one place we get our articles, but many; and there I hear that six is about the number of tailors' hawkers in town; the rest of the two dozen hawkers that I spoke of go a little way out into the suburbs. The six, however, stick to London altogether." The needle-sellers who go into the country, I am told, travel as far as Reading, westward, and to Gravesend, in the opposite direction, or Brentwood, in Essex, and they will keep going back'ards and for'ards to the metropolis immediately their stock is exhausted. These persons sell not only tailors' needles, but women's needles as well, and staylaces and cottons, and small ware in general, which they get from Shepherd's, in Compton Street; they have all been tailors, and are incapacitated from labour, either by old age or some affliction. There was one widow of a tailor among the number, but it is believed she is now either too old to continue her journeys, or else that she is deceased. The town-sellers confine their peregrinations mostly to the parishes of St. James's and St. George's (my informant was not aware that any went even into Marylebone). One travels the City, while the other five keep to the West End; they all sell thimbles, needles, inch-measures, bodkins, inch sticks, scissars ("when they can get them," I was told, "and that's very seldom"), and bees'-wax, basting cotton, and, many of them, publications. The publications vended by these men are principally the cheap periodicals of the day, and two of these street-sellers, I am informed, do much better with the sale of publications than by the "trimmings." "*They* get money, sir," said one man to me, "while *we* are starving. They have their set customers and have only to go round and leave the paper, and then to get their money on the Monday morning."

The tailors' hawkers buy their trimmings mostly at the retail shops. They have not stock-money sufficient, I am assured, to purchase at the wholesale houses, for "such a thing as a paper of needles large tradesmen don't care about of selling us poor men." They tell me that if they could buy wholesale they could get their goods one-fourth cheaper, and to be "obligated" to purchase retail is a great drawback on their profits. They call at the principal tailors' workshops, and solicit custom of the journeymen; they are almost all known to the trade, both masters and men, and, having no other means of living, they are allowed to enter the masters' shops, though some of the masters, such as Allen, in Bond-street; Curlewis, Jarvis, and Jones, in Conduit-street, and others, refuse the poor fellows even this small privilege. The journeymen treat them very kindly, the needle-sellers tell me, and generally give them part of the provisions they have brought with them to the shop. If it was not for this the needle-sellers, I am assured, could hardly live at all. "There's that boy there," said a blind tailor, speaking of the youth who had led him to my house, and who sat on the stool fast asleep by the fire,—"I'm sure he must have starved this winter if it hadn't been for the goodness of the men to us, for it's little that me and his mother has to give him; she's gone almost as blind as myself working at the 'sank work' (making up soldiers' clothing). Oh, ours is a miserable life, sir!—worn out—blind with over work, and scarcely a hole to put one's head in, or a bit to put in one's mouth. God Almighty knows that's the bare truth, sir." Sometimes the hawkers go on their rounds and take only 2*d.*, but that is not often; sometimes they take 5*s.* in a day, and "that is the greatest sum," said my informant, "I ever took; what others might do I can't say, but that I'm confident is about the highest takings." In the summer three months the average takings rise to 4*s.* per day; but in the winter they fall to 1*s.*, or at the outside 1*s.* 6*d.* The business lasts only for three hours and a half each day, that is from eight till half-past eleven in the morning; after that no good is to be done. Then the needle-sellers, I am told, go home, and the reason of this is, I am told, if they appear in the public streets selling or soliciting alms, the blind are exempted from becoming recipients of the benefits of many of the charitable institutions. The blind man whom I saw, told me that after he had done work and returned home, he occupied himself with pressing the seams of the soldiers' clothes when his "missus" had sewed them. The tailors' needle-sellers are all married, and one of the wives has a mangle; and "perhaps," said my informant, "the blind

husband turns the mangle when he goes home, but I can't say." Another wife is a bookfolder, but she has no work. The needles they usually sell five a penny to the journeymen, but the most of the journeymen will take but four; they say "we can't get a living at all if we sell the needles cheaper. The journeymen are mostly very considerate—very indeed; much more than the masters; for the masters won't hardly look at us. I don't know that a master ever gave me a farden—and yet there's some of them very soothing and kind in speaking." The profit in the needles, I am told, is rather more than 100 per cent.; "but," say the sellers, "only think, sir, we must get rid of 150 needles even to take 3*s.* The most we ever sell in one shop is 6*d.* worth—and the usual amount is 2*d.* worth. You can easy tell how many shops we must travel round to, in order to get rid of 3*s.* worth." Take one shop with another, the good with the bad, they tell me they make about 1*d.* profit from each they visit. The profit on the rest of the articles they vend is about 20 per cent., and they calculate that all the year round, summer and winter, they may be said to take 2*s.* a day, or 12*s.* a week; out of which they clear from 5*s.* to 5*s.* 6*d.* They sell far more needles than anything else. Some of the blind needle-sellers make their own bees'-wax into "shapes," (pennyworths) themselves, melting into and pouring into small moulds.

