Students in Penn's Master of Environmental Studies Program

Multi-Stakeholder Collaborative Approaches to Addressing Environmental Water Issues and Solutions

In a world of increasing complexity and globalization, international organizations and governments can not solve the planet's environmental problems by themselves. While organizations and governments may devise and adopt sound and valuable principles, implementation and execution of the resulting policy or regulation is difficult, if not impossible, without the cooperation and support of the various stakeholders that are impacted by such policy. Our MES Students will discuss the roles of various stakeholder organizations with respect to global water issues and how their participation is critical to the overall outcome. This interactive discussion will focus on the work of international organizations, non-profit NGOs, the private sector, and educational institutions, and how international principles and policy are translated into international and local action.

Date: April 11, 2007

Time: NOON - 1:30 pm

Place: Carolyn Hoff Lynch Auditorium

On the Penn campus: Chemistry Building
34 & Spruce Sts. (enter on 34 St)

NO REGISTRATION REQUIRED

Direct questions to: 215-573-3164
