The main stakeholders in the CAMERA Environmental Stewardship Program are the students, teachers, grant writers and CAMERA Inc. The goal of CAMERA Inc. and the grant writers is to attract more African American students into careers that involve science. The goal of the teacher is to enhance the students’ environmental science content knowledge. This is directed by curriculum provided by CAMERA Inc. that emphasizes technology, research, inquiry based activities and hands on activities. The students are heavily involved in service learning projects that enhance the community that they live in by participating in tree planting and neighborhood clean ups. They work with other volunteer groups from high schools, University of Penn and community groups, such as UC Green. The reward for their participation is a trip to the U.S. Virgin Islands where they work with a partnered school group to learn about marine environmental issues.