The blind needle-seller whom I saw was a respectable-looking man, with the same delicacy of hand as is peculiar to tailors, and which forms so marked a contrast to the horny palms of other workmen. He was tall and thin, and had that upward look remarkable in all blind men. His eyes gave no signs of blindness (the pupils being full and black), except that they appeared to be directed to no one object, and though fixed, were so without the least expression of observation. His long black surtout, though faded in colour, was far from ragged, having been patched and stitched in many places, while his cloth waistcoat and trowsers were clean and neat—very different from the garments of street-sellers in general. In his hand he carried his stick, which, as he sat, he seemed afraid to part with, for he held it fast between his knees. He came to me accompanied by his son, a good-looking rough-headed lad, habited in a washed-out-blue French kind of pinafore, and whose duty it was to lead his blind father about on his rounds. Though the boy was decently clad, still his clothes, like those of his father, bore many traces of that respectable kind of poverty which seeks by continuous mending to hide its rags from the world. The face of the father, too, was pinched, while there was a plaintiveness about his voice that told of a wretched spirit-broken and afflicted man. Altogether he was one of the better kind of handicraftsmen—one of those fine specimens of the operatives of this country—independent even in their helplessness, scorning to beg, and proud to be able to give some little equivalent for the money bestowed on them. I have already given accounts of the "beaten-out" mechanic from those who certainly cannot be accused of an excess of sympathy for the poor—namely the Poor Law Commissioners and masters of workhouses; and I can only add, that all my experience goes fully to bear out the justice of these statements. As I said before, the class who are *driven* to the streets to which the beaten-out or incapacitated operative belongs, is, of all others, the most deserving of our sympathy; and the following biography of one of this order is given to teach us to look with a kindly eye upon the many who are forced to become street-sellers as the sole means of saving themselves from the degradation of pauperism or beggary.

"I am 45 years of age next June," said the blind tailor. "It is upwards of 30 years since I first went to work at the tailoring trade in London. I learnt my business under one of the old hands at Mr. Cook's, in Poland-street, and after that went to work at Guthrie's, in Bond-street. I belonged to the Society held at the Old White Hart. I continued working for the honourable trade and belonging to Society for about 15 years. My weekly earnings then averaged 1*l.* 16*s.* a week while I was at work, and for several years I was seldom out of work, for when I got into a shop it was a long time before I got out again. I was not married then. I lived in a first floor back room, well-furnished, and could do very comfortably indeed. I saved often my 15*s.* or 16*s.* in a week, and was worth a good bit of money up to the time of my first illness. At one period I had nearly 50*l.* by me, and had it not been for "vacations" and "slack seasons" I should have put by more; but you see to be out of work even a few weeks makes a large hole in a journeyman's savings. All this time I subscribed regularly to Society, and knew that if I got superannuated I should be comfortably maintained by the trade. I felt quite happy with the consciousness of being provided for in my old age or affliction then, and if it had not been for that perhaps I might have saved more even than I did. I went on in this way, as I said before, for 15 years, and no one could have been happier than I was—not a working man in all England couldn't. I had my silver watch and chain. I could lay out my trifle every week in a few books, and used to have a trip now and then up and down the river, just to blow the London smoke off, you know. About 15 years ago my eyes began to fail me without any pain at all; they got to have as it were a thick mist, like smoke, before them. I couldn't see anything clear. Working by gas-light at first weakened and at last destroyed the nerve altogether. I'm now in total darkness. I can only tell when the gas is lighted by the heat of it.

"It is not the black clothes that is trying to the sight—black is the steadiest of all colours to work at; white and all bright colours makes the eyes water after looking at 'em for any long time; but of all colours scarlet, such as is used for regimentals, is the most blinding, it seems to burn the eyeballs, and makes them ache dreadful. After working at red there's always flying colours before the eyes; there's no steady colour to be seen in anything for some time. Everything

