Chemistry: The Science of Sustainability!
or
How do We get There from Here?

To paraphrase the 1987 Brundtland report. Sustainable development is about prospering today without compromising tomorrow. As our cities and neighborhoods become more crowded and developed, challenges that once seemed far-off are rapidly approaching and causing significant debate around the world. Debate on global climate change has shifted from arguments over whether the phenomenon is even real to *what can or should we be doing and doing now!*

We will explore the path to sustainability and the decisions that we will face along the way. Come prepared to engage and discuss where we should be going and what it will take to get there.

I'll be referencing our own Sustainability Plan, Greenworks Philadelphia, which can be found at:
<http://www.phila.gov/green/greenworks/>

Cosponsored with

Initiative for Global Environmental Leadership

Date: November 11, 2009

Time: NOON - 1:30 pm

Place: Carolyn Hoff Lynch Auditorium

On the Penn campus: Chemistry Building, 34 & Spruce Sts.

NO REGISTRATION REQUIRED

Direct questions to: 215-573-3164
