### Science in Support of Environmental Protection: Emerging Approaches to the Assessment and Management of Chemicals

Science plays an important role in informing environmental decision-making. Emerging science is providing new and better tools to be applied to the characterization of hazards and risks. In addition, new technologies are providing approaches to pollution prevention and chemical management that were not available to decision-makers just a few years ago. These developments have led to the evolution of the risk assessment process to assure that it stays in step with emerging data. Trends in risk assessment methods and in application of new technologies to environmental problems will be described.

**Date: March 17, 2004**

**Time: NOON - 1:30 pm**

**Place: Carolyn Hoff Lynch Auditorium**

On the Penn campus: Chemistry Building: 34 & Spruce St  
(No Food or Drink Permitted)

**NO REGISTRATION REQUIRED**