seems all of a twitter, and to keep changing its tint. There's more military tailors blind than any others. A great number of tailors go blind, but a great many more has lost their sight since gas-light has come up. Candle-light was not half so pernicious to the sight. Gas-light is so very heating, and there's such a glare with it that it makes the eyes throb, and shoot too, if you work long by it. I've often continued working past midnight with no other light than that, and then my eyes used to feel like two bits of burning coals in my head. And you see, sir, the worst of it was, as I found my sight going bad I was obliged to try it more, so as to keep up with my mates in the shop. At last my eyes got so weak that I was compelled to give up work, and go into the country, and there I stopped, living on my savings, and unable to do any work for fear of losing my sight altogether. I was away about three years, and then all my money was gone, and I was obligated, in spite of my eyes, to go back to work again. But then, with my sight defective as it was, I could get no employment at the honourable trade, and so I had to take a seat in a shop at one of the cheap houses in the city, and that was the ruin of me entirely; for working there, of course I got "scratched" from the trade Society, and so lost all hope of being provided for by them in my helplessness. The workshop at this cheap house was both small and badly ventilated. It was about seven foot square, and so low, that as you sot on the floor you could touch the ceiling with the tip of your finger. In this place seven of us worked—three on each side and one in the middle. Two of my shopmates were boys, or else I am sure it would not have held us all. There was no chimney, nor no window that could be opened to let the air in. It was lighted by a skylight, and this would neither open nor shut. The only means for letting out the foul air was one of them working ventilators—like cockades, you know, sir—fixed in one of the panes of glass; but this wouldn't work, so there we were, often from 5 in the morning till 10 at night, working in this dreadful place. There was no fire in the winter, though we never needed one, for the workshop was over-hot from the suffocation, and in the summer it was like an oven. This is what it was in the daytime, but mortal tongue can't tell what it was at night, with the two gas-lights burning away, and almost stifling us. Many a time some of the men has been carried out by the others fainting for air. They all fell ill, every one of them, and I lost my eyes and my living entirely by it. We spoke to the master repeatedly, telling him he was killing us, and though when he came up to the workshop hisself, he was nearly blown back by the stench and heat, he would not let us have any other room to work in—and yet he'd plenty of convenience up stairs. He paid little more than half the regular wages, and employed such men as myself—only those who couldn't get anything better to do. What with illness and all, I don't think my wages there averaged above 12*s.* a week: sometimes I could make 1*l.* in the week, but then, the next week, maybe I'd be ill, and would get but a few shillings. It was impossible to save anything then—even to pay one's way was a difficulty, and, at last, I was seized with rheumatics on the brain, and obliged to go into St. Thomas's Hospital. I was there eleven months, and *came out stone blind.* I am convinced I lost my eyesight by working in that cheap shop; nothing on earth will ever persuade me to the contrary, and what's more, my master robbed me of a third of my wages and my sight too, and left me helpless in the world, as, God knows, I am now. It is by the ruin of such men as me that these masters are enabled to undersell the better shops; they get hold of the men whose eyes are just beginning to fail them, like mine did, because they know they can get them to work cheap, and then, just at the time when a journeyman requires to be in the best of shops, have the best of air, and to work as little by gas-light as possible, they puts him into a hole of a place that would stifle a rat, and keeps him working there half the night through. That's the way, sir, the cheap clothes is produced, by making blind beggars of the workmen, like myself, and throwing us on the parish in our old age. You are right, sir, they not only robs the men but the ratepayers too.

"Well, sir, as I said, I come out of the hospital stone blind, and have been in darkness ever since, and that's near upon ten years ago. I often dream of colours, and see the most delightful pictures in the world; nothing that I ever beheld with my eyes can equal them—they're so brilliant, and clear and beautiful. I see then the features and figures of all my old friends, and I can't tell you how pleasureable it is to me. When I have such dreams they so excite me that I am ill all the next day. I often see, too, the fields, with the cows grazing on a beautiful green pasture, and the flowers, just at twilight like, closing up their blossoms as they do. I never dream of rivers; nor do I ever remember seeing a field of corn in my visions; it's strange I never dreamt in any shape of the corn or the rivers, but maybe I didn't take so much notice of them as of the others. Sometimes I see the sky, and very often indeed there's a rainbow in it, with all kinds of beautiful colours. The sun is a thing I often dream about seeing, going down like a ball of fire at the close of the day. I never dreamt of the stars, nor the moon—it's mostly bright colours that I see.

"I have been under all the oculists I could hear of—Mr. Turnbull, in Russell-square, but he did me no good; then I went to Charing-cross, under Mr. Guthrie, and he gave me a blind certificate, and made me a present of half-a-sovereign; he told me not to have my eyes tampered with again, as the optic nerve was totally decayed. Oh, yes; if I had all the riches in the world I'd give them every one to get my sight back, for it's the greatest pressure to me to be in darkness. God help me! I know I am a sinner, and believe I'm so afflicted on account of my sins. No, sir, it's nothing like when you shut your eyes; when I had my sight, and closed mine, I remember I

could still see the light through the lids, the very same as when you hold your hand up before the candle; but mine's far darker than that—pitch black. I see a dark mass like before me, and never any change—everlasting darkness, and no chance of a light or shade in this world. But I feel consolated some how, now it is settled; although it's a very poor comfort after all. I go along the streets in great fear. If a baby have hold of me, I am firm, but by myself, I reel about like a drunken man. I feel very timid unless I have hold of something—not to support me, but to assure me I shall not fall. If I was going down your staircase, sir, I should be all right so long as I touched the bannister, but if I missed that, I'm sure I should grow so giddy and nervous I should fall from the top to the bottom. After losing my sight, I found a great difficulty in putting my food into my mouth, for a long time—six months or better—and I was obliged to have some one to guide my hand, for I used often to put the fork up to my forehead instead of my mouth. Shortly after my becoming quite blind, I found all my other senses much quickened—my hearing—feeling—and reckoning. I got to like music very much indeed; it seemed to elevate me—to animate and cheer me much more than it did before, and so much so now, that when it ceases, I feel duller than ever. It sounds as if it was in a wilderness to me—I can't tell why, but that's all I can compare it to; as if I was quite alone with it. My smell and taste is very acute" (he was given some violets to smell)—"Oh, that's beautiful," he cried, "very reviving indeed. Often of an evening, I can see things in my imagination, and that's why I like to sit alone then; for of all the beautiful thoughts that ever a man possessed, there's none to equal a blind man's, when he's by hisself.

"I don't see my early home, but occurrences that has recently took place. I see them all plain before me, in colours as vivid as if I had my sight again, and the people all dressed in the fashion of my time; the clothes seem to make a great impression on me, and I often sit and see in my mind master tailors trying a coat on a gentleman, and pulling it here and there. The figures keep passing before me like soldiers, and often I'm so took by them that I forget I'm blind, and turn my head round to look after them as they pass by me. But that sort of thinking would throw me into a melancholly—it's too exciting while it lasts, and then leaves me dreadful dull afterwards. I have got much more melancholy since my blindness; before then, I was not seriously given, but now I find great consolation in religion. I think my blindness is sent to try my patience and resignation, and I pray to the Almighty to give me strength to bear with my affliction. I was quick and hot-tempered before I was blind, but since then, I have got less hasty like; all other troubles appears nothing to me. Sometimes I revile against my affliction—too frequently—but that is at my thoughtless moments, for when I'm calm and serious, I feel thankful that the Almighty has touched me with his correcting rod, and then I'm happy and at peace with all the world. If I had run my race, and not been stopped, I might never have believed there was a God. My wife works at the 'sauk work.' She makes soldiers' coats; she gets 1*s.* 1*d.* for making one, and that's nearly a day and a half's work; then she has to find her own trimmings, and they're 1*d.* It takes her 16 hours to finish one garment, and the over-work at that is beginning to make her like as I was myself. If she takes up a book to read to me now, it's all like a dirty mass before her, and that's just as my sight was before I lost it altogether. She slaves hard to help me; she's anxious and willing—indeed too much so. If she could get constant work, she might perhaps make about 7*s.* a week; but as it is, her earnings are, take one week with another, not more than 3*s.* Last week she earned 5*s.*; but that was the first job of work she'd had to do for two months. I think the two of us make on an average about 8*s.*; and out of that there is three people to keep—our two selves and our boy. Our rent is 2*s.* 6*d.*, so that after paying that, we has about 5*s.* 6*d.* left for food, firing, and clothing for the whole of us. How we do it I can't tell; but I know we live very, very hard: mostly on pieces of bread that the men gives to me and my boy, as we go round to the workshops. If we was any of us to fall ill, we must all go to the parish; if my boy was to go sick, I should be left without any one to lead me about, and that would be as bad as if I was laid-up myself; and if anything was to happen to my wife, I'd be done clean altogether. But yet the Lord is very good, and we'd get out of that, I dare say. If anything was to drive me to the parish, I should lose all hopes of getting some help from the blind institutions; and so I dread the workhouse worse than all. I'd sooner die on the step of a door, any time, than go there and be what they call well kept. I don't know why I should have a dislike to going there, but yet I do possess it. I do believe, that any one that is willing to work for their bread, hates a workhouse; for the workhouse coat is a slothful, degrading badge. After a man has had one on his back, he's never the same. I would'nt go for an order for relief so long as I could get a halfpenny loaf in twenty-four hours. If I could only get some friend to give me a letter of recommendation to Mr. Day's Charity for the Blind, I should be happy for the rest of my days. I could give the best of references to any one who would take pity on me in my affliction."

The Public-House Hawkers of Metal Spoons, etc.

The public-house hawkers are never so prosperous as those who confine their calling to private houses; they are often invited to partake of drink; are not the most industrious class of hawkers, and, to use their own language, are more frequently *hard up* than those who keep away from tap-room selling. The profits of the small hawkers in public-houses vary considerably. Some of them, when they have earned a shilling or two,
